"The gabel, or salt department, is under the control of a special officer, called a 'commissioner for the transport of salt,' and forming in the five maritime provinces one of the *san ssŭ*, or three commissioners, of which the *pu-chêng ssŭ* and *an-ch'a ssŭ* are the other two. There are, above these commissioners, eight directors of the salt monopoly, stationed at the depôts in Chihli and Shantung, who, however, also fill other offices, and have rather a nominal responsibility over the lower commissioners. The number and rank of the officers connected with the salt monopoly show its importance, and is proof of how large a revenue is derived from an article which will bear such an expensive establishment. At present its administration costs about as much as its receipts."—*Williams, Midd. King.*, i. 443.

"*Liang Tao* (糧道).—Grain Intendant. Chief comptroller of the provincial revenue from the grain tax, whether collected in money or in kind. Distinguished by various titles in different provinces, as *Tu Liang Tao* (督糧道) and *Liang Ch'u Tao* (糧儲道)."—*Mayers, Ch. Gov.*, p. 34.

"The commissariat and revenue department is unusually large in China compared with other countries, for the plan of collecting any part of the revenue in kind necessarily requires numerous vehicles for transporting and buildings for storing it, which still further multiplies the number of clerks and hands employed. The transportation of grain along the Yangtzŭ River is under the control of a *tsungtu*, who also oversees the disposal and directs the collectors of it in eight of the provinces adjacent to this river. The office of *liang-chu tao*, or commissioner to collect grain, is found in twelve provinces, the *pu-chêng ssŭ* attending to this duty in six; the supervision of the subordinate agents of this department in the several districts is in the hands of the prefects and district magistrates. That feature of the Chinese system which makes officers mutually responsible, seems to lead the superior powers to confer such various duties upon one functionary, in order that he may thus have a general knowledge of what is going on about and under him, and report what he deems amiss. It is not, indeed, likely that such was the original arrangement, for the Chinese government has come to its present composition by slow degrees; but such is, so far as can be seen, the effect of it, and it serves in no little degree to accomplish the designs of the rulers to bind the main and lesser wheels of the huge machine to themselves and to one another."—*Williams, Midd. King.*, i. 443–4.

"The 'provincial government,' constituted by the above-named high officers, is commonly designated by the term *Tu Fu Ssŭ Tao* (督撫司道), embracing them all." "The *Ssŭ Tao*, or four high officials immediately below the rank of Governor, constitute in each province a Committee or Board of provincial administration. This Committee was named, during the T'aip'ing rebellion, when its organization first came into general use, the *Chün Hsü Tsung Chü* (軍需總局) or Supreme Military Board; but of late years the title *Shan-hou Tsung Chü* (善後總局) or Supreme Board of Reorganization (provincial administrative Board) has been substituted in the majority of cases. The phrase *shan hou* implies the 'restoration of order,' or pacification, after a state of rebellion or warfare." "At Foochow, a Board of Foreign Affairs, similarly constituted, is designated the *Tung Shang Tsung Chü* (通商總局)."—*Mayers, Ch. Gov.*, p. 34.

"Next in rank to the *pu-chêng ssŭ* and *an-ch'a ssŭ*, who always reside in the provincial capital, are the intendents of circuit, who are located in the circuits consisting of two or three prefectures united for this purpose. They are deputies of the two highest functionaries, and their delegated power often includes military as well as civil authority, the chief object of their appointment being to relieve and assist those high functionaries in the discharge of their extensive duties. Some of the intendents are appointed to supervise the proceedings of the prefects and district magistrates, others are stationed at important posts to protect them, and those connected with foreign trade at the open ports have no territorial jurisdiction."—*Williams, Midd. King.*, i. 440.

"*Fên Hsün Tao* (分巡道).—Intendant of Circuit. . . . Off. des. *Tao* (道); Coll. des. *Tao-t'ai* (道台); Epist. style *Kuan-Ch'a* (觀察) and *Chien Ssŭ* (監司). A functionary placed with administrative control over two or more Prefectures (*Fu*). In virtue of the powers of control over the military forces within his jurisdiction, which are usually annexed to a Taot'ai's office, he is officially designated *Ping Pei Tao* (兵備道), a title which distinguishes him from the *Liang Tao*, or the Intendants of the Salt and Tea Revenue, *Yen Ch'a Tao* (鹽茶道), established n some of the provinces. (See also *Hai-kuan Chien-tu.*)"—*Mayers Ch. Gov.*, p. 34.

"A *tao* area [more modern and definite than the *fu* (see *infra*)] usually consists of two or more *fu*, or of one *fu* and several *hien* or *chou*. The 'intendant' has not even got the loan of a walled town to live in, and there is no such place as even a theoretical *tao* city. Like the *fu*, he is a conduit, but he is a much busier man than the *fu*, and always seems to have many special duties. Still, he is a 'guest officer,' and not so imperial a representative as the *fu*, who is the territorial magnate, or 'host.' The *fu* is like the colonel of a regiment, and the *hien* like the captain of a company: however you make up your brigades, you must work through the colonel and captain. At nearly all the treaty-ports, the *tao* or *taotai* (with whom a consul ranks by treaty) manages foreign affairs. His *yamên* is generally within the walls of a prefectural city, but at Shanghai it is within the *hien* city of that name, and in other places it may be anywhere. He ranks with but below the Treasurer and Judge, and 'savours' of them. There are several grades of *tao*: there is the simple 'circuit intendant'; then there is the 'intendant having a say in military matters,' the 'customs intendant,' and so on. Besides these executive *tao*, there are also others in charge of grain transport and salt gabelle," but these do not form part of the regular administration. There are also assistant administrative officials, outdoor and indoor, attached to each *fu* and *hien* district."—*Parker, China*, pp. 177–8.

"All officials appertaining to the above ranks are spoken of or addressed in conversation by the title *Ta Jén* (大人) appended to their surnames; except in the case of members of the Grand Secretariat or titular 'Imperial Guardians.'" [See *supra.*]—*Ibid.* p. 35.

"Subordinate to the governors, through the intendants of circuits, are the prefects or head magistrates of departments, called *chih-fu*, *chih-chou*, and *t'ing t'ung-chih*. . . . It is the duty of these persons to make themselves acquainted with everything that takes place within their jurisdiction, and they are held responsible for the full execution of whatever orders are transmitted to them, all presenting their reports and receiving their orders through the intendants." "The practical efficiency of the Chinese government in promoting the welfare of the people and preserving the peace depends chiefly upon these officers. The people themselves are prone to quarrel and oppress each other . . . and need wise and vigorous hands to repress and punish them, while all classes avoid and resist the tax-gatherer as much as is safe. The proverb, 'A *chih-fu* can exterminate a family, a *chih-hsien* can confiscate a patrimony,' indicates the popular fear of their power."—*Williams, Midd. King.*, i. 440–1.

"*Chih Fu* (知府).—Prefect. . . . Off. des. *Shou* (守); Epist. style *T'ai Shou* (太守). Personal designation in recital

of titles, *Chêng T'ang* (正 堂). The title of the officer governing the largest of the provincial sub-divisions, or *Fu*, of which each province at the present day embraces, on an average, about ten. There are now, in all, 183 *Fu* or Prefectures, the smallest number (seven) being in Shensi, and the largest (thirteen) in Kiangsi. The *Chih Fu* of the present period represents the *Chün Shou* (郡 首) of the earliest administrative division of the Empire, under Ch'in Shih Huang-ti, B.C. 221, and the *T'ai Shou* of the Han dynasty (reign of Ching Ti, B.C. 156). The Prefecture of the present day is frequently spoken of as *Chün* (郡), in reference to the ancient designation. The incumbent of the prefecture within which the provincial capital is situated is designated *Shou Fu* (首 府) or the chief (head) Prefect (of the province)."—*Mayers, Ch. Gov.*, p. 35. The Governor of the Metropolitan Prefecture *Shun T'ien Fu* was styled *Fu Yin* (府 尹); the Vice-Governor, *Fu Ch'êng* (府 丞); and the Sub-Prefect, *Chih Chung* (治 中). In addition to these there were the usual subordinate ranks appertaining to a Prefecture. For the Police, Magisterial, Military, etc., organization of Peking, see *ibid.* pp. 44–7.

"The police of the city [of Peking] is connected with the Bannermen, and is, on the whole, efficient and successful in preserving the peace."—*Williams, Midd. King.*, i. 83.

"The duties of a *fu* (usually called a 'prefect') are as unsolid and abstract as his territory. I have sat and talked with many a *fu*, but to this day I do not understand what they do (beyond re-hearing as judges in the second instance), except act as a conduit-pipe for several *hien*: just as the archdeacon is an ecclesiastical dignitary performing archidiaconal functions, so is the *fu* a territorial dignitary performing prefectural functions. All orders from above come to the *hien* through the *fu*, and conversely with the reports. The head *fu* and the head *hien* when in one city with the Viceroy, or Governor, have to dance attendance in person every morning: there are ample opportunities in the ante-room for squaring accounts with the secretaries and clerks. In a few cases the *fu* has some special business confided to him in addition to his supervisory functions. . . . The profits of the *fu* are not so great as those of a *hien*, but he has a considerable say in the appointment of each *hien*, and can do plenty of damage by picking out awkward faults if he is not properly conciliated. The northern Chinese have a popular saying,

Fu li fu
San-pai-wu,

which practically means 'Each prefecture is 100 English miles from the other, and contains an area of 10,000 square miles.' The patronage or choice of *fu* and *hien* officials is pretty evenly shared between the Peking government and those of the provinces; but it is always understood that the Viceroy and Governor may choose their own head *fu* and *hien*, even though Peking may appoint a successor to the man thus chosen, by way of compensation. The practice is similar to that of our own high officers selecting their own private secretary or flag-lieutenant from personally agreeable or obsequious individuals."—*Parker, China*, pp. 176–7.

"*T'ung Chih* (同 知).—Sub-Prefect. . . . Coll. des *Êrh Fu* (貳 府); Epist. style *Ssŭ Ma* (司 馬). To be distinguished as (A) First-class Sub-Prefect, administering a *T'ing* or independent sub-prefecture, and (B) Second-class Sub-Prefect, holding office under a *Chih Fu*. Of this latter class there are a variety of denominations, according to the functions exercised. Such are *Hai Fang T'ung Chih* (海 防 同 知), Maritime Sub-Prefect; *Chün Min T'ung Chih* or *Chün Min Fu* (軍 民 府), Sub-Prefect with military jurisdiction; *Shui Li T'ung Chih* (水 利 同 知), Sub-Prefect in charge of water communication; *Li Fan T'ung Chih* (理 番 同 知), Sub-Prefect in authority over aboriginal tribes, etc. A distinct office is *Li Shih T'ung Chih* (理 事 同 知), or Civil Commissary of a Manchu Garrison."—*Mayers, Ch. Gov.*, p. 35.

"*T'ung-p'an* (通 判).—Assistant Sub-Prefect. . . . Epist. style *Pieh Chia* (別 駕); Coll. des. *San Fu* (三 府). Holds office under either a Prefect or an independent Sub-Prefect. Distinguished, according to the functions exercised, by titles such as *Liang Pu T'ung-p'an* (糧 捕 通 判), Revenue and Police Sub-Prefect,—and *Pu Tao T'ung-p'an* (捕 盜 通 判), Police Sub-Prefect, etc."—*Ibid.* p. 36.

"*Chih Chou* (知 州). — Department Magistrate. . . . Off. des. *Mu* (牧); Epist. style *Ssŭ Ma* (司 馬). To be distinguished as (直 隸 州) Magistrate of an independent Department or *Chih-li Chou*, *i.e.*, subject to no prefectural control but reporting direct to the provincial government; and (散 州) Magistrate of a subordinate Department or *San Chou*, forming part of a prefecture." "The *Chih Chou* of the present period are considered to be the counterparts of the *Tz'ŭ Shih* (束 史) of the Sung dynasty." See also ABSOLUTE MONARCHY. —*Ibid.* p. 36.

"*Chou T'ung* (州 同).—First-class Assistant Department Magistrate. . . . Epist. style *Pieh Chia* (別 駕) and *Chou Ssŭ-Ma* (州 司 馬)." "*Chou P'an* (州 判).—Second-class Assistant Department Magistrate. . . . Epist. style *Chou Pieh-Chia* (州 別 駕)." "*Li mu* (吏 目).—Departmental Police-master and Jail Warden." "The three foregoing officers are common to both classes of Departments." "*Tso Êrh* (佐 貳). —Assistant Magistrates, whether of Prefects, Departments, or Districts. Lit. des. *Ch'êng Ts'ui* (丞 倅)."—*Ibid.* p. 36.

"The subdivisional parts of departments, called *t'ing*, *chou*, and *hsien*, have each their separate officers, who report to the *chih-fu* and *chih-chou* above them; these are called *t'ung-chih*, *chih-chou*, and *chih-hsien*. . . . The parts of districts called *ssŭ* are placed under the control of *hsün-chien*, circuit-restrainers, or hundreders, who form the last in the regular series of descending rank—the last of the 'commissioned officers,' as they might not improperly be called. The prefects sometimes have deputies directly under them, as the governor has his intendants, when their jurisdiction is very large or important, who are called *Chün Min Fu* and *t'ung-chih*. . . . The deputies of district magistrates are termed *chou-t'ung* and *chou-p'an* for the *chih-chou*, and *hsien-ch'êng* and *chu-pu* for the *chih-hsien*; the last also have *tso-t'ang* and *yu-t'ang*. . . ." "Besides these assistants there are others, both in the departments and districts, having the oversight of the police, collection of the taxes and management of the revenue, care of waterways, and many other subdivisions of legislative duties which it is unnecessary to particularize. They are appointed whenever and wherever the territory is so large and the duties so onerous that one man cannot attend to all, or it is not safe to entrust him with them. They have nearly as much power as their superiors in the department entrusted to them, but none of them have judicial or legislative functions, and the routine of their offices affords them less scope for oppression. Nor is it worth while to notice the great number of clerks, registrars, and secretaries found in connection with the various ranks of dignitaries here mentioned, or the multitude of petty subordinates found in the provinces and placed over particular places or duties as necessity may require. Their number is very large, and the responsibility of their proceedings devolves upon the higher officers who receive their reports and direct their actions."—*Williams, Midd. King.*, i. 441–2.

"*Chih Hsien* (知 縣).—District Magistrate. . . . Off. des. *Ling* (令); Epist. style *Ming Fu* (明 府), *Ta Yin* (大 尹), and *Yi Tsun* (邑 尊). Personal designation in recital of titles *Chêng T'ang* (正 堂). The district within which a provincial capital is situated gives the title of *Shou Hsien* (首 縣) to its incumbent."—*Mayers, Ch. Gov.*, p. 36.

"The *Fu Chou Hsien* (府 州 縣) or Prefects and Magistrates of different classes constitute the general administrative body of the provincial civil service. They are charged with the collection of revenue, the maintenance of order, and the primary dispensation of justice, as well as with the conduct of literary examinations and of the government postal service, and in general with the exercise of all the direct functions of public administration. They are commonly spoken of as *Fu Mu Kuan* (父 母 官), or officials who stand *in loco parentis* toward the people—lit., who are the 'father and mother' of the people." "All officials in the above-mentioned ranks [from the Prefect to the District Magistrate] are spoken of or addressed as *Ta Lao Yeh* (大 老 爺)."—*Ibid.* pp. 36–7.

"The true official unit of Chinese corporate life is the *hien*, or 'city district,' and there are some 1,300 of them. Each average province is divided into from 70 to over 100 *hien*, a term variously translated by Europeans 'district,' 'department,' 'canton,' or 'prefecture.' The half-barbarian province of Kwei Chou has only thirty-four; but then it has numerous 'autochthonous' districts besides. Chih Li has nearly 140; but this total includes the Peking and Mongol districts. A *hien* is in area about the size of an English county, or a French department, with the same uncertainty or irregularity as to area and importance. It almost always consists, in pure Chinese tracts, of a walled city and an area of, say, 500 or 1,000 square miles round the town. Very often an enormous city of lower rank forms an appendage to a sleepy old *hien*; until recently this was the case with Hankow. Every Chinaman is described first of all as belonging to a given *hien*; and so strong is the association that it follows him through life, if he gains distinction, much as the territorial surroundings of a Scotch or French magnate easily attach to his family name."—*Parker, China*, pp. 170–1.

"The *hien* magistrate is the very heart and soul of all official life and emolument, his dignity and attributes, in large centres such as Canton or Chungking, not falling far short in many respects of those of the Lord Mayor of London. His comparatively low 'button'-rank places him in easy touch with the people, whilst his position as the lowest of the *yu-sz*, or 'executive,' clothes him with an imperial status which even a viceroy must respect. He is the lowest officer on whom the Emperor himself (at times) directly confers an appointment. He is so much identified with the soul of 'empire,' that the Emperor or Government itself is elegantly styled *hien-kwan*, or 'the district magistrate.' He is judge in the first instance in all matters whatsoever, civil or criminal, and also governor of the gaol, coroner, sheriff, mayor, head-surveyor, civil service examiner, tax-collector, registrar, lord-lieutenant, œdile, chief bailiff, interceder with the gods; and, in short, what the people always call him—'father and mother officer.' He cuts a very different figure in a remote country district from that accepted by him in a metropolis like Canton, where he is apt to be overshadowed by innumerable civil and military superiors; just as in London the Lord Mayor is outshone by the Court and the Cabinet Ministers. In his own remote city he is autocratic and everybody. He has no technical training whatever, except in the Chinese equivalent for 'Latin verse'; he has a permanent staff of trained specialists who run each department for him, share the plunder with him, and keep themselves well in the background. If a weak man he is at the mercy of these tools, and also of his 'belly-band,' *i.e.* the man who advances the money for him first to secure and then to reach his post. But, if a strong man, he soon transforms all these into contributory 'suckers' of the sponge he personally clutches."—*Ibid.* pp. 171–2.

"The 'value' of every *hien* in the empire is of course perfectly well known; but, although there is bribery and corruption at Peking as well as in the provinces, the solid basis of government is not really bad, and from my experience of Chinese officials I should say that the majority of them are men no worse than American 'bosses'—that is, mere hacks of a corrupt growth, with as much 'conscience' as their system vouchsafes. Purchase of official rank, and even of office, has been sadly on the increase since China began to get into trouble with rebels and Europeans; even now, though higher office can no longer be bought, the office of *hien* may be purchased, and many even higher brevet titles are on sale. But, putting aside questions of bribery and jobbery, most *hien* magistrates obtain their posts either because they have passed brilliant examinations, or because their parents have served the State well, or because they themselves have 'earned their turn' by special services or efforts of some kind, which 'services' include patriotic 'offerings' (office purchase) in different shapes and sizes. Whether the officer has obtained his post honourably or otherwise, his first care is (unless he be an enthusiast or a crank, in either of which cases he promptly comes to grief) to repay the expense of working up for his post, and of getting to it; his next care is to feather his nest, keep on the soft side of the Treasurer and the Governor, and prepare the way for future advancement. This is how he does it. His most important, or at least his most profitable duty, is the collection and remission of the land-tax, for which purpose he pays a liberal salary to a highly-trained conveyancer kept permanently on the premises. The Board at Peking never asks for more than the regulation amount of this, and is uncommonly glad to see even 'eight-tenths' of it paid. But by means of juggling with silver rates and 'copper-cash' rates; drawing harrowing pictures of local disasters and poverty; by legerdemain in counting and measuring; charging fees for the receipts, notices, tickets, attendance, and what not; it has come about in the course of time that the actual amount of the land-tax collected is anything between twice and four times the legal amount, whilst under no circumstances is the full amount even officially due ever admitted to be in hand. Say the land-tax of the district is 10,000 taels, a profit of this sum, or (at the old silver exchanges) £2,000 to £3,000 a year, would evidently bring the man back to his native village, after twenty years of work, with a handsome fortune. But he does not get all this for himself; many superiors have to be squared in a fixed, decorous, and it may even be said imperially-recognised way."—*Ibid.* pp. 172–3.

"Then there is the administration of justice. Every *hien* magistrate, bad or good, must keep an army (usually hereditary rogues) of runners, collectors, lictors, and police; and in only very few cases can he afford to pay them anything, even for food, should his integrity be so unusual as to awaken within him the desire to do so. The smallest district needs thirty, the largest 300 or more of these ruffians. In practice these men, invariably the riff-raff of the town, live on their 'warrants,' and no man who is 'wanted under a warrant,' be he witness, criminal, or plaintiff, can as a general rule get off without payments to them of some sort. Moreover, every *yamén* has hovering in the vicinity a vulture-like multitude of champerty and maintenance men, who live by sowing ill-wind, and run 'hand-and-glove' with the police. The amount of tyranny and villainy varies in each district with each magistrate. I have myself seen enough with my own eyes, and had innumerable free-and-easy conversations with both magistrates and runners, to enable me to state with absolute certainty that a downright bad magistrate, succeeding to a post dominated by a nest of evil-minded runners with a long-established tyrannical habit engrained in their hearts, and practising amongst a stupid, timid, or malignant population, can with impunity assassinate anyone he likes in his own gaol, accept any bribe, commit or condone any injustice, make his fortune, and even preserve his reputation in spite of all this. On the other hand, I have seen completely honest, simple-minded, benevolent magistrates, perfectly clean-handed (subject to custom), anxious to do right, loyal to their superiors, beloved of the people, and quite capable of restraining the police; who, again, under a kind master soon fall into the habit of reasonable obedience and fairness. . . . With all this, however, it must be stated that most magistrates supplement their gains on land-tax account by considerable profits under the head of 'justice,' and the lawyer, or special 'justice secretary' who 'shapes the law' is the most important person behind the *hien's* back."—*Ibid.* pp. 173–5.

"There are other little pickings in the way of inquests (blind-eyes), licences, permits, presents from gentry, transfers of land, posts, storage of official grain, purveyances, etc., which go to make up the magistrate's fortune; for it is an understood thing at Peking that 'outside expenditures' require 'miscellaneous funds,' while the provincial magnates in turn also understand that a magistrate who is bound by unwritten custom to repair and furnish their *yamêns*, keep all public buildings in order, forward their despatches, supply their transport, and (under breath be it said) grease their palms, must have something pecuniary wherewith to do it all. Besides, most viceroys have a son who is a *hien*, and 'if you won't scratch my back, I won't scratch your back.' Consequently there is a comfortable feeling all round that 'the less said about insignificant details the better for all concerned.'"—*Ibid.* p. 175.

"Although the essence of provincial government thus consists in the *hien* and the four big men at the top of the tree, there are certain intermediaries who cannot be ignored. Each group of two or more *hien* is under a *fu*, or city of the first class, and each province has from five to ten *fu*. The *chi-fu* is also popularly and officially styled the *fu*. The name is comparatively modern, and in former times there were similar administrative divisions called *lu*; but the same names have in this as in other cases at different times been applied to provincial and divisional or prefectural tracts. . . . A *fu* city has no real existence of its own, but is always within the walls of one or more of its own *hien*. Thus Lü-chou Fu in An Hwei, which has under it five *hien*, is really the Hoh-fei city where Li Hung-Chang comes from. In such cases the *hien* which has the honour of thus housing a *fu* is called the 'head *hien*' of the province. In a few cases, as for instance that of Kwang-chou Fu (Canton city), there are two head *hien* within one set of walls, but the warrants of each are limited in their run by an imaginary dividing line—much to the comfort of local thieves. In one case, the enormous city of Su-chou Fu (Soochow), there are actually three head *hien*., *i.e.* three palaces and three rulers, within one wall; but of course only the triple head of the one body, or tripartite abstract shrieval government, is there: the *Hinterlands*, or territories subject to each one, spread out like fans in different directions."—*Ibid.* pp. 175–6.

"Each intendant, prefect, and district magistrate has special secretaries in his office for filing papers, writing and transmitting despatches, investigating cases, recording evidence, keeping accounts, and performing other functions. All above the *chih-hsien* are allowed to keep private secretaries, called *ssŭ yeh*, who are usually personal friends, and accompany the officers wherever they go for the purpose of advising them and preparing their official documents. The *an-ch'a ssŭ* have jailers under their control, as have also the more important prefects."—*Williams, Midd. King.*, i. 442.

[Next to the *Hsien*, District Magistrate, were the *Hsien Ch'êng* (縣 丞), Assistant District Magistrate, *Chu Pu* (主 簿), Deputy Assistant Magistrate, *Hsün Chien* (巡 檢), Sub-district Deputy Magistrate, and *Tien Shih* (典 史), District Police-master and Jail Warden, forming the lowest offices in the official hierarchy. See *Mayers, Ch. Gov.*, p. 37.]

"*Hsüeh Chêng* 學 政.—Provincial Directors of Education or Literary Chancellor. Off. des. *Hsüeh Yüan* 學 院; Coll. des. *Hsüeh T'ai* 學 台; Lit. des. *Wên Tsung* 文 宗, and *Tu Hsüeh Shih Chê* 督 學 使 者. Full official title is *T'i-tu Hsüeh Yüan* 提 督 學 院. A special appointment, usually filled by officials of high literary degrees who leave Peking for three years to serve in this capacity. They preside at the prefectural examinations, and give the degree of *hsiu ts'ai*, which admits to the triennial competition for the *chü-jên* degree" (v. *infra*).—*Ibid.* p. 39.

"The appointment of officers being theoretically founded on literary merit, those to whom is committed the supervision of students and conferment of degrees would naturally be of a high grade. The *hsüeh-chêng*, or literary chancellor, of the province, therefore ranks next to the governor, more, however, because he is specially appointed by his Majesty and oversees this branch of the government, than from the power committed to his hands. Under him are head teachers of different degrees of authority, residing in the chief towns of departments and districts, the whole forming a similar series of functionaries to what exists in the civil department. These subordinates have merely a greater or less degree of supervision over the studies of students, and the colleges established for the promotion of learning in the chief towns of departments. The business of conferring the lower degrees appertains exclusively to the chancellor, who makes an annual circuit through the province for that purpose and holds examinations in the chief town of each department, to which all students residing within its limits can come."—*Williams, Midd. King.*, i. 442–3.

"*Hai Kuan Chien-tu* 海關監督.—Superintendent of Custom. Of various ranks. At Canton, a special officer, appointed from the Imperial Household, bears the designation *Yüeh Hai Kuan Pu* 粵海關部, or Superintendent of Customs for the province of Kuangtung. Is commonly designated by Europeans as the 'Hoppo,' a term the derivation of which is unknown. At Foochow, the Manchu General-in-Chief fills a similar position. At the Custom House of Huai-an, a special appointment is likewise made, the three functionaries in question being regarded as special purveyors of the Court. Elsewhere, the office is usually filled by a Taot'ai, in addition to his territorial duties. In such case he receives the designation *Kuan Tao* 關道. Within recent years, a special 'Customs' Taot'ai' has been established at Tientsin, without territorial jurisdiction."—*Mayers, Ch. Gov.*, p. 40. For customs, excise duties, etc., see *Revenue*.

"*Chih Tsao* 織造.—Superintendent of an Imperial Manufactory, at Nanking, Soochow, or Hangchow. Specially appointed, from the Imperial Household, to superintend the manufacture and despatch of silk textile fabrics and other requisites for the use of the Imperial Court."—*Ibid.* p. 40.

"*Ho Tung Ho Tao Tsung tu* 河東河道總督.—Director-General of the Yellow River. . . . Ordinary designation *Ho Tao Tsung-tu*. The duties attached to this post have in recent years become much reduced in importance, the Governors of Honan and Shantung having become the active agents in the conservation of the river embankment works. A military division, under the orders of the Director-General, is designated the *Ho Piao* 河標. It numbers at present about 1,700 rank and file, having its head-quarters at Tsi-ning Chou, in Shantung." —*Ibid.* p. 40.

"*Ts'ao Yün Tsung-tu* 漕運總督.—Director-General of the Grain Transport. . . . This functionary has the grain transportation system, for the conveyance of the rice from the southern provinces to Peking, under his control. The *Wei* 衛 and *So* 所, or first and second class transport stations connected with this system, have a special military organization of their own. Of late years, the introduction of steam-shipping, concurrently with the progressive difficulties of navigation on the *Yün Ho* 運河, or Grand Canal, has led to the larger portion of the grain despatched to Peking being forwarded by sea to Tientsin. Of the *Hai Yün* 海運, or grain transport by sea, a part is conducted by the steamers of the *Chao Shang Chü* 招商局, the so-called 'China Merchants' Steam-ship Company,' which was established as a Government institution in 1872."—*Ibid.* pp. 40–1.

"*T'u Kuan* 土官.—Administrators of 'Native' Districts. The portions of the provinces of Kuanghsi and Kueichou which are inhabited exclusively by the Miao-tzŭ 苗子 and other aboriginal tribes are in some cases organized as Districts or Departments under hereditary Magistrates, the representatives of ancient independent chiefs. They are generically designated as above; but the ruler of each district or department bears the ordinary Chinese official title, with the character *t'u* prefixed as 土州, and 土縣. In Yünnan, four 'native' prefectures, *t'u fu* 土府, are organized, with four *t'u chou*, or 'native' departments. The province of Kuanghsi has 26 'native' departments, and four districts of the same class. The process of exchanging the status of a tribe under the direct government of its hereditary chief or magistrate for that of the ordinary Chinese population, or the 'bestowal of rights of citizenship,' is described by the phrase *kai t'u wei liu* 改土爲流."—*Ibid.* p. 41.

"*T'u Ssŭ* 土司.—The Native Tribes; and their Chieftains. This is the designation applied in general to all the multitudinous tribes of aborigines who overspread the southern and western provinces, and occupy the borderland between China on the one side and Annam, Laos, Burmah, and Tibet on the other. The most widely distributed and important of these are the Miao Tzŭ 苗子 of Kuanghsi, Kueichou and Ssŭ-ch'uan, the Lo-lo 猓猓 or 玀玀 of Ssŭ-ch'uan and Yünnan, and the Shans, who occupy the southern and western portions of that province and the frontier lands beyond. This last-named race, the representatives of a once powerful and still widely-spread nationality, whose name (as known to Europeans through the Burmese) may be traced in the *Hsien* of Hsien-Lo 暹羅 or Siam, are considered by the Chinese as the descendants of the people of Yüeh Shang 越裳 of whom their most ancient records make mention. The designation attributed to them in Chinese literature is Lao Chua 老撾, in which an affinity to the Laos of the Burmese and Siamese is plainly apparent. The Shans of the borderland between Yünnan and Burmah term themselves and are commonly known as *Pai I* 擺夷. Chinese official writers, however, describe them as Lao Chua, and the designation Pai I is applied in the description of the tribes of Yünnan (*Nan Man Chih* 南蠻志, Book III, forming part of the topography of that province), to the aborigines of the Kuanghsi frontier, who are distinguished as *han* 旱 and *shui* 水 or Land, and Water, Pai I. The government of the semi-independent tribes in general is left in the hands of their hereditary chieftains, upon whom high-sounding titles of various degrees are bestowed, in accordance with a system introduced originally by the Mongol conquerors of China. According to the size and importance of the territory they rule over, these chieftains —known to the Burmese, on the south-western frontier, by the title of *tsaubwa*—are invested with different gradations of rank [v. pp. 42–3]."—*Ibid.* pp. 41–2.

"Recapitulating in tabular form, we may say that outside of the Cabinet, Council Boards, and Courts at the capital, the government (in the Eighteen Provinces) is in the hands of:—

8 Governors-General (6 governing two provinces each).
15 Governors.
19 Commissioners of Finance (2 for Kiangsu).
18 Commissioners of Justice.
4 Directors of the Salt Gabel.
9 Collectors (independent of these).
13 Commissioners of Grain, or Commissaries.
64 Intendants of Circuit.
182 Prefects.
68 Prefects of inferior Departments.
18 Independent Sub-prefects.
180 Dependent Sub-prefects.
139 Deputy Sub-prefects.
141 District Magistrates of the Fifth Class.
1,232 District Magistrates of the Seventh Class."—*Williams, Midd. King.*, i. 444.

The Viceroy Yin-chi-shan "effected several important administrative changes, such as stationing a Taot'ai at Shanghai and the Judge at Soochow in 1729, uniting Kuangsi under one Viceroyalty with Kuangtung in 1733, and giving Ssŭch'uan a separate Viceroy in 1749."—*Giles, Bio. Dic.*, p. 944.

As an official Yao Wên-t'ien (A.D. 1757–1827) "urged the inconvenience of frequent changes in the high provincial posts, the need for giving adequate salaries to magistrates, and the hardships of criminal procedure."—*Ibid.* p. 928.

[For the salaries of officials see *infra*, *Judicial*.]

[For the government postal establishments see DISTRIBUTION.]

Examination system.—Though education was private, examinations for official appointments were conducted by the Government. "China has no official education." "The Government controls only the examinations, and candidates are only subjected to one law—the most tyrannical of all—that of knowing." The "grades do not merely signify merit, but the superiority of merit. They are, in fact, obtained by competitive examination." —*Tcheng-ki-tong, Chinese Painted by Themselves*, pp. 65–6. There were, however, a certain number of endowed schools in each province for the benefit of indigent scholars. See also ACCESS. INST.

1644. "It is said that corruption had begun to sway the public examinations, and that Chuntche [Shun Chih] issued a special edict, enjoining the examiners to give fair awards and to maintain the purity of the service."—*Boulger, Short Hist.*, p. 130.

"The Manchu monarchs were not at first favorably disposed to the system of examinations, and frowned upon the literary hierarchy who claimed all honors as their right; but the next generation saw the advantages and the necessity of the *concours*, in preserving its own power."—*Williams, Midd. King.*, i. 521.

"When the candidates suppose themselves sufficiently prepared to undergo the first examination, they send in their names to the under-prefecture, where the examination takes place. There are six trials." "The candidate selected after the sixth trial is considered worthy to undergo the examinations that take place before the prefect at the capital of the province. This examination also consists of a certain number of trials; and if the candidate comes forth victorious from all, he presents himself to the imperial examiner specially delegated to each province." "It is only after being admitted by this examiner that a candidate receives the grade of bachelor." "Each trial lasts an entire day; and about 15 have to be undergone to satisfy the conditions of the programme. The whole examination is in writing, and the candidates are shut in little cells without the assistance of any book, having nothing with them but their ink, brush, and paper. They have to compose upon the subjects of literature, poetry, history and philosophy. These examinations take place every year, at the chief place in the prefecture." "Examinations for the second degree conferring the license take place every three years at the provincial capital, and are composed of three examinations, each lasting three days, and spreading over twelve days in all. The candidates are generally very numerous, sometimes more than 10,000 for two hundred degrees." "Examinations for the third degree, conferring the doctorate, take place at Pekin, in the same order as the examinations for the second degree. Those selected from this competition are still subject to a last examination in presence of the Emperor, and are classified by order of merit in two categories. The first numbers only 4 members, who are immediately received academicians. The second category comprises candidates who will have to compete still further to enter the Academy. The third category furnishes the attachés to the ministerial departments; and the fourth, the under-prefects, or officers of equal rank." "The number of doctors admitted at each session varies from two to three hundred." "The academicians become members of the Imperial College of Han-lin, and form the highest body, from whom the Emperor's Ministers are usually chosen."—*Tcheng-ki-tong, Chinese Painted by Themselves*, pp. 67–9.

Besides the above, there are other examinations following the first grade, "and rewarding success with a pension or a title. Those fortified with this title may compete for places in the magistracy, the members of which are not directly selected by examination."—*Ibid.* p. 71. See details given below.

"If to these honours, sufficient to inflame the most sluggish ambition, we add the belief so dear to the Chinese, that they are reflected upon their family, and are agreeable to their ancestors, and the fact that the father and mother will receive the same rank and the same consideration, we may realize what a power the institution of competition exerts upon the nation." —*Ibid.* p. 71.

"The degrees, which are called in China, as in western countries, those of bachelor, licentiate, and doctor, are not simple diplomas, bearing witness to the relative extent of knowledge in art and science. They have quite another character, inasmuch as they confer titles to which rights and privileges are attached." "If you are poor, having for sole wealth an honourable name and the ambition to be worthy of it, can you by study alone and its rewards obtain a place in the State administration? Can you rise by the credit of your science alone? Can you require of it to obtain for you a privilege? Can you obtain by it honours and power? In China, yes; in Europe, no."—*Ibid.* pp. 63–5.

"*K'ao Shih* 考試.—The Chinese system of competition for civil and military degrees, which furnish successful candidates with a passport to the public service, is organized in three principal gradations, under the following names: *Hsiang Shih* 鄉試, the Provincial Examinations, held as a rule triennially, in the autumn, followed by the *Hui Shih* 會試, or Metropolitan Examination, held at Pekíng in the ensuing spring, and *Tien Shih* 殿試, or Palace Examination, at which the final award of degrees is obtained. Special examinations, granted in celebration of auspicious public events, are denominated *En Shih* 恩試, or Examinations by Imperial Grace, in addition to the regular triennial occasions. The 'classes' of graduates at the *Hsiang Shih* and *Hui Shih* respectively are termed *k'o* 科 and *chia* 甲, whence the meaning of 'literary graduation' has come to be applied to these terms combined in a single phrase. The following are the ranks successively obtained under this all-important system:—

T'ung Shêng 童生.—Student. The Students of each district throughout the Empire undergo a series of preliminary examinations before the Magistrate of their own district, the Prefect within whose jurisdiction they are placed, and the Literary Chancellor of the province, before qualifying for entrance at the triennial provincial competition. A certificate of merit from the District Magistrate enables the candidate for literary honours to term himself *t'ung shêng*, which may be regarded as equivalent to Student. The candidate who is ranked first on the Magistrate's list has the distinguishing title of *An Shou* 案首. A person before competing for the right to term himself *t'ung shêng* is designated, in complimentary parlance, *chün hsiu* 俊秀, which may be rendered 'man of promise.'

Hsiu Ts'ai 秀才.—Licentiate. In every second year the Literary Chancellor of each province completes a tour of his domain, holding examinations—*an lin* 按臨—at the different Prefectural cities. Candidates who are successful on these occasions obtain their first degree, and become entitled *hsiu ts'ai*, which may be rendered Licentiate. The highest on the list receives in this category, likewise, the title *an-shou*. The general literal and official designation for the *hsiu-ts'ai* class is *shêng-yüan* 生員. Two categories are formed by the division of the successful candidates into those of the 'established list,' termed *fu shêng* 附生, and those of the 'supplementary list,' or *tsêng shêng* 增生, the first class representing the number of degrees accorded by the ancient regulations, and the second those who are admitted under more recent ordinances, extending, for one reason or another, the number of degrees obtainable.

Lin Shan Shêng 廩膳生.—Salaried Licentiate. In addition to the privilege described above, a further series of advantages remain open to the licentiates who fail to obtain this position or to pass for a degree at the provincial examinations. Special examinations, granted as an act of imperial grace (see *supra*), enable a certain number of *hsiu-ts'ai* to attain the position of *ên kung-shêng* 恩貢生. An examination recurring once in twelve years gives access to the grade of the *pa kung-shêng* 拔貢生, which qualifies for admission to the metropolitan competition. Simple seniority admits a certain number of unsalaried licentiates to the grades of *fu kung-shêng* and *sui kung-shêng* 歲貢生; whilst for meritorious achievements at periodical examinations a certain number receive the title of *yu kung-shêng* 優貢生. After the degree of *fu shêng* (see *supra*) has been reached, that of *fu kung-shêng* 附貢生 or accessory Senior Licentiate may be obtained by purchase.

Chü Jên 舉人.—Provincial (*Chü Jên*) Graduate. This degree, which forms the first substantial reward of a student's ambition, is conferred at the *Hsiang Shih* (see *supra*). Lit. des. *Hsiao-lien* 孝廉. Licentiates of one or other of the primary degrees described above assemble at the provincial capital in the eighth moon of every third year (or more frequently on special occasions offering), to compete under the auspices of the Examiners appointed from Peking (see *infra*). Of some ten to twelve thousand competitors, commonly described as *shih tzŭ* 士子 or scholars, barely 300 at the utmost are admitted to degrees, the number of which is limited by regulation. The successful graduates, whose names appear upon the official list, termed the *Lung Hu Pang* 龍虎榜, are said to have *chung chü* 中舉—attained their degree—and are thenceforward known as *chü-jên*, or 'promoted-men.' Their next step is to proceed to the capital, early in the following year, to compete at the Metropolitan examination for the superior degrees (see *infra*). In addition to the actual list of graduates, about forty of the candidates, whose performances are adjudged as not inferior in merit to those of their selected competitors, are admitted to a secondary list, entitled *fu pang* 副榜—a description of *proxime accessit*—by which means their names obtain the honour of publicity although they have failed to secure the degree competed for. The highest on the list of graduates receives the honorary title of *chieh yüan* 解元; and the five individuals next in order are entitled *ching ku'ei* 經魁. For the encouragement of study, it is further provided that *chü-jên* graduates who shall have attended three successive examinations—*san k'o* 三科 —for the *chin shih* degree (see *infra*), without actually passing, shall be allowed to appear before a Commission of Selection, *Ta T'iao* 大挑, which is appointed triennially after each metropolitan examination. On this occasion, a limited number of appointments to the rank of District Magistrate, and some minor offices at Peking, together with sundry nominations to the rank of *Chiao Kuan* 教官 or district officers of instruction [see *Prov. Adm.*], are conferred upon the most approved candidates. . . . The *chü-jên* degree is also bestowed as an honorary reward upon candidates above the age of 80 or 90, who have presented themselves at repeated examinations without passing, and who comply with certain specified requirements. *Chin Shih* 進士.—Metropolitan Graduate. This degree is obtained at Peking, by triennial (or special) competition among the *chü-jên* assembled from the provinces, to the number of about six thousand, out of whom some 325 to 350 obtain a successful result. The provincial graduates, or *chü tzŭ* 舉子, after assembling at the capital early in the spring following the examinations at which they have severally passed, are required to undergo a test examination,

fu shih 覆 試, which qualifies them for admission to the *Hui Shih* 會 試, or metropolitan competition. The graduates who prove successful at this examination become entitled *kung shih* 貢 士 during the period which still intervenes between the publication of the lists and their final competition. This takes place within the precincts of the Imperial Palace itself, and is hence called *Tien Shih* 殿 試, or Palace Examination. The essays written on this occasion are scrutinized and classified by a Special Commission of Imperial Revisers, entitled *Yüeh Chüan Ta Ch'ên* 閱 卷 大 臣. According to their order of merit, as ascertained by this crowning test, the graduates now receive, usually in the proportion of about one in three, admission into the ranks of the Hanlin, or College of Scholars *par excellence*. The highest in order of merit are distinguished by various titles, as set forth below; and the remainder are classed as *chin shih* of three classes (*chia* 甲, see below). Some days after the publication of these awards, a fresh competition entitled *Ch'ao K'ao* 朝 考, or the Court Examination, is held in the Palace, a theme selected by the Emperor himself being given out for the compositions required. The graduates are subsequently admitted to audience, whereupon a certain number belonging to the second and third classes of the graduates are honoured with the title *Shu-Chi Shih*, or Bachelor of the Hanlin (see above); the remainder, as *chin shih*, receive appointments either to provincial offices, as District Magistrates in expectancy, or to minor ranks in connection with the Six Boards at Peking. *Chuang Yüan* 狀 元.—Optimus. The title conferred at the Palace Examination on the most approved scholar among the competing metropolitan graduates. The recipient of this, the highest literary award, becomes entitled to enter upon the rank of *Han-lin Yüan Hsiu Chuan* (Compiler). To have produced a *chuang yüan* is rejoiced in as a lasting honour by the district whence the fortunate candidate proceeds. *Pang Yen* 榜 眼.—Secundus. The title conferred upon the graduate ranked second in order of merit at the Palace Examination. *T'an Hua* 探 花.—Tertius. The candidate who secures this distinctive title, together with the *Pang Yen*, becomes invested with the rank of *Pien Hsiu* (Compiler, second class). The two together constitute, in company with the *Chuang Yüan*, the first class, *yi chia* 一 甲, of the year, and are designated *chin shih chi ti* 進 士 及 第. *Ch'uan Lu* 傳 臚.—Quartus. This title is bestowed upon the candidate graduating at the head of the second class, *êrh chia* 二 甲, at the Palace Examination. The remainder of this class take rank as *Shu Chi Shih* (see above). They are designated *chin-shih ch'u shên* 進 士 出 身. The designation *t'ung chin-shih ch'u shên* 同 進 士 出 身 is bestowed upon the graduates of the third and last class, of whom the highest take rank as *Shu Chi Shih* and the remainder simply as *chin shih*." "Examinations for military degrees follow precisely the same course and give access to the same degrees as those for the civil career, with the character *wu* (military) prefixed. Examinations are likewise held for Manchus qualifying as interpreters (*fan-yi* 繙 譯) in the language of their race, and who receive degrees as in the ordinary literary course."—*Mayers, Ch. Gov.*, pp. 69–74.

"The 朝 考 for the *yu-kung* is held after the 殿 考, and the candidates are examined once. Every 戌 year the *pa-kung* are examined with them, but twice. The instructorships [八 旗 教 習] are in connection with the Government schools [官 學]."—*Ch. Rev.*, x. 73.

[For the titles (*Chêng K'ao Kuan* 正 考 官, Chief Examiner, etc.) employed in connection with the Literary Examinations, see *Mayers, Ch. Gov.*, pp. 74–6.]

"*Hsiao Lien Fang Chêng* 孝 廉 方 正.—Worthies of Literature. This is a honorary title bestowed by Imperial grace on obscure scholars who are specially recommended by provincial authorities for examination and the bestowal of official rank, in conformity with ancient precedent."—*Ibid.* p. 74.

Embassies.—An "interesting event in the reign of Chuntche [Shun Chih] was the arrival at Pekin of more than one embassy from European States. The Dutch and the Russians can equally claim the honour of having had an envoy resident in the Chinese capital during the year 1656, but in neither case could the result be described as altogether satisfactory."—*Boulger, Short Hist.*, p. 130.

The recurrence of attacks upon missionaries and other foreigners "served to bring more clearly than ever before the minds of the Chinese Ministers the advisability of taking some step on their own part towards an understanding with European governments and peoples. The proposal to depute a Chinese ambassador to the West could hardly be said to be new, seeing that it had been projected after the Treaty of Nankin, and that the minister Keying had manifested some desire to be the first mandarin to serve in that novel capacity. But when the Tsungli Yamen took up the question it was decided that in this as in other matters it would be expedient to avail themselves in the first place of foreign mediation. . . . In the winter of 1867–68 Mr. Burlinghame accepted an appointment as accredited representative of the Chinese government to eleven of the principal countries of the world, and two Chinese mandarins and a certain number of Chinese students were appointed to accompany him on his tour," but on his death in 1870 the mission came to an end.—*Ibid.* pp. 326–7. Later, native ambassadors began to be sent. Both foreign and native ambassadors were lay, semi-political, semi-commercial, the foreign at first abortive, then periodical (Russian in 1727), and finally permanent (English, 1860). See *Williams, Midd. King.*, ii. chaps. 21–26.

2. *Legislative.*—The Emperor is the source of law, but is "considered as bound to rule according to the code of the land."—*Ibid.* i. 384.

"The edicts furnish almost the only exponents of the intentions of government. They present several characteristic features of the ignorant conceit and ridiculous assumptions of the Chinese, while they betray the real weakness of the authorities in the mixture of argument and command, coaxing and threatening, pervading every paragraph. According to their phraseology, there can possibly be no failure in the execution of every order; if they are once made known, the obedience of the people follows almost as a matter of course; while at the same time both the writer and the people know that most of them are not only perfunctory but nearly useless. The responsibility of the writer in a measure ceases with the promulgation of his orders, and when they reach the last in the series their efficiency has well nigh departed. Expediency is the usual guide for obedience; deceiving superiors and oppressing the people the rule of action on the part of many officials; and their orders do not more strikingly exhibit their weakness and ignorance than their mendacity and conceit. A large proportion of well-meaning officers are sensible too that all their efforts will be neutralized by the half-paid, unscrupulous retainers and clerks in the *yamêns*; and this checks their energy."—*Ibid.* i. 472.

3. *Judicial.*—"Although the Emperor is regarded as the head of this great organization, as the fly-wheel which sets other wheels of the machine in motion, he is still considered as bound to rule according to the code of the land; and when there is a well-known law, though the source of law, he is expected to follow it in his decrees."—*Ibid.* i. 384.

"The code provides that all persons having complaints and informations address themselves in the first instance to the lowest tribunal of justice in the district, from which the cognizance of the affair may be transferred to the superior tribunals. The statement of the case is made in writing, and the officer is required to act upon it immediately; if the parties are dissatisfied with the award, the judgment of the lower courts is carried up to the superior ones. No case can be carried directly to the Emperor; it must go through the Board of Punishments: old men and women, however, sometimes present petitions to him on his journeys, but such appeals seldom occur, owing to the difficulty of access. . . . The almost utter impossibility of learning the truth of the case brought before them, either from the principal parties or the witnesses, must be borne in mind when deciding upon the oppressive proceedings of the magistrates to elicit the truth. . . . Few or no civil cases are reported in the *Gazette* as being carried up to the higher courts, and probably only a small proportion of them are brought before the authorities, the rest being settled by reference. Appeals to court receive attention, and it may be inferred, too, that many of them are mentioned in the *Gazette* in order that the carefulness of the supreme government in revising the unjust decrees against the people should be known through the country. . . . At other times the wicked judges have been degraded and banished. . . . All cases are not reported in writing."—*Ibid.* i. 500–2. See also Local Gov.

"Notwithstanding the cruelty of officers to the criminals before them, they are not all to be considered as tyrants; . . . the Chinese are so prone to falsify that it is difficult to ascertain the truth, yet it must not be inferred that every sentence is a lie."—*Ibid.* i. 518.

"The greatest difficulty the Emperor finds in upholding his authority lies in the general want of integrity in the officers he employs; good laws may be made, but he has few upright agents to execute them."—*Ibid.* i. 517.

"The mass of the people show their democratic tendencies in many ways, some of them conservative and others disorganizing. They form themselves into clans, guilds, societies, professions, and communities, all of which assist them in maintaining their rights, and give a power to public opinion it would not otherwise possess. Legally, every subject is allowed access to the magistrates, secured protection from oppression, and can appeal to the higher courts, but these privileges are of little avail if he is poor or unknown. He is too deeply embued with fear and too ignorant of his rights to think of organized resistance; his mental independence has been destroyed, his search after truth paralyzed, his enterprise checked, and his whole efforts directed into two channels, viz., labor for bread and study for office. The people of a village, for instance, will not be quietly robbed of the fruits of their industry; but every individual in it may suffer multiplied insults, oppressions, and cruelties, without thinking of combining with his fellows to resist. Property is held by a tolerably secure tenure, but almost every other right and privilege is shamefully trampled on."—*Ibid.* i. 415.

"The chief security on the side of the people against an unmitigated oppression such as now exists in Turkey . . . lies as much as anywhere in their general intelligence of the true principles on which the government is founded and should be executed. With public opinion on its side the government is a strong one, but none is less able to execute its designs when it runs counter to that opinion, although those designs may be excellent and well intended. Elements of discord are found in the social system which would soon effect its ruin were they not counteracted by other influences."—*Ibid.* i. 517.

"Property is safe enough to afford assurance to honest toil that it shall generally reap the reward of its labors, but if that toil prosper beyond the usual limits, the avarice of officials and envy of neighbors easily find a multitude of contrivances to harass and impoverish the fortunate man, and the laws are not executed with such strictness as to deter them."—*Ibid.* ii. 63.

"In cases of serious accusation the clerks frequently subpœna all who are likely to be implicated, and demand a fee for liberating them when their innocence is shown. These myrmidons still fear the anger of their superiors and a recoil of the people so far as to endeavour to save appearances by hushing up the matter, and liberating those unjustly apprehended with great protestations of compassion. It may be added that, as life is not lightly taken, thieves are careful not to murder or maltreat their victims dangerously, nor do the magistrates venture to take life outright by torture, though their cruelties frequently result in death by neglect or starvation. Money and goods are what both policemen and officials want, not blood and revenge. Parties at strife with each other frequently resort to legal implication to gratify their ill-will, and take a pitiful revenge by egging on the police to pillage and vex their enemy, though they themselves profit nowise thereby." "The evils resulting from a half-paid and venal magistracy are dreadful, and the prospects of their removal very slight." Proclamations have frequently been issued by provincial governors and other high officials exhorting their subordinates to deal justly with their inferiors and attend to the faithful discharge of their duties, but without effect. "One natural consequence of such a state of society and such a perversion of justice is to render the people afraid of all contact with the officers of government and exceedingly selfish in all their intercourse. . . . It also tends to an inhuman disregard of the life of others and chills every emotion of kindness which might otherwise arise; for by making a man responsible for the acts of his neighbours, or by involving a whole village in the crimes of an individual, all sense of justice is violated. The terror of being implicated in any evil that takes place sometimes prevents the people from quenching fires until the superior authorities be first informed, and from relieving the distressed until it is often too late. Hence, too, it not unfrequently happens that a man who has had the ill fortune to be stabbed to death in the street, or who falls down from disease and dies, remains on the spot till the putrescence obliges the neighbours, for their own safety, to remove the corpse. A dead body floating down the river and washing ashore is likely to remain on the banks until it again drifts away or the authorities get it buried, for no unofficial person would voluntarily run the risk of being seen interring it. One censor reports that when he asked the people why they did not remove the loathsome object, they said: 'We always let the bodies be buried either in the bellies of fishes or devoured by the dogs; for if we inform the magistrates they are sure to make the owner of the ground buy a coffin, and the clerks and assistants distress us in a hundred ways.' The usual end of these memorials and remonstrances is that the police are ordered to behave better, the clerks commanded to abstain from implicating innocent people and retarding the course of justice, and their masters the magistrates, threatened with the Emperor's displeasure in case the grievance is not remedied; after which all goes on as before, and will go on as long as both rulers and ruled are what they are." "The working out of the principle of responsibility accounts for many things in Chinese society and jurisprudence that otherwise appear completely at variance with even common humanity. It makes an officer careless of his duties if he can shift the responsibility of failure upon his inferiors, who, at the same time, he knows can never execute his orders; it renders the people dead to the impulses of relationship, lest they become involved in what they cannot possibly control and hardly know at the time of its commission. . . . During the first war with England, fear of punishment induced many of the subordinates to commit suicide when unable to execute their orders, and the same motive impelled their superiors to avoid the wrath of the Emperor in a like fashion."—*Ibid.* i. 475–81.

"If the character of the officers, therefore, be such as has been briefly shown—open to bribery, colluding with criminals, sycophantic toward superiors, and cruel to the people; and the constituents of society present so many repulsive features—opposing clans engaged in deadly feuds, bandits scouring the country to rob, policemen joining to oppress, truth universally disregarded, selfishness the main principle of action, and almost every disorganizing element but imperfectly restrained from violent outbreaks and convulsions, it will not be expected that the regular proceedings of the courts and the execution of the laws will prove on examination to be any better than the materials of which they are composed. As civil and criminal cases are all tried by one officer, one court tries nearly all the questions which arise. A single exception is provided for in the code, wherein it is ordered that 'in cases of adultery, robbery, fraud, assaults, breach of laws concerning marriage, landed property or pecuniary contracts, or any other like offences committed by or against individuals in the military class—if any of the people are implicated or concerned, the military commanding officer and the civil magistrate shall have a concurrent jurisdiction.'"—*Ibid.* i. 499–500.

"The general commission of robbery and dakoity, and the prevalence of bands of thieves, . . . proves the weakness of the government, not the insurrectionary disposition of the people."—*Ibid.* i. 496–7.

"All officers of government are supposed to be accessible at any time, and the door of justice to be open to all who claim a hearing; and in fact, courts are held at all hours of night and day, though the regular time is from sunrise to noonday."—*Ibid.* i. 502.

"A drum is said to be placed at the inferior tribunals, as well as before the Court of Representation at Peking, which the plaintiff strikes in order to make his presence known, though from the number of hangers-on about the doors of official residences, the necessity of employing this mode of attracting notice is rare. At the gate of the governor-general's palace are placed six tablets, having appropriate inscriptions for those who have been wronged by wicked officers; for those who have suffered from thieves; for persons falsely accused; for those who have been swindled; for such as have been grieved by other parties; and lastly, for those who have secret information to impart. The people, however, are aware how useless it would be to inscribe their appeals upon these tablets; they write them out and carry them up to his excellency, or to the proper official—seldom forgetting the indispensable present. . . ." "No counsel is allowed to plead, but the written accusations, pleas, or statements required must be prepared by licensed notaries, who may also read them in court, and who, no doubt, take opportunity to explain circumstances in favour of their client. . . . Of course there is no such thing as a jury, or a chief justice stating the case to associate judges to learn their opinion; nor is anything like an oath required of the witnesses." "The presiding officer can call in others to assist him in the trial to any extent he pleases. In one Canton Court Circular it is stated that no less than sixteen officers assisted the governor-general and governor in the trial of one criminal. . . . The prisoner, or his friends for him, are allowed to appear in every step of the inquiry prior to laying the case before the Emperor, and punishment is threatened to all the magistrates through whose hands it passes if they neglect the appeal"; but the usage of the courts does not always conform to the letter of the law. "The general policy of officers is to quash cases and repress appeals, and probably they do so to a great degree by bringing extorted confessions of the accused party and the witnesses in proof of the verdict. . . . It seems to be the constant effort on the part of the officers to evade the importunities of the injured and shove by justice, and were it not owing to the perseverance of the people, a system of irremediable oppression would soon be induced. But the poor have little chance of being heard against the rich, and if they do appeal they are in most cases remanded to the second judgment of the very officer against whom they complain; and of course as this is equivalent to a refusal from the high grades to right them at all, commotions gradually grow out of it, which are managed according to the exigencies of the case by those who are likely to be involved in their responsibility. The want of an irresistible police to compel obedience has a restraining effect on the rulers, who know that Lynch law may perhaps be retaliated upon them if they exasperate the people too far. . . . Amid such enormities it is no wonder if the peaceably disposed part of the community prefer to submit in silence to petty extortions and robberies, rather than risk the loss of all by unavailing complaints." "The code contains many sections regulating the proceedings of courts, and provides heavy punishments for such officers as are guilty of illegalities or cruelty in

their decisions, but the recorded cases prove that most of these laws are dead letters. Section CCCCXVI ordains that 'after a prisoner has been tried and convicted of any offence punishable with temporary or perpetual banishment or death, he shall, in the last place, be brought before the magistrate, together with his nearest relations and family, and informed of the offence whereof he stands convicted, and of the sentence intended to be pronounced upon him in consequence; their acknowledgment of its justice or protest against its injustice, as the case may be, shall then be taken down in writing; and in every case of their refusing to admit the justice of the sentence, their protest shall be made the ground of another and more particular investigation.' All capital cases must be reviewed by the highest authorities at the metropolis and in the provinces, and a final report of the case and decision submitted to the Emperor's notice. Section CCCCXV requires that the law be quoted when deciding. The numerous wise and merciful provisions in the code for the due administration of justice only place the conduct of its authorized executives in a less excusable light, and prove how impossible it is to procure an equitable magistracy by mere legal requirements and penalties."—*Ibid.* i. 502–6.

"It is considered of great importance to be beforehand with one's adversary in filing a charge. If two men have a fight or other cause for magisterial intervention, a popular saying declares that 'he who first files his plaint has won three-tenths of the battle.'"—*Giles, Historic China*, p. 219.

"He . . . forthwith filed in the Taot'ai's court a petition, written in blood. (This is one of the last resources of a man who is otherwise unable to secure justice)."—*Ibid.* p. 223.

"Responsibility . . . always attaches to mandarins for crimes, and still more for accidents, such as fires and floods, which occur within their jurisdiction."—*Ibid.* p. 223.

"He made a public appeal for the redress of his grievances. The *ultima ratio* of a suitor with a grievance. It was once described by Mr. Davenport, when officiating as H.M. Consul at Shanghai, as follows:—'A recognised procedure among the Chinese is what is called "Han Yüan"—*i.e.*, the aggrieved suitors, with as many friends as they can gather, surround the magistrates yamên, and howl as loud as they can for days and nights. . . . Sometimes they go further, and pull down the magistrate's court-house over his ears.' The concluding sentence is a valuable contribution to our knowledge of the real relationship existing between the Chinese people and their rulers. Instances of the kind are not by any means unknown. The Hongkong *China Mail* contained only last autumn (1880) a graphic account of the struggle between the mandarins and the pork-butchers of Ch'ung-k'ing, in the province of Szechuen, relative to the imposition of an extra tax on each pig killed. The latter closed their shops, and took measures for preventing the sale of pork either by or to any person unpledged to support their cause. The military were called out, and four official pork-stalls were opened, but the meat exposed there rotted for want of purchasers. Ultimately, 'the pork-butchers gained the day, . . . and the proper guarantees were given not to raise the tax.' The Chinese are the most law-abiding people on the face of the globe; but the laws by which they will abide must be laws of which they approve. Another case was given in the *China Mail* during July, 1880."—*Ibid.* pp. 224-5.

"Prisoners are often to be seen outside their prisons, employed either in some handicraft or in begging from the passers-by, and secured as a rule by fetters or a chain. But if good security is forthcoming, they are allowed, when merely awaiting trial, to go free. Bail is personal in China. If the bailee absconds the bailer has to take his place."—*Ibid.* p. 229.

"Probably the number of persons who suffer by the sword of the executioner is not one-half of those who die from the effects of torture and privations in prisons. Not much is known of the internal arrangement of the *hells*, as prisons are called; they seem to be managed with a degree of kindness and attention to the comfort of the prisoners, so far as the intentions of government are concerned, but the cruelties of the turnkeys and older prisoners to exact money from the new comers are terrible. . . . Since it is the practice of distant magistrates to send their worst prisoners up to the capital, these jails are not large enough, and jail distempers arise from over-crowding," numerous deaths being the result. "The prisons are arranged somewhat on the plan of a large stable, having an open central court occupying nearly one-fourth of the area, and small cribs or stalls covered by a roof extending nearly around it, so contrived that each company of prisoners shall be separated from its neighbors on either side night and day, though more by night than by day. The prisoners cook for themselves in the court, and are secured by manacles and gyves, and a chain joining the hands to the neck; one hand is liberated in the daytime in order to allow them to take care of themselves. Heinous criminals are more heavily ironed, and those in the prisons attached to the judge's office are worse treated than the others. Each criminal should receive a daily ration of two pounds of rice, and about two cents with which to buy fuel, but the jailer starves them on half this allowance if they are unable to fee him; clothing is also scantily provided, but those who have money can procure almost every convenience. Each crib full of criminals is under the control of a turnkey, who with a few old offenders spends much time torturing newly arrived persons to force money from them, by which many lose their lives, and all suffer far more in this manner than they do from the officers of government."—*Williams, Midd. King.*, i. 514–5.

[Li T'ing-i (1723–32), whilst President of the Board of Punishments, introduced many measures, among which was the separation of men and women, and of serious and petty criminals, in all prisons.]—*Giles, Bio. Dic.*, p. 469.

"There are four prisons in the city [of Canton], all of them large establishments."—*Williams, Midd. King.*, i. 167.

"Sometimes the officer is unable from press of business to attend to a case, and confines all the principals and witnesses concerned until he can examine them, but the government takes no means to provide for them during the interval, and many of the poorer ones die. No security or bail is obtainable on the word of a witness or his friends, so that if unable to fee the jailers he is in nearly as bad a case as the criminal. Extending bail to an accused criminal is nearly unknown, but female prisoners are put in charge of their husbands or parents, who are held responsible for their appearance. The constant succession of criminals in the provincial head prison renders the posts of jailers and turnkeys very lucrative."—*Ibid.* i. 514–5.

"The most startling sign of poverty is the readiness with which a condemned criminal can obtain a substitute, who will give his life for the sum needed to support his family."—*Johnson, Or. Rel.—China*, p. 31.

"The Assistant 'police-magistrates' [*Mayers*, No. 344 坊官] of Peking are distinctly stated in the *Gazette* to have no criminal jurisdiction [不理刑]."—*Ch. Rev.*, xiv. 51.

"The duel is unknown."—*Johnson, Or. Rel.—China*, p. 34.

1851–62. "The corruption of the public service had gradually alienated the sympathies of the people. Justice and probity had for a time been banished from the civil service of China. The example of the few men of honour and capacity served but to bring into more prominent relief the faults of the whole class. Justice was nowhere to be found; the verdict was sold to the highest bidder. The guilty, if well provided in worldly goods, escaped scot-free; the poor suffered for their own frailties as well as the crimes of wealthier offenders. There was seen the far from uncommon case of individuals sentenced to death obtaining substitutes for the capital punishment. Offices were sold to men who had never passed an examination, and who were wholly illiterate, and the sole value of office was as the means of extortion. The nation was heavily taxed, but the taxes to the state were only the smaller part of the sums wrung from the people of the Middle Kingdom. How was honour, or a sense of duty, to be expected from men who knew that their term of office must be short, and who had to receive their purchase money and the anticipated profit before their post was sold again to some fresh and possibly higher bidder? The officials waxed rich on ill-gotten wealth, and a few individuals accumulated enormous fortunes, while the government sank lower and lower in the estimation of the people. It lost also in efficiency and striking power."—*Boulger, Short Hist.*, pp. 236–7.

[Owing to the unsatisfactory state of justicial administration foreigners were extraterritorialized by Treaty.] "The relations between the countries [Great Britain and China] were gradually settling down on a satisfactory basis, and the appointment of a Supreme Court for China and Japan at Shanghai . . . promised to enforce obedience to the law among even the unsettled adventurers of different nationalities left by the conclusion of the Taeping rebellion and the cessation of piracy without a profitable pursuit."—*Ibid.* p. 315.

4. *Revenue and Taxation.*—"If the population of the empire is not easily ascertained, a satisfactory account of the public revenue and expenditures is still more difficult to obtain. . . . The market value of the grain, silk, and other products in which a large proportion of the taxes are paid, varies from year to year; and although this does not materially affect the government which receives these articles, it complicates the subject very much when [one is] attempting to ascertain the real taxation. Statistics on these subjects are only of recent date in Europe, and should not yet be looked for in China, drawn up with much regard to truth. The central government requires each province to support itself, and furnish a certain surplusage for the maintenance of the Emperor and his court; but it is well known that His Majesty is continually embarrassed for the want of funds, and that the provinces do not all supply enough revenue to meet their own outlays."—*Williams, Midd. King.*, i. 288–9.

[Taxation was light, the average being 3 francs per head, annually, while in France it is 99 or 100 (*Simon, Cité Chinoise*, p. 6). Other estimates are 60 cents and 90 cents. "All agree in placing the total amount of revenue below that of any European government in proportion to the population" (*Williams, Midd. King.*, i. 290, 292).]

"The resources of the Empire are—[the land tax], the customs revenues, mining royalties, and the salt monopoly. The Emperor's private revenues, which constitute the Civil list, are furnished by a part of the salt-tax, by his flocks in Mongolia, and by the tribute from vassal States."—*Simon, Cite Chinoise*, p. 32, note.

"The extraordinary sources of revenue which are resorted to in time of war or bad harvests, are sale of office and honors, temporary increase of duties, and demands for contributions from wealthy merchants and landholders. The first is the most fruitful source, and may be regarded rather as a permanent than a temporary expediency employed to make up deficiencies. The mines of gold and silver, pearl fisheries in Manchuria and elsewhere, precious stones brought from Ali and Khoten, and other localities, furnish several millions." "The expenditures, almost every year, exceed the revenue, but how the deficit is supplied does not clearly appear: it has been sometimes drawn from the rich by force, at other times made good by paltering with the currency, as in 1852–55, and again by reducing rations and salaries."—*Williams, Midd. King.*, i. 292. Taxes have also at various times been imposed on many other kinds of articles: see *Wên hsien t'ung k'ao hsiang chieh, c.* 5 *hsia*, etc.

"The amounts given by various authors as the revenue of China at different times, are so discordant, that a single glance shows that they were obtained from partial or incomplete returns, or else refer only to the surplusage sent to the capital. De Guignes remarks very truly, that the Chinese are so fully persuaded of the riches, power, and resources of their country, hat a foreigner is likely to receive different accounts from every native he asks; but there appears to be no good reason why the government should falsify or abridge their fiscal accounts."—*Williams, Midd. King.*, i. 289.

[The following estimates have been made at various times:—1587 (Trigault), taels 20,000,000; 1655 (Nieuhoff), taels 108,000,000; 1667 (Magalhaens), $20,423,962 ("treasures of the Emperor"), (Le Comte), $22,000,000; both the latter estimate the revenue from rice, silk, etc., at $30,000,000, making the total up to K'ang Hsi's death (1721) between $50,000,000 and $60,000,000; 1777 (De Guignes), taels 96,013,400; 1796 (Barrow), taels 198,000,000; (Sir G. Staunton), $330,000,000, of which $60,000,000 only was transmitted to Peking; (Medhurst), $200,958,694; 1823 (a Graduate), taels 74,461,633. Since part of the revenue was placed under foreign management, an estimate, made from the land-tax, li-kin, import and export duties collected by foreigners, import and export duties on native commerce, salt gabelle, sale of offices and degrees, sundries, and tax paid in produce, puts the total at taels 79,500,000.]—*Ibid.* i. 289–92.

[The expenditure on the army, navy, civil service, canals, forts, etc., left according to the estimates, surpluses, sometimes of 20,000,000 of taels; but "the outlays for quelling insurrections and transporting troops, deficiency from bad harvests, defalcation of officers, payments to the tribes and princes in Mongolia and Ili, and other unusual demands" more than exceed the surplus.]—*Ibid.* i. 292–3.

"The customs and excise are under the management of different grades of officers according to the importance of their posts. The transit duties levied at the excise stations placed in every town are collected by officers acting under the local authorities, and have nothing to do with the collection of maritime duties. This tax, called *li-kin* [*li-chin*], or 'a cash a catty,' has lately been greatly increased, and the natural result has been to destroy the trade it preyed on, or divert it to other channels. The foreign merchants and officers have, too, protested against its imposition, seeing that their trade was checked."—*Ibid.* i. 444. See *infra.*

"Indefatigable in government, he [K'ang Hsi] kept a careful watch on his Ministers, his love for the people leading him to prefer economy to taxation. He was personally frugal, yet on public works he would lavish large sums."—*Giles, Hist. of Ch. Lit.*, p. 385.

"Cruelty to individual prisoners does not produce so much disturbance to the general peace of the community as the forcible attempts of officers to collect taxes. The people have the impression that their rulers exact more than is legal, and consequently consider opposition to the demands of the tax-gatherer as somewhat justifiable, which compels, of course, more stringent measures on the part of the authorities, whose station depends not a little on their punctuality in remitting the taxes. Bad harvests, floods, or other public calamities render the people still more disinclined to pay the assessments."—*Williams, Midd. King.*, i. 498.

"In the 2nd year of the reign K'ang Hsi [1663] the rush-tax [a tax on reed lands near river banks] in the Ts'ung Ming District which had recently been increased was abolished." In 1671 "the rush and land taxes in Chiang Nan, Chiang Hsi, Hu Kuang, and other provinces were allowed to be managed by the local authorities."—*Wên hsien t'ung k'ao hsiang chieh, c.* 5 *hsia, Chêng ch'üeh k'ao hsia*, p. 9*a*.

[In the 18th year measures were taken to prevent peculation by officials receiving taxes, etc.—*Ibid. c.* 1 *shang, T'ien fu k'ao shang*, p. 3*a*.]

"The financial condition of China was then [1708, etc.] so prosperous that the Emperor, in the fulness of his heart, took to remitting the whole land-tax from time to time, each province taking its benefit in turn. The total cultivation had reached about 110,000,000 acres; that is, counting bad and good land together, land-tax upon the total area (possibly 150,000,000 or 200,000,000 acres) upon which it was due from 24,600,000 householders, was gathered in—*calculated at* the rate of so much an acre of good land. The Emperor determined that this sum thus derived (not quite 30,000,000 taels, or ounces of silver) was a sufficient charge upon the land; arguing that, no matter how the population might increase in the future, the same land, now for the most practical purposes all of it cultivated, would in the same future have to feed two, three, or even ten persons, instead of the one as now; which meant that the struggle for life would be greater, and each individual's power to pay taxes would therefore proportionably decrease. Accordingly, from the year 1713 the returns of 'adults and mouths' was accompanied by a subsidiary return of 'free ones.'"—*Parker, China*, pp. 189–90.

"The land tax is the principal resource of the revenue in rural districts, and this is well understood by all parties, so that there is less room for exactions. The land tax is from 1½ to 10 cents a *mao* (or from 10 to 66 cents an acre), according to the quality of the land, and difficulty of tillage; taking the average at 25 cents an acre, the income from this source would be upward of 150 millions of dollars. The clerks, constables, lictors, and underlings of the courts and prisons, are the 'claws' of their superiors, as the Chinese aptly call them, and perform most of their extortions, and are correspondingly odious to the people. In towns and trading places, it is easier for the officers to exact in various ways from wealthy people, than in the country, where rich people often hire bodies of retainers to defy the police, and practice extortion and robbery themselves. Like other Asiatic governments, China suffers from the consequences of bribery, peculation, extortion, and poorly paid officers, but she has no powerful aristocracy to retain the money thus squeezed out of the people, and ere long it finds its way out of the hands of Emperors and ministers back into the mass of the people. The Chinese believe, however, that the Emperor annually remits such amounts as he is able to collect into Mukden, in time of extremity; but latterly he has not been able to do so at all, and probably never sent as much to that city as the popular ideas imagine. The sum applied to filling the granaries is much larger, but this popular provision in case of need is really a light draft upon the resources of the country, as it is usually managed. In Canton, there are only fourteen buildings appropriated to this purpose, few of them more than 30 feet square, and none of them full."—*Williams, Midd. King.*, i. 288–95.

"When, in 1712, the land-tax was made unchangeable for ever, Sz Ch'wan had (with the exception of the four half-foreign and pauper provinces, Kan Suh, Yün Nan, Kwei Chou, and Kwang Si) the lowest land-tax of all—under 700,000 taels, against an average of 1,700,000 for the other provinces . . . [but owing to great increase in population] whilst in other provinces no attempt has ever been made to surcharge the land-tax (except in the way of ordinary peculation), in Sz Ch'wan for many years past one 'fine' and one 'benevolence' have been annually levied on landowners in proportion to their land-tax: in other words, the official land-tax alone has been more than quadrupled: for these two items, levied only in the richer districts, amount to considerably over 3,000,000 taels a year."—*Parker, China*, pp. 193–4.

1723–36. "The taxes in some of the most important cities and wealthiest districts had to be greatly reduced [on account of the famine] and the resources of the Exchequer were severely strained." The famine was followed, in 1730, by a terrific earthquake. "The loss was incalculable, and it has been stated that Yung Ching expended fifteen millions sterling in repairing the damage and allaying the public misfortune. Notwithstanding these national calamities the population increased and some provinces threatened to outgrow the production of rice."—*Boulger, Short Hist.*, pp. 157–8.

"In the 8th year [1730] of Yung Chêng the law for taxing [Ssŭ] Ch'uan tea was settled. An imperial decree was received on the method by which Ssŭ Ch'uan tea paid the tax by the garden or by the tree. Now tea-trees differed in size, and tea-gardens were some broad and some narrow. If the tax was collected on the garden or tree it was not fair—it would be juster if the tax were paid by weight."—*Wên hsien t'ung k'ao hsiang chieh, c.* 5 *hsia, Chêng ch'üeh k'ao hsia*, p. 6*a*.

"Up to 1734 the Board of Revenue's annual budget consisted, on the debit side, of a statement accounting for receipts of:—1. Land-tax in ounces of silver. 2. Grain-tax in hundred-weights of cereals. 3. Straw, grass, etc., in bundles. 4. Salt produced in 'drafts' (quarters) for retailing. Salt dues on above in taels (½ tael per draft). 6. Tea in 'drafts' (quarters) apparently for export. 7. Copper cash coined from Government copper. At the beginning of the dynasty the total revenue

receipts in money or bullion were under 15,000,000 taels, and in 1656 under 20,000,000. At the same time, the Emperor has left it on record that he was well aware enormous fortunes were made out of the provinces by his conquering generals. In spite of expensive wars, remissions of taxes, and imperial visits or costly tours of inspection, the average expenditure was so much below average receipts that for over half a century (1740–90) there was a balance of 60,000,000 or 70,000,000 taels always in hand. It must also be remembered that the international gold value of the silver tael was then nearer eight shillings than the present three shillings, and its local purchasing power was also much greater than at present. . . . During this halcyon period, the eighteenth century, the regular receipts may be roughly put down at 40,000,000, and the regular expenditure at 30,000,000 taels; the accumulated balance was only occasionally drawn upon when the annual surpluses were unequal to special demands; but these annual surpluses usually covered the exceptional expenses, just like the 'free resources' of Russia are always at hand (in theory at least) to defray unlooked-for charges. But every now and then, under special stress, the sale of titles or office was temporarily resorted to, in order to ease the money market. The following is a specimen of a genuine pre-Taiping budget:—

Receipts.

Reformed land-tax	29,410,000
Profits on salt	5,745,000
Customs [very little foreign]	5,415,000
Sale of office	3,000,000
Tea, fish, rushes, mining	322,000
Transfer fees...	190,000
Octroi and miscellaneous	858,000
	44,940,000
Less sale of office (exceptional)	3,000,000
Total ordinary cash receipts (taels) ...	41,940,000
Hundredweights of grain received (value from Tl. 1 to Tls. 2)	4,841,000
Total receipts	46,781,000

"All the above revenue seems to have gone either actually to Peking, or (indirectly thither) as pay to the central and provincial armies; or to officials; or to services connected with Peking and its armies, such as posts, grain-boats, or mints; or to administrations of other matters associated with the Peking interests, such as repairs to the Canal, to the Peking rivers, the Hwai dykes, or the Yellow river." "Out of a total expenditure of 31,000,000 taels, only one two-hundredth part goes in any way directly to the public, and even this trivial sum of 140,000 taels for 'educational establishments' probably refers to Peking official Colleges, or Manchu schools." "The following is a condensed specimen . . . of a genuine pre-Taiping expenditure sheet:—

Army and army interests	19,599,100
Salaries, allowances	4,554,700
Yellow River	3,800,000
Posts and boats	2,120,000
Palaces, princes, eunuchs, &c.	1,309,000
	31,382,800
Education	140,000
	31,522,800

"As the number of the soldiers included in the above pay total is 800,000, I presume that the 100,000 or so of bannermen at Peking would absorb between 2,000,000 and 3,000,000 taels, whilst the 100,000,000 bannermen in the provinces, *plus* the 600,000 Chinese provincial troops would require from 16,000,000 to 17,000,000 taels."—*Parker, China*, pp. 196–8.

"The salaries of officers, for some reason, are placed so low as to prove that the legal allowances were really the nominal incomes, and the sums set against their names in the *Red Book* as *yang tien*, or anti-extortion perquisites (lit., 'nourishing frugality'), are the salaries. That of a governor-general is from 15,000 to 25,000 taels for the latter, and only 180 or 200 taels for the legal salary; a governor gets 15,000 when he is alone, and 10,000 or 12,000 when under a governor-general; a treasurer from 4,500 to 10,000; a judge from 3,000 to 8,000; a prefect from 2,000 to 4,500; district magistrates from 700 to 1,000, according to the onerousness of the post, an intendent from 3,000 to 4,500; a literary chancellor from 2,000 to 5,000; and military men from 4,000 taels down to 100 or 150 per annum. The perquisites of the highest and lowest officers are disproportionate, for the people prefer to lay their important cases before the highest courts at once, in order to avoid the expense of passing through those of a lower grade. The personal disposition of the functionary modifies the exactions he makes upon the people so much, that no guess can be made as to the amount."—*Williams, Midd. King.*, i. 293–4.

[In 1758, a tax on broker's hongs in the Kuang and other districts was levied. The hongs were classed as superior, medium, and inferior, paying 2 taels, 1 tael, and half a tael respectively, the amount being reduced in "secluded towns and villages."]—*Wên hsien t'ung k'ao hsiang chieh, c.* 5 *hsia, Chêng ch'üeh k'ao hsia*, p. 10*a*.

"One of the first reforms instituted by the Emperor Taoukwang was to cut down the enormous palace expenses, which his father had allowed to increase to a high point, and to banish from the Imperial city all persons who could not give some valid justification for their being allowed to remain. . . . He also put a stop to the annual visits to Jehol and to the costly hunting establishment there, which entailed a great waste of public funds. The money thus saved was much wanted for various national requirements, and the sufferings caused by flood and famine were alleviated out of these palace savings."—*Boulger, Short Hist.*, p. 197.

"In 1834 there was a deficit of Tls. 34,000,000," owing to the risings in Kashgaria, Hainan, Formosa, and Kuangtung.—*Giles, Bio. Dic.*, p. 716.

"Even in the good old times of comparative solvency previous to the Japanese war, the expenditure on armies, navies, and things connected with them, had risen within a century from 19,000,000 to 38,000,000 taels."—*Parker, China*, p. 200, and see pp. 201–2.

Out of foreign trade, "and of the home or coast trade in foreign or Chinese steamers, which is equal in volume to over once and a half the total of the foreign trade, the Chinese Government in 1880 derived a revenue of 14,250,000 taels."—*Ibid.* p. 132.

"The amount of tribute rice sent to Peking from—

Kiangsu Province is 696,000 tons of 640 catties,						or 974,400 peculs.
Chehkiang	„	„	445,000	„	„	„ 633,000 „
Kiangsi	„	„	80,000	„	„	„ 112,000 „
Hupeh	„	„	50,000	„	„	„ 70,000 „
						1,789,400 „"

—*Williams, Midd. King.*, ii. 5, note.

"Four provinces out of the eighteen require very heavy subsidies to get along at all, and these subsidies practically cover the item 'Frontier armies to keep in check the Russians and the French,' who threaten the existence of these four provinces. Two rich provinces (Chih Li and Kiang Su) also receive subsidies from other provinces not so rich; not because they themselves are too poor to pay all, but because in the shape of arsenals, navies, or other expensive organizations they undertake, directly or indirectly, part of the defence of other provinces, which defence those provinces used once to undertake for themselves."—*Parker, China*, pp. 202–3.

"Things would . . . not be so very bad, in spite of parlous times, if all the receipts were paid, in one currency, into one central chest or account . . .; and if all payments were drawn in one currency from this one chest, and remitted in one way; but in the first place, all provinces have two main currencies of pure silver (several 'touches') and copper cash (several qualities), the relation between which two differs in each town every day. Besides this, each province has its own 'touch' and 'weight' of a silver ounce; and some provinces use dollars, chopped and unchopped, by weight or by piece, as well as pure silver; and the dollar exchange varies daily locally and centrally in regard to both copper cash and silver. Even this difficulty, which involves an enormous waste of time and energy, and opens the door to innumerable and inscrutable 'squeezes,' might be philosophically ignored if receipts and disbursements were lumped in one account. . . . But the Board, which is as corrupt and conservative as the provinces, goes about its business in a very hand-to-mouth, rough-and-tumble sort of way. Instead of saying: 'Your receipts are 5,000,000, and your disbursements 4,900,000; send 100,000 to the balance chest,'" it causes confusion by apportioning various sums to various payments, "each viceroy or governor disputes every new demand, and it is quite understood that some appropriations are intended to be more serious than others." "There are many other absurd results of this-rule-of-thumb system. Province A receives subsidies from province B but, itself owing others to province C, pays B on behalf of C. Thus there are two freights to pay, and two losses on exchange. Sometimes A may be directed even to pay a subsidy to a province B, which already pays one to province A. Funds which might easily be sent by draft are usually despatched in hollowed-out logs of wood, with a guard of soldiers as escort, accompanied by carts, fighting "bullies," and a commissioned officer. Even when sent by draft, there is a charge of 2 or 3 per cent. for remitting, and a commissioned officer is sent to carry the draft. . . . The extraordinary care and punctuality exacted in matters of form, duty, or national honour are only equalled by the shameless peculation and callous waste of time and money which prevail in personal matters connected with the performance of the same public duty. Officers of high rank, who are known to make 30,000, or 40,000 taels a year out of their posts, gravely work out their balances to the thousand-millionth part of an ounce, forgetting that (even if the clerk's salary were only sixpence a day) the time occupied in counting and subtracting each line of figures would cover, ten thousand times over, the clerk's salary rate per minute. In a word, the whole Chinese financial system is rotten to the core; childish and incompetent."—*Ibid.* pp. 203–6.

"The areas from which a revenue is derived from salt do not entirely correspond with the political subdivisions of the Empire into groups of provinces. We have the Valley of the Canton River, the Old Region of the Northern Yüeh Kingdoms, the Old Kingdoms of Wu and Ch'u, all supplied with sea-salt, extracted and prepared in different ways, according to the natural facilities at hand in each producing place. Then we have the various kinds of well-salt, with or without fuel in the shape of gas, which supply the western and mountainous parts of China, broadly corresponding to the ancient Kingdoms of Shuh, Tien, and K'ien. The lake-salt of the desert competes with the pond-salt of Shan Si for the service of what may roughly be styled the mixed Tartar-Chinese regions. Finally, there are the primitive reed-flats of the north, which serve the needs of the greater part of Old China. These administrative areas will be found to correspond in a general sense with the different stages of Chinese conquest, and with the spread of Chinese influence."—*Ibid.* p. 209.

[For the fiscal organization of the various "salt" areas, see *Ibid.* pp. 210–26.]

[The excise from salt in the various districts is stated to be:—Kuang Tung, taels 1,000,000; Fuh Kien 500,000; Chêh Kiang, 1,000,000; Sz Ch'wan, 2,000,000; Yün Nan, 500,000; Shan Tung, 400,000; Chih Li, 500,000; and Shan Si, 500,000.]—*Ibid.* pp. 210–26.

[The number of subordinate salt officers employed in each province depends upon the stage at which the salt leaves official hands to pass through middlemen to the consumers.]—*Ibid.* p. 211.

[A great portion of Kiang Su is very lightly taxed, owing to the brackishness of its soil and its inability to grow other crops than rushes.]—*Ibid.* p. 214.

"At the beginning of the Manchu dynasty . . . the satrap Wu San-kwei was allowed to increase the dues [on salt] for a time in order to pay his Yün Nan troops; and in our own days the Panthay Mussulmans held profitable possession in their turn."—*Ibid.* p. 220.

Mongolia "produces no revenue to the Central Government of any kind, salt or otherwise."—*Ibid.* p. 221.

"The Manchus merged the salt dues in some districts [in the Ho-tung area] into the land-tax, so that wherever this took place the people became entitled to free salt."—*Ibid.* p. 226.

Shan Tung "consumes not one pound of any salt but its own. The trade is divided into two branches, called respectively the 'warrant system' and the 'north and south freights,' the latter being half in official hands and half in mercantile, the two working together."—*Ibid.* p. 223.

"The idea of this now notorious tax [likin] is repeatedly said to have been conceived in 1849–51 by the *taotai* Yao, then engaged upon certain administrative reform schemes, and his original idea was only to tax tea and salt. But the first mention I can find of likin in standard records is towards the end of 1852, when, during the Great Rebellion, ten provinces were called upon to raise extra funds, and Li Hwei, the Governor of Shan Tung, instituted a *lit'ou*, to be contributed by traders. But he at once found that the expenses of collection were barely covered by the receipts. Both the above compound words practically mean a 'percentage,' or rather 'per *mill*age,' as it is reckoned on thousands; not necessarily one, but two or three per *mille*. The Governor Hu Lin-yih at Hankow about this time instituted such a charge in his province in order to pay the troops operating there against the Taipings. The next thing heard of it is in the spring of 1854, when the Governor-General of the Two Kiang reported the success of the *liküen*, or per *mille* 'contribution,' in certain tracts drained by what is known as the Inner Lower River (north of and parallel with the Yang-tsze, between the Canal and the sea), and suggested its extension to other provinces. In 1855 there were already complaints of extortion at the dozen or so of stations established one after the other below Yangchow on the Yang-tsze River. In Kan Suh province the new levy proved so full of abuses that it was at once suspended; but general regulations for the empire were none the less drawn up by the Cabinet Council in that year, and the Board of Revenue was officially charged with the duty of promulgating them and exercising general supervision. Thus the tax is an imperial one."—*Ibid.* pp. 227–8.

"In the summer of 1856 the late Marquis Tsêng's celebrated father, Tsêng Kwoh-fan, then in the field against the Taipings, applied unsuccessfully for permission to devote all or a part of the *likin* collected at Shanghai to the support of the armies operating against the rebels in Kiang Si; it was decided that the presence of foreigners at Shanghai was an insuperable difficulty, and that, in any case, Kiang Su had a prior claim over Kiang Si. In the absence of clearer language, it seems clear that at this stage the Chinese saw full well how far the common-sense interpretation of the Nanking Treaty was an obstacle, and that they would never have dared to place a *likin* on foreign goods had not our own boneless policy stiffened them up to it. The following year, on the recommendation of the Nanking Viceroy Iliang, the Emperor decided against the idea of levying a likin over and above the duty on tobacco, on the ground that traders would be liable to vexatious interference at every place they passed. The levy is here described as an 'unfortunate necessity'; so that it is plain that from the beginning the Chinese recognised its unconstitutional nature. In 1858 the Governor of Ho Nan reported the progress in his jurisdiction of the new idea, and was warned not to allow any 'undue harassing' of the persons charged with the tax. Meanwhile the Governor of Hu Nan signified his desire to stop the further levy of *likin* in his province, as being found injurious to trade: the Emperor's answer was ungraciously evasive: 'I have no doubt you understand what is right more than most of them: you are no fool.' The Nanking Viceroy Ho Kwei, who had expressed doubts about the wisdom of giving encouragements for 'contributions' charged upon foreign goods at Shanghai, 'in which there might be contraband,' was told by the Emperor not to make too much fuss about imaginary difficulties, but to give the usual rewards;—in other words to sell titles at so much per lump sum collected; which confirms the notion conveyed by the word *küen*, that the levy was nominally at first a voluntary gift. Mention is made at the same time of *likin* paid at Taku by Canton and Foochow junks entering the Tientsin River, and of *likin* on salt at Tientsin for Sengkolints'in's ('Sam Collinson's') army. In 1859 *likin* was newly established at Chefoo, it having been found that the various junks were beginning to go there in order to evade the charges at Tientsin. Orders were next issued to charge *likin* on native as well as on Indian opium in the interior, and the *likin* per pecul on foreign opium was fixed at Tls. 20, in addition to the Tls. 30 import duty; but the local officials were not allowed to collect the former. It does not here appear who collected the latter, but I suppose the embryo of the Foreign Customs, either under Mr. Wade or Mr. H. N. Lay [see *infra*]. At all events, it is quite clear that we gave ourselves away in the Treaty of 1858. At this time allusion is made to *likin* on native opium grown in Yün Nan, 'where foreign opium scarcely exists.' In 1860 a collection upon trading carts and bullion caravans was authorized at the Shan-hai Kwan—the gate to Manchuria—based on the same rules as that collection made outside the Fak'u Gate of Mukden. Li Han-chang was entrusted with the collection of *likin* in Kiang Si, where the army of Liu K'un-yih was then operating successfully against the rebels. Chungking *likin* to the amount of Tls. 10,000 was urgently called for as a military aid from Sz Ch'wan. In 1861 efforts were made to keep open the main Chêh Kiang roads, then harassed by Taipings, so as to facilitate the collection of *likin* from passing traders. The belated *likin* accounts of Kwang Si were also called for, and orders were given to rearrange the multifarious *likin* charges in Kiang Nan."—*Ibid.* pp. 227–30. For information as to *likin* in each province see *Ibid.* pp. 233–242, and *Ch. Rev.*, xi. 263.

1880. "The Viceroy *Ting*, in a recent *Peking Gazette*, mentions that the celebrated salt-wells at Tsz-lui-Ching were discovered in the reign of 太和 of the 晉 dynasty. He adds that the *li-kin* revenue derived thence amounts to over a million taels a year. As the *likin* is ⅓ of the cost price, the (nominal official) value of the salt would be over Tls. 3,000,000, and as the selling price is usually at least twice the cost price plus *likin*, the best possible nominal selling value would be Tls. 6,000,000 a year for these wells alone; the actual value may be imagined."—*Ibid.* xi. 262.

"Since 1861, during the forty years' nominal reign of the two boy emperors under the tutelage of Chinese Catherine No. 3, things have gone from bad to worse."—*Parker, China*, p. 230.

"Not one cent. of anything Peking can get hold of is ever voluntarily given up by Peking to any person for any purpose except what concerns, directly or indirectly, the interests of Peking."—*Ibid.* p. 231.

"The increased intercourse with Europeans not merely led to greater diplomatic confidence and to the extension of trade, but it also induced many foreigners to offer their services and assistance to the Peking government during the embarrassment arising from internal dissension. . . . Already the suggestion had been brought forward in more than one form for the employment of foreigners, with the view of increasing the resources of the Government by calling in the assistance of the very agency which had reduced them. A precedent had been established for this at an earlier period . . . by the appointment of Mr. Horatio N. Lay to direct and assist the

local authorities in the collection of Customs in the Shanghai district."—*Boulger, Short Hist.*, p. 311.

[For foreign assistance in establishing the Chinese Navy, see MILITARY.]

"The Foreign Customs, of course, interfered greatly with the development of the native collectorates, which were always regarded as the great plums of Palace favour; and if the Hoppo of Canton—to take one as an example—could not recoup the million or so of dollars he had paid for his post, how could he send a regular stream of gold watches and chocolate creams to his patrons of the Seraglio? Not only so; the Taipings had ravaged the greater part of the country, and the rebellion had seriously reduced the yield of the land-tax. If the *hien* had no longer any 'superfluity' on the land-tax, how was he to grease the prefect's palm, the prefect the *taotai's*, the *taotai* the treasurer's and the judge's, and so on up to the Governor, the Viceroy, the Board, and the eunuchs, not to say the Emperor and the Empress-Dowager?"—*Parker, China*, p. 231.

"The working revenue or expenditure of the provinces, which of course was never reported in detail, and never appeared even locally on paper in the shape of a budget, was in real fact somewhat as follows:—1,300 *hien* rulers would have to net on the average at least 10,000 taels a year, over and above all allowances, in order to make their own fortunes and those of their superiors. The 'allowances and salaries' issued by the Emperor were really held back as security, and very often quietly peculated by the *heins'* superiors. These *hien* would also have to spend on the average at least another 10,000 taels a year in order to entertain passing officials of rank, pay the cost of their own maintenance (including police), the salaries of secretaries, &c. Of course, some *hien* secretaries would have their tens of thousands, whilst others would only have their hundreds of taels: I only speak of averages. The various Customs monopolists would also require 5,000,000 taels a year for their own fortunes, and to defray the cost of presents to the fisc at Peking; scarcely any of the Customs receipts went to the *ærarium*, whether local or central. In other words, the 45 or 46,000,000 of official revenue must be at least doubled if we are to get even approximately at the first instalment only of what was really extracted as actual working revenue from the popular bed-rock in a regular way. And all this, again, is quite apart from the irregular tyranny, bribery, peculation, and extortion by special inquisitors, military men, the rapacity of tax-collectors, police, and so on. Anything done for the public good, such as road-making, bridge-repairing, sanitation, charitable establishments, municipal police, local schools, feasts, theatricals, lighting, police—in fact everything except what concerns the Emperor and his service—was, and is defrayed by local subscriptions or popular rates, municipally or rurally imposed, over and above the imperial and official taxes levied directly or indirectly, . . . in the name of the central or local government."—*Ibid.* pp. 198–200.

"In 1826, the sale [of honours] produced about six millions of taels, and was continued at intervals during the three following years."—*Williams, Midd. King.*, i. 566–9.

"Peking and the provinces are, though competing rivals, still one great 'trust' or 'combine' for all matters connected with the great national industry of raising the wind. A *hien* to-day may be a secretary of state to-morrow. The mandarins are the skilled 'hands' in a big co-operative scheme, and they will either change the foreman or strike, unless reasonable compromises are made with them. Moreover, the 'boss' himself accepts presents, not to mention his mother and his wife; and, above all, the gang of hermaphrodite servants in the household. Finally, the people themselves are 'in it,' for China is purely republican, and any industrious man but a barber or a comedian may become a viceroy. . . . Yet there have not been lacking officials who have taken a higher view. In 1879, when the national conscience began to wake up, and the sale of office was abolished in view of renascent prosperity, it was seriously proposed to abolish *likin* too. However, Yellow River and other disasters and complications soon drove the Government once more to the sale of titles, and sometimes of real office; so *likin* had perforce to remain," and "has now magnified its net and narrowed its meshes so that almost everything in the Empire is taxed which is in transit, either inwards or outwards, by land or by water."—*Parker, China*, p. 232.

"When a coffle of camels enters Peking, laden with coal or lime, it is the usage to pay a slight tax or octroi to the gate, but this tax is so lenient that the price of coal is about the same within the walls as in the villages around. There cannot therefore be any serious exactions from the authorities on this branch of industry."—*N. and Q. on C. and J.*, ii. 99.

1860. "It has been decided in Peking [probably referring to a decision by the Board of Revenue, which had the oversight of this Department] that those who open coal mines in the Western Hills . . . need pay no taxes; but when they report the matter to the officers, the latter shall furnish them with an official document stating the particulars and allowing the works to proceed; if one wishes to open a coal shop, a similar paper shall be given to him. No other expenses than a douceur of 10 taels or so to the underlings shall be required. After the mine is opened the usual ground tax per *mao* shall only be demanded without addition. There is no other law on the subject."—*Ibid.* ii. 98–9.

[For land-taxes see also REG. OF LAB.]

[Some of the government departments principally concerned with Industry have been referred to under REG. OF LAB.]

LAWS—CRIMINAL, CIVIL, AND INDUSTRIAL.

Early Feudal Period (*c.* 2357 *to* 1122 B.C.).—*Table I.*

[The institution of laws and punishments is ascribed to the mythical emperors Fu Hsi and Huang Ti. The former is said to have introduced the marriage bond. See *Han shu Hu Chien chuan, I'ei wén yün fu, c.* 106, p. 22*b*. In these times it is said that instead of punishments being actually inflicted, criminals were stigmatized by being made to wear grass shoes, different-coloured clothes, etc. Under Yao (2357–2255 B.C.) neglect of their duties by government astronomers was punishable with death: "The astronomers neglecting their work, and allowing the months and seasons to get into confusion, were to be punished with death" (*Legge, Ch. Class.*, III. i. 167, note), but some doubt exists as to whether this is the correct interpretation of the passage in the *Shu ching*. The first reliable evidence of a body of laws relates to the time of Shun (2255–2205 B.C.), when attempts seem to have been made to form a system. Shun "gave delineations of the statutory punishments, enacting banishment as a mitigation of the five great inflictions; with the whip to be employed in the magistrates' courts, the stick to be employed in schools, and money to be received for redeemable crimes. Inadvertent offences and those which might be caused by misfortune were to be pardoned, but those who offended presumptuously or repeatedly were to be punished with death. 'Let me be reverent; let me be reverent,' he said to himself. 'Let compassion rule in punishment'" (*Shu ching*, Pt. II. Bk. I. Ch. III. ii; *Legge, Ch. Class.*, III. i. 38–9).]

"Among the people of Meaou, they did not use the power of good, but the restraint of punishments. They made the five punishments engines of oppression, calling them the laws. They slaughtered the innocent, and were the first also to go to excess in cutting off the nose, cutting off the ears, castration, and branding. All who became liable to those punishments were dealt with without distinction, no difference being made in favour of those who could offer some excuse. The mass of the people were gradually affected by this state of things, and became dark and disorderly. Their hearts were no more set on good faith, but they violated their oaths and covenants. The multitudes who suffered from the oppressive terrors, and were in danger of being murdered, declared their innocence to Heaven. God surveyed the people, and there was no fragrance of virtue arising from them, but the rank odour of their cruel punishments." "The great emperor compassionated the innocent multitudes who were in danger of being murdered, and made the oppressors feel the terrors of his majesty. He restrained and finally extinguished the people of Meaou, so that they should not continue to future generations," and put the system of punishments in the empire into a satisfactory state.—*Shu ching*, Pt. V. Bk. XXVII, 3–5; *Legge, Ch. Class.*, III. ii. 591–3.

[Kao Yao, the Minister to the Emperor Shun, is said to have been the first to introduce laws for the repression of crime.]—*Giles, Bio. Dic.*, p. 368. See *Shun tien, Shu ching chieh yao, c.* 1, p. 8*a*.

"Kao Yao said: 'Error is pardoned though it is great, and intentional crime punished though it is small. If guilt is doubtful it should be punished lightly, and if merit doubtful it should be rewarded richly. It is better to fall short of the law than to kill an innocent person. The humanity [of the sovereign] harmonizes with the mind of the people. If these principles prevail, they would not oppose the magistrates.'"—*Ta Yü mo, Shu ching chieh yao, c.* i, p. 12*b*; see also p. 7*a*.

"In those primitive ages punishments were corporal and immediate.—*Ch. Repos.*, xviii, 348. See also REG. OF LAB.

[The five punishments were:—branding (on the forehead) (墨 *mo*); cutting off the nose (劓 *pi*); cutting off the legs (刖 *yüeh*) [changed to cutting off the feet under the following Period]; castration (宮 *kung*); and death [which might be by various modes of execution] (大 辟 *ta p'i*).]—*Legge, Ch. Class.*, III. i. p. 38, note. See also *Tzŭ chih t'ung chien kang mu, c.* 2, *Ch'ien p'ien*, p. 23*b*.

[*Mo* was inflicted on those who "did not act according to right or did what they ought not to do"; *pi*, on those who "altered or disobeyed the sovereign's laws, changed the style of clothes, carts, sedans, &c., or who wounded, stole, committed adultery, or created disturbances harmful to the government"; *yüeh*, amputating the legs at the knees, and *pin* (臏), amputating the knee-cap, for climbing over walls to steal, undermining or damaging city gates, destroying bridges, &c. (after the latter punishment the offender could still walk, though slowly, and could be employed as a watchman, or in a similar capacity); *kung*, for rape, illicit intercourse, &c.; and *ta p'i*, for assisting rebels against the government, robbery with violence, &c.]—*Shang shu ta chuan, Yüan chien lei han, Chêng shu pu, Jou hsing i*, p. 111.

"Rebellion, murder, wounding, burglary, and adultery are all capital crimes of which the punishment cannot be relaxed."—*Tzŭ chih t'ung chien kang mu, c.* 2, *Ch'ien p'ien*, p. 23*b*.

"The crimes punishable with the whip and stick are supposed to be slighter offences, not only below the penalty of the five inflictions, but also below banishment. The whip [鞭 *pien*: see *K'ang Hsi Tzŭ tien, Hsü chi pu chung, Ko pu*, p. 140*b*] was employed against officers in the courts; and the stick [扑 *p'o*: see *Ko chih ching yüan, c.* 42, *Wu pei lei*, p. 30*b*] against officers in the schools."—*Legge, Ch. Class.*, III. i. 39, note.

"The five severe inflictions might be commuted for banishments,—to a greater or less distance."—*Ibid.* p. 45, note. *Cf. Shu Shun tien, K'ang Hsi Tzŭ tien, Ssŭ chi shang, Shui pu*, p. 46*b*.

"Banishment [流 *liu*] was used for relaxing the five punishments, and was a somewhat lighter punishment than those inflicted on people guilty of the grave crimes." The reasons for mitigation were compassion, doubt as to the law, royal consanguinity, exceptional merit,—in which cases the five severe punishments would not be applied, banishment being substituted. "Whipping and flogging [see *supra*] were inflicted for lighter crimes; and money fine [金 贖 *chin shu*] was the punishment for the lightest kind of crime,—though [by reason of his offence] a person may be liable to whipping or flogging, either through pardon or doubt as to the law he may escape the heavier penalty. In the infliction of the five punishments there was thus reason in the exercise of kindness and cruelty, leniency and severity. It was a correct (or just) law."—*Tzŭ chih t'ung chien kang mu*, c. 2, *Ch'ien p'ien*, p. 23*b*.

[Slavery as a legal punishment was unknown.]—*Ch. Repos.*, xviii, 348.

"The *Shên Pao* says that fines have ceased to form part of Chinese punishments since the Ts'in and Han dynasties, but that the Three Ancient Dynasties of Hia, Shang and Chou had fines under the name of *chin tsoh shuh hing*, or money for ransoming punishment 金作贖刑."—*Ch. Rev.*, xvii. 52. Fines were, however, in later times inflicted on women, and on men in the case of the lightest offences. See *infra*.

"It was one of the principles of Shun that punishments should not be extended to the offender's children (*Counsels of the Great Yü*, p. 11)."—*Legge, Ch. Class.*, III. ii. 284, note.

"The three kings [Yü, T'ang, and Wên Wang] established laws which they saw fitted the occasion; and rites which fitted the event."—*Chan kuo ts'ê, P'ei wên yün fu, c.* 106, p. 29*b*.

[Hsia, Shang, and Chou, when they suffered from bad government, made the legal punishments of Yü, T'ang, and the nine legal punishments, respectively. The three capital punishments were in force in former ages.]—*Ku wên hsieh i, Shu Hsiang chu hsing shu, c.* 2, p. 59*b*.

[It was "only in times of anarchical rule" that the founders of the Hsia and Shang dynasties found it necessary to issue collections of laws.]—*Parker, Anc. Ch. Simpl.* p. 312. See also following Period and the arguments against codification there stated.

"The *teen* (典) were the general regulations about government, and its several departments of instruction, ceremonies, offices, punishment, and employments. The *tsih* (則) were the special rules about sacrifices, emoluments, the collection of revenue, &c. Yu's canons and rules were more compendious probably than those of a later period; but they would be of the same general nature."—*Legge, Ch. Class.*, III. i. 160, note.

"As all government was supposed to be based on the natural laws of the universe, of which universal law or order of things the Emperor, as 'Son of Heaven,' was (subject to his own obedience to it) the supreme mouthpiece or expression, there lay upon him no duty to define that manifest law; when it was broken, it was for him to say it was broken, and to punish the breach. Nature's bounty is the spring, and therefore rewards are conferred in spring; nature's fall is in the autumn, which is the time for decreeing punishments; these are carried out in winter, when death steals over nature. A generous table accompanies the dispensing of rewards, a frugal table and no music accompanies the allotment of punishments; hence the imperial feasts and fasts. Thus punishment rather than command is what was first understood by Law, and it is interesting to observe that 'making war' and 'putting to death' head the list of imperial chastisements, war being thus regarded as the Emperor's rod in the shape of a posse of punitory police, rather than as an expression of statecraft, ambitious greed, or vainglorious self-assertion. Then followed in order of severity, castration, cutting off the feet or the knee-cap, branding, and flogging. The Emperor, or his vassals, or the executive officers of each in the ruler's name, declared the law, *i.e.*, they declared the punishment in each case of breach as it occurred. Thus from the very beginning the legislative, judicial, and executive functions have never been clearly separated in the Chinese system of thought." Commercial and civil jurisprudence was not a government concern: "whenever these, or analogous matters, were touched by the State, it was for commonwealth purposes, and not for the maintenance of private rights. Each paterfamilias was absolutely master of his own family; merchants managed their own business freely; and so on with the rest. It was only when public safety, government interests, or the general weal was involved that punishment-law stepped in."—*Parker, Anc. Ch. Simpl.*, pp. 108–9.

"There is good ground to suppose that the Chinese Emperor's 'laws,' such as they were at any given time, were solemnly and periodically proclaimed in each vassal kingdom; but, subject to these general imperial directions, the *themis, diké*, or inspired decision of the magistrate, was the sole deciding factor; and, of course, the ruler's arbitrary pleasure, whether that ruler was supreme or vassal, often ran riot when he found himself strong enough to be unjust. For instance, in 894 B.C., the Emperor boiled alive one of the Ts'i rulers."—*Ibid.* p. 110.

"Yü, when he succeeded Yao and Shun, thought that his virtue was declining [because the people were beginning to be less loyal], so he instituted the punishment of mutilation (肉 刑 *jou hsing*). T'ang [founder of the Shang dynasty] and Wu [founder of the Chou dynasty] kept it unchanged, for the customs of the time were inferior to those of the days of T'ang [Yao] and Yü [Shun]."—*Han shu Hsing fa chih, P'ei wên yün fu, c.* 24*a*, p. 62*b*.

"I shall *nu* (孥) and execute you," *i.e.*, put both you and your children to death. The Commentary [says]: "This was a punishment involving the children."—*Shu ching Yü shu kan shih, K'ang Hsi Tzŭ tien, Yin chi shang, Tzŭ pu*, p. 6*a*.

"Punishments [in Yü's time] do not extend to the criminal's heirs."—*Shu ching*, Pt. II. Bk. II. Ch. II. 12.

"I will so [in a manner fiercer than raging fire] destroy only the chief criminals, and not punish their forced followers, while those who have long been stained by their filthy manners will be allowed to renovate themselves."—*Shu ching*, Pt. III. Bk. IV. Ch. II. 6, *Legge, Ch. Class.*, III. i. 168–9.

"From him [T'ang] down to the emperor Yih, the sovereigns all made their virtue illustrious, and were cautious in the use of punishments;—thus also exercising a stimulating influence over the people. When they, having examined the evidence in criminal cases, put to death those chargeable with many crimes, they exercised the same influence; they did so also, when they liberated those who were not purposely guilty" (*Shu ching*, Pt. V. Bk. XVIII. 10–11, *Legge, Ch. Class.*, III. ii. 498–9). Legge remarks (*ibid.* p. 498, note) that "the assertion made here about the sovereigns of the Shang dynasty down to Yih, must be taken with large allowance."

"The minister who does not try to correct those vices [dissipation, etc.,] in the sovereign shall be punished with branding."—*Shu ching*, Pt. IV. Bk. IV. Ch. III. 7, *Legge, Ch. Class.*, III. i. 197.

[*c.* 1765 B.C.] "If you do not obey the words which I have

spoken to you, I will put your children with you to death ;—you will find no forgiveness."—*Shu ching*, Pt. IV. Bk. I. Ch. II. 4, *Legge*, III. i. 175.

"Kĕĕ" inflicted "cruel dismemberments."—*Legge*, III. i. 174, note.

[Punishments (in 1401 B.C.) sometimes extended to extirpation of the offender's children. See *Shu ching*, Pt. IV. Bk. VII. Pt. ii. 16.]

"We have seen Yu's son, (*The Speech at Kan*, p. 5) and even T'ang, (*The Speech of T'ang*, p. 4) menacing their troops with the death of their children, if they did not do their duty. That may have been a measure of war ; and Chow carried it into all the penal administration of his government. To what extent the punishment of relations was carried by Chow, we do not learn from the text. Gan-kwŏ supposes that the parents, brothers, wives and children (三 族) all suffered with the offender."—*Legge, Ch. Class.*, III. ii. 284–5, note.

"Show, the king of Shang, does not reverence Heaven above, and inflicts calamities on the people below. He has been abandoned to drunkenness, and reckless in lust. He has dared to exercise cruel oppression. Along with criminals he has punished all their relatives. . . . He has burned and roasted the loyal and good. He has ripped up pregnant women. Great Heaven was moved with indignation."—*Shu ching*, Pt. V. Bk. I. Pt. i. 4–5.

"The princes began to rebel [at the licentious extravagances of Ta Chi, concubine of Chou Hsin], when Tă-ke [Ta Chi] said that the majesty of the throne was not sufficiently maintained ;—that punishments were too light, and executions too rare. She therefore devised two new instruments of torture. One of them was called 'The Heater,' and consisted of a piece of metal, made hot in a fire, which people were obliged to take up in their hands. The other was a copper pillar, greased all over, and laid above a pit of live charcoal. The culprit had to walk across the pillar, and when his feet slipped, and he fell down into the fire, *Tă-ke* was greatly delighted."—*Legge, Ch. Class.*, III. i. 270, note. For various versions of these punishments see *T'ung chien wai chi, Kuang shih lei fu*, c. 11, p. 17*b* ; *Tzŭ chih t'ung chien kang mu*, c. 6, *Ch'ien p'ien*, p. 16*a* ; *Kang chien ch'üan pien, Shang chu chi*, c. 1. p. 51*b* ; etc.

"In the 13th year [lit., sacrifice] Earl Hsi [Wên Wang] presented the land of Lo Hsi [to the King], and requested him to abolish the punishment of 'roasting' [clasping the smoothing-iron, pillar, etc.]. Chou in consequence authorized [its abolition]."—*Kang chien ch'üan pien, Shang chou chi*, c. 2, p. 52*b*. See also *Tzŭ chih t'ung chien kang mu*, c. 6, *Ch'ien p'ien*, p. 22*b*.

[To *hai* (醢) was to make into mince-meat, and was the punishment inflicted upon the Prince of Chiu by Chou because his concubine, Chiu's daughter, resented his lewd conduct.]—*Tzŭ chih t'ung chien kang mu*, c. 1, *Hsia ts'ê, Chêng p'ien*, p. 12*b*.

"Mencius points it out as one of the glories of King Wăn's administration of K'e [Ch'i], that the wives and children of criminals were not involved in their guilt."—*Legge, Ch. Class.*, III. ii. 284, note.

In 596 "Tsin (which . . . seems to have taken the hint from Ts'in)" exterminated the family of a political refugee "who had fled to the Tartars." In 594 "there is an instance cited where two dignitaries were killed by direct specific order of the Emperor." In explaining this exceptional case, the commentator says :—"The lord of all below Heaven is Heaven, and Heaven's continuer or successor is the Prince ; whilst that which the Prince holds fast is the Sanction, which no subject can resist." "Even in Ts'u the relatives of the man who first taught war to Wu were massacred in 585."—*Ibid.* pp. 110, 113.

"The laws of Ts'u seem to have been particularly harsh ; in 551 the premier was cut into four for corruption, and one quarter was sent in each direction, as a warning to the local districts."—*Ibid.* p. 111.

[In 550 Tsin exterminated the family of a political refugee who had fled to Ts'i.]—*Ibid.* p. 110.

In 529 "anyone succouring the fugitive King of Ts'u was threatened with the 'three clan penalties.'"—*Ibid.* p. 111. Parker says this was the last case.

"Confucius said :—'The ancients who knew the law could use torture sparingly [as human nature was good, and others were ready to take warning] ; this was the root [from which good things were expected]. But the men of the present time who know the law, owing to the increase of offenders, are obliged to treat them according to the strict letter of the law ; these are the [degenerate] branches.'"—*Han shu Hsing fa chih, P'ei wên yün fu*, c. 106, p. 34*a*.

"In the case of anyone who murders another whose corpse is exposed in the market-place for 3 days, the punishment of the criminal (*hsing tao*) is carried out in the market-place. The Commentary says : 'When the words *hsing tao* are used the crime is very great.'"—*Chou li Ch'iu kuan Chang lu, P'ei wên yün fu*, c. 79, p. 28*a*.

"A prisoner guilty of a capital crime should have his hands put in the wooden handcuffs (梏 *ku*) and his feet in the *chih* (桎), fetters. The Commentary [says] : 'A wooden stock for the hands is called *ku* (manacles) and one for the feet *chih* (fetters).'"—*Chou li Ch'iu kuan, K'ang Hsi Tzŭ tien, Mao chi chung, Shou pu*, p. 40*b*.

"If he committed a crime [lighter than that punishable by decapitation] he should be executed by strangling or hanging. The Commentary [says] : 'Strangling (絞 *chiao*) means hanging.'"—*Tso chuan, K'ang Hsi Tzŭ tien, Wei chi chung, Mi pu*, p. 18*a*.

"Whenever the people committed offences, or fell into errors, stocks were put upon the feet, a collar upon the neck, and they sat upon the *Kea shih* or pillory, and became servants of the minister of works. Those who committed a grave offence sat upon the *Kea shih* thirteen days, and became servants for a year :" . . . further degrees being, nine days and service for nine months, seven days and seven months, five days and five months, and three days and three months. The *Chou* or *Li* (districts) "were required to give security, and the offenders were then liberated."—*Gingell*, p. 86.

"All subjects committing the crime of injuring their neighbours shall be fettered and manacled and made to sit by the engraved tablet (嘉 石 *chia shih*) [outside the palace gate]."—*Chou li Ch'iu kuan, K'ang Hsi Tzŭ tien, Ch'ên Chi chung, Mu pu*, p. 38*a*.

"The fetter and manacle (桎 梏 *chih kao*) [together] were used to punish medium crimes ; the manacle alone to punish light crimes."—*Chou li Ch'iu kuan Chang nei, ibid.* p. 45*a*.

[A stock for the feet is mentioned in *Chou I, Ko chih ching yüan*, c. 42, *Wu pei lei*, p. 31*a*.]

"The wearing stock (荷 校 *ho chiao*), cangue, covered the ears. The Commentary [says] :—'Here stock means a cangue. Anyone who committed a serious crime had his head put in the cangue.'"—*Ibid.* p. 30*b*.

"When in a doubtful case the infliction of branding is forborne, the fine laid on instead must be 600 ounces of copper ; but you must first have satisfied yourselves as to the crime. When the case has reference to the cutting off the nose, the fine must be double this, the same care having been taken to determine the crime. When the penalty would be cutting off the feet, the fine must be 3,000 ounces ;—with the same careful determination of the crime. Where the penalty would be castration [or solitary confinement in the case of a female], the fine must be 3,000 ounces ;—with the same careful determination of the crime. Where the punishment would be death, the fine must be 6,000 ounces ;—with the same careful determination of the crime. Of crimes that may be redeemed by the fine in lieu of branding there are 1,000, and the same number of those that would otherwise incur cutting off the nose. The fine in lieu of cutting off the feet extends to 500 cases ; that in lieu of castration to 300 ; and that in lieu of death to 200. Altogether, set against the five punishments there are 3,000 crimes. In the case of others not exactly defined, you must class them with the next higher or next lower offences, not admitting assumptive and disorderly pleadings, and not using obsolete laws. Examine ; act lawfully :—judging carefully, and proving yourselves equal to every difficulty."—*Shu ching*, Pt. V. Bk. XXVII. 18, *Legge, Ch. Class.*, III. ii. 605–6.

King Mu was "the first to introduce, at least on an extensive scale, the system of accepting money as a compensation for the most heinous offences. He says, indeed, that the fine was to be exacted only where there was some doubt as to the justice of inflicting the punishment itself. China certainly, within the range of its history, was never the country where a government would, openly and without some glossing of the fact, take money as a satisfaction for transgressions of the law ; but it is easy to see how grossly the regulations of king Muh were sure to be abused." "Once introduced into China, however, the redemption of punishments has entered into the penal code of every subsequent dynasty" (see *Staunton, Penal Code*, pp. 72–3).—*Legge, Ch. Class.*, III. ii. 608–9, note. See also *infra, Procedure.*

Taliation.—"In the second Book of the Le Ke there is the following passage :—'With the slayer of his father, a man may not live under the same heaven ; against the slayer of his brother, a man must never have to go home to fetch a weapon ; with the slayer of his friend, a man may not live in the same State (I. i. v. 10).' The *lex talionis* is here laid down in its fullest extent. The Chow Le tells us of a provision made against the evil consequences of the principle, by the appointment of a minister called 'The Reconciler.' The provision is very inferior to the cities of refuge which were set apart by Moses for the manslayer to flee to from the fury of the avenger. Such as it was, however, it existed, and it is remarkable that Confucius, when consulted on the subject, took no notice of it, but affirmed the duty of blood-revenge in the strongest and most unrestricted terms. His disciple Tsze-hea asked him, 'What course is to be pursued in the case of a murder of a father or mother?' He replied, 'The son must sleep upon a matting of grass, with his shield for his pillow ; he must decline to take office ; he must not live under the same heaven with the slayer. When he meets him in the market-place or the court, he must have his weapon ready to strike him.' 'And what is the course on the murder of a brother?' 'The surviving brother must not take office in the same State with the slayer ; yet if he go on his prince's service to the State where the slayer is, though he meet him, he must not fight with him.' 'And what is the course on the murder of an uncle or cousin?' 'In this case the nephew or cousin is not the principal. If the principal on whom the revenge devolves can take it, he has only to stand behind with his weapon in his hand, and support him *Li chi*, II. i. ii. 24).'"—*Legge, Ch. Class.*, i. Prol. p. 112.

Exemptions and Mitigations.—"A man of 80 or 90 years old was called *mao* (耄) ; and a child of 7, *tao* (悼). These two, though they committed crimes, were exempt from punishment."—*Li chi, P'ei wén yün fu*, c. 24*a*, p. 68*b*. See also *Li chi*, vi. ii. 8.

"A woman had inflicted on her 'no punishment' (無 刑). Her punishment was not administered in the public market. The Commentary [says] :—'Here "No punishment" means that tattoing the face and cutting off the feet were not inflicted.'"—*Tso chuan, ibid.* c. 24*a*, p. 61*b*.

"Anyone of the same clan as the king may not be castrated ; he may only be punished by having his head shaven." This was considered a punishment because the body as inherited from the parents was sacred.—*Chou li Ch'iu kuan Chang lu chu, K'ang Hsi Tzŭ tien, Hai chi shang, P'iao pu*, p. 45*a*. See also *Li chi shu, P'ei wén yün fu*, c. 7*a*, p. 56*b*.

"Anyone who, in taking revenge, kills another, if he be a *shih* (士), courtier, shall be without punishment."—*Chou li Ch'iu kuan Ch'ao shih, P'ei wéi yün fu*, c. 26*a*, p. 166*b*.

"Anyone who kills a robber, or a rebel who attacks a village or town and its inhabitants, may not be punished."—*T'ung tien ch'i yao*, c. 18, *Hsing*, p. 1*a*.

"In the 1st moon of Spring the Judge was ordered to spare imprisonment and disuse fetters and manacles."—*Li chi, Ko chih ching yüan*, c. 42, *Wu pei lei*, p. 31*a*.

"Anyone who commits a mere fault should be released, but anyone who commits a crime intentionally should be punished."—*Chou li Ch'iu kuan su, P'ei wén yün fu*, c. 40, p. 62*a*. For fines in lieu of severer punishments, see *supra*.

Crimes.—"Using the 8 [kinds] punishments to punish all subjects, viz. :—the punishment for (1) unfilial conduct, (2) discord, (3) illegal marriage, (4) lack of fraternal submission, (5) not fulfilling duty, (6) want of pity, (7) using false words, and (8) insurrection."—*Chou li Ti kuan Ta ssŭ t'u, P'ei wén yün fu*, c. 24*a*, p. 62*b*. By the Chou, and probably also in the Shang and Hsia times, the term "five punishments" was often used as a descriptive name for punishments in general.

"All people who of themselves commit crimes, robbing, stealing, practising villainy and treason, and who kill men or violently assault them to take their property, being violent and fearless of death :—those are abhorred by all." "The King says, 'Fung, such chief criminals are greatly abhorred, and how much more detestable are the unfilial and unbrotherly !—as the son who does not reverently discharge his duty to his father, but greatly wounds his father's heart ; and the father who can no longer love his son, but hates him ; and the younger brother who does not think of the manifest will of Heaven, and refuses to respect his elder brother, so that the elder brother does not think of the toil of their parents in bringing them up, and is very unbrotherly to his junior. If we who are charged with government do not treat parties who proceed to such wickedness as offenders, the laws of our nature given by Heaven to our people will be thrown into great disorder or destroyed. You must deal speedily with such parties according to the penal laws of King Wăn, punishing them severely and not pardoning.' 'These, who are disobedient to natural principles, are to be thus severely subjected to the laws ; how much more the officers employed in your State as the instructors of the youth, the heads of the various official departments, and the petty officers, charged with their several commissions ; when they propagate and spread abroad other lessons, seeking the praise of the people, not thinking of the sovereign, nor using the rules for their duties, but distressing him ! These lead on to wickedness and are an abomination to me. Shall they be let alone? Do you quickly, according to what is recognised as right, put them to death.'"—*Shu ching*, Pt. V. Bk. ix. 15–17 ; *Legge, Ch. Class.*, III. ii. 392–4.

"If you are told that there are companies who drink together, do not fail to apprehend them all, and send them here to Chow, where I may put them to death"—if they were found to have assembled to plot against the government. "As to the ministers and officers of Yin, who have been led to it, and been addicted to drink, it is not necessary to put them to death ;—let them be taught for a time. If they keep these lessons, I will give them bright distinction. If you disregard my lessons, then I, the one man, will show you no pity. As you cannot cleanse your way, you shall be classed with those who are to be put to death."—*Shu ching*, Pt. V. Bk. X. 14–16, *Legge*, pp. 411–2.

"Splitting words so as to break (the force of) the laws ; confounding names so as to change what had been definitely settled ; practising corrupt ways so as to throw government into confusion : all guilty of these things were put to death. Using licentious music ; strange garments ; wonderful contrivances and extraordinary implements, thus raising doubts among the multitudes : all who used or formed such things were put to death. Those who were persistent in hypocritical conduct and disputatious in hypocritical speeches ; who studied what was wrong, and went on to do so more and more, and whoever increasingly followed what was wrong so as to bewilder the multitudes : these were put to death. Those who gave false reports about (appearances of) spirits, about seasons and days, about consultings of the tortoise-shell and stalks, so as to perplex the multitudes: these were put to death. These four classes were taken off, and no defence listened to."—*Li chi*, iii. iv. 16. *Legge*, i. 237–8. See also *T'ung tien ch'i yao*, c. 18, *Hsing*, p. 1*b*.

"In the time of duke Ting of Ku-lü, there occurred the case of a man killing his father. The officers reported it ; when the duke, with an appearance of dismay, left his mat and said, 'This is the crime of unworthy me !' He added, 'I have learned how to decide on such a charge. When a minister kills his ruler, all who are in office with him should kill him without

Later Feudal Period (1122 *to* 221 B.C.).—*Table II.*

Punishments.—"During the early centuries of [this] . . . period, laws were, as might be expected, excessively severe, and punishments correspondingly barbarous ; mutilation, and death by burning or dissection, being among the enumerated penalties."—*Giles, Historic China*, p. 7. For exemptions see *infra*.

"五 刑 the five punishments, as in force under the 周 Chou and 漢 Han dynasties :—黥 branding on the forehead ; 劓 cutting off the nose ; 刖 cutting off the feet ; 宮 castration ; 大 辟 death."—*Giles, Dic.*, p. 474. See also No. 5541.

[For the slaying of the three family connections of a criminal, see *infra*.]

[There were 500 crimes punishable by *yüeh* (刖), cutting off the feet. The Chou changed the punishment of cutting off the knee-cap to that of *yüeh*. (The *pin* was devised by Sun Pin, and named after him. The Chou probably abolished it soon after it was established.) Killing (殺 *sha*) was the capital punishment.]—*Chou li Ch'iu kuan, K'ang Hsi Tzŭ tien, Wei chi hsia, Jou pu*, p. 13*b*.

[The punishment of mutilation is mentioned in the *Shih ching*. II. v. VI. is the complaint of a eunuch suffering from slander. Mutilation is also mentioned in the *Shu ching*, V. xxvii. 3, among the punishments appointed by king Mu.]

"The punishment of branding (*mo*) the face consisted of 500 kinds [of crimes to which it was applicable]. The commentary [says] 'it meant to "tatoo" the face; first the face was pricked and then coloured with ink.'"—*Chou li Ch'iu kuan Ssŭ hsiang, Kang Hsi Tzŭ tien, Hai chi hsia, Hsi pu*, p. 32*b*.

"Ts'een, . . . tells us that 'during the time of kings Ching [Ch'êng ; 1115–1078 B.C.] and K'ang [1078–1052 B.C.], the empire was in a state of profound tranquillity, so that punishments were laid aside, and not used for more than forty years.'"—*Legge, Ch. Class.*, III. ii. 569, note.

"In the 50th year [of Mu Wang ; *c.* 950 B.C.] they made the *lü hsing* (呂 刑), [Prince] Lü on punishments, and promulgated them throughout the empire."—*Tzŭ chih t'ung chien kang mu*, c. 9, *Ch'ien p'ien*, p. 9*a*. These consisted of amputating the nose, the ears, castration, branding (*ts'ung* in place of the old *mo*). See *Shu ching*, c. 6, p. 14*a* ; and *infra* ; also *Laws*, for character of the enactments.

"Mu Wang, when aged, appointed the Marquis Lu Chief Criminal Judge and ordered him to revise the [existing] criminal law. At that time the *lü* punishments were put in force throughout the Empire. Generally speaking he made stricter the regulations respecting the punishments of branding and cutting off the nose, with which to punish all offenders throughout the Empire, and made more lenient the regulations respecting the punishments of castration and capital punishment, in order to avoid [as much as possible the infliction of] the death penalty. As he had established 5 fines to meet cases of doubt in the use of the 5 punishments, so also he established 5 'errors' to meet cases of doubt in the infliction of the 5 fines. The laws were numerous but light, as being suitable to a vicious age."—*Tzŭ chih t'ung chien kang mu*, c. 9, *Ch'ien p'ien*, p. 10*a*.

"In 746 B.C. the state of Ts'in . . . first introduced the 'three stock' law, under which the three generations, or the three family connections of a criminal were executed for his crime as well as himself."—*Parker, Anc. Ch. Simpl.*, p. 110. But see EARLY FEUDAL PERIOD.

mercy. When a son kills his father, all who are in the house with him should kill him without mercy. The man should be killed; his house should be destroyed; the whole place should be laid under water and reduced to a swamp. And his ruler should let a month elapse before he raises a cup to his lips.'"—*Li chi*, ii. ii. iii. 18, *Legge*, i. 195.

"Confucius said: 'Capital crimes are of 5 kinds, but manslaughter is of less importance. The punishment for the crime of offending against heaven and earth extends through 5 generations; of professing spiritual matters to deceive people and cause them to rebel, through 4; of opposing the human relation, through 3 (father, son, and grandson); of confusing civilization, through 2; but manslaughter affects only the criminal himself.'"—*T'ung tien ch'i yao*, *c.* 18, *Hsing*, p. 1*b*.

"The Military Judge (present President of the Board of War) was sent for and asked: 'What should you say should be done to one who comes later than the appointed time, and so delays military movements?' He answered: 'He should be executed.'"—*Shih chi Ssŭ-ma Jang-tsui chuan*, *P'ei wên yün fu*, *c.* 59, p. 22*a*.

[There was a law in the Wei State that anyone using a royal chariot should have his feet cut off.]—*Giles*, *Bio. Dic.*, p. 586.

"Anyone who stole wood should be punished [by being beaten] or fined."—*Chou li Ch'iu kuan Shan yü*, *Pei wên yün fu*, *c.* 95, p. 126*a*.

Laws, Codification, etc.—"Our monarchs in past times were wont to decide matters by specific ordinance, and had no prepared statutes, fearing lest the people should grow contentious. Yet even so it was impossible to suppress wrong-doing; for which reason they employed justice as a preventive, administration to bring things into line, external formality to secure respect, good faith as an abiding principle, and kindness in actual treatment."—*Letter of Shuh Hiang to Tsz-ch'an*, quot. *Parker*, *Anc. Ch. Simpl.*, p. 311.

"But when the people themselves become cognizant of a written law, they will cease to fear their superiors, and moreover, they will aquire a contentious spirit. Having book to refer to, they will employ every device to elude the letter of the law. It was only in times of anarchical rule that the founders of the Hia and Shang dynasties . . . found it necessary to issue (to their officers) the collections of laws which still bear their two respective names; and it was also only in anarchical times (1000 B.C.) that one emperor of our present dynasty found it necessary to publish (for his officers) the so-called Nine Laws. In other words, the advent of written law has on all three occasions connoted a decay of government."—*Ibid.* p. 312.

King Mu, 952 B.C., "was the first of the Chou dynasty to decide that law reform was necessary" so as to "maintain order among the 'hundred families' (the Chinese people). A full translation of this code is given in Dr. Legge's Chinese classics . . . in charging his officer to prepare it," the King "only uses the words 'revise the punishments,' and the code itself is only known as the 'Punishments' (of the marquess who drew it up); although it also prescribes many judicial forms, and lays down precepts which are by no means all castigatory. The mere fact of its doing so is illustrative of reformed ideas in the embryo."—*Ibid.* pp. 109–10.

"By King Muh's enactments the total number of crimes was increased, but at the same time a larger number were classed as liable to the lighter penalties and fines, and a smaller number as liable to the heavier punishments. Thus the Chow Le makes 500 offences punishable with death; King Muh, only 200; against the 500 of the former, punishable with branding or cutting off the feet, he assigned in each case 1,000."—*Legge*, III. ii. 606, note.

The penal code of the Chou "may be called humane when compared with other Asiatic systems."—*Hirth*, *Anc. Hist.*, p. 123.

"In 796 B.C. a ruler of Lu was . . . recommended to the Emperor for selection, in preference to his elder brother, because 'when he inflicted chastisement he never failed to ascertain the exact instructions left by the ancient emperors.'"—*Parker*, *Anc. Ch. Simpl.*, p. 110.

[For the "three stock law," introduced by the state of Ts'in in 746 B.C., see *supra*, *Punishments*.]

"About 680 B.C. the King of Ts'u is recorded to have passed a law against harbouring criminals, under which the harbourer was liable to the same penalty as the thief," reference being made to the previous law of 1122 B.C., *q.v.*—*Parker*, *Anc. Ch. Simpl.*, p. 112.

[There was a statute forbidding a prince to cross the boundaries of his state save on the King's service.]—*Hirth*, *Anc. Hist.*, p. 207.

Reference was made by the advisers of the King of Ch'u, about 680 B.C., to an ancient law or command of the imperial dynasty before it came to power. "If any of your men take to flight, let every effort be made to find him." "Thus it would seem that other ruling classes, besides those of the Chou clan, accepted the general imperial laws, Chou-ordained or otherwise."—*Parker*, *Anc. Ch. Simpl.*, p. 112.

"Although it is thus manifest that the vassal states, at least after imperial decadence set in, in 771 B.C., drew up and published laws of their own, yet, at the great durbar of princes held by the First Protector in 651 B.C., it is recorded that the 'Son of Heaven's Prohibitions' were read over the sacrificial victim. They are quite patriarchal in their laconic style, and for that reason recall that of the Roman Twelve Tables. They run: 'Do not block springs!' 'Do not hoard grain!' 'Do not displace legitimate heirs!' 'Do not make wives of your concubines!' 'Do not let women meddle with State affairs!' From the Chinese point of view, all these are merely assertions of what is Nature's law."—*Ibid.* pp. 112–3.

"About 650 B.C. a distinguished Lu statesman, named Tsang Wên-chung, seems to have drawn up a special code, for one of Confucius' pupils (two centuries later) denounced it as being too severe when compared with Tsz-ch'an's mild laws. . . . This Lu statesman, about twenty years later . . . said: 'There are only five recognised punishments: warlike arms, the axe, the knife or the saw, the branding instruments, the whip or the bastinado; there are no surreptitious ones like this now proposed, namely, removing a federal refugee by poison.' The result was that Lu, being of the same clan as the Emperor, easily succeeded in bribing the imperial officials to let the refugee prince go."—*Ibid.* p. 111.

"The proper balance between superior classes and commoners is what we call 'ordinance.' The ruling prince Wên (who assumed the Protectorship of China in 632 B.C.) for this reason established an official body of dignitaries, and organized the annual spring revision of the laws of his ancestors as Representative Federal Prince."—*Ibid.* p. 315.

[For the minuteness of regulation introduced by Confucius in Lu, see LAWS OF INTERCOURSE.]

Hitherto the criminal law had been simply "declared" by the various rulers and their officers according to the circumstances of each case. In 536 B.C. the minister Tzŭ-ch'an (Kung-sun Ch'iao) of Chêng, one of the leading statesmen in the Chinese Federal Union, who had "compiled a penal code for the regulation of punishments" (*Giles*, *Bio. Dic.*, p. 394), "decided to cast the laws in metal for the information of the people: this course was bitterly distasteful to his colleague, Shuh Hiang of Tsin. . . . Confucius, who had otherwise a genuine admiration for Tsz-ch'an, disapproved of this particular feature in his career."—*Parker*, *Anc. Ch. Simpl.*, pp. 112, 311.

"You, sir [Tzŭ-ch'an], are the chief minister of Chêng state (part of modern Ho Nan); you made a few years ago some new regulations about the parcelling of land; next you placed the system of your taxation on a fresh basis; and you now seek to embody the three special collections [of Hsia, Shang, and King Mu] . . . in a new popular code, which you have had cast in metal characters. . . . Where were the written laws in those times [of Kings Wên and Wu, who ruled by force of virtuous example]? . . . We shall witness a flood of litigious accusations; bribery and corruption will be rampant."—*Ibid.* p. 312.

"Though the exact words of the above-mentioned code in brass have not come down to us, they are (like the Twelve Tables of Rome, eighty years later in date, were in relation to Roman jurisprudence) the foundation of Chinese Criminal Law as it exists to-day, modified of course, dynasty by dynasty."—*Ibid.* p. 312.

"Like the Romans with their Twelve Tables, so the Chinese held the year when the laws were first cast on an iron tripod as a new epoch. Great opposition to this primitive codification of the laws was at first manifested, as it was considered that the people would lose regard for their superiors if the *themistes* were abolished. The judgments of Wên Wang were held up as a model, and the new system derided, as encouraging the people to argumentative and litigious habits. It was argued that the standard of right and wrong would be transferred from the rulers to the written law, whereas the ancient kings decided all questions by a *themis*. Confucius was amongst those who took this antiquated view, in opposition to 子 產 [Mayers' *Manual*, 730]."—*Ch. Rev.*, x. 71.

"A distinguished Tsin statesman . . . is said to have engraved some laws on iron (513), an act highly disapproved by Confucius."—*Parker*, *Anc. Ch. Simpl.*, p. 111. "They drew upon Tsin state for 4 cwt. of iron, in order to cast a punishment tripod upon which to inscribe the law book composed by Fan Süan-tsz (a minister.)"—*Ibid.* p. 314. "Confucius said:— . . . 'The state of Tsin ought to govern its people by maintaining the ancient laws and ordinances received by their ancestor who was first enfeoffed there (in 1120 B.C.), when the officers of state would each observe the same in their degree. . . . Now Tsin abandons this system [of Prince Wên, *supra*], and makes a tripod, which tripod will henceforth govern the people's acts. How can they now respect their superiors (having book to go by)? How can the superiors maintain their patrimonies?'"—*Ibid.* pp. 314–5.

"The men of Chêng composed law books."—*Tzŭ chih t'ung chien kang mu*, *c.* 21, *Ch'ien p'ien*, p. 21*b*.

"The first of the Ngwei sovereigns had in his employ a statesman named Li K'wei, who introduced, for taxation purposes, a new system of land laws, and also new penal laws. ['Simple in arrangement and construction' (*Staunton*, *Penal Code*, Pref., p. xxii.).] These last were in six books, or main heads [the first three relating to practice, the fourth to the general administration, and the last two consisting of an exposition of offences; or, according to Staunton (*Penal Code*, Pref., p. xxiii.), two were introductory, the third related to prisons, the fourth to the administration of the police, the fifth to the lesser or miscellaneous offences, and the sixth to all the great and capital crimes against public justice], and, it is said, represented all that was best in the laws of the different feudal states, mostly in reference to robbery: the minor offences were roguery, getting over city walls, gambling, borrowing, dishonesty, lewdness, extravagance, and transgressing the ruler's commands—their exact terms are now unknown. This code was afterwards styled the 'Law Classic,' and its influence can be plainly traced, dynasty by dynasty, down to modern times; in fact, until a year or two ago, the principles of Chinese law have never radically changed; each successive dynasty has simply taken what it found; modifying what existed, in its own supposed interest, according to time, place, and circumstance."—*Parker*, *Anc. Ch. Simpl.*, p. 114.

"The statutes of China form an edifice, the foundations of which were laid by Li Kwei twenty centuries ago. Successive dynasties have been building thereon ever since, adding, altering, pulling down, and putting together as circumstances seemed to require."—*Williams*, *Midd. King.*, i. 384.

"In the time of the Warring States the Han State engaged [351 B.C.] Shên Tzŭ [Shên Pu-hai] and the Ch'in engaged Shang Yang to consult together and fix the law of mutual responsibility [*i.e.*, in case of crime ten neighbouring families were involved]. They also arranged the punishments of being involved in the death penalty, the punishments of mutilation, and death [by various means], of piercing the skull, wrenching out the ribs, and boiling in a cauldron."—*Han Shu Hsing fa chih*, *P'ei wên yün fu*, *c.* 24*a*, p. 62*b*.

"[Shang] Yang was appointed [*c.* 350 B.C.] to be *Tso Shu Chang* (a title in the Ch'in State) to fix the standing orders of the reformed law, and ordered that a crime should involve 10 families and 5 neighbours. Anyone who failed to denounce or point out the offender therein should be cut in two at the waist; anyone who did not fail to do so would be rewarded in the same way as one who has cut off an enemy's head; and anyone who harboured the offender should be punished in the same way as one who submitted to the enemy."—*Tzŭ chih t'ung chien kang mu*, *c.* 1, *Shang ts'ê*, *Chêng p'ien*, p. 46*b*.

Wei Yang (d. 338 B.C.) drew up a severe code of laws, which was "enforced with such impartiality that even the guardian and the tutor of the Heir Apparent were both punished with branding for failing to keep their young charge in the paths of duty and decorum."—*Giles*, *Bio. Dic.*, p. 869.

"The Dracos of Chinese legal history were 申 不 害 [Shên Pu-hai, d. 337 B.C.] and 韓 非 [Han Fei, d. 233 B.C.], whose criminal laws [刑 名 之 學] formed the basis of Han jurisprudence."—*Ch. Rev.*, xii. 445.

"Hsiao Kung [d. 233 B.C.] used the law made by Shang [Yang]. When the people knew that anyone who committed a crime would certainly be punished, they dared not transgress the law. In this way the Empire was well-governed and strong, the territories became large and the rulers had dignity. The reason was that the punishment of those who concealed criminals was great and large rewards were bestowed upon those who reported them."—*Han Fei tzu*, *P'ei wên yün fu*, *c.* 40, p. 67*b*.

"According to the Chow Li (*Biot*, ii. 349), found property must be declared at once to the provost of the market, who takes charge of it for ten days, and then appropriates it, things of small value being given to the finder, while those of great value fall to the State," but "these regulations speak more strongly for the anxious care of the rulers than the scrupulous honesty of the governed."—*Simcox*, ii. 217–8, and note. See also MONGOL PER.

"The Ch'in State . . . claimed [*c.* 230 B.C.] from the Yen State the rendition of a deserter, together with the surrender of a slice of territory as a fine."—*Giles*, *Bio. Dic.*, p. 156.

[Revision of the laws seems occasionally to have been caused by eclipses—these being taken by virtuous kings as a sign of heaven's displeasure. See *Kuan Tzŭ in P'ei wên yün fu*, *c.* 24*a*, p. 62*b*, and *cf.* SUPERSTITIONS.]

[The laws of the various warring states are said to have differed slightly, but probably followed the same general plan as those of Chou.]

[For the legal grounds of divorce, see MARITAL.]

Deeds, &c.—"Written deeds and agreements were in common use in the Chow dynasty, especially a sort of indenture consisting of a tablet of bamboo, upon which the terms of the contract were written in duplicate, and which was then divided between the contracting parties. According to the Chow Li, these were used for all loans and lesser transactions regarding things which pass 'from hand to hand'; nothing could be sold without either an indenture or a deed of warranty (*Tcheou-li*, i. p. 318), which was used for the greater sales, *i.e.* of slaves, horses, and cattle. These documents were submitted to an officer of the market and presumably registered; and, in accordance with the curious Chinese tendency to regard all law as penal, any dispute as to a debt or contract was decided before a judge, who called for the two parts of the agreement, and punished whichever party had attempted to infringe it. Misconduct was punished either by the cangue, fine, or blows; the expression 'to be beaten in the market place' is used in the Shoo King to represent the utmost depth of ignominy."—*Simcox*, ii. 60.

Procedure.—"When both parties are present, with their documents and witnesses all complete, let all the judges listen to the five-fold statements which may be made. When they have examined and fully made up their minds on those, let them adjust the case to one of the five punishments. If the five punishments do not meet it, let them adjust it to one of the five redemption-fines; and if these again are not sufficient for it, let them reckon it among the five cases of error." (*Shu ching*, Pt. V. Bk. XXVII. 15). Of 'judges' there were four (mentioned in the *Chou Li*, Bk. XXXIV), who ranked immediately after the 'assistant minister of crime.' The 'five pleadings' were the statements, with the evidence, on both sides, whether incriminating or exculpating. They were called 'five,' as the penalty might be one or other of the 'five punishments.' The 'five cases of error' meant "the various cases of inadvertence. What should ensue on the adjudication of any charge to be so ranked does not appear. Ts'ae, after Gan-kwo, says the result would be pardon and dismissal. Such was the rule prescribed to Kaou-yaou by Shun. See 'The Counsels of Yu,' p. 12,—宥 過 無 大, 'you pardon inadvertent faults, however great.' The rule of the Chow dynasty seems to have been more stringent. Wang Gan-shih, as quoted in the 集 說, says that various penalties mentioned in the Chow Le, such as the stocks, exposure on a public stone, labouring on public works, were, the punishments for crimes of error, which were not freely pardoned. Some degree of criminality must have been supposed to attach to the cases which were thus punished."—*Legge*, *Ch. Class.*, III. ii. 602–3, and note.

"In settling the five cases of error there are evils to be guarded against; being warped by the influence of power, or by private grudge, or by female solicitation, or by bribes, or by applications. Where such things are, the offence becomes equal to the crime before the judges. Do you carefully examine, and prove yourselves equal to every difficulty."—*Shu ching*, Pt. V. Bk. XXVII. 16, trans. *Legge*, *Ch. Class.*, III. ii. 603.

"When there are doubts as to the infliction of any of the five punishments, that infliction should be forborne. When there are doubts as to the infliction of any of the five fines, it should be forborne. Do you examine carefully, and overcome every difficulty. When you have examined, and many things are clear, yet form a judgment from studying the appearance of the parties. If you find nothing on examination, do not listen to the case any more. In everything stand in awe of the dread majesty of Heaven."—*Shu ching*, Pt. V. Bk. XXVII. 17, *Legge*, *Ch. Class.*, III. ii. 604.

"The king says, . . . 'in examining the evidence in criminal cases, reflect upon it for five or six days, yea, for ten days or three months. You may then boldly carry your decision into effect.'"—*Shu ching*, V. ix. 12.

"The five punishments consisted of 3,000 articles [*i.e.* punishable crimes] which were met by comparing the punishments next above and next below (*shang hsia*). In the *Chronicles* it says: 'If to a crime there could be applied no exact law, then the punishment was to be decided by comparing its *shang* and *hsia*.'"—*Shu ching*, *P'ei wên yün fu*, *c.* 40, p. 61.

"If a criminal be treated with the *shang* punishment, but [the crime appeared] rather lighter, the *hsia* punishment should be applied. And if a criminal be treated with the *hsia* punishment, but [the crime appeared] rather heavier, the *shang* punishment should be used. In this way the punishment would be properly adjusted."—*Lu hsing*, *Shu ching chieh yao*, *c.* 6, p. 16*b*.

"Where the crime should incur one of the higher punishments, but there are mitigating circumstances, apply to it the next lower. Where it should incur one of the lower punishments, but there are aggravating circumstances, apply to it the next higher. The light and heavy fines are to be apportioned in the same way by the balance of circumstances. Punishments and fines should also be light in one age and heavy in another. To secure uniformity in this seeming irregularity, there are certain relations of things to be considered, and the essential principle to be observed." "The chastisement of fines is short of death, yet it will produce extreme distress. They are not therefore persons of artful tongue who should determine criminal cases, but really good persons, whose awards will hit the right mean. . . . In sending up reports of cases, they must be full and complete. If a man has been tried on two counts, his two punishments must be recorded."—*Shu ching*, Pt. V. Bk. XXVII.

19–20; *Legge, Ch. Class.*, III. ii. 606–8. For appeals, etc., see *Judicial.*

"In deciding cases he [Confucius] would take the opinions of several individuals and, after due consideration, decide in favour of one of them. Once he made light of a case in which a father had brought a serious charge against his son. When questioned how this judgment was compatible with his views on filial piety, he threw the guilt on the accuser for not having taught his son to be filial."—*Hirth, Anc. Hist.*, p. 245.

[See also GEN. GOVT.—*Judicial.*]

Absolute Monarchy (221 B.C. *to* A.D. 221).—*Table III.*

Laws.—"When Ch'in Shih Huang had eaten up all the Warring States, he abolished the laws of the ancient kings."—*Han shu Hsing fa chih, P'ei wên yün fu, c.* 106, p. 22*b*. "He established definite laws and gave them to his ministers to put in force."—*Shih chi Ch'in Shih Huang chi, ibid.* p. 20*b*.

"When the Ch'in dynasty flourished the laws were severe and the punishments strict, and the empire was able to prosper [owing to these strict measures]; but when it declined [the laws were still more severe and] the people murmured and rose in rebellion."—*Shih chi Ch'in chi tsan, ibid.* p. 31*a*.

Under the Han, "legislation made great progress and there was an important amelioration of the criminal law."—*Journ. P.O.S.*, ii. 148.

"All the laws of the late dynasty were repealed, and in their place three penalties alone imposed,—for murder, death, and proportionate punishment for assault and theft."—*Simcox*, ii. 104.

"The founder of the Hans, on his entry into the capital of the fallen Ch'ins, at once issued a proclamation embodying what has since been known as the 'Three Laws,' the object in view being to attach the people to his cause by an abandonment of the more barbarous legal penalties in force at that date. By these laws, murder was still to be punished with death, but wounding and robbery only in proportion to the act committed. His next care was to entrust an able and faithful adherent, named Hsiao Ho [d. 193 B.C.] with the construction of a Penal Code, which was ultimately published, and contained no fewer than 359 statute laws, upon one of which, namely, capital punishment, we read that there were 409 additional clauses and 13,472 quoted precedents. It was at any rate upon the model thus made available that later dynasties framed their various Codes, each with such modifications as altered circumstances might dictate."—*Giles, Historic China*, pp. 35–6. See also *Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 1*b*; *Ku wên hsieh i, c.* 8, *Ju kuan kao yü*, p. 1*a*; the abolition of torture, sanctioned by the Ch'in laws, is also referred to in *Tzŭ chih t'ung chien kang mu, c.* 2, *Hsia ts'ê, Chêng p'ien*, p. 54*b*.

"As the 'three laws' was insufficient to restrain offenders, the Prime Minister Hsiao Ho collected the laws of the Ch'in which were suited to the times and made the 'nine laws,' forming a new Penal Code for the rising dynasty."—*Han shu Hsing fa chih, P'ei wên yün fu, c.* 106, p. 21*a*.

The criminal laws of Shên Pu-hai and Han Fei (see preceding Period) "were approved by 鼂 錯 [Ch'ao Ts'o, d. 155 B.C.]. This statesman induced the Emperor 文 [Wên, 179–156 B.C.] to remit offences and sell titles in exchange for contributions of grain."—*Ch. Rev.*, xii. 445.

[The emperor Hsüan Ti is said to have revised the laws at the instigation of Chêng Ch'ang, Governor of the Province of Cho in the 3rd year (67 B.C.) of the period *Ti Chieh*.]—*T'ung chien lei tsuan, c.* 6, *Chêng shih pu*, p. 4*a*.

"In the 14th year [A.D. 38] of the reign of Chien Wu, Liang T'ung, Secretary of the Board of Punishments, memorialized the throne saying: 'Your servant has always heard that in the 5th year [44 B.C.] of the period *Ch'u Yüan* of Yüan Ti they lightened the law punishing murder in regard to about 34 acts, and in the 1st year [6 B.C.] of the period *Chien P'ing*, about 81 acts, among which 42 related to the case of one who killed another with the hand being allowed to lessen the capital punishment one degree. Hence it became the established law. As a result, the people easily committed crimes and the officers readily killed people. When Kao Ti received the throne he made rules and settled laws to meet the justice of each case exactly. Wên Ti only abolished the law of mutilation and law of involving [others], but kept all the old laws. When Ai Ti succeeded to the throne the Prime Minister Wang Chia lightly perverted right principles and discarded the law established by the late Emperor. I pray your majesty to issue a decree ordering the magistrates not to alter the established laws.'"—*T'ung chien lei tsuan, c.* 6, *Chêng shih pu*, p. 4*b*.

"In the period *Yung Yüan* [A.D. 89–105] of the reign of Ho Ti, Ch'ên Ch'ung revised the laws, abolishing those which were too severe." He then memorialized the throne, pointing out that capital crimes were formerly 250 in number, those otherwise punishable making the total 3,000. These figures were now, for capital punishment, 610; for shaving the beard, 1,698; and for redeemable crimes and lesser offences, 2,681. He accordingly prayed the emperor to instruct the *San Kung* and *T'ing Wei* [see GEN. GOVT.] to revise the laws on the classical model and make 3,000 articles, abolishing the rest.]—*Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 3*b*.

"In the 1st year [A.D. 150] of the period *Ho P'ing* of the Emperor Ch'êng of Han, a decree was issued diminishing the punishment for capital crime and abridging the rules of the law."—*Tzŭ chih t'ung chien kang mu, c.* 6, *Chêng p'ien*, p. 170*a*.

"In the first year [A.D. 196] of the period *Chien An* of Hsien Ti, Ying Shao revised and settled the laws under the title of the 'Laws of the Han dynasty.'"—*Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 3*a*.

Punishments.—"Chang An said: 'By the laws of the Ch'in dynasty anyone who committed a crime involved his whole family as well as his 5 neighbours.'"—*Tzŭ chih t'ung chien kang mu, c.* 2, *Hsia ts'ê, Chêng p'ien*, p. 55*b*.

"In the 9th moon Lo Ai of the Ch'in dynasty caused a riot and was executed for it with his 3 families of relatives."—*Ibid.* p. 32*b*.

"The Ch'in dismissed [for treason] the Right Prime Minister Hung Ch'ü-chih, and the Left Prime Minister Li Ssŭ from office. The former died by his own hand; the latter was cut in two at the waist and his 'three related families' (paternal family, maternal family, and wife's family) were also executed."—*Ibid.* p. 37*b*.

"Anyone who slandered the Government was executed with his whole family; and anyone who discussed [a book or poem] in company was publicly executed."—*Ku wên hsieh i, c.* 8, *Ju kuan kao yü*, p. 1*a*.

"When Wên Shu was Governor of Ho Nei he arrested the ruffians and disloyal people within his territory and memorialized the throne stating that for a great offence [the criminal as well as] his family should be killed and for a slight offence only the criminal himself should be put to death."—*Han shu Wang Wên shu chuan, P'ei wên yün fu, c.* 79, p. 31*b*.

[The Ch'in rulers, following the system of Wei Yang, enacted many horrible punishments, such as cutting off extremities, taking out ribs, and inclusion of relatives and neighbours in the punishment. In the time of Shih Huang, punishments included decapitation and quartering by being drawn asunder by four horses. The practice of executing dead bodies was also springing into existence at this time. (See *Tzŭ shih ching hua.*)]

"In the *Chia Yin* year [187 B.C.] Queen Lü abolished the punishment of executing the three families of relatives."—*Tzŭ chih t'ung chien kang mu, c.* 3, *Shang ts'ê, Chêng p'ien*, p. 70*b*.

"At the time of the Han dynasty only three of the five punishments remained, viz., branding the face, cutting off the nose, and cutting off the feet (or toes)."—*Kang chien ch'üan pien, Wên Ti chi, c.* 6, p. 33*b*. See also *Shih chi Hsiao Wên Ti chi, K'ang Hsi Tzŭ tien, Wei chi hsia, Jou pu*, p. 1*a*.

"In the first year [179 B.C.] of the Emperor Wên he abolished the rule by which a son was involved in [his father's] crime; and in the 13th year [166 B.C.], the punishment of mutilation." [*i.e.*, amputation of nose, tattooing, castration, etc. After this beating was substituted.]—*Tzŭ chih t'ung chien kang mu, c.* 3, *Shang ts'ê, Chêng p'ien*, p. 70*b*.

"The [number of crimes] punished by cutting off the feet at the ankles was 500."—*Ch'ien Han Hsing fa chih, K'ang Hsi Tzŭ tien, Tao pu, Tzŭ chi hsia*, p. 39.

[The penalty of mutilation was abolished in 167 B.C.]—*Giles, Bio. Dic.*, p. 204.

"Shun-yü I, magistrate of T'ai Ts'ang, in Ch'i, was found guilty of a crime, for which he was condemned to punishment. His young daughter, however, cried bitterly and followed her father to Ch'ang An. On arriving there she petitioned the throne saying: 'My father was a magistrate of Ch'i, the people there all called him an incorrupt and just official. Now he has committed a crime and is going to be punished. I therefore request to be taken as an official servant in order to redeem his crime.' The Emperor Wên accordingly issued a decree pardoning I's crime and at the same time abolished the punishment of mutilation."—*Han shu Hsing fa chih, Shih lei t'ung pien, c.* 54, p. 9*b*.

"Wên Ti [179–156 B.C.] was much affected by the cruelty of the punishments in vogue and accordingly abolished them. He substituted shaving the head for branding the face, flogging with 300 strokes of the bamboo for cutting off the nose, and with 500 strokes for cutting off the feet (or toes). From this time forward all criminals throughout the empire were exempt from liability to the punishments of branding and mutilation."—*Kang chien ch'üan pien, Wên Ti chi, c.* 6, p. 33*b*.

"Formerly the Emperor Wên abolished the punishment of mutilation. Though he got the credit for having decreased the severity of punishments, in reality he caused the death of the criminals. A man subjected to 500 floggings frequently died. In that year [13th, *i.e.*, 166 B.C.] a decree was issued which said: 'Increasing the number of floggings is not different from inflicting the heavier punishment—though the criminal be lucky enough to escape with his life after a flogging, he is no more like a man. Now We decree a law that 500 floggings shall be changed to 300, and 300 to 200.'"—*Tzŭ chih t'ung chien kang mu, c.* 4, *Shang ts'ê, Chêng p'ien*, p. 2*a*.

"In the 6th year of the Emperor Hsiao Ching [150 B.C.] the law as to flogging was again ameliorated and rules fixed regulating the bamboo-switch. The Commentary [says]: 'The bamboo-switch was 5 feet long and made of bamboo one inch thick, but the end was thinned down to half an inch. All its joints were levelled.'"—*Tzŭ chih t'ung chien kang mu, c.* 4, *Shang ts'ê, Chêng p'ien*, p. 31*b*.

"All offenders guilty of capital crime should be *tsê* (磔), have the body cut open in the market. In the 2nd year [148 B.C.] of the period *Chung Yüan* of the Emperor Ching, *tsê* was changed to *ch'i shih* (棄 市), casting out in the market [*i.e.*, executing], and there was no more *tsê*."—*Ch'ien Han Hsing fa chih, K'ang Hsi Tzŭ tien, Wu chi hsia, Shih pu*, p. 19*a*.

[The punishment of castration (腐 *fu*) was, however, still inflicted, as in the case of Ssŭ-ma Ch'ien in 98 B.C. for extenuating the conduct of Li Ling (whose family was exterminated as a punishment for his defeat by the Hsiung Nu).]—*Tzŭ chih t'ung chien kang mu, c.* 5, *Shang ts'ê, Chêng p'ien*, p. 39*a*.

[Liu Shih, afterwards ninth sovereign of the Han dynasty, when only eight years of age (68 B.C.) took upon himself to remonstrate with his father upon the excessive severity of punishment in vogue.]—*Giles, Bio. Dic.*, p. 521.

"Those who commit a slight crime should be *ya* (軋), and those who commit a capital crime should be put to death. In [Ju Shun's] Commentary [it says]: '*Ya* is beating with a cudgel, or punishment of the rack.'"—*Han shu Hsiung nu chuan, P'ei wên yün fu, c.* 52, p. 66*b*. *Ya* is also explained as bruising the legs by driving a cart over them. It was not a death penalty, and only inflicted extreme pain. It is now represented by the punishment of pressing the legs with a stick held down by two lictors.

[Manacling was a punishment for several offences: see *infra.*]

"Under the law of the Han dynasty causing a prisoner to die from hunger or cold was called *shou* (瘦)."—*Tzŭ chih t'ung chien kang mu, c.* 5, *Hsia ts'ê, Chêng p'ien*, p. 136*a*.

"A decree was issued decreasing the tax on salt and strictly forbidding death by *shou*, starvation."—*Ibid.* p. 136*a*.

"[Wang] Mang added 50 articles to the law by which offenders were exiled to the Western Sea. The exiles were myriads in number, so that the people murmured against him."—*Han shu Wang Mang chuan, P'ei wên yün fu, c.* 106, p. 35*a*.

"In the first moon of Spring, Mang ordered that offenders should be executed without waiting a certain time. [In the] *Chi lan* [it says]: 'In ancient times no punishment was inflicted after the opening of Spring. We now see that Mang did not wait to the utmost limit of time.'"—*Tzŭ chih t'ung chien kang mu, c.* 8, *Hsia ts'ê, Chêng p'ien*, p. 68*a*.

"When Hsiu, President of the Board of War, came to Ho Pei he abolished the cruel government of Mang."—*Ibid.* p. 100*b*.

"To fasten with the clamp (鉗 *chien*) and to sever the leg by piercing it with a gimlet (鑽 *tsuan*) were the severest forms of torture."—*Hou Han shu Chang Ti chi, K'ang Hsi Tzŭ tien, Hsü chi shang, Chin pu*, p. 13*b*.

"In the 2nd year [A.D. 85] of the period *Yüan Ho* of the Emperor Chang of Han a decree was issued saying: 'Formerly the great punishment was inflicted on one who used enticing words, involved many: one man committed the crime and three related families (or clans) were put in prison. If among them there were men of ability, they would become useless for the rest of their lives. Therefore We, feeling compassion for them, now abolish all the former rules about imprisonment for using enticing words."—*Tzŭ chih t'ung chien kang mu, c.* 10, *Shang ts'ê, Chêng p'ien*, p. 25*b*.

Exemptions.—"The punishments of branding (tatooing) the face and cutting off the feet at the ankles are not inflicted on a Great Minister."—*Ku wên hsieh i, c.* 8, *Chih an ts'ê liu*, p. 21*a*.

"When a favourite of the Emperor committed a crime no punishment was inflicted on him out of respect for the Emperor." *Ibid.* p. 21*b*.

[Old men of 80 and upwards, except in cases of false accusation and murder, were exempt from punishment.]—*Han shu Hsüan Ti chi, P'ei wên yün fu, c.* 79, p. 48*b*.

"Those in ancient times known as the paternal uncle or maternal uncle of the Emperor were now liable to the punishments of branding the face, cutting off the nose, shaving the head, cutting off the feet, flogging, scolding, and executing, just as if they were common people."—*Ku wên hsieh i, c.* 8, *Chih an ts'ê liu*, p. 21*b*.

"In the 4th year [66 B.C.] of the period *Ti Chieh* of the reign of the Emperor Hsüan of Han a decree was issued saying: 'From this date onwards if a son conceals the crime of his parents, or a wife conceals the crime of her husband, or a grandson conceals the crime of his grandparents, no punishment is to be inflicted.'"—*Tzŭ chih t'ung chien kang mu, c.* 5, *Hsia ts'ê, Chêng p'ien*, p. 131*b*. See also *Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 2*a*, where it is also stated that in the inverse case, as *e.g.*, a parent concealing the crime of his son, etc., the punishment is death.

Crimes.—"A law of the Han dynasty says: 'One who commits an act of great rebellion or an illegal deed towards his parents, wife and son, or blood brothers [*i.e.*, any of the nine kindred (*chin tsu*)] is to be executed.'"—*Yüeh Ya T'ang ts'ung shu, Hou Han shu pu chu, c.* 10, p. 22*a*.

"Among the rules regulating the five punishments, there is no offence greater than unfilial conduct."—*Tzŭ chih t'ung chien kang mu, c.* 5, *Hsia ts'ê, Chêng p'ien*, p. 100*b*.

"A thief breaking through a wall, a person wounding another, a man or woman committing adultery, an official receiving a bribe—such criminals were punished with shaving the head or manacling. Lighter punishment was insufficient for them."—*Han shu Hsing fa chih, P'ei wên yün fu, c.* 95, p. 13*b*.

"In the law treating of robbery it says: 'Anyone who seized another, seized and sold another, or deceived and sold another to be a slave or maid is to be put to death.'"—*Yüeh Ya T'ang ts'ung shu, Hou Han shu pu chu, c.* 1, p. 9*b*.

"When the officials encountered the calamities of famine and insurrection [they allowed their women, etc., to be] seized by the robbers of Ching [Chou and] Hsü [Chou] to be [sold as] servants, maids, or concubines. It was ordered that they should be allowed to return or stay as they liked. If anyone dared to restrain one who wished to return, or to sell one to anyone else, he was to be punished under the law which deals with the sale of human beings."—*Hou Han shu Kuang Wu Ti chi, P'ei wên yün fu, c.* 106, p. 47*a*.

"In the 11th year [A.D. 35] of the period *Chien Wu* of the reign of Shih Tsu a decree was issued saying: 'Of the products of heaven and earth, man is the most esteemed. Anyone who murders a servant or a maid shall not be allowed mitigation of punishment.'"—*Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 2*b*.

"In the reign-period *Chien Ch'u* [A.D. 76–84] there was a man who insulted another's father, whose son killed the man. Su Tsung [Chang Ti, A.D. 76–89] showed leniency in inflicting the death penalty. Afterwards this was used as an example in order to settle the law of insult." The decision was criticized by Chang Min on the ground that it was contrary to ancient precedent and might countenance indiscriminate murder.—*Ibid.* p. 5*b*.

[Murder of a step-mother by a step-son for killing his father was a less grave crime than killing a mother.]—*Ibid.* p. 5*b*.

"In the time of An Ti [A.D. 107–26], a native of An Ch'iu, Wu Ch'iu-chang, went with his mother to market, where they met a drunkard who insulted his mother, so Chang killed him and ran away. After his capture had been effected, Wu Yu, the Prefect of the place, spoke to Chang, saying: 'A son seeing his mother insulted feels ashamed, yet a filial son should think over the trouble likely to arise from his anger and should not involve his parents in a single action. Now you have forgotten your parents and allowed your anger to [cause you to] murder a man in full daylight. If I now forgive you it would be unjust, and to punish you is pitiful—what can I do? Have you a wife and son?' 'I have a wife but no children,' Chang replied. So [the Prefect] immediately sent a man to bring Chang's wife to the Court and having ordered Chang's manacles and fetters to be loosed ordered him to live with his wife in prison. So at last his wife became pregnant. In the depth of winter, when on the point of execution, Chang bit his fingers, drawing blood, and said: 'If only my wife could bear a son, whose name should be Wu Shêng' (born by Wu). Having said this he committed suicide by hanging himself. This was what was called 'murdering another for being insulting.' Su Tsung [Chang Ti] showed leniency in [inflicting] the death penalty, but in Ho Ti's time it was abolished. Therefore Wu Yu thought this was a doubtful case and allowed him to hang himself without inflicting any punishment, for it was a matter open to dispute."—*Ibid.* p. 5*b*.

"Anyone who steals a fowl or a dog or who receives a little bribe sufficient to buy wine does not deserve to be put to death. If he be killed, the punishment is too heavy, and if he have his head shaved, too light. If a qualified law be not made to meet [such cases] the law itself as to killing human beings would be wrong."—*Hou Han shu Chung Chang-t'ung chuan, P'ei wên yün fu, c.* 40, p. 65*b*.

"Ku Tsu coined cash with copper and tin. If any one mixed it with lead or iron or committed any similar fraud, this crime was to be punished with branding (or tattooing)."—*Chia I su, P'ei wên yün fu, c.* 98, p. 135*b*.

"In the 6th year [A.D. 201] the law of punishing with the death penalty the casting of coin of false metal for gold was established."—*T'ung tien ch'i yao, c.* 18, *Hsing*, p. 2*b*.

"Anyone who presumed to cast iron implements illegally or to make [lit., boil] salt secretly was to be punished by having the left foot fettered."—*Shih chi P'ing-chun shu, K'ang Hsi Tzŭ tien, Hsü chi shang, Chi'n pu*, p. 6*a*.

"There was a thief who stole the gem ring hung before the shrine of the ancestral temple. When he was arrested Wên Ti was angry and degraded [Chang] Shih-chih, the Minister of Justice, who according to the law should have reported to the throne anyone who stole anything belonging to the ancestral temple."—*Shih chi Chang Shih-chih, P'ien wên yün fu, c.* 93*b*, p. 32*b*.

"When Ti Wu-lun was Governor of Hui Chi the people there were accustomed to worship gods and were fond of divination. They frequently used an ox to sacrifice to the gods, so their wealth decreased. When Lun took office he sent a dispatch to the magistrates under his jurisdiction ordering them to issue a proclamation to warn the people that anyone disregarding the prohibition against killing oxen should be punished by the local magistrate."—*Ti Wu-lun chuan, ibid. c.* 95, p. 12*5b*.

[In 199 B.C. it was a capital crime for merchants, &c., to wear embroidered silk. See LAWS OF INTERCOURSE.]

Atonement.—"Robbers swarmed. In the tenth moon of winter, a decree was issued ordering that if one robber killed another robber he should be pardoned his own crime. Accordingly they all dispersed."—*Tzŭ chih t'ung chien kang mu, c.* 9, *Shang ts'é, Chéng p'ien*, p. 86*b*.

"In the 1st year [194 B.C.] of Hui Ti of the Han dynasty it was ordered that persons guilty of crime but allowed to purchase 30 grades of official rank might be absolved from the death penalty."—*Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 7*b*.

"In the Emperor Hui's time people might atone for the death penalty by paying 60,000 cash to the government."—*Yüeh Yu T'ang ts'ung shu, Hou Han shu pu chu, c.* 2, p. 5*a*. See also *Tzŭ chih t'ung chien kang mu, c.* 4, *Shang ts'é, Chéng p'ien*, p. 113*b*.

"In the 4th year [97 B.C.] of the period *T'ien Han* of the reign of the Emperor Wu of Han he ordered that offenders should be allowed to atone for their crimes."—*Tzŭ chih t'ung chien kang mu, c.* 5, *Shang ts'é, Chéng p'ien*, p. 43*b*. The *Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 7*b*, says the atonement fine was 500,000 *cash*.

Period of Disruption (221 *to* 589).—*Table IV.*

Laws and Punishments.—"In the period *Ch'ing Lung* [233–7] of the reign of Ming Ti of the Wei kingdom, an imperial decree was issued ordering that the law relating to punishments should be renewed and making a new law in 18 sections and a law for Prefectures and Districts in 45 sections amounting with the laws for Boards and the military to 180 sections. At that time the old laws of the Ch'in and Han dynasties were in use, the text of which had been learnt from Li Li by the Marquis Wên of Wei. Li collected the laws of nations to make the Law Classic. He thought that in government nothing was more important than the law for robbers and thieves. As robbers and thieves must be captured and their cases investigated he composed two sections on the law of capture. Those of cunning, climbing over the city wall, gambling, borrowing [without returning], dishonesty, adultery, and violating the law, composed a section of miscellaneous laws. Again, by increasing and decreasing the law, six sections only were made, but they were arranged according to the names of the crime. Shêng used it when he was Prime Minister of Ch'in. The Han dynasty following the system of Ch'in [Prime Minister] Hsiao Ho settled the law and abolished the law of killing three relatives [in addition to the criminal] and that of [others being] involved [in the crime], and increased the articles relating to witnesses and evidence and 3 sections of law relating to business [or benefit to government], assuming without authority, and stables [or horse rearing], composing 9 sections. Shu-sun T'ung increased what was insufficient, making 18 sections of appendices to the Law. Chang T'ang made 27 sections of the law regarding entering the palace, Chao Yü made six sections of the law of the Court, making altogether 60 sections. Again, in the time of the Han dynasty the laws were collected from cases previously decided. Under the article *Chiu* were more than 300 sections, and together with what Pao [Yi] the President of the Board of Revenue had composed, the law of marriage and of accusation as punishment by comparison, made 906 volumes. The men of subsequent ages each explained the law in his own way; there were more than 10 different families [or schools]. Those to be used when deciding criminal cases consisted of 26,272 articles. Now an imperial decree was issued [by Ming Ti in the period *Ch'ing Lung*] ordering that the law as collected by the Chang family only should be used and no other. Again another decree was issued ordering the law of punishments to be revised and settled, and instructing Ch'ên Ch'ün and Liu Shao to make 18 sections of new laws. To the 9 sections of principal law an appendix was added. In this way the law was simplified."—*Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 3*b*.

"In ancient times [*i.e.*, in Chou dynasty, under Ch'êng Wang and K'ang Wang, when the laws were not required to be put in force for 40 years] people did not violate the law, so that the punishments were set in order but not used; but at the present time they were used but not set in order."—*Tzŭ chih t'ung chien kang mu, c.* 8, *Shang ts'é, Chéng p'ien*, p. 31*a*.

"In the *Ting Mao* year [A.D. 248] the Wei Kingdom abolished the punishment of castration."—*Ibid. c.* 3, *Shang ts'é, Chéng p'ien*, p. 70*b*.

[The Wei Kingdom unsuccessfully attempted to revise the punishment of mutilation.]—*Ibid. c.* 14, *Chéng p'ien*, p. 120*a*.

[A law was instituted by which a married woman was punished as being involved in the crime of her parents before marriage and of her husband after marriage—being no longer liable to be involved in the crime of her parents after her marriage.]—*T'ung tien ch'i yao, c.* 18, *Hsing*, p. 4*a*.

"Now the punishment of flogging to death is used instead of decapitation—which is regarding one's body as worthier than one's life."—*Tzŭ chih t'ung chien kang mu, c.* 14, *Chéng p'ien*, p. 28*a*.

"If we adopt the ancient punishments, the adulterer should be put in the 'silkworm room' (*ts'an shih*) and a robber have his feet cut off, and then adultery and burglary will be put an end to. The Commentary [says]; The '"silkworm-room" is a close, warm room occupied by mutilated men [as they died if exposed to the wind during or soon after the operation].'"—*Ibid.* p. 27*b*.

"The Grand Tutor Chung Yu sent a memorial to the Throne saying: 'We should follow the law of Hsiao Ching [of the Han]—those who should be executed, but desire to have the right foot cut off [instead], may do so; those who are liable to face-branding, cutting off of the nose, of the left foot, or castration, may substitute shaving the head and flogging, as Hsiao Wên [of the Han] did. In this way the lives of 3,000 men *per annum* will be spared.'"—*Ibid.* p. 120*a*.

"The Emperor Wu of Wei settled the *chia tzŭ k'o* (甲子科), law of punishment. Those who committed a crime punishable by cutting off the right or left foot, should instead be put in wooden fetters, for at that time iron was scarce, so wood was used instead."—*Chin shu Hsing fa chih, P'ei wén yün fu, c.* 55, p. 39*a*.

"Chia Ch'ung asked Hao saying: 'I heard that when you were in the South you used the punishment of gouging out the eyes and skinning the face. What punishments are those?' [He replied:] 'These are punishments inflicted on regicides or those who are traitorous and disloyal.'"—*Tzŭ chih t'ung chien kang mu, c.* 17, *Chéng p'ien*, p. 8*a*.

"Why the old law could not be understood was due to it being contained in six chapters consisting of a few pages. Now a new code of laws should be made dealing with all kinds of affairs and the articles should be [increased so as to be] sufficient in number."—*Chin shu Hsing fa chih, P'ei wén yün fu, c.* 93*b*, p. 34*a*.

"In the 3rd year [A.D. 267] of the period *T'ai Shih* of the reign of Wu Ti of the Chin dynasty, Chia Ch'ung [the Prime Minister] and others were ordered to settle the laws, and adopted the Nine Laws of the Han, adding 11 sections. By preserving the classes and correcting the names, they made altogether 20 sections with 630 articles."—*Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 3*b*. This new law code "was favourably received by the people."—*Giles, Bio. Dic.*, p. 127.

"Among [the provisions of] the law of robbery there were [some dealing with] plundering and seizing, aimed at conspiracies to injure trade. . . . The law of plundering and seizing was sub-divided."—*Chin shu Hsing fa chih, P'ei wén yün fu, c.* 93*b*, p. 39*b*.

"Hsün Hsü (d. A.D. 289) aided in drawing up a Penal Code for the newly-established Chin dynasty."—*Giles, Hist. of Ch. Lit.*, p. 137.

[The instability of the law, ascribed to the prevalence of militarism, at the end of the Western Chin dynasty (313-7), is referred to in *T'ung chien lei tsuan, c.* 6, *Chéng shih pu*, p. 4*b*.]

"The Emperor Min of Wei [313–7] changed the law regarding the infliction of fines. If the criminal was a man, it was permissible to inflict the fine; but if a woman, she should have an increased flogging."—*Chin shu Hsing fa chih, P'ei wên yün fu, c.* 67*b*, p. 112*b*.

"Anyone sentenced to be bastinadoed (杖 *chang*) should have applied to him the end of a small cudgel of at least 5 in. [in length]. Anyone sentenced to be bastinadoed who has an ulcer on the leg [or on other parts] should be beaten lightly."—*Chin ling, Ko chih ching yüan, c.* 42, *Wu pei lei*, p. 30*b*.

"Fugitive [criminals] had their feet cut off, so that they could not escape again. Robbers had their hands cut off, so that they could not rob again. Licentious people were castrated with the same object (*i.e.*, to prevent repetition of the offence)."—*Chin shu Hsing fa chuan, P'ei wén yün fu, c.* 55, p. 48*b*.

"If anyone committed a crime punishable by face-branding, his turban was blackened; one punishable by cutting off the nose, his garment was reddened; one punishable by cutting off the feet at the ankles, his body was blackened; and one punishable by castration had to wear straw shoes of different colours."—*Chin shu Hsing fa chih hsü, Tzŭ shih ching hua, c.* 55, p. 39*a*.

[Under the ruler of the ephemeral Hsia State (407–31) the punishment for scamped work of any kind was death.]—*Giles, Bio. Dic.*, p. 520.

[Wên Ti (424–54) of the Liu Sung dynasty improved the criminal law.]—*Ibid.* p. 507.

"In the time of Wên Ti, Ts'ai Kuo was appointed to be *Shih Chung*, and memorialized the throne proposing that in questioning a criminal his son or grandson should not be called as a witness to testify to his parent's or grandparent's crime. This was greatly injurious to civilization and human feelings. 'From henceforth let criminals see the members of their family, but do not allow the latter to be questioned. In this way it will be clear that to make him confess his guilt the calling of the members of his family as witnesses will not be necessary.' The court, after deliberation, having agreed to this proposal, the request was granted."—*T'ung tien ch'i yao, c.* 18, *Hsing*, p. 5*b*.

"In the period *Yüan Chia* [424–54] of the Sung Kingdom, Chao, the wife of Huang Ch'u, a native of the Yen district, killed Wang, the wife of Hsi Tsai. The former fortunately came in for a general pardon, but Mrs. Wang's parents and the son of Hsi requested that Mrs. Chao should be banished beyond 2,000 *li* according to the law."—*Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 6*a*.

"When [K'ung] Hsiu-chih was magistrate of Wu there was a boy 10 years of age who stealthily cut 1 bundle of paddy from his neighbour's paddy-crop. Hsiu-chih arrested him for punishment. Someone persuaded him not to, but he said: 'If a boy of 10 years dares to steal things, what will he not do when fully grown?' In this way the district became quiet."—*Nan shih K'ung Hsiu-chih chuan, P'ei wén yün fu, c.* 79, p. 29*b*.

"From this time forth criminal cases must be decided according to law and after hearing the reasoning of the case. The cudgel and flogging shall be tempered to the health of the offender, but no illegal flogging or flogging with stone shall be allowed. The rules respecting canguing and flogging were now definitely settled."—*Wei shu Hsing fa chih, Tzŭ shih ching hua, c.* 55, p. 40*b*.

"In the period *T'ai An* [455–60] of Wên Ch'êng Ti, scholars as well as common people, through getting mad drunk, were frequently bringing lawsuits against each other. So a law was made that both the brewer and the purchaser of the wine should be liable to execution. But when guests were entertained on joyful or mournful occasions (weddings and funerals) the rule was relaxed, and wine was allowed to be drunk for a certain number of days. A superintendent was appointed to keep watch, and if he received a bribe amounting to 2 *chang* (丈), or half a *p'i*, roll, of cloth, he was executed."—*T'ung tien ch'i yao c.* 18, *Hsing*, p. 7*b*.

"In the 7th year [489] of the period *Yung Ming* of the reign of Wu Ti of the Ch'i, Wang Chih, a Reviser, collected the old laws of the commentary written by Chang P'ei and Tu Yü of the Chin' country into one volume."—*Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 4*a*.

"The Later Wei arose in the north. The insurrections of the Chin dynasty gave her the opportunity of increasing her colonies. The ruler of Wei used torture as a punishment and decided cases by martial law. As the people had experienced generous (or lenient) government [under the Chin], as many as 10,000 people became offenders against the law. By this all the colonies were disturbed. Afterwards anyone whose crime was punishable with death could atone for it by payment of gold or horses, but if anyone committed a 'great' offence (rebellion) his relatives, men and women, young and old, were all executed. Men and women guilty of illegal intercourse with each other were put to death. If anyone killed another, the former was sentenced to give the latter's family 49 head of horses and oxen, and [to provide] burial implements."—*T'ung tien ch'i yao, c.* 18, *Hsing*, p. 7*a*.

"The law of retaliation was [now] first abolished.' Those who offended against it [the prohibition] were to be punished according to the law of manslaughter."—*Ibid.* p. 9*a*.

"In the time of the Emperor Wu [502–50] of Liang the whip used was of 3 kinds, *viz.*: the *chih* (制), whip made of hide with edges; the *fa* (法), whip of hide without edges; and the *ch'ang* (常), whip of leather with the edges left on. Each had a 'stork's-head' knot, 1 ft. 2 in. long; its lash [thong] was 2 ft. 7 in. long, and 3 in. broad; and its handle 1 ft. 5 in. long."—*Sui shu Hsing fa chih, Ko chih ching yüan, c.* 42, *Wu pei lei*, p. 30*a*.

"When Shên Wu of the Ch'i took over the regency of the Eastern Wei he removed his capital to Yeh. As there were many robbers a strict law was established. If anyone murdered another by violence the principal as well as his confederates were all to be executed, and his wife and son degraded to be singers; but if the robber did not murder, and the cost of the stolen goods did not exceed 5 *p'i* [50 *chang* or 500 feet], the principal was to be beheaded and his confederates put to death, his wife and son being also degraded to be singers. If a thief stole things costing 10 *p'i* and upwards his wife and son were to be exiled to the distant posthouses and his confederates banished."—*T'ung tien ch'i yao, c.* 18, *Hsing*, p. 7*b*.

[Wang Wei, a Grand Secretary under the Liang, was nailed to a post by his tongue for reprimanding the king.]—*T'an Lou, Yüan chien lei han, c.* 260, *Jên pu*, pp. 7–8.

"Chang Lao of the Northern Ch'i requested [the Emperor] to establish laws."—*T'ung chien lei tsuan, c.* 6, *Chéng shih pu*, p. 4*b*.

"The Emperor Wu Ch'êng [561] of North Ch'i used light punishments and had the edges cut off the leather whip. The whip for punishing offenders was one foot long."—*Sui shu, Ko chih ching yüan, c.* 42, *Wu pei lei*, p. 30*a*.

"Yü Tsun was a Magistrate of Mei Yang, at which place a woman accused her adopted son, saying: 'My adopted son wished to wive me, and when I refused he beat me and railed at me.' When Tsun investigated the case and interrogated the parties, the son confessed his crime. He [Tsun] then said: 'There is no law about wiving a mother, for the sage did not like to insert it. This is a case of what the classics call *tsao yü*, evil consequences of sin.' Accordingly he hung this unfilial son on a tree and ordered 5 horsemen to shoot him to death."—*Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 5*b*.

[See also GEN. GOVT., *Legislation.*]

Exemptions and Mitigations.—"After Wên Ti of Wei had ascended the throne, there was a woman named Liu Chu who treated her daughters-in-law with cruelty, so they committed suicide one after the other. It was decided that Chu's punishment should be mitigated from the death penalty to take service in the *Shang Fang* (a branch office of the Imperial Household). On this account an order mitigating the death penalty of one who killed another with oppression was issued."—*T'ung tien ch'i yao, c.* 18, *Hsing*, p. 3*a*.

"At this time the people took various [menial] services under Government to redeem their crimes. . . . Though light in name they were in reality severe."—*Chin shu Wang Hsi-chih chuan, P'ei wên yün fu, c.* 40, p. 63*b*.

"In the time of Ch'eng Ti [326–43] of the Chin dynasty, the Minister of Justice memorialized the throne stating that Shao Kuang, the official accountant of the Court, was to be executed for having stolen the purse, but Tsung Yün and Huang Fan, Kuang's two sons, beat the drum [at the gate of the yamên] and offered themselves as Government slaves if their father was pardoned. The official who decided the case proposed to exempt Kuang from the death penalty and sentenced him to only 2 years' imprisonment, and sent Tsung and the other to be Government slaves. He did not set this up as an unchangeable law, but did it to impress upon the people the value of affection between father and son and the benevolence of the Government."—*Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 6*a*.

"In the 1st year of the period *Yüan Hsi* [continued by Wu Ti: 420], all the 5-years' offenders in the country were released."—*Nan shih Sung Wu Ti chi, P'ei wên yün fu, c.* 24*a*, p. 68*b*.

"The Emperor T'ai Wu [424–52] of Wei issued a decree ordering Ts'ui Hao to settle the law that officers of the 9th rank may redeem their crime with their rank."—*T'ung tien, ibid.* p. 68*a*.

"In the 11th moon of the 11th year [487] of the period *T'ai Ho* a decree was issued as follows: 'Now that the weather is bitterly cold, flogging is intolerable. From this month till the first moon of the summer of next year, no sentences shall be administered with the cudgel.'"—*Pei shih Wei Hsiao Wên Ti chi, ibid. c.* 34*a*, p. 62*a*.

"An imperial decree was issued that if anyone who committed a capital crime had aged parents or grandparents and no grown-up son or any relative to take care of them, the magistrate was to memorialize the throne with a statement of the case, and allow [his case] to stand over until after the death of his parents."—*T'ung tien ch'i yao, c.* 18, *Hsing*, p. 7*b*.

"Anyone who killed a thief or robber who plundered a village or town and entered people's houses was exempted from punishment."—*Ibid.* p. 8*b*.

"A pregnant woman should not be punished even though guilty of crime."—*Ibid.* p. 6*b*.

"In the year A.D. 561 the Ch'ên dynasty issued orders that no capital punishments were to be inflicted in spring and summer."—*Ch. Rev* xiv. 51.

From the Restoration of Unity to the End of the Five Dynasties (589 *to* 960).—*Table V.*

589–907.

Wên Ti "codified the criminal law."—*Giles, Bio. Dic.*, p. 898. Li Tê-lin had drawn up a revised legal code in 581 (*ibid.* p. 467).

"The Chinese laws were remodelled by the founder of the Sui dynasty, in A.D. 581. The laws of the Tartar dynasties of Chou and Ts'i had been frivolous and vexatious . . . and 裴政 was commissioned to revise them. Capital punishments were reduced to two, beheading and strangling; banishments, with exile for ever, 2,000 and 3,000 *li* [流]; plain banishment [徒] in five degrees from 1 to 3 years; five degrees of the bastinado [杖] from 60 to 100 blows; five degrees also of the knout [笞] from 10 to 50. This is the foundation of modern Chinese castigation. The second Emperor of this dynasty, the celebrated Yang Ti, promulgated the new Code."—*Ch. Rev.*, xiv. 51.

"Wên Ti of the Sui dynasty ordered Kao Ying and others to revise the law. It contains five kinds of punishments, viz.: 1st, the punishment of death, which was of two kinds, strangling and beheading; 2nd, banishment of three kinds, to 1,000 *li*, 1,500 *li*, and 2,000 *li*, those banished to 1,000 *li* did hard labour for 2 years, to 1,500 *li* for 2½ years, and to 2,000 *li* for 3 years; 3rd, exile, of five kinds, 1 year, 1½ years, 2 years, 2½ years, and 3 years; 4th, flogging, of five kinds, from 60 to 100 strokes; 5th, bambooing of five kinds, from 10 to 50 strokes. The punishments, of former dynasties, of whipping, of hanging up the head as a warning, and of breaking the body by driving carts over it, were abolished. The punishments of banishment and of exile were mitigated: banishment for 6 years was changed to 5, and exile for 5 years to 3. But if anyone committed a 'great' offence or concerted rebellion, his father, son, and brothers were to be executed and his family forfeited [as slaves] to the government."—*T'ung tien ch'i yao*, *c.* 18, *Hsing*, p. 9*a*. The punishments of breaking the body and hanging up the head (on a pole) were reinstituted by the Emperor Yang (605–17) and abolished by the T'ang Emperor Kao Tsu (618–27).—*Sui shih, Kuang shih lei fu*, *c.* 11, p. 17*b*.

[The crime of rebellion involved relatives to the 9th degree.]—*Kuang shih lei fu*, *c.* 11, p. 17*b*.

"The Emperor Wên of the Sui dynasty ordered that the large cudgel (大棒 *ta pang*), *shu*, or disciplinary, cudgel (束杖 *shu chang*), ankle compresser (壓踝 *ya hua*), and other forms of investigation used by magistrates of former dynasties, should be totally abolished."—*T'ung tien, Ko chih ching yüan*, *c.* 42, *Wu pei lei*, p. 31*a*; also in *Shih wu yüan hui*, *c.* 15 p. 8*a*.

"The first Sui Emperor, in the year A.D. 596, ordained that no executions should take place until three separate applications had been made for Imperial sanction."—*Ch. Rev.*, xiii. 430. See also *infra*.

[A revised code of statutes was drawn up in 607 by Niu Hung, President of the Civil Office.]—*Giles, Bio. Dic.*, p. 599.

"The Chinese were forbidden, in the same reign [Yang Ti], to carry arms—a change always significant of an important stage in national progress."—*Simcox*, ii. 130.

"On the accession of the T'ang dynasty, the code was remodelled by 裴寂 and 劉文靜.... The new Code was issued in the year A.D. 614 [? 618], and formally promulgated in 637."—*Ch. Rev.*, xiii. 401.

"Kao Tsu [618–27] of the great T'ang dynasty raised up [forces in defence of] right. When he arrived in the capital he made 12 laws. Besides murderers, those guilty of robbery and theft, of breaches of the military law, and of rebellion, were to be executed; the other [capital punishments] were abolished. When he succeeded to the throne he further made 53 laws, which entered into [formed part of] the new law. In the 7th year of the period *Wu Tê* [624] this was put in force."—*T'ung tien ch'i yao*, *c.* 18, *Hsing*, p. 9*b*; *Wén hsien t'ung k'ao hsiang chieh*, *c.* 17, *Hsing k'ao*, p. 4*a*.

"[The first T'ang] emperors re-established the ancient punishments of the whip and bamboo, then fallen into disuse, the shaving of the head and putting irons on the neck being substituted. . . . The T'ang dynasty also introduced the punishment of transportation, which . . . [was probably identical with] forced labour."—*Ch. Repos.*, xviii. 348. Flogging with the light bamboo was called (*ch'ih* 笞). It was administered for slight faults in order to shame (*ch'ih* 恥) the offender. The ferule or birch (*ch'u* 楚) is said in *T'ang shu Hsing fa chih, K'ang Hsi Tzŭ tien, Wei chi shang, Chu pu*, p. 7*b*, to have been substituted for the kind of bamboo used in the Han dynasty (Absolute Monarchy).

"When Li Fêng was sub-magistrate of Yen Ling he did not punish criminals with the bamboo, but made them ridiculous by ordering them to wear green kerchiefs. The number of days they had to be worn was regulated by the degree of guilt, so the people of Wu were ashamed to wear this kerchief. This brings to mind the fact that among the people of Wu at the present time, when they deride one whose wife is guilty of lewd conduct, they call her a 'green headkerchief.'"—*T'ang shih, Ko chih ching yüan*, *c.* 14, *Kuan fu lei*, p. 5*a*. The idea of shaming the offender into obedience to the law is also said to have underlain the infliction of punishments in *T'ang shu hsing fa chih, K'ang Hsi Tzŭ tien, Yen chi hsia, Ch'ih pu*, p. 68*a*; *Wei chi shang, Chu pu*, p. 7*b*; etc.

"The Penal Code of the T'ang dynasty consisted of four [classes, viz.]:—*lü* (律), penal laws, *ling* (令), decreta, *ko* (格), statutes, and *shih* (式), examples. The *ling* were concerned with distinctions between the ranks of nobles and plebians, and the regulation of the country; the *ko* dealt with the affairs under the charge of all the body of government officials; and the *shih* were the laws constantly in use. The government of a state should be carried on under these three kinds of laws. If anyone transgressed them and committed evil, he should be sentenced for his crime according to the law. The law books, being extracted from the old law of the Sui dynasties, were composed of 12 sections, namely:—(1) Definitions; (2) Guarding the Palace; (3) Official Duties; (4) Marriage; (5) Stables and Treasuries; (6) Assuming; (7) Robbery and Theft; (8) Quarrelling and Litigation; (9) Fraud; (10) Miscellaneous Laws; (11) Arresting Absconders; (12) Deciding Criminal Cases."—*Wên hsien t'ung k'ao hsiang chieh*, *c.* 17, *Hsing k'ao*, p. 4*a*.

"On the 1st day of *Kêng Tzŭ* of the 4th moon in summer in the 7th year [624] of the period *Wu Tê* all criminals in the Empire were pardoned, and on the same day new laws were published which contained 53 more clauses than those issued in the period *K'ai Huang* [581–601]."—*T'ung chien lei tsuan*, *c.* 6, *Chêng shih pu*, p. 5*a*.

[T'ai Tsung modified the Penal Code.]—*Giles, Bio. Dic.*, p. 462.

"When T'ai Tsung ascended the throne [627] he made 50 laws, and instituted the punishments of strangling and of cutting off the right toe in case where the death penalty had been remitted. Later on Pei Hêng-hsien, Secretary of the Board of Punishments, discussed the portion of the existing law relating to more than 30 actions, which was inconvenient. Accordingly T'ai Tsung ordered him to revise the same, and abolish the law relating to cutting off of toes, substituting the punishment of transportation to 3,000 *li* with hard labour for 3 years. In comparison with the death penalties of ancient times, about one-half were abolished."—*T'ung tien ch'i yao*, *c.* 18, *Hsing*, p. 9*b*.

T'ai Tsung "substituted penal servitude or transportation (役流) for certain cruel punishments: the criminal was transported (流) for 3,000 *li* and made to work three years (居作三年)."—*Ch. Rev.*, xiii. 401 See also *T'ang shu Hsing fa chih, Kang Hsi Tzŭ tien, Yen chi hsia, Ch'ih pu*, p. 68*a*, where it says the length of the period of transportation was proportioned to the gravity of the crime.

"When T'ai Tsung was in the Ming hall inspecting a diagram of acupuncture and cauterisation, he observed that man's five viscera were all connected with the back, so he prohibited whipping on the back."—*Ko chih ching yüan*, *c.* 12, *Shên t'i lei*, p. 8. The *Tzŭ chih t'ung chien kang mu*, *c.* 3, *Shang ts'ê, Chêng p'ien*, p. 70*b*, says that this was in the 4th year of the period *Chêng Kuan*, *i.e.*, 630. See also *T'ang shu Hsing fa chih, K'ang Hsi Tzŭ tien, Wei chi shang, Chu pu*, p. 8*a*.

"Moved by remorse at the hasty execution of one of his statesmen, T'ang T'ai-tsung ordered that, even where instant decapitation was imperially commanded, the death penalty should not be carried into execution until three separate applications had been made for the Imperial consent. On execution days fasting, to a limited extent, and absence of music were ordained."—*Ch. Rev.*, xiii. 401.

"In 637 a new code was drawn up in 500 articles. Milder penalties were substituted for 92 causes of death, and 71 of exile previously recognised, and the total number of penalties was reduced to 20; 1,590 rites and ceremonies, having the force of law, were enumerated, but, as usual, these were mostly derived from former codes."—*Simcox*, ii. 132.

"The new T'ang Laws, promulgated A.D. 637, contained 500 statutes (律), and established 20 grades of punishment: 92 previously capital offences were reduced to more merciful ones, and 71 penal servitude (流) offences were reduced to temporary exile (徒). Innumerable other vexatious provisions were altered for the better. In addition, 1,590 *decreta* (令) were embodied in the code."—*Ch. Rev.*, xiii. 401.

"In the 17th year [643] of T'ai Tsung the Board of Punishments thought that the law respecting brothers involved in rebellion being forfeited as slaves to the government was too light, and requested the throne to punish such criminals with the death penalty. But Ts'ui Jên-shih disagreed, saying: 'In ancient times the father's and son's, younger brother's and elder brother's, crimes did not involve each other. Why then put in force the cruel law of Ch'in and neglect the just law of the Chou? Moreover, killing the father and son was sufficient punishment. If for this you did not show any care, why then care about brothers?' It was accordingly granted."—*Wén hsien t'ung k'ao hsiang chieh*, *c.* 17, *Hsing k'ao*, p. 4*b*.

"When Yü-wên Yung was promoted [A.D. 730] to be Assistant Secretary of the Grand Court of Revision he saw that the size of the implements for flogging had no fixed measurement, so he made a club stand [or mould] wherewith to measure the length of the club, and also cast a copper compass for measuring its size."—*T'ang shu Yü wén Yung chuan, Tzŭ shih ching hua*, *c.* 55, p. 40*b*.

"In Kiangsi the punishment for illegally brewing wine was severe [death]. Wang Chung-su [742–62], being a man of integrity, on the day of his becoming a Judge, memorialized the throne to abolish it."—*Yüeh Ya T'ang ts'ung shu, Nan pu hsin shu, Chia* (vol. i.), p. 6*a*.

"In the 6th year [747] of the period *T'ien Pao* of Hsüan Tsung the punishments of putting to death by strangling and beheading were abolished."—*Tzŭ chih t'ung chien kang mu*, *c.* 3, *Shang ts'ê, Chêng p'ien*, p. 70*b*. Rebels, parricides, etc., were still put to death by these punishments; other serious crimes were punished with beating to death.

Occasionally the Emperor exercised a somewhat arbitrary discretion as to the punishment of murderers. "In the time of Su Tsung [756–63] a military official, Wang Ch'ü-jung, having a private grudge against a local magistrate, killed him. The Emperor, thinking he was clever in the use of the catapult, issued a decree reprieving him from the death penalty. A court herald, Chia Chih, memorialized the throne [as follows]: 'Your Majesty thinking that he is clever in one art has reprieved him from the death penalty. Now, in the army there are not a few who are clever in the best arts. If, depending upon their cleverness, they offend their superiors, how will [crime] be stopped? If Ch'ü-jung be pardoned, but the rest executed, the administration of the law would not be uniform [would be unjust], and people would be led to violate it.' The Emperor [however] pardoned him."—*Wên hsien t'ung k'ao hsiang chieh*, *c.* 17, *Hsing k'ao*, p. 6*b*.

"In the period *Chien Chung* [780–4] of the T'ang a law was made that a thief who stole three rolls of silk should be put to death."—*Ibid.* p. 5*a*.

"In the 8th year [792] of the period *Chêng Yüan* of the Emperor Tê Tsung of the T'ang dynasty an Imperial decree was issued ordering that the bambooing of capital criminals before execution should be discontinued."—*Hsü t'ung tien ch'i yao*, *c.* 12, *Hsing*, p. 1*a*.

"In the 6th year [811] of the period *Yüan Ho*, Liang Yüeh, a native of Fu P'ing, seeking revenge for his father, killed Ch'in Kao and went and confessed his crime to the magistrate. An imperial order was issued allowing him to seek revenge. According to the Classic of Rites the meaning was different, but by the law of T'ien Chêng anyone who murdered another should be put to death. The two commands of the Law and the Rites were great principles of civilization. There being this difference between the two, disputes arose. Now, it should be ordered that in the capital as well as in the provinces the matter should be jointly deliberated over, and a report sent to the throne. Han Yü, Secretary of the General Conduct Office, reported as follows: 'There is no law for it; it is not the case that it was left out, but revenge is not allowable, for it may injure the heart of a filial son and oppose the precepts established by the late Emperors. If revenge is allowable, then the people, depending on the law, will kill each other on mere presumption. This could not be prevented. Therefore the sage laid stress on this meaning in the Classic of Rites and neglected these words in the law. His intention was that the judge should decide criminal cases according to the law, and men versed in the Classics might deliberate on them according to the Classics. Now a law should be established providing that in the case of anyone who sought revenge for his father, it should, on being discovered, be reported to the *Shang Shu Shêng* for joint deliberation and memorializing the throne. He should be punished according to his deserts, and then the Classics and the Law would both be satisfied.' An Imperial decree was accordingly issued ordering Liang Yüeh to be beaten 100 blows and banished to Hsün Chou."—*T'ung chien lei tsuan*, *c.* 6, *Chêng shih pu*, p. 7*b*.

"In the 8th year [813], an Imperial decree was issued ordering that in the two capitals, Ho Tung, Ho Pei, Huai Nan, Shan Nan, and the East and West circuits, of the ten crimes punishable with death, manslaughter, coining cash, making seals, armed robbery within the metropolitan district, and theft of goods to the value of 3 *p'i*, should continue to be punished as before, but that criminals guilty of the remaining death penalties should be banished."—*Hsü t'ung tien ch'i yao*, *c.* 12, *Hsing*, p. 1*a*.

"In the 2nd year [822] of the period *Ch'ang Ch'ing* of Mu Tsung, Sun Ko, Secretary of the Board of Punishments, memorialized the throne stating that the Prefect of Ching Chao Prefecture had reported a case in which Chang Li, a brave of Yün Yang, owed K'ang Hsien some rice money. When Hsien demanded payment, Li, being drunk, dragged Hsien along until he was nearly dead, but Hsien's son, Mai Tê, 14 years of age, went to rescue his father. Owing to Li's aggressive attitude, nobody dared to interpose. At length [the son] struck Li on the head with a wooden spade, drawing blood, and he died in 3 days' time. According to the law, if a son whose father was beaten by another wounded the other in saving his father he might have 3 degrees of the punishment of the law of quarrelling remitted; but if he killed the other he was to be punished according to the common law. According to this Mai Tê was liable to be executed. The law was [made] to guard against inhumanity and [to encourage] filial conduct, on which civilization rests. Now Mai Tê in saving his father showed filial conduct, and his killing Ch'ang Li was not due to inhumanity, but to his being moved by affection. In boyhood he learnt of the affection between father and son. If this had not been inculcated by the sages, how could a boy attain to it? Whether he may be pardoned or not depends on your Majesty's clemency. An imperial decree was issued saying: 'K'ang Mai-tê is still a boy, yet knows all about filial duty. Though he deserves to be executed for the murder of another, yet, as it was for the sake of his father, he is deserving of pity. If the death penalty were inflicted, the principle of the remission of punishments would be misunderstood. Let the magistrate be ordered to modify the death penalty one degree.'"—*Wén hsien t'ung k'ao hsiang chieh*, *c.* 17, *Hsing k'ao*, p. 6*b*.

"In the 3rd year [827] of the period *Pao Li* of Ching Tsung, in the Ching Chao Prefecture there was a mother-in-law who beat her daughter-in-law to death. The Prefect there memorialized the throne requesting that her life be forfeited. But Liu Kung-cho argued the matter as follows: 'An elder beating a younger is different from a quarrel. Moreover, her son was alive; it is not according to civilized principles to kill one's mother for the sake of the wife.' So she was pardoned."—*Ibid.* p. 7*a*; see also *Journ. N.-C.B.R.A.S.*, N.S. xl. 35–6; also in *Yüeh Ya T'ang ts'ung shu, Nan pu hsin shu, Yin* (vol. 9), p. 9*a*.

"In the time of Wu Tsung [841–7] an imperial decree was issued ordering that a thief who stole things of the value of 1,000 cash should be put to death. But no thieves were put to death, the excuse being made that the people were pressed by hunger. Wu Tsung had made this order, but as soon as Hsüan Tsung [847–60] succeeded to the throne it was abolished."—*Ibid.* p. 4*b*.

"In the 5th year [845] of the period *Hui Ch'ang*, according to the law, an official dismissed from office and guilty of a crime punishable with less than banishment, should not be punished under the law of official criminals, for this involved the difference of heavy and light penalties. If guilty of fraud why should he not be punished? Thenceforth an official guilty of crime, whose case was not excusable, was not to be treated under the law of excuse [*droit administratif*]."—*Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 1*b*.

"In the 5th year [845] of the reign *Hui Ch'ang*, Li Shên, Viceroy of Huai Nan, investigated the case of Wu Hsiang, the magistrate of Kiang Tu, who secretly converted the revenue to his own use, and married by force the daughter of Yen Yüeh, a man under his jurisdiction. By reckoning the property he had [thus obtained] as stolen goods, his crime deserved to be punished with death."—*T'ung chien lei tsuan*, *c.* 6, *Chêng shih pu*, p. 7*b*.

"The custom in China is to put thieves to death, when they are caught." "Highway robbers are killed."—*Reinaud, Relations des Voyages*, i. 24, 55. See also p. 53. Abu Zeyd adds (p. 69) that adultery, theft, and murder were punished with death. The statements as to mode of execution and eating of the prisoner described on pp. 69–70 are probably based on confusion of the methods of binding, flogging, and eating of parts of the body after death.

"In the time of Hsüan Tsung [847–60], Chang K'uei, Palace Guardsman and Secretary of the Board of Revenue, divided the law of punishments into classes or chapters with rules, and called it the 'Collected laws of Ta Chung.' It was put in force by imperial order."—*Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 1*b*.

"In the 6th year [865] of the reign *Hsien T'ung*, Chao Ling, an officer of the Salt Department of Ts'ang Chow, committed a capital crime. At his execution a girl came and requested to share the punishment, saying: 'My mother died when I was seven years old; after this my father brought me up by stealing Government funds. Now his crime having come to light it is my right to die with him.' The Commissioner of the Salt Department, being pleased with the righteousness of the girl, laid the case before the Throne. Accordingly a decree was issued taking pity on her and diminishing the father's crime."—*Yüeh Ya T'ang ts'ung shu, Nan pu hsin shu, Ting* (vol. 4), p. 14*b*.

"The sons of criminals, workmen, and traders belonged to different classes. If they borrowed each other's names to commit fraud, or if promotion and degradation were brought about by false registration, they were to be punished."—*T'ang shu Hsüan chü chih, I'ei wên yün fu, c.* 79, p. 79*b*.

[For law forbidding wives and concubines of officers above the 8th and 4th ranks respectively to re-marry, see MARITAL.]

907–960.

"During this welter of anarchy no startling advance was made: yet each dynasty . . . naturally took for granted the possibility that it might endure for ever; and thus the very first step taken by each founder was to issue a code of his own, based, of course, upon the old codes already described."—*Journ. N.-C.B.R.A.S.*, N.S. xl. 42.

"After the wars and revolution which accompanied the fall of the great T'ang dynasty there was only one copy of the laws to be found; but this was enough, and it formed the basis from which the next group of short-lived dynasties fashioned their codes. To this period belong the abolition of confiscation of property and of the responsibility of relatives in all cases but treason; the cleansing of prisons, medical treatment of prisoners, decent conduct towards mere witnesses, and regular tabulation of the rates of ransom; but the anarchy was too great for these important reforms to be properly consolidated; however, in any case they were symptoms of healthy progress."—*Ibid.* xl. 37.

"In the 4th year [910] of the period *K'ai P'ing* of T'ai Tsu of the Liang dynasty the law was revised. The *decreta* comprised 30 volumes; the forms, 20; the rules, 10; the law with its index, 30; and the law with the commentaries, 30. Altogether it made 130 volumes of newly-settled laws, *decreta*, rules, and forms of the Great Liang. It was accordingly put in force."—*Hsü t'ung tien ch'i yao, c.* 20, *Hsing*, p. 1*b*.

In the 12th year [947] of the period *T'ien Fu* of the [Posterior] Chin dynasty, an imperial decree was issued ordering that when a robber was captured, no difference was to be made on the ground of the quantity of his booty. If the case against him was proved, he was to be put to death."—*Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 4*b*.

Under the Posterior Han, in the period 936–48, many cruel punishments, such as burning criminals alive, slicing, and disembowelling, were legalized. "From the reign *Chien Yu* [948–51] the law was harsh, people who stole one *cash* being put to death. When T'ai Tsu [951–4] of the Chou learnt of this corrupt procedure he established a law that a thief who stole [goods costing] 3 rolls of silk should be executed."—*Ibid.* p. 5*a*. See also SUNG PERIOD.

"Liu Chu used torture as a punishment; when he bastinadoed a man, 2 cudgels were used at the same time, called 'united pleasure' (合歡 *ho huan*) cudgels."—*Wu T'ai shih, Ko chih ching yüan, c.* 42, *Wu pei lei*, p. 30*b*.

"In the 2nd year [952] of the period *Kuang Shun* of T'ai Tsu of the Chou it was ordered that anyone who wished to make an accusation against another should take his case in due order to the Magistrate, Department Magistrate, and Intendant of Circuit [at that time Judge] to have it decided. If they could not properly decide it, he was allowed to petition the *T'ai* and *Shêng* (higher authorities). If he could find a man to write a petition for him, the name and address of the writer were to be inserted in it; but if he could not find anyone to do so, he was allowed to bring a blank paper and make his accusation, but his accusation must relate to his own affairs and he must not depart in any way from the truth."—*Hsü t'ung tien ch'i yao, c.* 20, *Hsing*, p. 1*b*.

"In the 2nd year [955] of the period *Hsien Tê*, Shih Tsung recorded that among the prisoners inside the palace was a native of Ju Chow, named Ma Yü, whose father and younger brother had been wrongfully put to death by the magistrate. Though the case was revised many times, it could not be redressed. When Shih Tsung questioned him in person he ascertained the facts. The people thought he was clever. Since then all magistrates have decided criminal cases only after personal investigation."—*T'ung chien lei tsuan, c.* 6, *Chêng shih pu*, p. 8*a*.

"In the 4th year [957] of the period *Hsien Tê* of Shih Tsung, it was thought that the style and meanings of the law books were antiquated, the articles in them [too] numerous, and the rules and orders they contained [too] complex. It was impossible to ascertain clearly [what the law was]. Chang Ti, the Censor of Books, was ordered to compile the law afresh, and explain those which were difficult to understand. Rules and orders which were too complex were to be revised. Light and heavy punishments, which were not in due proportion, being unfit for the present though fit for ancient times, and those in which there were inconsistencies, were to be adjusted and compiled into books. When it was finished the officials of the 4th grade and upwards in the Censorate and Board, and those of the 5th grade and upwards in the two *Shêng* were ordered to reason with him and discourse upon [the laws], after which it was to be presented to the Grand Secretariat, for [final] decision."—*Hsü t'ung tien ch'i yao, c.* 20, *Hsing*, p. 1*b*.

"An imperial decree was issued and published to the departments and districts stating that the neighbours as well as those who lived in the same house as a robber were to be executed."—*Ibid.* p. 1*b*.

"An imperial decree was issued ordering that anyone who castrated a boy was to be punished."—*Ibid.* p. 2*a*.

"In the 10th moon of the 4th year an imperial decree was issued ordering that anyone who made false gold should be put to death."—*Ibid.* p. 2*a*.

"The founder of the Sung Dynasty forbade executions in the satrapies without the revision of the Board and the Emperor's warrant."—*Ch. Rev.*, xvii. 52. Also in *Giles, Bio. Dic.*, p. 70.

[The *lex talionis*, though not constitutional, was not punished, the slaying of a parent's murderer being praised.]—*Sung shih Li Lin chuan, P'ei wên yün fu, c.* 26*a*, p. 166*b*; *Sung shih Ch'ên P'o-êrh chuan, ibid.* p. 168*a*; *Sung shih Yao Ssŭ chuan, ibid.* p. 166*b*.

"From the time of the Five Dynasties to the 2nd year [961] of the period *Chien Lung*, most of the prefects and magistrates were military officers, who allowed the judicial officers to use the law as they pleased. At that time, Ma Han-hui, a native of Ching Chou, was a worthless fellow and a murderer. His neighbours were afraid of him. His parents and brother killed Han-hui. Ch'ou Chao, the Judge, and Tso Fu, the Registrar, decided the case and put them all to death. The Emperor, being angry at Chao and the others for being too cruel, degraded them both and banished Fu to a solitary island. Thus men learned to obey the law."—*T'ung chien lei tsuan, c.* 6, *Chêng shih pu*, p. 8*a*.

"In the 2nd year of the period *Chien Lung* [in cases of theft] goods costing *cash* to the amount of 3,000 were reckoned at 80 to the 100. There was an imperial decree to this effect, so that the law was less severe."—*Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 5*a*, *cf.* previous Period.

"In the 3rd year [962] . . . a decree was issued stating that the prevalence of thieving was not really destructive [to the nation]. But the laws of recent dynasties were severe, they did not conform to the principles of humanity. From this time a thief who stole goods costing 5 *kuan* (a string of 1,000 *cash*) [instead of 3 kuan as formerly] of full *pai* (*i.e.*, 100 counting as 100) was to be put to death."—*Ibid.* p. 5*a*.

[The custom of offering all memorials or petitions in writing is said to date from A.D. 964.]—*Simcox*, ii. 264, and note.

"In the 3rd year [970] of the reign *K'ai Pao* of T'ai Tsu . . . an imperial decree was issued ordering all intendants of circuit, department magistrates and prefects, after deciding a case of capital punishment, to write, in red ink, what law had been followed in the case, with the dates and titles and name of the official who decided it, and to report to the Board of Punishments for revision. In the 5th year [980] of the reign *T'ai P'ing Hsing Kuo* of T'ai Tsung, in the Yen Ting district of Ching Chou, a woman who hated the son of her husband's first wife killed him by cutting his throat. An imperial decree was issued as follows: 'Laws are established to show the importance of human relationships; affection and tenderness are natural. Between consort and concubine there is the difference of love and hate. The law must regard intention; it is impossible to apply the same principle to both cases.' Since then a stepmother who killed the son of her husband's first wife and a mother-in-law who killed her daughter-in-law were punished according to the law of murdering one of the common people."—*Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 7*a*.

"In the 1st year [976] of the period *T'ai P'ing Hsing Kuo* it was ordered that every department should find men versed in astronomy and send them to Court. If any were bold enough to conceal one he was to be put to death."—*Hsü t'ung tien ch'i yao, c.* 20, *Hsing*, p. 2*a*.

"In the 7th moon of the 2nd year [977] an imperial decree was issued stating that any treasurer who dared to alter the standard weights and measures in order to pocket the excess should be put to death."—*Ibid.* p. 2*a*.

"In the 5th moon [of 977] an imperial decree was issued ordering that any sons of officers, whether in the capital or in the provinces, who were wicked and would not reform, though repeatedly cautioned, should be reported by their elders to the magistrate, who should send them to the court for transportation abroad. If their elders did not report their crimes they would be involved as near relatives (*e.g.*, uncles, cousins, &c.)."—*Ibid.* p. 2*b*.

"In the 10th moon [of 977] an imperial decree was issued forbidding anyone to secretly study books on astronomy, divination, and physiognomy, and ordering anyone who disobeyed to be executed. It was also prohibited that Chiang Nan and other departments should again cast small cash. Anyone who cast them surreptitiously was to be put to death."—*Ibid.* p. 2*b*.

"A law of the year 977 . . . made the murder by a stepmother of her husband's earlier son punishable as an ordinary homicide."—*Journ. N.-C.B.R.A.S.*, N.S. xl. 37.

[T'ai Tsung pardoned a son who killed his mother's murderer.]—*Sung shih Ch'ên P'o-êrh chuan, P'ei wên yün fu, c.* 26*a*, p. 168*a*.

[992. Plunderers of rich during famine were put to death.]—*Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 5*a*.

"In the 2nd year [996] of the period *Chih Tao* an imperial decree was issued stating that the people of all the *chou* districts of [Ssŭ] Ch'uan and Shan [Si] who had kept weapons should deliver them up to the Government within 100 days. Anyone concealing them was to be executed."—*Hsü t'ung tien ch'i yao, c.* 20, *Hsing*, p. 2*b*.

"In the 2nd year [999] of the period *Hsien Ping*, Chang Yung, Vice-President of the Censorate, was appointed President of the Board of Works. When he was magistrate of Hangchow, a person brought an action against his sister about some property. His brother-in-law spoke to the magistrate, saying: 'When my wife's father was on the point of death his son was only 3 years old, so he bade me take charge of his property, and wrote out a will [by which] when the time came his son should have $\frac{3}{10}$ths and his son-in-law $\frac{7}{10}$ths.' Yung, having read the will, poured wine on the ground and said: 'Your wife's father was a clever man. He thought that, as his son was young, he would entrust him to you. If he had rashly given $\frac{7}{10}$ths to his son he would have died under your hand (whilst under your care).' Accordingly he decided that the son should have $\frac{7}{10}$ths and the son-in-law the remainder. The people admired him for his righteousness."—*T'ung chien lei tsuan, c.* 6, *Chêng shih pu*, p. 8*a*.

"A rich man once lost his female slave. Her parents laid an accusation against him before the Department Magistrate, and the First Class Assistant Magistrate was ordered to investigate the case. As he had once tried without success to borrow some money from the rich man he sentenced him for having murdered the slave with the help of his son and thrown the corpse, which was missing, into the river. This crime was one punishable with death. As the rich man could not bear the torture, he made a pretence of confessing his guilt. Though the sentence was revised by the Department Magistrate, it was not altered. But [Chien] Yüeh-shui had doubts about the case, and delayed his decision for a few days, during which he secretly sent a man to search for the slave. When she was found and shown to her parents they said it was their daughter. Thus, through him, the rich man and his son were saved."—*Ibid.* p. 8*a*.

"In the beginning of the period *Ch'ien Hsing* [1022] they began to draw up rules for the delimitation of the fields. If anyone presumed to seize the field of another, the latter was granted leave to lay an accusation against him, and was given $\frac{1}{3}$rd of the field of the former."—*Sung shih Shih huo chih, P'ei wên yün fu, c.* 106, p. 49*b*.

"It is about 900 years ago that the lingering death punishment (abolished in 1905) appears both in South China and among the Kitan Tartars."—*Journ. N.-C.B.R.A.S.*, N.S. xl. 38. See also *infra*, KITANS, and MONGOL and MANCHU PERIODS.

"The *Tsa-iao-tao*, or 'Stomach cutter,' . . . in appearance (although, of course, on a much larger scale) and manipulation very much resembles the chaff-cutter used by mafoos in cutting food for their ponies. The victim is laid on the platform of the 'cutter' at right angles to the knife blade, which being pressed down by the executioner and his assistants, meets the victim just above the abdomen and severs him in half. The *Tsa-iao-tao* was invented by a famous judge during the reign of Jên Tsung (1023–64) of the Sung dynasty, named Pao Cheng."—*N.C. Herald*, August 8th, 1900.

"In the 5th year [1027] of the period *T'ien Shêng* of Jên Tsung, a great drought took place in Shan Li. An imperial decree was issued ordering any people who committed armed robbery at granaries, but did not wound the owner, should be punished one degree lighter than the death penalty. Anyone not a chief conspirator should be punished one degree lighter still."—*Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 5*a*.

"In the 3rd year [1043] of the period *Ch'ing Li*, whilst Pao Chêng was magistrate of the T'ien Ch'ang district, someone accused a thief of cutting out the tongue of his ox. Chêng sent him back to kill and sell his ox, whereupon another accused someone of killing his ox. So Chêng said: 'Why did you cut out the tongue of another's ox, and then boldly bring an accusation against him?' On hearing this the thief was surprised and confessed his fault."—*T'ung chien lei tsuan, c.* 6, *Chêng shih pu*, p. 8*b*.

"Anyone in fault could atone for his sin by paying rice. One catty of brass was equal to 5 pecks of rice, which was used to meet the expenditure on the frontier."—*Sung shih Hsia Chien chuan, P'ei wên yün fu, c.* 40, p. 61*b*.

"In the 5th year [1053] of the period *Huang Yu*, Ma Hsün, being versed in law, said that when he was a magistrate he was stationed at Hsiang Chou in a famine year, when many people burgled the houses of rich families to carry away their grain. The judicial officer sentenced them as robbers, but Hsün said: 'They were pressed by hunger, so this case differs from robbery.' Accordingly he memorialised the Throne, requesting that they might have a [more] lenient [punishment than the] death penalty. It was ordered to be a fixed law."—*T'ung chien lei tsuan, c.* 6, *Chêng shih pu*, p. 8*b*.

"In the 1st year [1054] of the period *Chih Ho*, an imperial decree was issued stating that if a descendant of the late Emperor or of the princes had been an official of the present dynasty of a rank not exceeding the 7th degree, and his grandparents, parents, wife, or son had been guilty of [any crime punishable with] banishment or a lighter penalty, the crime might be atoned for, and this also even if he were not an official, provided he had had any [honour] bestowed upon him by the present dynasty. If his crime were not so great, he might enjoy the above-mentioned right."—*Hsü t'ung tien ch'i yao, c.* 20, *Hsing*, p. 3*b*.

"Anyone guilty of adultery, breaking the law, or disobedience to parents should be put to death by [being crushed by] five carts. Anyone who committed the offence of scolding or railing at a superior should be killed by having a hot awl thrust into his mouth."—*Ibid.* p. 6*a*.

"In the 2nd year [1055] an imperial decree was issued stating that if anyone killed or wounded another, and the village constable did not report it to the magistrate, or the magistrate did not send an officer to investigate, or the family of the murdered person withdrew their complaint on receipt of money, it would be allowable for anyone to report these offenders, who were to be punished according to law. The family who accepted money to withdraw their complaint were to be punished according to the amount received."—*Ibid.* p. 6*a*.

"In the 1st moon of the 2nd year [1055] an imperial decree was issued stating that one who offended against the law by melting cash into copper should not be pardoned, but his family should be deported."—*Ibid.* p. 6*a*.

"In the 1st year [1068] of the period *Hsi Ning* of Shên Tsung a woman of Têng Chou plotted to kill her husband, who was only wounded, but did not die. On the case being investigated she confessed her crime. The Department Magistrate Hsü Tsun said: 'According to the law, killing or wounding anyone who has been offended and who reports and confesses his guilt may be pardoned.' So he requested that her punishment be modified."—*Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 7*b*.

"There was a person of Huai who plundered people's wealth armed with a halberd. The judge punished him under the law of one who has not wounded another. Mi Kung said: 'If a man who, armed with a weapon, plunders others is pardoned, plunderers would be many.'"—*Sung shih Mi Kung chuan, P'ei wên yün fu, c.* 79, p. 30*b*.

"In the 5th year [of *Yüan Yu*, 1090] it was ordered that a ploughman who offended against his master should be punished one degree heavier than one who offended against one of the common people. If a master offended against a ploughman, and if his crime be less than [one punishable by] flogging, he might be absolved, but if his crime be one [punishable by a severer penalty than] transportation [his punishment] might be mitigated one degree [as compared with that] of the common people. If the offender was guilty of concerting to kill anyone, of cheating, extorting, or refusing to pay due rates, no mitigation was to be allowed to him. If anyone killed another in a fight, his face might be marked [tattooed or branded], but he was to be exiled to the next province. If the case was important, it was to be reported to the throne for its decision."—*Hsü t'ung tien ch'i yao, c.* 20, *Hsing*, p. 4*b*.

"On the whole it may be said . . . that the southern dynasty was as shifty and as merciful in laws as it was literary (*sic*) and unusually weak in arms. But officials were now obliged to study the law, and scholars began for the first time to hold judicial posts."—*Journ. N.-C.B.R.A.S.*, N.S. xl. 41–2.

The punishments were death, banishment to a distant, and

Sung Period (960 *to* 1280).—*Table VI.*

"The ordinary laws of the country underwent little change between the Tang and the Ming."—*Simcox*, ii. 213.

"No considerable departure was at any time made from the accepted principles handed down from ancient times. A celebrated novel . . . gives a powerful and vivid account of the corruption of those days."—*Journ. N.-C.B.R.A.S.*, N.S. xl. 41.

[A revised criminal code was among the many benefits conferred by T'ai Tsu upon the empire.]—*Giles, Bio. Dic.*, p. 70.

to a near place, and flogging. "Kao Tsung [1127-63] of the Sung dynasty ordered that the long cangue (枷 *chia*) should be made of dry wood and have the weight carved on it. All cangues and fetters in the summer months were to be washed once in every five days."—*Ko chih ching yüan*, *c.* 42. *Wu pei lei*, p. 30*b*.

"The cudgel (杖 *chang*) or bamboo [used in punishment] must not have the joints or eyes left [unlevelled], nor have iron nails stuck in it, nor sinews and glue added to it, etc., but must be [one] branded and supplied by the Government."—*Wên hsien t'ung k'ao*, *c.* 17, *Hsing chih*, p. 42*b*.

"On the day *Wu Hsü* of the 8th moon in the first year [1131] of the period *Shao Hsing*, the Board of Punishments sent a memorial to the throne about the murder case of the warriors Huang Tê and others, among the latter being his followers who had waited on the river bank, whom the Court of Punishments was about to forgive the death penalty. The Emperor said: 'With highwaymen no difference must be made between leaders and followers. Why would you pardon them? I frequently dare not be fond of eating living animals, lest too many be killed; only those who ought to be killed must be killed.' Fu Chih-jou said, that if a creature did not deserve death—even though it be a louse—it must be absolved—if it deserved death, even though it be a man, it must not be forgiven. The Emperor admired the correctness of his argument."—*T'ung chien lei tsuan*, *c.* 6, *Chêng shih pu*, p. 8*b*.

"In the 25th year [1155] of the period *Shao Hsing*, the law inflicting heavier punishment for false accusation was sternly promulgated."—*Sung shih Kao Tsung chi, P'ei wên yün fu*, *c.* 97, p. 49*a*.

"An order was published that all Department Magistrates who did not report untimely calamities taking place within their jurisdiction should be punished."—*Sung shih Chên Tsung chi*, *ibid. c.* 40, p. 67*a*.

"In the 27th year [1157] a thief stealthily opened the tomb of the mother of Wang Kung-Kun of the Wu Chiang district. The magistrate there released the thief, but Kung-Kun killed the thief on his own account. Kun's brother Tso, a Second Class Secretary of the Board of Revenue, paid the Government to atone for his brother's crime. An imperial decree was issued pardoning Wu, but Yang Ch'un and others said: 'One who opens a tomb and the coffin should by law be executed by strangling. When Kung-Kun arrested the thief he dared not kill him, and brought him before the Magistrate. After giving his decision the Magistrate set the thief free, making him again equal to one of the common people. The insult could not be redressed. A son like this would be ashamed to face others. We propose that Kung-Kun's killing the man who opened the tomb and was deserving of the death penalty, be not considered as a crime. Payment to the Government to atone for a brother's crime should not be permitted. For pardoning a criminal contrary to the law the magistrate should be severely punished.' The Emperor harkened to what they said (did as they proposed)."—*Wên hsien t'ung k'ao hsiang chieh*, *c.* 17, *Hsing k'ao*, p. 7*b*.

"In the 1st year [1165] of the period *Ch'ien Tao*, an imperial decree was issued stating that the law as to the punishment of offenders should be uniform. In recent years there had been many who used the law indirectly to commit fraud. This was going beyond the just administration of the law. From now the magistrates are to examine criminals according to principle, and investigate their case according to law, but need not apply to the throne asking for a decision to be given. If in criminal cases doubt exist, the Grand Court of Revision and the Board of Punishments should see what law applied, and then memorialize the throne to establish it as a standard law, and also to publish the same in all the provinces to have it put in force. The Board of Punishments and the Grand Court of Revision were to use the old system no more."—*T'ung chien lei tsuan*, *c.* 6, *Chêng shih pu*, p. 5*b*.

[1195. False entries of soldiers on military registers was punished under the law of bribery.]—*Sung shih Ning Tsung chi*, *P'ei wên yün fu*, *c.* 79, p. 79*b*.

"When Ning Tsung ascended the throne [1195], the law regarding the punishment of women who smuggled salt was settled. Formerly, in the time of Ying Tsung [1064–8], Wang K'o-ching was a Salt Commissioner of the Two Huai. Once a salt smuggler of Wên Chou was transported there—she was a woman. He was angry, and said: 'Why should a woman be transported more than 1,000 *li* accompanied by police? it is indeed injurious to civilization!' Since that time women were not transported. His proposal was submitted to the throne requesting that it be adopted as a law, and from that time the punishment for this crime was settled."—*Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 11*a*.

"In the 3rd year an Imperial decree was issued stating that thenceforth those who surreptitiously sold salt should be punished or sentenced according to the decree issued in the period *Shao Hsing*, namely, that anyone who sold one catty of salt surreptitiously should be banished for one year, and anyone who sold 300 catties should be banished to his native city. Anyone who boiled one tael of salt should be fined two taels. When any special imperial favour was shown they would have no right to be pardoned."—*Ibid.* p. 5*a*.

"In the 7th year an imperial decree was issued stating that when an officer of rank committed a crime, the judge should accuse him by memorial to the throne and await a further decree, but was to have no right to arrest him and dismiss him from office himself."—*Ibid.* p. 4*a*.

"A decree was issued that at K'ai Fêng Fu every year on New Year's Day and at the Winter Solstice, punishments should be prohibited for three days."—*Sung shih Jên Tsung chi*, *P'ei wên yün fu*, *c.* 24*a*, p. 67*a*.

"When Wu Yü was Magistrate of Ku Chih of Kuang Chou which formerly was a country belonging to Earl Shên, and also an old feudal State of Ch'u, where there were plenty of curiosities, he, being a stranger to the place, did not know [where they were to be found], so he ordered those of the people who committed crimes to ransom their crimes with ancient implements. When he was discharged from office he had procured about 60 implements."—*Pi shu lu hua*, *Tzŭ shih ching hua*, *c.* 55, p. 41*a*.

"The Kitans sent a despatch requesting the arrest of an incendiary. [Liu] Yung-nien replied to it, saying: 'An incendiary truly is guilty of crime, but as it was committed in my territory, how does it interfere with your affairs?'"—*Sung shih Liu Yung-nien chuan*, *Pei wên yün fu*, *c.* 79, p. 32*b*.

"In the 13th century a curious and elaborate set of instructions to coroners was drawn up (*Ch. Rev.*, iii. 34). As in the present code, the person guilty of wounding another is held liable for all the cost of his illness and medical treatment, and made responsible for his death, if it occurs within a prescribed interval. But in these instructions it is further required that the accused shall himself nurse and care for his victim: for, it is said, the relatives, unless their tie is of the closest, will wish the wounded man to die, that they may extort money from his slayer; while the accused wishes him to live, that his own punishment may be lightened."—*Simcox*, ii. 213–4.

[Adultery was punishable by law, though esteemed in the wife by the husband before marriage.]—*Pei shih Chi Hu chuan*, *P'ei wên yün fu*, *c.* 95, p. 130*b*. *Cf.* MARITAL and MORAL SENT.

[For the Law College established in 1074, see ACCESSORY INST.]

LIAO.

"In the first year [907] of the reign of T'ai Tsu everything was done roughly. Anyone guilty of crime was punished heavily, whether the crime was serious or otherwise."—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 19, *Hsing k'ao*, p. 1*b*.

"The Liao punishments were of 4 kinds, viz., death, exile, banishment, and bambooing. The death penalty included beheading, strangling, and slicing (*ling ch'ih*) [see also *supra*, SUNG PERIOD]. The punishment of exile was according to the severity of the sentence, either to the frontier towns or to the clans or tribes related to the Liao; as regards distance, they were sent beyond the frontier or to the remotest districts. The punishment of banishment was for life, or for 5 years, or for 1½ years. The punishment of flogging was from 50 to 300 strokes."—*San t'ung k'ao chieh yao*, *c.* 19, *Hsing chih*, p. 1*a*.

"In the Liao laws the death penalty involved the enslavement of the criminal's family, and the punishments of exile and banishment, branding (or tattooing) on the face."—*Hsü wên hsien t'ung k'ao*, *c.* 19, *Hsing lü t'u liu*, p. 5*b*.

"In the 1st year [907] of T'ai Tsu, the Emperor, on going in person to war, dressed in armour and worshipped his ancestors. Then they brought a criminal who had been condemned to death, and having placed him opposite where the Emperor was shot him through with arrows so that he died. The name of this punishment was 'shooting the demon,' and was intended to ward off evil influences. When the Emperor returned the prisoners were also shot with arrows. Afterwards these became established punishments." "In the reigns of T'ai Tsung and Mu Tsung there were further made laws instituting the wooden sword, great club, sand-bag, and iron bâton or club. The wooden sword had the face smooth and the back round. It was used in punishing by flogging great ministers who had been reprieved from the death penalty; the number of strokes was of 3 classes, from 15 to 30. The sand-bag was made of soft cowhide sewn together; it was 6 feet long, 2 feet broad, the handle 1 foot and more. When a punishment of flogging of 50 and more strokes was to be inflicted this instrument was used. The iron club was used to give 5 or 7 strokes. In serious cases the offender first received the strokes from the club on the bones of his back and was then flogged with the sand-bag on the flesh. The other punishments not in frequent use are too numerous to mention."—*San t'ung k'ao chieh yao*, *c.* 19, *Hsing chih*, p. 1*a*.

"At that time [at the beginning of the Liao] all the Boards had recently become adherents of the dynasties, and were not thoroughly acquainted with Chinese writing. K'ang Mo-chi thought out the meanings of the [Chinese] laws and discussed the relative severity of punishments, and fitted them exactly, so that all criminals acknowledged the justice of his decisions."—*Liao shih K'ang Mo-chi chuan*, *Tzŭ shih ching hua*, *c.* 55, *Hsing yü*, p. 25*a*.

"T'ai Tsu built a bell-room for people to announce they had grievances (by sounding the bell)."—*Liao shih Hsing fa chih*, *ibid.* p. 40*b*.

"In the 5th moon of the 6th year [921] of the period *Shên Ts'ê* an imperial decree was issued ordering the law to be settled. A bell-house was built for people to inform officials of their wrongs. In the bell-house there was a bell, so that anyone who had been wronged could inform the magistrate by striking it. It served the same purpose as 'the wronged-one's drum.'"—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 19, *Hsing k'ao*, p. 1*b*.

"In the 2nd year [938] of the period *Hui T'ung*, Prince I Shih Ta, in collecting the taxes, did not adjust them fairly, and so was punished by being beaten with the wooden semicircular pole." This was a punishment for the highest officials.—*Liao shih T'ai Tsung chi*, *Tzŭ shih ching hua*, *c.* 55, *Hsing yü*, p. 25*a*.

"In the 7th moon of the 16th year [966] of the Emperor Mu Tsung it was decreed that at any place where the Emperor stayed the officials should erect a high wooden placard recording the fact, and any of the people who broke the law [by entering that place] were to be put to death."—*Hsü wên hsien t'ung k'ao*, *c.* 19, *Hsing chih*, p. 1*a*.

"In the 7th moon of the 12th year [994] of the period *T'ung Ho* of the Emperor Shêng Tsung an imperial decree was issued ordering that Kitans who committed any of the 10 great crimes (rebellion, unfiliality, etc.) should be punished according to Chinese law. Shêng Tsung succeeded to the throne in his youth, and the Empress Dowager Jui Chih paid great attention to criminal decisions. She frequently persuaded the Emperor to exercise leniency in the administration of the laws. When the Emperor reached the prime of life he took great care over State affairs and zealously carried on the Government. At that time the law was revised, and many matters made to conform to humane principles. Punishment was only applied after strict investigation."—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 19, *Hsing k'ao*, p. 1*b*; see also *Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 6*b*.

"In the 29th year [1011] [it was decreed that], as by the old law, the offspring of the Prime Minister, of members of the Cabinet, and of nobles, who had committed crimes, were to be bambooed as if they belonged to the common people, only the face was not to be marked [or tatooed]."—*Ibid.* p. 6*b*.

"In the 6th year [1025] of the period *T'ai P'ing* it was decreed that if any relatives of high officials committed crime and were accused, the officials who neglected their duty in punishing them were themselves to be punished."—*Hsü wên hsien t'ung k'ao*, *c.* 19, *Hsing chih*, p. 1*b*.

"In the 12th moon an imperial decree was issued stating that if anyone was living apart from his parents it was allowable for the neighbours to report it, so that the offender might be punished."—*Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 6*b*.

"In the 2nd year [1033] of the period *Chung Hsi* of Hsing Tsung, the crimes to be punished with tatooing the face [*sic*] were decided upon. Anyone who committed robbery the 1st time was to be tatooed on the right arm, the 2nd time on his left arm, the 3rd time on the right side of his neck, the 4th time on the left side, and the 5th time he was to be put to death." Under the old system the face was tatooed. See EARLY and LATER FEUDAL PERIODS, etc.—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 19, *Hsing k'ao*, p. 5*a*.

"In the 8th year [1039] of the period *Chung Hsi* of Hsing Tsung an imperial decree was issued, saying: 'If the *pei yüan* (North Office) decided a case unjustly, and anyone struck the bell and offered a petition before the imperial chariot, it must be reported.' At that time the magistrate had arrested 8 robbers. After they had been killed the real culprit was arrested. As the families who had been wronged went to complain, the *Chung Shu Ling* (Prime Minister) Chang Chien requested the Throne 3 times to revise the case. At last the Emperor grew angry and said: 'Do you wish me to forfeit my life for theirs?' Chien answered: 'The young and old of these eight families were quite innocent, we should give them some little alms to enable them to bury their dead. This will be sufficient to satisfy the living as well as the dead.' It was granted accordingly."—*Ibid.* p. 6.

"In the 12th moon of the 1st year [1055] of the period *Ch'ing Ning* of the reign of the Emperor Tao Tsung an imperial decree was issued stating that all the Boards and Courts in the Palace as well as in the capital should report private affairs before the Emperor in person; other affairs were to be settled according to the law. If anyone sent a slanderous letter, the receiver and reader of that letter was to be executed and his body exposed to the public gaze."—*Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 7*a*.

"An imperial decree was issued saying: 'In the family of a rebel, if the brothers of a rebel did not know of the crime, though he lived together with them, yet he might not be considered as involved.' This was ordered to be the fixed law. It granted the memorial of the *P'ing Chang Shih* (Prime Minister) Yeh-Lü-O-mu-êrh. In the 24th year [1006] an imperial decree was issued, saying: 'If the chief of a family did not commit the crime of rebellion or crimes involving the penalty of death or of banishment, his servant or maid (slave) should not be regarded as compelled to give information concerning the master's crime. If a servant or maid committed a crime involving the penalty of death or banishment, the master was allowed to send her to the magistrate, but he was not allowed to kill the said servant on the presumption [that she was guilty].'"—*Wên hsien t'ung k'ao hsiang chieh*, *c.* 19, *Hsing k'ao*, p. 1*b*. See also *Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 6*b*.

"In the 6th year [1071] of the reign *Hsien Yung* it was thought that [though] the customs of the Kitans and Chinese were different, the laws should be the same for both. Ti-Yin-Su and the Cabinet Minister Yi-Hsin were ordered to revise the laws. Those worthy to be retained were inserted in the code, and those which were unfit were put in a separate book."—*Ibid.* p. 7*a*.

"When Tien Cha ascended the throne [1101] very severe punishments were in use. At that time there were no fixed laws of reward and punishment. Hatred and murmuring increased daily; robbers rose and fought; officials rebelled one after another; and the severity of punishments was increased in proportion. These embraced throwing from precipices, crushing with cannon, piercing with nails, mincing to death—all these were brought back into use. There were [such punishments as] cutting into five parts and taking the heart for offering in the Emperor's ancestral temple, but annihilation of forces [by the enemy] and loss of a city were only punished by deprivation of office."—*San t'ung k'ao chieh yao*, *c.* 19, *Hsing chih*, p. 1*b*.

KIN.

"At the beginning of the Kin dynasty the law was simple. Anyone who committed a slight crime was beaten with a willow; anyone who murdered or plundered was killed by braining, and his property confiscated, $\frac{4}{10}$ths to the Government and $\frac{6}{10}$ths to the bereaved or wronged family, the offender's family becoming slaves."—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 19, *Hsing k'ao*, p. 1*b*. Prisons were underground. See also *Tzŭ shih ching hua*, *c.* 55, p. 40*b*.

[Mock marriages were declared to be illegal in 1177.]—*Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 7*b*. See MARITAL.

"In the 2nd moon of the 2nd year [1124] of the period *T'ien Hui* of T'ai Tsung, an imperial decree was issued stating that anyone who secretly opened and robbed the mausolea of the Liao should be put to death for his crime. In the 7th moon of the 3rd year [1125] an imperial decree was issued stating that influential families should have no right to buy poor people as slaves. Anyone who bought one man by coercion should forfeit the price of 15 men to the Government, and anyone who bought one man by means of deceit should forfeit the price of two men and receive a flogging of 100 strokes."—*Ibid.* p. 7*a*.

[The Kin laws were also revised. See *Chin shih Sun To chuan*, *P'ei wên yün fu*, *c.* 93*b*, p. 34*b*.]

"In the period *Huang T'ung* [1141–9] of Hsi Tsung it was decreed that the Ministers of State should collect in one volume all the old Statutes of the present dynasty as well as those of the Sui, T'ang Sung, and Liao dynasties. The name given to the collection was '*Huang T'ung chih*,' ('Regulations of the *Huang T'ung* Period,') and it was promulgated throughout the capital and provinces."—*Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 7*a*.

"In the 2nd moon of the second year [1142] an imperial decree was issued stating that if any authority violated the law his subordinate, who was not able to rectify his fault or who did not report it to the throne, should be [dealt with as if] involved in the crime."—*Ibid.* p. 7*b*.

"In the 2nd moon of the 8th year [1168] of the period *Ta Ting* of Shih Tsung, the law dealing with officials guilty of gambling was established. If the booty was not more than 50 *kuan* (a string of 1,000 cash) the accused was to be bambooed but might atone for his crime; if he committed it again, he was to be bambooed, but without the opportunity of atonement. The Emperor said: 'The bamboo is used for punishing menials; but when a man has become an official his first care should be to avoid disgrace. But since he is shameless, he must be treated in the same way as a menial.'"—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 19, *Hsing k'ao*, p. 1*b*.

"In the 20th year [1180] [of Shih Tsung] an imperial decree was issued ordering the law to be settled regarding the trampling on crops. Formerly, when the Emperor went to Ch'un Shui he saw that most of the people's mulberry trees had been trampled down by beasts. Accordingly he issued a decree stating that shepherds who belonged to princes or influential families who injured the people's mulberry trees might be immediately punished by their local magistrates. Now the Emperor saw that there were some who trampled upon the crops; therefore he again issued a decree stating that anyone who trampled upon the

people's fields should be bambooed 60 strokes, and Anyone who stole grain, 80 strokes, and make good the cost of the damage done."—*Hsü t'ung tien ch'i yao*, c. 20, *Hsing*, p. 7*b*.

"In the 11th moon [of the 2nd year (1191) of the period *Ming Ch'ang* of Chang Tsung] a prohibition was issued forbidding play-actors and musicians to represent the Emperors of successive dynasties or use the name Sire of a Myriad Years [Emperor]. Those who disobeyed were severely punished."—*Ibid.* p. 8*a*.

"In the *T'ai Ho* period [1201–9] an imperial decree was issued forbidding anyone to buy horses for exportation. Anyone who went to the frontier to sell horses when found was to be put to death."—*Ibid.* p. 8*b*.

"In the 12th moon [of 1st year of *T'ai Ho*] the President of the Board of Works, Liang Hsiang, and others, presented the newly-fixed law, orders, decrees, articles, statutes, and forms, consisting of 53 volumes, to the Throne. The law itself consisted of 12 sections, viz., definitions, guarding the palace, titles, marriage, stables and treasuries, assuming, theft and robbery, quarrels and lawsuits, fraud, miscellaneous, arresting deserters, and deciding criminal cases. It really was the law of the T'ang dynasty, except that fines of copper were doubled and banishment for 4 years and 5 years increased to 7. Forty-seven articles unsuitable for the [present] time were abolished; those suitable for the present were increased to 149 articles; and those which were slightly altered were 282 in number. The remainder, amounting to about 126 articles, were kept the same as in the old law. Also, of those in which one was divided into two, and one into four, there were six articles, making a total of 563, bound in 30 volumes. The Commentary served to make the text clear, and the explanation to solve doubts. It was called *T'ai Ho lü yi*."—*Ibid.* p. 8*a*.

"In the 3rd year [1203] of the period *T'ai Ho* of Chang Tsung a physician of Po Chou, called Sun Shih-Ming, boldly used yellow paper and wrote on it in large characters the twelve words: 'A physician with needle bestowed by the Emperor,' etc. At the bottom of the paper were the date and imperial seal with the two characters *Ch'ing Lung* in red. With this he wished to deceive the people in the streets. On being arrested by the local magistrate he confessed his crime. This case was passed on to the Grand Court of Revision for deliberation. After it had deliberated, it decided that the case should be treated as a crime of forging the imperial seal, though in a general pardon he would, by rights, not be included. However, the Secretary, Chia Hsien memorialized the throne, saying: 'Each of the eight kinds of imperial seals has its special characters. In forgery of a seal no account was taken of whether it was done in clay or beeswax, but in this case he only wrote the words *Ch'ing Lung* with a pen. Since the words are unlike those on an imperial seal, if he be punished for the crime of forging the imperial seal, it would be a misunderstanding of the real intention of the law.' Being warned by this memorial the Emperor awoke to the true state of the case and pardoned him accordingly."—*Hsü wén hsien t'ung k'ao hsiang chieh*, c. 19, *Hsing k'ao*, p. 8*a*.

"In the 3rd moon of the 3rd year [1203] an imperial decree was issued stating that if at any place thieves or robbers gathered to the number of 30 or upwards it should be reported to the Throne. Anyone breaking this law was to be bambooed with 100 strokes."—*Hsü t'ung tien ch'i yao*, c. 20, *Hsing*, p. 8*b*.

"In the 5th year [1205] the President of a Board sent a memorial to the Throne stating that the District Magistrates were covetous and law-breakers. Though an absconder under his jurisdiction might meet with certain punishment, yet a neighbouring magistrate who harboured the absconder should also be punished. This was accordingly granted. In the 1st year [1222] of the reign *Yüan Kuang*, the punishment for harbouring and the reward for seizing or delivering up an absconder were increased."—*Ibid.* p. 9*a*.

"In the 3rd moon of the 6th year [1206] an imperial order was sent to the *Shang Shu Shêng* (Prime Minister's Office), saying: 'Grandparents and parents have no one to take care of them [but their children], yet their sons and grandsons go abroad for years. This is indeed injurious to civilization and manners. In the old law 2 years' banishment was the sentence for this offence, which is too light a punishment. Now you are to examine the old law and reconsider the matter and report to the Throne.'"—*Hsü wén hsien t'ung k'ao hsiang chieh*, c. 19, *Hsing k'ao*, p. 6*a*.

Mongol Period (1280 *to* 1368).—*Table VII.*

"At the beginning of the Yüan [Mongol] Dynasty there was no [new] law. Officials decided criminal cases according to the law established by the Kin dynasty. It was very severe."—*Yüan shih Hsing fa chih, P'ei wén yün fu*, c. 93*b*, p. 36*b*.

"Special features of this dynasty were the abolition of strangulation, and the creation of legislative privileges in favour of Buddhists, and at times of other priests. The Chinese, both in the north and south, seem to have had nearly all the benefits of old Chinese law; but the Mongols, mostly of course military men or officials, were under a special dispensation."—*Journ. N.-C.B.R.A.S.*, N.S. xl. 41. See also *infra*.

"It seems to have been reserved for the Mongols . . . to introduce it [the 'lingering death' punishment] on a regular scale."—*Ibid.* xl. 38.

"In the 1st year [1260] of the period *Chung T'ung* of Shih Tsu, a prohibition was issued forbidding unlicensed traders to pass the boundary. Anyone who violated it was to be put to death. In the 2nd year an edict was issued ordering that all the princes and husbands of imperial princesses should have no right to decide the criminal cases of the people privately, but that they should be left for the courts to pass sentence."—*Hsü t'ung tien ch'i yao*, c. 20, *Hsing*, p. 9*a*.

"In the 4th year [1263] an imperial decree was issued stating that in any province anyone who secretly cast weapons should be put to death; and any who had them in his possession and did not hand them in to the government, was to be punished in the same way as if he had illegally cast weapons."—*Ibid.* p. 9*a*.

"In the 5th year [1268] of the period *Chih Yüan* of Shih Tsu selling poisonous medicines was forbidden, such as *fu tzŭ* (蒲 子) a stimulant or tonic; *wu t'ou* (烏 頭), tubers of aconite, *pa tou* (巴 豆), croton, etc. A bad doctor using acupuncture and cauterizing wrongly, or injuring the womb of a woman, was to be punished more severely (than hitherto)."—*Hsü wén hsien t'ung k'ao hsiang chieh*, c. 19, *Hsing k'ao*, p. 2*a*.

"In the 3rd moon of the 8th year [1271] an imperial decree was issued ordering that the magistrates were not to delay criminal cases, causing people to pass them over and complain to the higher officials. If anyone disobeyed this order, the magistrate as well as the person in question was to be punished. In the History of Law it says: 'Anyone bringing a false accusation will be punished, and anyone passing over the proper official and complaining to a higher one is to be bambooed with 57 strokes. But if the local magistrate was at fault, did not hear the case of one who was wronged and had complained several times, or decided a case unjustly, or showed partiality, etc., it was permissible to pass over the proper official and complain to a higher one.'"—*Ibid.* p. 6*a*.

In 1274 Yao Shu "caused whipping, branding, and other excessive punishments to be abolished, showing much mercy to the defeated Chinese."—*Giles, Bio. Dic.*, p. 927.

"In the 2nd moon of the 12th year [1276] gambling amongst the people was forbidden. Anyone who violated the prohibition was to be exiled to the North."—*Hsü t'ung tien ch'i yao*, c. 20, *Hsing*, p. 9*a*.

"In the 11th moon an imperial decree was issued stating that anyone who falsely made banknotes should, together with his associates, be put to death, and anyone who used them was to be bambooed."—*Ibid.* p. 9*b*.

"In the 1st moon of the 15th year [1278] a prohibition was issued stating that if any officer, clerk, soldier, or commoner sold the girl or woman of good family he had married to be a prostitute, both the buyer and seller were to be punished, the price forfeited to the government, and the woman returned to her husband."—*Ibid.* p. 9*b*.

"In the 11th moon of the 18th year [1281] the Grand Secretary memorialized the throne saying: 'Criminals condemned to capital punishment throughout the Empire, with the exception of cases of rebellion, great offences, killing grandparents or parents, a wife killing her husband, and a servant killing his master, must be punished by the proper law. The remaining capital criminals should be banished to Japan, Cambodia, or the Mien Country (Burma).' It was granted."—*Hsü wén hsien t'ung k'ao hsiang chieh*, c. 19, *Hsing k'ao*, p. 5*a*.

"In 1286 the Chinese were forbidden to carry arms, and three years later their bows and arrows were burnt."—*Giles, Bio. Dic.*, p. 387.

"In the 5th moon of the 28th year [1291] the new law of Chih Yüan was published. . . . In the 8th year [1271] the law of T'ai Ho of the Kin dynasty had been prohibited, whereupon the Emperor ordered An T'u and others saying: 'In the late History the new law settled by T'ien Tsê and Yao Shu I have already perused: it is worthy to be put in force. You should carefully consider the matter. Is there anything which should be added to it or subtracted from it? You should one and all urgently deliberate over it and put it in force.'"—*Hsü wén hsien t'ung k'ao hsiang chieh*, c. 19, *Hsing k'ao*, p. 2*b*.

"In the 2nd moon of the 29th year [1292] the torture of beating criminals on the back was abolished. In the 3rd moon, the law punishing stealing was arranged in 13 grades. In the 7th moon of the 27th year [1290] the Governor-General of Kiang Nan, Sha Pu-ting, had proposed that a keeper of the Treasury who had stealthily used the revenue (tax) should have his face tattooed (branded) and his wrists cut. The Emperor said: 'This is the torture used by the Hui Hui (Mohammedans),' and did not grant his request. Thus the law was at that time codified in 13 graduated sections."—*Ibid.* p. 2*b*.

"According to Marco Polo, the finder of any article, sword, horse, hawk, or whatsoever else, without a known owner, is bound to bring it at once to the keeper, or is liable to punishment. This officer's tent is pitched in a conspicuous place, with banner displayed, so that both those who have lost and those who have found anything may know where to find him."—*Simcox*, ii. 218. *Cf.* LATER FEUDAL PER.

"In the 29th year [1292] people were again forbidden to possess law books. Formerly they were forbidden to buy them, lest they might be induced by reading them to charge others with faults." A Censor's request that the prohibition be removed was refused.—*Hsü wén hsien t'ung k'ao hsiang chieh*, c. 19, *Hsing k'ao*, p. 2*a*.

"In the 7th moon of the 1st year [1295] of the period *Yüan Chêng*, of Ch'êng Tsung, the rule as to seizing robbers was established. In the 9th moon of the 20th year [1283] of the period *Chih Yüan*, Shih Po had proposed a plan for putting down robbery, saying: 'The chief robber and his colleague should be executed, and the rest sent to cultivate the fields of Huai as a punishment.' The Emperor on hearing this, approved, and ordered Pi to put it in force. The wives of robbers cultivating fields inland were sent to the capital to be distributed among the men of the Ying Fang. Later on a Censor memorialized the throne, saying: 'The great number of robbers captured inland is due to the government frequently pardoning them. Now I request Your Majesty to order the Grand Secretary to make a fixed rule and instruct his subordinates to execute them all without exception.' This was granted."—*Ibid.* p. 2*b*.

"In the Chi Yang district there was a shepherd boy who happened to throw at a bird with an iron [*sic*] sling and missing his aim killed one of his fellow shepherds. For this he was put in prison for several years. Ta Li Ma said: 'The boy killed his colleague unintentionally, he really had no mind to kill anybody. It is impossible to apply any punishment to him.' So he sent him away imposing only a fine of brass."—*Yüan shih; Ta Li Ma chuan, P'ei wén yün fu*, c. 97, p. 32*b*.

"In the 3rd moon of the 7th year [1301] of *Yüan Chêng*, the law for official criminals was made in 12 sections."—*Ibid.* p. 2*b*.

"In the 3rd moon of the 4th year [1312] Jên Tsung ascended the throne. He ordered the Ministers of the Boards, saying: 'You should collect the laws of the periods *Chung T'ung* and *Chih Yüan*, and select men versed in law and who have had long experience to consider the matter and make the light and heavy ones more uniform, and publish them throughout the Empire. In this way magistrates would have a fixed law to administer, and criminals would suffer punishment without injustice.' The legal regulations dealing with manners were called *Fêng hsien héng kang* (Complete Principles of Manners and Precedents). Since then [in 1320] the Prime Minister and Literary Chancellors were again ordered to make extracts from the old books in order to compose a code of laws, which consisted of 2,539 articles, among which were 717 for deciding criminal cases, 1,151 statutes, 94 dealing with pardoning, and 577 *decreta*—it was called the Common Law of the Great Yüan Dynasty, and was published throughout the Empire."—*Ibid.* p. 2*b*.

In 1320 "the official code of the dynasty was promulgated, in 2,539 articles."—*Simcox*, ii. 230.

"Anyone who intentionally killed his innocent son or grandson in order to incriminate his enemy was to be punished under the law dealing with murdering another with intent."—*Yüan shih Hsing fa chih, P'ei wén yün fu*, c. 97, p. 32*b*.

"The game laws were relaxed by Jên Tsung, c. 1314."—*Giles, Bio. Dic.*, pp. 5–6.

"In the reign of T'ai Ting [1324–9], when the Emperor ascended the throne, an imperial decree was issued ordering that any offender who personally confessed his crime was to be pardoned. In the 6th moon of the first year of the reign a prohibition was issued forbidding Mongol vagrants to leave the jurisdiction of their own accord. Anyone violating this law was to be executed."—*Hsü t'ung tien ch'i yao*, c. 20, *Hsing* p. 11*a*.

"In the 9th moon of the 4th year [1327] [of the period *T'ai Ting*] a prohibition was issued forbidding Taoist or Buddhist priests to buy the people's fields; anyone violating it was to be punished, and the price was to be forfeited. A substantive officer who received a bribe was to be banished to Kuang Nan."—*Ibid.* p. 11*a*.

"In 1329 new *Institutes* were issued."—*Giles, Bio. Dic.*, p. 798.

"In the 10th moon of the first year [1330] of the period *T'ien Li* of Wên Ti it was thought that since the property of a criminal was forfeit, his wife and son should again [as before] be sent to guard the frontier. This was [however] not in accordance with the meaning of the ancient [law] that a crime did not involve the [criminal's] children. Accordingly, an imperial decree was issued stating that thenceforth the wife and children of a criminal should not be sent to guard the frontier."—*Hsü t'ung tien ch'i yao*, c. 20, *Hsing*, p. 11*a*.

"In the 2nd moon of the 2nd year [1331] of the period *T'ien Li* an imperial decree was issued ordering that all servants or employés should have the right to inform against their masters or employers before a magistrate if he committed a capital crime or did anything injuring themselves; but that they should have no right to inform against their masters if the thing did not concern them. It was ordered to be a fixed law." *Hsü wén hsien t'ung k'ao hsiang chieh*, c. 19, *Hsing k'ao*, p. 3*a*.

"In 1336 the Chinese were forbidden to possess arms."—*Giles, Bio. Dic.*, p. 742.

"In the 7th moon of the third year [1337] [of the period *Chih Yüan*] an imperial decree was issued ordering that besides murder and other important cases, criminal cases of robbery and theft need not wait for the decision and registration of the officer of the Record Office, but the local magistrate could decide them according to the standing law."—*Hsü t'ung tien ch'i yao*, c. 20, *Hsing*, p. 11*b*.

"In the 6th moon of the 4th year [1338] it was ordered that from that time in sentencing a capital criminal the official of the Record Office should calculate the distance and appoint an officer to the circuit [from the place nearest to the place of exile] beforehand to take charge of it."—*Ibid.* p. 11*b*.

Ming Period (*Restoration of Chinese Supremacy*) (1368 *to* 1644).—*Table VIII.*

"The first Emperor of the Ming dynasty . . . published a Penal Code, abolishing such punishments as mutilation, and drew up a kind of Domesday Book, under which taxation was regulated."—*Giles, Hist. of Ch. Lit.*, p. 291; *Bio. Dic.*, p. 193.

"The legal records of the purely native dynasty of Ming . . . distinctly state that all jurisprudence to their date is based upon the 九 章, Nine Chapters, of 200 B.C. (Han dynasty), as subsequently expanded and codified in A.D. 630 (T'ang dynasty). In 1373 this Ming dynasty published its code, which is confessedly based on that of 637, and has exactly the same twelve divisions."—*Journ. N.-C.B.R.A.S.*, N.S. xl. 41. See also under 1403, *infra*. The code of the following Period (q.v.) was a reproduction of the Ming code.

"In the 10th moon of the 1st year T'ai Tsu ordered the Grand Secretary to settle the law. At first the Emperor thought that in the T'ang and Sung dynasties there were laws to decide criminal cases, but that only the Yüan dynasty did not regard the laws of ancient times, making them for a time only. The rules of law were taken from what had been done before, so that the Yamên clerks found it easy to deceive. He therefore ordered the Prime Minister Li Shan-liang and 20 others to settle the laws in detail, saying: 'The important points in settling the laws are terseness of style, plain meanings, and simple reason, so that everyone may easily know the law. If articles are too complex or too numerous, or there is ambiguity, so that an offence may be punished either heavily or lightly, then corrupt officials will naturally practise deceipt. That which is to guard against wickedness, but on the contrary injures innocent people, is not a good law.' Moreover, he said to the censors: 'The law of the Yüan dynasty had too many articles, so the harm it did was great. For example, the seven cases of manslaughter, killing a person by conspiring with another, with intention, and in a quarrel were capital crimes. Why need it be divided into so many kinds? Only in killing by mistake can any distinction be made. After all, killing a person whilst in play or by accident, are not much different. Now, in settling the law we wish to abolish the defects of the old law and make it both "simple" and "strict"; for if it is simple there will be no ambiguity, and if it is strict the people will be careful to avoid transgression. You ought to follow this proposal.'"—*Hsü wén hsien t'ung k'ao hsiang chieh*, c. 19, *Hsing k'ao*, p. 3*a*.

"In the 12th moon the 'Direct Explanation of the Law' was composed and published throughout the prefectures and districts. At that time, when the law was about to be put in force, the Emperor said to Chou Chên, the Director of the Grand Court of Revision: 'The reason for establishing a law is to cause the people not to transgress it. How can the people of the wilds know it thoroughly? If those who unintentionally commit crime be pardoned, the law itself would become null and void; if they be punished with too strict a law the people would become nonentities. Besides the laws of ceremony, of music, of national organization, of revenue, and of selecting men for offices recently settled, you should compose a collection of laws governing the actions of the people with a complete commentary and publish the same throughout the empire in order that every family may become well acquainted with it.'"—*Ibid.* p. 3*a*.

"In the 8th moon of the 1st year [1368] of the reign Hung Wu an imperial decree was issued stating that the sentencing of capital criminals should take place after the autumn, but not at a time so as to injure the living."—*Hsü t'ung tien ch'i yao*, c. 20, *Hsing*, p. 11*b*.

"In the 12th moon [of 1368] a *têng wên* (登 聞) drum was set outside the Wu Gate, and a Censor appointed in charge of it. When anyone made a complaint against another and the

local magistrate did not investigate it, or if anyone was wronged and unable to obtain redress, he was allowed to beat the drum and the Censor had to report to the throne. Anyone who dared to prevent an accusation being made was to be put to death."—*Ibid.* p. 11*b*.

"Magistrates are not to punish offenders by whipping on the back, nor by castration. Self-castration is to be punished according to the laws dealing with unfilial conduct."—*Ming shih*, *c.* 8, p. 5*b*.

"In the 3rd moon [of 1371] an imperial decree was issued stating that if any officer received a bribe, he and the one who offered it should be punished and their families transported to the frontier."—*Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 20*b*.

"In the 11th moon of the 4th year [1371] an order was issued stating that from that time officers receiving bribes were not to be pardoned. At the end of the Yüan dynasty when the laws had become defective, promotion and appointment of officers was by bribery or the authority of influential nobles, and degree of rank was obtained by purchase. From a department magistrate down to a petty officer or clerk in a yamên no office could be obtained without bribery. So whenever the officials transacted public affairs they often governed corruptly or sold [pardon to] criminals for money. This was harmful to the people. The Emperor being aware of these defects the above order was issued."—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 19, *Hsing ka'o*, p. 3*b*.

"In the 4th moon of the 6th year [1373] the laws, orders, and regulations were engraved, and circulated to all the magistrates. In the 8th moon the law concerning relatives concealing one another's crimes was settled. *Ta kung* relatives [those mourned for 9 months] and those above them, a maternal grandfather, and grandmother, the wife of a grandson, the brother of a husband, and the mother, father, and son-in-law of a brother's wife or concubine were allowed to conceal each other's crimes [with impunity]. A servant who concealed his master's crime might be pardoned; but *hsiao kung* relatives [those mourned for 5 months] and those below them, who concealed each other's crimes, might have their punishment mitigated 3 degrees from that inflicted on the common people. In case of a relative outside the degrees of mourning, the brother-in-law of a husband, the brother of a wife, the husband of a sister-in-law, or the nephew of a wife who concealed one another's crimes, the punishment might be similarly mitigated two degrees. People guilty of high treason or concerting great rebellion are not included in this law."—*Hsü t'ung tien ch'i yao*, *c.* 28, *Hsing*, p. 12*a*.

"The meritorious minister had no right to receive the fields or property of others illegally offered to him by third parties. Anyone who offended against this rule was to be punished according to the law of taking the fields and property of others by force."—*Ibid.* p. 12*a*.

"In the 11th year [1378] the law of the Great Ming dynasty was re-arranged." "Now though the Emperor had already promulgated the law, he still thought that it was too severe or too lenient for justice—that it was not yet the 'happy mean' of law. Accordingly he ordered the literary officials and judicial officers to deliberate over the law of the T'ang dynasty and to offer 20 articles to the Emperor daily out of which to choose which should be put in force. Further he ordered Liu Wei-ch'ien the President of the Board of Punishments to revise the laws of the Great Ming dynasty in detail with an index, the arrangement being according to that of the laws of the T'ang, viz.: 'Palace-guarding, Titles, Marriage, Treasuries and Stables, Assumption, Robbery, Quarrelling and Litigation, Cheating, Miscellaneous Laws, Arresting Deserters, Deciding Cases, and Definitions.' The old laws adopted consisted of 288 articles; additional laws, 128; old decreta changed into laws, 36; case law, 31; the appendix of laws extracted from the code of the T'ang, 123. It amounted to 606 articles, and was bound in 30 vols. By adding and taking from it it was made to conform to principles of justice. When one page was finished it was written out and sent to the Emperor who ordered it to be hung on the walls on both sides of the porticos and adjusted it personally. When wholly finished it was promulgated throughout the Empire."—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 12, *Hsing k'ao*, p. 3*b*.

"In the 9th moon of the 15th year [1382], a native of Pei P'ing was wrongfully accused of crime. His son petitioned the Board of Punishments, but the executive officers wished to charge him with the crime of passing by the proper officials and complaining [direct] to the higher authorities. The Emperor [however] said: '[The act of] a son in stating the wrong done to his father springs from the highest human feeling; he should not have any punishment inflicted on him.'"—*Ibid.* p. 8*a*. See similar cases on p. 8*a*.

"In the 10th moon of the 15th year the Board of Punishments was again ordered to state clearly the prohibitions as to passing over the proper official and complaining to a higher authority. In the account of the law of punishments in the Ming History it says: 'At the close of the reign Hung Wu most of the people used to pass over the proper official and complain to the capital. On investigation it was found that this was true. So passing over the proper official and complaining direct to the capital was strictly forbidden. An aged man was ordered to take charge of the lawsuits of a town and to decide criminal cases by the help of the local beadle. If a case was important it was to be reported to the Magistrate. But even in this way the passing over of the proper official and complaining to a higher authority could not be prevented and it increased every day. Therefore the heavy punishment of banishment to the frontier was applied to it. In the reign Hsüan Tê [1426–36] if one passed over the proper official and complained to a higher authority he was pardoned if his case was true; if false, he was banished to the frontier. In the reign Ching Tai [1450–7] it was not to be considered whether it was true or false, but he was banished beyond the frontier (*k'ou wai*). Later on this was not recognized as a fixed law.'"—*Ibid.* p. 3*b*.

"In the 26th year [1393], once the royal grandson, standing by the side of the Emperor just when a guard had captured 7 robbers, attentively regarded their countenances and spoke to the Emperor, saying: 'There are only 6 robbers; one of them is not a robber.' So the Emperor asked him how he knew, and he replied: 'In the *Chou li* a case was decided first by looking at the countenance. The eyes of this one are clear and his look decorous, so I know he is not a robber.' The Emperor was glad and praised him, saying: 'To decide a criminal case the first requisite is to be versed in the Classics. What you have said is quite true.'"—*T'ung chien lei tsuan*, *c.* 6, *Chêng shih pu*, p. 8*b*.

"In the 6th moon of the 30th year [1397], the law regarding judges deciding criminal cases was again revised."—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 19, *Hsing k'ao*, p. 6*b*.

"In the 9th moon of the 6th year [1402] of the reign Chien Wên of Hui Ti, it was ordered that anyone who had committed any of the various capital crimes or crimes punishable with banishment should be sent to cultivate the fields of Pei P'ing. The Emperor ordered the judge, saying: 'By the late law, the criminal might atone for his crime with rice, the object being to save the trouble of transporting it. Now, I have heard that the poor people could find no means to get rice to atone for their crimes, so they frequently died of grief. This is not my real intention. Since then, besides the 10 great offences, if anyone commits a capital crime or crime punishable with banishment he is to be sent to Pei P'ing with his family to cultivate [the fields] there. Anyone who commits a crime punishable with banishment must go there for 3 years; and if a capital crime, for 5 years. After the expiration of this term he may return home to resume his place as one of the common people. Anyone who commits a crime punishable with transportation is to be ordered to make [lit., boil] salt; a crime punishable with bambooing, to undergo government servitude. Again, a degraded official whose crime was less than one punishable with transportation was chosen, and had bestowed upon him an unsubstantial title to direct the cultivation for 3 years; if he had done some deed of merit, he was allowed to take office; if not, he was to be punished in proportion to his deserts for his original crime.'"—*Ibid.* p. 5*b*.

"It is very questionable whether a Code in the proper sense existed before Yung Lo . . . (*circa* A.D. 1403); but during the reign of that prince the well-known system was framed upon which the present [Manchu] Code has been grafted."—*Alabaster*, *Notes*, *Intro.*, p. xli.

"In the 4th moon of the 2nd year [1404] of the reign Yung Lo of Ch'êng Tsu, the law as to the summer assizes was fixed."—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 19, *Hsing k'ao*, p. 6*b*.

[The Emperor Yung Lo cut out the tongue of Fang Hsiao-ju, a minister of the Emperor Chien Wên for rebellion (*Giles*, *Dic.*, p. 1173, No. 11, 903).]

"In the second moon [of 1407] an imperial order was issued stating that thenceforth anyone guilty of unfilial conduct, incest with a concubine of his father, intercourse with the wife of his brother, destroying relationship and ruining civilization—if it took place outside the capital, the local magistrate would have no power to decide the case, but must send the criminal to the capital for investigation and punishment."—*Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 14*a*.

"In the 5th moon of the same year Mohammedans were strictly forbidden to buy too many Chinese wives and concubines and male and female children to take out of Chinese territory. Those who did so were to be executed according to law."—*Ibid.* p. 14*a*.

"In the 7th moon of the 8th year [1410] a prohibition was issued forbidding people to cast off their sons and not bring them up. The Heir Apparent spoke to Lü Chên, the President of the Board of Rites, saying: 'Human feeling compels one to rejoice at others having many sons. Large populations make countries prosperous. Now I have heard that the foolish people of the capital hate to have too many sons, and frequently discard them instead of bringing them up. This must be strictly forbidden. If anyone offends by committing this crime both he and his two neighbours must be punished.'"—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 19, *Hsing k'ao*, p. 4*a*.

"Several times in the course of the half-century the system of money fines, extended by Yung-lo in 1413, is objected to on the ground that it is useless to let officers guilty of corrupt practices ransom themselves from punishment."—*Simcox*, ii. 242.

"In the 12th moon of the 16th year [1418], receiving of bribes by officials was again strictly forbidden. At first T'ai Tsu strictly warned the covetous officials, and issued a decree stating that any official who received bribes was not to be pardoned, and also ordered that if any officials of the Board of Punishments received bribes, the crime should involve the man who offered the bribe, and he himself as well as his family should be exiled to the frontier. This was ordered to stand as a law. As it had long been obsolete, it was now ordered to be again put in force."—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 19, *Hsing k'ao*, p. 4*a*.

"In the 1st moon of the 1st year [1436] of the reign Chêng T'ung of Ying Tsung, it was ordered that thenceforth anyone who accused another in the name of a woman, a maimed person, an old person, or a young one, if the accusation were false, was not to be allowed to atone for the crime, but that it should involve all [of his relatives] who had attained to manhood."—*Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 14*b*.

"In the 3rd moon of the 3rd year [1438], an imperial decree was issued ordering that when people brought law suits, women should not be taken into the courts, *i.e.* be legally proceeded against. Unless accused of adultery, murder, cursing parents-in-law, or unfilial conduct, they should not be brought to the Court for the cases to be investigated."—*Ibid.* p. 14*b*.

"In the 8th moon of the 4th year [1439], an imperial order was issued stating that a judge who recklessly quoted [applied] an important [lit., heavy] law when deciding a criminal case should be punished according to the law dealing with those who confuse the established law."—*Ibid.* p. 14*b*.

"In the 6th moon of the 14th year [1449], the law for punishing senior Licentiates who committed various crimes was settled." "One who commits a light crime should be degraded to be a clerk in a yamên, but not deprived of his rice stipend. If one commits the crime of receiving bribes, thieving, passing the provincial examination by a false register, drinking wine with singing girls, marrying wives or concubines whilst in mourning for a parent, etc.,—if a native of Chihli he should be sent to the two Ching as Court Butler of the Imperial Academy of Learning, but if under command of a Provincial Treasurer he should be sent to the nearest Confucian School as butler for a certain term. As soon as the term has expired he may resume his native place as one of the common people; he must be deprived of his stipend, and only rice given to him." "It was granted."—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 19, *Hsing k'ao*, p. 4*b*.

"In the 2nd moon of the 6th year [1462] an order was issued stating that a robber who committed robbery inside the capital city should be beheaded and his head hung up in an important place [*e.g.*, a main street] outside the radius of 100 *li* from the capital as a warning." *Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 4*b*. No heads could be exposed in the Emperor's abode (*i.e.* the capital).

"The tortures are to fasten boot-trees for stretching buskins one between the feet and two outside with cords, with which they torture their ankle-bones, and with mallets they strike the boot-trees, and sometimes break their ankle-bones and sometimes the shin-bones of their legs, and they die in a day or two. And there is also the similar one with pieces of wood between the fingers and toes; these suffer pain but do not run risk of their lives; they are, however, beaten on the legs, buttocks and the calves of the legs, and on the soles of the feet, and are given blows on the ankles. From these beatings many without number die; and all great and small are tortured. They hold very strongly to custom, and the people are ill-used, and no one writes a letter against the mandarin because he is of the gentry. The whip is a large dry split cane of the thickness of a finger and of the breadth of the palm of the hand, and they put it in soak that it may hurt the more."—*Ferguson*, *Lett. from Port. Capt.*, p. 126. *Cf. Gaspar da Cruz*, in *Purchas*, *Pilg.* iii. 188–9; *Mendoza* (Hak. Soc. ed.), i. 120.

"The capital punishments in the country of China. The most cruel is putting one on the cross, where they take from him three thousand slices while he is alive, and afterwards open him and take out his pluck for the hangman to eat, and cut all in pieces and give to the dogs that stand waiting for it. They give them [that is, the 'hangmen'] this [the pluck], to eat in the case of captains of robbers, for whom they have a liking. The second is cutting off the head, the private members being cut off and put in the mouth, and the body divided into seven pieces. The third is cutting off the head at the back of the neck. The fourth is strangling. Those that are liable to less than death become men of arms of China in perpetuity to son, grandson and great-grandson, that is, one that belongs to Cantao they transfer to another province very far off, and nevermore does he return to his own; there they serve as men of arms. . . . Those who have been banished they transfer to various provinces to serve in the houses of the mandarins and sweep and carry water, split wood, and to fulfil every other service of this kind, and to serve in works of the king and other services."—*Ferguson*, *Lett. from Port. Capt.*, pp. 125–6. *Cf. Mendoza*, I. iii. ch. xii.; *Gaspar da Cruz*, *ch.* xx.; and see following Period.

"From a casual observation [in the *T'ung chien*] it seems probable that the wooden collar 枷 was only invented in the sixteenth century."—*Ch. Rev.*, xi. 60. *Cf.*, however, previous Periods.

"In the 3rd moon [1462], officials were forbidden to invest money. Anyone who cheated the people out of their money or property under a false name, when found out, was to be cangued before the gate of the Board."—*Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 14*b*.

"In the 3rd moon of the 2nd year [1466] of the reign Ch'êng Hua of Hsien Tsung, the law of atoning for sin by female criminals was settled. At that time the Provincial Judge of Kuang Tung memorialized the Throne, saying: 'A woman may commit a crime punishable by bambooing or transportation, and though there may be an exact law to punish her crime, she is frequently involved by [that of] others [her husband's or father's]. It is quite pitiful. Now I request your Majesty to allow her to atone for the sin by money payment. This is the most convenient method. The Executive officers discussed the matter, saying that henceforth, with the exception of women who committed the crimes of adultery and of unfilial conduct, if she was quite poor she might be treated as a singing girl, and the rest might atone for the sin [in the way suggested]. This was established as law.'"—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 19, *Hsing k'ao*, p. 7*b*.

"In the 1st moon of the 11th year [1498] [of the reign Hung Chih], anyone who married his brother's wife after his brother's death was to be strangled," as was also anyone who was guilty of illicit intercourse with his relations.—*Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 15*a*.

"In the 10th moon of the 16th year [1503], an imperial decree was issued stating that anyone who threatened his grandparents or parents with death should be executed according to the law of beating parents. The sentence might be carried out immediately."—*Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 15*a*.

"The punishment of 點人油燈, 'lighting the human lamp'—*i.e.*, wrapping a man in cotton soaked in oil, hanging him up by the heels, and setting on fire from the top, was inflicted by Chia Ching in 1522, on 許 Hsü, who had falsely accused Tao of treason."—*Journ. N.-C.B.R.A.S.*, N.S. xi. 161.

"In the 2nd moon of the 22nd year [1543], the law of exiling people who adulterated tea was established. At that time the Boards of War and Revenue deliberated over it, saying: 'Henceforth anyone adulterating tea to the amount of 500 catties and upwards as well as the seller should be exiled to a near guard station, but if a native of a near guard station he should be exiled to the distant frontier. Anyone concealing 1,000 catties and upwards of adulterated tea should be dealt with under the above-mentioned law. But if the amount was below that stated, he should be punished according to the law of smuggling salt.' They requested that this be the fixed law. It was granted."—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 19, *Hsing k'ao*, p. 5*b*. See also *Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing* p. 16*a*.

[From p. 105 of *Letters from Portuguese Captives in Canton* in 1521 it would appear that the firing off of bombards was prohibited in front of the city and other places.]

"He who gives out money at usury loses it (if proved) and moreover incurs further punishment."—*Historia de Ethiopia* (1561), quot. *Mendoza*, *Hist. of China*, Intro. p. xlii.

"In the 1st moon of the 3rd year [1569] of the reign Lung Ch'ing of Mu Tsung, an imperial decree was issued stating that the article relating to purchase and sale of divorce and privately marrying another's wife should not be applied unless the offence amounted to adultery."—*Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 16*a*.

"In the 4th moon, the law as to fraudulent making of documents was settled. Anyone who privately used the stamp or fraudulently made the seal of a yamên or office was to be flogged and banished according to law."—*Ibid.* p. 16*a*.

"It seems that the penal stations (設衛分屯) were established by the Mings, and that banished people are [? were] always permanently settled (安插爲民)."—*Ch. Rev.*, xiii. 431.

"In the 4th moon of the 5th year [1571] [of the reign Lung Ch'ing], it was ordered that all the kinds of law with commentaries, as well as the commentaries containing inconsistent explanations, together with permanently fixed regulations, should all be arranged in consistent articles and published throughout the Empire."—*Hsü t'ung tien ch'i yao*, *c.* 20, *Hsing*, p. 16*a*.

"All the employés of nobles, such as ploughmen, stewards servants and their relations, who depended upon the influence of the nobles to insult the common people or deprive them of property or beat them, were to be punished according to the law governing the common people."—*Ibid.* p. 12*a*.

Manchu Period (1644 *to* —).—*Table IX.*

Code, etc.—"The statutes of China form an edifice, the foundations of which were laid by Li Kwei twenty centuries ago. Successive dynasties have been building thereon ever since, adding, altering, pulling down, and putting together as circumstances seemed to require."—*Williams, Midd. King.*, i. 384.

[Chinese law as distinct from the Manchu code and from the edicts, rescripts, etc., of the successive emperors of the reigning dynasty rests like old Roman law on *mos majorum*. The fundamental social principles of China have probably changed but little since the ritual of Chou by Chou Kung and the record of Rites by Confucius, *i.e.*, such principles as the patriarchal principle, *Hiao*, and the fraternal principal, *Yu* or *T'i*, which pervade Chinese law and customs. *Hiao* includes friendship (*hsin*) and loyalty (*chung*). *T'i* includes conjugal duty (*shun*). Chinese law both customary and statute furnishes an immense amount of collateral evidence in support of Maine's theory that the movement of progressive societies has hitherto been a movement from status to contract, or from families as units to individuals as units. This is the more valuable because China has not yet emerged from status and, as regards *patria potestas*, position of women, slaves, and adoption, is in the position of early Roman law before the 12 Tables.]—*Ch. Rev.*, viii. 68–9.

"The Chinese idea of law . . . being castigatory, it is not to be wondered at that there is no science of civil jurisprudence in the European sense. Moreover, the executive and the judicial powers have always been wielded by the same hand. All matters of what we should call Family Law are left entirely to the family or clan; the government in no way concerns itself—at least so far as taking the initiative goes—with births, marriages, deaths, burials, adoption, legitimacy, divorce, mourning, testamentary dispositions, division and transfer of property, joint ownership, mortgages, sanitation, medicine, midwifery, sobriety, or morals; so long as these matters proceed in a normal way, and do not infringe the interests of the Board of Revenue, the licence laws, the principle of ancestral continuity, the currency laws, the revenue laws, and, above all, the Five Cardinal Relations. These are all questions for the family council, and it is only on the comparatively rare occasions when the council actively and spontaneously seeks the assistance of a court that the officials take cognizance: even a murder may be quietly ignored if the clan concerned decides not to complain. In the same way, commercial jurisprudence lies within the private ken of the different trading guilds; banking questions are decided by the marvellously close and effective organization of bankers; junkmen, fishermen, pawnbrokers, post-offices, squatters, money-lenders, doctors—in short, all industries—manage their own affairs and pay the fees with the minimum of government interference, if any; and even then the official action is taken in the interests of public order rather than to assert a legal principle: and although a few laws concerning marriages, inheritance, land transfer, usury, brokerage, etc., are laid down in the codes, these rather express what is the universal custom than impose any fresh 'command.' There is strictly speaking, no contract law at all, except as touches the supreme contract of marriage. Thus, take the rate of interest that pawnbrokers may charge, and their licences; or the permits to sail in and out of port: in the one case the needy classes are protected from extortion; in the other travellers are protected from pirates. Should it happen that any family or any industry see fit to claim the sanction of a court of justice, it does not at all follow that such court would announce, still less create, a law for itself: on the contrary, it would do exactly what our courts do, and what they did to a greater extent before statute law largely replaced common law—it would declare the law, or adopt the customary law, local or general, as ascertained on evidence. This is only another way of saying that in most matters China is governed by the customs of ancestors, or common law; that the common law is administered by the people themselves; and that the State (unless when specially invited) only steps in to prevent a breach of the peace, such interferences rarely extending beyond persons holding official rank for any other reason than this last. It is a question whether liberty in any country, even in our own, has ever advanced beyond this stage. An eloquent prelate about twenty years ago created some sensation by his remark in the House of Lords that he would rather 'see England free than England sober': there is in the same way a certain free trade in morals and religion in China (except where the ancient filial and ancestral duties are concerned), and her rulers have always preferred to 'see China free than China educated,' so far as interference with family life is concerned."—*Journ. N.-C.B.R.A.S.*, N.S. xl. 14–16.

"The confusion of the civil and criminal laws in the code, and the union of both functions in the same person, together with the torture and imprisonment employed to elicit a confession, serve as an indication of the state of legislation and jurisprudence. The common sense of a truthful people would revolt against the infliction of torture to get out the true deposition of a witness, and their sense of honour would resist the disgraceful exposure of the cangue for not paying debts. As the want of truth among a people indicates a want of honour, the necessity of more stringent modes of procedure suggests the practice of torture; its application is allowed and restricted by several sections of the code, but in China, as elsewhere, it has always been abused. Torture is practised upon both criminals and witnesses, in court and in prison; and the universal dread among the people of coming before courts, and having anything to do with their magistrates, is owing in great measure to the illegal sufferings they too often must endure. It has also a powerful deterrent effect in preventing crime and disorder. Neither imprisonment nor torture are ranked among the five punishments, but they cause more deaths, probably, among arrested persons than all other means."—*Williams, Midd. King.*, i. 506–7.

"The laws of China are numerous, minute and circumstantial, and give the best idea of the character of the people, and their advance in civilization, which could possibly be furnished. The present dynasty has published 3 works on law. The first contains the general laws of the empire, an elegant translation of which has been furnished by Sir G. Staunton. The next contains the bye-laws, or particular regulations for each department of government; and the 3rd is . . . 'a collection of statutes for the present dynasty.' . . . A writer in the 'Edinburgh Review' [says] . . . 'We scarcely know any eastern code, that is at once so copious and so consistent, or that is so nearly free from intricacy, bigotry and fiction. In everything relating to political freedom or individual independence, it is, indeed, wholly defective; but for the repression of disorder, and the gentle coercion of a vast population, it appears to us to be in general mild and efficacious.' . . . In our humble opinion, many of the penal laws are just and good, and indicative of a knowledge of human nature not to be met with in the savage state. Among the Chinese, the code is highly prized; and their only wish is to see their [*sic*] enactments justly and impartially administered. The whole is divided into 6 sections, according to the 6 tribunals [see GEN. GOVT.] . . . ; and regard civil office, revenue, rites, military proceedings, punishments, and public works. Officials are removed every 5 years, and "however high and dignified, they must always state in every public document how many times they have been degraded, in order to keep their delinquencies in remembrance."—*Medhurst, China: Its State and Prospects*, pp. 131–2.

"The very first thing the new Emperor did on his accession in 1644 was to ordain that the laws of the Ming dynasty . . . should be modified so as to include Manchu customs, and . . . be re-issued as the Laws of the Manchu Dynasty." Continuity of legal history is shown by quotations from and appeals to ancient dicta.—*Journ. N.-C.B.R.A.S.*, N.S. xl. 38. See also *Journ. Asiat.*, III. vi. 329–30.

"The Chinese Penal Code now in force is strictly natural, not dynastic, being the latest development of a written statute legislation that has been growing for more than 2,000 years."—*Meadows, Chinese and Their Rebellions*, p. 119, note. A revised edition is published every 5 years.

It "contains (1) [*li*] the immutable statute laws of the empire, derived in great part from the previous code of the Mings, and (2) [*li*] such modifications, extensions, and restrictions of these fundamental laws as time and circumstances have made necessary. . . . 'The former portion bears the same ratio to the latter portion as the charters of the early Norman kings to the legislation of the past fifty years' (*Ch. Rev.*, viii. 2)."—*Giles, Historic China*, p. 125. It was drawn up "upon a mitigated scale of severity as compared with that of the Mings."—*Ibid.* pp. 121–2. "Allowing for difference in national customs and habits of thought," it "stands almost unrivalled." "It is regarded by the people as an inspired book, though few know much beyond the title, and seems to answer its purpose well."—*Giles, Ch. Sketches*, p. 79.

[The code is divided into seven main sections dealing respectively with (1) General Laws (Punishments and Mitigations, etc.); (2) Civil Laws (System of Government; Conduct of the Magistrates); (3) Fiscal Laws (Enrolment of the People; Lands and Tenements; Marriage; Public Property, including Revenue and Coinage; Duties and Customs; Private Property; Sales and Markets); (4) Ritual Laws (Sacred Rites; Miscellaneous Observances); (5) Military Laws (Protection of the Palace; Government of the Army; Protection of the Frontier; Military Horses and Cattle; Expresses and Public Posts); (6) Criminal Laws; (7) Laws Relating to Public Works (Public Buildings; Public Ways).]—*Staunton, Penal Code.*

[The code labours to provide a specific remedy for each individual possible offence. The collection of cases follows on the same track; they leave nothing to the judge's discretion.]—*Ch. Rev.*, x. 357.

The people have a high regard for the code, "and all they seem to desire is its just and impartial execution, independent of caprice and uninfluenced by corruption. That the laws of China are, on the contrary, very frequently violated by those who are their administrators and constitutional guardians, there can, unfortunately, be no question; but to what extent, comparatively with the laws of other countries, must at present be very much a matter of conjecture: at the same time it may be observed, as something in favour of the Chinese system, that there are substantial grounds for believing that neither flagrant nor repeated acts of injustice do, in point of fact, in any rank or station, ultimately escape with impunity."—*Staunton, Penal Code*, Introd., p. xxviii.

"Still, with all the tortures and punishments allowed by the law, and all the cruelties superadded upon the criminals by irritated officers or rapacious underlings and jailors, a broad survey of Chinese legislation, judged by its results and the general appearance of society, gives the impression of an administration far superior to other Asiatic countries. A favourable comparison has been made in the *Edinburgh Review* (Vol. XVI. 1810): 'By far the most remarkable thing in this code is its great reasonableness, clearness, and consistency, the business-like brevity and directness of the various provisions, and the plainness and moderation in which they are expressed. There is nothing here of the monstrous *verbiage* of most other Asiatic productions, none of the superstitious deliberation, the miserable incoherence, the tremendous *non-sequiturs* and eternal repetitions of those oracular performances—nothing even of the turgid adulation, accumulated epithets, and fatiguing self-praise of other Eastern despotisms—but a calm, concise, and distinct series of enactments, savouring throughout of practical judgment and European good sense, and if not always conformable to our improved notions of expediency, in general approaching to them more nearly than the codes of most other nations. When we pass, indeed, from the ravings of the Zendavesta or the Puranas to the tone of sense and business in this Chinese collection, we seem to be passing from darkness to light, from the drivellings of dotage to the exercise of an improved understanding; and redundant and absurdly minute as these laws are in many particulars, we scarcely know any European code that is at once so copious and so consistent, or that is so nearly free from intricacy, bigotry, and fiction. In everything relating to political freedom or individual independence it is indeed woefully defective; but for the repression of disorder, and the gentle coercion of a vast population, it appears to be equally mild and efficacious. The state of society for which it was formed appears incidentally to be a low and wretched one; but how could its framers have devised a wiser means of maintaining it in peace and tranquillity?' This encomium is to a certain extent just, but the practice of legislation in China has probably not been materially improved by the mere possession of a reasonable code of laws, though some melioration in jurisprudence has been effected. The infliction of barbarous punishments, such as blinding, cutting off noses, ears, or other parts of the body, still not uncommon in Persia and Turkey, is not allowed or practised in China; and the government in minor crimes, contents itself with but little more than opprobrious exposure in the pillory, or castigation, which carry with them no degradation."—*Williams, Midd. King.*, i. 391–2.

"The defects in this remarkable body of laws arise from several sources. The degree of liberty that can safely be awarded to the subject is not defined in it, and his rights are unknown in law. The government is despotic, but having no efficient military power in their hands, the lawgivers resort to a minuteness of legislation upon the practice of social and relative virtues and duties which interferes with their observance. . . . The code also exhibits a minute attention to trifles, and an effort to legislate for every possible contingency, which must perplex the judge when dealing with the infinite shades of difference occurring in human actions. There are now many vague and obsolete statutes, ready to serve as a handle to prosecute offenders for the gratification of private pique; and although usage and precedent both combine to prove their disuse, malice and bribery can easily effect their reviviscence and application to the case."—*Ibid.* i. 392.

"The second Emperor K'ang Hsi likewise made many appeals to classical principles, and, like his successor, laid down very definite rules exempting women from the necessity of appearing before the courts: all female witnesses and persons concerned in a case (provided they were not themselves accused) were to be examined on commission in their own houses [*cf.* MING PERIOD]. The treason laws of the present dynasty, it must be confessed, are as ferocious as they have ever been in China at the worst of times: all the odious punishments abolished by the decree of April, 1905, were in full swing when the Manchus took over their predecessors' code, and have remained so; that is to say, slicing to pieces, and decapitating the dead; besides responsibility of relatives to the third generation both ways, slavery of the women and young boys, and so on. The fourth Emperor Ch'ien Lung in 1740 issued a new edition of the Manchu code, alluding in his preface to the supposed pictorial punishments of extreme antiquity, and to the first real code of 960 B.C. [*v.* LATER FEUDAL PERIOD]. . . . In addition to justifying several of his specific decisions in Crown Cases Reserved by referring back to the classics, the Emperor cites two cases a thousand years ago, specially named in the Chinese legal records, in order to amend two decisions connected with the justifiable murder of a father's enemy by that father's son. . . . The same principle is repeatedly laid down by the Manchu Emperor that was asserted by the Roman Emperors, namely, that 'though above the law, they considered themselves bound to live within the law.'"—*Journ. N.-C.B.R.A.S.*, N.S. xl. 39.

"The punishing of mandarins *ex post facto* for not having foreseen, or for not having punished, a crime, is also an extension of the responsibility theory which seems to have grown up under the Manchu dynasty."—*Ibid.* p. 40.

"Sheer cruelty, except in cases of treason against the Emperor, cannot be charged against this code as a whole, though many of the laws seem designed to operate chiefly *in terrorem*, and the penalty is placed higher than the punishment really intended to be inflicted, to the end that the Emperor may have scope for mercy, or, as he says 'for leniency beyond the bounds of the law.' The principle on which this is done is evident, and the commonness of the practice proves that such an exercise of mercy has its effect. The laws of China are not altogether unmeaning words, though the degree of efficiency in their execution is subject to endless variations; some officers are clement, others severe; the people in certain provinces are industrious and peaceable, in others turbulent and averse to quiet occupations, so that one is likely to form a juster idea of their administration by looking at the results as seen in the general aspect of society, and judging of the tree by its fruits, than by drawing inferences applicable to the whole machine of state from particular instances of oppression and insubordination, as has been so often the case with travellers and writers."—*Williams, Midd. King.*, i. 392–3.

"It is impossible to say how far Staunton's Law may have been modified by modern legislation."—*Ch. Rev.*, viii. 79, note 53.

"Legal activity at headquarters in China seems to have fallen off with the advent of Europeans: of course ordinary routine business has been submitted to the Throne and disposed of in the usual way; and of course special legislation—as for instance in the matter of opium—has been sometimes found necessary. . . . The close corporation of law secretaries, who have quite a monopoly of the law clerkships in all Chinese courts, are the real persons who manipulate the latest decrees, fashion the judgments, and hold a balance between the Emperor and his judicial officers. By them the judge-made law is really created and applied. It is another instance of a trade worked with the utmost secrecy. Even so far back as 800 years ago, it was complained that 'all law depended on the clerks' memories.'"—*Journ. N.-C.B.R.A.S.*, N.S. xl. 40.

"Besides these laws and their numerous clauses, every high provincial officer has the right to issue edicts upon such public matters as require regulation, some of them even affecting life and death, either reviving some old law or giving it an application to the case before him, with such modifications as seem to be necessary. He must report these acts to the proper board at Peking. No such order which for the time has the force of law, is formally repealed, but gradually falls into oblivion, until circumstances again require its reiteration. This mode of publishing statutes gives rise to a sort of common and unwritten law in villages, to which a council of elders sometimes compels individuals to submit; long usage is also another ground for enforcing them."—*Williams, Midd. King.*, i. 390–1.

Punishments.—"五 刑 the five punishments . . . in force under the present dynasty:—笞 beating with the light bamboo, 杖 beating with the heavy bamboo, 徒 transportation,—for a certain time, 流 banishment,—to a certain distance, 死 death,—by strangling or decapitation."—*Giles, Dic.*, p. 474. See also *Staunton*, pp. 1–2.

"The five kinds of punishment mentioned in the code are from ten to fifty blows with the lesser bamboo, from fifty to one hundred with the greater, transportation, perpetual banishment, and death, each of them modified in various ways. The small bamboo weighs about two pounds, the larger two and two-thirds pounds. Public exposure in the *chia*, or cangue, is considered rather as a kind of censure or reprimand than a punishment, and carries no disgrace with it, nor comparatively much bodily suffering if the person be fed and screened from the sun. The frame weighs between twenty and thirty pounds, and is so made as to rest upon the shoulders without chafing the neck, but so broad as to prevent the person feeding himself. The name, residence, and offence of the delinquent are written upon it for the information of every passer-by, and a policeman is stationed

68998

over him to prevent escape. Branding is applied to deserters and banished persons. Imprisonments and fines are not regarded as legal punishments, but rather correctives; and flogging, as Le Comte says, 'is never wanting, there being no condemnation in China without this previous disposition, so that it is unnecessary to mention it in their condemnation; this being always understood to be their first dish.' When a man is arrested he is effectually prevented from breaking loose by putting a chain around his neck and tying his hands."—*Williams, Midd. King.*, i. 508–9.

"Decapitation and strangling are the legal modes of executing criminals. . . . The least disgraceful mode of execution is strangulation, which is performed by tying a man to a post and tightening the cord which goes round his neck by a winch; the infliction is very speedy, and apparently less painful than hanging. The least crime for which death is awarded appears to be a third and aggravated theft, and defacing the branding inflicted for former offences. Decollation is considered more disgraceful than strangling, owing to the dislike the Chinese have of dissevering the bodies which their parents gave them entire. There are two modes of decapitation, that of simple decollation being considered, again, as less disgraceful than being 'cut into ten thousand pieces,' as the phrase *ling ch'ih* has been rendered. The military officer who superintends the execution is attended by a guard, to keep the populace from crowding upon the limits and prevent resistance on the part of the prisoners. The bodies are given up to the friends, except when the head is exposed as a warning in a cage where the crime was committed. If no one is present to claim the corpse it is buried in the public pit. . . . In ordinary cases the executions are postponed until the autumnal assize, when the Emperor revises and confirms the sentences of the provincial governors; criminals guilty of extraordinary offences, as robbery attended with murder, arson, rape, breaking into fortifications, highway robbery, and piracy, may be immediately beheaded without reference to court, and as the expense of maintenance and want of prison room are both to be considered, it is the fact that criminals condemned for one or other of these crimes comprise the greater part of the unreferred executions in the provinces."—*Ibid.* i. 511–2.

"The inveterate aversion of the Chinese of all ages to the mutilation of the body after death explains why in the *Ta Ts'ing luh li* decapitation is considered a punishment of a severer nature than strangulation. Both methods of despatching criminals are ranked by that Code side by side as 'the severest penalty existing'; but at the same time it makes a distinction between the two because, as it says, 'strangulation leaves the body entire in all its parts,' while 'decapitation sends the body and the head to different places.' It is, indeed entirely in accordance with this legal distinction that the heads of criminals executed in the provinces, when not exposed on stakes or in cages as a warning to the public, are in many instances sent up to the provincial capital, to serve not only as warrants to the higher authorities that the execution has taken place, but also to make sure of their not being buried along with the body."—*De Groot, Rel. Syst.*, i. i. 346–7.

"The idea that mangling a person after death constitutes a punishment of the severest kind, still plays an important part in the criminal legislation of modern China. The *Ta Ts'ing luh li* says: 'whoever murders three members of one family, not guilty of a crime punishable with death, or whoever quarters a living person or mortally mangles him, shall be slowly cut with knives till death doth ensue. His property shall be confiscated for the benefit of the family of the victim, his wives and sons be transported for life to a country two thousand miles away, and his accomplices shall be beheaded.' Considering, however, that this cruel way of dispatching the chief culprit is too slight a punishment for so heinous a crime, a bye-law is added, to this effect: 'Moreover, his corpse shall be chopped to pieces and his head exhibited on a stake as a warning to the public.'" "The Legal Code has heavy punishments in store for those who mangle the dead. It even goes so far as to extend its care to criminals executed. 'Whoever after an execution mangles or destroys the corpse shall receive fifty blows with the short bamboo stick.'" And there are other articles prescribing different punishments for mangling corpses of kinsmen, etc.—*Ibid.* ii. 344–6.

K'ang Hsi's "reign was singularly free from the executions so common under even the best of Chinese rulers."—*Boulger, Short Hist.*, p. 152.

"When Keen Lung had the chance of bringing matters under his own personal control he did not hesitate to exercise his own right and power, and all capital punishments were carried out at the capital after he had examined into each case. It is declared that he always tempered justice with mercy, and that none but the worst offenders suffered death. Transportation to Ili, which he wished to develop, was his favourite form of punishment."—*Ibid.* p. 180.

"Banishment and slavery are punishments for minor official delinquencies, and few officers who live long in the Emperor's employ do not take an involuntary journey to Mongolia, Turkestan, or elsewhere, in the course of their lives. The fates and conduct of banished criminals are widely unlike; some doggedly serve out their time, others try to ingratiate themselves with their masters in order to alleviate or shorten the time of service, while hundreds contrive to escape and return to their homes, though this subjects them to increased punishment. Persons banished for treason are severely dealt with if they return without leave, and those convicted of crime in their place of banishment are increasingly punished, ... whipping a man through the streets as a public example to others is frequently practised upon persons detected in robbery, assault, or some other minor offences. The man is manacled, and one policeman goes before him carrying a tablet, on which are written his name, crime, and punishment, accompanied by another holding a gong. In some cases little sticks bearing flags are thrust through his ears, and the lictor appointed to oversee the fulfilment of the sentence follows the executioner, who strikes the criminal with his whip or rattan as the rap on the gong denotes that the appointed number is not yet complete."—*Williams, Midd. King.*, i. 510–1.

"The difference between the punishment of 徒 and that of 流 seems to lie in the fact that the former is only for a few years and a short distance, whereas the latter is for life and a long distance."—*Ch. Rev.*, xvii. 52.

"The Viceroy Li explains that the nearest penal servitude (附近充軍), though nominally a heavier punishment than the farthest banishment (滿流三千里), is now-a-days, in fact, simply banishment for 2,000 *li*, since the frontier stations (邊衞) have been abolished, and criminals are no longer used as penal soldiers; and even the 近邊 and 邊遠 classes of penal servitude are only equal to the farthest banishment. The 極邊四千里 and the 'malarious' are the only two of the five classes really more serious than the farthest banishment. No penal servitude or banished men can be sent to Chih Li, and even exiles (徒) can only be sent to places 500 *li* distant from Pao-ting Fu."—*Ibid.* xiii. 431.

"A thief caught in the Kiang Si Futai's *yamên* was given 1,000 strokes of the 荊條, made to kneel on the 天平架 and was worried [熬審] a long time with a view to extracting confession."—*Ibid.* xvii. 52.

"I have more than once seen women on our streets in Soochow, securely chained and guarded, as they were led from examinations before the criminal judge. One woman at least has suffered death in this city within the last three years, by the 'six strokes,' for the murder of her husband; and a pretty girl of nineteen was hung not long before, because her disobedience and impertinence had driven her parents to commit suicide."—*Women's Work in China*, ii. 140.

"The *Shên Pao* of the 4th of April mentions certain offenders at Port Arthur, with arrows run through their ears [插耳箭]."—*Ch. Rev.*, xiv. 357.

"The *Peking Gazette* gives another instance of Chinese official barbarity. A wretch, in the position of a district magistrate in Shan Si, blinded one of his prisoner's eyes with lime, and cut his hamstring, on the ground that he was so dangerous that he might escape. Amongst the illegal tortures practised by the prefect 董兆奎 of Kiang Si province, are the following, burning the back with joss-sticks, forcing to kneel on bricks set sideways, placing in the chair of torture 霸王椅, embracing the burning post 將軍柱."—*Ibid.* xiii. 224.

[Instances of cargo-thieves being beaten to death by the crews of tea-junks in Hu Peh Province and also at Canton, are given in *Gray, China*, ii. 214–5; and of lynch law by biting to death, in *Journ. N.-C.B.R.A.S.*, N.S. xxi. 182–3, and note.]

"The ordinary instruments of punishment, as authorised by the Code, are:—(1). A flat, polished piece of bamboo, of a given length, breadth, weight, etc. (2). The *cangue*, a square wooden collar of about 30 *lbs.* weight. (3). An iron chain, about seven feet long and of about 7 *lbs.* weight. (4). Manacles of wood, for male prisoners only. (5). Iron fetters, to be used only in cases of banishment or sentence of death. It is true that in an 'additional' clause two instruments of torture are enumerated, (1) for compressing the ankle-bones, and (2) for squeezing the fingers, to be used if necessary to extort a confession in cases of robbery or homicide. The application, however, of these tortures is fenced round in such a way as to impose great responsibility upon the presiding magistrate; and in addition to the risk of official impeachment, there is the more dreaded certainty of a loss of influence and popular esteem. A judge, in the opinion of the Chinese, should be able to read the inmost heart of an accused man as it were the page of a book spread out before him; and when the crime is fairly brought home, it is an almost understood thing that the culprit will confess. Of this fact, I have witnessed several striking examples; while on the other hand, all my most recent investigations confirm to the full the statements made by me some six years ago on this subject, to the effect that 'torture,' though not unknown in China, exists there practically in name alone. It is also worthy of note that the 'lingering death,' about which so many horrible stories have been told, is not among the punishments here formally enumerated. Mention of it, however, occurs in another part of the code, as the proper punishment for high treason. But again all evidence tends to prove that though many are condemned, no one is ever subjected to this truly barbarous process, the very exceptions which might possibly be discovered forming of course part of the proof."—*Giles, Historic China*, pp. 125–6.

The *Tsa-yao-tao* [see Sung dyn.] "had been *fêng* (sealed up from future use) over 160 years ago. The last victim then was one Yü Ch'ang-chêng, a Literary Examiner during the reign of Yung Ching of the present dynasty (1723–36), who was condemned to die by the *Tsa-iao-tao* for selling the degree of M.A. (Chüjên) to one of the candidates. . . . When the Manchus conquered China (1644–62) they used this instrument on all who refused to shave their heads and braid their hair, because mere decapitation had no terrors for those who were loyal to the deposed Ming dynasty."—*N.-C. Herald*, Aug. 8th, 1900.

"Among the modes of torture employed in court, and reported in the *Gazette*, are some revolting to humanity, but which of them are legal does not appear. The clauses under Section I. in the code describe the legal instruments of torture; they consist of three boards with proper grooves for compressing the ankles, and five round sticks for squeezing the fingers, to which may be added the bamboo; besides these no instruments of torture are legally allowed, though other ways of putting the question are so common as to give the impression that some of them at least are sanctioned. Pulling or twisting the ears with roughened fingers, and keeping them in a bent position while making the prisoner kneel on chains, or making him kneel for a long time, are among the illegal modes. Striking the lips with sticks until they are nearly jellied, putting the hands in stocks before or behind the back, wrapping the fingers in oiled cloth to burn them, suspending the body by the thumbs and fingers, tying the hands to a bar under the knees, so as to bend the body double, and chaining by the neck close to a stone, are resorted to when the prisoner is contumacious. . . . Compelling them to kneel upon pounded glass, sand, and salt mixed together, until the knees become excoriated, or simply kneeling upon chains is a lighter mode" of punishment. "Flogging is one of the five authorized punishments, but it is used more than any other means to elicit confession; the bamboo, rattan, cudgel, and whip are all employed. When death ensues the magistrate reports that the criminal died of sickness, or hushes it up by bribing his friends, few of whom are ever allowed access within the walls of the prison to see and comfort the sufferers. From the manner in which such a result is spoken of it may be inferred that immediate death does not often take place from torture. . . . One check on outrageous torture is the fear that the report of their cruelty will come to the ears of their superiors, who are usually ready to avail of any mal-administration to get an officer removed in order to fill the post. In this case, as in other parts of Chinese government, the dread of one evil prevents the commission of another."—*Williams, Midd. King.*, i. 507–8.

"Most punishments are redeemable by the payment of money if the criminal is under fifteen or over seventy years of age, and a table is given in the code for the guidance of the magistrate in such cases. An act of grace enables a criminal condemned even to capital punishment to redeem himself, if the offence be not one of wilful malignity; but better legislation would have shown the good effects of not making the punishment so severe. It is also ordered, in Section XVIII., that any 'offender under sentence of death for a crime not excluded from the contingent benefit of an act of grace, who shall have infirm parents or grandparents alive over seventy years of age, and no other male child over sixteen to support them, shall be recommended to the mercy of his Majesty; and if only condemned to banishment, shall receive one hundred blows and redeem himself by a fine. . . . Few governments exhibit such opposing principles of actions as the Chinese: a strange blending of cruelty to prisoners with a maudlin consideration of their condition, and a constant effort to coax the people to obedience while exercising great severity upon individuals, are everywhere manifest. One who has lived in the country long, however, knows well that, . . . unless the rulers are a terror to evil-doers, the latter will soon get the upper hand."—*Ibid.* i. 509–10.

"There is a great deal more lenity in the *Penal Code* of China than most people are aware of. During the excessive summer heats, some punishments are mitigated, and others remitted altogether. Prompt surrender and acknowledgment of an offence before it is otherwise discovered, entitles the offender, except in certain cases, to a full and free pardon; as also does restitution of stolen property to its owner by a repentant thief. Neither are the near relatives, nor even the servants and slaves of a guilty man, punishable for concealing his crime and assisting him to escape—truly a great concession to the weakness of human nature. And, further, in the case of a criminal charge with two or more offences, it is provided that he shall be punished only to the extent of the principal charge. There are, *per contra*, ten heinous crimes for the commission of which no justification is allowed, and which are absolutely excepted from the benefit of any general act of grace. These are (1) Rebellion, (2) Destruction of Imperial Tombs, (3) Treachery to the State, (4) Parricide, (5) Murder of three persons in one family, (6) Sacrilege, (7) Filial Impiety, (8) Family Discord, (9) Official Insubordination, and (10) Incest. Children under seven as in English law regarding felony, and persons over the age of ninety, are not punishable under any circumstances, the crimes of treason and rebellion only being excepted; and in all cases, except capital crimes, where the offender is under fifteen or over seventy, punishment proper may be redeemed by payment of a fine."—*Giles, Historic China*, pp. 126–7.

"Neither the heavy bamboo nor the wooden collar can be used on Manchus, (and ? Bannermen)."—*Ch. Rev.*, x. 73.

"No officer of government from the first to the ninth grade, may be bambooed unless first deprived of rank. Neither may any holder of the first literary degree, until his diploma shall have been duly cancelled."—*Giles, Historic China*, p. 198. See also *Staunton*, Book I.

The local authorities are "responsible . . . in a greater or less degree for all the crimes, and even accidental fires floods, droughts, etc., which occur within the district."—*Giles, Historic China*, p. 200.

High Treason, Parricide, etc.—"The criminal laws are particularly severe in the matter of high treason, which is either against the established government, or against the person of the sovereign. All persons convicted of having been principals or accessories, in this heinous offence, are to be put to death by a disgraceful and lingering execution. Besides which, all the male relations of the offender, above the age of 16, shall be indiscriminately beheaded, while the female relations and the children shall be sold into slavery, and the property of the family, of every description, confiscated. In order to lead to the speedy discovery of the offence, any person who shall be the means of convicting another of high treason, will be immediately employed under government, besides being entitled to the whole of the criminal's property. This severe and sanguinary law is indicative of the fears entertained by the rulers of assassination and rebellion."—*Meadows, China*, pp. 136–7. See also *Staunton*, pp. 269–73.

This "crime includes destruction, as principal or accessory, of the tombs of the Emperors of the present dynasty. The same punishment is set apart for the equally hideous crime of parricide; and once every now and again the *Peking Gazette* records the due execution by this process of some unnatural child. A slave who kills his master is also similarly liable. It seems idle to renew here a protest entered six years ago against the prevalent—and in many ways justifiable—belief that the details of this disgusting process are, as a general rule, carried out. In spite of much declamatory opposition, that protest remains precisely in *statu quo*."—*Giles, Historic China*, pp. 133–4.

". . . All those who enter the service of a foreign state, who aim by the practice of magic to bewitch the people, who sacrilegiously abstract the implements used in the public sacrifices, or who steal the imperial signet, shall be indiscriminately beheaded. All the above offences are included under the head of theft, in the Chinese code, because they reckon all those to be thieves who oppose the established government, or who attempt to invade either the honour, authority, or personal security of the reigning monarch."—*Medhurst, China*, pp. 136–7. See also *Staunton*, pp. 272–3.

"The offences of the inferior relations against the superior are visited with a tenfold heavier punishment, while those of the latter against the former are scarcely noticed. . . . Should the criminal . . . die in prison, the body is to be subjected to the same process as if still alive."—*Medhurst*, pp. 138–9.

Robbery, Larceny, etc.—"Larceny, embezzlement, and the acquisition of property by other fraudulent means, naturally occupy a considerable space in this section of the code. An ordinary attempt to steal is punished by fifty blows; actual theft is punished according to a fixed scale, ranging from sixty blows for one ounce of silver, to death by strangulation for a value of one hundred and twenty ounces (say £35) and upwards. On a first conviction, criminals should be branded with the character 'thief on the left arm; on a second, with the same character on the other arm; but a third offence, or even defacement of the marks, is punishable with death. Theft of grain and fruit is forbidden under *ad valorem* penalties; in practice, however, the plea of hunger is always sufficient to secure dismissal, with a warning not to offend again. Stealing from relatives is punished on a mitigated scale; obtaining money under false pretences on the same scale as ordinary larceny, but without branding; extorting by threats, on a scale more severe by one degree. Robbery by violence, even though no injury has been inflicted, is also more

heavily punished than mere larceny; and if the victim has been wounded, the punishment is death by decapitation. Highway robbery involves a similar death to all parties concerned; so does the theft of an official seal from a magistrate or other functionary of the State, and also a rescue, or even an attempt to rescue any prisoner in custody. Kidnapping by stratagem is punishable with banishment to a distance of 3,000 *li* and one hundred blows; if by violence, with death. To disturb a grave and expose a coffin is a serious crime; if the coffin is opened, the punishment is death. For unauthorisedly entering a house at night, eighty blows are inflicted. If the master of the house should shoot the intruder dead on the spot, he is held guiltless; he may not, however, seize him first and then shoot him. What constitutes an actual theft is carefully defined in the code. In the case of money and easily portable articles, they must have been removed from the place or room where found, an exception being made for jewels and small valuables, the mere possession of which about the person is regarded as an actual theft. Large articles must have been placed in a cart or on the back of an animal; and horses and cattle must have been taken out of the stable, otherwise, the crime comes under 'attempt to steal' and is punished according. If a thief takes a single animal from a stable and the rest follow, the extent of his crime is limited to the value of the one: always excepting the case of a foal following a mare, which renders him liable according to the value of the two."—*Giles*, pp. 134–6. See also *Staunton*, pp. 269–302.

Homicide.—"Homicide is punished either by decapitation or strangulation, as the circumstances of the murder may require. An attempt to murder is punished by strangulation, providing that wounds were inflicted by the intending murderer; otherwise, he receives one hundred blows, and is banished for three years. Accidental homicide in a brawl is visited with strangulation; and so is homicide resulting from any kind of dangerous play. A son may kill the murderer of his father or mother on the spot and be held guiltless; if he defers his revenge, he is punished with sixty blows—not for deferring, but for perpetrating the crime. A husband may in like manner kill an adulterous wife, or her paramour, or both, provided he does so on the spot, but not at a later period. A man who should remove a ladder from a wall, or a bridle from a horse, is held responsible for all consequences to any persons injured by such acts. Homicide which is purely accidental in every respect is nominally awarded the same punishment as homicide in a brawl: but this may be redeemed by payment of a fine. The death of a patient under the hands of a doctor would come under this provision; if, however, it could be shown that the latter had wantonly deviated from the established rules of practice, he would be beheaded. If a wife strikes her father—or mother-in-law, and the husband kills her, he receives only one hundred blows. But if he kills her for mere disrespect to their memories, and so forth, he is punished by strangulation. And any one who for some unlawful purpose threatens another so that he is driven to commit suicide, is punished by decapitation. Ordinary cases of battery are met by ordinary punishments; but where several wounds are inflicted, an examination is made into the sufferer's condition by the local magistrate, and a 'period of responsibility' is fixed upon. If the injured man outlives this, or recovers in the interim and dies from some other well-ascertained cause, then the offender is punished only for a common assault; but if death occurs within the assigned limit, the case becomes one of murder, and the inflicter of the wounds is punished accordingly with death. During the above-mentioned period the injured person is entrusted to the care of his assailant, who is most likely to do all in his power to effect a cure."—*Giles*, pp. 135–7. See also *Medhurst*, pp. 137–8.

"If a parent put to death his own offspring, the offence is comparatively trivial. Whoever is guilty of killing a son, grandson, or slave, and charging another person with the crime, shall be punished with blows and banishment; but nothing is said about the crime of smothering female infants which is so prevalent, because entirely unchecked, in China."—*Medhurst*, pp. 138–9.

"The Chinese law, by a sort of Lord Campbell's Act, prescribes forfeiture of estate by a convicted murderer [財產斷付] to the family of which family three persons shall have been slain, provided such persons shall not have committed a capital offence [一家非死罪三人]."—*Ch. Rev.*, xiv. 223.

"The code (sect. ccxcii) provides that in the case of accidental killing, or wounding, the persons causing the injury may 'redeem themselves from punishment' (which would otherwise be incurred as for the offence of killing and wounding in an affray) 'by a fine to be paid to the family of the deceased or wounded person, which fine will, in the former instance, be applicable to the purpose of defraying the expenses attending the burial, and in the latter to that of procuring medicines and medical assistance.' The fine is given as about £4 2*s.* 10*d.*, a considerable sum in China, and recoverable, it should be noted, quite apart from any blame attaching to the agent. One innocent person injures another: to divide the damages as equally as possible, the one who does not suffer in person does so in purse."—*Simcox*, ii. 213, note.

The limit of responsibility for effects of wounds is given in the 大清律例 under the head of 保辜限期: "Section LVIII., p. 16.—In cases of violent injury to the limbs or body, or of fracture or dislocation of bones . . . whether the wounds have been inflicted with hand or foot *or by any other means* (他物 by any other thing) the period of responsibility shall be fifty days." "Section LVIII., p. 15.—Should the victim die after the term of responsibility has expired . . . the crime shall not be one of murder, but shall come under the law relating to assaults where wounds are inflicted."—*Ch. Rev.*, x. 286. For homicide generally, see also *Staunton*, pp. 303–23.

Quarrelling and Fighting.—"Quarrelling and fighting is strictly prohibited in a country, where the rulers being few, and the subjects many, it is necessary to keep the people as quiet as possible. The bamboo is the remedy for the pugnacious propensities of the plebeian, and the number of blows is proportioned to the injury done, or the situation of the offending individual. A difference is observed between striking with the fist or with a club, and the loss of an eye, tooth, finger or toe, is visited with punishment according to a graduated scale. A slave, beating or abusing his master shall be put to death; while nothing is said about the master's beating his slave. A husband is not amenable for chastising his wife, unless he inflict a wound; while a wife, striking her husband, is to receive 100 blows. A child, striking, or using abusive language to a father or mother, shall be put to death; while a parent, chastising a disobedient child, so as to cause death, shall be punished with 100 blows."—*Medhurst*, pp. 138–9.

"Anyone who strikes an officer of government is heavily punished with one hundred blows and banishment for three years; in the case of an open wound, the penalty is death by strangulation. A slave who strikes a free man, and a free man who strikes a slave, are punished one degree more and one degree less severely than would be the case but for this distinction between their respective social positions. A slave who designedly strikes his master is beheaded; if by accident, he is strangled. A wife who strikes her husband receives one hundred blows, and the latter is entitled to a divorce; but a husband who chastises his wife is liable to no punishment, unless he goes so far as to inflict an open wound. If, however, the wife dies of the beating, her husband is punished with death by strangulation. A son who strikes his father, mother, or paternal grand-parents, and a wife who strikes her husband's parents, are both liable to death by decapitation. A man who unintentionally beats his disobedient son or grandson to death is punished with one hundred blows; should he accomplish this designedly, the punishment is increased to sixty blows and one year's banishment. Abusive language in general is punished by ten blows; from a slave to a master, by strangulation; from a child or grandchild, by the same extreme penalty, provided always the person abused heard the abuse and made a formal complaint."—*Giles, Historic China*, pp. 137–8. See also *Staunton*, pp. 324–51.

[*Abusive language* was punishable by bambooing in various degrees.]—*Staunton*, pp. 354–8.

False Accusation, Bribery, Forgery, etc.—"With regard to indictments generally, it is incumbent on every prosecutor to begin by filing his charge at the lowest tribunal of justice within the district, under a penalty of fifty blows. Any person filing a false charge is punished a certain number of degrees more heavily than the accused would have been punished had he been convicted of the crime alleged. But if the charge is false in degree only, then he receives himself the difference between the punishments for the crime alleged and the crime committed. Authors of anonymous charges are liable to strangulation, irrespective of the truth or falsehood of the charge. No charge is allowed to be filed by a child, grandchild, or wife, even if the accusation is true, under a penalty of fifty blows; and the parent, grandparent, or husband, may escape all punishment for the same by voluntary surrender. But if the charge is untrue, even in part, the accuser is strangled. Stirring up litigation of any kind is punished according to a fixed scale. The laws against bribery are exceedingly severe, acceptance of eighty ounces of silver for an unlawful and of one hundred and twenty for a lawful object, rendering a mandarin liable to death by strangulation. It is death by decapitation to forge an official seal, or to issue a spurious edition of the *Imperial Almanac*, or to falsely pass oneself off as a government official."—*Giles, Historic China*, pp. 139–40. See also *Staunton*, pp. 359–403.

Rape, etc.—"It is death by strangulation . . . to commit rape, the limit of age—under which all cases are considered as such—being twelve years."—*Giles, Historic China*, p. 139. Consent was a valid excuse unless the patient cried out before completion. Age of consent was twelve (*Alabaster*, pp. 359–66).

[Indecent assault was punishable with transportation.]—*Alabaster*, pp. 366–7.

[Fornication was punishable with eighty blows, the pander being liable to seventy.]—*Ibid.* pp. 367–8.

[Unnatural offences were treated in the same way as ordinary immorality, no distinction being made between male and female. Age and consent were factors, and determined whether the offence be treated as fornication or rape.]—*Ibid.* pp. 368–9.

[The penalty for adultery was military servitude for the adulterer and imprisonment for a period and flogging for the adulteress. If the husband was a consenting party the punishments were reduced.]—*Ibid.* pp. 369–70.

[Incest was severely punished, and relationships beyond the usual five degrees were included. Criminal intercourse with relations in the fifth degree was punishable with transportation for three years and one hundred blows. If rape was committed decapitation was incurred. In the case of remoter relationships, the punishment was one hundred blows, with decapitation in case of rape.]—*Ibid.* pp. 370–1.

[Procuring abortion was punishable with transportation for life.]—*Ibid.* pp. 371–2.

[Abduction was ordinarily punishable with military servitude, but if with great violence, in bodies, or followed by violation, capitally.]—*Ibid.* pp. 372–81.

[Kidnapping (of man, woman, or child) with a view to subsequent sale was punishable according to the position of the person kidnapped, the purpose for which the person kidnapped was sold, and the general circumstances, with transportation and bambooing. Detaining or selling lost children, etc., involved a penalty of bambooing and transportation.]—*Ibid.* pp. 382–3; 381–2. For incest and adultery see further *Staunton*, pp. 404–10.

Miscellaneous Offences. — Arson. — "Arson is punishable according to its results, death being the penalty if anybody is burnt. Even to set fire to one's own house accidentally is punishable by forty blows; if the fire spreads, by fifty; and if anyone is killed, by one hundred blows."—*Giles, Historic China* p. 139.

Gambling.—"Gambling—the national vice of China—is forbidden . . . under a penalty of eighty blows and forfeiture of the stakes; but a few friends meeting in a private house are not thereby prohibited from playing at games of skill or chance for stakes of food or drink."—*Ibid.* p. 139.

Theatrical Representations.—[It is forbidden to represent upon public or private stages the persons of any 'emperors, empresses, famous princes, ministers, and generals of former ages,' under penalty of one hundred blows; but actual enforcement of this law has fallen into desuetude, if indeed it can be shown to have ever been enforced at all. The remainder of this theatrical clause is evidence that the real value of the drama has not been misunderstood:—'Nevertheless, it is not intended by this law to prohibit the exhibition upon the stage of fictitious characters of just and upright men, of chaste wives, and pious and obedient children, all which may tend to dispose the minds of the spectators to the practice of virtue.']—*Staunton*, pp. 418–9.

Emigration.—"At the time when the laws of China were originally framed, emigration in the proper sense of the word, did not exist, nor was it thought of, and therefore an explicit prohibition of it cannot be expected in the fundamental laws of the empire; these contain, however, many provisions for cases of clandestinely passing the frontier, holding intercourse with foreign nations, and proceeding to sea, which might be construed as prohibitive of emigration [see Staunton, Book III, Section 220, which, in the original constitutes the section entitled 關津 or 'Barriers,' in the division as 兵律 or 'Military Laws']; and notwithstanding that these early laws appear to have been originally framed with the sole view of preserving the integrity of the frontiers, and avoiding causes of conflict or trouble with neighbouring countries and with the border tribes, such a construction, as will be presently seen has actually been adopted. According to the fundamental laws of the Empire, and set forth in the section quoted above, the crime of clandestinely passing the inner barriers, proceeding beyond the frontiers, and there holding communication with foreign countries, is punishable with death by strangulation, while to inhabit the smaller islands on the coast is strictly prohibited by subsequent enactments, and minute provisions are made for the government of settlers and aborigines in Formosa. A supplementary enactment (without date) provides that all persons who 'clandestinely proceed to sea to trade, or who remove to the coast islands [海島, rendered "foreign islands" by Staunton] for the purpose of inhabiting and cultivating the same, shall be punished according to the law against communicating with rebels and enemies, and consequently suffer death by being beheaded.' [Staunton, Appendix No. XXI.] And under date of the 37th year of Kien Lung (A.D. 1772) the law is amplified, and illustrated by a case wherein certain individuals, natives of Kwang-tung, were sentenced to military transportation for combining with others to proceed contrary to law, with their families to Siam, for the purpose of clearing waste ground, and bringing the same under cultivation; this seems to be the most distinct prohibition of emigration contained in the Penal Code. That the fundamental laws of the Empire, and therefore the supplementary statutes, do fall into desuetude is manifest from the fact that the infliction of 100 blows is still specified as the punishment for exporting by sea or land, not only articles which may be classed as munitions of war, but even silk goods. Formal abrogation would therefore appear unnecessary, especially as emigration has been recognized and permitted by Imperial decree in connection with the late treaties, and, similarly, but 2 years ago, in a Decree on a too kindred subject, which legalised the punishment of decapitation for the crime of kidnapping. . . . The original text . . . specifies the conveying of *intelligence* [not productions and inventions as erroneously stated by Staunton] to outer people in connection with the next sentence, which treats of outer spies secretly introducing themselves within, as punishable with death by beheading."—*N. and Q. on C. and J.*, ii. 31–2.

"If they [emigrants] return with wealth enough to live upon, they are liable to the vexatious extortions of needy relatives, sharpers, and police, who have a handle for their fleecing whip in the law against leaving the country; although this clause has been neutralized by subsequent acts, and is not in force, the power of public opinion is against going."—*Williams, Midd. King.*, i. 279. For miscellaneous offences, see further *Staunton*, pp. 411–19.

Divorce, etc.—[The husband seeking a divorce, invites his father and other male relatives to meet him in the ancestral hall of the clan or family, for the purpose of hearing and investigating the charge. . . . To each one invited, a betel nut wrapped up in green leaves, is respectfully presented by the husband. In some of the rural districts, the husband convenes a meeting of this kind by beating a gong and crying his invitation . . . through the village. After worship of the ancestral tablets, in the presence of his wife, the husband states his case "and brings forward evidence. The relatives, after discussing it, give a decision on the evidence. If she is found guilty," a bill of divorcement is immediately given by the petitioner to the respondent. This bill, which is not written in the dwelling-house of the petitioner, but outside, is usually signed by both the parties concerned. Each signature consists of an impression made in ink by the tip of the forefinger of the right hand. . . . A Chinese husband cannot put away his wife for any of the minor offences which make divorce possible, should he be in mourning for a parent at the time when [it] was committed.]—*Gray, China*, ii. 220. *Cf.* Bill of sale for slaves, *Doolittle*, ii. 209.

"An action for breach of promise lies in China not against the fiancée herself but her parents as she is supposed to have no will in the matter. I am not able to state, however, how far parental authority may be carried or where legitimate compulsion would be supposed to end and conduct calculated to drive the rebellious beauty to despair and death to begin."—*N. and Q. on C. and J.*, iii. 184. *Cf.* MARITAL.

Debt, Bankruptcy, etc.—"There are many processes for the recovery of debts and fulfilment of contracts some legal and others customary, the latter depending upon many circumstances irrelevant to the merits of the case. A creditor often resorts to illegal means to recover his claim, which give rise to many excesses; sometimes he quarters himself upon the debtor's family or premises, at others seizes him or some of his family and keeps them prisoners, and, in extreme cases, sells them. Unscrupulous debtors are equally skilful and violent in eluding, cheating, and resisting their incensed creditors, according as they have the power. They are liable, when three months have expired after the stipulated time of payment, to be bambooed, and their property attached. In most cases, however, disputes of this sort are settled without recourse to government, and if the debtor is really without property he is not imprisoned till he can procure it. The effects of absconding debtors are seized and divided by those who can get them. Long experience, moreover, of each other's characters has taught them, in contracting debts, to have some security at the outset, and therefore in settling up there is not so much loss as might be supposed considering the difficulty of collecting debts. Accusations for libel, slander, breach of marriage contract, and other civil or less criminal offences are not brought before the authorities, but are settled by force or arbitration among the people themselves and their elders."—*Williams, Midd. King.*, i. 515–6.

[*Recovery of debts.—Guarantee.*—If the obligation of a debt be transferred by a deed to a third party, action must be brought against the third party and if it appear that he was a consenting party, he cannot plead the immoral motive of the consideration received. A brother is not responsible for debts, if there has been a partition of property before their accruing. The personal property of a deceased debtor will be first applied in satisfaction of debts, and if that is insufficient his real property

may be taken, but no claim may be made on that of his relatives. Also it appears that where property is held jointly the beneficiaries are severally liable for each other's debts. A debt may be inheritable, and action brought on it though original parties are dead, but very clear evidence is necessary to sustain it. Delay in payment of debts is punishable. If the debtor does not pay after a judgment order is obtained against him he may be brought up again and flogged for disobedience.]—*Ch. Rev.*, vi. 55–7.

"The Law of Bankruptcy in China, like most other laws or customs, except the Criminal Code, lies rather in the breasts of individuals than in the records of legal libraries. As a rule, an arrangement is effected 'out of court,' otherwise 'whilst the hawk and the oyster are struggling, the fisherman gets the pair.' One of the first steps is for the creditors to take possession of the bankrupt's property, call in the hundred men or the magistrate's runner, and take an inventory of the goods of the bankrupt. There is no such thing as an 'act of bankruptcy' amongst the Chinese, nor any subtleties as to trustees, precedence of creditors, secured debts, equitable and legal assets, adjudications, &c. &c.; the plain question is 'can Smith pay what he owes to Brown, Jones, and Robinson, or no?' If he cannot, B., J., and R., whatever be the nature of their claims, as long as they are well-grounded, come in as creditors on equal terms. Anciently, it is said, the body of the creditor [? debtor] was taken in satisfaction of his debts, and was liable to be used by them for labour. At the present time the creditor can himself arrest and confine in his own house the man who will not or cannot pay up, without any legal process whatever, and for any length of time, but he does it at his own peril, and if he injures or kills the debtor while resisting arrest, he is answerable just as he would be if he was no debtor at all. Or he may arrest and confine the son or grandson of the debtor, whatever their age; though he may not arrest his wife or daughter. He may not sell the son or grandson; but he may sell the clothes they wear or those of the debtor himself. Nor can he sell his slaves, lands, houses, or anything whatever in which the property is passed by deed; but he may sell his ships, horses, and other chattels. Servants have no prior claim for wages, and jewellers are not postponed in favour of butchers and bakers. Government taxes, however, or other funds, such as fees, fines, &c. &c., due to Government, take precedence over the claims of ordinary creditors. Future property, in the absence of special agreement, is liable to all time for the debts of an insolvent or bankrupt. Things passing by deed must be sold in the insolvent's name, by means of pressure applied to him, or by the officials, should the insolvent be foolish enough to get into Court."—*Ibid.* vi. 136.

"The Law, or rather Custom [of sale], seems to be as follows: certain things can only be sold by deed, such as slaves, houses, sons, daughters; under certain circumstances also wives and lands; and transfers of land should be registered in the District Magistrate's Office. But with regard to ordinary miscellaneous chattels, it appears that any agreement may be cancelled at any time before the delivery of the goods into the buyer's hands, but that the deposit of earnest money by the buyer gives the seller a right to retain this should the buyer recede from his contract, and imposes on the seller the obligation of refunding double the amount should he be the receding party. It also appears that the seller is responsible for the safe custody of the purchase until delivery, whether a question arise from fire, accident, or negligence. Yet if, under such circumstances, payment has been made, there seems to be no rule calling for the refund of the purchase-money, nor can a bank refuse to cash the buyer's bill, should it be presented after the accident. Much however is left for custom and the better feeling of the parties to settle in cases of this description. The point of *arrha* or earnest-money bears a remarkable resemblance to the post-Justinian Law regarding *emption venditio*."—*Ibid.* vi. 137.

"The land-tax . . . . is supposed not to exceed $\frac{1}{60}$ of the produce. The enactments regarding the lending of money limit the interest to 3% per month, and licenses are granted to money-lenders and pawnbrokers, by which no inconsiderable revenue is realized. The maker of false weights and measures is threatened with 60 blows; and the individual who passes inferior articles as good merchandize, with 50 blows." (*idem ibid.* under 'Fiscal laws.')—*Medhurst, China*, p. 133.

Fiscal Laws.—The 'Fiscal' section contains "regulations for the due registration of every Chinese subject, for the licensing of Buddhist monasteries, for the adoption of children, and for the case of aged and infirm persons, which by the way is admittedly the business of the State when no relatives or connections are forthcoming. The laws of mortgage and usury (36 *per cent.* being the extreme limit), of marriage and divorce, of coinage, of customs' duties, of taxes, of prohibited articles of export and import, of monopolies, of false weights and measures, and of manufactures not so 'strong, durable, or genuine as they profess to be,' are also among the more important on the list. Tea, salt, and alum, may not be sold without a licence, nor except under fixed conditions; smuggling is punished with fifty blows and forfeit of half value, part of the sum forfeited going to the informer. Interest on money lent is not to exceed 3 per cent. per month, and 'whatever the period of years or months may be upon which interest is due at the day of repayment, no more shall be received or demanded than the original and the lawful interest thereon, to any amount not exceeding the principal. . . . All property found lying about without an owner is to be delivered up to the district magistrate within five days; and if the owner is discovered within thirty days, the finder receives half as a reward for his trouble. Otherwise, the whole is returned to him."—*Giles, Historic China*, pp. 128–30.

Census.—"The law upon this subject is contained in Secs. lxxv. and lxxvi. of the statutes. It enacts various penalties for not registering the members of the family, and its provisions all go to show that the people are desirous rather of evading the census than of exaggerating it. When a family has omitted to make any entry, the head of it is liable to be punished with one hundred blows if he is a free-holder, and with eighty if he is not. If the master of a family has among his household another distinct family whom he omits to register, the punishment is the same as in the last clause, with a modification, according as the unregistered persons and family are relatives or strangers. Persons in government employ omitting to register their families are less severely punsihed. A master of family failing to register all the males in his household who are liable to public service, shall be punished with from sixty to one hundred blows, according to the demerits of the offence; this clause was in effect repealed, when the land tax was substituted for the capitation tax. Omissions, from neglect or inadvertency to register all the individuals and families in a village or town, on the part of the headmen or government clerks, are punishable with different degrees of severity. All persons whatsoever are to be registered according to their accustomed occupations or professions, whether civil or military, whether couriers, artisans, physicians, astrologers, laborers, musicians, or of any other denomination whatever; and subterfuges in representing one's self as belonging to a profession not liable to public service, are visited as usual with the bamboo; persons falsely describing themselves as belonging to the army, in order to evade public service, are banished as well as beaten."—*Williams, Midd. King.*, i. 281–2.

Coining.—"It is death by strangulation to counterfeit the common coin of the realm."—*Giles, Historic China*, p. 139.

Laws Relating to Public Works.—"Book VII [of the Code] relates entirely to public works: to the proper preservation of public buildings, of high roads, and of bridges; and to the prevention of floods by the maintenance of durable embankments along the banks of rivers."—*Ibid.* p. 140.

"The laws relative to public works provide that granaries shall be built in every province, supplied with a sufficient store of rice, for the sustenance of the people in time of scarcity; which being sold at a reduced rate, keeps down the price of grain."—*Medhurst, China*, p. 139.

[For laws governing repair of bridges, canals, special circumstances of the country and special care in draining and irrigation, embankments, etc., see *Williams, Midd. King.*, i. 390.]

"China indeed has laws affecting fisheries; roughly speaking, her laws are very similar to those of foreign countries. In China, every person is allowed to fish without a permit from the Chinese Government so far as land is invisible to the fishermen. In foreign countries, every person is allowed to fish immediately beyond the distance of three miles away from the shore, regardless of his nationality."—*N.-C. Herald*, July 31, 1903, p. 266. *Cf.* REG. OF LABOUR.

Industrial.—"Civil cases are rare in China, such questions as arise in the way of trade being almost invariably referred to some leading guild, whose arbitration is accepted without appeal."—*Giles, Chinese Sketches*, p. 79.

Procedure.—"At the trial, prosecutor and accused must each manage his own case, the magistrate himself doing all the cross-examination." "But . . . a clever magistrate never hesitates to set aside law or custom and deal out Solomonic justice with an unsparing hand, provided always he can shew that his course is one which *reason* infallibly dictates. Such an officer wins golden opinions from the people, and his departure from the neighbourhood is usually signalized by the presentation of the much-coveted testimonial umbrella."—*Ibid.* p. 79.

"The Penal Code, and all its modifications of murder, answering in some degree to our distinction between murder and manslaughter, is but little known to the people at large. Nay, the very officials who administer these laws are generally as grossly ignorant of them as it is possible to be, and in every judge's yamen in the Empire there are one or two "law experts," who are always prepared to give chapter and verse at a moment's notice, in fact, to guide the judge in delivering a proper verdict, and one such as must meet with the approbation of his superiors. The people, on the other hand, know but one leading principle in cases of murder—a life for a life. Under extenuating circumstances cases of homicide are compromised frequently enough by money payment, but if the relatives should steadily refuse to forego their revenge, few officials would risk their position by failing to fix the guilt somewhere. As a rule, it is not difficult to obtain the conviction and capital punishment of any native, or his substitute, who has murdered a foreigner, and we might succeed equally well in many instances of justifiable homicide or manslaughter: it is when the case is reversed that we call down upon our devoted heads all the indignation of the Celestial Empire. Of course any European who could be proved to have murdered a native would be hanged for it; but he may kill him in self-defence, or by accident, in both of which cases the Chinese would clamour for the extreme penalty of the law. Further, *hearsay* is evidence in a Chinese court of justice, and if several witnesses appeared who could only say that some one else told them that accused had committed the murder, it would go as far towards strangling or beheading him as if they had said they saw the deed themselves. The accused is, moreover, not only allowed to criminate himself, but no case being complete without a full confession on the part of the guilty man, torture might be brought into play to extort from him the necessary acknowledgement. It is plain, therefore, that Chinese officials prosecuting on behalf of their injured countrymen, are quite at sea in an English court, and their case often falling through for want of proper evidence, they return home cursing the injustice done them by the hated barbarians."—*Ibid.* pp. 83–4.

"On the other hand, the examination of Chinese witnesses, either in a civil or criminal case, is one of the most trying tests to which the forbearance of foreign officials is exposed. . . . We believe that native officials have the power, though it does not always harmonise with their interests to exercise it, of arriving at as just and equitable decisions in the majority of cases brought before them, as any English magistrate who knows 'Taylor's Law of Evidence' from beginning to end. They accomplish this by a knowledge of character, unparalleled perhaps in any country on the globe, which enables them to distinguish readily and without such constant resort to torture as is generally supposed, between the false and honest witness."—*Ibid.* pp. 84–5.

"As regards the evidence of Chinese taken in a foreign court of justice, the first difficulty consists generally in swearing the witness. Old books on China, which told great lies without much danger of conviction, mention cock-killing and saucer-breaking as among the most binding forms of Chinese oaths. The common formula, however . . . is an invocation to heaven and earth to listen to the statements about to be made, and to punish the witness for any deviation from the truth. This is sensible enough, and is moreover not without weight among a superstitious people like the Chinese. The witness then expects the magistrate to ask him the name of his native district, his own name, his age, the age of his father and mother (if alive), the maiden name of his wife, her age, the number and the ages of his children, and many more questions of similar relevancy and importance, before a single effort is made towards eliciting any one fact bearing upon the subject under investigation. With a stereotyped people like the Chinese, it does not do to ignore these trifles of form and custom; on the contrary, the witness should rather be allowed to wander at will through such useless details until he has collected his scattered thoughts, and may be safely coaxed on to divulge something which partakes more of the nature of evidence. Under proper treatment, a Chinese witness is by no means doggedly stubborn or doltishly stupid; he may be either or both if he has previously been tampered with by native officials, but even then it is not absolutely impossible to defeat his dishonesty. Occasionally a question will be put by a foreigner to an unsophisticated boor, never dreamt of in the philosophy of the latter, and such as would never have fallen from the lips of one of his own officials; the answers given under such circumstances are usually unique of their kind."—*Ibid.* pp. 85–7.

"The dread of being called as a witness is only second to that of being arrested as the culprit."—*Ibid.* p. 193.

"This [confronting of witnesses with others concerned] is a special feature of every Chinese trial, and one upon which the magistrate greatly depends for assistance in forming his decision. The contradicting parties are often allowed to wrangle away for a quarter of an hour or so without interference."—*Ibid.* p. 201.

"First offences against a new regulation are always severely punished, the effect of this system being considered more deterrent."—*Ibid.* p. 193.

There are "elaborate laws relating to the arrest, trial, and execution of prisoners. Constables are punishable [by bambooing] if they fail to recover stolen property or to produce the thieves. Prisoners are not to be ill-treated while awaiting their trial in gaol. . . . Women are not to be committed to prison at all, except in capital cases or in cases of adultery; and the underlings who bamboo culprits are not to inflict blows with great noise and little pain, as many of them are able to do, under penalty of receiving themselves all such punishment as is not severely administered."—*Ibid.* pp. 139–40.

"Magistrates are forbidden to receive presents of any kind, except eatables, from the people, under a penalty of 40 blows. . . . In judicial examinations, torture is not to be employed with respect to the 8 privileged classes, and persons under 15 or over 70, as well as those suffering under any bodily infirmity, are exempted, but in all other cases it is allowed and practised. This enactment goes upon the principle of not allowing offenders to be punished until they acknowledge the fact of which they are accused, the justice of the sentence pronounced upon them, and the parental kindness of the ruler in thus inflicting the necessary chastisement."—*Medhurst, China*, p. 139. *Cf. supra.*

Inquests.—"Every district magistrate is bound to hold an inquest, *siang yen* 相 驗 or *yen she* 驗 屍 in cases of death to which suspicion attaches, *on the application* of an interested party. Unless called upon to do so, I believe a *Che-hien* would never institute an inquest of his own motion; the object being in fact considered as a step toward the satisfaction of the grievance complained of by the friends of the person supposed to have been murdered. This accounts for the title of the work in which the rules for examining dead bodies are laid down, namely the *Si Yüan Luh* 洗 怨 錄 or Treatise on the [means] for the redress of wrongs. The elaborate practice detailed in this ancient (but easily accessible) work is confided to the hands of the *Wu Tso* 仵 作 or Examiner of dead bodies, a low functionary attached to each district yamun. The report made by this person to the magistrate corresponds to the 'finding' of our coroner's jury."—*N. and Q. on C. and J.*, iii. 127.

"All deaths from accident, drowning, strangulation or suspicious circumstances must be submitted to the coroner for inquest. Interment may be effected by employing the services of geomancers or necromancers who grant certificates of death, in natural cases, which suffice to pass the city gate-keepers as in Peking. These diviners are a body distinct in themselves, and not under mandarin control, except in cases where certificates are granted under false pretences, and then they run the chance of the neighbours not giving information. . . . The only [other] course left is to have it noted through the proper Yamên, which always causes a delay of at least 3 days. The examination of the injured or dead person *must* take place on the *very* spot, *whatever* and *wherever* that may be. No one dare move the body. . . . On the 3rd day after death . . . the body is laid out by the police preparatory to inspection: chairs and tables are arranged at a respectable distance to *windward*. . . . A fire is generally lighted between the tables where the officials are seated, and the dead body. One of the officers takes down the depositions of the examiner, the police carry pails of water, and others stand with burning incense in their hands, and keep continually replenishing the incense fire. The body is first filled with water, and then lustily washed by the police [without these washings no examination is legal or valid]—which generally carries off all the epidermis. As the body lies on its back, the examiner commences his manipulations with chopsticks, probing the head and face, then right and left sides, ribs and lower extremities, in the most careful manner. [Then] the body is turned, and the same processes take place as in front. The examiner afterwards proceeds to the table, where his depositions are taken down, and then the mandarins, with the relatives of the deceased, along with the examiner, go over the whole case again, dwelling particularly on the supposed causes of the death, or seat of the injury. Before attempting this, the officials, who have been partaking freely of snuff, introduce rolls of paper into their nostrils, and with wet towels in their hands, which they hold to their mouths, they proceed to the side of the body. The body is afterwards coffined, and is generally taken home by the relatives, or to the police station, or it may be allowed to remain at the spot of injury or death till the injurer or murderer confesses . . . and sentence has been passed upon him. Sometimes two or more examinations take place with the view of verifying the statements of the prisoner or persons implicated. . . . The coroner generally is not a medical man."—*Ibid.* iii. 127–8.

Extraterritoriality.—"At least one of them [the laws] has in practice been altogether abrogated at the instance of the Western barbarian. For it is expressly stated that foreigners who may be guilty of any crimes within the limits of the Chinese Empire shall be dealt with according to the provisions of this Penal Code. Wars and Treaties have changed all that, and the subjects of other nations are now tried in China, on the extraterritorial principle, by their own authorities administering their own laws."—*Giles, Historic China*, pp. 126–8. *Cf.* POLITICAL.

[For land laws and punishment of slaves see REG. OF LAB.; for marital laws see MARITAL; for laws of inheritance, FILIAL; for political laws, GEN. GOVT.; for military and police laws, MILITARY; for ritual laws, ECCLESIASTICAL; for laws relating to education, ACCESS. INST., for mourning regulations, FUNERAL RITES; and for sumptuary laws, LAWS OF INTERCOURSE.]

LOCAL GOVERNMENT.

Early Feudal Period (*c.* 2357 *to* 1122 B.C.).—*Table I.*

"In the Hsia and Shang dynasties there were no local officials."—*Yüan chien lei han*, *c.* 2, p. 22.

Later Feudal Period (1122 *to* 221 B.C.).—*Table II.*

In the imperial domain or city, "five families constituted a *pi* (比), which afforded each other mutual protection; five *pi* formed a *lü* (閭), the members of which were mutually responsible; four *lü* formed a *shu* (族), who were obliged to mutually assist in cases of burial; five *shu* constituted a *tang* (黨), and these were obliged to form mutual succour in times of emergency; five *tang* formed a *chou* (州), and these were obliged to contribute necessaries of life to those among them who were in want; and five *chou* constituted a *hsiang* (鄉), or village, and this was obliged to send forth scholars or visitors [successful candidates invited by the examiners, and styled 'guests.']"—*Chou li*, Gingell, pp. 49–50.

In the outer districts, "five families make one *lin* (鄰), neighbourhood; five *lin*, one *li* (里), village; four *li*, one *ts'uan* (酇), hamlet; five *ts'uan*, one *p'i* (鄙), town; five *p'i*, one *hsien* (縣), district; and five *hsien*, one *sui* (遂), country district. Each had its boundary where ditches were dug and trees planted; and each had charge of its own government, decreta, punishments, and prohibitions. At a certain time of year the population was inspected, and according to the number of the population, fields were distributed."—*T'ung tien ch'i yao*, *c.* 1, p. 10*a*.

"The rural unit consists for administrative purposes of a group of five families, which is called a 'neighbourhood.' Each family was supposed to include three generations, and to consist normally of grandfather and grandmother, husband and wife, and three or four children, making seven or eight persons in all, the husband being the grandfather's eldest son."—*Simcox*, ii. 42–3.

"The elder of the group was responsible for its internal government, and ranked as a graduate of the lowest class. . . . The dwellings of the neighbourhood are enclosed by a single wall, and the residents are bound to mutual aid and support; but an average group of forty persons of all ages is manifestly too small to constitute a village, and probably rather represents the family community. The present Chinese average is five persons to a family, counting parents and children only; but if the family or household here includes three generations, the family *group* would certainly include the families of younger sons, and thus the numbers of the 'neighbourhood' would easily be made up."—*Ibid.* p. 43.

"The counterpart of this community is the 'hamlet' of five neighbourhoods, including twenty-five families of perhaps 200 souls. It appears incidentally from one of the amatory poems of the Shi-King that this larger group is the one within which public opinion and 'the talk of people' makes itself felt as a social force."—*Ibid.* ii. 43.

"Now you may here dwell in your villages" [*Shu ching*, Pt. V. Bk. XIV. 25]. "Ts'ae says that we are to understand the 'villages' formed by the families around every four 井, or space of 3,600 *mow*. Every family in connection with such a settlement had its five *mow*, for houses and private garden,—2½ in the field, and 2½ in the associate village; see Mencius I. Pt. I. iii. 4."—*Legge*, *Ch. Class.*, III. ii. 463, note.

[The *Yüan chien lei han* (*c.* 117) gives the following as the local organization during this Period:—The *Hsiang Ta Fu* (鄉大夫), *Hsiang Lao* (老), and *Hsiang Shih* (師), controlling 12,500 families, were in charge of the education of the people, taxation, bestowal of rewards (in the shape of honorary tablets, etc., upon filial sons, chaste girls, and widows who did not re-marry, relief of distress, exhorting scholars to set noble examples to the people, hearing of law suits, etc. The *Chou Chang* (州長), over 2,500 families, controlled their education and the levy of taxes, reporting on their good or bad deeds to the superior officials. The *Tang Chêng* (黨正), over 500 families (= 1 *tang*) was in charge of the police and protection from thieves and robbers. The *Tsu Shih* (族師), over 500 families, supervised the training of the young and educational matters. The *Lü Hsü* (閭胥), controlling a *lü* of 25 families, was the man of ability (*hsü*) placed in charge of official matters in the *lü*: affairs concerning their public welfare, music, punishments, dancing, etc. The *P'i Shih* (鄙師), head of the *p'i* (= 5 *hsien*,) was in charge of the smaller schools and land-taxes. *Hsien Chang* (贊長). A *hsien* was composed of 4 *li*. The *Hsien Chang* was charged with the capture and punishment of thieves and robbers. *Li Tsai* (里宰). A *li* was composed of 5 *lin*, the *Li Tsai* being specially charged with matters relating to agriculture. *Lin Chang* (鄰長). A *lin*, neighbourhood, was composed of 5 *chia*, families. The *Lin Chang* acted as a representative, reporting (directly) to the *Hsiang Ta Fu*, etc. He attempted reconciliation when differences arose, but had no power of judicial decision. If the case was taken to his superiors he was called to give his evidence, etc. (the modern *Ti Pao*).]

"The functions of the village headman who presides over the twenty-five families of a hamlet, are to keep an account of the numbers of the community, to apportion the taxes both in produce and labour, and to preside over the work of seed-time and harvest, for the hamlet is the unit in the system of common cultivation or 'mutual aid,' always referred to as an essential feature of the Chow regime (*Tcheou-li*, i. p. 354). Four of these communities form a hundred, or, as Mr. Biot calls it, a commune, which is presided over by a graduate of the first rank. He revises the decisions of the local headmen, and is responsible for the military levies which are proportioned to the agricultural divisions. Five hundreds form a shire, or a department, and two further multiplications by five bring us to the largest administrative districts, the county and the province."—*Simcox*, ii. 44.

"The solidarity of the hundred extends to the sharing of funeral expenses, the childless and destitute being interred by their fellow villagers. The expenses of religious ceremonies are borne jointly by the county; living merit is rewarded by honours extending over the whole province, and the list of persons of special capacity handed in triennially by the governor of the province is preserved in duplicate by the Recorder of the Interior."—*Ibid.* ii. 44.

"This system is evidently theoretical, and the empire can never be mapped out into equal areas counted either by fives or nines. But Mencius mentions a tradition that 'the 50 mow allotment of Hia, the 70 of Yin, and 100 of Chow were actually of the same dimensions' (*Life and Works of Mencius.* By James Legge, D.D., 1875, p. 201). And in another section of the Chow Li (i. p. 226) the divisions after the *tsing* proceed by fours, giving groups of 36, 144, and 576 families, which answer roughly to the 25, 100, and 500 families comtemplated by the grouping in hundreds and shires. So that it is possible that the real usage varied less than the descriptions of it."—*Ibid.* p. 44.

"Though there was no strictly universal usage, there was a perfectly well known and familiar type of usage, any decently close approximation to which was accepted as lawful and satisfactory, just as the expression 'a hamlet of ten families' was used proverbially (*Legge*, i. p. 47; *De Mailla*, iii. p. 30) for the smallest centre of social life."—*Ibid.* ii. 45.

"One hundred years before the close of the Chow dynasty, a great statesman, named Wei Yang, appeared in the rising State of Ch'in, . . . and brought about many valuable reformations. Among other things, he introduced the system of tithings, which has endured to the present day. The unit of Chinese social life has always been the family and not the individual; and Wei Yang caused the people to be divided into groups of ten families to each, upon a basis of mutual protection and responsibility. The headman or elder of each group, elected among themselves as representative of the tithing, formed one of an unofficial council by whom the affairs of the community were regulated, rights secured, and wrongs redressed, as far as possible, without appeal to the authorities."—*Giles*, *Hist. Ch.*, p. 8.

"As to the state system within the *chiao* (郊), wilds, five families made one *kuei* (軌), 'circuit'; ten *kuei*, one *li* (里), 'village'; four *li*, one *lien* (連), 'union'; ten *lien*, one *hsiang* (鄉), 'neighbourhood'; and five *hsiang*, one *shuai* (師), 'leadership.' Outside the *chiao* (in the remoter wilds), thirty families made one *yi* (邑), city; ten *yi*, one *tsu* (卒), 'command'; ten *tsu*, one *hsiang* (鄉) 'neighbourhood'; three *hsiang*, one *hsien* (縣), district; ten *hsien*, one *shu* (屬), 'dependency.' From the five families up to the *shu* each had officials to take charge of the government and of military affairs."—*T'ung tien ch'i yao*, *c.* 1, p. 10*a*.

Absolute Monarchy (221 B.C. *to* A.D. 221).—*Table III.*

[Under the Ch'in system, which was also adopted by their successors, the Han, the *Wu Chang* (伍長) and *Shih Chang* (什長) exercised police jurisdiction; the *Li K'uei* (里魁) rewarded the good, and punished the bad deeds of the people; and the *T'ing Chang* (亭長) regulated educational matters. Ten *t'ing* made a *hsiang* (鄉), and over the *hsiang* were the *San Lao* (三老), Three Ancients, or Elders, whose duty was to see to the progress of the people generally and the welfare of the district. The *Se Fu* (嗇夫) decided law suits and controlled the collection of taxes (pressing the people to pay their taxes), and the *Yu Hsi* (游徼) was charged with the capture of robbers and thieves and prevention of robbery and theft.]—*Yüan chien lei han*, *c.* 117, p. 15, etc.

["Village and hamlet government" were established at San Fu when the agricultural families were sent to settle in Kuang Chung, when the Han capital was still in the West.]—*T'ung tien ch'i yao*, *c.* 1, p. 10*b*.

Period of Disruption (221 *to* 589).—*Table IV.*

During this Period the local government system was generally the same as under the Han. In the time of the Chin (265-420), over "a *hsiang* (鄉), neighbourhood, which had not less than 1,000 families, one *Chih Shu Shih* (治書史), beadle, was appointed, and over those with 1,000 families and upwards one *Shih* (史) and one assistant *Shih*."—*Chin shu Chih kuan chih*, *P'ei wên yün fu*, *c.* 37*a*, p. 143*a*.

"In the beginning of the Later Wei dynasty [386], the three *Chang* (長), village chiefs, were not appointed, but only the *Tsung Chêng* (宗正) to govern [the village.] For this reason the people used to conceal their families, fifty or thirty houses sometimes representing one family in the register, which was called *yin fu* (蔭附), sheltering one's dependents. They had no government servants, so the taxes [surreptitiously] collected by the village braves were double those collected by the government."—*T'ung tien ch'i yao*, *c.* i. p. 11*b*. See also *Wên hsien t'ung k'ao*, *c.* 11, p. 6*a*.

"In the tenth year [486] of the period *T'ai Ho* of Hsiao Wên, the supervising Censor, Li Ch'ung, remembering that the use of the three *Chêng* (正), elders, to govern the people was a system originated in very early times, made the system of three *Chang* (長), chiefs or headmen, saying: 'We should follow the example of the ancients, who set up one *Lin Chang* (鄰長), chief of neighbourhoods, over every five families, one *Li Chang* (里長), village headman, over every five *lin* (鄰), neighbourhoods, and one *Tang Chang* (黨長), chief of an association, to every five *li* (里), villages. The *Tang Chang* was selected from those who were influential and diligent in the *hsiang*."—*T'ung tien ch'i yao*, *c.* 1, p. 11*b*.

"In the Northern Ch'i Kingdom [550–77] the people were ordered to form a *lin* (鄰), neighbourhood, out of every ten families; a *lü* (閭), village association, out of every fifty families; and a *tsu tang* (族黨), association of clans, out of every hundred families. In one *tang* there was one *Tang Tsu* (黨族), village chief, one assistant *Tang*, two *Lü Chêng* (閭正), village elders, and ten *Lin Chang* (鄰長), chiefs of neighbourhoods; altogether fourteen men who governed one hundred families."—*Ibid.* *c.* 1, p. 12*a*.

From the Restoration of Unity to the end of the Five Dynasties (589 *to* 960).—*Table V.*

589–907.

"When Wên Ti of the Sui Dynasty succeeded to the throne a new order was issued that five families were to make one *pao* (保), headborough; five *pao*, one *lü* (閭), village association; four *lü*, one *tsu* (族), tribe. Each had a chief (*Chêng*). Outside of the capital *Li Chêng* (里正), beadles, were established, with rank equal to the *Lü Chêng* (閭正), village elders; and *Tang Chang* (黨長), chiefs of associations; to the *Tsu Chêng* (族正), heads of tribes. They investigated one another's misdeeds."—*T'ung tien ch'i yao*, *c.* 1, p. 12*a*.

"Shortly after the conquest of 陳 by the 隋 dynasty, a new parochial system was introduced at the recommendation of 蘇威. One hundred families formed a 里, over which was a 里長; five *li* fell under one 鄉, over each of which was a 鄉正."—*Ch. Rev.*, xiii. 430.

"Su Hsien memorialized the throne requesting that to every five hundred families one *Hsiang Chêng* (鄉正), village chief, should be appointed, to administer criminal matters for the people."—*T'ung tien ch'i yao*, *c.* 1, p. 12*a*.

[The local government under the Sui was at first administered by the *Hsien Ling*. As in the Later Feudal Period, there were *chou*, *chün*, and *hsien*. The *Chün Chêng* and *Hsien Chêng* in the chief city of the *chou* controlled the affairs of the *chün* and *hsien*. Below these were the *Chou Chün* (the *chou* at this time was small). The *Hsien Ling* could be deputed to transact the affairs of the district. It is said that the emperor, in the *K'ai Huang* period, being unacquainted with State affairs, called the *Hsien Ling*, *Hsiang Kuan*, or local officers, they having rank (*p'in*) bestowed upon them, and being appointed by the Board of Civil Office. They had to undergo examinations once a year. In the 15th year (595) of *K'ai Huang* separate local officers (*Hsiang Kuan*) were appointed. They were the same as the *chü jên* and *hsiu ts'ai* of modern times.]—*Yüan chien lei han*, *c.* 117, p. 16.

"In the great T'ang dynasty it was ordered that one hundred families should make one *li* (里), village; five *li*, one *hsiang* (鄉), suburban district. Four families made one *lin* (鄰), neighbourhood, and three families, one *pao* (保), beadledom. To every *li* one *Chêng* (正), chief, was appointed. (In mountainous or dangerous districts, or those with few inhabitants, any number of *Li Chêng* were allowed to be appointed, if necessary.) He had charge of examining the population, teaching them to plant mulberries and elms, and to cultivate the fields, searching for evildoers, and urging on the tax collectors in the performance of their duties."—*T'ung tien ch'i yao*, *c.* 1, p. 12*b*.

"One hundred *hu* (戶) made one *li* (里), the *li* being under control of a *Chêng* (正), whose duty was the capture of thieves and robbers, the quelling of brawls, etc. Five *li* made a *hsiang*, the latter being under a *Ch'i Lao* (耆老), elder, or man of 70 years of age, also called *Fu Lao* (父老), who had charge of the local morals (lit., good and evil deeds of the people), agricultural matters, etc. Each *hsiang* had also a *Hsiang Chang* (長), with whom the *Ch'i Lao* consulted in difficult cases, who had similar duties, and in addition decided lawsuits and regulated taxation. Two *Hsiang Tso* (鄉佐) assisted in the collection of taxes and in police matters."—*Yüan chien lei han*, *c.* 117, p. 16.

907–960.

"In the 5th year [958] of the period *Hsien Te* of Shih Tsung of the Chou Kingdom, an imperial decree was issued ordering that all intendants of circuit, department magistrates, and prefects should form a *t'uan* (團), militia, out of the village population of one hundred families each. To each *tuan* three great families were chosen as *Ch'i Chang* (耆長), chiefs, to investigate cases of theft and criminal connections of the people, and to equalize their fields in times of good and bad harvest."—*Hsü t'ung tien ch'i yao*, *c.* 3, p. 1*a*.

Sung Period (960 *to* 1280).—*Table VI.*

"The Sung system was similar to that of the Ch'in and Han."—*Yüan chien lei han*, *c.* 117, p. 16.

"The Sung followed the systems of former dynasties; there were *Ya Ch'ien* (衙前), ? tax collectors, *Li Chêng* (里正), beadles, *Hu Chang* (戶長), overseer of population [for fiscal purposes], and *Ch'i Chang* (耆長), village chiefs. In the 7th year [982] of the period *T'ai P'ing Hsing Kuo* of T'ai Tsung it was ordered that the people under the jurisdiction of all the department magistrates in the capitals who were in want of seed and agricultural implements were allowed to choose a man who was best acquainted with the circumstances of the land or soil and was skilful in cultivation to be *Nung Shih* (農師),

superintendent of fields, of the district, his duty being to examine the fields and [ascertain] their fitness for the five kinds of grain; and the aged people and officers of the village were ordered to help the *Nung Shih* in encouraging the people to cultivate the waste land. When the harvest was gathered they shared in the produce. The *Nung Shih* did not pay any kind of tax nor was he allowed to take other government service."—*Hsü t'ung tien ch'i yao*, *c.* 3, p. 1*a*.

"In the period *Hsi Ning* [1068-78] of Shên Tsung, when Wang An-shih was Prime Minister [1069] he established the system of tithing, a union for mutual protection in a village, and put the people of the village on the register. Ten families made one *pao* (保), tithing. Each man of the *pao* had a bow and arrows, and was taught warfare."—*Ibid. c.* 3, p. 1*b*.

KIN.

"In the 6th year [1206] of the period *T'ai Ho* of Chang Tsung it was thought that the old system of the *pao* and *wu* had been destroyed by the magistrates. It was ordered that the people should mutually protect one another, and anyone concealing a spy, thief, or robber, should be involved in the crime."—*Ibid. c.* 3, p. 2*a*.

Mongol Period (1280 *to* 1368).—*Table VII.*

[The Mongol system was the same as that of the Sung.]—*Yüan chien lei han*, *c.* 117.

"In the 7th year [1270] of the period *Chih Yüan* of Shih Tsu it was ordered that all villages under the jurisdiction of the magistrate should form a *shê* (社), hamlet or society, out of fifty families. One chief should be chosen from the old men best acquainted with agriculture. Above that, for one hundred families, another *Chang* (長), chief, was appointed. If a village had less than fifty families it was to form a *shê* with its neighbouring village. Remote places with few inhabitants or those in which the people did not agree with one another were allowed to form separate *shê* if they liked."—*Hsü t'ung tien ch'i yao*, *c.* 3, p. 2*b*.

C. 1275. "The streets [of Cambeluc = Peking] are so straight and wide that you can see right along them from end to end, and from one gate to another. . . . All the plots of ground on which the houses of the city are built are foursquare, and laid out with straight lines; all the plots being occupied by great and spacious palaces, with courts and gardens of proportionate size. All these plots were assigned to different heads of families. Each square plot is encompassed by handsome streets for traffic; and thus the whole city is arranged in squares just like a chess-board. . . . Moreover, in the middle of the city, there is a great clock—that is to say, a bell—which is struck at night. And after it has struck three times no one must go out in the city, unless it be for the needs of a woman in labour, or of the sick. And those who go about on such errands are bound to carry lanterns with them. . . . The established guard at each gate of the city is 1000 armed men . . . as a guard of honour for the Sovereign, and to prevent thieves from doing mischief in the town."—*Yule, Marco Polo*, i. 362-3 (2nd ed.).

At Kinsay [Hangchow]—"since the Great Kaan occupied the city, he has ordained that each of the bridges should be provided with a guard of ten men, in case of any disturbance. . . . Each guard is provided with a hollow instrument of wood and with a metal basin, and with a time-keeper, to enable them to know the hour of the day or night, [and strikes the hour,—once for the first, two for the second, &c.—until sunrise]. Part of the watch patrols the quarter, to see if any light or fire is burning after the lawful hours; if they find any, they mark the door, and in the morning, the owner is summoned. . . . If they find anyone going about the streets at unlawful hours, they arrest him, and in the morning they bring him before the magistrates. Likewise, if in the daytime they find any poor cripple unable to work for his livelihood, they take him to one of the hospitals . . . or if he be capable of work, they oblige him to take up some trade. [In case of fire, they give the alarm, with their instruments] and this brings together the watchmen from the other bridges, to help to extinguish it, and to save the goods . . . either by removing them to the towers . . . or by putting them in boats, and transporting them to the islands in the lake. For no citizen dare leave his house at night, or to come near the fire: only those who own the property, and [the] watchmen. . . . Moreover, within the city there is an eminence on which stands a tower, at the top of [which] is hung a slab of wood, [and a man is stationed there to beat it, and give the alarm in case of fire, or other disturbance.]"—*Ibid.* ii. 171-2.

Ming Period (*Restoration of Chinese Supremacy*) (1368 *to* 1644).—*Table VIII.*

"The Ming did not appoint *Hsiang Kuan* [*v. supra*], but bestowed official titles upon the *Yü* (役)" [= the modern *Ti Pao*], *i.e.*, they gave titles to those who formerly occupied the same positions (*e.g.*, the modern *Shên shih*).—*Yüan chien lei han*, *c.* 117, p. 16.

"Martini speaks of the public clock-towers in the Chinese cities, which in his time were furnished with water-clocks. A watchman struck the hour on a great gong, at the same time exhibiting the hour in large characters. The same person watched for fires, and summoned the public with his gong to aid in extinguishing them."—*Yule, Marco Polo*, i. 365, note (2nd ed.).

"First these judges, in all cities and towns of their jurisdiction, do number the households, and do report them in ten and ten households, and upon the tenth house they do hang a table or sign whereon is [*sic*] written the names of those ten householders with a commandment, in the which generally they are commanded, and everyone by himself particular, that having any knowledge or notice that any of these ten householders have committed any trespass or fault . . . that is hurtful unto his neighbours or to the commonaltie, to go straightway and give the justice to understand thereof. . . . And unto him that doth know any such offence and will not declare it, is allotted the same punishment that the offender should have, which is the occasion that one neighbour hath a care of another, and liveth under fear, lest they should give occasion to be complained of. . . . When that any of these ten neighbours doth remove into another street, or into any other city or town to dwell, or will make any long journey, he is bound to ring a bell, or play on a copper kettle amongst all the neighbours for the space of ten days before he doth remove or depart, and to advise them all of his departure, and whether for that if he do owe anything, or anything be lent, that they may come and demand it. . . . And if . . . any shall depart without using this diligence, the justice doth compell the rest of his neighbours that are written on the signe to pay his debt, because they did not advise the justice or his creditors before his departure."—*Mendoza, Hist.*, i. 110.

[It was strictly forbidden, in 1382 to make complaints direct to the capital, passing over the local official; and an aged man was ordered to take charge of the lawsuits of a town and decide criminal cases by the help of the local beadle. Only important cases were to be reported to the magistrate. The prohibition seems to have been ineffective at least until the heavy punishment of banishment to the frontier was attached to the offence.]—*Hsü wên hsien t'ung K'ao hsiang chieh*, *c.* 19, *Hsing K'ao*, p. 3*b*. And *cf.* LAWS.

Manchu Period (1644 *to* —).—*Table IX.*

"In reality, the Chinese govern themselves, and administer their own affairs—in the family, by all the members of the family,—in the city, by the delegates whom they have chosen, and of whom the official functionaries are, so to speak, only the presidents. . . . They have no hesitation in dismissing these presidents when they find reason to complain of them." [An instance is given, where, after vainly petitioning the Viceroy against the appointment of an unpopular prefect, the Council received the official outside the walls of the town, invited him to rest and refresh himself, and then informed him that a chair was in readiness, and that three of their number would escort him back to the capital. This, the author insists, is a normal, and not an exceptional fact.]—*Simon, Cité chinoise*, pp. 15-16.

"The imperial theory would hardly seem to recognize local self-government. Yet the communal organization in China, and even Japan, as in India, maintains the idea of a popular commonwealth in many important ways at the base of the social structure; and in the former States, far more than in the latter country, yields practical instruction in the school of liberty. In every part of China towns and villages abound where the officers of government are scarcely ever seen, and affairs are administered by local authorities, selected on the basis of the national respect for culture, and forming bodies which direct affairs by open discussion, sometimes amounting to decision of peace or war between neighbouring clans. These municipal institutions, even in the poorer communes, rest on a kind of patriarcho-universal suffrage, to which all heads of families are entitled, or on choice of elders by lot. Organizations of the people, for the detection and punishment of robbers and other social offenders, are very common. The elders of town councils, even where government has its *tipaos* or mayors, possess very considerable powers; communicating with the prefect through these latter offices, administering justice, and directing the police, regulating ceremonies, settling disputes, and estimating taxes. They remain in office during the goodwill of the people. In dangerous moments, these councils unite for consultation, from 50 to 100 combining for discussion in some central hall; and their decisions are of great weight with the central government. Their power over State officials was seen in the resistance of the Canton city council to the opening of that port to the British in 1857."—*Johnson, Or. Rel.—Ch.*, pp. 306-7.

"The Chinese government is not a despotism maintained by a physical force, but an autocracy existing in virtue of the cheerful acquiescence of the people. The latter actually do share largely in a kind of self-government, in consequence of the mandarins being taken impartially from *all* classes. Further, at the triennial examinations of each province only about 70 [out of 6000 or 8000] can pass. But among the rejected . . . there are probably 700 as able as the selected 70, between whom and the latter it was a mere 'toss-up' with the examiners. All these rejected remain members of the non-official commonality, and possess, with hundreds of thousands of candidates who never even attain bachelorships, as much intellectual power for practical purposes as the bulk of the administrators. Many of the more reckless and daring perform the functions of *professional* demagogic agitators with us . . . they, for selfish purposes bully and check the authorities. . . . From the paucity of the military and police establishment, numbers of large villages (towns we may call some) exist in every district, the inhabitants of which scarcely ever see an official agent except when the tax-gatherers apply for the annual land tax." "In certain parts of China these personages are so far from attempting to levy this tax by force that they often get the magistrate to give them a bambooing, and then repair to the villages with a self-imposed cangue round their necks . . . and appeal to the good feeling of the rustics, crying, 'See what we have to suffer because you delay paying us what we are bound to hand in.'"—*Meadows, Chinese and Their Rebellions*, pp. 27-8, and note.

[The local government was entrusted to the *Hsiang Shên* (鄉紳), who had general control of public matters; the *Tuan Tsung* (團總) or *Lien* (練) *Tsung*, charged with police jurisdiction; the *Pao Chêng* (保証) or *Ti Pao* (地保), see *infra*; the *Ti Chia* (地甲), the occupant of a small office for the protection of agricultural produce from thieves, etc.; and the *Hsiang Ch'i* (鄉耆), a respected elder (*cf.* previous Periods), who was referred to for information on ancient matters (*e.g.*, in disputes concerning land). He had now no power, and his office had declined in importance. He was a man, always over 70 years of age, who had been brought to the notice of the emperor as having lived to an honourable old age and had been granted permission to place a *pien*, honorary tablet, over his door, and wear a breast *pu tzŭ* with the words *Huang ên ch'ih tz'ŭ*, "Bestowed by Imperial favour."]

"At the bottom of the judicial scale are the village elders. This incipient element of the democratic principle has also existed in India in much the same form; but while its power ended in the local eldership there, in China it is only the lowest step of the scale. The elders give character to the village, and are expected to manage its public affairs, settle disputes among its inhabitants, arrange matters with other villages, and answer to the magistrates on its behalf. The code provides that all persons having complaints and informations address themselves in the first instance to the lowest tribunal of justice in the district."—*Williams, Midd. King.*, i. 500. See also GEN. GOVT.

"Not only are all the members of a family . . . knit together by mutual responsibilities, but families are again thus knit. It is the village elders who are responsible if any crime is committed in the district. It is they who have to discover and bring back stolen articles; it is they who have to quiet disturbances and settle disputes about boundaries. The principle of local self-government has in the course of centuries been perfected in China, where all that Mr. Ruskin aims at appears to have been attained centuries ago; village industries, local self-government, no railways, no machinery, hand labour, and each village, as far as possible each self-sufficing family, growing its own silk or cotton, weaving at home its own cloth, eating its own rice and beans, and Indian corn and pork. Schools are established by little collections of families, or tutors engaged, as the case may be. In either case the teacher is poorly paid, but meets with a respect altogether out of proportion to his salary."—*Little* (*Mrs. A.*), *Int. Ch.*, pp. 538-9.

"The people in China generally live in villages in many of which there are no government officials. But every village has its head man, and if necessary a police. The headman is elected by the villagers, receives such salary as they please to give, and holds his office during good behaviour. He may be deposed and another elected in his place."—*Ch. Rec.*, ix. 384. See also pp. 412-4.

"Custom has given this headman a degree of authority. Although unconnected with government, as the head of the village, he is held responsible. His duties are chiefly arranging petty disputes, but his powers extend to flogging. The salary of this headman, in the village of Whampoa (7,000 inhabitants) is 300 dollars per annum; and he has under him fourteen policemen. Appeals from the decision of the headman are to the seun-keen, the chief officer of a sze. . . . Of these sze the district of Pinanyn has four; and the sze which includes Whampoa comprises 164 villages, each having a headman."—*Martin, China*, i. 39-40.

"An aggregation of . . . families formed the village community, every member of which was compelled to comply with the customs of the group to which he belonged. The manner of farming his allotted land, the way in which he conducted his business and his social relations, all came under the observation and control of the elders of the community. Time has worked some transformations in the outward administration of the village, but the same spirit pervades the present system. The tendency which has been observed in other countries towards establishing a hereditary pre-eminence in one family, had in China produced the *tipao* or headman, who is held responsible for the peace and well-being of his neighbourhood, and who is commonly assisted in his office by the elders of the village or district. This office not unfrequently descends from father to son, and is regarded [with] respect."—*Douglas, Soc. in Ch.*, pp. 111-2. For procedure in cases of unsatisfactory decisions, appeal, etc., see *supra*.

"The object of the *tipao* is, therefore, so to exercise his authority as to prevent petitions being presented to the mandarins. In this he has the full support of the village elders. . . . It was said by Mencius that villagers who left unheeded domestic disturbances in their neighbours' households, were to be considered as participators in the quarrels. The elders of a district, acting on this dictum, do not scruple to enter on the scenes of family broils and to constitute themselves judges of the matters in dispute. The village or district forms one whole, and each individual in it is but a cog-wheel in the social machine. . . . Personality disappears, and ostracism of a complete and oppressive kind is the fate of those who venture to oppose themselves to the public opinion of those about them. . . . The village elders . . . settle questions of trespass, they arrange money disputes, and they grant divorces to husbands impatient of the failings of their wives. It is seldom that, in such cases, their decisions are not final. Frequently, however, they . . . usurp to themselves the functions of criminal judges. In this way a large proportion of criminal business never reaches the courts of the mandarins, but is adjudicated upon by the village elders, with the consent and approval of the inhabitants." [If appealed to, the higher magistrates express indignation at these irregular procedures, but in practice, they are perfectly satisfied to be thus relieved of a large amount of work.]—*Ibid.* pp. 112-3.

"The very lowest man in office is called the Tipao (the Protector of the land). He is the head man in a ward. Every town in China is divided into so many wards, and in the rural districts, villages are grouped into divisions of the same kind, and over each of these there is a Tipao. This man is usually a person of no education and no social standing, and as a rule is conspicuous for the absence of all moral qualities. His functions are of an exceedingly miscellaneous description. He is supposed to know everyone in his ward, his occupations, what he is doing either by day or night, what scheme his brain is plotting, and what are his private sources of income. He has a large amount of arbitrary power, for he can refuse to allow persons of doubtful reputation or uncertain means to reside within his jurisdiction, and he can summarily eject, without any process of law, loose characters who are a trouble to the community and who may not have the means of bribing his good will."—*Macgowan, Lights and Shadows*, pp. 15-16.

"It is his duty to report to his superior officer anything important that is going on in his ward, and to inform him of everything that he knows concerning it, and a great deal besides that he could not possibly know. He is liable at any moment to be beaten into a jelly for something that has taken place in his district that it was utterly out of the question that he should be aware of. The Tipao, therefore, must be a man of fertile imagination, ready wit and easy conscience. Of course, in every ward there are bad characters. There are opium-smokers whose fortunes have vanished down their pipes, and professional thieves that sally out in the small hours of the morning. There are also gamblers, consumed with a passion that never brings them the longed-for wealth, and ballad singers that stand in the dark corners of the thoroughfares and sing lurid and obscene songs to little knots of men that look bad enough to have just come from the pit."—*Ibid.* p. 16.

"Every one of these is known to the Tipao, and each one if he wishes to be let alone must pay him blackmail, if he wishes to avoid being reported to the local mandarin, who would take a short and easy method of ridding the neighbourhood of his presence." "The beautiful theory of responsibility that permeates the Chinese brain brushes aside the ordinary excuses that weigh with an occidental, and the man is held guilty for offences that no single human being could possibly have foreseen or prevented."—*Ibid.* pp. 16-17. See also *Ch. Rev.*, ii. 273.

"The *tipao*, or 'local guarantor,' is a curious Chinese institution, like a 'whipping-boy.' He is nominally *Monsieur le Maire*, but in reality he is often a hired ruffian or toper, who, for a consideration acts as spokesman to the municipality, and incurs all the penalties; it is as though the Lord Mayor should keep a

greengrocer at fifteen shillings a week to listen to the warnings of the Chief Justice."—*Parker, John Chinaman*, p. 92.

This "primitive village system . . . is entirely apart from the legal code; each moves as its own plane, and it is only when the planes touch, that is, when an appeal, as in the above-mentioned case, is made to the authorities, that the two systems clash." "It often happens that one family becomes the possessor of an entire village. . . . In such cases the seniors of the clan act as the village elders. In larger communities the clans claim jurisdiction over their members, irrespective of the authority of the tipao and his council. The clan seniors, however, devote their attention more exclusively to the intimate personal relationships of their members than do the village elders, their object being rather to prevent scandals within their ranks than to preserve public order. . . ." They have joined in promoting "attacks upon Christians, and in the provinces of Hunan and Hupeh they jealously guard their ranks from the imputation of heresy. Any member suspected of having joined the foreign religion is haled before the clan tribunal and flogged or otherwise tortured in proportion to his obduracy."—*Douglas, Soc. in Ch.*, p. 115.

"The eldership of the villages has no necessary connection with the clans, for the latter are unacknowledged by the government, but the clan having the majority in a village generally selects the elders from among their number. This system is of very ancient date; its elementary details are given in the *Chou-li*, one of the oldest works extant in China. . . . In the vicinity of Canton the elder is elected by a sort of town meeting, and holds his office during good behaviour, receives such a salary as his fellow villagers give him, and may be removed to make way for another whenever the principal persons in the village are displeased with his conduct. His duties are limited to the supervision of the police and general oversight of what is done in the village, and to be a sort of agent or spokesman between the villagers and higher authorities; the duties, the power, and the rank of these officers vary almost indefinitely. The preponderance of one clan prevents much strife in the selection of the elder, but the degree of power reposed in his hand is so small that there is probably little competition to obtain the dignity. A village police is maintained by the inhabitants, under the authority of the elder; the village of Whampoa, for instance, containing about eight thousand inhabitants, pays the elder $300 salary, and employs fourteen watchmen. His duties further consist in deciding upon the petty questions arising between the villagers and visiting delinquents with chastisement, enforcing such regulations as are deemed necessary regarding festivals, markets, tanks, streets, collection of taxes, etc. The system of surveillance is, however, kept up by the superior officers, who appoint excise officers, grain agents, tide-waiters, or some other subordinate, as the case may require, to exercise a general oversight of the headmen." "The district magistrate, with the *hsün-chien* and their deputies over the hundred, are the officers to whom appeals are carried from the headmen; they also receive the reports of the elders respecting suspicious characters within their limits, or other matters which they deem worthy of reference or remonstrance. A similarity of interests leads the headmen of many villages to meet together at times in a public hall for secret consultation upon important matters, and their united resolutions are generally acted upon by themselves or by the magistrates, as the case may be. This system of eldership, and the influential position the headmen occupy, is an important safeguard the people possess against the extremity of oppressive extortion; while, too, it upholds the Government in strengthening the loyalty of those who feel that the only security they possess against theft, and loss of all things from their seditious countrymen, is to uphold the institutions of the land, and that to suffer the evils of a bad magistracy is less dreadful than the horrors of a lawless brigandage."—*Williams, Midd. King.*, i. 482–4. *Cf.* following extract.

"The paucity of military and police establishments . . . left in every district numbers of towns and villages uncontrolled by local agents. The natural consequence is a large amount of local self-government . . . fiscal, as regards common local objects, and penal, as regards minor offences; such as petty thefts, and the less serious assaults. *Chinese hamlets, villages, and even country towns are usually inhabited by people of one common surname and ancestry*, forming a tribe or clan. . . . Herein we find a consistent Chinese reason for the non-interference of the Imperial officials; for the authority of a father or grandfather is, by Chinese principles, paramount in his own family. But when, in the course of generations, the family has increased into a clan, we find no one arbitrary 'chief,' but a communal government exercised by the more energetic of the respectable members of the community, more especially . . . any literary graduates it may have produced; for even in local self-government, the institution of China has a marked practical influence. The communal authorities, or municipal magistrates, so constituted, meet for the transaction of business in some public place—often a temple—where all matters of common interest are openly discussed. Such . . . are sometimes nothing less than inter-communal wars. These are conflicts between adjacent communities (often about boundary lines) which last for days and weeks. The foreigners have witnessed some of them. After considerable destruction of life and property, they are usually ended by formal treaties of peace; and all this takes place without the least intervention on the part of the Imperial Authorities."—*Meadows, Chinese and their Rebellions*, pp. 46–7.

"There are customs, privileges, and laws in every province which the government dare not abolish, and which destroy that civil and administrative unity which Europeans have been pleased to attribute to this colossal empire."—*Huc, Ch. Empire*, ii. 49.

[Simon says that the repairs of local roads, bridges, &c., were paid for by the subscriptions of the residents, as also the upkeep of the "pagodas" used as market-houses, &c. (*v.* ACCESSORY INSTITUTIONS).]—*Cité chinoise*, p. 351.

"Along the streets of this city [Hsin Hsian, Honan] one sees at every few yards an iron chain fastened to the wall, which at night is stretched across the street. A man is not supposed to go walking in the evening with his sweetheart."—*Exchange*, III. i.

"The term 旗籍, or 'native place as a Bannerman,' corresponds to the 民籍 or 'settlement' in the English parochial sense."—*Ch. Rev.*, xiii. 430.

"Four wells make a town."—*Giles, Dic.*, No. 5481.

"Fortified villages, with embattled walls and a moat . . . are not uncommon in the province of Kwangtung, and . . . serve to indicate the state of insecurity in which the rural population live."—*Gray, China*, ii. 37.

"The city of Main-yang, situated about 50 miles N.W. [? S.W.] of Han-kow is the seat of government [of Hupeh], and the country lying between the Han river and Sha-s[illegible] is under its jurisdiction. On the journey I collected some interesting facts as to the relations of the people living in the dyke lands, as well as those living in the reed-growing country, with the government. The only officials with whom they are brought in contact are the few petty mandarins at the Custom's stations, who at stated seasons travel through their districts collecting ground rent, and beyond paying this tax, the people see little of the mandarins and trouble them less. There are no soldiers to be seen, each village and hamlet maintaining its own watchman by public contribution. The isolated position of the people struck me so forcibly that I was led to make inquiries at many of the villages passed through, as to the administration of the law among them, and from what I gathered, it may be said that they literally govern themselves. All civil disputes are settled by the two eldest men of the families of the disputants, who act as arbitrators, their award being practically final, subject, however, to an appeal to the civil mandarin at Main-yang; but such an appeal is rarely [if] ever made, and then only in cases where the parties are wealthy, and one or other seeks the utter ruin of his opponent. Lesser criminal cases are likewise disposed of by the elders of villages; but . . . capital [charges] must be tried by the Mandarin [at Main-yang.] This mode of partial self-government seems to be successful, if one may judge from the industrious and peaceful appearance of the people."—*Cooper, Travels*, pp. 36–7.

"In the western half of Sz'chuen, the people . . . are governed by their own local rulers, under Chinese superintendence. They belong to the Lolos race, and have been inimical and insubordinate to Chinese rule from earliest times, preventing their own progress and destroying all desire on the part of their rulers to benefit them."—*Williams, Midd. King.*, i. 158.

"Many partially subdued tribes are found within the limits of this province [Kwangsi], who are ruled by their own hereditary governors, under the supervision of the Chinese authorities; there are twenty-four *chau* districts occupied by these people, the names of whose headmen are given in the Red Book, and their position marked in the statistical maps of the empire, but no information is furnished in either, concerning the members, language, or occupations, of the inhabitants."—*Ibid.* i. 176–7.

"The mountaineers called 苗子 Meaoutsze, are governed by a hereditary magistracy."—*Morrison, Dic.*, i. i. 823.

"Without a corporation to attend to its condition, or having power to levy taxes to defray its unavoidable expenses, it cannot be expected that it [Canton] should be as wholesome" [as modern cities in the West].—*Ibid.* i. 163.

"Puto and a few smaller islands are independent of civil jurisdiction, being ruled by the abbot of the head monastery."—*Ibid.* i. 124.

[For limits of Chinese jurisdiction in partially subdued regions, &c., see POLITICAL.]

MILITARY.

Early Feudal Period (*c.* 2357 *to* 1122 B.C.).—*Table I.*

"In a feudal kingdom, the multitudes of the people were all liable to become its army, when occasion required, and the 'host' and the 'population' might be interchangeable terms. As Froude expresses it in the introductory chapter to his *History of England*, 'Every man was regimented somewhere.'"—*Legge, Yi king*, Intro. p. 22.

"Our prince . . . is calling us away from our husbandry to attack and punish the ruler of Hea."—*Shu ching*, Pt. IV. Bk. I. Ch. I. 2; *Legge, Ch. Class.*, III. i. 174.

"The sweeping and levelling a place within the private homestead for the grain stacks was not merely an epoch in the work of the farm, it marked the period when the military forces might be assembled, and the chariots of war passed in review and manœuvred, because the fields were clear of crops (*Tcheou-li*, ii. 175)."—*Simcox*, ii. 47.

[The *Tu shih t'ung tien* says: In ancient times, under the system of the Three Dynasties (Hsia, Shang, and Chou), the Emperor had six *chün* (軍) armies; whose commanders were the Great Ministers of State (*Ch'ing*). Thus the books of the Hsia State say: In warring with a small State, the 6 *Ch'ing* took command; but in ancient times the king gave the command to the 6 *Ch'ing*; in times of peace they superintended the labour in the fields, when trouble broke out they went to war. That is what is meant by saying that on entering [the State] they were employed (by the sovereign) to arrange or superintend (the affairs of civil government), and on leaving it were employed as leaders [of troops].—*Yüan chien lei han, Shê kuan pu, Chiang chün tsung tsai i*, p. 143*a*.

"六卿,—'the six high nobles,' here evidently the leaders of the 'six armies' (六軍, and 六師) which composed the military force of the emperor [Ch'i (K'i K'e): 2197–2188 B.C.].

"The emperor, about to engage in battle with a rebellious vassal, assembles his generals and troops, and addresses them. First he declares obscurely the grounds of the expedition which he had undertaken, and concludes by stimulating the soldiers to the display of courage and observance of order by promises of reward and threats of punishment."—*Legge, Ch. Class.*, III. i. 153, note.

"The emperor did not fight (戰), but only 'punished'; nor did he take the field till after the means which the constitution of the government provided had proved ineffectual. Such came to be the rule, when the feudal system had become fully developed;—we can hardly seek to apply it regularly to the case of K'e at so early a period."—*Ibid.* p. 153, note.

"Eight travelling officers had charge of watching for traitors and for changes [in the surroundings], promoting harmony amongst the men, and spying on the enemy's movements."—*Liu t'ao, Tzŭ shih ching hua*, *c.* 74, p. 10*b*.

"In to-day's business [*c.* 1100 B.C.] do not advance more than six or seven steps; and then stop and adjust your ranks:—my brave men, be energetic! Do not exceed four blows, five blows, six blows, or seven blows; and then stop and adjust your ranks. . . . Display a martial bearing. Be like tigers and panthers, like bears, and grisly bears;—here in the borders of Shang. Do not rush on those who fly to us in submission, but receive them to serve our western land."—*Shu ching*, Pt. V. Bk. II. 7–9; *Legge, Ch. Class.*, III. ii. 304.

"I [the king] lead the multitude of you to execute the punishment appointed by Heaven" (*Shu ching*, Pt. V. Bk. I. Pt. i. 10). "In the Le Ke, Bk. 王制, Pt. ii., 17, we find . . . 'When the emperor is about to go forth, he offers special sacrifice to God, performs the due services at the altar of the Earth, and goes to the shrine of his father.'"—*Legge, Ch. Class.*, III. ii. 288, note. He also reviewed and addressed the army before battle.—*Ibid.* pp. 289, 294, etc.

"It would appear . . . that it was the practice of the emperors, when they went on a warlike expedition, to carry with them these two classes of tablets [the spirit-tablets of their ancestors and the tablets of the spirits of the land], that they might have with the host, hovering about them, the spirits of their ancestors and the tutelary spirits of the country or dynasty. A variety of passages are adduced to prove the existence of the practice in the Chow dynasty;—it had come from the earlier time. Those tablets were to K'e and his army like the ark of God in the camp of the Israelites. Martial law also was executed before them. And strict law it was." "You who disobey my orders shall be put to death before the spirits of the land; and I will also put your children to death" (*Shu ching*, Pt. III. Bk II. Ch. I. 5).—*Ibid.* III. i. 154, note; and p. 155.

[The severity of martial law is illustrated in the *Shu ching*, Pt. III. Bk. IV. Ch. II. 7. "We are to understand that the prince of Yin here warns his troops, that if they do not do their duty, they must not expect him to deal with them on any principle of indulgence" (*Legge*, III. i. 169, note).]

[Horses were used in warfare: see the *Shu ching*, Books of Hsia and Yü, and *Mém. conc. les Ch.*, xi. 388, 401.]

"It appears that in the warfare of those early times [*c.* 2190 B.C.] chariots were much used in China, as in other nations in a similar or less advanced stage of civilization. . . . The ordinary war-chariot for the troops contained only three men,—an archer on the left, a soldier armed with javelins and pike or spear on the right, and the charioteer in the centre. This continued down to the Chou dynasty."—*Ibid.* III. i. 154, note.

"War-chariots are mentioned as having been in use at least as far back as 1797 B.C. by the Tartar-affected ancestors of the Chou dynasty, nearly 700 years before they themselves came to the imperial power."—*Parker, Anc. Ch. Simpl.*, p. 30.

"Three hundred chariots of war and three hundred tiger-like officers" are mentioned in the *Shu ching*, Pref. 33.

"They [Huang Ti, Yao, and Shun] made the (defence of the) double gates, and (the warning of) the clapper, as a preparation against the approach of marauding visitors."—*I ching*, App. III. Sect. II. ch. 2. 18; *Legge, Yi King*, p. 384.

[Drums were used to give signals. The *tao* (鼗) was a hand-drum with two pellets attached to strings, ascribed to the Emperor Ku (2436 B.C.) (*Ko chih ching yüan*, *c.* 47, p. 14*a*). The same work states (p. 19*a*) that another of the legendary emperors (Shao Hao, 2598 B.C.) made a drum with a leather top. "In the Hsia dynasty the 4 feet were added, and in the Chou dynasty the drum in the war-chariot had toes. The drum-stand of the present day was an imitation of it."]

Flags and banners distinguished the superior and inferior ranks. "In the Shang dynasty there was the *tao* (纛), standard, made of black silk. . . . Five hundred men had one *tao*."—*Erh i shih lu, Ko chih ching yüan*, *c.* 31, *Ch'ao chih lei*, p. 12*b*. Hsi Chung, appointed by Yü Director of the Imperial Stud, made the *ch'i* (旗), flag, *yu* (斿), scallops on its end, and the *chao* (旐), banner with dragon-and-tortoise design (*ibid.* p. 4*b*). East, south, west, north, and centre were indicated by green dragon (*ch'i*), red bird (*shu*), white tiger (*tien*), black snake (*ch'i*), and yellow dragon (*ch'ang*), respectively (*ibid.* p. 5*a*).

"In his left hand he [the king] carried a battle-axe, yellow with gold, and in his right he held a white ensign, which he brandished, saying, 'Far are ye come, ye men of the western regions!' He added, 'Ah! ye hereditary rulers of my friendly States; ye managers of affairs, the ministers of instruction, of war, and of public works: the many officers subordinate to them: the master of my body-guards: the captains of thousands, and captains of hundreds; and ye, O men of Yung, Shuh, Kêang, Maou, Wei, Loo, P'ang, and Pŏ;—lift up your lances, join your shields, raise your spears:—I have a speech to make'" (*Shu ching*, Pt. V. Bk. II. 1–4). Commenting on the above, Legge (*Ch. Class.*, III. ii. 300–1, notes) says: "The 'axe' is supposed to be called 'yellow,' from its having been ornamented with gold. The 旄 ensign consisted (according to the figures of it, which agree with the component parts of the character) of several ox-tails, suspended as streamers from a staff. By means of this Woo could intimate his wishes as to the order of their position, etc., to the troops, and therefore he carried it in his right hand."

[At the battle which put an end to the Shang dynasty, "those in the front [of Shang's army] inverted their spears, and attacked those behind them till they fled, and the blood flowed till it floated the pestles about." These were the wooden pestles of the mortars which the soldiers carried with them to prepare their rice.]—*Ibid.* p. 315, and note.

[The mythical emperor Huang Ti is said to have used different coloured flags to indicate the points of the compass to which troops were to march, to have directed the exercises of his troops by means of a horn, and to have trained tigers to fight for him, etc.]—*Huang Ti ch'u chün chüeh, Ko chih ching yüan*, *c.* 31, *Ch'ao chih lei*, p. 9*a*; *Lieh Tzŭ, ibid.* p. 4*b*; *Journ. N.-C.B.R.A.S.*, N.S. viii. 109; *Ch'ün shu k'ao so, Ko chih ching yüan*, *c.* 31, p. 4*b*; *Po liu t'ieh, ibid. c.* 47, p. 20*b*.

MILITARY.

Later Feudal Period (1122 *to* 221 B.C.).—*Table II.*

Army Organization.—[The king led his troops to battle. Five *shih* (師), or 12,500 men, formed a *chün* (軍) or army (*Shih ching*, II. vi. IX. i; III. i. IV. 3). They distinguished the soldiers of the left wing and the right, according to the division long used in the marching and encampments of the Tartar hordes (III. iii. IX. 2). The six royal armies (六 軍 or 六 師) were commanded by six *ch'ing* (卿) (*Shu ching*, III. ii. 1). The chief of each corps had his place in the middle of it (*Shih ching*, I. vii. V. 3).]

"The ruler of the state did not usually take the field, but employed a professional to command the army—one of the masters of war who wandered from state to state at that time with the secrets of victory to impart to the highest bidder." Political interference with the general in the field was regarded as causing delay and disaster.—*Calthrop*, pp. 9–10.

At this period "there is no reason to believe that any state, least of all the imperial reserve, ever put more than 1,000 chariots, or say, 75,000 men, into the field on any one expedition."—*Parker, Anc. Ch. Simpl.*, p. 31.

"The Emperor had a *hu pên* (虎 賁), body guard, who learned military precepts; the princes, *lü pên* (旅 賁), who resisted natural calamities and troubles; great ministers, *érh chü* (貳 車), who managed affairs, and officials, *p'ei ch'êng* (陪 乘), who carried messages."—*Kuo yü, Tzŭ shih ching hua*, c. 74, p. 9*a*.

The name *Chiang Chün* (將 軍), a "conductor of an army," denoting a general, "arose at the close of the Chow dynasty, and has continued ever since. . . . During the civil wars at the close of the . . . dynasty the term *Ta Chiang Chün* (大 將 軍) was introduced."—*Morrison, Dic.*, p. 820. They were distinguished as advance, rear, left, and right, their number varying according to the necessities of the war.—*Chavannes, Mém.*, p. 514.

"Wu Wang of the Chou dynasty subdued the Empire with his forces. When the Empire became peaceful, he appointed an officer called *Ssŭ Ma*, and established 6 armies, using the taxes from the *ching t'ien*, 'well-fields,' to provide for them. The king had 6 armies or legions (*chün*); a large state, 3 armies; a state next in size, 2 armies; and a small state, 1 army. These were under the command of *Ch'ing* (卿), or great ministers. A legion of 2,500 men was called a *shih* (師); each *shih* was commanded by a *Chung Tu Fu*, a great minister of second rank. A battalion of 500 men was called *lü* (旅); each *lü* was commanded by a *Hsia Tu Fu*, a great minister of lower rank; a company of 100 men was called *tsu* (卒), and was commanded by a *Shang Shih*, officer of the 1st rank; a company of 25 men was called a *liang* (兩), and was commanded by a *Chung Shih*, officer of medium rank; a file of 5 men was called a *wu* (伍), and each *wu* had its *Chang*, head or chief. The *Hsiao Ssŭ Tu*, Vice-President of the Board of Revenue office, levied the *tsu* and *wu* from the people in order to form the armies and troops. Five men formed a *wu*; 5 *wu*, a *liang*; 4 *liang*, a *tsu*; 5 *tsu*, a *lü*; 5 *lü*, a *shih*; and 5 *shih*, a *chün*, or army. When the Empire was in great need, they were called out. The *Sui Jên* (遂 人), magistrate of a *sui* or 4 districts, examined the population every year at the different seasons, and selected weapons so as to be in readiness to meet the needs [of the State]."—*Kuang chih p'ing lüeh hsü chi*, c. 25, *Chou tai ping chih*, p. 1*a*. See also *Yüan chien lei han, Shê kuan pu, Chiang chün tsung tsai i*, p. 143*a*; and *Wên hsien t'ung k'ao*, c. 149, i.–3.

"Six *hsiang* (鄉), 12,500 families, were called a principal army; and six *sui* (遂), districts (country 100 *li* from the capital), the auxiliary forces. So the Emperor had 6 *hsiang* and 6 *sui*, forming 12 armies (*chün*) in all; but they were only called 6 armies. A large State had 3 *hsiang* and 3 *sui*; one next in size, 2 *hsiang* and 2 *sui*; and a small State 1 *hsiang* and 1 *sui*. They were all the same throughout the Empire. This was the system of regulating the armies according to *hsiang* and *sui*."—*Kuang chih p'ing lüeh*, c. 25, *Chou tai ping chih*, p. 1*a*.

"Five files of 5 men made a body of 25 called a *yüan tsu* (元 卒); one *tsu* in the front was called *k'ai* (開); one in the rear, *tun* (敦); one on the right and one on the left, *lü* (閭); 4 *tsu* formed a guard called *po* (伯); 3 *po*, a chief called *tso* (佐); 3 *tso* a *yu* (右); 3 *yu*, a *chêng* (正); 3 *chêng*, a *ch'ing* (卿); and 3 *ch'ing* a *p'i* (辟)."—*I chou shu, Tzŭ shih ching hua*, c. 74, p. 10*b*.

"Hsiao Kung [368–320 B.C.] ordered Shang Yang to reform the system of files of 5 and 10 soldiers. There were also *kêng tsu* (更 卒), soldiers on relief, *chêng tsu* (正 卒), regular soldiers, and *shu tsu* (戍 卒), soldiers on guard. They did good military service for their king and superiors."—*Kuang chih p'ing yüeh*, c. 25, *Chou tai ping chih*, p. 2*a*.

"Of people who were brave and strong they formed a *tsu* (卒), company of 100 men; of those who were pleased to go to war and to exert themselves to the utmost in order to obtain honour, they formed a *tsu*; of those who could jump high and travel far and who were nimble-footed and good runners, they formed a *tsu*: of those who wished to show their merit when the king and ministers lost their stations, they formed a *tsu*; and of those who wished to kill disloyal men who surrendered the city wall or deserted the garrison, they formed a *tsu*. These five formed the pick of a troop."—*Wu Tzŭ, Tzŭ shih ching hua*, c. 74, p. 9*a*.

"Ho Lu of Wu selected 500 strong and 3,000 nimble-footed men to be his vanguard."—*Lü shih Ch'un ch'iu, ibid.* p. 9*a*.

[Troops of the feudal States were called in to aid in expeditions.]—*Legge, Ch. Class.*, III. ii. 622, note.

["Surprise troops" of 25,000 men for harassing the enemy are mentioned as being used by the Ch'in forces in their battles with Chao Kua in 260 B.C.—See *Yü lan t'ung chien lei tsuan*, c. 16, *Wu pei pu*, p. 17*b*.]

[Soldiers were also employed on cultivating the land and on police duty.]—*Wên hsien t'ung k'ao*, c. 149, 2.

[At ordinary times, one man only was levied from each family, surplus enlistments being employed in hunting wild animals and police work. When the nation was involved in any great military enterprise, the people were ordered to volunteer as soldiers. When there was fear of invasion, the supernumeraries were called out.]—*Ibid.* c. 149, 3.

[The frontier-posts between the States at war with one another, or on the borders of the barbarous regions, were supplied from the peasantry, and were relieved from year to year;—the service at these posts was truly forced, and hence the lamentations of the soldiers who were so stationed (*Shih ching*, I. vi. IV.; II. i. VII.). The edict which enjoined regular service on the frontiers was sent to the general, inscribed on a bamboo or wooden tablet (II. i. VIII.). In the Chinese armies of this epoch, as in the feudal armies of our middle ages, the infantry was composed of husbandmen taken from their labours, and they complained bitterly of their lot (I. iii. VI.; xv. III. and IV.; II. viii. III.), especially when they formed part of an expedition against the barbarous hordes of the north and of the south (II. viii. VIII. and X.).]

"Chao Wang [1052–1001 B.C.] had 800,000 valiant and brave soldiers, 1000 chariots, and 10,000 horses. He divided them into 3 armies. At the battle of Chang P'ing all people above 15 years of age were sent out to war. This was not the old law established by Shang Yang. Generally speaking, the system of the Warring States was that those who had reached the age of fitting on mail (manhood) must be enlisted as soldiers."—*Kuang chih p'ing lüeh*, c. 25, *Chou tai ping chih*, p. 2*a*.

"In the year 788 B.C. the Royal Guards were sent, contrary to custom, away from the capital to aid the regular army on the northern frontier."—*N.-C. Herald*, Oct. 12, 1894.

"Prince Mu of Ch'in, having overpowered the tribes in the west (*c.* 655 B.C.), started the formation of 3 armies."—*Kuang chih p'ing lüeh*, c. 25, *Chou tai ping chih*, p. 2*a*.

"Strong men formed an army; strong women, another; and those who were weak and old another. These were called the 3 armies."—*Shang Tzŭ, Tzŭ shih ching hua*, c. 74, p. 9*a*.

"Then 1300 chariots, 13,000 horses, 50,000 warriors with strength sufficient to lift 100 [catties of] metal, and 100,000 archers were chosen. Every one of them was forced to train for battle."—*Shih chi Li Mu chuan, ibid.* p. 9*a*.

The body of fighters was arranged in columns and wings. "The Shan Yü led their great forces onwards, whilst Li Mu prepared many curious columns and attacked the former with the right and left wings."—*Shih chi Li Mu chuan, P'ei wên yün fu*, c. 71, p. 41*a*.

"The column of Heaven (天 陣 *t'ien chên*) made by T'ai Kung belonged to the first diagram—that was the wild-goose-row column of Sun Tzŭ and the geese-crane column of Wu Tzŭ, which were connected together like a steelyard and weight."—*Wu ching tsung yao*, c. 71, *Yün fu shih i*, p. 4*a*.

In 546 B.C. "the Chinese Powers had a 'Hague Conference,' with a view to the reduction of armaments." "This celebrated Peace Conference closed the seventy-two years of almost incessant war that had been going on between Tsin and Ts'in (Shan Si and Shen Si), apart from the subsidiary war between Tsin and Ts'u (Hu Pêh)."—*Parker, Anc. Ch. Simpl.*, pp. 315–6.

"Even our ruling house of Tsin has fallen on degenerate times [539 B.C.] Armies are no longer equipped, and our statesmen are not ready for war. There is no one to lead the chariots, and our battalions have no competent commanders. The common people are utterly exhausted, whilst the extravagance of the palace is unbounded."—*Shu Hsiang*, quot. *Parker, ibid.* p. 314.

"Prince Ai [519 B.C.] first used the crown taxes to meet the army expenditure, and made great changes in the system of soldiers and chariots. The people's strength became exhausted."—*Kuang chih p'ing lüeh*, c. 25, *Chou tai ping chih*, p. 2*a*.

"The soldiers commanded by Jang (5th cent. B.C.) were fishermen and hunters of Ch'i and Chi (Shantung)."—*Wên Ta-ya Ch'uang yeh ch'i chü chu, Tzŭ shih ching hua*, c. 74, p. 10*b*.

[When the regular huntings took place, opportunity was taken to practise the methods of warfare (*Legge, Ch. Class.*, IV. i. Prol. p. 154). Flags were used in the great hunts "not merely for sport, but also in order to prepare soldiers for a military life."—*Parker, Anc. Ch. Simpl.*, p. 32.]

Appliances.—"When the son of Heaven was about to go forth on a punitive expedition, he sacrificed specially, but with the usual forms to God [or, more correctly, to the Emperors on high]; offered the *Î* sacrifice at the altar of the Earth, and the *Zhdo* in the fane of his father. He offered sacrifice also to the Father of War (on arriving) at the state which was the object of the expedition. He had received his charge from his ancestors, and the complete (plan) for the execution of it in the college. He went forth accordingly and seized the criminals; and on his return he set forth in the college his offerings, and announced (to his ancestors) how he had questioned (his prisoners), and cut off the ears (of the slain)."—*Li chi*, iii. ii. 21; *Legge*, i. 220.

"Now, when the army of Ch'u was drawn up in order of battle, quite close to the camp in which the troops of Tsin were entrenched,—so we read in one of the accounts we have in Chinese literature of those times,— the king of Ch'u mounted a war-chariot with a look-out on it, from which he was able to survey the enemy's camp. He then ordered his Secretary of State, Po Chouli (who . . . was a fugitive from Tsin), to stand at his side. . . . 'There are men running to the left and to the right within the enemy's camp. What does that mean?' asked the King.—'They are calling the officers,' replied Po Chouli. And again the King said: 'Now they are collected in great numbers in the midst of the camp.'—'They are met to take counsel,' answered Chouli. The King looked again and said: 'All of a sudden they are pitching a tent. What is the reason of this?'—'They are offering prayers to the manes of the deceased rulers of Tsin,' was Chouli's reply. And the King looked again and said: 'Now they are again removing the tent.'—'That,' replied the other, 'means that the orders to the army are about to be issued.'—'Why,' continued the King, 'is there such a clamour in the hostile army? And why do I all at once see clouds of dust rising thick and fast in their camp?' 'They are shutting up the wells and levelling the cooking places in order to gain room for their movements,' said Chouli.—'Now they are putting the horses to their chariots, and their officers are mounting the carriages,' resumed the King.—'They are going to form their ranks,' was Chouli's rejoinder.—'But why, asked the King, 'do those who had mounted the chariots descend once more?'—'It is to prostrate themselves on the ground and pray to the Gods, before they face us in battle,' answered Chouli."—*Tung Chou Lieh kuo chih*, ch. 58.; *Journ. P.O.S.*, i. 52–3. See also *Shih ching*, III. i. VII. 8.

"Sacrificing to the regimental drum before a fight was a very ancient custom, which has been carried down to the present day."—*Parker, Anc. Ch. Simpl.*, p. 32.

"Confucius said, . . . 'Formerly duke Hwan of Khî, going frequently to war, made fictitious tablets and took them with him on his expeditions, depositing them on his return in the ancestral temple [lit., the temple—shrine of his grandfather].'"—*Li chi*, v. i. 23; *Legge*, i. 323.

"Zăng-zze asked, 'Anciently, when an army went on an expedition, was it not first necessary to carry with it the spirit-tablets that had been removed from their shrines?' Confucius said, 'When the son of Heaven went on his tours of Inspection, he took (one of) those tablets along with him, conveying it in the carriage of Reverence, thus intimating how it was felt necessary to have with him that object of honour. The practice nowadays of taking the tablets of the 'seven temple-shrines' along with them on an expedition is an error. No shrine in all the seven (of the king), or in the five of the prince of a state, ought to be (left) empty. A shrine can only be so left without its tablet when the son of Heaven has died, or the prince of a state deceased or left his state, or when all the tablets are brought together at the united sacrifice, in the shrine-temple of the highest ancestor."—*Li chi*, v. i. 24; *Legge*, i. 324–5.

"Wu Wang carried the wooden ancestral tablet representing Wên Wang [his father] with him when he invaded Chou."—*Po i lieh chuan, Ku wên hsi i*, c. 7, p. 23*a*.

Lord Wên "spread a mat, and his wife offered up a cup, and Wu was appointed general before the altar."—*Calthrop, Book of War*, p. 77.

"Lend not a ready ear to human counsellors, but lay the matter before the altar; seek inside the turtle [v. *Divination*], and consider well the time and season. Then, if all be well, commit yourselves to the undertaking."—*Ibid.* p. 78.

[The principal element of a Chinese army was the chariot drawn by 4 horses. In an ordinary fighting chariot, the charioteer was in the middle; one warrior, who wielded the spear, was on the right; and the one on the left was an archer. In was only in the chariot of the general that the driver was on the left, while he himself thundered on a drum to urge the troops forward. The spearman on the right was not his esquire to hand him his arms, but a noted warrior of great strength to protect him, and take part in the battle as he was needed (*Shih ching* I. vii. V. 3). A troop of soldiers followed the chariot to protect it (II. i. VII. 5; IV. ii. III. 7). A war-chariot "connoted, for military organization purposes, a strength of 75 men each and 4 horses: to wit, three heavily armed men or cuirassiers in the chariot itself, and 72 foot soldiers (613 B.C.). Thirty years later mention is made of 125 men attached to each chariot, while the Emperor's chariots are stated to have had 100 men assigned to each (*Parker, Anc. Ch. Simpl.*, p. 30). The term chariot was then a collective name like *lance* in our middle ages. "A thousand chariots" was the regular force which a great State could at the utmost bring into the field. There were attached to each chariot 72 foot soldiers and 25 other followers to look after the baggage, cooking, etc., 100 men in all; so that the whole force would amount to 100,000 men. But in actual service the force of a great State was restricted to three armies, or 375 chariots, attended, inclusive of their mailed occupants, by 37,500 men, of whom 27,500 were what were called foot-soldiers, given in round numbers in IV. ii. IV. 5, I. 4 as 30,000. The 3,000 chariots mentioned in II. iii. IV. i., which would give a host of 300,000 men, is probably an exaggeration. The whole force of the kings of Chou only amounted to six armies (六 軍), of 12,500 men each (*Legge, Ch. Class.*, IV. ii. 626, 285, notes).]

"The Emperor alone was supposed in true feudal times to possess a force of 10,000 chariots. . . . No vassal was entitled to more than 1,000 war chariots. In the year 632 B.C., when Tsin inflicted a great defeat upon its chief rival Ts'u, the former power had 700 chariots in the field. In 589 B.C. the same country, with 800 chariots included in its forces, marched across the Yellow River and defeated the State of Ts'i, its rival to the east. Again in 632 Tsin offered to the Emperor 100 chariots just captured from Ts'u, and in 613 sent 800 chariots to the assistance of a dethroned Emperor. The best were made of leather, and we may assume from this that the wooden ones found it very difficult to get safely over rough ground, for in a celebrated treaty of peace of 589 B.C. between the two rival states Tsin and Ts'i, the victor, lying to the west, imposed a condition that 'your ploughed furrows shall in future run east and west instead of north and south,' meaning that 'no systematic obstacles shall in future be placed in the way of our invading chariots.'"—*Parker, Anc. Ch. Simpl.*, pp. 28–9.

"So much a matter of course was it to use chariots in war, that . . . it was considered quite a remarkable fact" when no chariots accompanied the forces.—*Ibid.* p. 29.

"Wên Kung of the Chin met the enemy with 5 chariots of warriors skilled in the 5 kinds of warfare and 1000 valiant soldiers. So all the princes dared not resist him. He took back Pei of the Chêng State and the fields of E-Wei and paid respect to the Emperor at Hêng Yung (in the Chêng State)."—*Lü Shih Ch'un ch'iu, Tzŭ shih ching hua*, c. 74, p. 9*a*.

[The chariot of the sovereign, or of the commander-in-chief, had 6 horses, yoked abreast. When there were 4 horses to a chariot, which was the ordinary number (*Shih ching*, II. vii. VIII. 2; III. iii. VII. 2), two of them were yoked to the pole, and two to the transverse bar of the chariot (II. vii. VIII.). The horses were covered with mail (I. vii. V.; xi. III.), and bucklers protected the chariot in the front (I. xi. III. 2). The horses' bits were of metal and fitted with bells (III. ii. III.; I. xi. II. 3; II. iii. IV. 2; III. iii. VII. 4). The sides of the chariots were covered with boards as a defence against the arrows of the enemy (I. xi. III.). The axle-trees, or perhaps only their projecting ends, of the chariots of the chiefs were wrapped round with leather, which was lacquered (II. iii. IV. 2), probably to strengthen them. The curved end of the pole was also covered with leather, painted in 5 colours (I. xi. III. i).]

"Civil officers had 青 ears; military ones 赤 ears, *i.e.*, 'iron ears' or points to their chariots, which 'doubled up' like cows' horns and were called 重 較 (pronounced *koh*) 耳. Possibly these were like the scythes used by the Greeks."—*Ch. Rev.*, xiii. 429.

"Khung Ying-tâ observes that chariots were used in the field before cavalry . . . One of the earliest instances of riding on horseback is in the *Zo Kwan* under the year B.C. 517."—*Legge, Li Ki*, i. 91, and note.

[The *Shuo yüan* says that Wu Wang had an excellent cavalry force, which greatly contributed to his victory over *Chou Hsin*.]—*Mém. conc. les Ch.*, xi. 403.

"Elephants . . . were really used anciently in Chinese warfare. . . . The Ko Chî Wu Yüan mentions their existence [in parts of Kuangsi and Yünnan] . . . ; and the Tso Chuan relates that the *Wu* attacked the *Ch'u* with elephants

whom they stirred up by putting combustibles under their tails and kindling them."—*Journ. N.-C.B.R.A.S.*, N.S. vi. 115.

"Little, if anything, is said of conveying troops by boat . . . north of the Yang-tsz River. . . . Later on, when the King of Ts'u's possessions along the sea coast, embracing the delta of the Yang-tsz, revolted from his suzerainty and began . . . to take an active part in orthodox Chinese affairs, boats and gigantic canal works were introduced by the hitherto totally unknown or totally forgotten coast powers; and it is probably owing to this innovation that war-chariots suddenly disappeared from use, and that even in the north of China boat expeditions became the rule, as indeed was certainly the case after the third century B.C."—*Parker, Anc. Ch. Simpl.*, pp. 30–1.

Boats were used in Wu Tzŭ's time: "When the linch-pins are secure, the oars and sweeps ready for use in the boats, the armed men trained for war, and the horses exercised, we have what is called the influence of force."—*Calthrop*, p. 103.

[The warriors wore buskins on their legs (*Shih ching*, ii. vii. VIII. 3). In I. xi. VIII. a man of Ch'in engages another to follow him to the war by the promise of clothes, shoes, and weapons, should he need them.]

[They marched 30 *li* per day, about 11 kilometres, if we value the *li* at 1,800 cubits of 10 centimetres each (*Shih ching* II. iii. III. 2). For a grand army of 300 chariots, 10 chariots formed the advanced guard (*ibid.* 4).]

[Besides the war-chariots, there followed the army carriages laden with sacks of baggage, and drawn by oxen (*Shih ching*, II. viii. III. 2; *Shu ching*, V. xxix. 3). These sacks had one or two openings, and contained provisions (*Shih ching*, III. ii. VI. 1). The chariots were unloaded, and arranged round the place of encampment. Then the feeble watched the baggage, while the strong advanced against the enemy. See also *Parker, Anc. Ch. Simpl.*, p. 30.]

[Chariots covered with leather, horses, armour and helmets, arrows and bows, spears, shields, pikes, and fighting towers, waggons and oxen ramparts, stages, battering-rams and siege engines, hides and leather ornamented with red lacquer and figures of panthers and elephants, halberds 24 feet long and pikes 12 feet long, catapults, banners and standards, bells and drums, fodder and provisions, are mentioned by Sun Tzŭ and Wu Tzŭ as used in warfare. See *Calthrop*, pp. 22, 25, 75–6, 98, 8104].

[An army took with it cattle, and the soldiers were apt to leave the ranks to go in search of them when they strayed. The people through whose country the troops marched were ordered to return carefully strayed animals and absconded camp-followers. The duty of the latter was to gather fuel, cook, etc. There were 25 of them to each chariot, to which were attached 3 men in mail and 70 foot soldiers.]—*Legge, Ch. Class.*, III. ii. 623–4, and note.

["Posts and planks" were used in making entrenchments.]—*Ibid.* p. 624–5, and note.

"Formerly there were four different kinds of tongued bells (鐸) in use in the army. The ringing of the *to* conveyed to the soldiers the injunction to stand still and be quiet in the ranks."—*Van Aalst, Ch. Music*, p. 57.

[The drum gave the signal for departure (*Shih ching*, I. iii. VI. 1) and for attack. A retreat was generally ordered by the gong or some instrument of metal. In II. vi. IV. 3 a light sound of the drum serves the same purpose. Before the battle the warriors excited one another by mock combats.]

"P'êng Mêng introduced archery."—*Shih pên, Yüan chien lei han*, c. 324, *Ch'iao i pu*, p. 1*a*.

"The Emperor ordered generals and soldiers to practise the military art and to learn archery, horsemanship, and the tug-of-war."—*Lü shih ch'un ch'iu, Tzŭ shih ching hua*, c. 76, p. 19*a*.

[Archery, and the use of weapons, were practised in the great State college in spring and summer (*Legge, Ch. Class.*, IV. ii. 616, note).]

"When the Chows went into battle they formed a line, with the bowmen on the left and the spearmen on the right flank. The centre was occupied by chariots, each drawn by either three or four horses harnessed abreast. Swords, daggers, shields, iron-headed clubs some five to six feet in length and weighing from twelve to fifteen pounds, huge iron hooks, drums, cymbals, gongs, horns, banners and streamers innumerable, were also among the equipment of war. Beacon-fires of wolves' dung were lighted to announce the approach of an enemy and summon the inhabitants to arms. Quarter was rarely if ever given, and it was customary to cut the ears from the bodies of the slain. Parleys were conducted and terms of peace arranged under the shelter of a banner of truce, upon which two characters were inscribed—'Stop fighting.'"—*Giles, Historic China*, p. 10.

"By means of drum, bell and flag, the direction of large forces in battle is possible, and like unto the direction of small forces." "The drum was used to beat the assembly and in the advance, the bell as a signal to halt. Flags were of two kinds, signalling flags and distinguishing banners."—*Calthrop*, p. 31.

"Various kinds of flags were used to indicate the nature of obstacles ahead."—*Legge, Lî Kî*, i. 91 and note. See also *Parker, Anc. Ch. Simpl.*, pp. 31–2.

"When the *Ssŭ Ma* organized his forces in the 2nd month of autumn the military officers bore flags. The flag was not only used in war and hunting expeditions, but also in sacrificing and worshipping, as well as when meeting guests. In later ages, such as Ch'in, they had a flag for every season, viz.: in spring, green; in summer, red; in the middle of a year, yellow; in autumn, white; and in winter, black."—*Ch'ün shu k'ao so, Ko chih ching yüan*, c. 31, p. 4*b*.

"When the 9 chang (章), flags, were made, the soldiers were ruled and military officers became brave—when the sun flag was raised, the troops were to march by day; when the moon-flag was raised, by night; the dragon-flag, through water; the tiger-flag, through forests; the bird-flag, on banks; the snake-flag, through marshes; the magpie-flag, on ships; the wolf-flag, over hills; and on the raising of the bow-flag, the troops were to take up food and mount."—*Kuan Tzŭ, ibid.* p. 9*b*.

Other war-flags are mentioned in the *Tso chuan* (*mao hu* flag, a flag of victory borne by Yin K'ao-shu when invading the Chêng State), *Mu T'ien tzŭ chuan* (the sun, moon, and Great Bear flag), *Chou li* (the *yü* banner, bearing designs of a phœnix and fish-hawk, indicating virtue and sternness). See *Ko chih ching yüan*, c. 31, pp. 5*b*, 12*a*, etc., and *K'ang Hsi Tzŭ tien, Mao chi hsia*, p. 43*b*. The names of meritorious warriors were recorded on the *t'ai ch'ang*, flag of the king (see following extract): *Chou shu, Ko chih ching yüan*, c. 31, *Ch'ao chih lei*, p. 10*a*. See also IMPLEMENTS.

[On the banners were figures of birds (*Shih ching*, II. iii. III. 4), and of serpents and tortoises intertwined (II. i. VIII. 2, 3). There were bells and ornaments at the top of the flagstaff (IV. i. [ii.] VII. 4). The royal standard (大常) had a representation at the top of it of the sun and moon, beneath which and all round were dragons. The princes of the blood, and secondary chiefs or viceroys had broad pennons or flags figured with dragons (IV. iii. IV. 3). One pennon, formed of an ox-tail upon a pole, was placed behind in the chariot of the chief of a squadron.]

"Then the king of Wu raised a troop and stationed it on the north of the river, and the king of Yüeh stationed his on the south. The latter divided his troops into left and right divisions, and privates and sons of nobility to the number of 6,000 formed the central division. He wished to commence action on the river with his ships on the next day, and so in the evening he ordered the left division to be gagged and to go against the current for 5 *li* and to wait until they were needed; he also ordered the right division to be gagged and to pass over the river to a distance of 5 *li* and wait until needed. At midnight he ordered both the left and right divisions to wade into the river and beat drums, and to wait there until needed in the middle of the river."—*Kuo yü, Tzŭ shih ching hua*, c. 74, p. 9*a*.

"Kung-shu Pan made a wooden kite for spying the city of Sung."—*Tsa tsu, Yüan chien lei han*, c. 357, *Ch'an yeh pu*, p. 27*b*.

"In the year B.C. 562, when serving at the siege of a place called Peih-yang (偪陽), a party of the assailants made their way in at a gate which had purposely been left open, and no sooner were they inside than the portcullis was dropped. Heih was just entering, and catching the massive structure with both his hands, he gradually by dint of main strength raised it and held it up, till his friends had made their escape."—*Legge, Ch. Class.*, i. Prol. p. 58.

"Though the enemy had high fortifications and deep ditches yet they could not, without making a sortie, fight with our troops, as we attacked the place where the enemy must be rescued."—*Sun Tzŭ, P'ei wên yün fu*, c. 26*b*, p. 164*b*. Some military ditches are referred to under LANDWORKS.

[In the *Shih ching*, III. i. VII. 7, 8, king Wên causes the assault of a fortified city, and his soldiers ascend the wall by means of hooked ladders. He takes some prisoners and punishes them as rebels, proportioning their chastisement to the gravity of their offence. He causes one ear of his captives to be cut off, and in contenting himself with this punishment he passes for a just and humane man. The left ears of the slain, as also often of captives, were cut off. In the State of Lu (towards the south of Shan Tung), the army, returned from an expedition, is assembled in the great college. They present to the prince the ears that have been cut off and the prisoners, who were skilfully questioned. The Chinese then made very few prisoners; they put the vanquished chiefs to death, and released the common soldiers after cutting off one of their ears (IV. ii. III.).]

Laws.—"The population was divided, for military purposes, into groups of eight families. In time of war, each group sent one man into the field, furnished his wants, and provided for his family. Therefore if 100,000 men are taken, 700,000 homes are affected."—*Calthrop*, p. 70, note.

"So Yin said: 'The law of the Ch'in State regarded a man who cut off many heads of the enemy as having chief merit; anyone who cut off one head had one step of rank bestowed on him.'"—*Tzŭ chih t'ung chien kang mu*, c. 1, *Hsia ts'ê, Chêng p'ien*, p. 121*a*.

"Of old when a country was attacked, the young children were not slain."—*Giles, Dic.*, 5124.

[In the 6th century B.C. warfare became a science through the work of Sun Wu (Sun Tzŭ), his ideas being supplemented in the 4th century B.C. by Wu Ch'i (Wu Tzŭ). These works greatly influenced military operations throughout subsequent ages. Their main principles are given below.] "Personal ambition and intrigue, and not the wishes of the people," being the main factors in the wars, patriotism could not "be relied on to maintain the *moral* of the levies. Instead of these, what may be called the force of despair is pointed out as the most powerful agent in giving cohesion and energy to an army. The general is urged to take a vigorous offensive; and to act at a distance from his base; where defeat means disaster, and where desertion is minimised owing to the distance from home. He should, in fact, burn his boats before an action, or, in Chinese phrase, act as one who removes the ladder from under those mounted upon the roof."—*Calthrop*, pp. 8–9.

"A loop-hole of escape weakens the resolution of the general and the energy of his troops."—*Ibid.* p. 8.

"Do not eat the bait of the enemy; returning troops should not stop; troops besieging [others] should leave one side open [so as not to render the enemy too desperate]; and do not pursue a desperate enemy."—*Sun Tzŭ, Tzŭ shih ching hua*, c. 76, p. 16*b*.

"*Moral*, or the spirit of the troops, is thus considered a determining factor in war. The Chinese are perhaps unusually affected by climatic conditions. As is well known, the umbrella was part of a soldier's equipment; and for the same reasons, the sunny side of high ground is recommended as most suitable for defence, tactical considerations permitting."—*Calthrop*, pp. 8–9.

"The large number of bannermen in the Chinese army was out of all proportion to the service of standards in providing rallying points. The chief use of banners was to maintain the spirit of the troops. A forest of banners, held erect, gave a feeling of liveliness and security to the ranks, in the same way as a military band, and when Sun remarks that the march of an army should be calm like the forest, he is using a simile that is not inappropriate."—*Ibid.* p. 9.

"War meaning ravage, it was essential that the operations should be conducted in the enemy's territory. Once there, however, a vigorous offensive is no longer advised. 'At first behave with the discretion of a maiden' is the counsel of Sun. The enemy must be induced to take the initiative, and when he is worn out by marching, or makes a false move, 'then,' says the master, 'dart in like a rabbit.'"—*Ibid.* p. 10.

"Unlike the tactics of the Japanese, in whom the spirit of attack burns so strongly, those of Suntzu and Wutzu are essentially of the offensive-defensive order—manœuvre before fighting, and non-committal until the enemy has shown his hand. The business of the general is to avoid encounter in battle until the enemy is no longer capable of offering a successful resistance."—*Ibid.* pp. 10–11.

"The masters do not make, however, the mistake of advocating a passive defensive. . . . It is rather the defence which avoids battle by mobility and manœuvre, induces the enemy by stratagem to divide his forces, or act in conformity with our wishes, and then falls upon him."—*Ibid.* p. 11.

"With regard to the tactics of the battlefield, the pitched battle, or, in other words, the frontal attack, is considered unworthy of the skilful general. The plan of attack should consist, broadly speaking, in the division of the army into two forces. The enemy is 'attracted and engaged by one force, and defeated with the other'; and here we have the containing or secondary attack, and the main or reserve force which decides the battle of to-day—a most striking instance of the continuity of military principles."—*Ibid.* pp. 11–12. See also *infra*.

"Considerable space is devoted [in Sun Tzŭ's work] to the influence of ground on war. . . . Among other axioms, it is laid down that the passage of a river should not be disputed as the enemy will probably give up the attempt, and make the passage untouched at some other point, but that he should be attacked when half his force is across the stream. Again, an army should not encamp on a river below the enemy, as it is thereby liable to be inundated, or to have its water poisoned; or the enemy may come down stream and make a sudden attack."—*Ibid.* p. 12. See also *infra*.

Both Sun Tzŭ and Wu Tzŭ point out that "even successful war brings evil in its train. Wu remarks that 'few are those who have gained power on earth by many victories,' and he is insistent that war should not be undertaken until a careful comparison of the two sides shows that victory is certain." "Hence the importance they assign to the intelligence of the enemy, and to the spy. . . . The spy was treated with great honour by his countrymen. . . . They frequently toiled for years, and rose to high rank in the enemy's service; and thus, by wrong counsel and by spreading mistrust in his ranks, they became a two-edged sword in the hands of the general. 'Wonderful, indeed, is their power,' exclaims Sun; but he also reminds us that their management is the most difficult and delicate duty of the general."—*Ibid.* pp. 13–14. The five kinds of spies (village, inner, converted, death, and living) with their duties, use, and treatment, are described on pp. 70–4.

"The warrior is the country's support. If his aid be entire, the country is of necessity strong; if it be at all deficient, then is the country weak." Ignorance on the part of a prince may embarrass his army (pp. 26–7).—*Ibid.* p. 26.

Strategy was one of the most important first principles laid down in the work of Sun Tzŭ: "War is a thing of pretence: therefore, when capable of action, we pretend disability; when near to the enemy, we pretend to be far; when far away, we pretend to be near." "Allure the enemy by giving him a small advantage. Confuse and capture him. If there be defects, give an appearance of perfection, and awe the enemy. Pretend to be strong, and so cause the enemy to avoid you. Make him angry, and confuse his plans. Pretend to be inferior, and cause him to despise you. If we have superabundance of strength, tire him out; if united, make divisions in his camp. Attack weak points, and appear in unexpected places." "These are the secrets of the successful strategist."—*Ibid.* pp. 19–20.

But "better than defeating a country by fire and the sword, is to take it without strife." "The supreme art is to subdue the enemy without fighting." "Wherefore the most skilful warrior outwits the enemy by superior stratagem." "A siege should not be undertaken if it can possibly be avoided."—*Ibid.* pp. 24–5.

"The ancient masters of war first made their armies invincible, then waited until the adversary could with certainty be defeated."—*Ibid.* p. 28.

"The 5 disciplines: the 1st was training the eyes with the colours of flags; the 2nd, training the person in the carrying out of the various orders; the 3rd, training the feet in the paces of advancing and retiring; the 4th, training the hand in the use of long and short weapons; the 5th, training the heart in the correct views as to rewards and punishments. Being trained in these five, soldiers will become bold."—*Kuan Tzŭ, Tzŭ shih ching hua*, c. 76, p. 18*b*.

"In the 2nd month of spring the drum, bell, small bell, and cymbal, should be examined; in the 2nd month of summer, chariots and foot soldiers should be chosen and their names put on the register; in the 2nd month of autumn chariots should be examined; and in the 2nd month of winter the movements of troops should be reported to the superior."—*Kuang chih p'ing lüeh*, c. 25, *Chou tai ping chih*, p. 1*b*.

"Now the requirements of war are such that we need a thousand light chariots with four horses each; a thousand leather-covered chariots, and one hundred thousand armoured men; and we must send supplies to distant fields. Wherefore the cost at home and in the field, the entertainment of guests, glue and lacquer for repairs, and necessities for the upkeep of waggons and armour are such that in one day a thousand pieces of gold are spent. With that amount a force of one hundred thousand men can be raised:—you have the instruments of victory." Long operations, even if victorious, were regarded as weakening and both physically and financially exhausting.—*Calthrop*, pp. 20–3.

[The control of large forces is possible by subdivision, and their direction by means of drum, bell, and flag. Interchange of manœuvres (frontal or holding, and flanking or surprise, forces), knowledge of the enemy's strength and weakness, the value of the spirit of the troops, of discipline, boldness, strength, proper choice of men, and seizing of advantages when offered, of earliness in the field, obstructing and harassing the enemy, of surprise and feints, of avoiding useless attacks, of combination, secrecy, right point to attack, avoiding prolonged preparations, knowledge of the ground and occasion, of variation in strategy, and general mobility, were fully recognized; see *ibid.* pp. 31–9.]

[Further valuable precepts are given under "Battle Tactics," *q.v.* pp. 40–4.]

[As regards procedure in war, Sun Tzŭ, under the heading of "The Nine Changes," counselled avoidance of marshy or low-lying ground for camping; promotion of friendly relations with neighbouring states; not lingering in a far country; use of stratagem in mountainous and wooded country; and fighting on death ground. "There are always roads that must be avoided; forces that must not be attacked; castles that must not be besieged; ground that must not be chosen for encounter; orders from the lord that must not be obeyed." "In reducing an enemy to submission, inflict all possible damage upon him; make him undertake useless adventures; also make neighbouring rulers move as you would desire them by tempting them with gain." "Generals must be on their guard against these five dangerous faults:—Blind impetuosity, which leads to death. Over-cautiousness, which leads to capture. Quick temper, which brings insult. A too rigid propriety, which invites disgrace. Over-regard for the troops, which causes inconvenience. These five faults in the leader are disastrous in war."]—*Ibid.* pp. 44–6.

[Respecting the rules for movements of troops in mountain warfare, in relation to water and rivers, marshes, open country, rising ground, various obstacles (such as impassable valleys, narrow passages with pitfalls, precipices, thick forests, etc.), and deductions to be drawn from appearances of clouds of dust, startled animals, noises, actions of the enemy, and behaviour of leaders, etc., see *ibid.* pp. 47–53. The different natures of ground and the suitable manœuvres for each are described on pp. 53–67; and the five ways of attack by fire (barrack-, commissariat-, equipment-, store-, and company-burning) on pp. 67–9.]

[Wu Tzŭ's counsels regarding estimation of the enemy, control of the army (lightness, weight, and confidence being of first importance), qualities of the general (reason, preparation, determination, vigilance, and simplicity)—"not until the enemy has been vanquished does he speak of return. This is the duty of the general"—the four important influences (spirit, ground, opportunity, force), "suiting the occasion," and encouragement of the troops, are detailed on pp. 85–119.]

"The Empire having become pacified the Emperor played the *ta k'ai* (大凱). The Commentary [says]: '*Ta k'ai* was a pæan played, according to the rites of the Chou dynasty, when the troops returned from battle."—*Shih chi, Chu Fu chuan, Tzŭ shih ching hua, c.* 74, p 12*b*.

"From of old there existed in China a custom requiring that, on the conclusion of peace between different States, the contracting parties should exchange hostages, who were usually members of the ruling Houses, as a guarantee of mutual good faith. Thus we find, during the last years of the reign of the House of Chow, a grandson of Chao-siang, King of Ts'in, living as hostage in Han-tan."—*Ch. Rev.*, xiii. 365.

Absolute Monarchy (221 B.C. *to* A.D. 221).—*Table III.*

Army Organization.—"When he [Ch'in Shih Huang] conquered his internal enemies he resolved to complete the pacification of his country by effecting a general disarmament [throughout the provinces], and he ordered that all weapons should be sent in to his capital at Hienyang. . . . In one of the courts of this latter place [Palace of Delight], it is said he could have drawn up 10,000 soldiers. This eye to military requirements in even the building of his residence, showed the temper of his mind, and, in his efforts to form a regular army, he had recourse to 'those classes in the community who were without any fixed profession, and who were possessed of exceptional physical strength.' He was thus the earliest possessor in China of what might be called a regular standing army."—*Boulger, Short Hist.*, p. 6.

"The authority of Ch'in was the most powerful, and he united the States into one Empire. He thereby put an end to warfare, and melted up all weapons. He thought that as all the warriors were dispersed throughout the empire and all the weapons [which remained] kept in the capital, calamity would never befall him. But he did not suspect that weapons could be made of wood or bamboo poles, and that every person being a soldier, the Ch'in Kingdom could thus be overthrown."—*Kuang chih p'ing lüeh, c.* 25, *Chou tai ping chih*, p. 2*b*.

[Armies of 100,000 and 600,000 men are mentioned in the time of Shih Huang Ti.]—*Shih chi Hsiung Nu chuan, Tzŭ shih ching hua, c.* 78, p. 4*a*; *Boulger, Short Hist.*, p. 8.

[The Han, following the Ch'in system, established imperial guards in all the provinces. In the capital there were the North and South armies.]—*Ibid. c.* 25, *Liang Han ping chih*, p. 2*b*.

[Under Kao Tsu strong men were chosen as bowmen after examination at the beginning of autumn and appointed commanders. They were classed as those who fought on level ground, hilly ground, and amid obstacles.]—*Han kuan i, Tzŭ chih ching hua, c.* 74, p. 9*a*.

[Archery and horsemanship were the tests for admission to the *Yü Lin*, Bodyguard, in 137–52 B.C.]—*Han shu Chao Ch'ung-kuo chuan, ibid.* p. 9*a*.

[In extreme cases the imperial guards were taken from the capital to the seat of war. Wu Ti, fearing the capital might thus be too weak, divided the North army into 8 *chiao* divisions.]—*Kuang chih p'ing lüeh, c.* 25, *Liang Han ping chih*, p. 2*b*.

[Soldiers on frontier guard were of 3 classes (*tsu kêng, ch'ien kêng*, and *kuo kêng:* see p. 32*a*) and could hire substitutes.]—*Tzŭ chih t'ung chien kang mu, c.* 5, *Shang ts'ê, Chêng p'ien*, p. 32*a*.

Wang Mang "sought out those who grew fat on their offices, and took off their wealth to maintain the army."—*Ibid.* c. 8, *Shang ts'ê, Chêng p'ien*, p. 62*b*.

"Kuang Wu [A.D. 25–58] of the Eastern Han thought that the soldiers of Yu Chou and Chi Chou were capable of pacifying the Empire and so established an army at Li Yang. The horsemen were usually a thousand in number, were taken charge of by the Herald of the Court of Ceremonial, and called the Li Yang troop. The North and South armies in the capital were kept unchanged, but the North army [was] diminished by 3 *chiao* divisions, *viz.*, the *Chung Lei, Pien Ch'i*, and *Hu Pên*—so that there were only 5 camps and the leaders were called *chiao shih* of the 5 camps."—*Kuang chih p'ing lüeh, c.* 25, *Liang Han ping chih*, p. 3*a*.

[Membership of the Imperial Body Guard, etc., could be purchased (A.D. 107–26). Corruption prevailed in the selection of military officers.]—*Ibid.* p. 3*b*.

"In the period *Yen Hsi* [A.D. 158–67] of Ch'êng Ti an imperial decree was issued decreasing the salaries of the *Yü Lin* and *Hu Pên* (Imperial Body Guards), who were doing nothing, by one half. Through this the forces in the capital became daily weaker. The native soldiers outside [in the provinces] were lacking in discipline and the guards inside [the capital] were out of training."—*Ibid.* p. 3*b*.

"At this time all the people, including scholars and great ministers, practised the military art. . . . The people were disciplined soldiers. Military officers could be selected from the Boards of Revenue and Ceremonial or the Court of Imperial Stud. Scholars and great ministers could be appointed generals. Thus the advantage of the Han system was that soldiers need not always be mobilized nor the post of general limited to certain officers. . . . When there was trouble they could be summoned; and when it was over they could be dismissed."—*Ibid.* p. 3*b*.

Appliances.—[Prayers were offered before going to war by the Director of the Imperial Board of Astronomy, holding flags pointed towards the country of the enemy.]—*Chiao ssŭ chih, Ko chih ching yüan, c.* 31, *Ch'ao chih lei*, p. 13*a*.

[The ceremony of killing the sacrificial animal is mentioned in *Hou Han li i chih, Tzŭ shih ching hua, c.* 76, p. 19*a*.]

"In autumn an awe-inspiring peck measure was cast of 5 *shih* of brass, in shape like Ursa Major. Being for subduing the soldiers the general used to carry it before the troops when they advanced and at their side when they retired."—*Tzŭ chih t'ung chien kang mu, c.* 8, *Shang ts'ê, Chêng p'ien*, p. 59*b*.

"After the Conquest . . . of China by the First August Emperor of Ts'in, and down to this day, war-chariots have scarcely ever once been even named, at least as having been marshalled in serious battle array."—*Parker, Anc. Ch. Simpl.*, p. 28.

"The *ch'ao ch'ê*, 'turretted chariot' . . . was a war-chariot with a turret (or spy-tower) for spying out the enemy."—*Chih lu shih ku chu, Ko chih ching yüan, Lou lei*, p. 6. Some were drawn by several oxen (*Hou Han shu Nan Hsiung Nu chuan, Tzŭ shih ching hua, c.* 78, p. 5*a*).

"With their strong mail and sharp swords, long and short mixed together, cross-bows travelling to and fro, the *shih* and *wu*, files of 10 and 5 men, advanced, and the Hsiung Nu (Huns) were not able to resist them (*c.* 160 B.C.).—*Han shu Ch'ao Ts'o chuan, ibid. c.* 74, p. 9*a*.

"[Li] Ling [1st and 2nd cent. B.C.] led his soldiers out of the camp and formed a column. Those in front were armed with 3-pronged lances and shields, whilst those in the rear had bows and cross-bows. He gave them an order saying: 'On hearing the sound of the drum you are to advance, and on hearing the sound of the cymbals, to halt.'"—*Han shu Li Ling chuan, ibid.* p. 11*a*.

[Military reviews and mailed horsemen are referred to in *Kuang chih p'ing lüeh, c.* 25, *Liang Han ping chih*, p. 3*b*.]

"In wartime, if the sound of the drum was clearer than usual it indicated victory; if heavy and dull, it indicated defeat."—*Hu Ch'ien ching chan hou p'ien, Ko chih ching yüan, c.* 47, p. 15*a*.

[Different beats on the drum indicated marching, advancing, and galloping (*Shêng-an wai chi, Ko chih ching yüan, c.* 47, p. 13*b*; *Wei Kung ping fa, ibid.* p. 13*a*). The time of the drum when an army was on the march was marked by means of a bell (*cho*) (*Ku chin yüeh lu, ibid. c.* 45, p. 13*b*). The cymbal (*chin*) was used to call a halt (*Ch'ien Han Li Ling chuan, K'ang Hsi Tzŭ tien, Hsü chi shang*, p. 1*b*).]

"Of the *to* (鐸), bells used to convey commands in an army, there were the metal *to* and the wooden *to*. . . . The metal *to* was rung when there were military affairs to be attended to. Those used by the *Ssŭ Ma*, President of the Board of War, were the *chua to* (抓鐸) and *lu to* (摝鐸). When they met at Huang Ch'ih the government troops rattled the *to*."—*Pei T'ang shu ch'ao, Ko chih ching yüan, c.* 45, p. 12*a*.

"The trumpet or horn was 5 feet long. In shape it was like a bamboo tube with one end large and the other small. It was used in the Imperial cavalcade and army. It was sometimes made of wood or bamboo and sometimes of leather."—*Yin yüeh chih kuei, ibid. c.* 47, p. 20*b*. It was used to announce sunrise and sunset (*T'ung li i tsuan, ibid.* p. 20*b*).

[An imperial chariot with a plumed flag (*tu*) made of ox-tail fixed on the left upper end of the yoke or on the horse's head is mentioned as being in use in 206–194 B.C. (*Han Kao Ti chi, Ko chih ching yüan, c.* 31, *Ch'ao chih lei*, p. 12*b*). Mention of it also occurs in the *Chou li*. The *Chi yün* dictionary says that the black *tugh* was a great military standard (*Ch. Rev.*, xvii. 300). It was similar to the *yü pao*, made of a collection of Tartar pheasants' tails (*Han Han Yen-shou chuan, Ko chih ching yüan, c.* 31, *Ch'ao chih lei*, p. 13*a*). Other military flags were the *ling ch'i* bearing the figure of *Chao Yao*, one of the brightest stars in the Great Bear (*Han li yüeh chih, ibid.* p. 6*a*), the *chien*, a silken banner (*Erh ya, ibid.* p. 10*b*), the *ch'i*, with a bell at the top of the flagstaff, and a scaly dragon painted on the pendant (*ibid.* p. 10*a*), the *hsi*, flag of a commander-in-chief (*Shu wu i ming su, ibid.* p. 14*a*].

"It is mentioned . . . that generals had their orders cut on seals for rapid circulation among the troops under their command. In such a case in the third and fourth centuries the writing in camp orders would be white while the ground was black or red."—*Edkins, Ch. Currency*, p. 7.

Laws.—[Cavalry tactics to surround the enemy's forces are mentioned (233–202 B.C.) in *Han shu Hsiang Chi chuan, Tzŭ shih ching hua, c.* 74, p. 11*a*.]

[The enemy's grain supply was cut off by bodies of soldiers specially detailed; raised paths were thrown up to transport provisions for the army; and moats and fortifications used as means of defence.]—*Shih chi Hsiang Yü chi, Tzŭ shih ching hua, c.* 74, p. 11*a*. *Yü Lan t'ung chien lei tsuan, c.* 16, *Wu pei pu*, p. 18*a*.

[The ruse of concealing the brave soldiers and fat oxen and horses, showing only old and weak soldiers and lean cattle, was successfully tried in 200 B.C. by the Hsiung Nu against Kao Ti.]—*Yü Lan t'ung chien lei tsuan, c.* 16, *Wu pei lei*, p. 18*b*.

[The importance in military operations of able generals is referred to in *ibid.* p. 1*b*.]

Chao Ch'ung-kuo, 137–52 B.C., "was the originator of the 屯田 system of military settlements, under which the settlers contributed by taxes or by service to the expenses of administration in return for their allotments."—*Giles, Bio. Dic.*, p. 59.

"The Prince of Han ordered the magistrate to collect the bodies of the dead soldiers and place them in coffins and send them to their respective families."—*Tzŭ chih t'ung chien kang mu, c.* 2, *Hsia ts'ê, Chêng p'ien*, p. 106*b*.

"By the military law of the Han dynasty on an expedition those who were cowards or lagged behind were to be executed."—*Ibid. c.* 9, *Shang ts'ê, Chêng p'ien*, p. 87*a*.

"The sons and grandsons of a man dying in battle were supported by the officers of the Guards. They were called 'orphans of the guard.'"—*Han shu, Yüan chien lei han, c.* 244, p. 10*a*.

Period of Disruption (221 *to* 589).—*Table IV.*

Troops were divided into columns. The *Tsa ping shu* mentions eight: "The Eight Columns: the 1st was called 'square column'; the 2nd, 'round'; the 3rd, 'female'; the 4th, 'male'; the 5th, 'rushing'; the 6th, 'wheel'; the 7th, 'floating'; the 8th, 'wild-geese-row.'"—*P'ei wên yün fu, c.* 71, p. 39*a*. The *Wu ching tsung yao* refers to a division into five—two for preparing for action; one to check the movements of the enemy; and two in case of victory and defeat (*Yün fu shih i, c.* 71, p. 4*b*). See also *Sung shu Liu Yüan-ching chuan, Tzŭ shih ching hua, c.* 74, p. 11*a*; *Yü Lan t'ung chien lei tsuan, c.* 16, *Wu pei pu*, p. 19*a*. Reviews were held: *Tzŭ shih ching hua, c.* 76, p. 19*a*.

"On changing a column the drum must first be sounded. First a straight column (single rank) was formed and then other columns."—*Wu ching tsung yao, Yün fu shih i*, c. 71, p. 4*a*.

Youths of 18 to 20 were taught military science, being instructed in "the classics of war, military tactics, the movements of fleets and cavalry, and the ways of using weapons." The authorities visited the colleges once a month, holding examinations and promoting the proficient.—*Sung shu Chou Lang chuan, Tzŭ shih ching hua, c.* 76, p. 19*a*. The Emperor Hsiao Wên (471–500) ordered the drill-grounds to be repaired and horsemanship, archery, and military manœuvres to be taught (*Wei shu Hsiao Wên Ti chi, ibid.* p. 19*a*). In 290–307 men, and maid-servants of princes were supplied with soldiers' allowances, and sons of officers below the first grade, if 13 years of age, were sent to guard the frontier. Soldiers had servants sent to assist them (*Chin shu Hui Ti chi, ibid. c.* 74, p. 9*b*).

A garrison of 5,000 farmers of Chi Chou was formed to garrison Shang Kuei. "In autumn and winter they practised the military art, and in spring and summer they cultivated the fields and planted mulberry trees. By this means the forces as well as the land were sufficiently cared for and adequate preparation made against thieves and robbers."—*Chin shu An P'ing Wang chuan, Tzŭ shih ching hua, c.* 76, p. 19*a*.

A flying squadron in 24 divisions was formed with a similar object by Yü-wên Kuei in Shu; see *Chou shu Yü-wên Kuei chuan, ibid. c.* 74, p. 9*b*.

[A body of 700 archers, able to use the strong bow and proficient in shooting was formed in 479–83 in Ch'i to protect the city-wall.]—*Ch'i shu Kao Ti chi, Tzŭ shih ching hua, c.* 74, p. 9*b*.

"When Wu Li invaded Wei he divided the troops into left and right battalions, each under a general. He also established the *Yü Lin* (羽林), *Hu Pên* (虎賁), *Shang Chi* (上騎), and *Yi Li* (異力), divisions, each commanded by a *Hsiao Ch'i*. There were also the left, right, front, and rear troops commanded by four *Hu Chün* and these, together with a *Wei* and one *Hsiao Ch'i*, made 7 troops which were under the command of a *Chung Chün*, General. After he had conquered Wu, an imperial decree was issued ordering that the *Tzŭ Shih* (Prefects) should not command the soldiers. To a large province 100 military officers were to be assigned, and to a small one, 50."—*Kuang chih p'ing lüeh, c.* 25, *Liu ch'ao ping chih*, p. 4*a*. The Prefects were again placed in command of the soldiers under Yüan Ti when he moved the capital to Yang Chou (*ibid.* p. 4*b*).

"In the period *Ta T'ung* [535–46] of the W. Wei, when Yü-wên T'ai engaged Su Cho to adopt the rules of the Chou dynasty and establish 6 armies, enlisting 6 classes of people, selecting the boldest and strongest men as leaders, and remitting all their taxes. The Prefect trained them in the leisure left from their farming. They together formed [the troops of] 100 *fu*. Each *fu* was commanded by a *Lang Chiang* (郎將) and was divided into 24 brigades. Each brigade was commanded by a *K'ai Fu* (開府). There were 12 Great Generals and each general commanded two *K'ai Fu*. Also a *Ssŭ Chieh Tu Tu* was added to command them all."—*Kuang chih p'ing lüeh, c.* 25, *Liu ch'ao ping chih*, p. 4*b*.

"When the naval troop of Chang Pao was at Hsi Ts'u, several tens of brave knights of Ching Su and active soldiers of Ching and Ch'u (Hunan and Hupeh) co-operated and attacked the naval troop, which was accordingly defeated, Chang Pao being killed. On the other hand, the generals did not act together, so he was in the end defeated by T'ai Chün."—*Sung shu Chien P'ing Wang* [*Liu*] *Hung chuan, Tzŭ shih ching hua, c.* 74, p. 9*b*.

[A body of "fighters to the death," named *Pai Pao*, was instituted by Wên Hsüan in 550.]—*Sui shu Shih huo chih, Tzŭ shih ching hua, c.* 74, p. 9*b*.

[Appliances included forts (*Yün fu shih i, c.* 49, p. 10*b*), curtains (*Ko chih ching yüan, c.* 53, *Chü ch'u ch'i wu lei*, p. 22*b*), code words: a sword being called "young sentinel," etc. (*ibid. c.* 42, *Wu pei lei*, pp. 2*a*, 20*b*, *c.* 41, p. 6*a*, etc.), chariots, used for staying the onrush of the enemy, conveying food and weapons on the march, and forming a protective ring round the camp (*Yü hai, P'ei wên yün fu, c.* 71, p. 43*a*), flags of various kinds for directing the movements of troops, etc. (*Pai shih lei pien, Ko chih ching yüan, c.* 31, *Ch'ao chih lei* pp. 6*a*, 6*b*, 9*a*, 13*a*, 13*b*); if the flag clung to the pole it was regarded as a supernatural sign, indicating that the enemy's challenge should not be accepted (*Ch'u chün chüeh, ibid.* p. 9*b*), dams made of sand-bags to flood the enemy's country (*Shui ching chu, Tzŭ shih ching hua, c.* 76, p. 18*b*), drill-grounds (*Chin shu li chih, ibid.* p. 19*a*), terraces for practising shooting on horseback (*Wei shu Ming Yüan Ti chi, ibid.* p. 19*a*), city walls and moats (*Yü Lan t'ung chien lei tsuan, c.* 16, *Wu pei pu*, p. 19*b*), fortifications in mountainous places and barricades in valleys (*Pei Ch'i shu Hu-lu Hsien chuan, Tzŭ shih ching hua, c.* 78, p. 5*a*).]

"The Emperor had 12 *yu* (旂), flags, each reaching down to the ground; the princes, 9 *yu* each, reaching to the board of the carriage; the great ministers 7 *yu* each, reaching to the hole in the hub of the wheel; and the officials 3 *yu* each, reaching to the shoulder."—*Po ya, K'ang Hsi Tzŭ tien, Mao chi hsia*, p. 36*b*.

"[Ma] Lung, according to the Plan of the Eight Divisions, made the *p'ien hsiang* chariots. If a field was broad, a regiment of *lu chiao* (fish) chariots was formed; and if the road was narrow, a wooden turret was built above the chariot from which they fought as it advanced. Any arrow that struck it recoiled. By this means good tactics were frequently possible which could not be foreseen by the enemy."—*Chin shu Ma Lung chuan, Tzŭ shih ching hua, c.* 74, p. 11*a*.

Ma Lung "is said to have defeated a Tartar general by covering the sides of a pass with lodestone, the result being that his mail-clad adversaries were unable to move either backwards or forwards and were all put to the sword."—*Giles, Bio. Dic.*, p. 569.

[K'ung-ming (= Chu-ko Liang) is said to have used gongs or drums to mislead his enemies (*Journ. N.-C.B.R.A.S.*, N.S. viii. 107).]

[The gong (*chêng*) and bell (*to*) gave the signals for advance and retreat.]—*Yüan hui, K'ang Hsi Tzŭ tien, Hsü chi shang*, p. 1*b*.

"On hearing the beating of the drum and seeing the white banner and deep red flag hoisted, the ships and boats were to advance; [the captains of] those which did not do so would be beheaded. On hearing the sound of the cymbals, the ships were to stop, and [the men on] those which did not do so would likewise be beheaded."—*Chu-ko Liang chün ling, Ko chih ching yüan, c.* 31, *Ch'ao chih lei*, p. 9*b*.

"The men of Wu laid iron chains across the river wherever there were dangerous places; also they made sharp-pointed spikes of iron more than 1 *chang* long to scatter in the river to prevent the enemy's fleet from entering." "Now Yang Yu had arrested a spy of Wu from whom he learnt all about the enemy's movements. But Wang Chün made 10 large rafts, 100 paces in area, and [placed on them] men made of straw, wearing armour and holding clubs; then he ordered good swimmers to pull them rapidly [up the river]. When the spikes struck the rafts they were carried away by them. Also he made large torches, more than 10 *chang* long and several tens of cubits in circumference; these he soaked in oil and placed on the bows of ships to burn the chains, which were soon melted or broken. By these means his ships were able to pass without hindrance."—*Chin shu Wang Chün chuan, Tzŭ shih ching hua, c.* 74, p. 11*a*.

"[Fu Têng, 5th sovereign of rebel dynasty known as Earlier Ch'in] in every battle used long spears [used on horseback] and hooked swords, and formed his troops into squares or circles. Knowing that some of his columns were firm and others loose, he equalized them, so that the soldiers gladly fought spontaneously. Wherever he fought there was no match for him."—*Chin shu Fu Têng tsai chi, ibid.* p. 11*a*.

[Ch'iung's body of 10,000 soldiers (*c.* 557–81) wore green headkerchiefs and embroidered jackets. They were called the "yellow-dragon troop."]—*Chou shu Yü-ch'ih Ch'iung chuan, ibid. c.* 74, p. 9*b*.

"Music was played on the short flute when the royal troops had been victorious. It was played in the army as a pæan."—*Chin shu Yüeh chih, ibid. c.* 75, p. 12*b*.

"It was the . . . age of . . . strategy rather than hard fighting."—*Parker, China*, p. 25.

Chu-ko Liang "did not invènt, as is often stated, but improved and ultimately perfected, the Eight Dispositions, a series of military tactics."—*Giles, Bio. Dic.*, p. 182. See also *Shui ching chu, P'ei wên yün fu, c.* 71, pp. 39*b*, 40*b*, 43*b*; *Shu chih Chu-ko Liang chuan, Tzŭ shih ching hua, c.* 74, p. 11*a*; *c.* 76, pp. 19*a*, 19*b* (in which works Chu-ko Liang's tactics are fully explained). See the same works for the various military formations, etc.

"The method of forest warfare [was as follows]: taking our lances and swords we formed files of 5 men. If the trees of the forest were far apart cavalry was used to assist; if the chariots were in front they should stop where convenient. If in the forest there were many obstructions, the balance-shaped column should be formed in order to protect the front and rear troops. If 3 armies fought strenuously, though the enemy's force be great, they might be defeated. Fighting and stopping followed the nature of the place—this was the rule of forest warfare."—*Liu t'ao, Tzŭ shih ching hua, c.* 76, p. 18*b*.

"If mutilation prevents a body from ever reviving, then mangling or destroying the remains of an enemy is the most refined means of revenge. It is also the severest punishment one can inflict on the body of a criminal. The Books of the Tsin Dynasty relate that Shih Lih, a pretender to the Throne in the north-eastern part of the Empire, exhumed and burned the corpse of Yueh, an imperial commander who had been in the field against him and had died in the year 311:—'this man,' said he, 'has thrown the Empire into disorder, and so I must take revenge in the name of the Empire.'"—*De Groot, Rel. Syst.*, i. i. 343–4.

From the Restoration of Unity to the end of the Five Dynasties (589 *to* 960).—*Table V.*

589–907.

"The military system of the Sui dynasty was copied from the old system of *fu* soldiers of the Chou and Ch'i, but was somewhat improved. There were 12 *wei* (衛), guard divisions, viz.: *yi wei* (翊衛), assistant guard, *hsiao ch'i* (驍騎), valiant guard, *wu wei* (武衛), warlike guard, *T'un wei* (屯衛), settled guard, *i.e.* which did not go to distant places to fight. *Yu wei* (禦衛), opposing guard, and *hou wei* (侯衛), admirable guard. Each was further divided into 'right' and 'left' and was commanded by a general."—*Kuang chih p'ing lüeh, c.* 25, *Liu ch'ao ping chih*, p. 4*b*. For the various commanding officers and changes of name, see *ibid.*

"Now all the generals in the battle with Lu were afraid of the fierceness of the Tartar horses. So they used chariots, infantry, dragoons mingled together, placing the chariots to form an abatis, thus forming a hollow square with the dragoons inside. Yang Su said: 'This is a movement of defence, but not one to conquer the enemy.' Accordingly he reformed the troops and ordered them all to form a cavalry column. When Ta T'ou heard it he was very glad and said: 'God has blessed us,' and dismounting made his obeisance to heaven. Then he led 100,000 selected dragoons in a charge, but Su met them bravely and defeated them."—*Sui shu Yang Su chuan, Tzŭ shih ching hua, c.* 74, p. 11*b*.

"From the time of the Emperor Yang [the Emperor] did not regulate the system of the *Fu Ping*, and did not take care to guard the frontier [of Corea]. The soldiers collected from the 4 quarters consisted of 1,133,800. Each troop had a *Ta Chiang* (senior general), and a *Ya Chiang* (junior general). The cavalry consisted of 40 *tui*, companies; each *tui* of 100 men. Ten *tui* made a *t'uan*. The infantry consisted of 80 *tui*, which were divided into 4 *t'uan*. Each *t'uan* had a *P'ien Chiang* to command it. The soldiers in charge of travelling equipages (commissariat, etc.) were also divided into 4 *t'uan*, which were helped by the infantry. For marching, advancing, halting, encamping there were certain rules. However, both in near and distant places rebellion arose, and the soldiers and officers died or were wounded. The Sui dynasty was thus overthrown."—*Ibid.* p. 4*b*.

"The T'ang dynasty lasted more than 300 years, and the military system was changed 3 times. When on its rise [the dynasty] was flourishing, there was the *Fu Ping* system. When the *Fu Ping* was abolished the *Kuang Chi* was established. When this was abolished the *Tang Chên* was instituted" (see *infra*).—*Ibid. c.* 25, *T'ang tai ping chih*, p. 5*a*.

"The system of *Fu P'ing* (府兵), prefectural soldiers, was introduced in the W. Wei and later Chow, but was only completed in the Sui and the T'ang. In the period *Wu Tê* [618–27] the *Chün Fu* (軍府), commander of the *Fu Ping*, was first established; the 2 *piao Ch'i* and *Chü Ch'i* generals were under the command of the *Chün Fu*. Kuan Chung was divided into 12 circuits in each of which a *Fu Ping* was established."—*Ibid.* p. 5*a*.

"The *chin chün* (禁軍), imperial troops, of the emperor were the *ya ping* (衙兵), palace soldiers, of the north and south. The S. *ya*, were all guard soldiers; and the N. *wei*, *chin chün*. Kao Tzu pacified the empire with volunteers and they were afterwards sent home, but if any wished to remain as a bodyguard they were provided with fields given up by the people and if any were old or unworthy to take service his son could take his place."—*Ibid.* p. 6*a*.

"When the first T'ang Emperor ascended the throne, it was found that the entire cavalry of China consisted of but five thousand horses, all told." This scarcity is ascribed to the pampering which took place under the Monarchical Period.—*Balfour, Leaves*, p. 74.

"In the 3rd moon of *kêng yin* [621] the Emperor [Kao Tsu] came to the K'un Ming lake to practise naval warfare."—*T'ang shu Kao Tsu chi, Tzŭ shih ching hua, c.* 76, p. 19*b*.

[626. Monasteries were closed with the idea of causing celibates to marry and contribute soldiers to the defence of the country. See ECCLESIASTICAL.]

"A new military system was inaugurated by T'ang T'ai-tsung [627–50]. In the 十道 or Ten Provinces, there were 634 府, and in the metropolitan province or district (關內) there were 261 府. All these 895 generals were under the different 衛 and the six supreme generalissimos (東宮六卒). A *fu* of the 1st class had 1,200 men; of the second 1,000; of the third 800. A 團 consisted of 300 men commanded by a 校尉; 50 men formed a 隊, commanded by a 正; 10 men formed a 'mess,' or 火, commanded by a 長. Military service was commenced at 20 with exemption at 60. The Supreme Marshal or General (折衝都尉) held a review every winter. Those who could shoot on horseback were given money to buy a horse; the rest were infantry."—*Ch. Rev.*, xiii. 401.

"At the head of his chosen regiment of cuirassiers, carrying black tiger skins, he [Lichimin, Kao Tsu's second son] was to be found in the front of every battle, and victory was due as often to his personal intrepidity as to his tactical skill."—*Boulger, Short Hist.*, p. 26.

"In order to achieve any great or lasting success in this enterprise [that of subduing his enemies beyond the northern frontier, and bringing about national unity], Taitsong saw that it was essential that he should possess a large and well-trained standing army, on which he could rely for efficient service beyond the frontier as well as in China itself. Before his time Chinese armies had been little better than a rude militia, and the military knowledge of the officers could only be described as contemptible. The soldiers were, for the most part, peasants, who knew nothing of discipline, and into whose hands weapons were put for the first time on the eve of a war. They were not of a martial temperament, and they went unwillingly to a campaign; and against such active opponents as the Tartars they would only engage when superiority of numbers promised success. They were easily seized with a panic, and the celerity and dash of Chinese troops only became perceptible when their backs were turned to the foe. So evident had these faults become that more than one Emperor had endeavoured to recruit from among the Tartar tribes, and to oppose the national enemy with troops not less brave or active than themselves. But the employment of mercenaries is always only a half remedy, and not free from the risk of aggravating the evil it is intended to cure. But Taitsong did not attempt any such palliation; he went to the root of the question, and determined to have a trained and efficient army of his own. He raised a standing army of 900,000 men, which he divided into three equal classes of regiments, one containing 1,200 men, another 1,000, and the third 800. The total number of regiments was 895, of which 634 were recruited for home service and 261 for foreign. By this plan he obtained the assured services of more than a quarter of a million of trained troops for operations beyond the frontier. Taitsong . . . relied on the co-operation of his cavalry, a branch of military power which has generally been much neglected in China. He took special pains to train a large body of officers, and he instituted a Tribunal of War, to which the supreme direction of military matters was entrusted. As these measures greatly shocked the civil mandarins, who regarded the Emperor's taking part in reviews and the physical exercises of the soldiers as an impropriety, it will be allowed that Taitsong showed great moral courage and surmounted some peculiar difficulties in carrying out his scheme for forming a regular army. He overcame all obstacles, and gathered under his banner an army formidable by reason of its efficiency and equipment, as well as for its numerical strength."—*Ibid.* pp. 27–8. For the improvement in weapons, etc., see WEAPONS.

[Troops of archers were placed in ambush under the walls of a fort by Tzŭ I.]—*P'ei wên yün fu, c.* 30*a*, p. 53*a*.

"40,000 braves were summoned from the nearest provinces and 20,000 from the capital, making 60,000 in all, to be knights of the palace, and a general of the north appointed to command them. From the prefectures courageous and loyal men were selected as subordinates. They were divided into 3 armies, with an officer established in command over each. 20,000 braves practised archery only; 20,000 with halberds and shields only; and 20,000 with the long spear used on horseback. The drill grounds were repaired. The practice was held once in 10 days."—*Chiu T'ang shu T'ai Tsung chi, Tzŭ shih ching hua, c.* 76, p. 19*a*.

"The *Fang Chên* [brigade] were the soldiers of the *Chieh Tu Shih*, Governor. It originated in the guard under the general stationed on the frontier. Since the time of T'ai Tsung the Empire had been divided into 10 circuits, in which troops were stationed. The soldiers guarding the city were divided into 12 circuits, to which [*Chieh Tu*] *Shih* were appointed. A *Tu Tu* commanded them all."—*Kuang chih p'ing lüeh, c.* 25, *T'ang tai ping chih*, p. 5*b*.

"Up to Kao Tsung [650–84] and Queen Wu's time [684–705] the *Fu Ping* of the Empire had long been disused, so the system had fallen into disorder. The soldiers sent to guard the frontiers did not change when their turns came. The officers on guard had almost all deserted."—*Ibid.* p. 5*a*.

"In the time of Queen Wu the 100 cavalry of the N. troop were increased to 1,000; and by Jui Tsung to 10,000. As Hsüan Tsung had subdued the rebellion of [Mr.] Wei with 10,000 cavalry, it was changed to the right and left *Lung Wu Chün*. The sons of the well-bred were excused the service of guarding the frontier, their places being filled by the sons of meritorious ministers."—*Kuang chih p'ing lüeh, c.* 25, *T'ang tai ping chih*, p. 6*a*.

"In the beginning of the period *Ch'ang An* [701–5], Kuo Yüan-Chên, a colonel of Liang Chou, ordered Li Han-Chao, Department Magistrate of Kau Chou, to establish *t'un t'ien* (屯田), fields allotted to soldiers. He profited by all the advantages afforded by land as well as water. Formerly in Liang Chou one *hu* (斛) [nominally 10 pecks], of wheat or rice cost several thousand cash; afterwards, in those places where the matter had been organized by Han, one *chien* (縑), a kind of lustring, would purchase several tens of *hu*. He stored provisions for military purposes so as to have sufficient for 10 years' consumption. Yüan-Chên was good at military government and had been in Liang Chou for 5 years: both the *Yi* and *Hsia* (foreigners and Chinese) feared and loved him. His prohibitions were tremblingly obeyed; oxen and sheep were plentiful in the fields, and things lost were not picked up by anyone."—*Yü lan t'ung chien lei tsuan, c.* 16, *Wu pei pu*, p. 4*a*.

"Military graduates were first established by the Empress Wu Hou, A.D. 701."—*Ch. Rev.*, xiii. 399.

"The uselessness of the militia [in 712–55] led to the enrolment of regular troops, which very much increased the power of the provincial Governors."—*Giles, Bio. Dic.*, p. 451.

"In the 13th year [725] of the period of *Kai Yüan* an order was again issued that the *Chang Ts'ung* (escort) bodyguards called *Kuang ch'i* were to be distributed to the 12 *wei*. Altogether 120,000 soldiers were divided into 6 *fan*."—*Yü lan t'ung chien lei tsuan, c.* 16, *Wu pei pu*, p. 7*b*.

"In the 1st year [763] of the period *Kuang Tê*, T'ien Ch'êng-Ssŭ, Commissioner of the garrison of Wu Pu, was appointed Governor and selected the strong males under his jurisdiction to be soldiers, leaving the old and weak to cultivate the fields. In a few years there were 100,000 soldiers. Also, he chose 10,000 soldiers to be his personal guard, naming it *Ya ping* (牙兵), constabulary."—*Ibid.* p. 9*a*.

In Tê Tsung's reign, 779–820, "it was complained of as a serious grievance that an avaricious minister failed to provide the troops called out for a campaign with full rations, in addition to the pay reserved for the maintenance of their families. It was estimated that their ordinary pay was practically tripled during their time of active service (*De Mailla*, vi. 331)."—*Simcox*, ii. 152.

"The law provided (as it still does) that rations should be given to the families of soldiers on a campaign, in addition to their regular pay; but the general in charge of" Ssŭ Ch'uan "earned much gratitude, by continuing the allowance to the widows and children of deceased soldiers, till the former married again and the latter were of age to work. And this liberal ruler was so good an economist in other respects, that he was able to remit the usual tribute to court and at the same time levy less than the customary amount of taxes."—*Ibid.* ii. 134.

[In 780, the army consisted of 868,000 effective soldiers.]—*Ibid.* ii. 135.

"In the 2nd year [786] of the period *Chêng Yüan*, Tê Tsung began to consult with Li Pi about reviving the system of *Fu Ping*, prefectural soldiers. The latter related the history of its rise and fall from the Western Wei and also said that the *Fu Ping*, on ordinary days, peacefully cultivated their fields. Since every prefecture had a *Chieh Ch'ung*, general, he should teach them military tactics in their leisure."—*Yü lan t'ung chien lei tsuan, c.* 16, *Wu pei pu*, p. 9*a*.

During the eighth century "the Chinese employed large numbers of foreigners in the army, and both Arabs and Ouigours (who therefore must have some of them already become Mussulmans) assisted China in recovering Si-an Fu and Ho-nan Fu from the rebels."—*Parker, China*, p. 66.

[In 807 the number of paid troops was 830,000 (*Parker, China*, p. 184). Compared with the number in the period *T'ien Pao* (742–56) the soldiers had increased by one-third. On the average 2 families supplied one soldier. A few years after 807 the number was 990,000. See *Yü lan t'ung chien lei tsuan, c.* 16, *Wu pei pu*, p. 10*b*.]

"When Shun Tsung ascended the throne [805] Wang Shu-wên wished to retain the power over the *Shên Ts'ê* force, but in vain. In the 2nd year [807] of the period *Yüan Ho* the *Shên Wu* and *Shên Wei* troops were reduced to one *T'ien Wei* troop. In the 8th year [813] the *T'ien Wei* troop was abolished and its soldiers joined the *Shên Ts'ê* troop."—*Kuang chih p'ing lüeh, c.* 25, *T'ang tai ping chih*, p. 6*a*.

"The 16 *wei* (衛) military guard stations of the T'ang included the north and south armies of the Han system. In the Han dynasty, the *Wei Wei* was used to aid the south army and the *Chin Wu* (金吾) to inspect the north army. The 16 *wei* of the present time have *Chin Wu*, generals, who have charge of patrolling the city wall of the capital."—*Ibid.* p. 6*b*.

"Though the soldiers of the T'ang dynasty were assembled in the capital yet the empire did not suffer, for they did not eat without working."—*Ibid.* p. 7*b*.

Their worthlessness having been pointed out (in 897) to the emperor by Han Chien "the 4 troops of the guard of the aft-chamber consisting of 20,000 men, were all dismissed, so that the bodyguard of the Emperor was entirely done away with."—*Yü lan t'ung chien lei tsuan, c.* 16, *Wu pei pu*, p. 9*b*.

"Hsü Shu-chi memorialized the throne stating that certain women, Hou Ssŭ Niang, of Wei Chou, T'ang Ssŭ Niang, of Hua Chou, and Wang Erh Niang, of some other Chou, having taken the oath requested leave to attack the enemy. They had bestowed upon them the title of *Kuo Yi* (果毅), 'brave soldiers.'"—*Chiu T'ang shu Su Tsung chi, Tzŭ shih ching hua, c.* 74, p. 10*a*.

"At that time the Princess [P'ing Yang] led more than 10,000 picked soldiers to join the troops of T'ai Tsung at Wei Pei. When they met both set up encampments and surrounded the capital. In the army they were known as the 'Women's Brigade.'"—*Chiu T'ang shu P'ing Yang kung chu chuan, ibid.* p. 10*a*.

[For various special bodies of valiant troops see *ibid.* p. 10*a*; and for different formations, *P'ei wên yün fu, c.* 71, p. 45*a*.]

"Those who were old and unworthy for service and whose sons took their place were called 'Father and Son Troop.'"—*T'ang shu ping chih, ibid.* p. 10*a*.

"At the close of the T'ang dynasty violent soldiers and cruel military officers were scattered throughout the Empire. The Emperors also themselves had soldiers established in the capital who were called *Chin Chün* (禁軍), palace soldiers.

Afterwards the imperial power became weak and the *Fang Chên* (方鎮), Governors' soldiers, became strong. In this way the T'ang dynasty was overthrown."—*Kuang chih p'ing lüeh, c.* 25, *T'ang tai ping chih*, p. 5*a*.

[Flags and banners continued to be much used in warfare, and were sacrificed to. A white horse was killed before the *tu* banner at the place from which the troops started (*Pai shih lei pien, Ko chih ching yüan, c.* 31, *Ch'ao chih lei*, p. 12*b*). For names, descriptions and uses of various banners, see *ibid.* pp. 8*a*, 8*b*, 11*b*, 12*b*, etc.]

"When the Turks offered the Chinese throne to Li Yüan, father of the founder of the T'ang dynasty, as a condition of their aiding to get rid of the monster Yang Ti, it was arranged, as a compromise, that brown and red should be used as joint colours of the national standard."—*Ch. Rev.*, xiii. 432.

[Forts were built (*I'ei wên yün fu, c.* 49, p. 167*a*); moats dug, hills pierced, fire-beacons erected (*ibid.* p. 167*b*; *Tzŭ shih ching hua, c.* 78, p. 5*b*); code-words or secret signals used (*Ko chih ching yüan, c.* 42, *Wu pei lei*, p. 29*b*); defensive ditches dug (*Tzŭ shih ching hua, c.* 78, p. 5*a*); and scaling towers placed against walls of besieged cities (*ibid. c.* 76, p. 18*b*).]

"In the 6th year [623] of the period *Wu Tê*, Ch'ai Shao fought with the T'u Ku Hun, the former being besieged by the latter. The enemy, standing on a height, shot at them (the Shao troop) with arrows like a shower of rain, while Shao ordered a man to play the Tartar guitar and two girls to dance together. The enemy, being surprised, stopped the shooting to see what it was. Shau, seeing they were off their guard, secretly sent a troop of picked cavalry to attack their rear column, greatly defeating them."—*Yü lan t'ung chien lei tsuan, c.* 16, *Wu pei pu*, p. 19*b*.

"When the arrows in the city were all used up Hsün made more than 1,000 straw men dressed in black garments and let them down from the city wall by night. The soldiers of Ch'ao shot at them eagerly and after a time he hauled them up and thus procured several tens of thousands of arrows."—*T'ang shu Chang Hsün chuan, Tzŭ shih ching hua, c.* 76, p. 18*b*.

"The general of Wei Yo, Wang Wu-tsun, at the head of 30 dragoons formed a square and advanced athwart, whilst [Chu] Tao made lion-skins and wild horses out of silk cloth and dressed 100 brave soldiers in them. At the beating of the drum they advanced, and the enemy's troops were scattered through fear. Thus they attacked them, defeating them utterly."—*Chiu T'ang shu Chu T'ao chuan, ibid. c.* 74, p. 11*b*.

[Soldiers' clothing was ordinarily of a uniform colour: Yang Hsing-mi's warriors wore black clothing and black armour (*Tzŭ shih ching hua, c.* 74, p. 10*a*), those at Chung Wu had short tunics and yellow turbans (*ibid.* p. 10*a*), etc.]

907–960.

"Naval engagements with two-deckers [樓 船] are mentioned in the year A.D. 909."—*Ch. Rev.*, xiv. 224.

"In the 1st year [936] of the reign *T'ien Fu*, Lu Wang of the T'ang issued an order to take all the horses away from the military officers and people, and also to send the people to be soldiers. Of every 7 families one was to be enlisted, who were to provide their armour and weapons themselves. They were called *i chün* (義 軍) volunteers."—*Yü lan t'ung chien lei tsuan, c.* 16, *Wu pei pu*, p. 9*b*.

"In the 10th moon of the 4th year an imperial decree was issued ordering fowlers and hunters to learn the military art. In the 7th moon the censor Ch'ên Kuei memorialized the throne saying: 'Formerly Shih Tsung of the Chou said: "The value of soldiers consists in their being trained, and not in their number. One hundred farmers could not support one soldier. Why need we support useless soldiers with the people's money?"' At that time every battle ended in defeat: this was caused not by the small number of soldiers, but by there being too many soldiers. The strong and weak being alike employed, they were defeated by the enemy. For the weak ran away first and the strong could not fight alone, and were therefore defeated. This was the reason. The Emperor hearing it was displeased."—*Hsü wên hsien t'ung k'ao hsiang chieh, c.* 18*b*, *Ping k'ao hsia*, p. 2*a*.

"In the first year [944] of the reign *K'ai Yün*, an imperial decree was issued ordering that village troops should be enlisted by the respective provinces, under the name of *Wu ting chün* (武 定 軍), and should consist of at least 70,000 men. After the experiences of war and famine this further trouble left the people nothing to live on."—*Yü lan t'ung chien lei tsuan, c.* 16, *Wu pei pu*, p. 9*b*.

"In the first year [954] of the reign *Hsien Tê*, the system of the body-guard had been kept unchanged for several reigns. It remained just as it was—they were not changed nor reviewed lest it might be against human feelings, so most of them were weak, old, and disobedient. They were really unworthy to be employed as soldiers. Whenever, in a great battle, they did not run away they surrendered to the enemy. The Empire was frequently overthrown in this way. Shih Tsung, knowing of this defect from the battle of Kao P'ing, said to his attendant ministers: 'The soldiers should be selected on account of efficiency and not merely for the sake of making a show of numbers.'"—*Ibid.* p. 8*b*.

[The son of the king of Chin, before going out to war, sacrificed a sheep in the ancestral temple. He carried before the army the 3 arrows given him by his father on his death-bed with instructions to kill his 3 enemies, Liang, Yen, and Ch'i Tan.]—*Ling kuan chuan, Ku wên shih i, c.* 14, p. 21*a*.

[Prayers were offered before operations were undertaken.]—*Wu Tai Liang Ch'ên chuan, Tzŭ shih ching hua, c.* 76, p. 18*b*.

[An instance of winning a battle by probably exceptional disregard of superstition is given in *Yü Lan t'ung chien lei tsuan, c.* 16, *Wu pei pu*, p. 19*b*.]

[The value of lenient treatment of soldiers is indicated in *ibid.* p. 2*a*, and of moral influence in *T'ang shu yüan Pan-ch'ien chuan, Tzŭ shih ching hua, c.* 74, p. 11*b*.]

[All men above 15 and under 70 eligible as soldiers had their faces branded. The number thus marked in 907 is stated to have been 200,000.]—*Wu tai shih Tsa chuan, Tzŭ shih ching hua, c.* 74, p. 10*a*.

[Tunnels were dug under city walls (*Wu Tai shih Liang Ch'ên chuan, Tzŭ shih ching hua, c.* 76, p. 18*b*); fortifications, city walls, and moats built (*ibid.* p. 18*b*; *c.* 78, p. 5*a*); and horses, armour, various weapons, and signal-flags used. The last 3 were the same colour as the horses (*ibid. c.* 74, p. 11*b*).]

[In 919, in the battle between Ch'ien Ch'uan-huan and P'êng Yen-chang, the former loaded his ships with lime, beans, and sand. The sand was used to give purchase for the soldiers' feet on the decks of his own ships, the lime was thrown into the air to blind the enemy, and the beans, which were thrown on to the enemy's decks and got soaked with blood, caused them to fall. Whilst they were in this predicament, Ch'uan Huan set fire to their ships and secured a decisive victory.]—*Yü Lan t'ung chien lei tsuan, c.* 16, *Wu pei pu*, p. 20*b*.

[In 928, iron chains were sunk in a river and hauled up by means of windlasses by soldiers concealed behind ramparts on the banks, whence the enemy's warriors were shot by the cross-bow archers before they could escape.]—*Ibid.* p. 20*b*. The same narrative is given in *Wu Tai shih Nan Han shih chi, Tzŭ shih ching hua, c.* 76, p. 18*b*.

[Divers were employed, in 956, to fasten the enemy's ships with chains whilst they were being attacked.]—*Yü Lan t'ung chien lei tsuan, c.* 16, *Wu pei lei*, p. 20*a*.

Sung Period (960 *to* 1280).—*Table VI.*

T'ai Tsu "also devoted his attention to the improvement of his army, and particularly to the training of his officers, who were called upon to pass an examination in professional subjects as well as physical exercises. A French writer said, forty years ago, that 'The laws of military promotion in the states of Europe are far from being as rational and equitable as those introduced by this Chinese ruler."—*Boulger, Short Hist.*, p. 35.

[T'ai Tsu and T'ai Tsung "by their good tactics and awe-inspiring military prowess, united the empire." As the Governors had too much power they brought the provincial troops to the capital, re-distributing them as palace guards, colonial troops, soldiers who cultivated military fields, and frontier guards. Military officers were given duty in the court, and riotous people were enrolled as soldiers. Training and promotion were regulated, the Emperor reviewing the army in person.]—*Kuang chih p'ing lüeh, Sung tai ping chih, c.* 25, p. 6*b*; *Yü Lan t'ung chien lei tsuan, c.* 16, *Wu pei pu*, p. 8*b*.

"In the Sung military system there were 4 [divisions], viz.: 1st, the *Chin Ping* (禁 兵), guards of the state; 2nd, the *Hsiang Ping* (廂 兵), guards of the provinces; 3rd, the *Hsiang Ping* (鄉 兵), who were selected from the people on the registers or enlisted from the natives; and 4th, the *Fan Ping* (蕃 兵), who were enlisted within the frontier or in the colonies, and combined to guard the frontier."—*Kuang chih p'ing lüeh, c.* 25, *Sung tai ping chih*, p. 6*b*. The danger of large numbers of unemployed soldiers was frequently felt; *v. ibid.* p. 7*b*.

[In 962, after a general review, the emperor discarded the weak members of the forces, and formed a body of trained soldiers from those who were proficient in the use of weapons on foot and archery on horseback (*Yü Lan t'ung chien lei tsuan, c.* 16, *Wu pei lei*, p. 8*b*). The registration system was re-modelled in 976; the age for enlisting was between 20 and 30, cheating or harbouring deserters being punishable with death (*Hsü wên hsien t'ung k'ao hsiang chieh, c.* 18*a*, *Ping k'ao shang*, p. 2*a*). In 1040 the Ho Pei and Ho Tung braves, the newly-enlisted archery corps of Shensi, and the troops stationed on the E. and W. of the capital were divided into groups of 25 men forming a *t'uan* (團), each *t'uan* being under a *Ya Kuan* (押 官). 4 *t'uan* formed a *tu* (都), squad, commanded by a *Tu*, commander, and assistant *Tu*. 5 *tu* were under a *Chih Hui Shih*, major. 60 was the age for retirement (*Yü Lan t'ung chien lei tsuan, c.* 16, *Wu pei pu*, p. 9*b*). In 1068–78, the soldiers in the empire numbered more than 1,000,000, and Shên Tsung instituted a process of selection by which the unfit were degraded to the rank of common people (*Kuang chih p'ing lüeh, c.* 25, *Sung tai ping chih*, p. 7*b*). In a family of 2 males one was enlisted, provided with weapons and taught warfare. In this way farmers and soldiers were equal in number (*ibid.* p. 8*a*). See also following extract.]

[In 1069, Wang An-shih established the system of tithing in villages, for mutual protection. Ten families made one *pao*. Each man of the *pao* had a bow and a crossbow, and was taught warfare (*Hsü t'ung tien ch'i yao, c.* 3, p. 1*b*). "A universal system of militia, under which the whole body of citizens were liable to military drill and to be called out for service in time of need." The scheme was "set aside, through the opposition" of the statesman Ssŭ-ma Kuang (*Giles, Hist. China*, pp. 80–1).]

"In the 8th year [1075] of the period *Hsi Ning*, Tsang Ching memorialized the throne on the 6 ways of shooting on horseback, viz., (1) direct shooting in a line with the horse's [neck]; (2) shooting on the back; (3) shooting from a horse moving in a curve; (4) shooting as one likes; (5) shooting in wild regions; (6) shooting in rotation. Each had a full explanation attached for the instruction of the archer. It was granted by imperial decree in the words: Let it be taught to archers."—*Sung shih ping chih, Tzŭ shih ching hua, c.* 76, p. 19*b*.

[For the various columns in use, see *Sung shih ping chih, P'ei wên yün fu, c.* 71, p. 45*a*; and *Sung ch'ao ying chên li, Yün fu shih i, c.* 71, pp. 4*a*, 4*b*.]

Kang Wang [Kao Tsung, 1127–63] "on the advice of his mother, who pointed out to him that 'for nearly 200 years the nation appears to have forgotten the art of war,' . . . devoted all his attention to the improvement of his army and the organisation of his military resources."—*Boulger, Short Hist.*, p. 43.

"The successful employment of cavalry by the Kins naturally led the Chinese to think of employing the same arm against them, although the inhabitants of the eighteen provinces have never been good horsemen. Kaotsong also devoted his attention especially to the formation of a corps of charioteers. The chariots, four-wheeled, carried twenty-four combatants, and these vehicles drawn up in battle array not only presented a very formidable appearance, but afforded a very material shelter for the rest of the army."—*Ibid.* p. 43.

"When Kao Tsung crossed over the river to the south he established a *Yü Ying Ssŭ* (御 營 司), commandant of an imperial division, who regulated military affairs. The soldiers under all the generals and surrendered robbers were under his command. Soon after, the *Ma Ssŭ* (馬 司), *Yü Chün* (餘 軍), and *Pa Tzŭ Chün* (八 字 軍) armies were combined to form 6 armies with 12 generals. Then the three *Ya* (衙) of the old system were resumed. Out of the 5 armies of *Yü Ying* (御 營), imperial divisions, 3 armies of *Yü Ch'ien* (御 前), vanguard divisions, were formed. But they were immediately changed to 5 armies of *Shên Wu* (神 武), and then again to travelling divisions of four *Hu Chün* (護 軍), guard divisions."—*Kuang chih p'ing lüeh, c.* 25, *Sung tai ping chih*, p. 8*b*.

"The military system of 張 燾, 1127, consisted of multiples of five-squads 伍, sections 甲, companies 隊, battalions 部, brigades 社, and divisions 都. The system of 傅 亮 made a company 100 instead of 125 men, and called a brigade a 軍."—*Ch. Rec.*, xv. 250.

"The soldiers of the Sung dynasty did not cultivate the land, but assembled in the capital. Those going and coming by turns to garrison the provinces and districts, were about 100,000 in number who were supplied [with food] by the magistrates. On ordinary days or in peaceful times the taxes became [so heavy] that they could not possibly be further increased. The *San Ssŭ* (三 司), three ministers [of War, Instruction, and Works] (*Ssŭ T'u, Ssŭ K'ung*, and *Ssŭ Ma*), were afraid not to supply them sufficiently. This defect was due to the soldiers not cultivating the land, but assembling in the capital and consuming the taxes and tribute offered from all quarters."—*Kuang chih p'ing lüeh, c.* 25, *Sung tai ping chih*, p. 7*b*.

"In the beginning of the period *Shao Hsing* [1131] when Wang Shu was Governor of Hsing Yüan and Prefect of Li Lo An, he enlisted the sons and brothers of families of strong build as soldiers, whom he named *Yi Shih* (義 士), volunteers, and appointed magistrates to be *Chün Chêng* (軍 正), lieutenants, and sub-magistrates to be *Chün Fu* (軍 副), sub-lieutenants. Every day a review was held in the districts, and every month in the departments. Before half a year had elapsed there were 500,000 soldiers. Thus in Ch'üan K'ou there were many worthy volunteers—all this was due to Shu."—*Ibid.* p. 8*b*.

"In the 31st year [of *Shao Hsing* (1161)] an imperial decree was issued ordering the people to be enlisted as volunteers. The way it was done was to select families containing 2 males. 10 families formed 1 *chia*, and 5 *chia*, 1 *tuan*. Each had a chief. Also a brave man was chosen out of a town to be general-in-chief. When they had leisure after farming they were taught the military art, while the government provided them with an allowance. Thus 7,000 or 8,000 people were enlisted. At that time the [regular] soldiers in all the provinces dispersed before seeing the enemy, whenever they passed through any district they plundered along the road, acting more cruelly than robbers or the enemy. But the volunteers, following their general, whether advancing or retiring, dared not commit the slightest violation, nor take the smallest thing from the people, for they cared for their families and homesteads."—*Ibid.* p. 8*b*.

[The commanders of the armies in San Ya, Chiang Shang, and Ssŭ Ch'uan were ordered to see that the troops corresponded to the numbers in the registers. Those who attempted fraud were to be punished under the law of receiving bribes.]—*Sung shih Ning Tsung chi, I'ei wén yün fu, c.* 79, p. 79*b*.

[In the time of Ning Tsung (1195–1225) the "Tea Merchant Troop" was formed out of the riotous tea merchants of Hu Peh, and proved to be a useful fighting force (*Hsü wên hsien t'ung k'ao hsiang chieh, c.* 18*a*, *Ping k'ao shang*, p. 8*b*). The "Brave Huai Force," formed in 1207, was disbanded in the following year, the soldiers returning to their farms (*ibid.* p. 8*b*). Various bodies of volunteers are mentioned under the years 1218, 1208–25, etc. "In the spring and summer they were allowed to work in the fields, and in the autumn and winter they went to drill" (*ibid.* p. 8*b*).]

"In the 1st moon of the 1st year [1205] of the period *K'ai Hsi* of Ning Tsung . . . the navy of Kan Pu was established, and in the 11th moon of the 3rd year [1230] of *Shao Ting* it was increased."—*Ibid. c.* 18 *hsia, Ping k'ao hsia*, p. 4*a*.

"In the reign of the Sung dynasty they used to brand soldiers when impressed for service on the back of the hand [刺 手 背]."—*Ch. Rev.*, xiv. 357. Also in *Giles, Dic.*, No. 12,412.

"The archaic custom of boarding out the horses and cattle of the Chief among his retainers survived . . . in the days of Chow, so far as the officers of the imperial stable were concerned. On this foundation, Wang-ngan-shi based a so-called 'Law for the protection of horses' [保 馬 法], a development of the local military system applied to the maintenance of cavalry horses. The people were invited to volunteer either to provide or to take charge of one or more horses for the army. Nominally 250 bundles of hay, and payments in cloth and money, were allowed for the maintenance of each horse; but while the charge was practically made compulsory, the allowances were embezzled by underlings, and as the dead or diseased animals had to be replaced at the keeper's expense, the opportunities for oppression were virtually endless."—*Simcox*, ii. 187.

[Some attention was paid to the repair of forts.]—*Sung shih Ho chü chih, P'ei wên yün fu, c.* 49, p. 167*b*.

[Military schools or training colleges were introduced by Jên Tsung (1023–64).]—*Shan t'ang k'ao so, Shih wu yüan hui, c.* 9, p. 14*a*.

[12th cent. Attempts were made to raise the standard of military efficiency by examinations in the theory and practice of archery and other warlike arts.]—*Simcox*, ii. 212. *Cf.* Access. Inst.

"Yao (Yang Yao), trusting in his strength, would not submit, and launched vessels in the lake (T'aihu) which struck the water with wheels and went along as if they were flying; they carried poles on the sides to break up the government vessels they met. Fei (Yao Fei) felled trees on the Chün mountain to make enormous rafts to bar the confluence of streams and scattered rotten wood and straw which the current floated down. Then choosing shallow places he sent good swearers to provoke the enemy by abusing them as they went along. The rebels, getting angry, came in pursuit, but the straw and wood obstructed the wheels of the vessels and prevented them moving. Fei at once sent soldiers to attack them and when the rebels fled up stream they were stopped by the rafts on which the government troops, safely sheltered against arrows and stones by extended hides, battered their vessels with big beams and destroyed them completely. Yao jumped into the water but Niu Kao seized and beheaded him."—*Sung Shih* or *Dynastic History of the Southern Sung*, ch. 365. Trans. Volpicelli.

"The Sung armies marched in five columns, the three first being armed with swords and spears, the two rear with bows and cross-bows, supported by 'artillery' [虎 蹲 弩 and

床子弩]. The 論衡 [*Mayers*, 795] also mentions a 十石弩."—*Ch. Rev.*, xv. 188.

[The rebel general 楊太 made use of vessels propelled by wheels during the wars of Kao Tsung of the After Sung Dynasty.]—*Ibid.* xi. 201.

[Drawbridges surmounted by triple stockades were thrown across rivers (964) and military maps were in use (*Yü Lan t'ung chien lei tsuan*, *c.* 16, *Wu pei pu*, p. 21*a*; *Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 18*a*, *Ping k'ao shang*, p. 8*b*), and spy-towers (*Wang Chih kuo lao t'an yüan*, *Tzŭ shih ching hua*, *c.* 79, p. 6*a*), whilst signal-flags are frequently mentioned (*Sung hui yao*, *Ko chih ching yüan*, *c.* 31, *Ch'ao chih lei*, p. 7*a*, p. 14*a*, etc.]

"Like Wang-mang the Sung innovator included a new militia law amongst his regulations. A revival of the local military levies was proposed in order to save the cost of regular armies. From every family including two or more adult males, one was required to serve as a soldier; the burden on the agricultural population was so great that numbers deserted their homes, and the law could only be kept in force at all by an expedient, which could scarcely have been proposed in any other country,—that of exempting the peasants from its operation, a measure which of course only made it bear the more oppressively on the other classes."—*Simcox*, ii. 187.

"In every war his [T'ai Tsu's] one command was that there should be no slaughter nor looting."—*Giles*, *Bio. Dic.*, p. 70.

Liao and Kin.

[There was a corps of 200 gunners called *P'o Hsi Yung*.]—*Liao shih Hsi hsia chuan*, *Tzŭ shih ching hua*, *c.* 75, p. 10*b*.

"Their [Kin] tactics, although of a simpler kind, were as superior to those of the Leaous as the latter's were to the Chinese. Their army consisted exclusively of cavalry, and victory was generally obtained by its furious attacks delivered from several sides simultaneously. The following description taken from Mailla's translation of the Chinese official history, gives the best account of their army and mode of fighting: 'At first the Niuche had only cavalry. For their sole distinction they made use of a small piece of braid on which they marked certain signs, and they attached this to both man and horse. Their companies were usually composed of only 50 men each, twenty of whom, clothed in strong cuirasses, and armed with swords and short pikes, were placed in the front, and behind these came the remaining thirty in less weighty armour, and with bows and arrows or javelins for weapons. When they encountered an enemy, two men from each company advanced as scouts, and then arranging their troops so as to attack from four sides, they approached the foe at a gentle trot until within a hundred yards of his line. Thereupon charging at full speed, they discharged their arrows and javelins, again retiring with the same celerity. This manœuvre they repeated several times until they threw the ranks into confusion, when they fell upon them with sword and pike so impetuously that they generally gained the victory."—*Boulger*, *Short Hist.*, pp. 41–2.

By the latter half of the 12th century, the Kin "had lost some of their skill and more of their liking for war. The troops on the frontier murmured at their hardships, and the people at the taxes imposed to provide for the extravagance of Oulo's successors."—*Simcox*, ii. 175.

[A condemned criminal was shot dead with arrows before the Emperor after he had worshipped his ancestors preliminary to going out to war. On return, prisoners were similarly dealt with.]—*San t'ung k'ao chieh yao*, *c.* 19, *Hsing chih*, p. 1*a*. See also Laws.

[Destroying the enemy's sails by means of rockets was one of the tactics adopted by Wang Tsung-pi in fighting against the Sung fleet under Han Shih-chung in 1130.]—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 18*b*, *Ping k'ao hsia*, p. 4*a*.

[Forts, city-walls, and moats were built for defensive purposes.]—*Szŭ shih ching hua*, *c.* 76, p. 18*b*.

[Flags were used for distinguishing divisions and for signalling.]—*Wên Mou-chao chin chih*, *Ko chih ching yüan*, *c.* 31, *Ch'ao chih lei*, p. 7*b*.

Mongol Period (1280 *to* 1368).—*Table* VII.

[The first few of the following extracts refer to the Mongol military organization by which the Sungs were overthrown, but before they had completely supplanted them in the government of the country (1280).]

Genghis "was, . . . a military genius of the very first order, and it may be questioned whether either Caesar or Napoleon can as commanders be placed on a par with him. Even the Chinese said that he led his armies like a God. The manner in which he moved large bodies of men over vast distances without an apparent effort, the judgment he showed in the conduct of several wars in countries far apart from each other, his strategy in unknown regions, always on the alert, yet never allowing hesitation or over-caution to interfere with his enterprise, the sieges which he brought to a successful termination, his brilliant victories, a succession of 'suns of Austerlitz,' all combined [to] make up the picture of a career to which Europe can offer nothing that will surpass, if indeed she has anything to bear comparison with it."—*Boulger*, *Short Hist.*, p. 55.

In 1211, "the Mongol army was led by Genghis in person, and under him his four sons and his most famous general, Chepe Noyan, held commands."—*Ibid.* p. 51.

"Mangu proclaimed that he would take the field in person, and that Kublai should hold joint command with himself."—*Ibid.* p. 60.

[Kublai and Uriangkadai crossed the upper course of the Great River on rafts.]—*Ibid.* p. 60.

"Although Kublai's instincts were martial, he gave up all idea of accompanying his armies in the field after his war with Arikbuka." But in his battle with Nayan, "Kublai commanded in person, and arranged his order of battle from a tower supported on the backs of four elephants chained together."—*Ibid.* pp. 71, 76.

"In the 1st moon of the 4th year [1267] of the period *Chih Yüan* of Shih Tsu [Kubkai] Mongolian soldiers were put on the register. If in a family there were 2 or 3 males, one was enlisted as a soldier; in those families having 4 or 5 males, 2, and in those having 6 or 7, 3 had to enlist."—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 18*a*, *Ping k'ao shang*, p. 2*a*.

"The Mongols built a large fleet of fifty war junks, with which they closed the Han river and effectually prevented any aid being sent up it from Hankow or Wouchang." In the campaign of 1270 "the flotilla was divided into two bodies, one composed of the fighting, the other of the storeships" "After this affair [Mongol attack on Siangyang] the Mongols pushed the siege with great vigour. . . . The Mongol commander, Alihaya, sent to Persia, where the Mongols were also supreme, for engineers trained in the working of mangonels or catapults, engines capable of throwing stones of 160 lbs. weight with precision for a considerable distance." "At the Sung capital the Mongols found an army of 130,000 men, but many of them were ill-trained, and the splendour of the camp provided a poor equivalent for the want of arms and discipline among the men." At Nanking "the Sung fleet was almost annihilated and 700 war-junks were taken by the victors."—*Boulger*, *Short Hist.*, pp. 64–7.

"As the Mongols were then, not only the best archers in the world, but used the strongest bows, the destruction they wrought was considerable, and soon threw the elephants [of the Burmese] into hopeless confusion."—*Ibid.* p. 74.

"In the 7th year [1270] of *Chih Yüan* of every 10 males one had to be a soldier; but as regards families, one in every 20 had to be soldiers. They enlisted at about 20 years of age. If the soldier's family were rich merchants or great traders, one was also enlisted and was called *Yü Ting Chün* (餘丁軍). They were free at the end of 15 years' service. Some *chün* selected from workmen were called *Chiang Chün* (匠軍), workmen force, and some *chün*, selected from sons or brothers of feudal princes or generals, *Chih Tzŭ Chün* (質子軍) or *T'u Lu Hua Chün* (禿魯華軍). This was the system formed temporarily when there was touble."—*Kuang chih p'ing lüeh*, *c.* 25, *Yüan tai ping chih*, p. 9*a*.

"The Mongols owed their military success to their admirable discipline and to their close study of the art of war. Their military supremacy arose from their superiority in all essentials as a fighting power to their neighbours. Much of their knowledge was borrowed from China, where the art of disciplining a large army and manœuvring it in the field had been brought to a high state of perfection many centuries before the time of Genghis. But the Mongols carried the teaching of the past to a further point than any of the former or contemporary Chinese commanders, indeed, than any in the whole world had done; and the revolution which they effected in tactics was not less remarkable in itself, and did not leave a smaller impression upon the age, than the improvements made in military science by Frederick the Great and Napoleon did in their day. The Mongol played in a large way in Asia the part which the Normans on a smaller scale played in Europe."—*Boulger*, *Short Hist.*, p. 51.

["Marco Polo says that Kublai Kuan had a body-guard of 12,000 horsemen, divided into 4 bodies of 3,000, each of which in turn mounted guard at the palace, for three days and nights."]—*Yule*, *Marco Polo*, i. 366.

"In the time of Shih Tsu [1260–95] the *Wei* (衛) guards were established in order to represent the 5 directions. So then there were the imperial body-guard and guard. After this the increasing and decreasing of [changes in] the *Chin Ping* (禁兵), palace guard, were more frequent than before. Moreover the *Su Wei* (宿衛), relief guard of the palace, carrying weapons (bow-cases and quivers), and stationed around the imperial palaces, were used in various ways. Those used at a general Court meeting were called *Wei Su Chün* (衛宿軍), guards; at the great sacrifices, *Yi Chang Chün* (儀仗軍), advance guard; when the emperor went on tour, *Hu Tsung Chün* (扈從軍); those who guarded the imperial store of cross-bows, *K'an Shou Chün* (看守軍); those used to give the alarm at accidents at night, *Hsün Lo Chün* (巡邏軍), sentinels; and those employed to suppress disturbances when the annual grain revenue by the grain canal arrived at the capital, *Chên Ya Chün* (鎮壓軍), police."—*Kuang chih p'ing lüeh*, *c.* 25, *Yüan tai ping chih*, p. 9*b*.

"In the beginning of the Yüan dynasty the rank and salary of all military officers were proportioned to the number of soldiers they had command of. Those who were in command of 10,000 men were called *wan hu*, '10,000 families'; of 1,000, *ch'ien hu*, '1,000 families'; and of 100, *pai hu*, '100 families.' In the time of Shih Tsu [1260–95] the system of titles was but little organized. Inside the capital, 5 *wei* (衛), guards, were established to control all the *su wei* (宿衛), and to all the body guards a *Tu Chih Hui Shih* (都指揮使), General Commandant, was appointed. Of those outside the capital, for each 10,000 families one *Tsung Pa* (總把), sergeant, was established; to 100 families, one *T'an Ya* (彈壓), keeper of the peace. The *Shu Mi Yüan* controlled them all. When the Empire was troubled it was established to perform the duties of that institution; when it was at peace, it was abolished."—*Ibid.* p. 9*a*. See also *Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 18*a*, *Ping k'ao shang*, p. 10*a*.

"Some soldiers took their names from their duties (arts), viz.: gun-force (artillery); cross-bow force (archers); marine force (marines). But the register of soldiers was an important item in military affairs. The Chinese could not know the number [of soldiers inscribed]: it was only known by one or two of the great ministers near the Emperor who had sole charge of military affairs, or by the *Shu Mi*, cabinet in charge of military matters. Thus, though the Yüan Kingdom lasted for 100 years the number of soldiers both inside and outside the capital was unknown."—*Kuang chih ping lüeh*, *c.* 25, *Yüan tai ping chih*, p. 9*a*.

[Volunteer forces were enrolled: see *Yüan shih Shun Ti chi*, *Tzŭ shih ching hua*, *c.* 74, p. 10*b*; *Yüan shih ping chih*, *ibid.* p. 10*b*.]

"Of the soldiers, at first there were the Mongolian forces, and the *T'an Ma Chih* (探馬赤) forces. The former were natives of the kingdom and the latter natives of the colonies. The system was that in a family males above 15 and under 70 years of age were all enlisted. Ten men formed one *p'ai* (牌); over each *p'ai* a chief (牌頭 *p'ai t'ou*) was appointed. When they were mounted they were prepared for action; and when dismounted, they went to farm or to tend cattle. Little boys approaching maturity were also enlisted and called *Chien Ting Chün* (漸丁軍), 'first time enlisted force.' When the Empire was once more at peace and the less worthy of the common people were not allowed to be soldiers [those chosen] were called *Han chün* (漢軍), 'Chinese troops.'"—*Kuang chih p'ing lüeh*, *c.* 25, *Yüan tai ping chih*, p. 9*a*.

[Soldiers on the frontier stations cultivated the ground during times of peace.]—*Yüan shih shih tsu chi*, *P'ei wên yün fu*, *c.* 23*a*, p. 202.

"In the 15th year the *Shu Mi Yüan* memorialized the throne requesting that orphans and maimed who had no body for military service should be allowed to find trustworthy substitutes."—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 18 *shang*, *Ping k'ao shang*, p. 2*a*.

"After the death of Liu Chün in battle his son Chien squandered his property by paying (engaging) hundreds of warriors who disguised themselves as merchants or workmen and entered the enemy's territory. In this way he at length got revenge."—*Yüan shih*, *Yüan chien lei han*, *c.* 357, *Ch'an yeh pu*, p. 20*b*.

"[Lin Chêng] constructed 5,000 ships and trained them for naval warfare. Though it rained they were not allowed to be dismissed [from drill]. He also drew ships on the ground for training purposes. In this way he procured a trained naval force of 70,000."—*Yüan shih Lin Chêng chuan*, *Tzŭ shih ching hua*, *c.* 76, p. 19*b*.

"For this is a custom of the Tartars, that, before they join battle, they all unite in singing and playing on a certain two-stringed instrument of theirs, a thing right pleasant to hear . . . until the great Naccara of the Prince is heard to sound. As soon as that begins to sound, the fight also begins on both sides, and in no case before the Prince's Naccara sounds, dare any commence fighting." Nakkara = nagárah = kettle-drum. Yule says (p. 331) that the two-stringed instrument was probably the Kalmak "*balalaika*, or two-stringed lyre."—*Yule*, *Marco Polo*, i. 329 (3rd ed.).

"So then, as they were thus singing and playing, though ordered and ready for battle, the great Naccara of the Great Khan began to sound. And that of Nayan also began to sound. And thenceforward the din of battle began to be heard loudly from this side and from that. And they rushed to work so doughtily with their bows and their maces, with their lances and swords, and with the arblasts of the footmen, that it was a wondrous sight to see. Now might you behold such flights of arrows from this side and from that, that the whole heaven was canopied with them and they fell like rain. Now might you see on this side and on that full many a cavalier and man-at-arms fall slain, insomuch that the whole field seemed covered with them. From this side and from that such cries arose from the crowds of the wounded and dying that had God thundered, you would not have heard Him! For fierce and furious was the battle, and quarter there was none given."—*Ibid.* i. 338.

[For tablets of authority given to officers see Laws of Intercourse.]

Ming Period (*Restoration of Chinese Supremacy*) (1368 *to* 1644).—*Table VIII.*

"The soldiers . . . are in two sorts and manners, the one . . . such as are naturals [natives] of the city where they have their charge, and these be called in their language Cum; in this place the son doth succeed his father, and for lack of an heir, the king doth provide one in the dead man's place. Every one hath his name written upon the post of his door, and the place appointed whither he shall go when occasion shall serve. . . . The other sort . . . are strangers, and are consorted for years or months to serve. These be they that ordinarily make their watches, musters, and join companies for the receit [*sic*] of the captains: these be called in their language Pon. These go from one place to another, whereas they are commanded to go. One captain and ancient [lieutenant] hath charge of a thousand, and a meaner captain with his ancient a hundred. . . . Every chief or petty captain of these, hath his house upon the city wall, and his name put upon it, and there he dwelleth so long as the wars endureth."—*Mendoza*, *Hist.*, i. 87.

"In the 1st year [1368] of the reign Hung Wu, the Emperor having conquered Chi Ch'ing abolished the commander and general of all divisions and established the *Wu Tê*, *Lung T'ao*, and 17 other *Wei* (衛). Afterwards the *P'ing Chang Tsung Kuan*, and other titles established by the Yüan dynasty were abolished. It was settled that a commander of 5,000 soldiers should be called *Chih Hui* (指揮) major; of 1,000 soldiers, *Ch'ien Hu* (千戶), '1,000 families'; of 100, *Pai Hu* (百戶), '100 families'; of 50, *Tsung Ch'i* (總旗), banner-in-chief; and of 10, *Hsiao Ch'i* (小旗), petty banner."—*Yü lan t'ung chien lei tsuan*, *c.* 16, *Wu pei pu*, p. 10*a*.

"The *Fu Nei*, *Wei*, and *So* (*i.e.*, the metropolitan soldiers) were distributed to the important passes of each province. Each *wei* consisted of 5600 soldiers, and each *so* of 1000 families of 1120 men; each *so* of 100 families of 112 men; to each of those under 100 families, 2 *Tsung Ch'i*, leader of 50 men, and 10 *Hsiao Ch'i*, leader of 10 men, were appointed. They were combined together to form files and companies. A *Chih Hui Shih*, major, commanded them all. A *Tu Tu* kept the census of the soldiers but had no power to control them. The Board of War had power to detach soldiers but did not transact military affairs. This was the method adopted to limit the power of the military."—*Kuang chih p'ing lüeh*, *c.* 25, *Ming tai ping chih*, p. 9*b*. See also *Yü Lan t'ung chien lei tsuan*, *c.* 16, *Wu pei pu*, p. 10*a*.

"Under the military system of the Ming dynasty there were the metropolitan soldiers *fu nei*, *wei*, and *so*. Those stationed on the frontier were called *pien ping* (邊兵), frontier soldiers. Of the metropolitan soldiers there were 2 classes: the *chin i* (錦衣), 'embroidered coats' and others consisting of 12 *wei so* (衛所), guards of the palace—that was the south army of the Han dynasty; the *liu shou* (留守), guards left at important posts, and others consisted of 48 *wei so* which were used to guard the city walls of the capital—that was the north army of the Han dynasty."—*Ibid.* p. 9*b*.

"In the 7th moon of the 3rd year [1370] of the reign Hung Wu . . . 24 naval stations were established; each station had 50 war-junks with 350 military officers to control them. Whenever they were sent on an expedition the marines were increased and drilled."—*Hsü wên hsien t'ung k'ao hsiang chieh*, *c.* 18*b*, *Ping k'ao hsia*, p. 4*b*.

"A special system of coast defence" was necessitated by the Japanese descents upon the shores of Che kiang.—*Giles*, *Bio. Dic.*, p. 194.

"In the 5th moon of the 1st year [1403] of the reign Yung Lo of Ch'êng Tsu the first captain of Fu Kien was ordered to build 137 sea-going war junks, and the 2 garrisons of Su Chou and Chên Hai were also ordered to increase the number of their war junks and select soldiers to guard [the country] against the Japanese."—*Hsü wên hsien t'ung k'ao hsiang chieh*, c. 18*b*, *Ping k'ao hsia*, p. 4*b*.

"In the 4th moon of the 2nd year [1404] [of Yung Lo], the garrisons, the fields allotted the soldiers, and the soldiers guarding the city wall were re-organized. Regard was had to places being level, dangerous, important, or isolated in order to distribute the number of soldiers at the stations and soldiers on guard. If a frontier was dangerous and important the soldiers on guard were allotted in greater numbers than the soldiers at the stations, and if an inland station was level and isolated the soldiers at the stations were allotted in greater numbers than the soldiers on guard, and if a place though dangerous and important yet was difficult to transport provision to, the soldiers at the stations were allotted in still greater numbers."—*Ibid.* p. 3*b*.

"At the close of the reign Yung Lo [1425] the soldiers of the prefectures were collected together to invade the north. On returning troops were assembled for drill. The 2 troops *San Ch'ien* and *Shên Chi* being added made 3 great troops, but they were the soldiers of 5 great prefectures. At the close of the reign Chêng T'ung [1450] they were changed to 10 *t'uan* troops; in the reign Hung Chih [1488–1506] increased to 12 *t'uan* troops, and in the reign Chêng Tê [1506–22] E. and W. *Kuan T'ing* [official pavilions for reviewing troops from] were added. Though the names of the 5 troops were not lost the system of the 5 *fu* still existed."—*Kuang chih p'ing lüeh*, c. 25, *Ming tai ping chih*, p. 10*b*.

Hsüan Tsung "took the field in person."—*Boulger*, *Short Hist.*, p. 90.

"In the reign Ching T'ai [1450–57] the President of the Board of War, Yü Chien, distributed the troops and horses in the capital to join the 5 armies and 3,000 *Shên Chi* troops. Though each had a Brigade General to command it, one had no power to control the other. When an expedition took place, soldiers were detached from the various armies, so the soldiers and generals did not know each other. Moreover, their hands were not trained in the art of war and the use of weapons; on ordinary days (generally), their feet were not used to [rapid] movement; their eyes did not recognize the signals or flags; nor their ears the sound of the cymbal or drum. Sending them to meet the enemy was like sending sheep to attack wolves. Now, from all the troops and armies, 150,000 soldiers were selected and divided into 10 large *t'uan* bodies of militia. To each troop a *Tu Tu*, Lieutenant General, was appointed in command. The posts of sergeant or leader of a company and the leaders of large and small troops were filled by selecting men of talent, who were clever and brave. They had power one to control the other. When the *t'uan* was at drill each leader led his own troop to ascertain whether they knew one another or not, and to see whether or not they were versed in military art. In this way the general was able to know which of his soldiers were strong or weak and the soldiers were accustomed to the orders given by the general; respect was shown by one to the other; and the soldiers and generals were known to each other. The officers and soldiers, being well trained, easily combined together. Orders issued by one would easily command them. The system of *t'uan* troops was then introduced."—*Kuang chih p'ing lüeh*, c. 25, *Ming tai ping chih*, p. 10*a*.

The improper management of the allowances for the armies was also rectified. "In the reign Ching T'ai the *t'uan* system had been established; and when 24 years had elapsed the number of soldiers on the register was decreased by 75,700 odd, but the soldiers' allowances remained the same." The President of the Board of War [memorialized the throne] and had the brigade-generals and others guilty of fraud punished.—*Hsü wên hsien t'ung k'ao hsiang chieh*, c. 18*a*, *P'ing k'ao shang*, p. 4*a*.

"When Ying Tsung resumed the throne [1457] he abolished the *t'uan* troops and reinstituted the 3 large troops (三大營)."—*Kuang chih p'ing lüeh*, c. 25, *Ming tai ping chih*, p. 10*a*.

Among the reforms of Ying Tsung's reign may be named "the establishment of military schools for teaching archery and horsemanship."—*Boulger*, *Short Hist.*, p. 92.

"To guard against the descents of these enterprising islanders [Japanese] the Chinese had erected towers of defence along the coast, and had called out a militia which was more or less inefficient."—*Ibid.* p. 95.

"In the 2nd moon of the 3rd year [1569] of the reign Lung Ch'ing of Mu Tsung, the 2 *Chên* (鎮) brigadier-generals at the entrepot of *Chi* (薊) and *Ch'ang* (昌) were ordered to establish 7 divisions of chariot troops."—*Hsü wên hsien t'ung k'ao hsiang chieh*, c. 18*b*, *Ping k'ao hsia*, p. 5*b*.

"At this juncture [when the Manchu army was marching on Peking] Taitsong divided his army into eight banners, which still remain the national divisions of the Manchu race."—*Boulger*, *Short Hist.*, p. 113. But see *infra*.

Taitsong "devised a list of military and civil dignities for those Chinese who attached themselves to his fortunes."—*Ibid.* p. 113.

"The Eight Banners were first established in the year 1614, two years before the name 'Manchu' was given to the State of which Hetuala was the nucleus. Each 300 men were enrolled under a *tso-ling* or *nuru changyin* (equivalent to the Chinese *shon-pei* or captain), and over every five *tso-ling* was set a *ts'an-ling* or *ghiara changyin* (equivalent to the Chinese *ts'an-chiang*, *yuchi*, or lieutenant-colonel). Over every five *ts'an-ling*, again, was set a *tut'ung* or *kusain changyin* (equivalent to the Chinese *tsung-ping* or brigade-general), who thus commanded 7,500 men. Each *tut'ung* was assisted by two (left and right) *fu-tut'ung* or *meire changyin* (equivalent to the Chinese *fu-chiang* or adjutant-general). The eight *tut'ung* were in command of the Eight Banners, or 60,000 men. It was not until the year 1660 that the above Chinese translations were employed instead of the Manchu equivalents given after them; moreover, the word *ngêchên* was, until the year 1723, used instead of the word *changyin*. At first the Chinese and Mongols admitted into the banner organization were not enrolled into special banners; and, instead of the 200 Manchu *tso-lings*, each in command of 300 men, there came to be 400 *tso-lings*, each commanding 150 men, of which total 308 were Manchu, 76 Mongol, and 16 Chinese. In 1635 it became necessary to create eight additional Mongol banners of 16,840 men, and in 1642 eight additional Chinese banners of 24,050, which last absorbed the Chinese troops under the three Chinese generals K'ung (孔), Kêng (耿), and Shang (尚), who earliest came over to the Manchu interest. From this date the *tso-lings* ceased to have any fixed number. In addition to the Manchu, Mongol, and Chinese banners above described, there are the Solon, Sibê, and Chakhar military establishments. When the Emperor Shun-chih fixed his capital at Peking, all the Eight Banners were with him, and his minister Kholokhui was left in charge of Moukden. Each of the three armies engaged in subduing Shen Si, Shan Tung, and Kiang Nan consisted of 50,000 or 60,000 men; so that, including the Peking Guards (宿衛), there must have been about 200,000 men enrolled in the banners at this date, the Khorch'ins and a few other Mongols being the only feudatories as yet enrolled. Afterwards, those kept at Peking were drafted into the Imperial Guards (禁旅), whilst those on service in the Provinces were drafted into the Garrison (駐防) categories, the total number still remaining at 200,000, though the *tso-lings* were increased. Hence, when, in K'ienlung's time, we hear of 681 Manchu *tso-lings* at Peking, with 204 Mongol, and 266 Chinese *tso-lings*, besides the 840 garrison *tso-lings*, we must remember that each of these 2,000 or so of *tso-lings* only had from 80 to 90 men under his command."—*Journ. N.-C.B.R.A.S.*, N.S. xxii. 3–5.

"In the 5th year [1616] of the reign T'ien Ming the officers of the 8 Banners were changed, and a post of Brigade-General established divided into 3 classes, with colonel, lieutenant-colonel, and major on the same system. All *Niu Lu O Chôn* acted as officers of the guard. Each *Niu Lu* had 4 lieutenants under him."—*Huang Ch'ao Wên hsien t'ung k'ao hsiang chieh*, c. 18, *Ping k'ao*, p. 1*b*.

"Tingbi, with the wrecks of the Chinese armies, succeeded in doing more for the defence of his country than had been accomplished by any of his predecessors with undiminished resources. He built a chain of forts, he raised the garrison of Leaoutung to 180,000 men, and he spared no effort to place Leaouyang, the capital of that province, in a position to stand a protracted siege."—*Boulger*, *Short Hist.*, p. 108.

"In the reign T'ien Tsung [1627–36] the *Pu Yu Lu* division was established. This was the beginning of the Guards' Division."—*Huang ch'ao Wên hsien t'ung k'ao hsiang chieh*, c. 18, *Ping k'ao*, p. 5*b*.

"In the 2nd year [1632] of the reign Ts'ung Tê the Chinese troops were divided into 2 Banners. In the 7th year [1633] of the reign T'ien Tsung an order had been issued that in Manchuria any family with 10 Chinese males was to receive a suit of cotton armour. There were in all, 1580 families commanded by the leader of the old Chinese troops and filling vacant places in the Banners. At this time the Banners were divided into two right and left wings. Their standards were of a black colour. To each Banner one *Ku Shan o Chên* was to control the *Niu Lu*."—*Ibid.* p. 2*a*.

Appliances.—[Stamped or inscribed warrant, tablets or tallies were issued as proof of authority to officers. They were endorsed by the Court.]—*Ibid.* p. 2*a*.

[The single-thilled chariot was first used in 1372. The Duke of Wei had 800, and the Duke of Tsao, 1000.]—*Ibid.* p. 5*b*.

[Importance continued to be attached to the reservation of grounds for drills and reviews: see the accounts given under the years 1373, 1403–25, 1535, etc., in *ibid.* p. 2*a*.]

At the defence of Tsinan (1399) the governor "set all the artists in the place to work to paint as many portraits as they could of the Emperor Hongwou, and these, when completed, he caused to be hung from the ramparts, knowing that the prince would not dare, both out of respect to his father's memory and also for fear of offending public opinion, to order his troops to fire upon them. The ruse was completely successful."—*Boulger*, *Short Hist.*, p. 88.

[In 1449 better training in the use of swords and shields for defence against arrows shot from bows was advocated. The *Shên Chi* Divisions used the rifle, but it was regarded as being liable to be rendered useless by sudden downpours of rain.]—*Ibid.* p. 2*a*.

[The Chinese learnt how to cast cannon from the Jesuits in the 17th century. *Cf.* WEAPONS.]—*Tcheng-ki-tong*, p. 189.

"In 1643 the Imperial general was reduced to beg the assistance of the European Tang-ja-wang (Adam Schall), who understood the use of artillery and the construction of bridges of boats. In accepting the command, the general had counted on the private resources of his family and himself; but on arriving at the seat of war, he found all his possessions in the hands of the rebels, and had no means of paying his troops; no assistance was to be obtained from the imperial revenues, which were distributed by the eunuchs among their own families and supporters. His force was thus paralyzed, and Li-tse-ching, the rebel chief, pressed on victoriously to the gates of Peking."—*Simcox*, ii. 250.

"The Chinese beacon towers of the Ming times are well described by Persian travellers in the 15th century. See Dr. Zenker's translation of the *Khatai Nameh* in the *Zeitschr. f. d. Kunde des Morgenlandes*, xv. band. These towers could only be ascended by rope ladders."—*Bretschneider*, *Arch. and Hist. Researches*, etc., p. 17.

Manchu Period (1644 *to* —).—*Table IX.*

"As the Chinese were in this respect [military science] in the thirteenth century, so we find them now; at least, the change is so trifling as to be hardly worth noticing."—*Ch. Repos.*, v. 166.

"It does not appear that the Chinese have made great progress in that art [warfare] since this early epoch [Feudal Period]. Excepting the fire arms which they have now adopted, they have remained stationary."—*Journ. Asiat.*, 1843.

"In speaking of the army of China, the chief distinction to be observed is between the Bannermen, who may be said to be the force of the usurping family, and the troops of the Green Standard, who are, with occasional exceptions amongst the officers above the rank of subaltern, entirely Chinese."—*Ch. Repos.*, xx. 252.

"Manchu Military Organization.—*Pa Ch'i* 八旗.—The Eight Banners. The army specially appertaining to the Manchu dynasty is known as the Eight Banners, from the organization introduced by the early sovereigns of the reigning family. These Banners are distinguished by the colours enumerated below, and are farther divided into two classes, viz., the Three Superior and the Five Inferior Banners, as follows:

i. Bordered	Yellow	鑲黃	上三旗 The Three Superior Banners.
ii. Plain	„	正黃	
iii. „	White	正白	
iv. Bordered	„	鑲白	下五旗 The Five Inferior Banners.
v. Plain	Red	正紅	
vi. Bordered	„	鑲紅	
vii. Plain	Blue	正藍	
viii. Bordered	„	鑲藍	

The nationalities composing the Banner force are three in number, viz., Manchu, Mongolian, and Chinese, the latter, known as *Han Chün* 漢軍, consisting in the descendants of those natives of Northern China who joined the Manchu invaders during the period of their contest with the Ming dynasty in the early part of the seventeenth century. Each nationality bears the Manchu designation of *Ku-sai* (written *Ku-shan* 固山); and as a complete division of each nationality exists under the colour of each of the Banners enumerated above, there are in fact 24 banners, or eight *Ch'i* divided into three *Ku-sai* each. Under one or other of these divisions all living Manchus, and all descendants of the Mongolian and Chinese soldiery of the Conquest, are enrolled. Each banner of the Manchu and Mongolian nationalities, again, is divided into a *nei ch'i* 內旗 and a *wai ch'i* 外旗, *i.e.*, an Inner and Outer division. The inner division is composed of the so-called *pao-i* 包衣, from the Manchu *bo-i*, signifying a bondservant, who are specially bound to render suit and service. The *pao-i* of the three Superior Banners appertain to the *Nei Wu Fu* or Imperial Household, whilst those of the remaining five Banners are attached to the various Princely houses or *Wang Fu* [see GEN. GOVT.]. The Banners constitute, in fact, the population of Peking, with offshoots in various provincial garrisons: and a certain number of the adult males of the force receive pay as members of one or other of the military corps into which they have, from time to time, been organized, in addition to the pittance they receive as soldiers of the Banner."—*Mayers*, *Ch. Govt.*, pp. 51–2.

"The 1st, 3rd, 4th and 7th [Banners] form the left, the remainder the right wing. The chief superintendence of all Bannermen vests in the Metropolitan office of the *T'u-tung*, or Captains-general of the Banners, of whom there are 24, or one to each Banner of each race—of the same nation, generally, as the Bannermen they command, though not necessarily of the same corps or Banner. Their jurisdiction is of both a civil and military character, but it must be remembered that although all the Bannermen in China Proper, as well as almost all Manchus, and certain of the Mongols . . . are more or less subject to the above arrangement, they do not all perform military service; and that such as do not, and are not either in the civil service of the Banner establishments, receive no support from the state, unless they belong to the three Banners superior."—*Ch. Repos.*, xx. 252.

"The General Head Quarter Office of the Banners is designated the *Chih Nien Ch'i* 值年旗, to which one *Tu-t'ung* (see below) from each Banner is annually appointed to do duty. All correspondence relating to the Banner force as a whole passes through this office. The official organization of the Banners is as follows:—*Tu-t'ung* 都統.—Lieutenant-General; . . . One to each *kus-ai* or national division of a Banner. *Fu Tu-t'ung* 副都統.—Deputy Lieutenant-General; . . . (For the *Fu Tu-t'ung* of the provincial Banner garrisons, see below.) *Yin Wu Ts'an-ling* 印務參領.—Adjutant-General; . . . Two to each of the twenty-four Banners (except the Mongolian, which have but one). Selected from the Colonels (see below). *Hsiao-Ch'i Ts'an-ling* 驍騎參領.—Colonel; . . . Has the general civil control over a sub-division or *Cha-la* 甲喇, of which there are five in each of the Manchu and Han Chün Banners. In the Mongolian Banners there are but two of these sub-divisions. *Fu Hsiao-Ch'i Ts'an-ling* 副驍騎參領.—Lieutenant-Colonel; . . . One to each *Cha-la* or sub-division (as above). *Yin-Wu Chang-ching* 印務章京.—Adjutant; . . . Conducts the civil correspondence of the Banner. Although less in degree of rank than the *tso-ling* (see below) this officer is considered as filling the higher post, and is promoted from it to the rank of lieutenant-colonel. The term *chang-ching* is a corruption of the Manchu word *chan-yin*, signifying an 'assistant' [see GEN. GOVT.] *Wei Yin-Wu Chang-ching* 委印務章京.—Assistant Adjutant. Appointed from the grade of *Hsiao Ch'i Hsiao* (see below). *Tso-ling* 佐領.—Captain; . . . Of this rank there are, in each Manchu banner, from 70 to 80 officers, and in each of the Han-chün Banners, from 30 to 40, according to the strength of the corps. Acting under the immediate command of the *ts'an-ling* (Colonel; see above) of the *cha-la* to which he belongs, the *tso-ling* is specially charged with the control of some 70 to 100 of the households of the Banner. The *tso-ling* hold in some cases their appointments by hereditary right, either as *Hsün Chiu* 勳舊 or *Shih Kuan* 世管 *Tso-ling*. Those who become entitled to appointment by various processes of selection are designated *Kung Chung* 公中, *Fên Kuan* 分管, and *Lun Kuan* 輪管 *Tso-ling*. *Pan Ko Tso-ling* 半個佐領.—Half Tso-ling. A title formerly in use but now almost, if not entirely, obsolete, to designate the captains of companies numbering less than one hundred strong. *Hs'iao-Ch'i Hsiao* 驍騎校.—Lieutenant; . . . Officers of this grade are drawn upon to fill the post of *Pu Chün Hsiao* 步軍校 [Lieutenant of Police in Peking]. Their post in the Banner is then filled by a 'deputy,' of lower rank, with the following title: *Wei Shu Hsiao-Ch'i Hsiao* 委署驍騎校.—Sub-lieutenant; . . . Promoted from the post of *pi-t'ieh-shih* 筆帖式 [Official Writer,—see GEN. GOVT.]. *Ling-ts'ui* 領催.—Corporal (non-commissioned officer). Acts under the orders of *Hsiao Ch'i Hsiao*. *Ma Chia* 馬甲.—(Manch. *Ukêsén*). First-class Private Soldier, receiving 3 Tls. per mensem. *Ao-êrh-pu* 敖爾布.—(Manch. *Orbo*). Second-class Private Soldier, receiving 2 Tls. per mensem. Also called *Lu-chiao Ping* 鹿角兵, or *chevaux de frise* bearer, from his

traditional duty on parade and in action. In the *Han Chün* Banners only. *Yang Yü Ping* 養 育 兵.—Supernumeraries or juniors, awaiting appointment to the position of second or first class private, as vacancies occur. In all the Banners. *Hsien San* 閒 散.—(Manch. *Sulá.*) Bannermen at large, without position or pay."—*Mayers, Ch. Govt.*, pp. 52–4.

"There is no doubt that the principles of military organisation perfected by the Manchus were conceived in the same general spirit and form as those of their ancestors the Nüchêns, who imperially ruled North China from 1113 to 1234; and these latter again drew part of their inspiration from a distantly allied race called the Kitans, who had ruled much the same territory as northern emperors, and on an equal footing with the rulers of South China, from 907 to 1112. As modified by the early Manchu chieftains and emperors, the organisation is as follows:—There are eight Manchu banners, in pairs of four colours (plain and bordered), three banners being of higher caste than the other five, like the three Kitan 'superior tents.' Thus, with the assimilated Mongols and the descendants of 'faithful' Chinese, there are twenty-four banners, numbering in all from 200,000 to 220,000 men. Just as every ordinary Chinaman belongs to a *hien*, and has his domicile registered in the office of his 'father and mother mandarin,' so every bannerman belongs to what the Manchus call a *niuru*, and has his military domicile registered at the head-quarters of his colonel, who thus stands in the same (or a somewhat similar) patriarchal relation to his military people, be they princes, officers, or common troopers, as does the magistrate to his civil population. About 150 years ago, when the banner organisation was at its best, there were 679 Manchu, 227 Mongol, and 264 Chinese colonels (or *tsoling*, the other current name for the Manchu *niuru*), each in theoretical command of 300 families (troopers); but the actual total has always been at about two-thirds of the theoretical, and the natural increment of able-bodied men has from economical considerations been drafted off into the categories of expectants, supernumeraries, and so on, drawing less or no pay. With this limited force of archers and spearmen China was conquered, for artillery was only used on rare occasions; but of course local troops had even from the first to be forced or cajoled to assist the comparatively small bodies of bannermen, who acted rather as 'stiffeners' than as the main body, just as the bulk of our Indian and African armies are of native races, merely 'stiffened' in the proportion each emergency requires, with a backbone of British soldiers. The *élite* of the banner forces, always more than half, has from the first served to hedge in majesty at and around Peking; but at certain vital provincial centres, such as Canton, Foochow, Hangchow, etc., banner garrisons with their families, forming a sort of hereditary privileged caste within the inner walls, have been kept under a Tartar General, theoretically in order to 'keep down' the turbulent 'Man-tsz' or Chinese, and to hold the keys of the city gates. The feeding of these privileged soldiery is a first charge upon the revenues of China, and it is thus only natural that so expensive an incubus should severely test the loyalty of the Chinese majority not enjoying any such banner privileges. For many years past 7,000,000 taels has been the fixed 'first' appropriation for those at Peking alone, and a 'supplementary' vote of at least 1,000,000 usually follows. As all this money comes from the provinces, *à fortiori* the latter have to find the money for their own local bannermen and for the Chinese armies as well. If the finances of China, so flourishing 100 years ago, had not been shattered by a succession of rebellions and foreign troubles; if these bannermen had maintained their military virtues, and their robust simplicity and manliness, the Empire would neither have felt the burden severely, nor grudged the necessity of this heavy charge: the preservation of order, and a national sense of pride in power and prestige, would have amply compensated for the price paid to a few privileged keepers of the peace and the purse-strings. . . . But, unhappily, the otiose bannermen, both at Peking and in the provinces, have degenerated into idle, flabby, and too often opium-smoking parasites; they have neglected even to keep up their archery, which in any case is useless in these days of magazine rifles, though it might have nourished a wholesome muscular force if persisted in. In the provinces they are often, practically, honourable prisoners, rigidly confined within the limits of the city walls, in the midst of a hostile population speaking a dialect which bannermen must learn in addition to their own if they wish even to purchase a cabbage in the streets; and the Tartar General, who nominally outranks the Chinese Viceroy, is really often sneeringly regarded as an 'old frump,' or a 'drunken swab.' . . . Of course this picture requires different lights and shades according to locality, for there are some excellent Tartar Generals as well as many brave banner soldiers; but in the main it is, I think, correct."—*Parker, China*, pp. 244–7.

"Though the Imperial Guards were in eight banners under eight *tut'ungs*, yet only the troopers, corporals and armourers of the Cavalry were enrolled under their command; whilst the Advance Force Guards, Escort and Musketry were each under a separate Commander-in-chief; the Guards alone being, amongst these last four, under the command of the Captain of the Imperial Body Guards, and no Chinese being admitted into any one of the four classes. [Each Manchu and Mongol *tso-ling* had 20 troopers: total 17,700. Each Chinese *tso-ling* 40 troopers: total 11,172; grand total 28,872. The *ling-ts'ui*, or corporals, are the pick of the troopers, who act as roster-keepers and paymasters; each *tso-ling* had five; hence the 1,051 *tso-lings* had 5,755 corporals. Each *tso-ling* had a number of bow and arrow makers, saddle-smiths, and blacksmiths, appointed by the Imperial Armoury, to the total number of 1,391. Each *tso-ling* had two Advance men, *i.e.* 1,770 in all, all Manchus except 408 Mongols. (The 2,000 scalers of the Light Division are also counted as Advance men.) The Guards are the same in number as the Advance. Each *tso-ling* has 17 Escort men; total 11,577 Manchus, and 3,468 Mongols. (The Summer Palace Escort are chosen from among these). Each *tso-ling* has 6 musketeers and one gunner: total Manchu and Mongol, 5,310 musketeers and 885 gunners. There are 1,937 guns on the walls of Peking, of which 100 are taken to the Luk'ou Bridge in the autumn of each year for practice. On the Pai-t'a Hill there are five signal guns; and, on alarm given, those at the nine city gates acknowledge. Of the Guards, the three superior banners (white, yellow, and bordered yellow) are under the Captain (the rest under the princely establishments), who also commands the 600 tiger hunters.] On the other hand, the Manchu and Mongol cavalry do not possess any gunners, caltrop-throwers, or shield-bearers, such as the Chinese cavalry force has. [Each banner has 40 gunners: total, 320. The shield-bearers are for guarding the guns, and each banner has 100: total, 800. Each *tso-ling* has 8 caltrop bearers: total, 2,828.] As to the Infantry Force, the Manchus, Mongols, and Chinese are all grouped together under one Commander-in-chief, and the above (Cavalry, Advance, Guards, Escort, Musketry, and Infantry) form together the Eight Banners of Peking Guards (禁 旗), the Infantry alone being a body mixed of all three nationalities. [Each Manchu and Mongol *tso-ling* has two infantry corporals, or 1,770 in all: eighteen rank and file, or 15,930 in all. Each Chinese *tso-ling* has one corporal, or 166 in all: twelve rank and file, or 3,192 in all. Total infantry, 21,158.] Besides the above, there are 10,000 Chinese gendarmerie of the Green Standard (綠 旗) under the Captain-General of Peking, and these also belong to the Peking Guards, the grand total of whom is thus brought up to 100,000, exclusive of 27,400 supernumeraries. [There are 16,664 Manchu supernumeraries drawing rice, and 5,428 not. There are 3,279 Mongols drawing rice, and 2,024 not. The 4,813 Chinese supernumeraries do not draw rice.] If we turn now to the Garrison Troops, we find that the Mongol, Manchu, and Chinese bannermen are all grouped under one command. There are 25 garrisons in the Metropolitan Cordon, consisting of 8,758 men. There are 44 garrisons in the Three Manchurian Provinces, consisting of 35,360 men. There are in Sungaria and Kashgaria 8 garrisons, consisting of 15,140 men. [Within the past few years, however, the Manchurian and Turkestan garrisons have been greatly altered and redistributed.] Distributed over China there are 20 garrisons, of 45,540 men. Besides these, there are 1,419 at the Tombs; 858 in the Hunting Park; and 700 guarding the frontier gates of Kirin and Shêng-king. Total Garrison Troops 107,760, commanded by Tartar-Generals, *tut'ungs*, and City Commandants. In Turkestan and Manchuria, besides the above-described Eight Banners of Manchu and Mongol garrison troops, there are the Solon, Sibê, Daour [all three Tungusic] (hunting), and the Bargu, Oelot, and Chakhar [all three Mongolic] (nomad) soldiery, belonging to those hunting and nomad tribes who submitted latest to the Manchu supremacy, and who, therefore, are enrolled under *tso-lings* of their own, outside of the Eight Banners. There are 97 hunting *tso-lings* commanded by the Tartar-General at Tsitsihar. There are 170 nomad or herdsmen *tso-lings*, of whom 120 are over the chief tribe,—the Chakhars; and all these are commanded by the *tut'ung* at Kalgan. Odd bodies of hunters in the Kirin Province are from time to time enrolled, but not under *tso-lings* of their own. Thus the grand total of Peking Guards and Garrison Troops exceeds 200,000, of whom half are in Peking. The musketeers of the Manchu and Mongol banners date from K'ang-hi's reign. The Summer Palace Escort dates from Yung-chêng's reign. The Light Division [trained originally for scaling the Tibetan stone towers] dates from K'ien-lung's reign."—*Journ. N.-C.B.R.A.S.*, N.S. xxii. 5–7.

"For the defence and escort of the Emperor and his palaces there are select bodies of troops, which are stationed within the *Huang-ching* and the capital and at the various cantonments near the city. The Bannermen form three separate corps, each containing the hereditary troops of Manchu, Mongol, and enrolled Chinese, organized at the beginning of the dynasty under eight standards. Their flags are triangular, a plain yellow, white, red, and blue for troops in the left wing, and the same bordered with a narrow stripe of another color for troops in the right wing. All the families of these soldiers remain in the corps into which they were born." "Two special forces are selected, one named the Vanguard Division, the other the Flank Division, from the Manchu and Mongol Bannermen; these guard the Forbidden City, form his Majesty's escort when he goes out, and number respectively about one thousand five hundred, and fifteen thousand men. For the preservation of the peace of the capital a force of upward of twenty thousand, called the Infantry Division, or Gendarmerie, is stationed in and around the walls, in addition to the palace forces. Besides these a cadet corps of five hundred young men armed with bows and spears, two battalions with firearms, and four larger battalions of eight hundred and seventy-five men each, drilled in rifle-practice, are relied on to aid the Gendarmerie and Vanguard in case of danger."—*Williams, Midd. King.*, i. 410–11.

"The duty of the Imperial Guard, or *Tsin-kiun ying*, is to guard the person and apartments of the Sovereign."—*Ch. Repos.*, xx. 259.

"In Yün Nan, Kwei Chou, Hu Nan, Kwang Si, [An Hui] and Kiang Si there are no Tartar or banner troops. Wu San-kwei, the Chinese General who practically gave the Empire away to the Manchus, was rewarded with the satrapy of Yün Nan, which brought him into active contact with Burma. The Manchu and other northern troops he took with him to Yün Nan partly account for the fact that almost pure Pekingese is still spoken in that remote province. After his rebellion was crushed by the second Manchu emperor, the satrapy system was abandoned; all banner troops were withdrawn (except those mentioned) from China south of the Yang-tsze, and viceroys replaced the former satraps at Canton and Foochow, as well as at Yün-nan Fu. Never before had China been entirely placed under one completely homogeneous system."—*Parker, China*, p. 256.

"The Inquiry, etc., of 1825, makes 41 principal divisions of the Banner forces, stationed in Peking, and a section of Chihli round it, and in eleven of the other provinces of China Proper, Manchuria, and Turkestan. . . . The troops of the Green Standard are divided into 1202 *ying*, battalions or cantonments, of which there are but five in Peking, under the command of the Captain-general of the Gendarmery. These *ying* vary widely in strength; and a number of them, also differing in different places, composes a *piáu*, of which there are 43, or a *chin-piáu*, of which there are 72, in the eighteen provinces."—*Ch. Repos.*, xx. 253.

[For a table showing the disposition and strength of the Banner Forces in 1825 and the disposition (1849) and strength (1825) of the troops of the Green Standard, see *ibid.* xx. 254–5.]

"*Paid Forces of the Banner Organization:* The various corps organized from the Banner population of Peking are as follows:—*Hu Chün Ying* 護 軍 營.—The Guards' Division. Common des. *Ta Ying* 大 營 (the main division). This force was organized during the early wars of the Manchu sovereigns, with the designation *Pa-ya-lá* [*cf.* MING PERIOD], which was exchanged in A.D. 1660 for its Chinese equivalent now in use. Admission into the corps, which is estimated as numbering some 3,000 to 4,000 strong, constituted until lately the special ambition of the great mass of the Bannermen of Peking, to whom it secured the advantages of substantial addition to their pay and prospects of promotion in a degree which, until the institution of the *Shên Chi Ying* (see below), was attainable by comparatively few. From the place assigned to the two main sections of the Division, on the right and left wings of the Banner force when drawn up for review or action, the title 'Flank Division' has been given to this corps by Sir T. F. Wade in his article on the Chinese Army [*Ch. Repos.*, vol. 20]. . . . The principal duty assigned to the corps, at the same time, is that of furnishing detachments of guards for the Imperial palace. It consists of eight divisions corresponding to the eight Banners, each of which is commanded by a *T'ung-ling* (see below): *Hu Chün T'ung Ling* 護 軍 統 領.—Captain-General; . . . This office is usually filled by Princes or other dignitaries of the Court. *Hu Chün Ts'an-ling* 護 軍 參 領.—Lieut.-Colonel; . . . *Hu Chün Hsiao* 護 軍 校.—Lieutenant; . . . *Wei Shu Hu Chün Hsiao* 委 署 護 軍 校.—Sub-lieutenant."—*Mayers, Ch. Govt.*, pp. 54–5.

Ch'ien Fêng Ying 前 鋒 營.—Vanguard Division. "The Vanguard or leading division is composed entirely of Manchus or Mongols of the whole Eight Banners, chosen in the proportion of two to every *tso-ling;* it is divided into right and left wings, each of which is under a *t'ung-ling*."—*Ch. Repos.*, xx. 264. "*Tso Yi Ch'ien Fêng T'ung-ling* and *Yu Yi Ch'ien Fêng T'ung-ling* 左 右 翼 前 鋒 統 領.—Commandants of the Left and Right Wing of the Vanguard division. *Ch'ien Fêng Shih Wei* 前 鋒 侍 衛.—Imperial Guardsman of the Vanguard division. *Wei Shu Ch'ien Fêng Shih Wei* 委 署 前 鋒 侍 衛.—Deputy do. do. *Ch'ien Fêng Hsiao* 前 鋒 校.—Sergeant of the Vanguard division (and *Wei Shu* do. do.)." "*Pu Chün Ying* 步 軍 營.—The Division of Gendarmerie." A force recruited from the Eight Banners for the policing of Peking and maintenance of its roadways.—*Ibid.* p. 55.

"*Huo Ch'i Ying* 火 器 營.—The Artillery and Musketry Division. Consisting in *Nei* and *Wai*, or Inner and Outer Divisions, of which the former is stationed at Peking and the latter at *Lan-tien Ch'ang* or the Indigo Manufactory, a short distance from Yüan Ming Yüan. The *Nei Huo Ch'i Ying* is formed from the *bo-i* of the different Banners (see above). At the present day this corps, like the 'Light Division' (see below) has but a nominal existence." *Chien Jui Ying* 健 銳 營.—Light Division. . . . Quartered near the *Hsiang Shan Yüan* 香 山 苑, or *Ching I Yüan* 靜 宜 園, the Imperial Hunting Park, north-west of Peking." "*Hsiang Tao Ch'u* 嚮 導 處.—The Guides. A department which furnishes the outriders, etc., for imperial progresses." "*Hu Ch'iang Ying* 虎 槍 營.—The marksmen for tiger hunts." "*Shang Yü Pei Yung Ch'u* 上 虞 備 用 處.—The Imperial Hunting Department."—*Ibid* pp. 55–6. For ranks see *ibid.*

"*Shên Chi Ying* 神 機 營.—The Peking Field Force. This force, comprising the élite of the Banner troops of the capital, was organized, in 1862, as a result of the disastrous campaign of 1860, with a view to provide for the future defence of the centre of government. The title given to the force was borrowed from the history of the Ming dynasty, when, on the first introduction of fire-arms in the 15th century, the designation *Shên Chi* or 'divine mechanism' was attributed to the new engines of warfare. The Field Force numbers some 18,000 or 20,000 men, including cavalry, artillery, and rifle regiments, all of whom are drilled and manœuvred after the European fashion. The instruction of these troops is based upon the lessons in European drill which were given to detachments sent to Tientsin for the purpose of studying under British instructors in 1862–1865."—*Ibid.* p. 56.

"*Yüan Ming Yüan Pa Ch'i* 圓 明 園 八 旗.—The Yüan Ming Division of the Banner Force. This is a corps composed of representatives of all the eight Banners, forming a sedentary garrison in the vicinity of the Summer Palace." "*Chu Fang* 駐 防.—The Manchu Garrisons outside Peking. Divided into three classes as follows:—(a) *Chi Fu Chu Fang* 畿 輔 駐 防.—The garrisons of the 'military cordon,' consisting of 25 cities in the province of Chihli, surrounding Peking [see *Ch. Repos.*, xx. 314]. The nine garrisons nearest to the capital are termed the *Hsiao Chin Ch'u* 小 九 處, or Nine Small Posts. The organization of these garrisons is the same with that of the Peking Banners, of which they are offshoots. (b) *Ling Ch'in Chu Fang* 陵 寢 駐 防.—The garrisons of the Imperial Mausolea. . . . (c) *Ko Shêng Chu Fang* 各 省 駐 防.—The garrisons stationed in the provinces, to wit, at Sui-yüan, Kuei-hua, and T'ai-yüan Fu in *Shansi*, at Ch'ing-chou Fu and Tê Chou in *Shantung*, at K'ai-fêng Fu in *Honan*, at Nanching and Ching K'ou in *Chiangsu*, at Hangchou Fu and Cha-p'u in *Chê-chiang*, at Fuchou in *Fuchien*, at Canton in *Kuangtung*, at Ch'êng-tu Fu in *Ssŭch'uan*, at Ching-chou Fu in *Hupeh*, at Hsi-an Fu in *Shensi*, and at Ninghsia, Liangchou, and Chuang-liang T'ing in *Kansu*, beside the garrisons of Urumtsi, Barkul, Ku-ch'êng, and Turfan, included within the Kansu jurisdiction [see *Ch. Repos.*, xx. 318 *seq.*]. *Chiang Chün* 將 軍.—Manchu General-in-Chief (or 'Tartar General'); . . . Lit. des. *Ta Yüan Jung* 大 元 戎. The *Chiang Chün* exercising territorial jurisdiction in Manchuria and elsewhere are described as Military Governors. . . . The *Chiang Chün* in the Chinese provinces ranks with, but before, the Governor-General, although exercising no authority except over the small Banner force at the head of which he stands. In Kuangtung and Ssŭ-ch'uan he has a nominal degree of control over the Chinese forces in addition to his own; but this is not in practice exercised. . . . [For ranks see p. 58.] "*Shui Shih Ying* 水 師 營.—Marine Battalion of the Banner Forces; for river service in the various provincial garrisons." "*Wei Ch'ang* 圍 場.—The Imperial Hunting Reserves. A vast tract of country, several hundreds of miles in extent, in the region of Jêho, set apart in the early days of the reigning dynasty as a preserve for large game and as a place for the exercise of the Imperial troops in the art of war as exemplified in the chase. The guards of the Hunting Reserves are placed under the command of" a Chief Comptroller (*Wei Ch'ang Tsung Kuan*) and a Brigadier (*I Ch'ang*).—*Ibid.* pp. 56–8.

"Proficiency in this exercise [archery] is evidently the guaranty of promotion. There are six days a month devoted to its practice by the Bordered Yellow and Plain White Banners; six other days by the Plain Yellow. The most expert of the higher *Shi-wei* [gentlemen of the Guard] may become Ministers extra; the lower *Shi-wei*, and those of the Blue feather, rise to the higher classes; the *tsin-kiun* become *Shi-wei* of the lowest class and of the Blue plume."—*Ch. Repos.*, xx. 260.

A few of the *Shi-wei* "are detached to the Mohammedan colonies, for three years at a time, viz., 15 to Ilí; 9 to Úliasútai; 12 to Yarkand; 12 to Tarbagatai; 8 to Kashgar; 6 to Úshí; and 2 to Kobdo. As a corps . . . the *tsin-kiun* are managed by their lieutenants (*tsin-kiun kiáu*) and sub-lieutenants (*wei tsin-kiun kiáu*). The *kiáu* is a term strictly military, and common to all the Banner corps and garrisons."—*Ibid.* xx. 260.

[For a Table showing the strength of the Five Metropolitan Corps, see *ibid.* xx. 262–3.]

"The Chinese army not of the Banner, is known as the *Luh Ying*, or that of the tents of the Green Standard, a designation bestowed on it to distinguish it from the Banner-corps. These in 1575, were but four in all, and of a purely military organization, numbering each 7,500 men; they were subsequently doubled, and the bordered added, for distinction's sake, to the original plain colors. When the Manchus established their dynasty in 1644, the banners were nominally distributed at Peking according to a mystic system whereby the yellow is made to represent the centre; the red the south; and the white, the west; the north should have been black, but for this, as of bad omen, was substituted the blue; and to the east, thus left unprovided for, in lieu of the azure required by the system, was assigned, without any reason stated, the green, which the native troops were directed to assume as their standard. They took up no corresponding position, however, in the city, which was held entirely by the Bannermen; the two yellow Banners being quartered to the north of the larger inclosure which surrounds the Forbidden Precincts of the Emperor's residence; the white to the east, the red to the west, and the blue to the south; that is to say, with the left wing camped from north to south on the east, and the right on the west side."—*Ibid.* xx. 252–3.

"*Lü Ying* 綠營.—The Chinese provincial Forces; designated as the Army of the Green Standard. These troops are divided into *Lu Lu* 陸路, or Land Forces, and *Shui Shih* 水師, or Marine. The ranks and designations are identical in both divisions. The land forces, numbering in all some 400,000 to 500,000 men, are an absolutely effete organization, discharging the duties of sedentary garrisons and local constabulary, but superseded, on all occasions when active service is required, by the so-called 'braves'—*yung* 勇, or irregulars, enlisted and discharged according to circumstances [*v. infra*]. The officers of these irregular troops are usually invested with rank as 'expectants' of appointments to posts in the regular service. The main bulk of the provincial forces are commanded by a General-in-Chief or *T'i-tu*, and bear the designation of *T'i Piao* 提標, or *T'i-tu's* command. A smaller body of men, to whom the duty of garrisoning the provincial capital is specially assigned, is known as the *Fu Piao* 撫標, being the command allotted to the provincial governor; and a Governor-General has in addition a third distinct command annexed to his functions, this division receiving consequently the title of *Tu Piao* 督標. The forces under the command of the General-in-Chief are divided into *Chên-Piao* 鎮標, or Brigades, and these again into *Hsieh* 協, or territorial regiments. The *Hsieh* are divided into *Ying* 營, battalions, and the *ying* is farther subdivided into a right and left *Shao* 哨, or patrol. The *ying* is commanded, as a rule, by an officer of the rank of Major (see below), although in some cases the commanding officer is only a first or second Captain. The *shao* is commanded by a *ch'ien-tsung* or lieutenant, beneath whom the force is distributed in either two or four *ssŭ* 司, corresponding to the *hsün* 汛, or military posts established in different localities, at the head of each of which a *pa-tsung* or sergeant is placed. As has already been stated [see LOCAL GOVT.] the Directors-General of the Yellow River and of the Grain Transport have each a separate military organization under their command designated, respectively, the *Ho Piao* 河標 and *Ts'ao Piao* 漕標. The division under the orders of the Director of the Grain Transport has the duty of garrisoning and guarding the stations along the line of the grain transportation service at which the squadrons of junks are successively loaded, despatched, and discharged in effecting the conveyance of the 'tribute rice' to Peking. These stations are designated *wei* 衛 and *so* 所, according to the class to which they belong; and the officials in charge at these ports, ranking as *shou-pei* (second captain) and *ch'ien tsung* (lieutenant), have special designations such as *shou yü* 守禦, 'on service for garrison duty,' and *ling yün* 領運, 'charged with the conduct of the grain squadrons,' etc., prefixed to the titles of their rank. In the river-guard squadron which has been organized of late years for the patrol of the Yangtzŭ, under the name of *Ch'ang Chiang Shui Shih Ying* 長江水師營, forming a distinct command, the *ssŭ* of the established land forces are represented by *tui* 隊, or gunboat companies. In other respects, the titles employed in this organization are the same with those of the regular army, which are as follows:—*T'i tu* 提督.—Provincial Commander-in-Chief, or General-in-Chief; . . . Common des. *t'i-t'ai* 提台; Epist. style, *chün mên* 軍門. *Tsung-ping* 總兵.—Brigade General; . . . Common des. *Chên-t'ai* 鎮台. Lit. des. *Tsung Jung* 總戎; Epist. des. *Ta Tsung-chih* 大總制. *Fu-chiang* 副將.—Colonel; . . . Lit. des. *Fu Jung* 副戎; Common des. *Hsieh-t'ai* 協. *Ts'an-chiang* 參將.—Lieutenant-Colonel; . . . Lit. des. *Ts'an Jung* 參戎; Common. des. *Ts'an Fu* 參府. The Lieutenant-Colonel acting as Commandant of a *Fu Piao* or Governor's Brigade is colloquially designated *Ta T'ing* 大廳. *Yu-Chi* 遊擊.—Major; . . . Lit. des. *Yu Jung* 遊戎; Common des. *Yu Fu* 遊府. *Tu Ssŭ* 都司.—First Captain; . . . Lit. des. *Tu K'un* 都閫. *Shou-pei* 守備.—Second Captain; . . . Common des. *Shou Fu* 守府. *Ch'ien-tsung* 千總.—Lieutenant; . . . Lit. des. *Ch'ien Jung* 千戎; Common des. *Tsung Yeh* 總爺. *Pa-tsung* 把總.—Sergeant; . . . Common des. *Fu Yeh* 副爺. *Wai-wei Ch'ien-tsung* 外委千總.—Second Sergeant. . . . *Wai-wei Pa-tsung* 外委把總.—Corporal; . . . *E-wai Wai-wei* 額外外委.—Lance-Corporal."—*Mayers, Ch. Govt.*, pp. 59–61. See also *infra*.

"*Ying Tsung* 營總.—Commandant. This title is given to the officers in command of special bodies of troops, such as the Manchu contingents employed in Sungaria, and the irregulars or 'braves,' *chuang yung* 壯勇, who have superseded the regular army organization for purposes of active service, together with the divisions or contingents of these irregulars which have been subjected to drill and furnished with arms on the European model. These are ordinarily designated *lien chün* 練軍, a term which may be translated as 'field force.' *Chung Chün* 中軍.—Adjutant or Military Secretary. This post is filled by an officer of the rank of Colonel, Lieutenant-Colonel, Major, or first or second Captain, according to the position of the authority under whose orders it is established. The officers who serve as Adjutants to Governors-General and Governors are, respectively, the commandants of the Governor-General's and the Governor's brigades (see above). In the general army organization, each commanding officer, down to the rank of major, has an officer of the rank immediately below him as his adjutant, except in the case of the General-in-Chief, who makes his own selection for the post."—*Ibid.* p. 61.

The Green troops "are divided into the Cavalry and the Infantry. The Infantry are sub-divided into the Fighting and the Defensive. All lance-corporals are Cavalry. The Province of Chih Li has 42,532 men, under the four commands of the Viceroy, River Director, General, and the different Brigadiers. Shan Tung has 20,174, under the three commands of the Governor, River Director, and the Brigadiers. Shan Si has 25,534. Ho Nan 13,834. Kiang Su has 50,134, under the six commands of the Viceroy, Governor, General, Brigadiers, River Director, and Transport Director. An Hwei has 8,728. Kiang Si 13,832. Fu Kien has 63,304, under the commands of the Viceroy, Governor, Admirals, and Generals. Chên Kiang has 39,009. Hu Peh 22,740. Hu Nan (including the military cultivators and the trained braves), 35,590. Shen Si has 42,960. Kan Suh has 55,609 (including those under the Barkul, Urumtsi [within the past few years there have been changes], and Ili Brigadiers), under the Viceroy, General, and Brigadiers. Sz Ch'wan has 34,188, including 994 Chinese soldiers under the Tartar-General. Kwang Tung has 69,052, including those employed afloat. Kwang Si 23,408. Yün Nan 42,549. Kwei Chou 48,490 (including 9,239 military cultivators). Total green troops, 661,656."—*Journ. N.-C.B.R.A.S.*, N.S. xxii. 7–8.

"The Chinese army or 'Green Banner' is organised in the following way, or was theoretically so organised until the Taiping rebellion and foreign wars necessitated fresh patchwork. . . . Each province has a General [*v. infra*], in supreme command of the green troops, and in immediate command of a portion of them; his *yamên* is sometimes at the provincial capital, sometimes at a *fu* or other place more strategically important. This officer's rank is one nuance higher even than that of a viceroy; but in the diplomatic and civil part of his business he has to report and memorialise conjointly with the Viceroy, who (unless the General be a very able man, and charged with very important duty) is often to most intents his superior officer. He has under him from two to six brigadier-generals, each in high command of a brigade, and in immediate command of part of one: their *yamên* is either at a first-class city, or (like that of the *taotai*, with whom they seem to pair off) at some special point where foreigners or other objectionable persons have to be kept down. Both the Viceroy and the General 'command' the brigadiers, but the General has a tendency to weaken his rigour into 'moving.' It all depends upon the real work being done. And so it goes on. Colonels, majors, captains, lieutenants, sergeants, and corporals are each in command of greater or smaller bodies of men, stationed in the cities, towns, and markets, and co-operating with prefects, *hiens*, assistant magistrates, and other civilian small fry, down to the village headman. . . . Military officers are supposed to ride on horseback, and not sit in sedans, but in these degenerate days this rule is honoured more in the breach than the observance. Civilian officers can never serve in or very near their own province, but military officers nearly always do so; and indeed must, for otherwise they would not be able to talk promptly to their men."—*Parker, China*, pp. 247–8.

"For two centuries at least, all 'green' officers, from general to corporal, have been engaged, despite numerous spasmodic punishments and reforms, in wholesale peculation, and neither the garrison branch nor the fighting branch of the troops supposed to be under their commands, even if it has in some cases existed at all, has had more than a partial or temporary existence."—*Ibid.* p. 249.

"All the general officers in the army have fixed places of residence, at which the larger portion of their respective brigades remain, while detachments are stationed at various points within their command. The governor, major-general, and Banner commandant have commands independent of each other, but the *t'i-tu*, or major-general, exercises the principal military sway. The naval officers have the same names as those in the army, and the two are interchanged and promoted from one service to the other. Admirals and vice-admirals usually reside on shore, and despatch their subordinates in squadrons or single vessels wherever occasion requires. This system must, ere long, give place to a better division of the two arms with the building of steam vessels and management of arsenals, when junks are superseded." "The system of mutually checking the provincial officers is also exhibited in their location. For example, in the city of Canton the governor-general is stationed in the New city near the collector of customs, while the lieutenant-governor and Manchu general are so located in the Old city that should circumstances require they can act against the two first. The governor has the general command of all the provincial troops, estimated to be one hundred thousand men, but the particular command of only five thousand, and they are stationed fifty miles off at Shaoching fu. The *chiang chün* has five thousand men under him in the Old city, which in an extreme case would make him master of the capital, while his own allegiance is secured by the antipathy between the Manchus and Chinese preventing him from combining with the latter. Again, the governor-general has the power of condemning certain criminals to death, but the *wang-ming*, or death-warrant, is lodged with the *fut'ai*, and the order for execution must be countersigned by him; his despatches to court must be also countersigned by his coadjutor. The general absence of resistance to the imperial sway on the part of these high officers during the two centuries of Manchu rule, when compared with the multiplied intrigues and rebellions of the pashas in the Turkish Empire, proves how well the system is concocted."—*Williams, Midd. King.*, i. 445–6.

"The military government of a province includes both the land and sea forces. It is under a *t'i-tu*, or commander-in-chief, of which rank there are in all sixteen, twelve of them commanding one arm alone, and four controlling both land and sea forces. In five provinces the *fut'ai* is commander-in-chief, and in Kansu there are two. Above the *t'i-tu*, in point of rank but not of power, are placed garrisons of Manchu Bannermen under a *chiang-chün*, or general, whose office is conferred, and his actions directly controlled, by the captains-general in Peking; he has jurisdiction, usually, only in the city itself, the principal object of the appointment, apparently, being to check any treasonable designs of the civil authorities."—*Ibid.* i. 439.

"The military section of the provincial governments is under the control of a *t'i-tu*, or major-general, who resides at a central post, and, in conjunction with the governor-general and governor, directs the movements of the forces, while these last have also an independent control over a certain body of troops belonging to them officially. The various grades of officers in the native army, and the portion of troops under each of them, stationed in the garrisons and forts in different parts of the provinces, are all arranged in a methodical manner, which will bear examination and comparison with the army of any country in the world. The native force in each province is distinct from the Manchu troops, and is divided somewhat according to the Roman plan of legion, cohort, maniple, and century, over each of which are officers, from colonel down to sergeant. Nothing is wanting to the Chinese army to make it fully adequate to the defence of the country but discipline and confidence in itself; for lack of practice and systematic drilling have made it an army of paper warriors against a resolute enemy. Nevertheless, the recent campaigns against the rebels in the extreme western colonies indicate the fact that its regeneration is already of some weight."—*Ibid.* i. 444-5.

"The fixed number of hereditary military 'nobles' allotted to An Hwei is 176; to the Nanking division of Kiang Su 348; to the Soochow financial division 150. Kiang Si has 463, costing the public over Tls. 50,000 a year. It is now proposed to fix the maximum at this number."—*Ch. Rev.*, xiii. 431.

"No man was permitted to become a cavalry soldier [under] thirty-five, or to remain such after fifty. It was necessary for him to be tall, robust and strong, active and firm in his saddle. . . ."—*Balfour, Leaves*, p. 73.

Li Ting-i, whilst President of the Board of Punishments (1723–32), "introduced many measures, notably the institution of trainbands, 50 men in each District."—*Giles, Bio. Dic.*, p. 469.

"The Ming dynasty employed vast numbers of soldiers, the expense of which they charged upon the people. The Manchu system has always been to employ small bodies of troops, well-paid from the Imperial Treasury. In the conquest of Annam the Mings employed as many as 100,000 Coreans at a time, whereas both the Manchu columns engaged in the same conquest did not exceed 18,000. In the crushing of Po-chou (播州) and Li-ch'uan (麓川), the Mings employed over 200,000 men. In the subjugation of the native tribes of Yün-Kwei, the Manchus only employed between 20,000 and 30,000. In the Oelot campaign of K'ang-hi, the Dzungar campaign of K'ien-lung, his campaign against the Greater and Lesser Kin-ch'uan Tanguts, and in Kia-k'ing's suppression of the superstitious rebellions in Sz Ch'uan and Hu Nan, there were never employed in all more than 100,000 men. Ngo Chung-kung (岳鍾琪) only employed 7,000 men in crushing Kokonor. Chaohwei (兆惠) and Futeh (富德) defeated the two Khodjidjan with 30,000. Mingjui's two Burmese Columns did not exceed 20,000. In fact, it was only in the suppression of the Wu San-kwei's rebellion that the Emperor K'ang-hi had to put forth his full strength and employ over 400,000 Manchu and Chinese troops. The cost of the different Manchu campaigns has been as follows:—

	Taels.
Kin-ch'uan (five years)	70,000,000
Sz Ch'wan and Hu Nan rebellion ...	100,000,000
Dzungars and Mussulmans	33,000,000
Burmah	9,000,000
Formosa	8,000,000
Annam	1,000,000."—

Journ. N.-C.B.R.A.S., N.S. xxii. 8-9.

"Of the Banner Troops, the Advance, Guards, Escort [each of these three get Tls. 1 a month in addition if *ghioro*, or collaterals of the blood], Corporals [? of Cavalry], and Master Armourers receive Tls. 4 a month. The Cavalry, Armourers, and Coppersmiths receive Tls. 3: all the above draw in addition 40 bushels (角斗) of rice a year. The Infantry Corporals receive Tls. 2, and the Infantry Tls. 1-5, both classes drawing 24 bushels of rice. Gunners receive Tls. 2, and 36 bushels. Novices (教養兵) [? = Supernumeraries] receive the same as the Infantry, but no rice. Of the Green Standard Troops, the three Peking gendarmerie camps receive, if cavalry, Tls. 2; if infantry, Tls. 1; and both classes five pecks (斗) of rice a month. The Chinese cavalry in the provincial brigades receive Tls. 2, and the infantry Tls. 1-5, if fighting, and Tls. 1, if defensive; all three drawing three pecks of rice a month. The annual cost of the provincial Chinese troops is thus over Tls. 17,000,000 a year."—*Ibid.* pp. 9–10.

"The pay of Chinese officers was thus fixed by the Emperor Yung-chêng, the unit being one private's pay. A General 80; a Brigadier 60; a Colonel 30; a Major 20, in each case drawing the pay of infantry and cavalry in equal halves. Those who are not field officers, such as the *yuchi*, *tusz*, *shoupei*, *ch'ientsung*, and *patsung*, draw 15, 10, 8, 5, and 4 rations, in the proportion of one cavalry to four infantry rations in each five."—*Ibid.* p. 10. See also pp. 15–18.

"In 1782 the Emperor K'ien-lung found that he had Tls. 78,000,000 in his Treasury, against Tls. 30,000,000 in 1736. He therefore presented Tls. 400,000 to the provincial soldiers; increased the Peking troops by 4,900, and the Shen-kan troops by 12,900, ordering the regulation regiments to be kept fully

manned, and giving their officers 'anti-extortion' allowances in compensation. These changes cost Tls. 3,000,000 a year. In 1813 it was found that it had since been necessary to raise Tls. 26,790,000 by extra taxation or sale of office in order to meet unlooked-for expenses, and the Tls. 1,000,000 a year added on by K'ien-lung for 'anti-extortion' allowances was reduced to Tls. 800,000."—*Ibid.* pp. 10–11.

"In 1644 the new Manchu dynasty abolished some of the wasteful Ming expenditures; but, in 1651, after the campaigns in the South, the annual payments to the armies, Tls. 13,000,000, with the civil service payments (官俸), Tls. 2,000,000, at last exceeded the regular revenue (額賦), Tls. 14,850,000. After 1656, the army payments were increased to Tls. 20,000,000, and later to Tls. 24,000,000 a year, against which sum there was a regular revenue of Tls. 19,600,000, besides the interest on the Treasury balance: yet the Emperor Shun-chih imposed no extra taxes. After the rebellions of the Three Satraps, three fourths of the revenue again went to army payments, and the sale of office was opened for three years, producing Tls. 2,000,000 [?in all], whilst other financial reforms produced a little more: yet it did not escape the notice of the Emperor K'ang-hi that enormous fortunes were squeezed out of the provinces by all his generals. It is a wonder how the Empire was kept together at all under such conditions."—*Ibid.* p. 11.

"The cavalry establishments of the present dynasty are three. The five camps of Peking gendarmerie and the cavalry which are appropriated by law to each province together number 116,853 horsemen, each drawing a provender allowance of Tls. 2·5 a month: this branch of the service is known as the *ying ma* (營馬). The cavalry at Jêho and Mi-yün (north of Peking), and those of the provincial banner garrisons number 86,021; and 9 *tou*, or pecks, of beans a month are allowed for each in the winter and spring, with six in the summer and autumn, *plus* 30 sheaves of straw in all months: this branch of the service is known as the *kwan-ma* (官馬). Then there are breeding stations outside Kalgan, at the Stud Office under the Two Superintendents of Live Stock, and in various parts of Sungaria and Mongolia: these exceed 200,000 in number, and are known as the *kwan-ma* of the steppes."—*Ibid.* pp. 100–1.

"The 'greens' of Chê Kiang used to number over 35,000 men. In 1868, 13,800 were knocked off the number, marines included, leaving 22,500 distributed over the 11 prefectures. In old times the Province had 250 fighting ships. These were reduced by half during the rebellion. In 1882, Li Hung-chang recommended the gradual abolition of the old provincial navies, and 17 師船 were knocked off the list, repairs on 3 others being stopped. Fifty-two *shih ch'uan* were kept on and 7 others modified. These are for island and creek service, where gunboats cannot go. There are also 11 紅單艇, which do good police service. The Viceroy and Governor protest against further reductions."—*Ch. Rev.*, xvi. 124–5.

"A garrison of Manchus was placed in each town of importance, and it was by Kanghi's order that a walled town, or 'Tartar city' was built within each city for the accommodation and security of the dominant race."—*Boulger, Short Hist.*, p. 136.

[K'ang Hsi took the field in person.]—*Ibid.* p. 136.

In his war with Galdan K'ang Hsi "placed four armies in the field numbering about 150,000 combatants, and it has been computed that with non-combatants, the total of men employed did not fall short of a million. . . . Kanghi took personal command of the second" army.—*Ibid.* p. 144–5.

K'ang Hsi "provided cotton armour which was proof to the bullet for his cavalry and part of his infantry, and he organised a corps of artillerists mounted on camels, which also carried the light pieces, and rendered good service as 'flying artillery.' Before setting out for the campaign, the Emperor reviewed his army, and he chose for the occasion the date of the popular Feast of Lanterns, when all China takes a holiday. After the inspection of the numerous, and well equipped army, an impressive ceremony took place. Feyanku approached his sovereign, and received at his hands a cup of wine which the general took whilst on his knees, and which, on descending from the steps of the throne, he quaffed in full view of the spectators. Each of his assistant generals, and the subordinate officers in groups of ten went through the same ceremony, and the ruin of Galdan was anticipated in the libations of his conquerors."—*Ibid.* p. 145.

"If there is room for difference of opinion as to whether Keen Lung was as great a sovereign as Kanghi, there is no doubt that he was the greater conquerer of the two, and this is the more remarkable as, unlike his grandfather, he never attempted to lead an army in the field, or to figure as a great general. It was his boast that he never entered upon a war without concluding it with the humiliation of his enemy, and the conquest of his country."—*Ibid.* p. 162.

Ch'ien Lung "collected an army of 150,000 men, including the picked Manchu Banners and the celebrated Solon contingent, each of whom was said to be worth ten other soldiers. . . . Keen Lung superintended all the operations of the war, and took credit to himself for its successful issue," but on account of the great distance of the seat of war, he did not find it possible to take the field in person.—*Ibid.* pp. 163–4.

"The Inquiry [into the management of the Centre or main Pivot, *i.e.* the Army: 中樞政考] shows that, between 1812 and 1825, the Banner force was considerably augmented."—*Ch. Repos.*, xx. 251.

"It is utterly impossible to arrive at the numerical strength of the Chinese standing army: we can only say that the mandarins receive pay for the maintenance of about ten times the number of soldiers that actually exist. The Chinese soldier is not only dirty, ill-armed, lazy, and unpractical, but he has not the remotest notion of how to handle even such a rifle as is handed out to him—much less of keeping it clean; while the weapons provided for his use are infinitely more dangerous to himself than to the man he shoots at, and are dear to the Government at seventy-five cents apiece. In fact the Chinese Government is being universally 'stuck' in its purchase of both fire-arms and gunboats, and as long as the soldiers are provided with rifles which will explode, and with gunpowder which won't, so long will the army be an utterly useless institution. . . . Military discipline, properly so called, . . . does not exist."—*Balfour, Waifs and Strays*, pp. 41–2.

"The total insufficiency of the Chinese military force to repress any ordinary out-breaking in any part of the empire has, of late, become notorious to foreigners; and in the many insurrections, within the last eight years . . . the Chinese always admit that treachery and gold have effected what arms failed in procuring, the return of the leaders of the disaffected to submission."—*Ch. Repos.*, v. 171.

"Nor . . . judging from what we know of the campaigns of late years, are the Chinese armies much more to be dreaded than their fleets. We have now before us multitudes of instances in which small bodies of insurrectionists have kept head against the imperial troops for periods that amaze us: the emperor, in almost every case, being obliged to urge, threaten, and force the governor to take the business properly in hand; and yet, notwithstanding all this, partial rebellions are protracted for indefinite terms, and are generally only got under, at last, by bribery and conciliation. The Chinese army, large as it is sometimes made to look on paper, exists but in name; the soldiers, who are stationed from generation to generation in the same town, unless called out on actual service, naturally prefer taking their pay and going on with their peaceful avocations, or luxuriating in the *dolce far niente*, the supreme bliss of a Chinese, to undergoing the dangers of the tented field; and what the soldiers want in courage and efficiency the officers by no means make up in skill: nor is the total absence of a good commissariat, and the difficulty of transporting supplies, or *munitions de guerre* as *de bouche*, with the want of all medical or surgical aid, much calculated to stir up the dormant courage of the sons of Han."—*Ibid.* v. 174.

"The construction of forts and towers presents little worthy of observation, since there is no other evidence of science than what the erection of lines of massive stone wall displays. The port-holes are too large for protection and the parapet too slight to resist modern missiles. The Chinese idea of a fortification is a wall along the water's edge, with embrasures and battlements, and a plain wall landward without port-holes or parapets, enclosing an area in which a few houses accommodate the garrison and ammunition. Some erected at the junctions of streams are pierced on all sides; others are so unscientifically planned that the walls can be scaled at angles where not a single gun can be brought to bear. The towers are rectangular edifices of brick on a stone foundation, forty feet square and fifty or sixty high, to be entered by ladders through a door half way up the side."—*Ibid.* i. 758.

"The forts in the neighbourhood of Canton, probably among the best in the Empire, are all constructed without fosse, bastion, glacis, or counter-defence of any kind. Both arrangement and placement are alike faulty: some are square and approachable without danger; others circular on the outer face but with flank or rear exposed; others again built on a hillside like a pound, so that the garrison, if dislodged from the battlements, are forced to fly up the slope in full range of their enemy's fire. The gate is on the side, unprotected by ditch, drawbridge, or portcullis, and poorly defended by guns upon the walls or in the area behind. In general the points chosen for their forts display a misapprehension of the true principles of defence, though some may be noted as occupying commanding positions."—*Ibid.* i. 758.

"In recent times mud defences and batteries of sand-bags have proved a much safer defence than such buildings against ships and artillery, and show the aptitude of the people to adopt practical things. Though not particularly resolute on the field, the Chinese soldier stands well to his guns when behind a fortification of whose strength he is assured. The forts which have recently been constructed under supervision of European engineers are rapidly taking the place of native works in all parts of the country."—*Ibid.* i. 759.

"The Chinese idea of fortification seems confined to the erection of a plain wall, generally up and down from the water, and facing the channel of the river; this front is built of granite slabs and *chunam*; and is of greater thickness below than where the guns are placed, becoming thinner as it advances in height, and ending in battlements, on a common wall, breast high, which the look-out men, on the top of the main wall, can see over. No use, however, seems made of the battlements, which are but 'for look see.' At the back of the fort it seems to be the object to find a hill as steep as possible, up the face of which a solid wall without embrasures is run, joining nearly at the top, so as to give it the appearance of a great stone 'pound.' Along this part there are no defences, and it is built but to prevent the gunners being pounced upon in the rear. It seems probable that the original model of these 'horse-shoe' forts is to be found in the Portuguese one of the *barra*, at Macao." They were slightly improved as a result of the Anglo-Chinese hostilities of 1834; but are ". . . but such lines as the engineers of a disciplined army would throw up, as temporary defences and to cover their guns, in the course of a single night. The river forts are open at all points; and none of them could stand the fire of a heavy ship, assisted by a storming party, or tirailleurs on shore, who could always find excellent posts in the rear or flank, out of the reach of the guns of the forts."—*Ibid.* v. 168–9.

"Of ready effective military strength, the Chinese seem to have no idea; even at the city gates, where it is considered that a strong and responsible guard is always kept, foreigners . . . find no opposition more than from a coolie looking man, armed with a pair of breeches, a fan, and perhaps a rattan whip."—*Ibid.* v. 169.

"The Chinese tactics are as puerile as most of their other ancient disquisitions . . . : a collection of pompous, trite, and meaningless common places forms but a poor school for soldiers; yet, in the most famous treatises on the military art, held, as all the old books, in bigoted esteem by the Chinese, we find nothing better."—*Ibid.* v. 174. *Cf. supra.*

"The batteries [at Amoy] were admirably constructed, and manned by Europeans no force could have stood before them."—*Boulger, Short Hist.*, p. 221.

"The old Chinese 'army' of fifty years ago was simply a rabble, provided with bags of rice, gay flags, umbrellas, fans, and (quite a secondary matter) rusty guns, gingalls, spears, heavy swords, and (very occasionally) fairly good rifles and cartridges of a date always behind the times. If there were time and money, hired coolies carried the provision bags and the arms, while the soldiers carried the umbrellas, opium-pipes, and fans. If matters were urgent, the soldiers carried all. There was never any medical staff, not even bandages, and (if the warrior did not slink away before shooting began) the man hopped off when wounded, to die or recover in the nearest ditch. His pay was always a doubtful quantity, but he did not mind that much, so long as he was allowed to plunder the people he was marching to defend. When not on the march, entrenching himself, or trying to 'start' the enemy on a run, he spent his time in smoking, gambling, or prowling after women. Discipline of any kind there was none; but if officers were insulted heads went off in no time; in all other matters officers were disposed to be easy, so long as the men were not too curious about accounts, and were ready to cover the commander's flight when the enemy really 'came on.' Still, despite this sorry picture, Chinese armies under jealous and capable commanders . . . notwithstanding old or mixed conditions, have displayed excellent qualities; and even officers of the old school have shown considerable strategical and tactical ability."—*Parker, China*, pp. 257–8.

"When the great rebellions and the foreign complications consequent thereon broke out fifty years ago, the imperial leaders . . . had recourse to the device of hiring 'braves' to do the fighting. That is, such 'soldiers' as existed, and had no stomach for the merry wars, were left to perform garrison and police duty, whilst either sturdy peasants or such of the youthful soldiers as were willing and able to fight were engaged, at much higher rates of pay than the craven soldiers received, in order to induce them to face the enemy."—*Ibid.* p. 249.

"When the wars of the sixties were over, spasmodic efforts were made, not only to drill and supply with foreign weapons a certain number of bannermen at Peking, Canton, and a few other places where foreigners were well to the fore, but also to keep the braves up to the mark. The greens were too far gone for anything to be done with them, *qud* greens; but, carefully weeded out, some of them were occasionally available as reserve braves."—*Ibid.* p. 250.

"To convey to the mind of a stranger the ridiculous excess of the inutility of the naval establishment of China, would . . . be impossible."—*Ch. Repos.*, v. 174.

"From the early part of the seventeenth century onward, while progress in Europe was rapid, Chinese naval architecture remained stationary. When the British first came to blows with the Chinese nearly forty years ago, their army and navy were equipped in a manner which shewed that but little advancement had been made since the middle of the seventeenth century."—*United Service*, ii. 383.

"But when peace ensued, advantage was taken of the lessons received from their foes, and reforms were soon introduced. Not long after the Anglo-Chinese war a British officer, quoting authority on the spot, said, 'The Chinese are building ships on European models for defensive objects; they are constructing their forts on better principles, and they have foreigners in their pay from whose instruction they hope to benefit in the practice of gunnery.'" "The effect of the British and the Anglo-French expeditions was soon perceptible in the renewed vigor with which the Chinese authorities occupied themselves in introducing improvements in their naval and military systems."—*Ibid.* p. 383.

"At the best of valuations Chinese military officers are always regarded by civilian mandarins with that mixture of awe and contempt which we accord to professional pugilists, and all the more so because the bravest of them are wont to have been dangerous rebels, who have turned 'king's evidence,' or have been bought over. . . . Matters have become worse since 1860 by the sale of office, the dearth of substantive promotions and the superfluity of officers stranded after the recent wars and rebellions. Hence it is not uncommon for a man in charge of a corporal's guard to have colonel's brevet rank, or for a gun-boat captain to be a provincial-general in theory. My own servant was once offered a colonelcy, simply because he stood well up in his shoes; and my learned friend Dr. Hirth accidently discovered that his 'horse-boy' was a major."—*Parker, John Chinaman*, p. 232.

"After a brief interval they [Ward and Burgevine] were taken into the Chinese service for the purpose of drilling Chinese soldiers, a measure from which the most important consequences were to flow, for it proved to be the origin of the Ever Victorious Army."—*Boulger, Short Hist.*, p. 287.

"I have said that each Chinese province has a General; but Shan Si, Shan Tung, and Ho Nan—the three provinces where the Governor rules supreme, free of any Viceroy—have no General, and the Governor in each case is acting-General to his own brigadiers. Kiang Si, Kiang Su, and An Hwei have no General, but their Viceroy at Nanking has (since the Taiping wars) had the support, besides his General for Kiang Nan, of an additional General (or Admiral), called the Water-Army General, for the whole Yang-tsze River. This powerful official has to do not only with the three Kiang provinces, but also with the Yang-tsze portions of the two Hu as far up as Yoh-chou Fu."—*Parker, China*, p. 257.

"The other coast provinces of the South have also a Water-Army General as well as a Land General. 'Admiral' Ting, of the modern 'North Ocean Navy,' was a General, for Chih-Li possesses no regulation Water-Army."—*Ibid.* p. 257.

"Changchow had consequently to be approached systematically by trenches, in the construction of which the Chinese showed themselves very skilful. The loss of the pontoons compelled the formation of a cask-bridge." "On the 19th of July the Imperialists had run a gallery under the wall of Nankin, and charged it with forty thousand pounds of powder. The explosion destroyed fifty yards of the walls." "The troops whom he [Gordon] trained, and converted by success from a rabble into an army, formed the nucleus of China's modern army."—*Boulger, Short Hist.*, pp. 304–6.

"The uniforms of Chinese troops are not even calculated to give them a fine appearance when drawn up for parade, and no one, looking at them, can believe that men dressed in loose jackets and trousers, with heavy shoes and bamboo caps, could be trained to cope with western soldiers. Fans or umbrellas are often made use of on parade to assuage the heat or protect from the rain, while the chief object of these reviews is to salute and knock head before some high officer. In order to repress insurrection, the government has been frequently compelled to buy off turbulent leaders with office and rewards, and thus disorganize and scatter the enemy it could not vanquish."—*Williams, Midd. King.*, ii. 91.

"The uniform of the different regiments of the *luh-ying* or 'native army,' consists of a jacket of brown, yellow, or blue, bordered with a wide edging of another color; the trousers are usually blue. [See also WEAPONS.] . . . The back of the jacket bears the word *yung*, 'courage,' and on the breast is painted the service to which the corps is attached, whether to the Governor, commandant, or Emperor. The exhibition of courage among Chinese troops is not, however, always deferred to the time when they run away, spite of the disparaging reputation they have obtained in this respect from their British conquerors—who have, nevertheless, on more than one occasion, been led to admire the cool pluck of the same men when led by competent officers."—*Ibid.* ii. 89.

"Samuels says, (according to Yule), that the old Venetian idea of fighting was to exhibit as many flags, and have as much noisy music, trumpets, kettle-drums, etc., as possible, to put heart into the men and strike fear into the enemy. This continues to be the Chinese idea of warfare."—*Ch. Rev.*, xv. 249.

"In 1862, when the advantages to be derived from the military experience of foreigners had been practically recognised by the appointment of Europeans to command a portion of the army of China, . . . it was thought desirable for many reasons that something should also be done to increase the naval resources of the Empire, and Mr. Lay was entrusted with a commission for purchasing and collecting in Europe a fleet of gunboats of small draught, which could be usually employed for all the purposes of the Peking government on the rivers and shallow estuaries of the country." The national ensign was decided upon by Prince Kung, who "wrote on the 22nd of October to say that the Chinese ensign would be of yellow ground, and on it will be designed a dragon with his head towards the upper part of the flag.'" The fleet consisted of seven gunboats and one store-ship, but owing to the attitude of the foreigners who had been commissioned to purchase the vessels, who "claimed practically all the privileges of an ally, and declined the duties devolving on them as directing a department of the Chinese administration," the arrangement was not ratified and the ships were sent back to Europe.—*Boulger, Short Hist.*, pp. 311–3.

"English officers drilled Chinese troops in their permanent camp at Fungwang, and Dr. Macartney constructed and organised a great arsenal at Soochow, which was afterwards removed to Nankin as a town more conveniently situated."—*Ibid.* p. 314.

"Two days later the enemy, who held a fortified camp at Gumti, were bombarded out of it by the heavy artillery brought from the coasts of China for the purposes of the war."—*Ibid.* p. 340.

"They had conquered in this war [in Kashgaria] by the uperiority of their weapons, and their organisation, and not by an overwhelming display of numbers. Although large bodies of troops were stationed at many places, it does not seem that the army which seized the cities of Yarkand and Kashgar numbered more than twenty thousand men."—*Ibid.* p. 344.

[Some Krupp guns were used by the Black Flags in Tonquin against the French in 1883.]—*Ibid.* p. 349.

"The impression conveyed by the fighting in Formosa and the northern districts of Tonquin was that China had made considerable progress in the military art, and that she possessed the nucleus of an army that might become formidable. But while the soldiers had made no inconsiderable improvement, as much could not be said of the officers, and among the commanders there seemed no grasp of the situation and a complete inability to conduct a campaign. . . . The only capacity their commanders showed in Tonquin and Formosa was in selecting strong positions and in fortifying them with consummate art. . . . It cannot be denied that, considerable [as is the] progress . . . the Chinese have made in the military art, they have not yet mastered some of its rudiments."—*Ibid.* p. 350.

"The Manchu, Chinese, and Banner forces remain now [1887] much as they were in 1840. There is nothing to show that the provincial 'green' armies have undergone any great change; but in some cases the men have been partly transformed into *lien-ping*, or 'trained troops,' on higher pay. There is a specially strong army of trained men under the Viceroy of Chih Li's command. The armies of the Manchurian provinces are now being re-organized; there are several bands of *yung*, or 'braves,' kept constantly employed in Kwang Tung; and there are strong bodies of men stationed in the Lower Yangtsze forts, and in the new forts now being constructed in the north."—*Journ. N.-C.B.R.A.S.*, N.S. xxii. i. note.

"After making a fair show against the Russians in Ili and the French in Tonquin—not to mention the earlier reconquests of Turkestan from Yakub Beg (1874), and Yün Nan from Sulinan the Panthay (1873)—the Chinese, or rather the Manchu Government, began to get presumptuous, and our own blunders led them, or contributed to lead them, on the wrong tack in Corea." As a result of the Japanese war, it "was . . . decided to do away with a quarter or a half of the greens in every province, according to the degree of corruption prevailing in each place, and at any rate not to fill up or create more vacancies."—*Parker, China*, pp. 250–1.

"The utility of music in encouraging the soldiers and exciting them to the charge is fully appreciated."—*Williams, Midd. King.*, ii. 93.

[The drum—戰 鼓 *chan-ku*, or 'war drum'—was used to sound an advance; the signal for retreat was given by striking a gong (*Journ. N.-C.B.R.A.S.*, N.S. viii. 102).]

[The equipment was miserable. Soldiers lent to each other their clothes and weapons for the purpose of passing a review (*Journ. Asiat.*, 1843).]

The code legislates "on the government of the army, which it places entirely at the disposal of the emperor."—*Medhurst, China*, p. 134.

In 1660 Wu Chêng-chih "became President of the Censorate, and earned universal gratitude by stopping the proposed erection of barracks for Bannermen throughout China."—*Giles, Bio. Dic.*, p. 878.

"Amongst the places where there were once 屯 田 may be mentioned 黎 平 府 in Kwei Chou, but the present Governor has just [1881] done away with them. A quantity of military land is let out to farmers just outside the capital of Sz Ch'uan: for each *mu* they pay an annual rent of five 石 of grain and ten 斤 of straw. This goes to the maintenance of the Manchu garrison. The first-named 屯 田 were originally allotted for defence against the 苗 子, and paid thirty per cent. [按 十 抽 三] on all harvests to the Government."—*Ch. Rev.*, x. 73.

[For a map showing the army dispositions in the Eighteen Provinces previous to 1850, see *Parker, China*, facing p. 256.]

[Soldiers were gagged at night.]—*Giles, Bio. Dic.*, No. 4506.

[For a description of a review see *Little* (*Mrs. A.*), *Int. Ch.*, pp. 285–90.]

ECCLESIASTICAL.

Early Feudal Period (*c.* 2357 *to* 1122 B.C.).—*Table I.*

Priests, etc.—"It was the duty of all men to reverence and honour God, by obeying His law written in their hearts, and seeking His blessing in all their ways; but there was a solemn and national worship of Him, as ruling in nature and providence, which could only be performed by the emperor. It consisted of sacrifices, or offerings rather, and prayers. No image was formed of Him, as indeed the Chinese have never thought of fashioning a likeness of the Supreme."—*Legge, Ch. Class.*, III. i. *Prol. p.* 194.

"That this—Arranger of the ancestral temple—should be the name given to the minister of Religion, shows strikingly the chief place occupied by the worship of their ancestors in the religion of China, from the earliest times."—*Ibid.* III. i. 47, note.

"There was no sacerdotal or priestly class among them; there were no revelations from Heaven to be studied and expounded. The chieftain was the priest for the tribe; the emperor for the empire; the prince of a State for his people; the father for his family."—*Ibid.* III. i. Prol. p. 193.

[The earliest traces of a priesthood are to be found in the chanting and dancing dervishes (*wu*), who performed exorcising functions in the 18th cent. B.C.]—*De Groot, Rel. Syst.*, vi. 1187–8.

Connection with State.—Shun "received Yaou's retirement from the imperial duties in the temple of the Accomplished Ancestor."—*Shu ching*, Pt. ii. Bk. i. Ch. 3, 4; *Legge, Ch. Class.*, III. i. 32.

"'By 神 主, is meant lord of the hundred (= all the) spirits.' It is a name for the emperor as chief of the religion of the empire,—in our phrase, 'Head of the Church' of China. Cheang Kew-shing observes:—'The sovereign is lord of all the spirits.' Thus we read in the She King (Pt. III. Bk. II. Ode viii. st. 3), 'May you be the lord of all the spirits!' Being lord of the spirits, it follows that he is lord of the people. On the other hand we read in the 'Many Regions' (Pt. V. Bk. XVIII. p. 6)—'Heaven on this sought a lord of the people.' Being lord of the people, it follows that he is lord of the spirits.' This is to the effect that the 'Head of the Church' is the 'Head of the State' as well, and that either of the designations must be understood as inclusive of the other. The term 主, however, cannot be taken with the same force exactly in both the phrases. The 'lord of the people,' is high above them, their ruler; the 'lord of the spirits' is only the president and director in their worship." "A passage in the Record of Rites, Bk. 祭 法, par. 3, makes this modified meaning of the term 'lord,' as applied to the emperor in his relation to 'spirits,' very plain. It is there said—有 天 下 者 祭 百 神, 諸 侯 在 其 地 則 拜 之, 'The possessor of the Empire sacrifices to all the spirits; the princes only sacrifice to those that are within their territories.' As sacrificing to the spirits, the emperor is their host (主 人). In this passage of the 'Laws of Sacrifice,' I know that the hundred 神 are the *shin* of the hills, rivers, forests, valleys, etc., and do not embrace the spirits of heaven or those of men. It was probably this prerogative of the emperor to sacrifice to all of these which first originated the designation of him as 百 神 之 主. But the phrase has now a wider application. Gan-kwo says that the 神 主 in the text = 天 地 神 祇 之 主: 'lord of the spirits of heaven and the spirits of the earth.'"—*Ibid.* III. i. 215, note.

Sacred Places.—[Yao and Shun both established temples to their ancestors.]—*Ibid.* III. i. 64, note.

[Shun raised altars upon twelve hills in his twelve provinces. He selected a mountain in each province, and made it the "guardian" of the territory (*Shu ching*, Pt. II. Bk. I. Ch. III. 10; *Legge, Ch. Class.*, III. i. 38, note).]

The kings "raised a mound of earth of the five colours, as an altar to the spirits of the land."—*Ibid.* III. i. 106, note.

"The emperors had in their ancestral temple the shrines with the spirit-tablets of seven of their ancestors;—see on the 'Doctrine of the Mean,' xix. 4. But in the case of an emperor's possessing great merit, having displayed great virtue and rendered great services to his dynasty, his shrine might remain in addition to the seven regular shrines of the temple." "That the imperial temple of ancestors in the Chow dynasty was fitted up with seven shrines as the rule is acknowledged on all hands; and there is no intimation in the classical books, or in any writings of a high antiquity . . . that the practice was different under the dynasties of Shang and Hea."—*Ibid.* III. i. 218, note.

Many attribute to Wu Yi (1197–1194 B.C.) "the first making of idols in China;—see Morrison's 'View of China for Philological Purposes,' and De Mailla's History, vol. I. p. 217. The action on which the charge is based, however, was more that of a madman than of a devotee, a freak of licentious folly, and not the birth of any religious feeling, however perverted."—*Ibid.* III. i. 269, note.

Sacrifices and Observances.—[Preliminary sacrifices were made before commencing large undertakings, others being offered on their conclusion.]—*Ibid.* III. i. 94, note.

"On arriving at each of his halting-places [on his tour of inspection] Shun first presented a burnt-offering to Heaven. . . . On the altar a pile of wood was reared, on which the victim and other offerings were placed. The practice is the same at the present day."—*Ibid.* III. i. 36, note.

"形 . . . was the name of a supplementary sacrifice, offered on the day following the regular and more solemn service (祭 明 日 又 祭). I have not been able to find any precise account of the reason and manner of such an observance, K'ang-shing says it was common to all sacrifices,—'those to Heaven and Earth, to the spirits of the land and the grain, of the hills and rivers, and of ancestors.'" *Cf.* LATER FEUDAL PER.—*Ibid.* III. i. 264, note.

"Shun had no sooner been designated by Yaou to the active duties of the government as co-emperor with him, than 'he offered a special sacrifice, but with the ordinary forms, to God; sacrificed purely to the six Honoured Ones; and extended his worship to the host of spirits' (The Canon of Shun, par. 6). Subsequently, in the progresses which he is reported to have made to the different mountains where he met the princes of the several quarters of the empire, he always commenced his proceedings with them by 'presenting a burnt-offering to Heaven, and sacrificing in order to the hills and rivers' (The Canon of Shun, par. 8). I do not refer to these passages as veritable records of what Shun actually did; but they are valuable, as being the ideas of the compilers of the Shoo of what he should have done in his supposed circumstances."—*Ibid.* III. i. Prol. p. 193; ii. 439, note; *Shu ching*, Pt. II. Bk. I. c. III. 6; *ibid.* III. i. 33–4.

"Different ranks were assigned to the hills and rivers, and the ceremonies paid to them varied accordingly."—*Ibid.* III. i. 36, note.

"When Heaven was sending down its favouring decree, and laying the foundations of the eminence of our people, spirits were used only in the great sacrifices" (*Shu ching*, Pt. V. Bk. X. 2). "We may take the 'great sacrifices' as those to Heaven, the earth, and ancestors. Sacrifices were not so numerous then as they afterwards became."—*Ibid.* III. ii. 401, note.

"Under the Hea dynasty they preferred in their victims of sacrifice a dark colour. Under the Shang, it was the reverse; their victims were white. At this time [*c.* 1765 B.C.] T'ang continued to follow the practice of Hea."—*Ibid.* III. i. 187, note.

During T'ang's reign, owing to drought and famine, "the sufferings of the people were intense. . . . It was suggested at last, we are told, that some human being should be offered in sacrifice to Heaven, and prayer for rain presented at the same time. 'It is for the people,' said T'ang, 'that rain needs to be sought. If a man must be the victim for such an object, I will be he.' He then fasted, cut off his hair and his nails, and in a plain carriage drawn by white horses, clad in white rushes, in the guise of a sacrificial victim, he proceeded to a grove of mulberry trees, and there prayed, asking whether the calamity was owing to any failure in his government, or misemployment of officers, or extravagance in palaces, or excessive devotion to beauty, or the practice of bribery, or allowance of calumniators. He had not done speaking when a copious rain fell over several thousand *le*." "The account is doubtless much embellished, but through the cloud of exaggeration we can see the generous sovereign sympathizing with the general distress, fasting, and praying for the removal of the calamity."—*Ibid.* III. i. 190, note.

Rites.—"In ancient times also dancing held a conspicuous place in worship, having been first introduced into the ceremonies by the Emperor Shun."—*Van Aalst, Ch. Music*, p. 33.

[The origin of religious fasting is ascribed to the legendary ruler Huang Ti, who is said to have fasted for three days when taking an oath. He is also said to have built altars for prayer. See *Shih wu yüan hui*, *c.* 35, pp. 4b, 6b.]

[For the state's attitude towards unorthodoxy see following Periods.]

Later Feudal Period (1122 *to* 221 B.C.).—*Table II.*

Priests.—[The king, the earthly sovereign, had alone the right to sacrifice to Shang-ti, the Supreme Lord; and, according to the *Kuo yü*, and the *Tso chuan*, the feudal princes lost all respect for their sovereign, when they arrogated to themselves this right. All the feudal princes were bound to offer the seasonal sacrifices to their ancestors (*Journ. Asiat.*, 1843).]

"Li K'o said: 'The Heir Apparent had charge of the chief sacrifice and the rice vessels for sacrificing to the gods of the Land of Grain'"—*Tso chuan, Yüan chien lei han, c.* 242, p. 29*a*.

"K'e, being the representative of the sovereigns of Shang, had the privilege of offering the great solstitial sacrifice to God."—*Legge, Ch. Class.*, III. ii. 378–9, note.

"The princes of Loo claimed great privileges, by royal grant to the Duke of Chow, in the matter of sacrifices."—*Ibid.* IV. i. Prol. p. 160.

[In spring the people, at mid-autumn the "Son of Heaven," and in winter the officers "celebrated the great or principal *no*," or "drumming away of epidemics," with various ceremonies and sacrifices.]—*De Groot, Rel. Syst.*, vi. 973–5. It continued to be celebrated in subsequent Periods: see pp. 975–90.

[*Wu*-ism (see previous Period) had a powerful influence, and as soothsayers, the *wu* held a place of great importance. Male and female *wu* were persons of official standing, "by whose invocations and other performances at the celebration of sacrifices the spirits came down to enjoy the offerings." But there is nothing to show that on those occasions they presented the offerings.]—*Ibid.* vi. 1196, 1195, 1233.

"In the age of Cheu the *wu* were not the only priests in existence . . . they shared the sacerdotal position with quite a body of officers of various ranks and grades, who were charged with the maintenance of the Rites and Ceremonies (*li*), among which those of the Religion of the State or the dynasty were the principal." The functions of these officers were to direct the erection, etc., of altars and temples, mausolea and tombs of the State, the celebration of sacrifices, funeral rites in the royal family, divination, auguration, etc. This official priesthood was the prototype of the Ministries of Rites and Ceremonies of subsequent Periods.—*Ibid.* vi. 1188.

Sacred Places and Temples.—"The sovereigns of the Chow dynasty worshipped in a building which they called the Hall of Light, and which also served the purpose of an audience and council chamber. It was 112 feet square, and surmounted by a dome; typical of heaven above and earth beneath. Thirty-six doors gave ample means of ingress and egress, while seventy-two windows, each three feet in height, admitted the light of day. China has always been remarkably backward in architectural development, never having got beyond the familiar roof with its turned-up corners. . . . Hence it is that the Hall of Light of the Chows is considered by the Chinese to have been a very wonderful structure."—*Giles, Historic China*, p. 6.

"The palace was a temple and the temple was a palace. . . . The emperors formerly came, when they visited Tai Shan, to hold here a great feudal assembly, to sacrifice to ancestors,

to sacrifice to heaven and to reside in it [the Ming T'ang] themselves during their stay. . . . Cheu kung, the great sage, sacrificed to his deceased father, Wen Wang, in the Ming tang of the Imperial residence, placing his tablet in a subordinate position at the time of sacrificing to Shang ti. This was to confer the greatest possible honour upon his deceased father. In the Ming tang there was worship offered to the sun and moon, also an altar for burnt sacrifice, in which case the victim was laid on wood and burnt. When the covenant was made between sovereign and feudal barons the emperor sat on a throne nine feet high during the Cheu dynasty, three feet high in the Shang dynasty, and one foot high in the Hia. The throne was a dais, and the emperor sat on it cross-legged. The commentator on the *Chow-li* (see 考工記, *K'ao Kung Chi*), from whom I learn these particulars, adds that when the covenant had been determined on, the fact was announced to the bright spirits, and therefore the hall was called the 'Bright Hall,' which is the meaning of the name Ming tang. We gather from this, by the way, the true explanation of the common phrase 'Shen ming,' spirits and bright intelligences. This phrase is much used in modern Chinese for worshipped beings who are believed to come and throng round the spots where sacrifices are offered and prostrations made. They also scrutinize and reward or punish the actions of mankind."—*Journ. N.-C.B.R.A.S.*, N.S. xxiv. 255-6.

"Mu Wang [1001-946 B.C.] of the Chou dynasty held the immortals in great veneration; he sent Yin Kuei and Tu Chung to Chung Nan Shan. The storied building of the Taoist priest Yin was called Taoist monastery, which then originated. This refers to pre-Lao Tzŭ Taoism, which took definite shape under Mu Wang."—*Hsü shih shih, Ko chih ching yüan, c.* 19, p. 27*b*.

"The practice of having two tablets in a temple-shrine originated from duke Hwan" [685-643 B.C.].—*Li chi*, v. i. 23; *Legge*, i. 323.

[The emperor, when appointing a prince over a State, took from the earth of his own altar to the spirit of the land, and gave it to the prince, that he might raise an altar to the spirit of the land in his State.]—*Ibid., Ch. Class.*, III. ii. 489, note.

"Liu Hsiang said: 'I have read somewhere that there was a Buddhist sacred book, so I know that in the Chou dynasty Buddhist books had already been introduced. Thus, before the Han dynasty Buddhas and the books existed [in Chiña].'"—*Li tai san pao chi; P'ei wen yün fu, c.* 94, p. 31*b*.

"But the greatest work Ashôka did was the establishing of a board for foreign missions (Dharma-Mahamâtra), which sent forth to all surrounding countries enthusiastic preachers who went out in self-chosen poverty, clad in rags, with the almsbowl in their hands, but supported by the whole weight of Ashôka's political and diplomatic influence." "At the same time [as the conversion of Ceylon] Cabulistan, Gandhara, Cashmere and Nepaul were brought under the influence of Buddhism, and thenceforth every caravan of traders, that left India for Central Asia, was accompanied by Buddhist missionaries." "In this way it happened, that as early as 250 B.C. a number of eighteen Buddhist emissaries reached China, where they are held in remembrance to the present day, their images occupying a conspicuous place in every larger temple."—*Eitel, Buddhism*, p. 21.

"The *ien* [*v. supra*] had their temples containing images of gods, to whom they paid worship and offered sacrifices, and whom they employed for magical purposes."—*De Groot, Rel. Syst.*, vi. 1240.

Sacrifices and Observances.—[The seasons of the year were inaugurated with special ceremonies and sacrifices.]—*Li chi*, iv. i.-iv.

[*Yo* (禴), *ssŭ* (禘), *ch'ang* (嘗), and *chêng* (烝) were the names of the seasonal sacrifices in the ancestral temple. *Yo* was the spring sacrifice, *ssŭ* that of summer, *ch'ang* that of autumn, and *chêng* that of winter. They were celebrated in the first months of the respective seasons (*Shih ching*, II. i. VI. 4; vi. V.). The Emperors raised a mound of earth of the five colours, as an altar to the spirits of the land (*Shu ching*, III. i. Pt. i. 35; *Legge, Ch. Class.*, III. i. 106, note). About the commencement of the year, a sacrifice was offered in every district to the Spirits presiding over the productive energies of the land (*Shih ching*, II. vi. VII. 2; III. iii. IV. 6). An analogous sacrifice was presented in the autumn after the harvest (IV. i. [ii.] IV.). We see in the *Chou li*, XX.-XXVII., that the right to perform sacrifice to the different celestial Spirits was graduated according to the order of dignities and offices. According to this graduation, the lower people of the country districts could sacrifice only to the ground and the secondary Spirits. This regulation must have facilitated the extension of the belief in Spirits.]

"On the day ting-we he [King Wu] sacrificed in the ancestral temple of Chow, when the chiefs of the imperial domain and of the teen, how, and wei domains all hurried about, carrying the dishes. Three days after, he presented a burnt offering to Heaven, and worshipped towards the mountains and rivers, solemnly announcing the successful completion of the war" (*Shu ching*, Pt. V. Bk. III. 3). "It was an honour to the chiefs and princes to assist at the sacrifice."—*Legge, Ch. Class.*, III. ii. 310, note. "Before setting out on his enterprise, Woo had sacrificed to his father, to God, and the Earth ('The Great Speech,' Pt. i. p. 10); here at its close he sacrifices, and, we may suppose, gives thanks at the same altars."—*Ibid.* III. ii. 309, note. See also MILITARY.

"'The King's guests' [*Shu ching*, Pt. V. Bk. XIII. 29] denotes all the princes present and assisting at the ceremonies, and specially those representing the previous dynasties." "The king entered the great apartment (*i.e.*, the middle hall of the temple), and poured the fragrant spirits on the ground to invite the descent of the spirits." The whole service was "a pure sacrifice presented in the temple of ancestors."—*Legge, Ch. Class.*, III. ii. 452, note.

"The son of Heaven sacrificed to Heaven and Earth; the princes of the states, to the (spirits of the) land and grain; great officers offered the five sacrifices (of the house). The son of Heaven sacrificed to all the famous hills and great streams under the sky, the five mountains receiving (sacrificial) honours like the honours paid (at court) to the three ducal ministers, and the four rivers honours like those paid to the princes of states; the princes sacrificed to the famous hills and great streams which were in their own territories." "The son of Heaven and the feudal lords sacrificed to the ancient princes who had no successors to preside over the sacrifices to them, and whose possessions now formed part of the royal domain or of their respective states." "The son of Heaven offered the spring sacrifice apart and by itself alone, but his sacrifices of all the other seasons were conducted on a greater scale in the fane of the high ancestor. The princes of the states who offered the spring sacrifice omitted that of the summer; those who offered that of the summer omitted that of the autumn; those who sacrificed in autumn did not do so in winter; and those who sacrificed in winter did not do so in spring." [They were absent in turn attending at the royal court.] "In spring they offered the sacrifice of the season by itself apart; in summer, in the fane of the high ancestor; in autumn and winter both the sacrifices were there associated together." "In sacrificing at the altars to the spirits of the land and grain, the son of Heaven used in each case a bull, a ram, and a boar; the princes, (only) a ram and a boar. Great and other officers, at the sacrifices in their ancestral temples, if they had lands, sacrificed an animal; and, if they had no lands, they only presented fruits. The common people, in the spring, presented scallions; in summer, wheat; in autumn, millet; and in winter, rice unhulled. The scallions were set forth with eggs; the wheat with fish; the millet with a sucking-pig; and the rice with a goose." The victims were all young animals.—*Li chi*, iii. iii. 6-9; *Legge*, i. 225-7.

"The odes do not speak of the worship that was paid to God, unless it be incidentally. There are two grand occasions on which it was rendered by the sovereign,—the summer and winter solstices. The winter sacrifice is often described as offered to Heaven, and the summer one to earth; but we have the testimony of Confucius . . . that the object of them both was to serve *Shang Te*. . . . Whether besides these two there were other sacrifices to God, at stated periods in the course of the year, is a point on which the opinions of the Chinese scholars themselves are very much divided. I think that there were, and that we have some intimation of two of them. IV. i. [i.] X. is addressed to How-tseih, as having proved himself the correlate to Heaven, in teaching men to cultivate the grain which God appointed for the nourishment of all. This was appropriate to a sacrifice in spring, which was offered to God to seek His blessing on the agricultural labours of the year, How-tseih, as the ancestor of the House of Chow, and the great improver of agriculture, being associated with Him in it. IV. i. [i.] VII., again, was appropriate to a sacrifice to God in autumn, in the Hall of Light, at a great audience to the feudal princes, when king Wăn was associated with Him, as being the founder of the dynasty of Chow."—*Legge, Ch. Class.*, IV. i. Prol. p. 134-5.

[The great sacrifice to Shang-ti, which was at the winter solstice, was also said to be to the Spirit (or Spirits) of heaven (天神). At the summer solstice Shang-ti was also sacrificed to, and the sacrifice was said to be to the Spirit (or Spirits) of earth (地祇) (*Chung Yung*, xix. 6).]—*Ibid.* i. 268, and note.

"The sacrifice to the spirits is represented as the great or chief ceremony; the subsequent festive indulgence by those who have taken part in it is a subsidiary ceremony." (*Legge, Ch. Class.*, III. ii. 405, note.) "Hearken constantly to my instructions, all ye high officers, ye assistants, and all ye noble chiefs:—when you have largely done your duty in ministering to your aged and serving your sovereign, you may eat and drink freely and to satiety. And to speak of greater things:—when you can maintain a constant watchful examination of yourselves, and your conduct is in accordance with correct virtue, then may you minister the offerings of sacrifice, and, at the same time, indulge yourselves in festivity. In such case, you will indeed be ministers doing right service to your king, and Heaven likewise will approve your great virtue, so that you shall never be forgotten in the royal House."—*Shu ching*, Pt. V. Bk. X. 7; *ibid.* pp. 404-5.

[They prepared themselves for this ceremony by washing the body, and by abstaining, for several days, from unbecoming words and actions (*Shih ching*, II. i. IV. 4). The priest sacrificed inside the temple gate after some had flayed the victims, some boiled their flesh, some arranged the meats, and some adjusted the pieces of it (II. vi. V. 2). The king, presiding at the sacrifice, used a knife with tinkling bells attached, to kill the bull, or principal victim (VI. 5) [*cf. infra.*]. They extracted the blood and the fat of the slain animals, and seasoned the flesh (V. and VI.). The pouring out of spirits, flavoured and made fragrant by various admixtures, commenced the service, being intended to bring the Spirits down (降神). The libations were followed by the sacrifice of a red bull, red being the colour in the victims slain under the Chou dynasty (*ibid.*).]

[At the same great epochs of the year, a ceremony in the ancestral temple was performed in each family, similar to what took place in the royal family, in honour of its ancestors, which was followed by a grand feast and rejoicings. In this ceremony the principal ancestor was represented by a grown-up man, designated by the name of 公尸, *kung shih*, or representative of the ancestors (*Shih ching*, II. i. VI.; vi. VI. 3). He kept himself motionless while they presented to him viands, fruits, and spirits (II. vi. VI. 3), and they augured the future prosperity of the family from the words which might escape from him (III. ii. III. and IV.). They thought it was the dead who spoke by his mouth. The personators were feasted at the supplementary repetition of the sacrifices on the day succeding the more solemn service (III. ii. IV.).]

The supplementary sacrifice (*cf.* EARLY FEUDAL PER.) "was continued under the Chow dynasty, and was called 繹. Subsequently, it seems to have fallen into disuse."—*Legge, Ch. Class.*, III. i. 264, note.

"There were also other services performed in the temple of ancestors which were of less frequent occurrence, and all known by the name of *te* (禘). That term was applied in a restricted sense to the annual sacrifice of the summer season; but there was also 'the fortunate *te* (吉禘),' when the Spirit-tablet of a deceased monarch was solemnly set up in its proper place in the temple, 25 months after his death; and 'the great *te* (大禘),' called also *hëah* (祫), celebrated once in five years, when all the ancestors of the royal house were sacrificed to, beginning with the mythical emperor Kuh (帝嚳), to whom their lineage was traced. There is no description in the She of the ceremonies used on those occasions."—*Ibid.* IV. i. Prol. p. 137.

"The above sketch of the seasonal sacrifices to ancestors shows that they were mainly designed to maintain the unity of the family connexion, and intimately related to the duty of filial piety. Yet by means of them the ancestors of the kings were raised to the position of the Tutelary Spirits of the dynasty; and the ancestors of each family became its Tutelary Spirits. Several of the pieces . . . are appropriate to sacrifices offered to some one monarch. They would be celebrated on particular occasions connected with his achievements in the past, or when it was supposed that his help would be specially valuable in contemplated enterprises."—*Ibid.* pp. 136-7.

"With regard to all the ceremonies of the ancestral temple, Confucius gives the following account of them and the purposes they were intended to serve in the Doctrine of the Mean, ch. XIX. 4:—'By means of them they distinguished the royal kindred according to their order of descent. By arranging those present according to their rank, they distinguished the more noble and the less. By the apportioning of duties at them, they made a distinction of talents and worth. In the ceremony of general pledging, the inferiors presented the cup to their superiors, and thus something was given to the lowest to do. At the [concluding] feast, places were given according to the hair, and thus was marked the distinction of years.'"—*Ibid.* p. 137.

"The *Book of Rites* contains a notice of the festival held in honour of weaving, which corresponds to that of ploughing by the Emperor. 'In the last month of spring the young Empress purified herself and offered a sacrifice to the goddess of silkworms. She went into the eastern fields and collected mulberry leaves. She forbade noble dames and the ladies of statesmen adorning themselves, and excused her attendants from their sewing and embroidery, in order that they might give all their care to the rearing of silk-worms.'"—*Williams, Midd. King.*, ii. 33.

The duke Gae, 478 B.C., "caused a temple to be erected [to Confucius], and ordered that sacrifice should be offered to the sage, at the four seasons of the year."—*Legge, Ch. Class.*, i. Prol. p. 91.

"The principal hall [of the temple of Confucius], called 大成殿, or 'Hall of the Great and Complete One,' is that in which is his own statue or the tablet of his spirit, having on each side of it, within a screen, the statues, or tablets, of his 'four Assessors.' On the east and west, along the walls of the same apartment are the two 庑, the places of the 十二哲, or 'twelve Wise Ones,' those of his disciples, who, next to the 'Assessors,' are counted worthy of honour. Outside this apartment, and running in a line with the two 庑, but along the external wall of the sacred inclosure, are the two 廡, or side-galleries, which I have sometimes called the ranges of the outer court. In each there are 64 tablets of the disciples and other worthies, having the same title, as the Wise Ones, that of 先賢, or 'Ancient Worthy,' or the inferior title of 先儒, 'Ancient Scholar.' Behind the principal hall is the 崇聖祠殿, sacred to Confucius' ancestors, whose tablets are in the centre, fronting the south like that of Confucius. On each side are likewise the tablets of certain 'ancient Worthies,' and 'ancient Scholars.'"—*Ibid.* p. 114.

[It was customary to offer to the God of the Yellow River the annual sacrifice of a maiden, who was richly attired and then thrown into the stream. The practice was stopped by Hsi-wên Pao, Governor of Yeh in Honan, in B.C. 424.]—*Giles, Bio. Dic.*, p. 265.

"No clear record of the sacrificial immolation of man by his fellow, 'offering the fruit of his body for the sin of his soul,' has been found in Chinese annals in such a shape as to carry the conviction that it formed part of the belief or practice of the people—although the Scythian custom of burying the servants and horses of a deceased prince or chieftain with him was perhaps observed before the days of Confucius."—*Williams, Midd. King.*, ii. 192.

[Grain, flesh, fruits, and spirits were among the articles of sacrifice.]—*Legge, Ch. Class.*, III. ii. 539, note.

[In sacrificing, wine made of black millet mixed with fragrant herbs was poured on the ground to "bring down the gods." Incense, made from artemisia mixed with fat, was burnt, "its fragrance filling the hall." Fish and soup were placed on the left, and flesh and meal on the right. This arrangement of the sacrificial offerings before the ancestral tablets was because the right was esteemed the place of honour, the elder brother standing on the right, and the younger on the left.]—*Chia li ta ch'êng, c.* 6, *Chi ssŭ pien k'ao*, pp. 18*a*, 17*b*. See also *Tsêng chu jén wu lei tien, Yin shih lei, c.* 36, p. 1*b*.

"According to the sacrificial rites, the common people in their offerings may use roast fish."—*Kuo yü, Ko chih ching yüan, c.* 24, p. 7*b*.

[Pieces of silk with prayers written on them were burnt during sacrifices. For the substitution of paper see following Period.]—*Chia li ta ch'êng, c.* 6, *Chi ssŭ pien k'ao*, p. 18*b*.

"Akkadian hymns are familiar with the idea of a scapegoat, animate or inanimate, but this sort of conjuration offended Chinese morality; and an author who died 237 B.C. narrates how a Duke King of Sung, refused to have it performed for his benefit when a star appeared ominously in a wrong constellation." *Simcox*, ii. 36-7.

"Of the ceremonies at the sacrifices in the royal temple of ancestors, in the first months of the four seasons of the year, we have much information in several odes. They were preceded by fasting and various purifications on the part of the king and the parties who were to assist in the performance of them. There was a great concourse of the feudal princes, and much importance was attached to the presence among them of the representatives of the former dynasties; but the duties of the occasion devolved mainly on the princes of the same surname as the royal House. Libations of fragrant spirits were made, to attract the Spirits, and their presence was invoked by a functionary who took his place inside the principal gate. The principal victim, a red bull, was killed by the king himself, using for the purpose a knife to the handle of which were attached small bells. With this he laid bare the hair, to show that the animal was of the required colour, inflicted the wound of death, and cut away the fat, which was burned along with southernwood, to increase the incense and fragrance. Other victims were numerous, and II. vi. V. describes all engaged in the service as greatly exhausted with what they had to do, flaying the carcases, boiling the flesh, roasting it, broiling it, arranging it on trays and stands, and setting it forth. Ladies from the harem are present, presiding and assisting; music peals; the cup goes round. The description is as much that of a feast as of a sacrifice; and, in fact, those great seasonal occasions were what we might call grand family re-unions, where the dead and the living met, eating and drinking together, where the living worshipped the dead, and the dead blessed the living."—*Legge, Ch. Class.*, IV. i. Prol. p. 135.

"This characteristic of these ceremonies appeared most strikingly in the custom which required that the departed ancestors should be represented by living individuals of the same surname, chosen according to certain rules which the

odes do not mention. They took for the time the place of the dead, received the honours which were due to them, and were supposed to be possessed by their Spirits. They ate and drank as those whom they personated would have done; accepted for them the homage rendered by their descendants; communicated their will to the principal in the sacrifice or feast, and pronounced on him and his line their benediction, being assisted in this point by a mediating priest, as we must call him for want of a better term. On the next day, after a summary repetition of the ceremonies of the sacrifice, these personators of the dead were specially feasted, and so . . . 'their happiness and dignity were made complete.' We have an allusion to this strange custom in Mencius . . . showing how a junior member of a family, when chosen to represent at the sacrifice one of his ancestors, was for the time exalted above his elders, and received the demonstrations of reverence due to the ancestor. This custom probably originated under the Chow dynasty—one of the regulations made by the duke of Chow; and subsequently to it, it fell into disuse."—*Ibid.* pp. 135–6.

"When the sacrifice to ancestors was finished, the king feasted his uncles and younger brothers or cousins, that is, all the princes and nobles of the same surname with himself, in another apartment. The musicians who had discoursed with instrument and voice during the worship and entertainment of the ancestors, followed the convivial party, to give their soothing aid at the second blessing. The viands, which had been provided . . . in great abundance, and on which little impression could thus far have been made, were brought in from the temple, and set forth anew. The guests ate to the full and drank to the full; and at the conclusion they all bowed their heads, while one of them declared the satisfaction of the Spirits with the services rendered to them, and assured the king of their favour to him and his posterity, so long as they did not neglect those observances. During the feast the king showed particular respect to those among his relatives who were aged, filled their cups again and again, and desired that their old age might be blessed, and their bright happiness ever increased."—*Ibid.* p. 136.

"They [the *sung*, or panegyrics, forming part IV of the *Shih ching*, or Book of Odes] appear to have been a species of hymn, sung before the Emperor when he sacrificed as *pontifex maximus* (always the peculiar office of Chinese Sovereigns) in the temples of Heaven and Earth, or in the hall of his ancestors."—*Davis, Chinese*, ii. 61.

"The three families used the Yung ode, while the vessels were being removed, *at the conclusion of the sacrifice*" (*Lun yü*, iii. 2). "For the Yung ode, see She-king, II. ii. Ode II. st. 7. It was, properly, sung in the imperial temples of the Chow dynasty at Che 徹, 'the clearing away,' of the sacrificial apparatus."—*Legge, Ch. Class.*, i. 19, note 2.

"佾, 'a row of dancers,' or pantomines rather, who kept time in the temple services, in the 庭, the front space before the raised portion in the principal hall, moving or brandishing feathers, flags, or other articles. In his ancestral temple, the Emperor had 8 rows, each row consisting of eight men, a duke or prince had 6, and a great officer only 4."—*Ibid.* i. 18, note 1.

"Under the sacerdotal guidance of these magicians [*wu*], the people . . . used to celebrate in those temples [*v. supra*] religious feasts, sacrificial masses or so-called *tsiao*, contributing money for the purpose, a good portion of which disappeared no doubt into the purses of those priests. Occasionally, temporary altars were put up in the open air with the same purpose."—*De Groot, Rel. Syst.*, vi. 1240.

Heresy.—Chinese "philosophy and politics both absolutely forbid freedom of religion and religious doctrines." The reason why they do so is because unorthodox views are opposed to the classical teachings of the ancients. Confucius condemned all that was not in conformity with the one infallible doctrine embodied in the Counsels of Yü the Great: "Hesitate not to put away all that is *hsieh*" (*i.e.*, that which is not correct, not right, evil in general), and said: "The practice of that which swerves from the orthodox (*i tuan*), oh, what harm it causes" (*Lun yü*, ii. 16). "It was Mencius, however, . . . who first by both word and example laid upon all future ages the duty of persecuting heresy. . . . He violently attacked all heretics," directing his attack chiefly against Yang Chu, "a preacher of epicureanism of the worst kind," and Mi Ti, "advocate of universal philanthropy to be practised even at the expense of one's parents, and also of simplicity in the funeral rites. To wage war against their doctrines, which evidently had made alarming progress in his time, was the chief aim and object of the sage." According to him, heresy is "everything which diverges from the teachings of the sages, and more particularly of three among them" (Yü, Chou Kung, and Confucius). "It is certain that, to the Chinese, the True Doctrine has always been exactly what was deemed, written, or edited by that triad; and so Mencius has saved all posterity the slightest uncertainty . . . as to what is heresy and what is not." He regarded heresies as dangerous to the State, and "criticisms . . . inevitably end in heresies." "Authoritative ancient writers, whose works are not included among the Classics, also waged war against all that was heterodox," as *e.g.*, Kuan I-wu (d. 645 B.C.). The *Ju chiao*, those who "exercise influence over the people by means of the *Tao*," right course, and the *Shih*, teachers, "who influence the people by their wisdom," form "a caste thoroughly versed in the orthodox writings concerning the ancients or emanating from them . . . upholding and propagating with fanatical tenacity the principles and doctrines expounded therein. China has at all times been abundantly blessed with members of this caste. From their midst the government officials are recruited. . . . When they pass without being appointed to an office . . . they form a class of notables of great distinction and influence. . . . It is therefore amongst the government officials and the literati that the fanatics are to be found for the one and only true Confucian doctrine of the Classics, which has been drummed into them by schoolmasters of their own calibre and convictions. They, and they alone, are the persecutors of heresy. The people deprived of all schooling are, of course, free from fanatic Confucianism. They have the privilege of supplying victims and martyrs for the blood-drenched altar of intolerance."—*De Groot, Sectarianism*, i. 4–15.

"According to Chinese logic and the immutable Confucian doctrine . . . the government must doom to death also all religious doctrines, customs and ethics which are not mentioned in the Classics, or bear no stamp of classical genuineness and soundness, or which the Classics mention with disapproval. The classical and only true religion consists in the worship of ancestors" and certain other gods. "And as for the people, their religion consists professedly only in the worship of their ancestors. Ever since the classical epoch, this religion has been exercised in the domestic circle, needing no religious corporations, no initiation, no doctrines, nor anything whatsoever that might stamp it as ecclesiastical or sectarian. All such things are therefore absolutely unclassical (*pu ching*) and anti-Confucian; they are incorrect and heterodox (*pu ching, pu tuan, i tuan, hsieh*, or *yin*), and 'left *Tao* (*tso tao*)'; and in the eyes of the State they have no right to exist. Hence it is that, armed with the sayings of the Great Yü, Confucius and Mencius, the State rages against them with strangulation, scourging and banishment, thus to keep the ancient religion free from pollution and innovations of any kind."—*Ibid.* p. 15.

Absolute Monarchy (221 B.C. *to* A.D. 221).—*Table III.*

Priests.—"In the second and first centuries before our era the *Wu*-ist priesthood [*v.* previous Periods] actually was the priesthood proper of China, even for the highest man in the world under heaven." The *wu* were employed by all ranks as sorcerers, etc. The priesthood consisted principally of women, who employed ghosts of the dead to effect their purposes. The State religion had not yet become an ultra-rigid system rejecting everything non-classical as heterodoxy.—*De Groot, Rel. Syst.*, vi. 1205–9, 1232–4.

"So early as B.C. 217 we read of Buddhist priests, Shih-li-fang and others, coming to China. The 'First Emperor' seems to have looked upon them with suspicion. At any rate he threw them into prison, from which, we are told, they were released in the night by a golden man or angel. Nothing more was heard of Buddhism until the Emperor known as Ming Ti [A.D. 58–76] in consequence, it is said, of a dream in which a foreign god appeared to him, sent off a mission to India to see what could be learnt upon the subject of this barbarian religion. The mission, which consisted of eighteen persons, returned about A.D. 67, accompanied by two Indian Buddhists named Kashiapmadanga and Gobharana. These two settled at Lo-yang, in Honan, which was then the capital, and proceeded to translate into Chinese the Sûtra of Forty-two Sections—the beginning of a long line of such. Soon afterwards the former died, but the seed had been sown, and a great rival to Taoism was about to appear on the scene."—*Giles, Hist. of Ch. Lit.*, p. 110.

"The primitive religion of the Chinese probably stood nearer to that of Egypt and Babylonia, both in kind and quantity of its observances, than modern Chinese writers would lead us to suppose. Besides all the traces of nature-worship met with in the Classics and Tso's commentary, there is a personage mentioned in Ssema-tsien's Treatise on the Fong and Chan Sacrifices, who reminds us of the Egyptian Cher-heb, in his character of reading or praying priest. There were 'official prayers,' one of whom was called '*le prieur secret*,' whose business it was to perform a sacrifice for the benefit of the prince, which, from the nature of the case, could not be done publicly, as its object was to cause an evil with which the sovereign was threatened, to be diverted from him to some other object."—*Simcox*, ii. 36.

"The Buddhist doctrine was introduced in the Han dynasty. Only the people from the Western regions were allowed to build temples for the worship of Buddha; and the people of Han were not allowed to become priests."—*T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 1*a*.

"Ying, prince of Ch'u, of the Han dynasty, was the first one to believe the Buddhist doctrines and went to *Kuo Hsiang* (title of a priest) to redeem his son with silks."—*Ibid.* p. 1*a*.

"In the time of the Emperor Ming [A.D. 58–76] of the Han dynasty, Ch'êng Liu-chün, Marquis of Yang, and others became Buddhist priests."—*Sêng shih lüeh, Shih wu yüan hui, c.* 34, p. 2*b*.

"The real evangelization of China commenced in A.D. 148 when the second batch of translators arrived in China. The earlier men did not effect much, but after the arrival of Anshikao [a Prince of Parthia, nephew of King Chosroes] and Lokaraksha the stream was quite continuous."—*N.-C. Daily News*, April, 1908.

Priests wore a distinctive dress. "The Buddhist priests of the Han dynasty wore red cloth garments, but afterwards [the priests] wore garments of various colours."—*Wei shu Shih lao chih, Tzŭ shih ching hua, c.* 107, p. 4*b*.

[For the connection between the State and the Buddhist Church see following Periods.]

Sacred Places and Temples.—"There would be village temples in the Han dynasty, erected to ancestors, as also to the gods of thunder, rain, and wind, and to the Great Bear and the gods of grain and agriculture."—*Journ. N.-C.B.R.A.S.*, N.S. xxiv. 270.

"[The goddess] Hsi-Wang Mu presented to the emperor a white jade image of the founder [of the Taoist sect], which was placed in a high look-out. The people of that time gave this the name of Taoist monastery. In the time of the Emperor Wu, Kungsun Ch'ing said: 'An immortal is fond of living in a loft.' Accordingly an order was issued that in the *Fei Lien* look-out in Ch'ang An, the *I Shou* and *Yen Shou* lofts were to be built and decorated with the best style of ornament. Taoist Monasteries became abundant at that time."—*Huang Li nei chuan, Shih wu yüan hui, c.* 35, p. 4*a*.

"In the 2nd year [A.D. 26] of the period Chien Wu a large altar to the Gods of the Land and Grain was built in Lo Yang, on the right of the Ancestral Temple. It was a square altar having no house, but [only] a wall and door."—*Hou Han shu Chi ssŭ chih, P'ei wên yün fu, c.* 14, p. 52*b*.

"In the *i ch'ou* or 8th year [A.D. 65] of the period *Yung P'ing* of the E. Han [the emperor] dreamt that a gold man more than 1 *chang* in height descended from heaven. He consulted all his ministers as to the interpretation of the dream, and Fu Yi answered: 'In the Western Region there is a deity called Buddha.' Accordingly he sent Ts'ai Yin and others to India to enquire about this doctrine. They procured the Buddhist books, and so this doctrine was introduced into China. Soon after this two Buddhist priests, Nieh Mo T'êng and Chu Fa Lan, came and brought with them the sacred book on the back of a white horse. When they first came they lived in the *Hung Lu Ssŭ* (Court of State Ceremonial of the T'ang dynasty). Hence the name *ssŭ*, temple or court. At the same time the *Pai Ma*, White Horse, monastery was built."—*Shih wu chi yüan, Shih wu yüan hui, c.* 34, p. 4*a*.

[A monastery was built on Wu T'ai Shan by the Emperor Ming (58–76) (*Fa yüan chu lin, P'ei wên yün fu, c.* 63, p. 242*b*), who also sent a messenger to the Western regions to procure Buddhist books and priests. Portraits of the latter were painted and hung in the *Hung Lu Ssŭ*. The *miao*, temples, were now changed to *ssŭ*, monasteries (*Fêng su t'ung, Ko chih ching yüan, c.* 19, p. 23*a*).]

"The Emperor Huan . . . displayed a liking for matters connected with genii. In the 8th year [165] of the period *Yen Hsi*, he instructed the Sub-Director of Court Ceremonial to go to the K'u district of the Ch'ên State to worship Lao Tzŭ, and in the 9th year he worshipped Lao Tzŭ in person, and built an altar at Yu Lung, the implements on which were of pure gold with decorated edges, and provided a throne with an embroidered cover. The music belonging to the sacrifices to heaven and earth was used."—*Hou Han shu Chi ssŭ chih, Tzŭ shih ching hua, c.* 109, p. 15*b*.

"Towards the close of the second century A.D. another Indian Buddhist, who had come to reside at Ch'ang-an in Shensi, translated the *sûtra* known as the Lotus of the Good Law, and Buddhist temples were built in various parts of China."—*Giles, Hist. of Ch. Lit.*, pp. 110–1.

Sacrifices and Observances.—"The founder of the Han dynasty, in passing through Loo, B.C. 194, visited his [Confucius'] tomb and offered an ox in sacrifice to him. Other emperors since then have often made pilgrimages to the spot."—*Legge, Ch. Class.*, i. Prol. p. 91.

[To guard against the neglect of agriculture, the rite of the Imperial ploughing was revived in 178 B.C.]—*Simcox*, ii. 112.

"The institution [scapegoat] was put an end to by the Han emperor Wen, in 166 B.C.: 'The secret supplicator diverts the course of calamities upon my subjects. I cannot permit it. Henceforward he is suppressed.'"—*Ibid*, ii. 37.

In the reign of Wu Ti (140–87 B.C.) "the important religious sacrifices to Heaven and Earth, known as 封禪 *fêng shan*, were established."—*Giles, Bio. Dic.*, p. 492.

[In the Han dynasty prayers were written on paper instead of silk. *Cf.* Early Feudal Per.]—*Chia li ta ch'êng, c.* 6, *Chi ssŭ pien k'ao*, p. 18*b*.

"At first, the worship of Confucius was confined to the country of Loo, but in A.D. 57 it was enacted that sacrifices should be offered to him in the imperial college, and in all the colleges of the principal territorial divisions throughout the empire. In these sacrifices he was for some centuries associated with the duke of Chow." Separate temples were assigned to them in 609: see *infra*, Rest of Unity.—*Legge, Ch. Class.*, i. Prol. pp. 91–2.

"During the Han dynasty (A.D. 59) wine was drunk and sacrifices made to Confucius in the study halls. The victim offered was a dog."—*Biot, Essai sur l'Instruction en Chine*, p. 168.

"The After Han Emperor 章 [76–89] was one of the earliest to pay honour to Confucius. He sacrificed at his village [闕里] to him and his 72 disciples [弟子], assembling 62 male descendants of the family at a great feast. Amongst them was 孔僖, Minister of State. The Emperor 桓 [147–68] later on sent an officer to sacrifice to Lao-tsz at his native town Hu 苦 the modern 亳州 according to the History Book."—*Ch. Rev.*, xii. 446.

"The rite of sacrificing to the founder of silkworm-rearing was by offering a sheep."—*Hou Han shu Li i chih, P'ei wên yün fu, c.* 14, p. 54*b*. The altar to the founder of silkworm-rearing is described in *ibid.* p. 54*b*.

"The king of K'un Ya, having killed the king of Hsiu T'u, went at the head of his people to conquer [Han]. When they had procured the 'golden god' [Buddha] no ox or sheep was used in worshipping it, only incense sticks were burnt and prostrations made."—*Han wu ku shih, Shih wu yüan hui, c.* 35, p. 5*a*.

"The books of the Buddhist religion, which are read and chanted in" the temples, "are partly translated into Chinese from the originals in the Pâli language, a dialect of the Sanscrit."—*Davis, Chinese*, ii. 88. Indian priests arrived with more books in A.D. 76, etc. Chinese Buddhists appear to have been most anxious to obtain and translate as many Buddhist manuscripts as they could lay hold of, and several emperors interested themselves in the work (*Eitel, Buddhism*, p. 25). 93 more works were translated by 170. The Bodhisattwas, Kwanyin, and Mandjusiri were "honoured in China as powerful divinities" (*Ch. Rev.*, xvii. 175–6).

"The cross, the mitre, the dalmatica, the cope which the lamas wear on their journeys, or when performing some ceremony out of the temple, the service with double choirs, the psalmody, the exorcisms, the censer suspended from five chains, which you can open or close at pleasure; the benedictions given by extending the right hand over the heads of the faithful; the rosary, ecclesiastical celibacy, spiritual retirement, worship of the saints; the fasts, processions, litanies, and holy water—all these are analogies between ourselves and the Buddhists."—*Huc, Travels in Tartary*, ii. 50. "In addition to these the institution of nuns, worship of relics, masses for the dead, and burning of candles and incense, with ringing of bells during worship, are prominent usages common to both. Their priests alike teach a purgatory from which the soul can be released by their prayers; they also conduct service in a dead language, and pretend to miracles. Lastly, the doctrine of the perpetual virginity of Maya, the mother of Sakya-muni, is an article taught by the Mongol Buddhists, who also practise a form of infant baptism, in which the lama dips the child three times under the water as he pronounces its name and gives it a blessing."—*Williams, Midd. King.*, ii. 231–2.

"On this point it is impossible to reach certainty. There have probably been some things borrowed by each from the other at various ages, without either knowing from whence they came or what were their tendencies. Fergusson shows the great probability that the monastic system, celibacy, and ascetic good works were adopted in the Eastern church from India; but the want of reliable records on either side hitherto has left much to inference and conjecture."—*Ibid.* ii. 232.

Period of Disruption (221 *to* 589).—*Table IV.*

Priests.—"The *wu* have ever remained what they probably were from" the beginning, ". . . men and women possessed by spirits or gods, and consequently acting as seers and soothsayers, exorcists and physicians; invokers or conjurers bringing down gods at sacrifices, and performing other sacerdotal functions, occasionally indulging also in imprecation, and in sorcery with the help of spirits." "Female *Wu*-ism had so firm a position in Chinese society, that it could boldly defy Confucian morality, which peremptorily forbids the presence of women in public before male eyes."—*De Groot, Rel. Syst.*, vi. 1212, 1214.

[*Wu*-ism, though imperially encouraged during the first half of 5th century, was in 472 denounced by the Emperor Wên, who forbade their heterodox rites and the participation of married or unmarried women in their performances. "But the exclusion of the *wu* from the celebration of canonical sacrifices of the State Religion, did not, however, include their dismissal as exorcists and destroyers of evil." *Cf.* following Period.]—*Ibid.* vi. 1234–5.

In 485 Kao Tsu decreed that the *wu* and *chi* "were strictly forbidden to foretell good or bad fortune under pretext of doing so by means of *shen* or *kwei*," and persecution of the priests probably followed.—*Ibid.* vi. 1217.

Originally the practice of Buddhism was permitted only to those who had brought it from the West. "By the beginning of the fourth century Chinese novices were taking the vows required for the Buddhist priesthood, and monasteries were endowed for their reception."—*Giles, Hist. of Ch. Lit.*, p. 111.

"In the time of the Emperor Yüan [317–23] of the Chin dynasty, Shih Hu served Fu T'u-Ch'êng respectfully and allowed the people to become priests. This was the beginning of the Chinese becoming priests."—*Sêng shih lüeh, Shih wu yüan hui, c.* 34, p. 2*b*.

"It was in the year 335 A.D., in one of the seventeen small kingdoms which divided China during the short and feeble rule of the T'sin Imperial Dynasty, that natives of the empire were first allowed to take Buddhist monastic vows. Fifteen years later there were as many as forty-two pagodas enumerated at Loyang, and the Taoists began to deprecate the antagonism of the religion, which they saw was likely to prove a dangerous rival, by claiming Buddha as an incarnation of Lao-tsze; but the overture was met by a revision of the elastic Buddhist chronology throwing the date of Prince Sakhya Mouni far enough back to exclude the possibility of such a derogatory hypothesis. In 400 A.D., the first of the string of Chinese pilgrims to the land of Buddha began his recorded travels, and from Fa-hien and his successors, the Bramans quoted by the Armenian Cosmas, (550 A.D.) learnt to think of China as equal in size to half the world. In 518 an embassy was sent from the Northern empire to bring Buddhist books from India."—*Simcox*, ii. 124–5.

Shih Chi-lung (石 季 龍) [died A.D. 363] "was a devout Buddhist, and under his reign people were permitted for the first time in China to take the vows of the Buddhist priesthood."—*Giles, Bio. Dic.*, p. 650.

"At this time only the Buddhist priests had preached the sacred books, but the Taoist priests had not. The preaching of the sacred books of the Buddhist priests is seen in the Chin Records, where it says: 'Mo Lo Shih preached the sacred books in the hall of the monastery.'"—*T'ung su pien, Shih wu yüan hui, c.* 34, p. 5*a*.

[Posthumous titles of honour were bestowed upon deceased priests, as by T'ai Tsu (386–409) of the Later Wei.]—*Shan t'ang ssŭ k'ao, ibid.* p. 3*b*.

"In A.D. 399 Fa Hsien started on his great pedestrian journey from the heart of China overland to India, his object being to procure copies of the Buddhist Canon, statues, and relics." He returned, with all his treasures, in A.D. 414, disembarking at Kiao-chow on the coast of Shantung.—*Giles, Hist. of Ch. Lit.*, p. 111.

"Ho Ch'ung [a minister] of the E. Chin was the first to build houses for nuns. Nunneries were then introduced."—*Shih wu yüan hui, c.* 34, p. 7*b*.

[Monasteries continued to be built by devotees. In 433 nuns were admitted to the Ching Fu Monastery. "The receiving of injunctions by nuns was thus originated."]—*Hsieh P'o T'o Shih Tzŭ chuan, Shih wu yüan hui, c.* 34, p. 7*b*.

"In the time of the later Wei, while T'ai wu was on an expedition to the West, the Buddhist priests in Ch'ang An violated the Buddhist law and collected together to do evil deeds. So an imperial decree was issued ordering the local magistrates to kill them all and burn their idols to ashes. On this single occasion all the priests of Ch'ang An were destroyed to the last man."—*Sui shu Ching chi chih, P'ei wên yün fu, c.* 93*b*, p. 35*b*.

"The emperor Wên [424–54] of the Sung dynasty thought that the priest Hui Lin was clever in discourse and so consulted with him about important government affairs. Afterwards he wielded power and interfered in important matters."—*T'ung chien, Kuang shih lei fu, c.* 20, p. 14*a*.

"[Shih] Hu thought that the false and true priests were combining to avoid payment of taxes and to spend the money on the services, and doing evil work, so he sent a decree to the Imperial Patent Office as follows: 'Buddha is to be worshipped by the government whether the common people worship him or not.' The Expositor of the *Han Lin* reported saying: 'The rules for the sacrificial ceremonies of the Emperor are fully set forth, but Buddha is a god of a foreign country and it is impossible for our Chinese to worship him.'"—*T'ung chien lei tsuan*, c. 17, *Shih chiao mên*, p. 1*a*.

"In 435 A.D., a provincial governor addressed a memorial to the emperor on the dangerous spread of Buddhism in the past 400 years. Temples of Fo, he complains, are to be seen in the smallest villages; to say nothing of the waste of labour, valuable building materials, stone, bricks and timber are thrown away upon these useless structures, while quantities of gold, silver, and copper, that might otherwise have been used in the public service, are consumed to make the idols worshipped by the perverted people. The memorialist concludes by begging that the temples may be destroyed and the materials used for the repair of public buildings. The Emperor approved of the suggestion, and issued an edict in accordance with it, almost exactly to the same effect as those which, 1,300 years later, put a stop to the spread of Catholic Christianity in China (*De Mailla*, v. 42)."—*Simcox*, ii. 125.

"We may be sure that at the earlier, as at the later date, there was no intolerance of speculative opinion at work. The Chinese dread of clerical aggression is purely civil and economical. The temporal authority cared nothing about the beliefs or opinions of its subjects, but it claimed to control their conduct, and it was contrary to the public interest that they should systematically waste their substance in endowing convents. Their money was their own as long as they spent it properly—in nourishing parents and children, in paying taxes and performing the customary ceremonies—but if the emperor's subjects tried to subsidize an independent, spiritual authority by temporal gifts, it was at their peril, and the gifts were liable to be confiscated, like the treasures of a rebellious prince."—*Ibid.* ii. 125.

"The material progress of Buddhism was not arrested and scarcely checked by these edicts, but they were really successful in resisting the danger—which the biography of Hiouen-thsang shows not to have been chimerical—of the machinery of public instruction falling into the hands of the heresiarchs and being used to train priests for the service of the religious sects, instead of scholars for the service of the State. Hitherto, as subsequently, independent scholars had led the way in literature, and the imperial colleges depended for their popularity and success upon the eminence of the teachers they could enlist."—*Ibid.* ii. 125.

"The doom of orthodoxy would have been sealed if its defence had been abandoned to the State schools, while heretical teachers succeeded to the place and influence of the unofficial Confucianists. Naturally, the new teachers fought less hard for the control of the schools, about which they cared little, than for the endowments of temples and monasteries, about which they cared a great deal; and so the state of antagonism was perpetuated between the few, who knew much and believed little, and the many, whose credulity was to be excused by their ignorance. As regarded temporalities, the struggle with Buddhism did not reach its height for some centuries, but the intellectual supremacy of Confucianism was not seriously endangered by its rivalry after the stringent measures of the 5th century."—*Ibid.* ii. 125–6.

"In the 19th year [442] of the period *Yüan Chia* [of Wên Ti], Shih Tsu [=T'ai Wu Ti] of the N. Wei rode in the imperial chariot to the Taoist altar to receive the written charms. All the banners he used were black. Hence [the custom of] every Emperor receiving written charms when ascending the throne. [K'ou] Ch'ien-chih also memorialized the throne requesting that a *Ching Lun* palace be built, which was to be so high that the barking of a dog or crowing of a cock could not be heard—wishing it to reach to heaven. Ts'ui Hao advised Shih Tsu to build it. The cost was over 10,000 [pieces of gold]. In a whole year it could not be completed."—*T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 6*a*.

In 446, Ts'ui Hao, an infatuated Taoist, Minister of Instruction to T'ai Wu of the N. Wei dynasty, "discovered a secret store of arms in a Buddhist temple at Ch'ang-an; in consequence of which the priests were put to death, their books and images destroyed, and for a time the Buddhist religion was prohibited."—*Giles, Bio. Dic.*, p. 774.

"In the 29th year [452] of the period *Yüan Chia*, Shih Tsu [=T'ai Wu Ti] of the Wei was somewhat lax as regards the prohibitions against the Buddhist sect, and people practised it in secret. When Kao Tsung [Wên Ch'êng Ti] succeeded to the throne, all the ministers requested the throne to reinstate it. Accordingly a decree was issued ordering that in populous places in every department, prefecture, and district, Buddhist temples might be built; if any wished to become priests they were allowed to do so—the large departments being limited to 50, and small departments to 40, etc. In this way the Buddhist temples formerly destroyed were all rebuilt. The ruler of Wei shaved the head of Ssŭ Hsien and others personally, and appointed Ssŭ Hsien to be *Tao T'ien T'ung* (President of the Buddhist Sect)."—*T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 1*b*.

"In A.D. 520 (or according to some, 526) he [the patriarch Bôdhidharma] came by sea to Canton, bringing with him the sacred bowl of the Patriarchate, and was received by the Governor with honour. Summoned to Nanking by the Emperor Wu Ti of the Liang dynasty, he offended that pious monarch by explaining that real merit lay not in works, but solely in purity and wisdom duly combined."—*Giles, Bio. Dic.*, p. 6.

"The Emperor [Liang Wu Ti, 502–50] in his old age was a firm believer in the Buddhist doctrines and offered the triple sacrifices in person. He took nourishment but once a day, and wore cotton garments."—*Liang shu Wu Ti chi, P'ei wên yün fu, c.* 94, p. 30*b*.

"Kao Tsu of the Liang dynasty, who firmly believed in Buddhism, built the *T'ung T'ai* monastery in Chien Nieh and offered himself as a slave [to be attached to the monastery]. So the Government collected precious things wherewith to redeem him. Every building for serving Buddha always had the characters *P'u Sa Bôdhisatva* inscribed on it, and in memorials the words 'Emperor P'u Sa' were inserted."—*Yüan chien lei han, c.* 316, p. 8*b*.

"The Buddhist priest Fa Yüch of the Chêng Chiao monastery in the capital of Liang was devoted to his calling. At the close of the Ch'i [501] he became pope of the Buddhist priests and lived in the Chêng Chiao monastery in the capital. He cultivated meritorious deeds and had four jurisdictions under his command."—*Fa yüan chu lin, P'ei wên yün fu, c.* 63, p. 12*4b*.

In 574 Wu Ti, of the N. Chou dynasty, "suppressed both Buddhism and Taoism."—*Giles, Bio. Dic.*, p. 962.

[The connection with the State is traceable only in the Emperor being the high priest in the State worship, the patronage of Buddhism by certain emperors, some of whom sacrificed in person or became priests, the receiving of charms on ascending the throne, and in the appointment of some priests to civil office. See the extracts under *Priesthood.*]

Conversion.—[Some further statements relating to conversion to Buddhism have been inserted *supra* under *Priesthood.*]

"In the time of the Three Kingdoms there was a Buddhist priest of the Western Region named K'ang Sêng who happened to bring a Buddha to the Wu State and explained what it was. The king of Wu, Sun Ch'üan, firmly believed in it. In the period *Huang Ch'u* [220–7] of Wei, the Chinese began to receive the commandments (or injunctions) of the Buddhist priest, and many of them shaved their heads and became Buddhist priests."—*Sui shu Ching chi chih, Tzŭ shih ching hua, c.* 107, p. 4*b*. See also *Ch. Rec.*, ii. 2.

"Shih Lê, Prince of Chao, thought that a Buddhist priest from India, Fu T'u Ch'êng, was able to precisely foretell good or ill luck, so he served him with piety. When Hu succeeded to the throne he served him still more respectfully. He clothed him in embroidered silk, and gave him a carved chariot to ride in. Every five days the princes and dukes were to attend him in audience. In this way the people of the country were converted and most of them served him. Where he was no one dared to spit on the ground. They competed in building Buddhist temples and in shaving their heads to become priests."—*T'ung chien Chin Ch'êng Ti chi, Yüan chien lei han, c.* 317, p. 27*b*. Also in *Chin shu, ibid. c.* 316, p. 1*b*.

[A protest against this adoption of an alien faith is recorded in *T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 1*a*, where reference is made to the "people of the Western regions" only being allowed to build temples to serve Buddha, the people of Han not being allowed to become priests. "In the Wei dynasty it was just the same." "It should now be forbidden to princes, great ministers, and all below them to enter Buddhist temples to worship therein. Also, the people of Chao who had joined the priesthood should be ordered to resume their original costume."]

"Under the first [Chin] sovereign, a monk from the country of the Getae, who had travelled to the West and obtained several Buddhist classics, arrived at Lo-yang and proceeded to the work of translation. From this time the advance of the foreign religion was very rapid, and we begin to read of Chinese becoming celebrated for their knowledge of the sacred books. About the year 335, the subjects of the After Ch'ao state were allowed to enter the service of Buddha. There seems to have been a considerable amount of religious excitement about this time, partly due to the influence of an Indian missionary monk, Buddojinga. Nearly fifty years afterwards, a king of this dynasty had a relic deposited within the palace enclosure, and a pagoda built over it. The progress of Buddhism, however, was not unopposed. When the people of Ch'ao were allowed to become religieux and were emulous in the erection of temples and monasteries, a high mandarin named Wang Tu 王 度 [protested against this in a memorial] . . . and prayed that (they) should be forbidden to frequent the Buddhist temples or offer worship to the Buddha." "About this time . . . [Wei Tao-an collected] a number of disciples [around him, and] sent them in different directions over the country to propagate the Law. He himself proceeded to Ch'ang-an, where the usurper Fu-chien 苻 堅 of Ch'in received him with great respect. . . . Tao-an persuaded the prince to send for [Kumarajwa from Tibet]. . . . It was not, however, until . . . the reign of An-ti (397–419) that the Hindoo monk arrived in China: when he found . . . that Tao-an had died twenty years before. The Prince of Ch'in appointed him Teacher of the Kingdom, 國 師, corresponding somewhat to an Archbishop. Kumarajiva now . . . with the assistance of . . . other monks, translated many of the sacred books. The prince collected the monks and priests in a pavilion in his garden, to hear the Master of the Law expound the Sutras. He himself helped in the work of translation and correction. . . . Thus the translations now made became the best, and they have in many cases remained ever since the standard editions." "In . . . 399, the celebrated Fa-hsien 法 顯, accompanied by Hwei-ching and several others, set out from Chang'an [for] India in search of the Buddhist 'prohibitions and regulations.' . . . [He returned, with a number of sacred books, in 414.] [*Williams, Midd. King.*, ii. 413, mentions a pilgrimage of *Hwui-sing* in 518.] Buddhism . . . was now favoured by the rulers, monasteries were multiplied, and nine-tenths of the households had embraced its doctrine. Shortly after Fa-hsien's arrival, another Chinese, Chi-mêng 智 猛, set out on a pilgrimage and obtained the Nirvana Sutra. Monks now arrived from India and other places also; and it appears that at the end of the Ch'in dynasty, Buddhism had made China well acquainted with the surrounding countries which had adopted that religion."—*Ch. Rec.*, ii. 2–4.

[357. Shih Tsu paid special honour to Confucianism and prohibited Taoism and divination, but in 381 was converted to Buddhism.]—*Giles, Bio. Dic.*, pp. 230–1.

Hsiao Wu Ti (372–96) "was the first sovereign who professed the Buddhist faith, and in 381 he built a monastery inside his palace."—*Ibid.* p. 674. He "fell completely into the hands of old 'frumps,' bonzes, and nuns. He refused to sanction repairs to Confucius' temple, though he had Buddhist shrines" (*Ch. Rev.*, xiii. 429).

"Being connected by trade with China, Tibet sent Buddhist emissaries to labour in China even before Buddhism became a recognized power among the Tibetans. The Buddhist Church of Tibet gained its first official recognition during the reign of Lha-tho-thori (407 A.D.)."—*Eitel, Buddhism*, pp. 29–30.

"In the second year [484] of the *Yung Ming* period, Tzŭ Liang, Prince of Ching Ling, believing firmly in the Buddhist doctrines, called for many famous priests to discuss them."—*T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 1*b*.

"The Indian Kumarajiva, one of the Four Suns of Buddhism, had been occupied between A.D. 405 and 412 in dictating Chinese commentaries on the Buddhist Canon to some eight hundred priests. He also wrote a *shâstra* on Reality and Appearance, and translated the Diamond Sûtra, which has done more to popularise Buddhism with the educated classes than all the material parts of this religion put together."—*Giles, Hist. of Ch. Lit.*, p. 114.

"In A.D. 520 Bôdhidharma came to China, and was received with honour. He had been the son of a king in Southern India. He taught that religion was not to be learnt from books, but that man should seek and find the Buddha in his own heart. Just before his arrival Sung Yün had been sent to India to obtain more Buddhist books, and had remained two years in Kandahar, returning with 175 volumes."—*Ibid.* p. 115.

"Christianity was introduced by the Nestorians under the title of the 'luminous teaching.'"—*Giles, Historic China*, p. 51.

Temples and Sacred Places.—[Encouragement was given to Buddhism by emperors and others by the building of temples, monasteries and altars, as *e.g.*, by Wang Kung (373–97), Hsiao Wu (381), T'ai Wu (424–52), and Wên Ti in 444 (*P'ei wên yün fu, c.* 63, p. 21*7b*; *c.* 14, p. 5*4b*; *Chin shu Hsiao Wu Ti chi, Tzŭ shih ching hua, c.* 107, p. 2*b*; *T'ung chien lei tsuan*, c. 17, *Shih chiao mên*, p. 4*a*; *Ch. Rev.*, xiii. 118; *Sêng shih, Ko chih ching yüan, c.* 19, p. 24*b*); by Ming Ti (465–73) (*P'ei wên yün fu, c.* 63, p. 22*4b*), etc.]

"Temples were erected on this island [Puto] as early as A.D. 550, and since it became a resort for priests it seems to have enjoyed the patronage of the government. The Goddess of Mercy is said to have visited this spot, and her image is the principal object of worship."—*Williams, Midd. King.*, i. 126.

[Idols were sometimes presented as tribute (*cf.* POLITICAL). A coral idol was sent by the Fu Nan country in 502–20 during the Liang dynasty.]—*Nan shih, Shih wu yüan hui, c.* 3, p. 6*a*.

Sacrifices and Observances.—"When T'ing was dead his subordinate officers cast an image of brass 8 feet high in the Kuang Yin monastery in the West City and built 8 gates. They fasted in order to pray for happiness for him in the realm below. He was loved to this extent after his death."—*Wei shu Ts'ui T'ing chuan, P'ei wên yün fu, c.* 63, p. 22*7a*.

[Some economy in sacrificing was shown under the Chin dynasty. Hsü Têng and Chao Ping-kuei used running water and substituted mulberry bark for flesh.]—*Sou shên chi, Ko chih ching yüan, c.* 24, p. 4*a*.

[The first Emperor of the Liang dynasty, interpreting the Buddhist commandment "Thou shalt not kill" in its strictest sense, caused the sacrificial victims to be made of dough.]—*Giles, Bio. Dic.*, p. 286.

[The kind of food used in sacrificing to the deceased emperors

and empresses was fixed by a decree of 491: for the Emperor Hsüan, leavened cake and duck soup; for the Empress Hsiao, duck with bamboo shoots, eggs, and pickled roast meat; for the Emperor Kao, hashed meat, and soup made from pickled vegetables; and for the Empress Shao, tea-congee and roast fish (which had been her favourite dishes during her life-time).]—*Nan shih, Ko chih ching yüan, c.* 26, *Yin shih lei*, p. 2*b*.

[Pinewood was burnt at the sacrifice to the god of the present year on his return to heaven.]—*Yüeh ling t'ung k'ao, ibid. c.* 50, *Jih yung ch'i wu lei*, p. 29*b*.

"When heaping up earth to sacrifice to the hills and rivers, and levelling a place to sacrifice to heaven, the wheels of the carriage were covered with rushes, so as not to injure the earth, stones, grass, or plants."—*Shih chi, ibid. c.* 29, *Chou chü lei*, p. 20*b*.

"It was not till the third year [485] of *Yung-ming* in the Ch'i dynasty that an imperial decree ordered that dancing should form part of the Confucian ceremonies (see 釋 奠 考, bk. 舞 譜)."—*Van Aalst, Ch. Music*, p. 33.

Sectarianism.—The data in Chinese literature concerning the persecution of heresy "reveal some interesting phenomena of Chinese religious life. They tell us with what undaunted zeal the sects send out their branches in different directions; how indestructible they are; how powerful an organization binds the numerous fraternities together; how strong must be the influence of religion which effects all this." These sources "reveal how the sects, arming in self-defence, have made Sons of Heaven tremble on their throne. And, constantly and regularly, they confirm . . . our demonstrations as regards the standpoint and line of action adopted by the State as persecutor, that is to say, as champion of the only true Confucian Doctrine."—*De Groot, Sectarianism*, ii. 276.

"When a Confucian Chinese thinks of Sectarianism, ten to one the sect of the White Lotus rises before his mind. For this society has for centuries had a leading part in China's history both as the chief object of persecution and as the mightiest rebel power; and more than any other sect it is to this day the nightmare of the mandarinate. As a so-called political society, it has also acquired outside China a notoriety such as no other sect possesses." "A Buddhist religious society, named the White Lotus, existed in China in early times. Its foundation is described in a little book . . . generally believed to have been compiled under the Tsin dynasty." The founder was "a certain member of the Kia tribe, bearing the clerical name of Hwui yuen, or Far-reaching Wisdom," who died in 416. We may say "that he sowed the seeds of the same syncretism which to this day has characterized Sectarianism in China generally." "The common goal of the first members . . . was salvation in the Realm of Purity, the Western Paradise of the Buddha Amita." They settled in the Lu Shan or Lu Mountains, near the P'oyang Lake. The name was taken from the white lotus flowers grown in the pond close to the monastery built by Hsieh Ling-yün on his meeting the founder. "After this we read no more of the brotherhood for several ages."—*Ibid.* i. 162–3.

The Lotus Society was "animated by faith in the coming Messiah, who was to bring deliverance from oppression and persecution, and would restore the church of Buddha to its ancient glory." "This mysterious, powerful community, accommodated to the religious instincts of the masses and, by satisfying their cravings for salvation, able to hold its own, in spite of bloody persecution and oppression, is certainly well worthy of our interest. We naturally long for some knowledge of its doctrine and ritualism, its constitution and organization, its purpose and aspirations, about which the codices and the constitution of China leave us in total darkness." A manifesto from the Prefect of Ch'üan Chou in 1887, "ordering his Sub-Prefects to set about the persecution and extermination of the three sects [*Lung Hua, Hsien T'ien,* and *Chin T'ang*] vigorously," led to De Groot obtaining some manuscripts containing the tenets of the sects. The *Chin T'ang* is merely a branch of the *Lung Hua* sect, with the same tenets, organization and ritual, so much so that the members attend each other's meetings. As regards the other two, "although one in principle and aspiration, viz., Salvation, as indeed we believe all Chinese sects to be, they are far from similar in other respects. While the former is most positively adverse to religious ritualism, show and activity, the other is its exact opposite, and would probably be so in much stronger measure if the members were not compelled, for fear of persecution, to moderate themselves in outward religious work. In this ritualism of the Lung-hwa society the Buddhist element predominates in every respect, its institutions being moulded entirely upon Buddhist monasticism." "The two sects . . . possess everything appertaining to a complete religious system: founders and prophets, a pantheon, commandments, moral philosophy, initiation and consecration, religious ritual, sacred books and writings, even theology, a Paradise and Hell—everything borrowed principally from Mahayanistic Buddhism, and partially from old Chinese philosophy and cosmogony. It is through these societies that religious feeling, piety, and virtue, created by the expectation of reward or punishment hereafter, flourish amongst the people, who but for the sects would live in utter ignorance about these matters, as Confucius and his school have written or said nothing of importance on the same, and the Taoist aspirations to perfection by virtue and religion have evidently died. But this does not mean that both sects have derived nothing from Confucianism and Taoism. Their syncretic character pre-supposes just the contrary."—*Ibid.* i. 168, 169–75. For branch-sects see MING PERIOD, and for general character of sects, MANCHU PERIOD.

Heresy.—[Some of the following extracts of a general character relate also to subsequent and, in a certain measure to preceding, Periods.] All religions, sects, doctrines, etc., that are not Confucian in the sense already set forth [see previous Periods] being liable to persecution and extermination, Buddhism "is thus in the first place assigned for persecution, together with all the religious communities and sects it has given birth to. Mohammedanism, Nestorianism, Christianity, or by what other names the religions may be called which either ephemerally or for good have found their way into China, all share the same fate. And finally, all home-bred ideas and usages of native paganism and Taoism are proscribed, in so far as the Classics speak of them disapprovingly or ignore them."—*De Groot, Sectarianism*, i. 16.

"Buddhism has always had much more to suffer from the anathema of the State than Taoism," the latter having "in a far greater measure . . . become amalgamated with the religion of the State," and its fundamental principle, *tao*, coinciding with that of Confucianism. The silence in the Classics respecting the deified ancestors of Taoism was not sufficient to condemn this old heathen religion as heretical, except by ultra-extremists. The highest power in the State was such an extremist (see following Periods). With the Emperor and his mandarins "rests the decision which of the gods are entitled to receive the people's worship, and which are not." "This dogma is most highly classical, being preached by the *Shu.*"—*Ibid.* i. 16–18.

As to which of the "classical" gods are, for purposes of worship, legal and which forbidden, "imperial despotism decides . . . in each particular case, or mostly the will and opinion of the mandarins, to whom the imperial powers are delegated. Only with respect to the class of the mandarins themselves we know for a certainty what *yin szê* are. They are sacrifices and devotions to divinities that hold no place in the ranks of the gods of the State religion, or, to use the official expression, that are not admitted in the *szê tien*, or Canon of Sacrificial Worship."—*Ibid.* i. 24–5.

"Though . . . in general, lenity is shown by the government and its mandarins to the people's native gods and goddesses and their worship, that tolerance does by no means extend to impudent rabbles who presume to found or propagate new, unclassical doctrines and religious practices. . . . Almost invariably . . . such prophets fell into the hands of the authorities, were tortured and put to death—in short, treated as sorcerers and deceivers of the public with their miracles or black arts particularly dangerous to the State."—*Ibid.* i. 26.

"After all, the conclusion is that the official persecution of Taoism and paganism does not resolve itself into a persecution of gods and their worship, but works with great activity against sects and their founders, leaders and followers."—*Ibid.* i. 26.

"In the first place, the State has, during a series of centuries, turned its fanatic wrath against one element of Taoism which was, as far as may be ascertained by means of the Classics, totally non-existent in the golden Confucian and pre-Confucian age, namely its monachism. Its system of worship of gods may be defensible for having existed in some form or other in those sacred times; but its monachism being certainly not so old, cannot plead that ground in favour of its right of existence."—*Ibid.* i. 26.

"Buddhism had a far worse ordeal to endure. This religion was altogether of exotic origin, and thus lacked the great privilege of being able to appeal for its right of existence to China's classical antiquity. Asceticism and monachism were in this Church brought to a much higher degree of development than they had ever reached in Taoism, and so they became necessarily the *bête noire* of Confucianists. Upon Buddhism in particular it was then that their blows fell, and we see the Confucian State direct her persecutions principally against this religion to this day, treating it continuously with the greatest enmity and contempt" (*cf.* MANCHU PERIOD).—*Ibid.* i. 27.

"When, under the Han dynasty, Buddhism had secured for itself a lasting place in Chinese society, it enjoyed a period of development, greatness and prosperity, which reached its climax in the fifth century." . . . The Northern Wei family "on the whole showed itself favourably disposed towards Buddhism. Its residence Loh-yang was a hotbed of monastic life. . . . But . . . this same imperial house produced a sovereign who was to be the first to lay violent hands upon Buddhism. He was Wu, the Warlike" (*Shih Tsu*, 424–52), "a staunch admirer of Confucianism. At first a patron of Buddhism, he came under the influence of the Taoist K'ou Chien-chih and his zealous adherent, the high minister Ts'ui Hao." Arms being discovered in a monastery during the suppression of a rebellion led by Kai Wu, the monks were executed and the monastery sacked. This was followed (444) by edicts ordering the suppression of Buddhism and the extermination not only of Buddhist priests and those who protected or concealed them, but also priests and leaders of native heathenism, together with religious soothsayers and others. "Is it the spirit of the present State-law against Heresy that we see hazily looming on the horizon?" There can be no doubt that he acted "much under the influence of Confucianism." But his cruel edicts "drove many monks and priests in despair to the banners of Kai Wu, the foreign insurgent, thereby giving the emperor a fresh impetus to rage against the foreign religion." "The temples and pagodas of earth and of wood, and the buildings where the doctrines were preached, were all effectively destroyed to the very last." "For seven or eight years in succession, until the end of the reign of that emperor, Buddhism was in a state of profound desolation and ruin. Then a gradual relaxation of the prohibitions set in, and serious believers could once more secretly perform their worship; but the Shamans, who began to re-appear one by one, still hid their religious garments and performed their Sutra-readings and religious practices in secret. Only in the capital they could not yet show themselves in public." "Such is the account, given in the Standard Annals [*Books of the Wu Dynasty*, ch. 114, fol. 10, 11; ch. 4, II, fol. 8, 11], of the first great storm which swept over Buddhism in China. Shi Tsu's death put a stop to the persecutions, and amongst the later emperors of his house we find many who again let Buddhism have its course, sometimes even showing it marked favour; nay, more than one amongst them founded monasteries, temples, and pagodas. The rapid recovery of the sorely damaged church may be learned from the fact that after less than three quarters of a century, between the years 512 and 516, the imperial government ascertained by an official census that there were no less than 13,727 monks and nuns within its dominions, and that the number of their pupils and hangers-on exceeded that of the laity [*ibid.* fol. 19]: figures well calculated also to give us an idea of the prosperity of Buddhism in those days."—*Ibid.* i. 27–33.

"Outside the pale of the empire of the Toba dynasty, Shi Tsu's example proved infectious, namely with his namesake of the house of Sung, which from Kien-Khang, the present Nanking, swayed its sceptre over a large portion of central and southern China. The plotting of a rebellion by T'an Piao in 458 led to the issue of prohibitory but abortive edicts which showed clearly that 'the fundamental motives for religious persecution emanated from Confucianism.'"—*Ibid.* i. 33–4.

"Nearly a whole century now passes by in which we read of no harsh imperial measures against Buddhism. But at the end of that time violent persecutions broke out in another part of the empire, namely in the dominion of the Northern Chou dynasty." At a meeting convened (573) by the Emperor Wu the rank to be assigned to each of the three religions was discussed, the order decided upon being, Confucianism, Taoism, Buddhism (*Chou shu*, ch. 5, fol. 17). "Confucianism being thus declared pre-eminent, the extermination of the two other systems was resolved upon at once." "In the following year, Buddhism and Taoism were abolished, the sacred books together with the images altogether destroyed, Shamans and Taoist doctors were no longer allowed to exist, and all were ordered to become laymen again. Also all heretical sacrifices [see previous Periods] were prohibited, and all sacrifices not mentioned in the Canon of Religion and Rites were totally abolished (*ibid.* fol. 19)." "Unfortunately, no minutes have been preserved of that curious synod," but it was another Confucian indictment of Buddhism. As a result "more than two millions of Buddhists and Taoists within the imperial dominions . . . forsook the ecclesiastical state. The two emperors who reigned during the next eight years . . . were favourable to Buddhism, so that there is reason to believe that this religion was once more allowed to revive."—*Ibid.* i. 34–5.

"Meanwhile, new dangers came from an entirely different quarter. For the second time a storm gathered over Kien-khang, where in 557 the thoroughly Buddhistically disposed Liang dynasty had been dethroned by that of Ch'ên." In 583 this house decreed Buddhism and Taoism to be heretical. But the political danger from the house of Sui seems to have rendered this decree ineffectual.—*Ibid.* i. 36.

[The toleration of *Christianity* in the early days was due to indifference. A Nestorian mission was established *c.* 505.]—*Ch. Rec.*, xii. 1–15.

From the Restoration of Unity to the end of the Five Dynasties (589 *to* 960).—*Table V.*

589–907.

Priesthood.—[The *wu* continued to have influence as spiritists, etc. Emperors "might freely charge them with the presentation of sacrifices to certain State gods, in order to avert dangers from the realm and throne." See instances in *De Groot, Rel. Syst.*, vi. 1217–23, 1235–6.]

"An official of the Sui dynasty was Fu I (A.D. 554–639), who became Historiographer under the first Emperor of the T'ang dynasty. He had a strong leaning towards Taoism, and edited the *Tao-Tê-Ching*. At the same time he presented a memorial asking that the Buddhist religion might be abolished. . . . He urged that at any rate priests and nuns should be compelled to marry and bring up families, and not escape from contributing their share to the revenue. . . . The result was that severe restrictions were placed for a short time upon the teachers of Buddhism."—*Giles, Hist. of Ch. Lit.*, p. 134. See also *ibid., Bio. Dic.*, p. 236. Also in *T'ang shu, Yüan chien lei han, c.* 316, p. 2*b*.

[Five clans (Yün Mên, Lin Ch'i, Hui Yang, Tung Hsien, and Fa Yen) are stated to have succeeded in the offices of Buddhist priests.]—*Pi shu lu hua, Tzŭ shih ching hua, c.* 107, p. 7*a*.

"On the demise of the Emperor Jui Tsung [684] the Princess Wan An, daughter of the emperor, became a Taoist priestess, wishing to pray for the happiness of her father in the realm below. The name of Taoist priestess or nun originated from this."—*T'ung chien, Shih wu yüan hui, c.* 35, p. 5*a*. Another instance is given in 712: See *T'ang shu Chu Kung chu chuan, P'ei wên yün fu, c.* 74, p. 93*a*.

In 626 "a scholar named Fou-y had addressed a memorial to the emperor Kao-tsong, against the two heretical sects of Buddha and Lao-tze." After pointing out the evil results of the doctrines of quietism and the dreams of immortality, he points out that by the marriage of the 200,000 Buddhist monks and nuns living in celibacy, 100,000 families would be added to those contributing soldiers to the defence of the country and labourers for its support (*De Mailla*, vi. 29). The result was that, in spite of ministerial opposition, the local officers "were instructed to tolerate one temple only in each town of the first class, and presumably, none elsewhere."—*Simcox*, ii. 145–6.

"During the reign of the Empress Wu (Chinese Catherine No. 2), priests were very much to the fore as generals, artists, and men of science."—*Parker, China*, p. 298.

[In 714 and succeeding years the royal relatives "competed with each other in building Buddhist temples and in memorializing the throne to allow people to become priests." Also, many wealthy families shaved their heads and entered the priesthood to avoid the fief labour.]—*T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 2*a*.

"In the second year [767] of the Period *Ta Li*, Tai Tsung served more than 100 Buddhist priests with food in the palace. Whenever rebels arose he ordered the priests to chant the *Jén Wang* prayer in order to avert the calamity. As soon as the rebels withdrew he bestowed large rewards [upon the priests]."—*Ibid.* p. 5*b*.

Tê Tsung, 780–805, "forestalled the more stringent prohibitions of Hien-tsong, by making it illegal to erect any new temples, or receive fresh candidates for Buddhist orders."—*Simcox*, ii. 135.

"Immediately on [Hsien Tsung] succeeding to the throne [806] people were forbidden to become Buddhist priests, nuns, or Taoists, and were also forbidden to build monasteries."—*Han Yü lun Fo ku piao, P'ei wên yün fu, c.* 74, p. 93*a*.

"The next attack upon the new religions came from a different quarter, and was aimed at the Buddhists only, by Wu-tsong (841–864 A.D.), an emperor who shared the weakness of his house for the Taoist sect. He began by ordering the destruction of all pagodas erected by private persons without authority, and renewed the prohibition against tolerating more than one temple of the sect in provincial towns. The two temples allowed to the capital were limited to thirty priests each, the remainder to five or ten; and the inmates of all the other monasteries, male and female, to the number of 265,000, were commanded to return to their homes and resume their place in the taxpaying community. In all, 44,600 monasteries and temples were condemned, of which only a tithe had received official sanction. The number of the monasteries is not given separately; but judging from the numbers of their inmates it must have increased formidably since the middle of the seventh century, when, according to the memoirs of Hiouen-thsang, there were 3,716 convents in the whole Empire, and the ordination of 18,500 monks and nuns, authorized upon the traveller's intercession, was sufficient to make up for the depopulation of the monasteries during the stormy close of the Souy Dynasty."—*Simcox*, ii. 148–9.

"The convent lands were confiscated, the materials of the temples used for the repair of public buildings, the copper statues melted down to make money, and the lesser movables most probably annexed by the officials sent to carry out the Imperial edict. The slaves of the monasteries, to the number of 150,000, were set free, and, like the monks, added to the ranks of the common people, who were liable to the payment of land

and labour tax. The stringency of these anti-Buddhist edicts was partly relaxed at the beginning of a new reign in the following year, but the indulgence was abused so that in 852 the Chinese were again forbidden to take Buddhist orders."—*Ibid.* ii. 149.

"In that year, with the exception of those in famous places where there were traces (*e.g.*, footprints) of spirits or deities, one temple only was allowed in the populous places of each district. Anyone not holding a government certificate was not allowed to enter the priesthood, and people wishing to travel for the purpose of studying with a professor had to obtain a passport from the local magistrate."—*T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 3*a*.

"The intercourse with the West, which was closer under this dynasty than at any former period, had opened the door to other strange religions, two of which were dealt with in a second edict. The priests of foreign origin were to be conveyed to the frontier nearest their own country, while the Chinese converts were required, like the Buddhists, to return to their secular duties. As there were 3,000 priests or monks affected by the edicts, it is obvious that the congregations cannot have consisted exclusively of foreigners, and the class of different proselytizing sects, competing for the contributions of the ignorant populace, was particularly abhorrent to the rulers. The banished religions were those of Ta-tsin, which is described as 'a kind of Fo religion,' and is certainly Christianity, and that of Mou-hou-fou, a name which suggests Mohamedanism, though the description given answers better to some form of Magianism or Manichœism imported from Persia."—*Simcox*, ii. 149.

"In the fourth month in summer [in 862 ?] an imperial decree was issued saying: 'The Buddhist sect is to be put above the Taoist sect, and Buddhist priests and nuns before Taoist priests and nuns.'"—*Chiu T'ang shu Tsê T'ien Huang Hou chi, Tzŭ shih ching hua, c.* 110, p. 17*b*.

[Priests were occasionally heavily fined, as, *e.g.*, for crime—*Yüeh Ya T'ang ts'ung shu, Nan pu hsin shu, Ping* (=*Vol.* 3), p. 4*b*.]

[Titles continued to be imperially bestowed upon priests: see *Huang ch'ao shih yüan, P'ei wên yün fu, c.* 63, p. 238*a*. Also the right of wearing the garments of gold and purple: *Shan t'ang ssŭ k'ao, Shih wu yüan hui, c.* 35, p. 3*b*.]

[Buddhist priests were versed in astrology.]—*Wu Lai chi, Kuang shih lei fu, c.* 15, p. 10*a*.

[See also further under *Persecution, infra*.]

Ranks.—"Buddhist and Taoist officialdom is not a modern institution. It was already in existence, under the T'ang dynasty. At that time, there was an Officer for the Worship of the Sombre Empyrean, of the eighth degree of official rank, with a Coadjutor or Secondary, of the ninth degree; their business was to keep in the metropolis the genealogical registers of the imperial family, to enroll the Taoist clergy, and to regulate the Buddhist and Taoist sacrificial masses celebrated by the clergy by order of the government. Buddhist monks and priests from Corea and Japan, residing or studying in the capital for more than nine years, had also to be registered by them. Besides all this, they had to see that no cleric lodged for more than three nights running in the house of a layman; and in case of infringement of this rescript, the one who had sheltered him so long, was to be brought to justice and punished, together with the Officer of the Clergy:—for longer journeys, which never might exceed seven days, every monk or priest had to be provided with a passport from the Prefect of the department or the district. At that time, 1,687 Taoist convents were tolerated in the empire, for 776 male and 988 female devotees; and of Buddhist monasteries there were allowed 5,358, for 75,524 monks and 50,576 nuns. In order to maintain these figures, a Censor in the metropolis was charged with the control of the ordination. In each department and district registration had to take place every third year; one register was kept there; one register of the Buddhist clergy was sent up to the Board of Sacrifices, and one of the Taoists to the Direction of the Imperial Clan, and to the Department for Grades and Promotions."—*De Groot, Sectarianism*, i. 105.

"To the two Officers for the Worship of the Sombre Empyrean were added: two Archivists, three Recorders, six Overseers, two Maintainers, and one Doctor for the Study of the Worship of the Dark Universe; finally, one hundred pupils. Under the Sui dynasty, this body of functionaries had been placed under the Bureau for State Ceremonial (*cf.* p. 63), whose principal function it was to receive foreign embassies and court guests. A place for the performance of religious rites and an altar to the Sombre Empyrean were built for them."—*Ibid.* i. 105–6.

"In the earliest years of its existence this imperial house [T'ang] had appointed one Inspector for every Buddhist or Taoist monastery and . . . these functionaries belonged to the Bureau for State-Ceremonial." In 627–50 these functions were withdrawn. For changes in official control and appointment of other dignitaries, see p. 106.—*Ibid.* i. 106.

"Thus we learn that the ecclesiastical mandarinate, which probably originated under the Sui dynasty, was under that of T'ang the medium through which the government insured on its own behalf the religious services of the clergy, and that altars were placed at their disposal for this purpose. In reality then the dynasty adhered to both these religions, notwithstanding its strenuous efforts to check their growth and influence."—*Ibid.* i. 106.

Sacred Places and Temples.—[Numerous temples, monasteries, and pagodas continued to be built. In most idols and images, often numerous, very elaborate, and of great value, were placed. Many are named and described in *Fa yüan chu lin, P'ei wên yün fu, c.* 63, p. 225*b*, 242*b*; *Kuei hsing tsa chih, ibid.* p. 41*b*; *Pien chêng lu, ibid.* p. 243*b*; *Lo Yang Chia lan chi, ibid.* p. 230*a*; *Po liu t'ieh, Ko chih ching yüan, c.* 19, pp. 23*b*, 27*b*; *T'ung chien, Shih wu yüan hui, c.* 35, p. 4*a*; *T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 5*b*; etc. For Confucian temples see further *infra*.]

"Instituted for the purpose of giving man an opportunity to raise himself to a higher state of perfection and bliss by ingeniously devised means, Taoistic asceticism has known its halcyon days, its ups and downs, chiefly ruled by the rising and falling of the thermometer of imperial favour. Under the T'ang dynasty, the empire possessed, according to official statistics, 1687 Taoistic monasteries (*Hsin T'ang shu, c.* 48, fol. 15)," but there is hardly a trace of them left at the present day (*cf.* MANCHU PERIOD).—*De Groot, Sectarianism*, i. 26–7.

"Some miles to the north-west [of Si-ngan, Shensi] lies the temple Ta-fu-sz', containing a notable colossus of Buddha, the largest in China, said to have been cut by one of the Emperors of the Tang in the ninth century. This statue is in a cave hewn out of the sandstone rock, being cut out of the same material and left in the construction of the grotto. Its height is 56 feet; the proportions of limbs and body of the sitting figure are, on the whole, good, the Buddha being represented with right hand upraised in blessing, and the figure as well as garments richly covered with color and gilt. Before the god stand two smaller colossi of the *Schang-hoa*, Buddha's favourite disciples; their inferior art and workmanship, however, testify to a later origin. The cave is lighted from above, after the manner of the Pantheon, by a single round opening in the vaulting. Sixty feet over the rock temple rises a tile roofing, and upon the hillside without the cavern are a number of minor temples and statues."—*Williams, Midd. King.*, i. 151.

[From 609 separate temples were assigned to Confucius and the duke of Chou, and in 628 the former displaced the latter altogether. Separate temples were also erected to Confucius in connection with all the colleges, or examination halls, of the country.]—*Legge, Ch. Class.*, i. Prol. pp. 92–3.

Of reactionary measures, those recorded are mostly of a drastic nature (see also *infra*). "Tih Jên-kieh (*Mayers*, No. 667), in the year A.D. 688, burnt over 1700 unauthorised shrines (淫 祠) in South China (吳 楚), leaving absolutely none but those of 伍 員 (*Mayers*, No. 879), the Great Yü (No. 931, near Shao-hing), Wu T'ai-peh, and Ki Chah (*Mayers*, No. 283)."—*Ch. Rev.*, xiii. 399. See also *T'ung chien lei tsuan*, c. 17, *Shih chiao mên*, p. 6*b*. The same work relates the demolition of 4,600 monasteries by Wu Tsung (841–7), who "abolished Buddhism," and used the materials thus obtained to repair the ancestral temples, post houses, and courts. The event is further described in *T'ang shih huo chih, Ko chih ching yüan, c.* 19, p. 23*b*.

"Chao Tsung [889–905] of the T'ang dynasty issued a decree that idols or Buddhist images were to be made of copper, tin, clay, and wood. Fashioning images out of copper, clay, and wood then originated."—*Shih wu yüan hui, c.* 35, p. 5*b*.

[Koeppen says that the following passage from the biography of Hiuen-tsang clearly shows the purpose and meaning of the tope, stûpa, dagoba, or pagoda]:—

"In the third year (652), in the third month of spring, the Master of the Law wished to build a Stûpa of stone, south of the gate of the monastery of Hong fosse (Great Happiness), in order to lay up in it the books and images which he had brought from the West. Considering the transitoriness of the human race, he was afraid that the books might be scattered and lost, or destroyed by fire. This tower was to be 300 feet high, in order to be worthy of the majesty of a great empire and in the future one of the finest monuments of Sakyamuni's religion. Before beginning the building, he sent a petition to the Emperor, who soon sent him a favourable answer through Li i fu, one of his private secretaries. The Emperor gave the necessary orders, so that the pious intentions of the Master in the Law might be carried out without any trouble. Each side of the tower was 140 feet wide, and its plan followed exactly the form used in India. It had five stories, and a dome at the top; its total height amounted to 180 feet. In the centre of each story Carîras [personal relics of Buddha, especially pieces of bone] were laid down . . . in all, about ten thousand. On the top story a stone chamber was built, which bore on its south side two metal plates, with the prefaces written by the Emperor and the Crown Prince (to Hiuen Thsang's translation of the Sacred Books) engraved on them." [These inscriptions were written out by Chu sui lang. On the day when the foundation-stone was laid, Hiuen Thsang wrote an account of the motives and results of his journey, concluding with an expression of gratitude for the two Imperial prefaces.]—*Die Rel. des Buddha*, i. 545–6.

Sacrifices and Observances.—"The sage is not alone in those temples [*v. supra, Sacred Places*]. In a hall behind the principal one occupied by himself are the tablets—in some cases, the images—of several of his ancestors, and other worthies; while associated with himself are his principal disciples, and many who in subsequent times have signalized themselves as expounders and exemplifiers of his doctrines. On the first day of every month, offerings of fruits and vegetables are set forth, and on the fifteenth there is a solemn burning of incense. But twice a year in the middle months of spring and autumn, when the first *ting* day of the month comes round, the worship of Confucius is performed with peculiar solemnity. At the imperial college the emperor himself is required to attend in state, and is in fact the principal performer. After all the preliminary arrangements have been made, and the emperor has twice knelt and six times bowed his head to the earth, the presence of Confucius' spirit is invoked in the words, 'Great art thou, O perfect sage! Thy virtue is full; thy doctrine is complete. Among mortal men there has not been thine equal. All kings honour thee. Thy statutes and laws have come gloriously down. Thou art the pattern in this imperial school. Reverently have the sacrificial vessels been set out. Full of awe, we sound our drums and bells.'" The spirit is supposed now to be present, and the service proceeds through various offerings, when the first of which has been set forth, an officer reads the following, which is the prayer on the occasion:—'On this . . . month of this . . . year, I., A.B., the emperor, offer a sacrifice to the philosopher K'ung, the ancient Teacher, the perfect Sage, and say,—O Teacher, in virtue equal to Heaven and Earth, whose doctrines embrace the past time and the present, thou didst digest and transmit the six classics, and didst hand down lessons for all generations! Now in this second month of spring (or autumn), in reverent observance of the old statutes, with victims, silks, spirits, and fruits, I carefully offer sacrifice to thee. With thee are associated the philosopher Yen, continuator of thee; the philosopher Tsăng, exhibiter of thy fundamental principles; the philosopher Tsze-sze, transmitter of thee; and the philosopher Măng, second to thee. May'st thou enjoy the offerings.'" "I need not go on to enlarge on the homage which the emperors of China render to Confucius. It could not be more complete. It is worship and not mere homage. He was unreasonably neglected when alive. He is now unreasonably venerated when dead." "The rulers of China are not singular in this matter, but in entire sympathy with the mass of their people."—*Legge, Ch. Class.*, i. Prol. pp. 92–3.

"There were at first only civil dancers (文 舞), but the Emperor Chên Kuan (貞 觀) of the T'ang (唐) dynasty (A.D. 650) introduced also military dancers (武 舞). The civil dancers, dressed in their court uniform, had in one hand a long feather and in the other a small stick; the military officials who took part in the dance were dressed in full military uniform, and had in one hand an axe and in the other a shield."—*Van Aalst, Ch. Music*, p. 33.

"In the first year [666] of the period *Ch'ien Fêng*, they sacrificed to T'ai Shan by heaping up earth to make a round altar called the *Fêng Ssŭ* altar."—*T'ang shu Li yüeh chih, P'ei wên yün fu, c.* 14, p. 55*a*.

Tzŭ-yü (子 輿) "was first associated with the sacrifices to Confucius in A.D. 668." Tzŭ-yü (子 羽), "with nearly all the disciples whose names follow [*v.* pp. 119–28], first had a place assigned to him in the sacrifices to Confucius in A.D. 739."—*Legge, Ch. Class.*, i. Prol. p. 119.

[In the T'ang dynasty prayers written on paper were used in sacrificing in the ancestral temple only. [*Cf.* EARLY FEUDAL PER.]—*Chia li ta ch'êng, c.* 6, *Chi ssŭ pien k'ao*, p. 18*b*.

"In sacrificing the ancients used cattle and silk. Under the rites of the Ch'in dynasty, horses were used. When sacrificing grew to excess, wooden horses were substituted. Ming Huang [713–56] of the T'ang, being too fond of worshipping the gods, Wang Yü, his minister, used paper instead of silk, and paper horses in place of the wooden ones."—*Chih hsin lu, Shih wu yüan hui, c.* 35, p. 5*b*.

[The same sovereign's excessive zeal also led to a request that an altar be built for the worship of Ch'ing Ti only.]—*T'ang shu Wang Yü chuan, P'ei wên yün fu, c.* 14, p. 51*b*.

"On the Moon Lake Embankment is the Ancient Bell Tower adorned within with the motto, dating back to the ninth century, 'Arousal to deep meditation,' in accord with which the old bell used to be kept ever tolling to arouse men's consciences."—*N. C. Herald*, April 18, 1900, p. 682.

"In the *i wei* year [of *T'ien Pao* of Hsüan Tsung: 755] the *Wu chê* society was formed in the Hall of Brilliancy. A hole five *chang* deep was dug in the ground. The palaces were made of variegated silk. All the idols were produced from the hole, [the priests] pretending that they emanated from the ground. Also, an ox was killed, and the head of a large image, 200 feet high, was painted with its blood. They pretended that Huai I painted it with blood from his thigh [lit., knee]."—*T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 5*b*.

"Before the Sung dynasty ascended the throne the condition of the people must have been debased in the extreme. In Kwang-tung men were sacrificed to demons; witches, wizards, and sorcery existed, and temples were erected for the practice of superstitious rites."—*Scarth, Twelve Years in China*, p. 88.

Fasting.—"Tung Ku had seen that the people on the days of Ursa Major descending, the third and the eighth *Kêng Shên, Chia Tzŭ*, and their birthdays, ate a vegetable diet. This was called 'abstaining from animal food.' In the *T'ung su pien*, it says: 'This custom began in the T'ang dynasty and prevailed during the Sung dynasty.'"—*Shih wu yüan hui, c.* 34, p. 6*b*.

Cleanness.—"On the 8th of the 12th moon the 6th *Chiang Fu* instructors earnestly entreated Buddha, saying: 'Thou, Buddha, used the sacred water to wash away the dirt in my heart. Now I ask the Buddhist priest to wash away the dirt of my body.' It became the common practice. Then baptism was an old custom in Western countries, so now baptism into Buddhism was originated."—*P'i yü ching, Shih wu yüan hui, c.* 34, p. 2*a*.

Connection with State.—"The Emperor Wen [589–605] of the Sui dynasty appointed the Buddhist priest Yen Ch'ung as Chancellor. This was the beginning of Buddhist priests becoming officers."—*Shih wu chi yüan, Shih wu yüan hui, c.* 34, p. 3*a*. But see previous Periods.

By Srong-dsan-gambo's (Lha-lho-lhori's grandson) "marriage (A.D. 641) with a daughter of the Chinese Emperor Tai-tsung, he materially strengthened the link which, for centuries before his time, connected the Buddhist Churches of China and Tibet."—*Eitel, Ch. Buddhism*, p. 30.

"In the time of Kao Tsung [650–84] Yeh Ching Nêng had bestowed upon him a Han Lin degree, and became Libationer of the Imperial Academy of Learning."—*Shan t'ang ssŭ k'ao, Shih wu yüan hui, c.* 35, p. 3*a*.

"In the summer of the 2nd year [675] of the period *Shang Yüan* high seats were put in the *Ching Lung* Taoist monastery [for the priests to sit on and] discourse on Taoism and Buddhism. The Prime Minister and all the other ministers were ordered to come to this monastery to hear the discourses, and a vegetable diet was prepared for them. Also they had money bestowed on them proportionally."—*Yüeh Ya T'ang ts'ung shu, Nan pu hsin shu, ting* (vol. 4), p. 6*b*.

[Queen T'ien was, in 690, declared by the Buddhist priests of the *Tung Wei Kuo* monastery to be the *Mi Li* Buddha incarnate.]—*T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 5*b*.

"In the 1st year [694] of the period *Yen Tsai*, Queen Wu . . . ordered that Buddhist priests and nuns should be attached to the Board of Ceremonies. Buddhist priests and nuns being under the control of the Board of Ceremonies then originated."—*Shan t'ang ssŭ k'ao, Shih wu yüan hui, c.* 34, p. 3*b*.

"In the 2nd year [708] of the period *Ching Lung*, a decree was issued welcoming Ta Shih (a Buddhist priest) into the palace from Huai, and the Emperor, in addressing him, spoke of himself as 'your disciple.'"—*Ssŭ Chou sêng Chia Ta Shih chuan, P'ei wên yün fu, c.* 63, p. 221*a*.

"Buddhism was patronised [by Tai Tsung], and in 768 there were a thousand priests and nuns in the palace, which was governed entirely by eunuchs."—*Giles, Bio. Dic.*, p. 475. The Empress Wu bestowed upon the Buddhist priest Fa Lan a purple surplice for his translation of the *Ta yün ching* (*Shih wu chi yüan, Shih wu yüan hui, c.* 34, p. 3*a*).

"Queen Wu . . . appointed the Buddhist priest Huai Yi commander of the Hsin P'ing District, and ordered him to invade the T'u Chüeh [Tartars]. That a Buddhist priest could become a commander of a military force is only known from this incident."—*Yüan chien lei han, c.* 317, p. 26*b*.

[Posthumous rank equal to that of President of the Board of Works was bestowed [768] upon Pu K'ung, the Buddhist priest.]—*Ibid.* p. 26*b*.

"Posts of growing value were being granted in larger measure than before to the successful candidates in the examinations—the literati in and out of office must have watched with comparative equanimity the spread of Buddhism, a doctrine which, in the words of a writer of the period, 'admits no envious rivalry for place or power.' The remedy proposed by the censors was . . . to reduce the number and the salaries of the official class; but after this display of impartiality, there was a notable revival of anti-Buddhist zeal." "The Emperor [Hsien Tsung] himself was an ardent Buddhist" and sent Han Yü (Han Wên-Kung) into virtual exile for protesting by means of a memorial against his reception of a relic of Buddha.—*Simcox*, ii. 146–7; see also *N.-C.B.R.A.S.*, N.S. vi. 165, and the trans. of the anti-Buddhist memorial in the *Celestial Empire*.

"The most disinterested votaries of the new law [Buddhism] had not thought of supplanting the Confucian hierarchy in the regulation of secular affairs."—*Simcox*, ii. 145.

"On the subject of the prevailing latitudinarianism, Han-yu complains that even Confucianists talk of their master as having shown respect for Lao-tze and Buddha—though the worship of the latter was not known in China till the eastern Hans—and he denounces, as the great evil of the day, the craving after the supernatural, which Confucianism most emphatically discourages. But the *a priori* arguments of the ancients are rather taken for granted by the later controversialists, and Han-yu insists principally upon the practical disadvantages of tolerating two new classes of non-producers. Anciently, the people were divided into four classes, the scholars, husbandmen, artisans, and traders, of whom the first only had to be maintained out of the labours of the rest; but now six classes have to be maintained by three, so who can wonder if crime and beggary prevail?"—*Ibid.* ii. 147–8.

It was argued that "individuals, who did nothing but try to save their own souls, to demand to be maintained at the expense of the community while so engaged, was not only absurd but anti-social. And, in fact, so long as the quarrel between religious asceticism and political secularism continued in China, the secularists posed consistently as the champions of social duty as opposed to spiritual egotism."—*Ibid.* ii. 148.

"It is curious that at the same time (A.D. 845) the control of the surviving monasteries was put under the Chinese Foreign Office, for the very logical reason that 'the religion of Fo came from India.' The official religion was a part of the internal policy of the realm, and the Board of Rites could no more be asked to look after foreign superstitions than a European minister of religion to look after secular education."—*Ibid.* ii. 149.

"In the year A.D. 860 the Emperor I-tsung of the Tang dynasty applied himself to the study of Sanskrit, and gave a new impetus to the collection of Buddhist literature, which was now only approaching completion."—*Eitel, Ch. Buddhism*, pp. 25–6.

I Tsung "was as pronounced a patron of Buddhism as some of his predecessors had been oppressors, and he sent, at enormous expense, to India a mission to procure a bone of Buddha's body, and on its arrival he received the relic on bended knees before his whole court."—*Boulger, Short Hist.*, p. 33. In 862 his zeal for Buddhism caused him to neglect the government. He built an altar in the *Han T'ai* Court as a place for the nuns in the monastery of the palace to receive the injunctions, and Buddhist priests and nuns of both sects were allowed to become members. He also erected a pulpit in the palace, where he chanted Buddhist prayers. He copied out Buddhist books, and frequently visited the monasteries, bestowing large presents upon the priests. See *T'ung chien lei tsuan*, c. 17, *Shih chiao mên*, p. 3*a*.

Conversion.—"In the 7th year [624] of the period *Wu Tê*, Shên Shu-an, President of the Board of Punishments, was instructed to take a Taoist idol to bestow upon Corea, and a Taoist priest was ordered to preach the *Tao tê ching* [to the Coreans]."—*Yüeh Ya T'ang ts'ung shu, Nan pu hsin shu, chia* (vol. 1), p. 7*a*.

Persecution of and Legislation against Heresy.—The re-union of the empire "did not improve the fate of the two religions. Confucianism had then apparently succeeded in working itself up for good to the rank of the very first power in the state, and never to this day would that system show mercy on heresies. The three centuries embracing the reign of the house of T'ang . . . were centuries of an aggressive war, in which the foreign church especially fared badly. Her glory departed for good, her strength declined, and she herself, formerly so glorious and prosperous, entered upon a decadent existence, without ceasing to show, however, to the present day a remarkable tenacity of life."—*De Groot, Sectarianism*, i. 36.

"As early as . . . 624 . . . the campaign was opened by a memorial" of the Minister Fu Yi, in which, "on the authority of . . . the chief classical book [*Shu ching*] every religion stands indicted with encroachment upon the imperial omnipotence, that is, with high treason, if, by preaching the existence of other punishments or rewards than those which terrestrial government inflicts or confers, it deters mankind from evil and encourages it to do good. For the sovereign alone has the right to punish and to recompense!" But "the only effect of his memorial was a theoretical abolishment of Taoism and Buddhism." This was in 626, but more lenient measures were almost immediately instituted. "In the sixth month the emperor rehabilitated the religions of Buddha and Laotsze."—*Ibid.* i. 36–42.

"It was . . . not until a whole century later (714) that the imperial government gave way, and began to take forcible measures against the clergy" of the Buddhist church. The result of a memorial (714) by Yao Ch'ung, in which reference was made to the prevalent custom of avoiding under the cloak of Buddhistic endowments services due to the government, was that more than 12,000 of the clergy were sent back into the lay world. Yao Ch'ung's philippic against Buddhism in his will, embodied in the standard annals, also had wide influence. "The chief reproach was that the people were deceived and led astray by it, as it did not, like the only true Confucianism, give verity pure and unalloyed. And especially its tenets concerning the possibility of raising the dead into a condition of higher bliss are idle gossip, its ceremonies instituted for that purpose absolutely valueless, nay, even detrimental, because of the outlays they entail. . . . Salvation of the dead was always the sheet anchor with which this religion, since its earliest establishment in China, had secured for itself a safe position in the vast ocean of Confucian heathenism; for of Confucianism itself, piety and devotion towards parents and ancestors, and the promotion of their happiness, were the core, and, consequently their worship with sacrifices and ceremonies a sacred duty."—*Ibid.* i. 43–9.

The sacrificial worship of the dead was performed without any church surrounding it with external pomp and ritualism, or regulating it by means of strictly defined doctrines. "Buddhism came to fill up this deficiency. Its grotesque tales of transmigration and future life, of paradises and hells, were eminently calculated to work upon the imagination; they charmed and fascinated a nation which at all times had evinced the greatest interest in the fate of its ancestors, and to whom it was no matter of indifference to know what their own fate would be on the other side of the grave. Moreover, the new religion invested the established worship of the dead with an elaborate system of ritual and ceremonies, which lent it a cheerful character, and converted it into a work of blithesome beatification. Is it then to be marvelled at that the Chinese inclined heart and soul towards the priests of the exotic religion, who so gratified their tastes and instincts? Thenceforth Buddha's clergy made it their regular vocation to alleviate by their solemn work the sufferings of the departed; paradise and hell furnished them the key to the heart and affections of the people."—*Ibid.* i. 49.

Other arguments of Fu Yih and Yao Ch'ung also had influence in the persecution of Buddhism. Both statesmen asserted that since its introduction "the age of man has been considerably shortened, and that no dynasty since that time has been able to keep on the throne for any great length of time." Therefore, this religion is dangerous to the emperor individually as well as to his house. To it Fu Yih ascribes "the alarming increase of faithlessness amongst the ministers towards their sovereign, and their increased cruelty towards the people."—*Ibid.* i. 49–50.

[But the anti-Buddhism of the T'ang dynasty possessed yet other weapons. The Confucianists argued that some of the emperors, etc., who had adopted Buddhism had come to a miserable end. And what was the use of tolerating a class of clergy—useless drones who neither worked nor paid taxes nor gave birth to soldiers for the emperor's armies nor to sons who could engage in the important occupations of agriculture and silk-weaving? Their religious work encouraged waste of money in the erection of temples and monasteries. Their ethical doctrines were of a low order. The pious sentiments of Buddhism are overlooked. "A chilling and peremptory denial of the worth of religious sentiment and moral elevation, which are the necessary effects of a striving after perfection for this world and the world to come, is one of the chief features of all anti-Buddhistic writings from Confucian pens." Moreover, retirement from the world into a convent, the main road to salvation according to the Buddhist doctrine, "was a breach of the ties by which nature has united children to parents and relations and a sin against the sacred *hiao* or duty of filial submission and devotion preached by the Classics and the sages of all times; it is a criminal act of the worst kind, an execrable sin against nature itself and the *Tao*, and words fail wherewith to brand its wickedness."]—*Ibid.* i. 50–1.

"Is it to be wondered at that under the T'ang dynasty, when Confucianism was marked by a considerable growth and expansion showing themselves in the creation of all kinds of classical political institutions, and their codification in the vast Ritual of the *Khai yuen* period (v. *Rel. Syst. of Ch.*, i. 236)—that the church of Buddha gradually lost ground with the emperors and the court, and could no longer maintain itself unhurt in the offensive warfare waged against it? That steady progress of Confucianism we find in natural alliance with the enactment of imperial laws whose object it was not so much to destroy the church by crude force, as to deprive it of its vital strength by attacking it at its very root: its conventual life." The number of persons permitted in the authorised monasteries was continually reduced, as well as the number of the monasteries themselves. "Restrainers" were appointed to control the inmates and their doings, and the clergy registered every third year at the Board of Sacrifices (*Chiu T'ang shu*, ch. 43, fol. 18; for members of authorized monasteries, priests and nuns, see ch. 48, fol. 15). The *tu t'ieh*, or "consecration certificate," a diploma conferred by the secular power, "without which no one could be considered to have become a member of the clergy, nor be allowed to dwell in a convent, or wear the religious garb," was instituted and "prevails to this day. Thus it remained for ever within the power of the State to keep the numerical strength of the clergy down to any level desired." The government also "sold these documents for money." Moreover, monasteries could only be erected by special imperial licence. The clergy were also ordered to honour their parents like the lay people.—*Ibid.* i. 51–3.

"Thus the T'ang dynasty created a special set of laws and rescripts designed to curtail conventual and clerical life; laws which all succeeding dynasties would take over, and which would bring monarchism into the languishing condition in which we find it in our days. . . . Meanwhile the Confucian mandarinate, the sworn enemy of Buddhism, never left off urging the imperial government to yet harsher measures. The official historical books of those times contain a remarkable proof of the fierceness and acrimony of their attacks, showing also that this acrimony was so intense that even the profound respect and veneration for the august person of the Son of Heaven, which has always characterized that caste, could not temper it," see the memorial (819) of the celebrated scholar and statesman Han Yü, which though it offers no further arguments against the church than those advanced by Fu Yih and Yao Ch'ung, is, amongst the literati of the present day, "the best known of anything that has ever been put on paper against Buddhism" (see *Chiu T'ang shu*, ch. 160, *Hsin T'ang shu*, ch. 176, and *Ch. Rec.*, ii. 40).—*Ibid.* i. 53–9.

But "it was not until 835 that an emperor . . . Wên Tsung 'interdicted by decree the ordinations of Buddhist monks and nuns' (*Chiu T'ang shu*, ch. 17, II. fol. 26); a measure which, at the instigation of the doctor of the Han-lin college Li Hiun, was followed by the removal of all Buddhistic images and altars from the court. These, however, were but the feeble precursors of the more rigorous measures by which Wên Tsung's successor Wu Tsung was to immortalize his name."—*Ibid.* i. 59.

"As early as 834 . . . he issued a decree" that the people and the convents or temples of the Uigurs and Mo-ni [? Manicheists], their farms, houses, money, effects, etc., were to be registered and confiscated by the Central Government. "The great crusade against Buddhism, which was now the chief item on Wu Tsung's programme, was to some considerable extent the work of three jealous and zealous Taoists, whose influence upon the emperor was great." These were Chao Kuei-chên, Têng Yüan-ch'i, and Liu Hsüan-ching. "The returns gave 4,600 monasteries, 40,000 hermitages (*a lan jo*), and 260,500 monks and nuns." These were reduced in number and ultimately most of them were ordered by decree to be destroyed and the inmates to return to the tax-paying section of the community. "With this imperial decree (845), Confucianism celebrated its triumph and held its jubilee, while Buddha's church received a blow from which it was never to recover. The extermination designed for it was, however, only partly effected. The demolition of monasteries and temples could, indeed, hardly banish the religion itself from the hearts of the people; on the contrary, the return of a host of zealots for the salvation of themselves and others into secular life, meant no less than the transplanting of the doctrines and practices of their church into the very midst of society. A revival of religiosity and piety, little to the mind of the government, was the necessary result; a revival expressing itself in the founding of religious associations and communities under the guidance of a priesthood living in the world, and which thenceforth was to rejoice in an increasing numerical strength. But the outward glory of the church was gone for ever; the number of its monasteries and ascetics remained from that time on a minimum level. Wu Tsung suffered some convents to remain in existence; and his decree could not prevent a large number of the mandarinate, and even of the imperial family, from retaining strong sympathies with this religion. So history continues its old course:—emperors come to the throne, who let the church go on its own way, and even order or support the erection of monasteries and temples; they sometimes ordain repasts to be given, at government expense, to the clergy in the capital or in other parts of the realm, or ceremonial vestments to be distributed among them: works which always passed for most meritorious among the devotees of the church. They attend the solemn worship of holy relics, and have pagodas built for these. They frequently invite the clergy to court to give sutra-readings, and to perform rites for the furtherance of the rainfall, and for the salvation of the imperial ancestors. They even enact penalties against sacrilege, against the insulting of the Triratna and other Buddhistic saints. The series of well-meaning emperors is headed by Wu Tsung's father's brother, Süen [Hsüan] Tsung, whom he appointed his successor." He sanctioned the increase of monasteries, ordered the execution of Liu Hsüan-ching with eleven others, and issued a decree permitting the rebuilding of convents. "We read nothing, however, of a restitution of the sequestered goods and lands" (*Hsin T'ang shu*, ch. 52, fol. 11). "But . . . the laws and rescripts shackling the church were maintained, and even intensified." The refraining from annihilation of the religion is explained by the influence of the doctrine of *féng shui* (p. 70), "which had gained a paramount influence under the T'ang dynasty."—*Ibid.* i. 59–71. For Yi Tsung's patronage of Buddhism (860–73) see *Ch. Rec.*, ii. 41.

Foreign Religions.—"It was under his [T'ai Tsung's] auspices that Nestorian missionaries were allowed to settle at the capital in A.D. 636."—*Giles, Bio. Dic.*, p. 462. His successors were for the most part favourable to the new religion, and did much for its dissemination (*cf. Huc.*, ii. 84). Persecutions took place by Buddhists (699) and by Confucianists (715). In 845, "the Empress Wu Tsung issued an edict commanding the 3,000 priests of the Nestorian Church to retire to private life."—*Ch. Rec.*, xii. 1–15.

Mohammedans are called *Hwuy-hwuy*, a name without meaning in Chinese, and perhaps derived from that of the *Ouigar* or *Uigur* tribes, many of whom served as mercenaries under the Chinese Emperor in A.D. 750. "A native encyclopædia . . . observes . . . 'The Hwuy nations lie above 1,000 miles beyond the frontiers of Northern Tartary, called the *Yuhmun* boundary, in 53° N. lat. It is the peculiar custom of that people to worship Heaven alone. At the beginning of the *Tang* dynasty, A.D. 750, they came by ship to the Canton province, where they erected a place of worship. After Kublai mounted the Chinese throne, this sect spread very widely throughout the empire. Wherever they went, they formed close alliances among themselves and settled down.' Another native account fixes the introduction of the Moslem religion into China about A.D. 633. At the latest, however, its entrance must have been at or near the year 130 of the Hegira. It has been remarked by some foreign residents at Canton, that they have been struck with the strongly-marked Arab faces of many natives there. Upon inquiry . . . it has been ascertained from [these people] that their ancestors had settled at Canton several centuries ago, and that they themselves were Mohammedans in religion. [See *Journ. R.A.S.*, xviii. 3.] [They came to trade, and have never tried to convert the Chinese; they have only increased by natural multiplication.] Except in strictly maintaining their religious sectarianism, they differ not from the surrounding myriads, in dress, language, and manners."—*Milne, Life in China*, pp. 411–2.

"The Uiguro during the T'ang reign, A.D. 806–21, received leave to set up Moni [? Manichæan] Temples in Honan Fu and T'ai yuan Fu."—*Ch. Rev.*, xvii. 115.

Relics.—"In the 13th year [818] of the period *Yüan Ho*, the Commissioner of Meritorious Deeds (title of priest) memorialized the throne, saying: 'In the pagoda in the *Ta mên* monastery of Têng Hsiang, there is a Buddhist finger-bone. It was said that it opened once in 31 years. When it opened the people had peace [throughout the Empire] and the years [harvests] were abundant. Next year is the time for it to open. Now I request your majesty to welcome it.' Accordingly Hsien Tsung instructed a eunuch to lead the priests to welcome it."—*T'ung chien lei tsuan*, c. 17, *Shih chiao mên*, p. 2*a*.

"In the 14th year [873] of the period of *Hsien T'ung* an imperial decree was issued ordering the *Ta Tê* Buddhist priests to welcome the bone of Buddha. On the 8th of the 4th moon the bone entered Ch'ang An, and the Emperor came to the *An Fu* monastery to worship it in person."—*Tu Yang tsa pien, P'ei wên yün fu*, c. 63, p. 235*b*.

Scriptures, etc.—In 629, Hsüan Tsang set out for India to obtain Buddhist books, "and also to visit the holy places of Buddhism. He came back in 645, bringing with him 657 Buddhist books, besides many images and pictures and 150 relics. He spent the rest of his life translating these books, and also, like Fa Hsien, wrote a narrative of his travels."—*Giles, Hist. of Ch. Lit.*, pp. 115–6. See also *Eitel, Ch. Buddhism*, pp. 25–6.

907—960.

Priesthood.—[Revolts against the sovereign several times depended upon the advice of the *wu*, blind or otherwise.]—*De Groot, Rel. Syst.*, vi. 1217–18.

Shih Tsung "recommended himself to the chroniclers by a revival of the anti-Buddhist edicts. The consent of all the elders of a family was required before monastic vows could be taken, and all unauthorized temples were ordered to be destroyed; yet there still remained 60,000 priests and nuns within the comparatively narrow limits of the imperial State, and statues of Buddha were as numerous as coin of the realm was scarce."—*Simcox*, ii. 166.

[In 914 the Buddhist temples were destroyed, and a prohibition issued forbidding people whose parents had no one to take care of them becoming monks or nuns, and secret membership of the priesthood was prohibited (*Wu Tai shih Chou Shih Tsung chi, P'ei wên yün fu*, c. 82, p. 201*b*). In 955, Buddhist and Taoist temples which had no imperial inscription tablets were ordered to be demolished. Anyone wishing to become a priest had to get permission from his parents, grand-parents, or uncles (*T'ung chien lei tsuan*, c. 17, *Shih chiao mên*, p. 3*a*). Registers of the priests were ordered to be kept. At this time there were 2,694 temples existing and 30,336 in ruins. The Buddhist priests numbered altogether 42,444 and the nuns 18,756 (*ibid.* p. 3*a*).]

[In 931 enormous sums were spent upon temple buildings by the ruler of Min, who "played music day and night, burnt incense in prayer and worship, and sought genii to distil medicine." All government matters, trifling or important, were decided by the order of Pao Huang through the sorcerer Liu Hsing.]—*Ibid.* p. 5*b*.

[The custom of feasting priests after the worship on the anniversary of an emperor's death (they being engaged to chant and entertained afterwards) became a fixed rule after its institution by Kao Tsu in 940.]—*Wu Tai hui yao, Shih wu yüan hui, c.* 34, p. 6*b*.

"In the time of Shih Tsung [954–60] of the Chou dynasty, the Middle Kingdom was in want of funds. Accordingly a decree was issued ordering all the copper Buddhist images in the Empire to be remelted and coined into cash."—*Wu Tai shih, Yüan chien lei han, c.* 316, p. 3*a*.

[Unlike the Taoist priests the Buddhist priests were not allowed to marry, but the latter were apparently not always celibate. It is written in the Miscellany of P'an Yü (a district in Kuang Tung) by Chêng Hsing of the T'ang dynasty that there were Buddhist priests there with families, who were called *shui chai séng*, and in the *Ch'ing i lu* by T'ao Ku (902–70) it says that the Buddhist priests in the *Ta Hsiang Kuo* monastery in the capital had wives, called "Wives of Buddha" (*fan sao*).]—*Cho kêng lu, Tzŭ shih ching hua, c.* 107, p. 7*b*. For restrictions on Taoist priests' marriages see following Period.

Sacrifices and Observances.—"The two metropolitan prefectures, Ta Ming and Ching Chao, and Ching Chou were the only places where it was permitted to build altars for receiving injunctions. The practices of the priests, such as sacrificing the person, cutting off limbs, hanging lanterns, wearing the pinching belt, and deceiving the common people, were all forbidden."—*T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 3*a*.

[In the Five Dynasties silver paper was made instead of ordinary paper, to be burnt after prayers had been written on them, "as being finer looking."]—*Chia li ta ch'êng, c.* 6, *Chi ssŭ pan k'ao*, p. 18*b*. *Cf.* EARLY FEUDAL PERIOD.

Connection with State.—[Priests had titles bestowed on them and were appointed to office. In 935, a Taoist priest was appointed Prime Minister as well as General and consulted with regard to all punishments and selections for office (*T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 4*b*). Chuang Tsung Hou regarded her having secured the Crown as due to the power of Buddha. For this reason she devoted her attention wholly to copying out the Buddhist books and bestowed upon the priests food and money (*Wu Tai shih T'ang Chuang Tsung Hou Liu Shih chuan, P'ei wên yün fu, c.* 94, p. 30*b*).]

[In 931, Yen Chün, the ruler of Min, became a Taoist priest under the belief that he would thereby secure the sovereignty of the whole empire.]—*T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 4*b*.

"In the time of the emperor Wu [=Shih Tsung: 954–60] of the Later Chou dynasty, the Taoist priest Wei Yüan-sung had bestowed upon him the title of Duke of the Shu Province."—*Shan t'ang ssŭ k'ao, Shih wu yüan hui, c.* 35, p. 3*a*.

Persecution of Unorthodox Religions.—"Defamed by official indictments for heresy; oppressed by the State and its all-dominating Confucian spirit; its monastic institutions merely tolerated on account of the *Fung-shui*, yea, even supported to some extent by the State for this very reason: such in the main has been the condition of Buddhism since the reign of the T'ang dynasty. This two-faced state-policy grants Buddhism an appearance of liberty which the outside world generally [but mistakenly] regards as real."—*De Groot, Sectarianism*, i. 71.

[In 955 an edict of Shih Tsung regulated monachism. In the same year "the various provinces sent in the prescribed registers. The number of monasteries left standing was 2,694; 3,336 had been demolished: the registered monks and nuns were 61,200 in number." "The proportion of the demolished monasteries to those left standing is striking." The Buddha-images were cast into money to replete the Treasury.]—*Ibid.* i. 71–7.

Sung Period (960 *to* 1280).—*Table VI.*

Priesthood.—[A thousand *wu* and *chi* in Shou, An, and Hung (Anhei) were ordered to take to farming, and their heretical sacrificial temples were demolished. This led to *Wu*-ism being totally prohibited and exterminated south of the Yang Tzŭ River by imperial decree. Further persecutions followed in the north.]—*De Groot, Rel. Syst.*, vi. 1238–9.

"At first Buddhist priests and nuns received the injunctions at the same altar. From the time of T'ai Tsu [960–76] of the Sung dynasty nuns were forbidden to live in the monasteries. In the 2nd month *Jên Shên* of the 5th year [972] of the period *K'ai Pao* an Imperial decree was issued forbidding anyone who wished to become a nun from receiving the injunction unless she built an altar in her own nunnery for it. Since then nuns had separate altars for receiving the injunctions."—*Sêng shih lüeh, Shih wu yüan hui, c.* 34, p. 7*b*.

"Of old Taoist priests had wives and families. From the time of T'ai Tsu Taoist priests (like the Buddhists) were forbidden to have wives."—*Shih wu yüan hui, c.* 35, p. 3*b*.

[Protests against the non-producing priests were founded on, amongst other reasons, the unfilial conduct of having no children and the unhappiness of being without an heir.]—*Hung ming chi, P'ei wên yün fu, c.* 78, p. 27*b*.

"In the 1st year of the reign Ta Chung [1008] the graduate Sun Ch'iao memorialized the throne saying that the people—the men by ploughing and the women by weaving—could not satisfy their hunger or clothe themselves (lit. be warm), but the Buddhist priests lived in splendid buildings, wore fine garments, and eat good food. On the average it required the work of 10 men to support one priest."—*T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 7*a*.

[Special imperial favour was shown in 1074 by the Emperor Shên Tsung to Yüan T'ung, the head of the priestly order in the *Fa Yün* monastery in the capital.]—*Hsü têng lu, P'ei wên yün fu, c.* 63, p. 225*b*.

"In the time of Hui Tsung [1101–26] . . . the Taoist priests began to have ranks which consisted of 36 grades. Taoist priests having grades originated at this time. Also [the Taoist priest] Lin Ling Su had a government allowance bestowed upon him."—*Shih wu yüan hui, c.* 35, p. 3*b*.

[Taoist priests received government salaries and the temples large grants of land. This caused great numbers of the poor to join the *Yü Ch'ing Shên Hsiao Pi Hu* Society consisting of 800 members housed in the *Shan Ch'ing Pao Hu* Palace built for them by the Emperor Hui Tsung in 1118. The Emperor also appointed 26 Taoist officials in 8 grades, including a Prayer Reviser, Prayer Instructor, Prayer Compiler, and Secretary.]—*T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 5*a*.

Temples and Monasteries.—[A monastery was built on Wu T'ai Shan (*Fa yüan chu lin, P'ei wên yün fu, c.* 63, p. 219*b*). A Yü Wang built 1,800 monasteries (*P'i yü ching, Ko chih ching yüan, c.* 19, p. 23).]

"In the 2nd year [1009] of the period *Ta Chung Hsiang Fu*, an Imperial decree was issued ordering the building of the *T'ien Ch'ing* Taoist temple. At that time there were very few who followed the Taoist doctrines; only the people of Chien Nan in Kiangsi used to honour them. Since then Taoist idols have spread all over the Empire."—*T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 7*a*.

Sacrifices and Observances.—"In 1008, chiefly owing to the report of Ting Wei that there was a large surplus in the Treasury, the Emperor [Chên Tsung] began a series of Imperial sacrifices which cost vast sums. Written revelations were at this time frequently received from God, and the documents were lodged in special temples. Auspicious grasses and double-eared stalks of grain poured in from the provinces, and general pardons in return for the supposed favour of Heaven became common. In 1015 a descendant of Chang Tao-ling received an honorary title. Confucius was likewise honoured, and temples to him in all the District cities were decreed in 1011."—*Giles, Bio. Dic.*, p. 60.

"At the present time the image of *Kuan Yin* (the Goddess of Mercy) in the *T'ien Chu* monastery of Hangchow though not higher than 5 feet, was wonderfully efficacious (in divine responses). In the *Kêng Tzŭ* year [1000] of the period of *Hsien P'ing* . . . there was a drought in Chê Hsi, so Chang Ch'ü-hua, Magistrate of Hangchow, led his subordinate officers bearing banners and [playing] drums and wind instruments to welcome her at the *Fang T'ien* monastery, where they prayed for rain. Accordingly rain fell continuously and the four quarters had sufficient rain."—*Chê kêng lu, P'ei wên yün fu, c.* 63, p. 242*b*.

"On the 4th moon of the 9th year [1031] of the period *T'ien Shêng* an imperial decree was issued ordering them to welcome the robe and dish of the sixth founder Ta Chien, priest of *Nan Hua* monastery of Ts'ao Ch'i in Shao Chou, to the *Ch'ing Ching* Hall in the palace for service and worshipping."—*Hsü têng lu, P'ei wên yün fu, c.* 63, p. 240*a*.

"The emperor Shin-tsung, in A.D. 1083, issued a patent, constituting Mencius 'Duke of the kingdom of Tsow' (鄒國公), and ordering a temple to be built to him in the district of Tsow, at the spot where the philosopher had been interred [in Shantung. Up to this time his memory had remained without any particular marks of honour]. In the following year it was enacted that he should have a place in the temple of Confucius, next to that of Yen Yuen, the favourite disciple of the sage."—*Legge, Ch. Class.*, ii. Prol. p. 40.

"In the *kêng wu* or 2nd month of the 4th year [1110] of the period *Ta Kuan* the practices of branding the crown, exercising the arm, bleeding, and cutting off the finger were forbidden."—*Sung shih Chêng Tsung chi, Tzŭ shih ching hua, c.* 107, p. 5*b*.

"The worship of 玉皇上帝, one of the persons in the Taoist Trinity, was instituted by" Lin Ling-su "in 1116 under Imperial Edict."—*Giles, Bio. Dic.*, p. 485.

In 1267 Tzŭ-yü (子輿) "was advanced to be one of the sage's [Confucius'] four Assessors."—*Legge, Ch. Class.*, i. Prol. p. 119.

Lien Hsi-hsien, 1234–80, "stopped a proposal to make pills of longevity, and upheld Confucianism against Taoism."—*Giles, Bio. Dic.*, pp. 482–3.

"The 5 commandments of the priests were: (1) avoid taking animal life; (2) do not steal; (3) do not commit adultery; (4) do not forget the Word; and (5) do not take meat or wine."—*P'i ni tsang ching, Yüan chien lei han, c.* 317, p. 53*a*.

"For affection he parted bone and flesh (wife and son) and for nourishment he did not take wine, fish, or meat."—*Po Chü-i, ibid.* p. 51*b*.

"In taking all kinds of food a priest should not increase nor decrease them, but as if taking medicine, and should be like the bee, gathering honey from flowers—it simply takes away their taste without injuring the fragrance or colour."—*Chiao chieh ching, ibid.* p. 51*b*.

[Under the Sung dynasty women desirous of offspring worshipped a divine being named Chang Hsien 張仙.]—*Giles, Bio. Dic.*, p. 23.

Connection with State.—Hui Tsung was accused of "unduly favouring the Taoists."—*Simcox*, ii. 172.

"Ching, ruler of South T'ang, in the Sung dynasty, firmly believed in the Buddhist sect, and did not care about the government."—*T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 3*b*.

[*Foundation.*—The Emperor Jên Tsung in 1035 opened a college for Sanscrit studies and appointed 50 youths to study that language.]—*Eitel, Buddhism*, p. 26.

Relics.—[T'ai Tsu sent 300 Buddhists priests to India to procure books and relics.]—*Davis, Chinese*, ii. 83–4.

"In the 2nd year [989] of the period *Tuan Kung* the Emperor sent a Commissioner to bring the pagoda containing the remains of the *Shih Chia* Buddha to the capital. Then he measured the ground on the South-West of the *K'ai Pao* monastery and built a pagoda of 11 stories to keep them in. From the top to the ground was 360 feet. The cost was about 1,000,000,000 [? cash] [or 10,000 strings of cash]."—*T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 7*a*.

"Between 982 and 989 a temple and pagoda for a relic of Buddha were built at enormous expense, in spite of the remonstrance of 田錫 T'ien Hsi."—*Giles, Bio. Dic.*, p. 65.

Sects.—The White Lotus sect "existed openly in the eleventh century as a society of salvationists occasionally even rejoicing in imperial favour."—*De Groot, Sectarianism*, i. 163–4.

Persecution of heresy.—"It was certainly least of all to be expected of the Sung dynasty, whose reign was the golden age of Confucian philosophy that it should loosen" the restrictions on Buddhism. They were from time to time made more severe. The institution of the certificate of ordination was maintained with care, and the number of monks and nuns was thus kept at a low level; we even read, that occasionally the delivery of those documents by the government was arbitrarily discontinued, and that the proposals of grandees and magnates to grant them anew, were met with a flat refusal, or ignored with sovereign haughtiness. They were withheld for an exceptionally long time in the *Shao hing* period (1131–62); but in 1161 "they once more were sold to the Buddhist and Taoist clergy" (*Sung shih*, ch. 32, fol. 1). Conversely, many emperors manifested their good-will towards the church by [favourable] acts and measures [*cf.* p. 68, and *v.* p. 78]. "The most brilliant proof of imperial attachment to both religions was given by Chên Tsung" in 1019 when "he granted the whole empire a complete amnesty, and ordered a general ordination of pupils of Taoists and Buddhists" (*Sung shih*, ch. 8, fol. 19). The *Fu tsu t'ung chi* adds, "that in that memorable year no less than 230,127 persons were consecrated as Buddhist monks, and 15,643 as nuns, and respectively 7,081 and 89 as Taoist monks and nuns; further, that by imperial order solemn religious ceremonies were performed on an elaborate scale in honour of Heaven and Earth, and a meeting of 13,086 clerics of both religions took place, amongst whom the emperor in his own person distributed gifts." These figures De Groot regards as being probably exaggerated, but "they show sufficiently" the result "directly the door of conventual life was opened by the government." "Taoistic monachism was greatly on the wane, or practically had been almost merged into Buddhism," which accounts for "the comparatively small number of Taoist novices admitted into the clergy in that year."—*Ibid.* i. 77–8.

"Chên Tsung's successor, Jên Tsung, was of quite a different disposition, and in 1033 'put a stop to all erection and renewal of Buddhist and Taoist monasteries' (*Sung shih*, ch. 10, fol. 3). Vandalic crusades on the Wu Tsung system, history mentions no more; which is quite consistent with the fact that the number of monasteries had dwindled down so considerably, that such performances had become well-nigh superfluous. The *Fung-shui* probably saved the wretched remainder." But the spirit dominating the imperial government towards the two religions is clearly shown. Unfavourable edicts were issued by Hui Tsung in 1106 and 1110, and "in sundry other ways also did this Taoistically-minded Son of Heaven thwart and vex the Buddhist church. . . . Thus for instance, he decreed in 1119, that in the performance of religious rites, the clergy might no more wear clerical vestments, but were to dress in secular ceremonial garb; that they should no longer bear special religious names, and should even drop the title of monk or nun; but in the next year he recalled this latter order. It is also of great significance that we see the emperors interfere with the religious doings of the lay people. 'In . . . 970 it was ordained by imperial decree, that in the department of Khai-fung (in which the imperial capital was situated), families who had to perform funerals and burials were prohibited from celebrating on such occasions Taoist or Buddhist solemn rites.'" (*Sung shih*, ch. 125, fol. 1.)—*Ibid.* i. 78–80.

"The anathema, pronounced by the Sung dynasty over Buddhist salvation of the dead, remains to this day. For Chu Hi, the great Confucian prophet of the twelfth century, drew up from the purest possible classical matter a little book entitled *Kia li*, or Rules of Conduct in the Domestic Circle, which to this day, with the official sanction of the State, is the standard guide for rites and family-customs among the people; and this influential bible imperatively forbids the performance of Buddhistic rites at the burial of the dead. Thus the State assailed Buddhism also in the very heart of its influence upon the people, to whom the worship of the dead has always been the highest religion, and the art of bringing them to a state of bliss the highest art. But these attacks have missed their mark, for to this day, any one who can afford the expense, faithfully improves the fate of his departed ancestry according to Buddhistic methods, with the help of Buddhist priests or monks."—*Ibid.* i. 80–1.

"The Sung dynasty instituted a similar system of control [to that of the T'ang]. We read that it had 'Officers for the Registration of the Clergy (*Seng luh szé*) for the Left and the Right Street, charged with the registration of the monks and nuns in the convents, and with matters relating to the appointment of Sangha-officers'" (*Sung shih*, ch. 165, fol. 5).—*Ibid.* i. 106.

LIAO AND KIN.

[The *Wu* continued to act as seers of hidden things and exorcists, but they were expelled from the sacrificial worship of Confucius.]—*De Groot, Rel. Syst.*, vi. 1223–6, 1236–7.

"In the 12th moon of the 11th year [1042] of the period *Ch'ung Hsi* on the anniversary of the death of the Empress Dowager Hsüan Hsien, the Emperor wore white [mourning] and waited on the Buddhist priests at dinner in the *San Hsüeh* monastery."—*Liao shih Hsing Tsung chi, P'ei wên yün fu, c.* 63, p. 229*a*.

"The 5th year [1072] of the period *Hsi Ning* was contemporaneous with the 8th year of the reign Hsien Yung of the Liao Kingdom. The Magistrate sent a memorial to the throne stating that in Ch'un T'ai, Ning Chiang, and San Chou there were more than 3,000 people offering to become priests and nuns who received the injunction satisfactorily. It was accordingly granted. The ruler of the Liao held the Buddhist sect in high esteem. Some [priests] were appointed Presidents of the Boards of Revenue and Works. So great was the honour bestowed upon the sect at that time."—*T'ung chien lei tsuan, c.* 17, *Shih chiao wên*, p. 3*b*.

Mongol Period (1280 *to* 1368).—*Table VII.*

Priesthood.—"In the beginning of the year 1308, immediately after John of Montecorvino had been consecrated Archbishop of Cambalu (Peking), Christian priests, Buddhist bonzes, and Taoist monks were ordered to 'pay taxes in future like anyone else,' and steps were taken to put a stop to the 'exacting claims of Buddhist priests.' The evident connection of religion with rebellion is apparent from the following: 'Princes and Tibetan priests in the imperial *cortège* having oppressed the people on the roads, such things are now prohibited. Prohibited is also the White Lily Sect; and their buildings will be destroyed: their sectaries will once more be made common people.' Again, in 1322: 'Prohibition of White Lily Buddhist business.' And in 1349 there was a red-turban revolt in the north of modern An Hwei, once more under the ægis of the White Lily Society. It was given out in this connection that Mâitrâya (the Buddhist Messiah) was coming to earth. Shortly after this a Buddhist priest turned the Mongols out, and founded the Ming dynasty."—*Parker, China*, pp. 288–9.

"The *Tsung T'ung So* (Presidency of Priests) received an imperial order saying: 'Any priest versed in 5 vols. of the sacred books shall be appointed a *Chung Hsüan*, and those who have performed meritorious deeds shall be appointed to be Buddhist magistrates, *Tu Kang*, sub *Tu Kang*, and other officials.' In every populous place there were again established *San Hsüeh Chiang* and *San Hsien Hui* (2 kinds of churches)."—*Yüan shih Shih Tsu chi, Tzŭ shih ching hua, c.* 107, p. 5*b*.

[*Sha mên*, Buddhist priests, were divided into 3 classes: those who sat in deep meditation, those who chanted liturgies, and those who acted as assistants.]—*Wu wei ching, Yüan chien lei han, c.* 317, p. 26*b*.

[In 1327 Buddhist and Taoist priests were forbidden to buy the people's fields, under pain of punishment.]—*Hsü t'ung tien ch'i yao, c.* 20, *Hsing*, p. 11*a*.

An unsuccessful attempt was made to check the influence of Taoists and Buddhists; "*Wu Hai* (吳 海) of the Yuan dynasty, emulating the never-to-be-forgotten folly of Li Ssŭ (李 斯), counselled the Emperor to destroy all works except such as should be officially authorized for publication, and to forbid the people either to deal in unauthorized literature, or to have any among their collections. His memorial was aimed chiefly at Taoist and Buddhist writings. It was, happily, unsuccessful; and has now become the 'declamatio' of the Roman satirist, under the title of *Lun-shu-chih-shih* (論書之矢); see the *Ku-wên-ya-chêng* (古文雅正)." —*Journ. N.-C.B.R.A.S.*, N.S. xx. 279.

"Formerly Buddhist priests wore black garments, but the Emperor Wên Tsung of the Yüan dynasty took into his favour a Buddhist priest Su Hsiao, and secretly bestowed upon him a yellow garment, so that at the present day priests wear yellow." —*Shan T'ang ssŭ k'ao, Yüan chien lei han, c.* 317, p. 38*b*.

"Buddhist priests always used straw mats for beds."—*Tsêng i han ching, Yüan chien lei han, c.* 317, p. 24*a*.

Sacred Places and Temples.—"Buddhism continued to cost vast sums, one single image consisting of 500,000 catties of bronze."—*Giles, Bio. Dic.*, p. 665.

[In 1270 the *Ta Hu Kuo Jên Wang* Monastery was built and the *Fan T'ien* idol, fashioned by skilful workmen, placed in it.]—*Chê kêng lu, P'ei wên yün fu, c.* 63, p. 242*a*.

Sacrifices and observances.—"What Buddhist priests called *fu la* (伏 蠟), midsummer wax, was held in their hands after shaving off their hair or receiving the inhibitions. The number of things to be refrained from, such as wine, lust, &c., they should observe satisfactorily every year. The 'fixed summer' is from the 15th of the 4th moon to the 15th of the 7th moon. By [the tenets of] the sect of the west in the time of 'fixed summer' a waxen man was made of the same weight as the human body. At the close of summer the wax man was weighed; if the weight of the body was exactly equal to that of the wax man this is called 'Having examined that one has no vain thought.' If vain thoughts were entertained his health would decline, and then he would be lighter than the wax man."—*Tsêng san I t'ung hua lu, Tzŭ shih ching hua, c.* 107, p. 7*b*.

At Hang-chow, Friar Odoric was taken to visit a monastery he calls "Thebe," probably on the Western Lake, where one of the monks "took two great buckets of scraps from the table, and opening the door of a certain shrubbery . . . we went in. In this . . . there is a little hill covered with pleasant trees, and all full of grottoes. And as we stood there, he took a gong, and began to beat upon it, and at the sound a multitude of animals of divers kinds began to come down the hill, such as apes, monkeys, and many other animals having faces like men, to the number of some three thousand, and took up their places round about him, in regular ranks. . . . He . . . fed them . . . and [then] began again to beat the gong, and they all returned to their retreats. . . . And he [said]: 'These animals be the souls of gentlemen, which we feed in this fashion for the love of God. . . . For if a man be noble, his soul entereth the form of some one of these noble animals, but the souls of boors enter the forms of baser animals, and dwell there.' And say what I list against it, nought else would he believe."—*Yule, Cathay*, i. 119–20.

John de' Marignolli, who visited China about twenty years later (leaving Zayton for India in 1346), speaks of "the cloister at Campsay [Kinsay, Cansay, King-ssé, Hang-chow] in that most famous monastery where they keep so many monstrous animals which they believe to be the souls of the departed, [and which] usually come to be fed at a given signal."—*Ibid.* ii. 384.

"In A.D. 1330, the emperor Wăn-tsung, of the Yuen dynasty, made an addition to Mencius' title, and styled him 'Duke of the kingdom of Tsow, Inferior Sage' (鄒 國 亞 聖 公). This continued till the rise of the Ming dynasty." *Legge, Ch. Class.*, ii. Prol. pp. 40–1.

Connection with State.—"Kublai was an ardent Buddhist, and sent an envoy to the Turfan to study the Sacred Books. Nevertheless he paid honours to Confucius, and to the great followers of the Master. In 1281 he caused all Taoist literature, save the *Tao Tê Ching*, to be burnt as spurious or useless."—*Giles, Bio. Dic.*, p. 387. He proclaimed the Tibetan priest Pakba Lama, and sent him back to Tibet, there to establish the ecclesiastical authority, which still exists in that country, in intimate alliance and sympathy with the Chinese rulers (*Boulger, Short Hist.*, p. 63).

Tup. Timur, 1304–32, "appointed a priest to the post of Imperial Preceptor," and "wasted large sums upon a new Buddhist temple at Nanking."—*Giles, Bio. Dic.*, p. 798. The *Yüan shih Shih Tsu chi, P'ei wên yün fu, c.* 76*a*, p. 122*a*, says the priest was Pa Ho Ssŭ of Magadha, that he had bestowed upon him the seal of [was appointed] President of the Buddhists, and that the *Hsien Yin* temple built for him was shortly afterwards renamed *Yü Ch'ên* temple.

"On Buddhist priests and ceremonies vast sums were expended [by Jên Tsung], and in 1318 the Canon was written out in golden characters."—*Giles, Bio. Dic.*, p. 6.

Tolerance of Foreign Religions.—"It was under the cover of the Buddhist zeal of the Mongol princes that the Latin friars of the 14th century established their missions, even while denouncing the latitudinarianism by which they profited. A somewhat fiery bishop Andrew of Zayton observes, in 1326, that there are persons of every nation and sect in the empire, all allowed to live freely according to their own creed, owing to the erroneous belief of the people 'that every one can find salvation in his own religion.' 'Howbeit,' he continues, 'we are at liberty to preach without let or hindrance'—the opposite doctrine!"—*Simcox*, ii. 231. *Cf.* the favourable reception and freedom in his propagandism accorded to John of Monte Corvino on his arrival in Pekin in 1293 (*Ch. Rec.*, xii. 1–15). See also under *Persecution*.

There were "a few Nestorian Christians in the province of Carajan (Yünnan). At Cacanfu (Hokienfu in Chih-li) the Christians had a church. At Chingkianfu (Chin-kiang-fu) there were two churches of Nestorian Christians, established in A.D. 1278, . . . by MAR SARGHIS, a Nestorian Christian sent by Kublai Khan to be governor of this city. . . . There was one Nestorian church at Kinsay (Hang-chow)."—*Yule, Marco Polo*, ii. 52, 115, 162, 175 (2nd ed.).

[There were two houses of "Friars Minor" at Zayton (Tsiuenchan in Fuhkien), and one at least at Hangchow, where they had converted a prominent official. At "Tamzai" (Yang-chufu in Kiangsu) there was a Franciscan monastery, and three Nestorian churches.]—*Yule, Cathay*, i. 108, 118, 123.

"The Minor Friars in Cambalic have a cathedral church immediately adjoining the palace, with a proper residence for the Archbishop, and other churches in the city besides, and they have bells too, and all the clergy have their subsistence from the Emperor's table in the most honourable manner." There were also three Franciscan monasteries at Tsiuen-chau, Fuh-kien.—*John de'Marignolli*, in *ibid.* ii. 341.

Foundation.—"In the 5th year [1301] of the period *Ta Tê* a hundred *ch'ing* (15–18 square acres) of land were bestowed upon the *Hsing Chiao* monastery."—*Yüan shih Ch'êng Tsung chi, P'ei wên yün fu, c.* 63, p. 229*b*.

"In the 6th moon of the 6th year [1317] of the period *Huang Ch'ing* a government paper [note] of 10,000 ingots of gold was subscribed to the *Ta Ch'ien Yüan* monastery. The interest produced from it was applied to repairing [the temple]."—*Yüan shih Jên Tsung chi, ibid. c.* 63, p. 249.

Tai Ting Ti (1324–28) "was as ardent a Buddhist as his predecessors, and gave grants of land to temples."—*Giles, Bio. Dic.*, p. 943.

Sects.—[The *Pai Yün Tsung*, or "White Cloud School" is mentioned in the Yüan histories but no information respecting it has been obtained. See also under MING PERIOD.]—*De Groot, Sectarianism*, i. 150.

After two centuries of silence regarding it, "suddenly we find the [White Lotus] sect mentioned in the Historical Books of the Mongol house of Jenghiz and Kublai, in one breath with the school of the White Cloud, as often making common cause with rebels (*Yüan shih*, ch. 202, fol. 8). . . . The sect was then a prey to government persecution (i. 164–5)."—*Ibid.* i. 164.

"These zealots for the Buddhist Messiah [*Ming shih*, ch. 122, fol. 3] were the offspring of persecuted members of the White Lotus religion; hence those members must have been married people with families; consequently, the monastic order had at this time achieved its transformation into a formal church, split into lay-communities. The prophets and leaders of these religious corporations could dispose of whole armies of partizans rising in open rebellion, yea, they even set up a man of their own against the legal emperor, and achieved a revolution by which a fellow-Buddhist was placed on the throne. Does not all this intimate that the White Lotus church must have had its congregations all over China? Sectarianism flourished: it was—who knows since when?—a prey to state-persecution. But it did not placidly turn the other cheek: it realized the power of solidarity, and threw its weight in the balance of the fate of the empire and the throne. And a heavy weight it was!" —*Ibid.* i. 165.

Persecution.—"Yet once again Buddhism was allowed to pass through a period of relief under imperial favoritism; but it was only of short duration. It was the time when the empire bore the yoke of the Yuen dynasty, the Mongol house of Kublai. . . . The removal of the bands and shackles in which it had lain under the T'ang and the Sung dynasties, immediately entailed an increase of monasteries, and the church seemed once more to move towards a Saturnian age, owing partly to the renovating influence of a foreign priesthood which this time made their way to China principally from Tibet. But after an existence of scarcely ninety years, the dynasty was dethroned, and the old regimen soon made its entrance again."—*Ibid.* i. 81.

Ming Period (Restoration of Chinese Supremacy) (1368 *to* 1644).—*Table VIII.*

Priesthood.—"Also under the Ming dynasty, which excelled in the purity of Confucianism, rigorous measures against *Wu*-ism certainly were more frequent than authors relate." The Ming code contains a special law against religious heterodoxy, the first clause of which decrees strangulation as the punishment of the principal offender in cases of practice of *Wu*-ism.—*De Groot, Rel. Syst.*, vi. 1239–40, 1242.

[Mendoza says that the "generals" of the four monastic orders live at Peking, being appointed by the Emperor in Council. They hold office for life, unless deprived for misconduct, and have revenues assigned them by the Emperor. They appoint "provincials" to visit and inspect the monasteries of each province, and these again, "ordain in every convent one, which is like unto the prior or guardian, whom all the rest do reverence and obey."]—*Hist.*, i. 56.

[The four "orders" were clothed, respectively, in black, yellow, white and "russet." Any member could leave the order when he wished, after giving notice to his Superior. The eldest son of a family was prohibited from entering any religious order.]—*Ibid.* pp. 56–88.

"The *Lu Ssŭ* (錄 司), Superiors, of Taoist and Buddhist priests of the Ming had control of all the Taoist and Buddhist priests in the empire. In Prefectures, Departments, and districts outside the capital there were Buddhist *Kang* (綱), leaders, and Taoist *Chi* (紀), directors, and other officials."—*Hsü wên hsien t'ung k'ao hsiang chieh, c.* 11*b*, *Chih kuan k'ao*, p. 12*b*.

"Idleness is tolerated in no class except the priests, and he [Valignano] observes, rather aptly, that though tolerated, their idleness is the chief reason of the contempt in which they are held."—*Simcox*, ii. 265.

"Ha-li-ma or Ka-li-ma 哈 立 麻, 14th and 15th cent. A.D., a Tibetan priest, whose fame as a magician and soothsayer so powerfully impressed the Emperor Yung Lo that in 1403 he dispatched one of his eunuchs, named 侯 顯 Hou Hsien to proceed at the head of an embassy and bring the holy man to his Court. In 1408 Hou Hsien returned, accompanied by Ha-li-ma, who was thereupon ordered to institute masses on behalf of the Emperor's parents. It was soon reported to his Majesty that supernatural manifestations had followed upon these masses, consisting in the appearance of auspicious clouds, the falling of heavenly dew, apparitions of azure-winged birds, white elephants, etc. In consequence of this, Ha-li-ma was invested with the title of 大 寶 法 王 Prince of the Great Precious Law, together with a number of other high-sounding epithets; and he was likewise proclaimed as the head of the Buddhist faith throughout the empire. His three attendant disciples were invested with the titles of 灌 頂 大 國 師 Grand State Preceptors of the Order of Baptism."—*Giles, Bio. Dic.*, p. 242.

Ranks.—"Under the Ming dynasty there was throughout the empire, in every province, department and district, a yamen for the Buddhist and Taoist clergy, with a *Seng luh szĕ* or *Tao luh szĕ* as keeper of the seal. These officials were also the religious examiners of the neophytes, and they obtained the diplomas for the successful candidates from the Board of Civil Office. They had also to supply the data required for a proper and exact registration of the clergy" (*Ta Ming hui tien*, ch. 95, fol. 4).—*De Groot, Sectarianism*, i. 107.

Sacred Places and Temples.—"The *Hsüan Ni* monastery of the Ming dynasty was built by Hsieh, Prince of Wu Hsüan, in P'an Ch'êng. It was located in the south of Shih Lou outside the *Chien Ch'un* Gate."—*Chia lan chi, P'ei wén yün fu, c.* 63, p. 218*b*.

"Hung-woo had his indignation excited in 1372 by one of Mencius' conversations with King Seuen . . . and he ordered Mencius to be degraded from his place in the temples of Confucius, declaring also that if any one remonstrated on the proceeding he should be dealt with as guilty of 'Contempt of Majesty.'" He was, however, restored by an edict in the following year.—*Legge, Ch. Class.*, ii. Prol. p. 41.

"In 1530, the ninth year of the reign Kea-tsing, a general revision was made of the sacrificial canon for the sage's temple, and the title of Mencius was changed into—'The philosopher Mĭng, Inferior Sage.' So it continues to the present day. His place is the second on the west, next to that of the philosopher Tsang. Originally . . . he followed Yen Hwuy, but Hwuy, Tsze-sze, Tsĭng, and Mĭng were appointed the sage's four assessors, and had their relative positions fixed, in 1267."—*Ibid.* pp. 41–2.

[At the beginning of his reign, Shih Tsung (1521–66) forbade the erection of statues to Confucius, lest they should be mistaken for idols.]—*Simcox*, ii. 247–8.

"The result of researches in the Ming dynasty led to the abandonment of the statue of Confucius and the restoration of the old Confucian tablet. This was an instance of recoil from Buddhist views of art. Yet in some cities the statue remains, the decree of the Emperor on the subject not having been very peremptory. But the spirit of modern China is against the use of statues in Confucian worship. The Buddhist love of statues in temples does not in any way influence the true Confucianist, who glories in his freedom from popular Buddhism."—*Journ. N.-C.B.R.A.S.*, N.S. xxiv. 281–2.

Connection with State.—"Buddhism and Taoism were made State religions" by T'ai Tsu.—*Giles, Bio. Dic.*, p. 194.

[Hsi-lou (Li Shih-lu) was put to death for having addressed a remonstrance to the Emperor (T'ai Tsu) on his addiction to the worship of Fo.]—*Simcox*, ii. 239. This led to further insubordination on the part of the Buddhist priests, and to temporary imperial disfavour. T'ai Tsu, however, soon restored them to their former position. See *T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 3*b*.

Yung Lo "was an ardent Buddhist, and the priests of that religion were raised to high positions and exerted considerable influence at Court. In 1421 there were loud complaints that some 10,000 priests were maintained in Peking, while the people of several provinces were reduced to eating bark and grass."—*Giles, Bio. Dic.*, p. 187.

The annual worship by the Emperor in the Temple of Heaven is mentioned by the Mohammedan narrator of Shah Rukh's Embassy (1421): "Every year there are some days on which the Emperor eats no animal food. . . . He spends his time in an apartment which contains no idol, and says that he is worshipping the God of Heaven."—Quot. *Yule, Marco Polo*, i. 441 (2nd ed.).

"In the 23rd year of the reign Chia Ching [1544] when Hsiao Wang withdrew, the capital was well guarded. The Emperor thought that he was blessed through cultivating the Taoist doctrine and that the merit of obtaining peace belonged to the *Chên Jên* (title of a Taoist priest) T'ao Chung-Wên so he specially bestowed upon him the rank of *Shao Shih* (Junior Preceptor)." —*T'ung chien lei tsuan, c.* 17, *Shih chiao mên*, p. 5*a*.

Festivals.—"The Ch'ing-ming festival, celebrated here, as all over China, . . . is one of the three principal annual festivals of the Celestial Empire, the other two being the New Year and the Mid-Autumn festivals. They date back probably no farther than the earlier years of the Ming dynasty. The Ch'ing-ming festival is always celebrated on the 106th day after the shortest day, that is the 15th day after the vernal equinox, which always falls some time in the 3rd Chinese moon." "It may be called the Festival of the Dead, and it reminds one very forcibly of 'Le Jour des Morts' which is celebrated in Paris on the last day of the year, when so many thousands of the Parisians repair to the cemetery of Père la Chaise, where their friends and loved ones are sleeping. So in China, on the Ch'ing-ming festival, immense numbers of the people repair to the graves of their ancestors to worship and sacrifice at their tombs. This no doubt was originally done merely as an act of remembrance of the dead, but it has apparently, in later years, degenerated until at the present time it would seem to partake more of the nature of an attempt to conciliate or propitiate the spirits of the dead, of whom the Chinese stand in perpetual dread." "The Chinese who are away from home when this feast comes round, use every effort to return to where their ancestors lie buried, in order that they may perform the necessary worship, which is to them a matter of supreme importance. The common people, not having ancestral halls of their own, perform their worship before the ancestral-tablet which is found in every home, and in which the Chinese believe the spirits of their ancestors reside." "The curious old custom of eating fruit and flower cakes at the graves of their ancestors at the Ching-ming festival is still observed by the Chinese who are desirous of fulfilling their filial duties and obligations, although, perhaps, not to the same extent as formerly. This custom, however, originated in the Han-chih or Cold Food Festival, which is probably still more ancient than the Ching-ming festival, and which was formerly celebrated on the day preceding that festival. But this old feast seems to have been forgotten, or, being so near Ching-ming has caused it to be incorporated with it. An old Chinese work, referring to the Han-chih festival, says that anyone who on this day eats hot food will have his rice-fields destroyed by hail."—*N.-C. Herald*, April 9th, 1903.

The annual worship of the Emperor in the Temple of Heaven is mentioned by the Mahommedan narrator of Shah Rukh's embassy (1421): "Every year there are some days on which

the Emperor eats no animal food. . . . He spends his time in an apartment which contains no idol and says that he is worshipping the God of Heaven."—*Yule, Marco Polo*, i. 441 (2nd ed.).

Foreign Religion.—"If, however, the acts of the principal representatives of the European trading nations were objectionable, and their policy calculated rather to confirm the exclusive spirit of the Chinese than to open their country to foreigners, there remain to the credit of European civilization the noble devotion and the humanising efforts of the large band of missionaries sent out by the Church of Rome in the sixteenth and seventeenth centuries. Michel Roger and Matthew Ricci, two of the first in point of time, were exceptionally well qualified for their task. They were men of the world, skilful astrologers and mechanicians, looking to practical measures as much as to theological disquisitions to promote the cause of Christianity and the numbers of their Church. The Chinese were quick to see that they differed from the commercial classes, that their intellect and knowledge might be useful to the state, and that their services could be utilised without making any concession to their religion. . . . But they made little progress in carrying out the Pope's mission, and their converts were few in number. As another missionary said, long afterwards, 'it is a melancholy trait in the character of the Chinese people that Christian truth does but glide over its surface.' "—*Boulger, Short Hist.*, p. 101.

"It is probable that the Ming emperors on their accession, put a stop to the coming of Christian missionaries from the west, not so much on account of [their] religion, as of their connection with the Mongols, and their coming through Mongol territory. From this time nothing is known, either of the Nestorian or of the Roman Catholic churches planted in China. They seem to have died out entirely. . . . It is not known that either suffered persecution from the [Ming emperors]. Roman Catholic missions begun by Dominicans in 1555, were soon 'interrupted by the opposition of the mandarins.' From that time till 1844, they have been alternately tolerated and persecuted by the government. Ricci (Jesuit) reached China in 1581. Founded missions in Kwang-tung, Kiang-si, Nanking and Peking. Forced to leave Peking in 1599, he returned in 1601, and was allowed full liberty by Wan leih till his death in 1610. The persecutions in 1616–22 were ended by the Manchu wars."—*Ch. Rec.*, xii. 1–15.

"In 1622 a White Lily revolt broke out in the exact spot where the . . . 'Boxer' rebellion of 1900 had its birth. The Jesuits, then establishing themselves in China, were not unnaturally connected with this rebellion in the Chinese mind, and for some years the Prime Minister severely persecuted them. Meanwhile the White Lily leader gained headway, sacked Peking, and put an end to the Ming dynasty, which was replaced by the very Manchus whose assistance the Ming statesmen had sought."—*Parker, China*, p. 289.

Scriptures.—"Strange to say, in spite of all these strenuous efforts, continued for more than a thousand years, it was not until the year 1410 A.D. that the Chinese procured a complete edition of the Buddhist canon, and the modern edition of it, known as the Northern collection, is of still later date, having been completed between the years 1573–1619 A.D."—*Eitel, Buddhism*, p. 26.

Sects.—"About half a dozen sects the Law against Heresy mentions by name. First . . . the White Lotus community [see *supra*]. . . . In the second place . . . the *Ming-tsun* sect, which . . . must have already existed under that house [Ming]. The name may be rendered, the Religion of the Luminous Venerable, and may thus refer to some particular Buddha, or to all the Buddhas together; but it also admits of other interpretations." There does not appear to be any information regarding this sect, nor as to whether it exists under the present dynasty. This is also the case with regard to "the *Peh-yun tsung*, or White Cloud school. We do know, however, that it existed under the Yuen dynasty," it being mentioned with the Lotus sect in the histories of that house.—*De Groot, Sectarianism*, i. 149–50.

"We are somewhat better informed concerning the *Shen-yiu* [*Shan Yu*], or Friends of Virtue. . . . In the great book of the state-institutions of the Ming dynasty, finished in the early years of the sixteenth century, this society was characterized as a branch of the Buddhistic Yoga school, and membership of it was decreed to be highly culpable. This proscription, however, did not prevent the sect from living to see the fall of that dynasty." "The Friends of Virtue formed a society seeking salvation in abstaining from animal food and, as the name indicates, in other works of benevolence." See also following Period.—*Ibid.* i. 151–2.

But in 1394, the "same emperor whom it [the Lotus sect] had raised to the throne, threatened with capital punishment all its members, together with the clergy living among the laity. . . . It seems probable that both were deemed culpable of the same sin: that of performing religious work in ordinary secular life. We must conclude that the Lotus church remained a chief object of state-persecution under subsequent emperors of the Ming dynasty, from the fact that we find it mentioned first among the prohibited sects in the first article of the Law against Heresy, which that dynasty called into existence." "We know no particulars about these persecutions," but there are reasons why the sect must have had to endure severe persecution under this dynasty causing it to rise in rebellion (1566) (i. 166–9).—*Ibid.* i. 166–9.

"The name *Sien t'ien* itself indicates the Taoist character of the sect which bears it. It is borrowed from the ancient Taoist and Confucian philosophy, and thus comes down from a time when no such thing as Buddhism was known in China. It means 'to precede heaven' and stands in contradistinction to *heu t'ien*, 'to follow heaven.' Both these terms mean: regulating one's acts and conduct after the Tao or course of the Universe by strictly conforming to the demands of the annual seasons and natural phenomena which the Tao creates (*cf.* i. 8); but the former implies, moreover, doing so by one's own initiative, without being compelled thereto in any way by heaven. This method of seeking bliss and perfection is, of course, sublimer than the other, though that too is of the highest value and excellence." "Confucius, himself a Taoist, is considered to be the father of both methods." For further explanation of the name and origin of the sect, see pp. 176–82. Its founder was Lo Hwai, a native of Shan Tung. He gained the imperial pardon by refuting a priest from Tibet named Hsiao-yin in a theological dispute, and was made a saint for performing miracles. His doctrine was the *Wu-wei*, which signifies "without activity or exertion," this religion being, if not identical with that of the *Hsien T'ien* sect, at any rate closely related to it. "The prophet's religion does not attempt to bring Salvation to its adherents by making them indulge in an active worship of saints and deities, with offerings of food and incense, with drums and lights. They have no images, no chapels or temples, no prayers. They seek perfection and bliss exclusively in 'words of truth uttered by heaven and earth,' in other words: in the study of Sutras explaining the Sharma or Natural Order, which bears sway within an all-embracing and yet empty Universe, the only Sutra-hall, the only temple which this sect acknowledges. To abide in that Nirwăna, the realm of Inertness or Wu-wei, is the main object of the society; to be admitted there at the departure from this life is the height of its ambition. It is the 'home' mentioned in the story of Lo Hwai's incarnation as the ideal aim towards which all religious endeavours should be directed." The deities of the sect are the Three Apexes, the Three Jewels, and a variety of inferior divinities and saints, both Taoist and Buddhist. The members worship the souls of their ancestors. The number of their divinities is in point of fact unlimited. Each member worships in his own house, before a burning oil-lamp, the god, buddha or bodhisativa of his choice, always presenting burning incense-sticks; and there on calendar days fixed by religion and custom, he offers a sacrifice of fruit and other vegetable food, but no meat or fish, as the Buddhist law strenuously forbids animal food to all living beings. Active propagandism is rare. There are no priests nor religious ranks or titles. Meetings are held in the members' own houses, they being principally of the "notable and well to do class." It is a domestic and also an aristocratic religion (pp. 189–90). "Here then we find Inactivity raised to the rank of supreme virtue, the chief means for performing and achieving everything, especially for creating felicity and prosperity, in blissful assimilation with the equally inactive, and yet omnipotent Course of the World."—*De Groot*, i. 176–87. See the further development of this doctrine and information collected by Edkins given on pp. 187–95. The sect's sympathy with Christianity is noted on p. 192.

[It is further to be noted that the *Hsien T'ien* sect is decidedly prohibited in the Law against Heresy (i. 146–7); and that the sect may be related to or identical with that of the Eight Diagrams (i. 195–6).]

The *Lung Hua* sect, on the other hand, is "thoroughly ritualistic." But both sects were "born of the same mother: the desire for Salvation, . . . assimilation with the Nirwăna Paradise or Apex of Nothingness. Both sects equally profess to have been founded by Lo Hwai." "The Lung-hwa sect . . . possesses . . . a much larger number of adherents than the Sien-t'ien society, drawing them in the main from the middle and lower classes (p. 199)." "It worships a great number of gods and goddesses, and makes painted or carved likenesses of them. At the head of the Pantheon are the three Apexes of the Sien-t'ien sect (p. 189), mostly represented in water-colours on large scrolls, as three old men, each holding in his hands the eight *kwa* (pp. 177–8), arranged in a circle. Thus we see that Anthropomorphism prevails among the sect with regard to its highest divinities (and see pp. 199–200)." "As in the Sien-t'ien sect, we find among the deities of the Lung-hwa society the Triratna of Buddhism, and moreover, all kinds of Buddhist, Confucian and Taoist saints. The chief of these *dii minores* are the God of Heaven and the Goddess of Earth, the sun, the moon," etc. (see also p. 200). Services and religious meetings in honour of these deities were held in the principal apartment or hall in ordinary dwelling-houses (called in Amoy "vegetarian halls"). The members all acknowledge one common head, a kind of bishop or pope . . . bearing the title "The Empty of the Empty" (indicating the attainment of voidness or non-existence). He only wore the Buddhist clerical robes when performing religious ceremonies. He had received the full Buddhist ordination, and lived in celibacy with other pious men, devoting themselves to Salvation-work and performing ceremonies for the redemption of dead sectaries and their relations. After him follow in rank a number of "Most Empty ones," and next a class of "Pure Empty ones," or travelling propagandists. These three highest classes are not allowed to marry; "but if married men or women are promoted to these ranks, they need not divorce. Nevertheless abstinence from sexual intercourse is the duty of all. . . . They dress like the laity, and even for Sutra-readings and performance of ceremonies seldom put on any special attire." Next come the "Scribes," friars who understand the writing-art. These are allowed to marry. The fifth degree is the "Chief Introducer," a title bestowed for faithful observance of all the five commandments, and other acts. Following these are the "Sub-Introducers," the "Third Vehicle," the "Great or Superior Vehicle," and the "Small or Inferior Vehicle" (pp. 216, 219). All ranks but that of "The Empty of the Empty" can be attained by men and women alike. Male sectaries who obtain the degrees which only "The Empty of the Empty" can confer ("The Most Empty" and two following) pass through a solemn ritual in his house. The members "generally denominate one another familiarly as . . . 'vegetarian friends,'" etc. Each parish or hall has a leader, who most often is the master of the house. He has charge of the altar which bears the images of the Triratna, etc. The cleanness of the hall was specially attended to. The leader is of mature age and specially honoured. Women are entitled to become religious leaders, but rarely do so. All communities of the Lung Hua society are zealous in enlisting new members. The initiation ceremonies and consecrations, vows, etc., are described on pp. 204–20, and the religious meetings and festivals on pp. 220–3. Sutra-reading, both in the meeting-halls and in private houses, formed an essential part of the great practice of Salvation. They "bargained for favours with the saints." Sutras were also published and distributed. The members found "Salvation in Amita by reciting his name." Their care of and ceremonies to save the dead are described on pp. 231–41. Masses were read for the dead, and the reading of them by sectaries for dead not belonging to their sect was held to be highly meritorious.]—*Ibid.* i. 197–241.

Persecution.—"Whether the systematic state-persecution, for the raging of which during the last five centuries this law [against Heresy, inherited by the Manchus from the Mings] stands the most eloquent witness, was already active under the Ming dynasty I cannot positively assert, as I have not discovered any documentary evidence on this head. But, knowing that the Confucian principle of intolerance was even then in its halcyon days, it is difficult to banish the supposition from our minds that heresy-hunting was as much in vogue then as it is now."—*Ibid.* i. 135.

"It is highly probable that the founder of the . . . house of Ming, T'ai Tsu, at first favoured Buddhism, for in his youth he himself had been a Buddhist monk." In 1371–2 "Buddhistic rites, at which he attended in person, were performed by his order near his residence Nanking. . . . But in that same year (1372) he began to revive the restrictive laws on the clergy and the convents. The monks, priests, and nuns were to be registered, and the several 'Registrars of the Buddhist and the Taoist clergy' were to send the registers to all the monasteries in the empire, in order that everywhere the identity of any friar who presented himself might be properly ascertained. In the following year he decreed that, in every department or district only one large Buddhist and one Taoist monastery should remain in existence, and that all the monks and nuns should be consigned to these; that no one should be consecrated unless he had given proof of being well versed in the Sutras; finally, that no female under the age of forty should become a nun. In 1387 he prescribed that no male who had passed his twentieth year should be allowed to embrace religious life. And four years later he renewed the order that no monk should be allowed to live outside the monastery of the department or the district on penalty of banishment. He further decreed that, in the Buddhist sacred books translated from foreign languages, no additions or retrenchments should be made, and that the Taoist clergy, when bringing their sacrifices, should no longer be allowed to send up to heaven 'green writings,' *i.e.*, prayers or petitions in red characters on green paper; and that every one of them should observe the regulations and directions enacted for the exercise of their religion. 'And people following the Yoga religion, calling themselves friends of virtue; or people spuriously using the reputation of Chang, the man merged with the *Tao*, surreptitiously to prepare charms, should all undergo the severe punishment (of death?)' (*T'a Ming hui tien*, ch. 95, fol. 4). Lastly, that all Buddhist and Taoist monasteries not in the possession of imperial charters sanctioning their erection or existence, should be pulled down by the clergy."—*Ibid.* i. 81–2.

"But T'ai Tsu had not yet come to the end of his measures. In 1394 he ordained that Buddhist or Taoist monks who kept a wife or concubine might be expelled from their convent, and that such married clergy should not be permitted to bring up other people's children for the religious profession; if they presumed to do so, they would be punished, as well as the parents of such pupils. No one was allowed to embrace the clerical profession unless his parents had sent in a petition to that effect to the authorities, and after these had received the sanction of the emperor. It was also decreed in that same year that Buddhist monks desiring a diploma from the government should first undergo an examination in the holy scripts in the imperial metropolis; and they who failed to pass successfully should be flogged and return to secular life. In the following year exemption from this perilous examination was granted to those over sixty years of age. And lastly, in that same year, 1394, the members of the White Lotus society and the *Ling Pao* religion, as also the *huo chü*, or such Taoist priests as ventured to live among the laity, were threatened with the severest punishment, viz., death, together with the Taoist and Buddhist clergy who should presume to neglect conformity to the established ancestral customs."—*Ibid.* i. 82–3. See also p. 83 for remarks as to the short duration of this and other Buddhistic-minded dynasties.

Ch'êng Tsu was "far from favourably disposed towards Buddhism and Taoism." He resolved in 1403 "that ordination-certificates should be issued by the government only once in three years. In 1408 he decreed that, if any person surreptitiously took the tonsure to become a monk, he was to be conveyed with his father and elder brothers to the imperial residence, which at that time he was establishing at Peking; from there they were to be sent to the Wu-t'ai mountains, in north Shansi, to hard labour; and after the expiration of their term they were to settle at Peking as husbandmen: a fate to which also the abbots were to be doomed who should have admitted persons thus tonsured into their monasteries. One year previous to this, he had manifested his malice against the Buddhists "by ordering eighteen hundred young men who had applied for ordination-certificates to be registered as soldiers, and sent to the garrisons in Liao Tung and Kansu" (*Ming t'ung chi, Ku chin t'u shu chi ch'êng*, sect. *Shên i*, ch. 64).—*Ibid.* i. 83–4.

"In 1417 this tyrant forbade all monks and nuns to found hermitages without the consent of the authorities; and in the following year he hampered ordination by rescripts" of a restrictive character as to the number of admissions, age, consent of parents, permission of authorities, registration, examination, etc. In 1458 Ying Tsung proclaimed that "henceforth only one consecration should take place in ten years; that all those who without government sanction had taken the tonsure when over twenty years old should be sent back among the laity, and that those who did not conform to this order should be sent into everlasting banishment to the garrisons on the frontiers. Thenceforth ordination should be administered exclusively by the fixed number properly examined (*v. supra*). The effect was that those disciples of the clergy dispersed and departed" (*T'u shu chi ch'êng*, sect. *Shên i*, ch. 64).—*Ibid.* i. 85.

"The Tibetan Lamaist clergy, who under the Yuen dynasty had settled in China in considerable numbers and played an important part in the short revival of Buddhism, had also to bear the brunt of Ying Tsung's persecution. When he came to the throne, so the Official Histories inform us (ch. 331, fol. 7), the Board of Rites twice over proposed to him to send away 690 Tibetan clergy; but only for those of low rank was this measure put into execution."—*Ibid.* i. 86.

"The zeal with which Ying Tsung pursued the destruction of the clergy, was marked in 1464 by a rescript" expelling non-diplomaed members over twenty years of age (*ibid.* ch. 64).—*Ibid.* i. 86.

"That Buddhism at that time [1465–88] was represented by a powerful faction, even among the court-dignitaries," is shown by Hsien Tsung's patronage of it.—*Ibid.* i. 86.

But there was no "mitigation or revocation of the strenuous measures against the church; . . . evidently matters had then reached such a point that the individuality of the supreme lord of the world had to demean itself to the Confucian paramountcy. Hien Tsung could only vent his sympathies by the grant of distinctions and semi-clerical, semi-secular titles to Lamaists, regardless of rebukes and protests from his officers, which were showered on him (ch. 331, fol. 8). These had a stronger effect upon his son and successor Hsiao Tsung, who at once retracted these dignities, and sent a part of those clergy back to their country. (The ardour with which the Confucian faction moved and stirred under his reign, may be seen from

a passage in the *Ming ta chêng chi, T'u shu chi ch'êng*, sect. *Shên i*, ch. 64)."—*Ibid.* i. 87.

Wu Tsung (1506–22) "marked his rule by no anti-Buddhistic measures of any significance. We read that he even favoured the Lamaists considerably, always wore their dress, and read their sutras. His successor, Shi Tsung, . . . again followed in the orthodox Confucian path, and put the final touch to the process of pruning the Church. As he had strong leanings towards Taoism, it was all the easier for him 'to wash away' the Lamaists; and," says the chronicler, "from that time members of the Tibetan clergy have seldom come to China (*Hist. of the Ming Dynasty*, ch. 331, fol. 9)."—*Ibid.* i. 87–8.

"But His Majesty did more work of Confucian merit. Besides pulling down several monasteries, he ordered in 1536, with the general applause of his court officers, convoked in consultation, the demolishing of the Buddhist temples within the precincts of the palace, and the destruction of the images, as also that the bones and teeth of Buddha, with more such holy relics and things, should altogether be burned outside the walls. . . . It is stated that . . . there were over a thousand pounds weight of these articles (*T'u shu chi ch'êng*, sect. *Shên i*, ch. 64)."—*Ibid.* i. 88.

In the following year the emperor decreed that "the old temples in the Buddhist monasteries should crumble to ruins, and all permission should be withheld to repair or rebuild them." He also forbade young men to enter the clerical state, "and that, if such things occurred, the parents, neighbours, and helpers should be punished." And in 1566, "it was ordained by imperial decree that the judicial officers of the Government of Shun-t'ien (Peking) should strictly prevent the Buddhist monks and nuns from having consecration altars, and from preaching the law," police measures being adopted to enforce the carrying out of the decree. Itinerant clergy were to be sent back to their family seats. "Just at that time the White Lotus sect came into full activity." It being regarded as "the sole cause of the disastrous rebellions, . . . orders were issued to forbid its existence" (*Ming t'ung chi, T'u shu chi ch'êng*, sect. *Shên i*, ch. 64).—*Ibid.* i. 88–9.

"In that memorable year 1566 the suppressed exasperation of the nation against its government, which for centuries had systematically trodden down, harassed, and persecuted its religion, in the end broke out in open rebellion. . . . Our only possible inference can be that the history of Buddha's religion under the Ming dynasty was one of tears and bloodshed." "For centuries this dynasty had been actively accumulating fuel under its throne; the measures of 1566 set it ablaze. . . . Shi Tsung's soldiery broke loose like a pack of wolves among the monasteries, the temples, and the clergy of the capital; nor did these hordes spare the lay communities. Priests and monks were dragged to the prisons; ordination and preaching were violently stopped; the extermination of the religion was entrusted to the police and the garrison; and the Buddhists in despair took to arms and girded themselves in self-defence. But, in China, he who defends himself against the government is a rebel. So orders were issued rigorously to attack the Lotus sect. . . . Now the soil of the empire was going to be drenched for a long series of years with heretic blood; and now the sect was branded and outlawed for ever as a political body of the utmost danger to the government; from that day to this it was delivered unconditionally to the persecution of a merciless mandarinate." "Perhaps it was the chief agent in that revolution which set the present Manchu house upon the throne. By its ragings against a religion of peace the Ming dynasty dug its own grave."—*Ibid.* i. 89–91.

"Shi Tsung hastened the outbreak of the religious war in . . . 1566, by a measure well calculated to strike alarm among the Buddhists throughout the provinces, and to convince them that they would share the martyrdom of their co-religionists in the capital." Monasteries and monks with their disciples were to be registered under penalty, and a time fixed "within which all the Buddhist monks temporarily residing in the monasteries, or travelling about, should be expelled, and sent to their birthplace, there to perform compulsory government service," police measures being again adopted to enforce compliance.—*Ibid.* i. 91.

"The war between the government and the people, which characterized the latter period of the reign of the Ming dynasty, no doubt much inspirited the hordes of the Manchu magnates who, having subdued various Mongol princes, directed their attacks, especially since 1618, with remarkable valour and audacity towards the Chinese throne, choosing Chihli and the other northern provinces for the field of their operations. In those days persecution was no doubt slumbering, the imperial house having other things to do than to hunt after heretics. And so, in those days of blood and woe, when the torch of war and destruction flared in all directions, the pious once more flocked into the church, and even new convents for the practising of the art of salvation cropped up everywhere. Irrefutable witness of this is borne by a decree, with which T'ai Tsung, the Manchu prince who from 1627 to 1643 carried on the warfare against the Ming dynasty with unwonted energy, attempted to check that religious revival. . . . It proves how the early ancestors of the Ts'ing dynasty were possessed with that same anti-Buddhistic spirit which has marked their descendants to this day." The substance of it was that punishment was to be inflicted in the case of monasteries erected without authority, and ecclesiastics who were not registered were to be sent back to their homes, while females were not to be admitted, and "possession" by gods and spirits was forbidden; "soothsayers, and other diviners for good or bad, shall be put to death without mercy; and . . . Taoist doctors and fasting persons who directly deceive the multitude shall also be punished."—*Ibid.* i. 91–4.

"Another edict of the same potentate against Lamaism was issued in 1636."—*Ibid.* i. 94.

"In oppressing and persecuting the non-Confucian religions" the Ming dynasty "conducted itself quite systematically, and with rigid determination. We possess another proof of this in the fact that it moulded its anti-heretical polity into the shape of formal state-laws, and placed them in its code. . . . The laws in question form in that code two separate titles—the one bearing upon the Buddhist and Taoist clergy and their convents; the other upon the religious societies or sects existing among the people, and upon heretical practices." "Both titles . . . passed over unaltered into the penal and civil code of the now reigning house."—*Ibid.* i. 94–5.

[For *legislation*, see also following Period.]

Manchu Period (1644 *to* —).—*Table IX.*

Priesthood.—"The Chinese official system, which allows no condition of the body politic to remain, in theory at least, unprovided with means for its control, includes among its administrative rules a complete scheme of ecclesiastical gradations of rank and authority in connection with the priesthood of both the Buddhist religion and the Taoist order. Whilst refraining from interference with the internal organization of either of these bodies, or with the admission of members to their ranks, the imperial Institutes provide a framework in harmony with the all-pervading official system, to be grafted upon the hierarchy as it is found in either case developed according to its own traditional rules. The complicated and costly organization of the Tibetan form of Buddhism, which has been created by the emperors of the reigning dynasty, is a subject entirely distinct from the more ancient and orthodox type which constitutes the religion *par excellence* of the Chinese people. . . . For the control of the Buddhist priesthood, official ranks are established according to the following scale:—*Sêng Lu Ssŭ* 僧錄司.—Superior. Two office bearers invested with this title are appointed in each district, department, and prefecture throughout the empire, as principal and deputy, the chief being distinguished as *Chêng Yin* 正印, or principal, and the second in order as *Fu Yin* 副印, or deputy, holder of the seal. The appointment is made by the local authority by selection from among the leading abbots (*fang chang* 方仗) of monasteries, and is submitted for approval, when made by subordinate officials, to the provincial government. The superior thus appointed acts as the medium of communication between the secular authorities and the priesthood, for whose general good conduct he is considered responsible, and over whom, in cases of litigation amongst themselves, he exercises certain judicial powers. The *Sêng Lu Ssŭ* of the metropolitan district is a person enjoying much consideration and wielding no small amount of authority; but the position elsewhere is attended with little respect. Distinctive titles are held by the incumbents of the office, according to the rank of the territorial division to which they belong. These titles are as follows:—*Sêng Kang* 僧綱.—Superior of the Buddhist priesthood in a *Fu* or prefecture. The full title is *Sêng Kang Ssŭ Tu Kang* 僧綱司都綱. The secondary degree of the ninth rank is assigned to holders of this office. *Sêng Chêng* 僧正.—Superior of the Buddhist priesthood in a *Chou* or department. *Sêng Hui* 僧會.—Superior of the Buddhist priesthood in a *Hsien* or district. Beside the foregoing, a certain number of ranks are provided by regulation, apparently for bestowal by way of distinction upon deserving members of the priesthood. They are but little, if at all, in use at the present day. . . . For the control of the Taoist priesthood a similar organization is provided, centreing in the patriarch or hereditary chief of the order, the Heavenly Master Chang, or *Chang T'ien Shih* 張天師, in whose person the spirit of one of the earliest of the Taoist mystics is reputed to reside. The following are the ranks of the official Taoist hierarchy.—*Tao Lu Ssŭ* 道錄司.—Superior. An appointment corresponding in all respects with that of the superior of the Buddhist order. *Tao Chi* 道紀.—Superior of the Taoist priesthood in a *Fu* or prefecture; 9*b*. The full title is *Tao Chi Ssŭ Tao Chi* 道紀司道紀. *Tao Chêng* 道正.—Superior of the Taoist priesthood in a *Chou* or department. *Tao Hui* 道會.—Superior of the Buddhist priesthood in a *Hsien* or district. In addition to the foregoing, a number of offices, with corresponding rank according to the Chinese official scale, are established with reference to the Taoist priests who are connected with the State temples devoted to the worship of the powers of Nature. These are as follows:—*Tso* and *Yu Chêng I* 左右正一.—Director (principal and secondary); 6*a*. *Tso* and *Yu Yen Fa* 左右演法.—Hierophant (principal and secondary); 6*b*. Employed in performing the stated acts of sacrifice in the Imperial temples. *Tso* and *Yu Chih Ling* 左右至靈.—Thaumaturgist (principal and secondary); 8*a*. These 'miracle-workers' are employed at the State temples in services specially intended as acts of propitiation in times of flood or drought. A corresponding office is filled by priests designated *Yin Yang Chêng Shu* 陰陽正術 in the temples dedicated to the presiding spirit (*Ch'êng Huang Miao* 城隍廟) of prefectural cities. *Tso* and *Yu Chih I* 左右至義.—Priest of the lowest order (principal and secondary); 8*b*."—*Mayers, Ch. Govt.*, pp. 77–9.

"The organization of the Rationalists is a regular hierarchy. It is under the supervision of the government, which holds the chiefs responsible for the general conduct and teachings of the members. The head resides at Lung-hu Shan in Kiangsi, where is a large establishment, resorted to by many votaries, and gathering in a large revenue from their offerings. When he dies a piece of iron is cast into a well near by, and when it floats the name of his successor is found to be written on it. By their extravagant professions and pretences the priests of this sect maintain their influence over a laity as ignorant and credulous as themselves."—*Williams, Midd. King.*, ii. 217.

[The emperor regarded "remissness in sacrificial services" on his part as one of the causes of national disaster.]—*Davis, Chinese*, ii. 75–6.

"In 1653 he [Shun Chih] received a visit from the Grand Lama of Lhasa, and he conferred upon him the title of Dalai, or Ocean Lama, because his knowledge was as deep and profound as the ocean."—*Boulger, Short Hist.*, p. 130.

"As to the priests, they are certainly not very numerous in China; they are mostly recruited from the lowest classes, and one finds among them frequently the most wretched specimens of humanity, more devoted to opium smoking than any other class in China. They have no intellectual tastes, they have centuries ago ceased to cultivate the study of Sanskrit, they know next to nothing about the history of their own religion, living together mostly in idleness, and occasionally going out to earn some money by reading litanies for the dead or acting as exorcists and sorcerers or physicians. No community of interest, no ties of social life, no object of generous ambition beyond the satisfying of those wants which bind them to the cloister, diversify the monotonous current of their daily life."—*Eitel, Buddhism*, p. 33.

"The priesthood is confined to monasteries and temples, and its members do not enter into society."—*Williams, Midd. King.*, i. 783.

[Parents who have vowed to devote an only, or delicate child, to the priesthood, sometimes evade the consequences of the vow by choosing a priest, as master to the boy, who is called his disciple, but lives at home, and occasionally exchanges presents with him, to keep up the relation.]—*Nevius, China and the Ch.*, p. 97.

"Buddhist priests are more numerous in China than the Tao sz', and they obtained influence more rapidly over the people. Their demonolatry allows the incorporation of the deities and spirits of other religions, and goes even further, in permitting the priests to worship the gods of other pantheons, so that they could adapt themselves to the popular superstitions of the countries they went to, and ingraft all the foreign divinities into their calendar they saw fit. The Emperors at various times have, moreover, shown great devotion to their ceremonies and doctrines, and have built costly temples, and supported more priests than ever Jezebel did; but the teachings of Confucius and Mencius were too well understood among the people to be uprooted or overridden. The complete separation of the State religion from the worship of the common people accounts for the remarkable freedom of belief on religious topics. Mohammedanism and Buddhism, Taoist ceremonies and Lama temples, are all tolerated in a certain way, but none of them have in the least interfered with the State religion and the autocracy of the monarch as the Son of Heaven."—*Williams, Midd. King.*, ii. 220–1.

"The *Shamans*, *Hoshângs*, or priests, are associated together in monasteries attached to the temples of Fŏ. They are in China precisely a society of mendicants, and go about like the monks of that description in the Romish church, asking alms for the support of their establishments." "Their tonsure extends to the hair of the whole head. There is a regular gradation among the priesthood, and according to his reputation for sanctity, his length of service, and other claims, each priest may rise from the lowest rank of *servitor*, whose duty it is to perform the menial offices of the temple, to that of officiating priest, and ultimately of *Tae Hoshang* [*T'ai Ho-shang*], abbot or head of the establishment. . . . Certain it is . . . that they now practise the ordinances of celibacy, fasting, and prayers for the dead: they have holy water, rosaries of beads which they count with their prayers, the worship of relics, and a monastic habit resembling that of the Franciscans. These strange coincidences led some of the Catholic fathers to conjecture that the Chinese had received a glimpse of Christianity by the way of Tartary, from the Nestorians; others supposed that St. Thomas himself had been among them; but Père Prèmare was driven to conclude that the devil had practised a trick to perplex his friends the Jesuits. To those who admit that most of the Romish ceremonies and rites are borrowed directly from paganism, there is less difficulty in accounting for the resemblance."—*Davis, Chinese*, ii. 81–3.

"The Buddhist priesthood is perpetuated mostly by the children given by parents who have vowed to do so in their distress, and by others purchased for serving in large monasteries. Persons occasionally enter late in life, weary with the vexations of the world; Mr. Milne was acquainted with one who had two sons when he took the vows upon him, but gave himself no care as to what had become of them. The only education which most of the acolytes receive consists in memorizing the prayers in the liturgy and reading the canonical works. A few fraternities have tutors from whom they receive instruction."—*Williams, Midd. King.*, ii. 229.

Buddhist priests "everywhere practise medicine, and therefore are not obliged, as in Christian countries, to share their influence with the family physician; in Tibet, China, Mongolia—in short, throughout the North, they are at the same time, soothsayers, astrologers, also sometimes necromancers and magicians."—*Koeppen, Die Rel. des Buddha*, i. 584.

"They [the Buddhist priests] seem . . . to repeat their prayers altogether by rote, and to be ignorant of the meaning of a very considerable portion of their sacred books."—*Davis, Chinese*, ii. 92.

"The moral character of [any class of] priests has very little to do with their *acceptability and popularity*. Suavity of manners, tact in the management of business, and a clear understanding of the part [to be performed] have much more to do in forming the popular estimation in which [they are] held."—*Doolittle, Soc. Life of the Ch.*, i. 252.

[A class of lay priests existed in certain places, as the *ching yu* (經友) at Wênchow and *tao tao* (道道) or *tao kung* (公) at Foochow.]—*Ch. Rev.*, xii. 207.

"In addition to their employment in the worship and burial of the dead and cultivation of glebe lands (some of which are very extensive), priests resort to many expedients to increase their incomes, few of which have the improvement of their countrymen as a ruling motive. Some go around the streets collecting printed or written paper in baskets, to burn them lest the venerable names of Confucius or Buddha be defiled; others obtain a few pennies by writing inscriptions and charms on doors; and many in rural places get a good living off the lands owned by their temples. The priests of both sects are under the control of officials recognized by and amenable to the authorities, so that the vicious and unprincipled among them are soon restrained."—*Williams, Midd. King.*, ii. 257.

"The Chinese collectively spend enormous sums in their idolatry, though they are more economical of time and money than the Hindus. Rich families give much for the services of priests, papers, candles, etc., at the interment of their friends, but when a large sacrifice is provided none goes to the priests, who are prohibited meat. The aggregate outlay to the whole people is very large, made up of repairs of temples, purchasing idols, petty costs, such as incense-sticks, candles, paper, etc., charms and larger sacrifices prepared from time to time. The sum cannot of course be ascertained, but if the daily expenditure of each person be estimated at one-third of a cent, or four cash, the total will exceed four hundred millions of dollars per annum, and this estimate is more likely to be under than over the mark, owing to the universality and constancy of the daily service."—*Ibid.* ii. 263.

"In spite of the oppression and persecution to which it has been subjected for ages, *Wu*-ism has not perished, for undoubtedly Confucianism has shown itself in the main tolerant, owing to the fact that even its most bigoted votaries found themselves occasionally in need of its spiritualistic soothsaying and exorcism, dictated by ancient custom and endemic superstition."—*De Groot, Rel. Syst.*, vi. 1241–2.

[The functions of the *Wu*-ist priesthood may be divided, as in former times, into 3 categories, *viz.*, clairvoyance and soothsaying, exorcism, and sacrificial work, with invocation and conjuring—though these were not always exercised conjointly by every priest or priestess. They did not borrow their dignity

or function from any ecclesiastical authority or hierarchy: "all men and women were *wu* who had the will and the capacities," and sufficient customers. The "masters" were married men and fathers. Distinctive dress was only worn when they officiated. The *wu*-ship was hereditary. They dominated the world of spirits by their *shén* and *ling*, divine wisdom and power. They were in fact magicians, but known and acknowledged by gods, men, and spectres. Fasts or vigils were observed before initiation, masses said, and various other ceremonies performed, the crux of the initiation being the "climbing of the ladder of swords." The State law against them was "strictly tyrannical," and restricted the adoption of pupils. They had become, "by a process of commixture," partially indentified with Taoism, though "the process may be still unfinished in various parts of China." The exorcising magic, to which they mostly devoted themselves, represented the older *Wu*-ist side of their functions.]—*Ibid.* vi. 1243-64. The religious dress is described on pp. 1264–8; the processions, dancing, self-wounding, etc., in cases of epidemics, the bringing of spirits into mediums, the curing of the sick by possessed mediums, their self-mutilation, discoveries, visiting the unseen world, passing through fire, spirit-writing and other oracular work, on pp. 1269–1322; and female *wu*-ism of the present time on pp. 1323–41.

[Some further particulars relating to the priesthood are given *infra*: see *Sacrifices and Observances*; and for nuns, *Sacred Places*. A description of the initiation of Buddhist priests is given in *Ch. Rec.*, 1878, pp. 181–4.]

Official and Judicial Control.—"For such lay people as leave their families and become members of the Buddhist or Taoist clergy, chiefs are appointed, in order to bridle and restrain them" (*Hui tien*). "In the capital they form, for the Buddhist clergy, committees, composed as follows: *a.* two *Seng luh szĕ*, or Officers for the Registration of the Clergy, the chief being styled *Ching yin*, or Principal Holder of the Seal; the second in order, *Fu yin*, or Deputy Holder of the Seal. Below them in rank follow: *b.* two *Shen shi*, or Improvers of Mankind. . . . *c.* two *Ch'en kiao*, or Expositors of the Religion. . . . *d.* two *Kiang king*, or Sutra Preachers. . . . *e. Kioh i*, 'who understand what Rectitude is' (?)." "Such a committee of so-called *Seng kwan*, or Sangha Officers is, in the capital, appointed for each of the five wards into which the city is divided," with others. "For the control of the Taoist clergy, a similar organization exists in the capital." Promotion was by seniority (1674), the lowest rank being recruited from Expectants (*Hou pu*). Expectants were created under official approval after examination (knowledge of sacred books, integrity and purity of life). The titularies receive no pay or salary. The controllers of the clergy hold low rank in the official world and are not entrusted with the supreme control of monasteries and clergy, this resting with certain Boards and Yaméns. "In the provinces there are no such numerous committees of control. There, in every *fu*, or department, the superior of the Buddhist clergy is a *Seng kang*, *i.e.*, a Cord or Controller of the Clergy; and the Superior of the Taoist clergy is a *Tao ki*, or Controller of Taoism." In a *chou* and *hsien* they bore other names (p. 104). "All the officers for the clergy are chosen from among the consecrated clergy of pure and careful behaviour. They are entitled to wear the secular official dress, but may not be ranked with the secular mandarinate in actual service (*Hui tien*). It is, of course, their duty to see that the regulations and rescripts enacted for the ecclesiastical world are strictly obeyed. . . . The government holds them responsible in a large measure for the conduct of their subordinates. . . . On the other hand, they have, no doubt, the right of intercession with the authorities on behalf of the clergy. They are the link between the secular powers and the clergy, and hence the channel by which intelligence regarding the latter is conveyed to the former. They also possess a certain amount of judicial power within the pale of religious life" (pp. 104–5).—*De Groot*, i. 102–5.

Sacred Places, Temples, etc.—"It became convenient, when the sovereign was at home in his capital, for the worship to be performed at spots removed from the palace, but down to the present time the ancestral hall is still attached to the palace on the south-east. So also the great halls and courts where the emperor meets the princes and high officers are connected with the palace. The altar of the spirits of the grain and land is also as near to the palace on the south-west as the temple of ancestors on the south-east. The arrangement of buildings in the capital at the present time is therefore in principle like the old classical arrangement, which combines the three ideas of temple, hall of audience and private residence." — *Journ. N.-C.B.R.A.S.*, N.S. xxiv. 256.

"There are religious edifices in the Chinese metropolis appropriated to many forms of religion, viz., the Greek, Latin, and Protestant churches, Islamism, Buddhism in its two principal forms, Rationalism, ancestral worship, state worship, and temples dedicated to Confucius and other deified mortals, besides a great number in which the popular gods of the country are adored. One of the most worthy of notice is the *Ti-Wang Miao*, lying on the avenue leading to the west gate, a large collection of halls wherein all the tablets of former monarchs of China from remote ages are worshipped. The rule for admission into this Walhalla is to accept all save the vicious and oppressive, those who were assassinated and those who lost their kingdoms. This memorial temple was opened in 1522; the Manchus have even admitted some of the Tartar rulers of the Kin and Liao dynasties, raising the total number of tablets to nearly three hundred. It is an impressive sight, these simple tablets of men who once ruled the Middle Kingdom, standing here side by side, worshipped by their successors that their spirits may bless the state. This selection of the good sovereigns alone recalls to mind the custom in ancient Jerusalem of allowing wicked princes no place in the sepulchres of the kings. Distinguished statesmen of all ages, called by the Chinese *kwoh chu*, or 'pillars of state,' are associated with their masters in this temple, as not unworthy to receive equal honors."—*Williams, Midd. King.*, i. 75.

"The *Shie Tsih tan*, or altar of the gods of Land and Grain. These were originally *Kau-lung*, a Minister of Works, B.C. 2500, and *Hau-tsih*, a remote ancestor of Chau Kung; here the Emperor sacrifices in spring and autumn. . . . The ceremonies connected with the worship held here are among the most ancient practised among the Chinese."—*Williams, Midd. King.*, i. 70. *Cf.* EARLY FEUDAL PERIOD.

"Opposite to the Colonial Office is the *Tang Tsz'*, where the remote ancestors of the reigning family are worshipped by his majesty together with the princes of his family; when they come in procession to this temple in their state dresses, the Emperor, as high-priest of the family, performs the highest religious ceremony before his deified ancestors, viz., three kneelings and nine knockings. After he has completed his devotions, the attendant grandees go through the same ceremonies."—*Ibid.* i. 72.

"The Great South Altar [in the Temple of Heaven at Peking], the most important of Chinese religious structures, is a beautiful, triple, circular terrace of white marble. . . . It is upon the single round stone in the centre of the upper plateau that the Emperor kneels when worshipping Heaven and his ancestors at the winter solstice. Four flights of nine steps lead from this elevation to the next lower stage, where are placed tablets to the spirits of the sun, the moon, the stars, and the Year God. On the ground at the end of the four stairways stand vessels of bronze in which are placed the bundles of cloth and sundry animals constituting part of the sacrificial offerings. But of vastly greater importance than these in the matter of burnt-offering is the great furnace, nine feet high, faced with green porcelain, and ascended on three of its sides by porcelain staircases. In this receptacle, erected some hundred feet to the south-east of the altar, is consumed a burnt-offering of a bullock—entire and without blemish—at the yearly ceremony."—*Ibid.* i. 76–7.

"Separated from the Altar to Heaven by a low wall, is a smaller though more conspicuous construction called *Ki-kuh Tan*, or 'Altar of Prayer for Grain.' Its proportions and arrangements are somewhat similar to those of the South Altar, but upon its upper terrace rises a magnificent, triple-roofed, circular building known to foreigners as the 'Temple of Heaven.' . . . The native name is *Ki-nien Tien*, or 'Temple of Prayer for the Year.' In the interior, the large shrines of carved wood for the tablets correspond to the movable blue wooden huts which on days of sacrifice are put up on the Southern Altar. Here, upon some day following the first of spring (Feb. 6), the Emperor offers his supplications to Heaven for a blessing upon the year. In times of drought, prayer for rain is also made at this altar, the Emperor being obliged to proceed on foot, as a repentant suppliant, to the 'Hall of Penitent Fasting,' a distance of three miles. A green furnace for burnt offerings lies to the south-east of this, as of the North Altar; while in the open park . . . are seven great stones, said to have fallen from heaven and to secure good luck to the country."—*Ibid.* i. 77–8.

"Across the avenue upon which is situated this great inclosure of the *Tien Tan*, is the *Sien Nung Tan*, or 'altar dedicated to Shinnung,' the supposed inventor of agriculture. These precincts are about two miles in circumference, and contain four separate altars: to the gods of the heavens, of the earth, of the planet Jupiter, and to Shinnung. The worship here is performed at the vernal equinox, at which time the ceremony of ploughing a part of the inclosed park is performed by the Emperor, assisted by various officials and members of the Board of Rites. The district magistrates and prefect also plough their plats; but no one touches the imperial portion save the monarch himself. . . . Sacrifices are offered to these divinities at various times, and, with the prayers presented, are burned in the furnaces, thus to come before them in the unseen world; the idea which runs through them partakes of the nature of homage, not of atonement."—*Ibid.* i. 77–8.

"West of the main city is the Temple of the Moon, and on the east side, directly opposite, stands the Temple to the Sun; the *Ti Tan*, or 'Altar to Earth,' is on the north over against the Altar to Heaven, just described. At all these the Emperor performs religious rites during the twelve months."—*Ibid.* i. 78.

"The tablet to Imperial Earth is placed on the upper [terrace] with those to the Imperial ancestors, and all are adored at the summer solstice. The bullock for sacrifice is afterwards buried and not burned."—*Ibid.* i. 79.

"In every city, down to those of the third order, styled Hien, there is a temple dedicated to Confucius. The Emperor himself, the magistrates, and all the learned of the land do him service."—*Davis, Chinese*, ii. 46.

"Official Chinese records enumerate 1,560 temples dedicated to Confucius attached to the examination halls, the offerings presented in which are all eaten or used by the worshippers; there are, it is said, 62,606 pigs, rabbits, sheep, and deer, and 27,000 pieces of silk, annually offered upon their altars. The municipal temple is not the only one where officers worship, but, like the common people, they bow before whatever they think can aid them in their business or estates."—*Williams, Midd. King.*, ii. 203.

"The *Ching-hwang miao* [in Foochow] is one of the largest religious edifices in the place, and the temples of the goddess of Mercy, and god of War, the most frequented."—*Ibid.* i. 132. This is an important temple in every Chinese city: see *infra*.

"Nearly halfway between Shanchan and Canton is a celebrated mountain and cavern temple, dedicated to Kwanyin, the goddess of Mercy."—*Ibid.* i. 175.

"The temples and public buildings of Canton are numerous. There are two pagodas near the west gate of the old city, and one hundred and twenty-four temples, pavilions, halls, and other religious edifices within the circuit of the city. The *Kwang tah* or 'Plain pagoda,' was erected by the Mohammedans (who still reside near it), about ten centuries ago, and is rather a minaret than a pagoda, though quite unlike those structures of Turkey in its style of architecture; it shoots up in an angular tapering tower, to the height of one hundred and sixty feet. The other is an octagonal pagoda, of nine stories, one hundred and seventy feet high, erected more than thirteen hundred years ago. Among the best known monuments to foreigners visiting this city was the monastery of Chong-show sz', 'Temple of Longevity,' founded in 1573, and occupying spacious grounds. . . . This temple was destroyed in November, 1881, by a mob who were incensed at the alleged misbehaviour of some of the priests towards the female devotees—an instance of the existence in China of a lively popular sentiment regarding certain matters. Near this compound stands the 'Temple of the Five Hundred Genii,' containing 500 statues of various sizes in honor of Buddha and his disciples." "The Hai-chwang sz', a Buddhist temple at Honam, usually known as the Honam Joss-house, is one of the largest in Canton. . . . Daily prayers are chanted before them [the images of the Past, Present, and Future Buddha] by a large chapter of priests, all of whom, dressed in yellow canonicals, go through the liturgy. Beyond this a smaller building contains a marble carving somewhat resembling a pagoda, under which is preserved a relic of Buddha, said to be one of his toe-nails. . . . One of the houses adjoining holds the hogs . . . offered by worshippers who feed them as long as they live." "Two other shrines belonging to the Buddhists, are both of them, like the Honam temple, well endowed. One called *Kwang-hiao sz'*, or 'Temple of Glorious Filial Duty,' contains two hundred priests, who are supported from glebe lands, estimated at three thousand five hundred acres. The number of priests and nuns in Canton is not exactly known, but probably exceeds two thousand, nine-tenths of whom are Buddhists. There are only three temples of the Rationalists, their numbers and influence being far less in this city than those of the Buddhists." "The *Ching-hwang miao* is an important religious institution in every Chinese city, the temple being a sort of palladium, in which both rulers and people offer their devotions for the welfare of the city. The superintendent of that in Canton pays $4,000 for his situation, which sum, with a large profit, is obtained again in a few years, by the sale of candles, incense, etc., to the worshippers. The temples in China are generally cheerless and gloomy abodes. . . . The entrance courts are usually occupied by hucksters, beggars, and idlers, who are occasionally driven off to give room for the mat-sheds in which theatrical performances got up by priests are acted. The principal hall, where the idol sits enshrined, is lighted only in front, and the altar, drums, bells, and other furniture of the temple, are little calculated to enliven it; the cells and cloisters are inhabited by men almost as senseless as the idols they serve, miserable beings, whose droning, useless life is too often only a cloak for vice, indolence, and crime, which make the class an opprobrium in the eyes of their countrymen."—*Ibid.* i. 163–6.

"In the northern part of this province [Shansi] the Buddhist temples at Wu-tai shan in Tai chan draw vast crowds of votaries to their shrines. The hills in which they are built rise prominently above the range, and each celebrated locality is memorialized by its own particular divinity, and the buildings where he is worshipped. The presence of a living Buddha, or *Gegen*, here attracts thousands of Mongols from the north to adore him."—*Ibid.* i. 96.

"The most elegant and solid building of the city [Ningpo] . . . is a temple dedicated to the marine goddess Ma Tsupu, and was founded by Fuhkien men in the 12th century, but the present structure was erected in 1680, and largely endowed."—*Ibid.* i. 123.

"The worship of street divinities is not altogether municipal; some of the shrines in Canton are resorted to so much by women as to obstruct the path. The unsocial character of heathenism is observable at such places and in temples; however great the crowd may be, each one worships by himself as much as if no one else were present. Altars are erected in fields, on which a smooth stone is placed, where offerings are presented and libations poured out to secure a good crop. Few farmers omit all worship in the spring to the gods of the land and grain; and some go further and present a thanksgiving after harvest. Temples are open night and day, and in towns are the resort of crowds of idle fellows. Worshippers go on with their devotion amid all the hubbub, strike the drum and bell to arouse the god, burn paper prayers, and knock their heads upon the ground to implore his blessing, and then retire."—*Ibid.* ii. 263.

"The hall of ancestors is found in the house of almost every member of the family, but always in that of the eldest son. In rich families it is a separate building; in others a room set apart for the purpose, and in many a mere shelf or shrine. The tablet, or *shin chu*, is a board about twelve inches long and three wide, placed upright in a block. The inscriptions on two are like the following: 'The tablet of Hwang Yung-fuh (late Ching-tch), the head of the family, who finished his probation with honor during the Imperial Tsing dynasty, reaching a sub-magistracy.' His wife's reads: 'The tablet of Madame, originally of the noble family Chin, who would have received the title of lady, and in the Imperial Tsing dynasty became his illustrious consort.' A receptacle is often cut in the back, containing pieces of paper bearing the names of the higher ancestors, or other members of the family. Incense and prayers are daily burned before them, accompanied by a bow or act of homage, forming in fact a sort of family prayer. The tablets are ranged in chronological order, those of the same generation being placed in a line. When the hall is large, and the family rich, no pains are spared to adorn it with banners and insignia of wealth and rank, and on festival days it serves as a convenient place for friends to meet, or for any extraordinary family occasion. . . . The portraits of the deceased are also suspended in the hall, but effigies or images are not now made."—*Ibid.* ii. 250–1.

"It is impossible to state the proportion in which Buddhist temples are found; there are one hundred and twenty-four in Canton alone, containing idols of every name and attribute."—*Ibid.* ii. 224.

"The high mountain called Tai shan, or 'Great Mount,' is situated near Tai-ngan fu in this province [Shantung]. This peak is mentioned in the *Shu King* as that where Shun sacrificed to Heaven (B.C. 2254); it is accordingly celebrated for its historical as well as its religious associations. It towers high above all other peaks in the range . . . and is the great rendezvous of devotees; every sect has there its temples and idols, scattered up and down its sides, in which priests chant their prayers, and practise a thousand superstitions to attract pilgrims to their shrines. During the spring, the roads leading to the Tai shan are obstructed with long caravans of people coming to accomplish their vows, to supplicate the deities for health or riches, or to solicit the joys of heaven in exchange for the woes of earth. A French missionary mentions having met with pilgrims going to it, one party of whom consisted of old dames, who had with infinite fatigue and discomfort come from the south of Honan, about three hundred miles, to 'remind their god of the long abstinence from flesh and fish they had observed during the course of their lives, and solicit as a recompense, a happy transmigration for their souls.' The youngest of this party was 78, and the oldest 90 years. Another traveller says that the pilgrims resort there during the spring, when there are fairs to attract them; high and low, official and commoner, men and women, old and young, all sorts gather to worship and traffic. A great temple lies outside the town, whose grounds furnish a large and secure area for the tents where the devotees amuse themselves, after they have finished their devotions. The road to the summit is about five miles, well paved and furnished with rest-houses, tea-stalls, and stairways for the convenience of the pilgrims, and shaded with cypresses. It is beset with beggars, men and women with all kinds of sores and diseases, crippled and injured, besieging travellers with cries and self-imposed sufferings, frequently lying across the path so as to be stepped upon. A vast number of them live on alms thus collected, and have scooped themselves holes in the side

of the way, where they live; their numbers indicate the great crowds whose offerings support such a wretched throng on the hill."—*Ibid.* i. 90–1.

"The Buddhist temples present much uniformity in their arrangements, and some of the monastic establishments are among the finest buildings in China. No cave temples are known, but caves have been turned into temples in many places, and miserable places they are for worship. On entering a Buddhist temple, one sees four colossal statues of the Four Great Kings who are supposed to govern the continents on each side of Mount Sumeru and guard or reward the devotees who honor their Lord; they have black, blue, red, and white faces, and usually hold a sword, guitar, umbrella, and snake in their hands. Opposite the door is a shrine containing an image of Maitreya Buddha, or the Merciful One, a very fat, jolly personage, who is to have an avatar three thousand years hence; images of Kwanti, the God of War, and of Wei-to, a general under the Four Kings, clad in armor, are often seen near the shrine. Going behind a screen, the next great hall contains a high gilded image of Sakya-muni sitting on a lotus flower, with smaller statues of Ananda and Kashiapa on his sides; their shrine often has standing images of attendants. In this hall are other images or pictures of the Eighteen Arhans, deified missionaries who propagated their faith early in China. In the rear of these is represented some form of Kwanyin, the Goddess of Mercy, the popular idol of the sects. In large temples the five hundred Arhans, placed on as many seats, each having some distinguishing attribute, fill a large hall. Besides these occur the disciples of Buddha listening to his teachings, the horrible punishments of hell, and various honored deities, sages, or local gods, so that few temples are alike in all respects. In all of them are guest-chambers of various sizes, refectories, study rooms, and cloisters, according to the wants and resources of the fraternity."—*Ibid.* ii. 235. For detailed description see *Nevius, China and the Ch.*, pp. 85–96.

In contrast with the monstrous images of Brahmanism, and their clumsy symbolism, Buddha is always embodied in a human figure of one particular type, that of the glorified Sage, which, with slight modifications, recurs in all Buddhist sacred figures. The monstrous figures of Chinese *pusas* (Bôdhisattvas) are an exception to this rule, probably because the name was transferred from Buddhist saints to older Shamanistic demons. —*Koeppen, Die Rel. des Buddha*, i. 505.

"Statues of Buddha all follow one conventional type, for which explicit directions are given. 'The form of Buddha must be full of grace, and the limbs well shaped.' The forms are soft and rounded—too much so for a Western idea of beauty—sometimes even to the point of obesity. 'This is especially the case with Chinese representations. See *e.g.*, *Haussmann*, i. 326: "A laughing Bacchus-figure with a protuberant stomach." The Siamese figures of Buddha are the most meagre, and have a somewhat elongated face, not a round one like those of Ceylon.' "—*Ibid.* i. 506.

"Nunneries also exist, most of them under the patronage of the Holy Mother, Queen of Heaven. The priests advocate their establishment as a good means of working upon the feelings of the more susceptible part of society, to whom they themselves cannot get admittance. The succession among the 'sisters' is kept up by purchase and by self-consecration; the feet of children bought young are not bandaged. The novice is not admitted to full orders till she is sixteen, though previous to this she adopts the guard of the sisterhood; the only difference consists in the front part of the head being shaved and the hair plaited in a queue, while nuns shave the whole. It is not easy to distinguish monks from nuns as they walk the streets, for both have natural feet, wear clumsy shoes, long stockings drawn over full trousers, short jackets, and bald pates. Like her sister in Romish countries, the Chinese nun, when her head has been shaved—the opposite of taking the veil, though the hair of both is sacrificed—is required to live a life of devotion and mortification, eat vegetables, care nothing for the world, and think only of her eternal canonization, keeping herself busy with the service of the temple. 'Daily exercises are to be conducted by her; the furniture of the small sanctuary that forms a part of the convent must be looked after and kept clean and orderly; those women or men who come to worship at the altars, and seek guidance and comfort, must be cared for and assisted. When there is leisure the sick and poor are to be visited; and all who have placed themselves under her special direction and spiritual instruction have a strong claim upon her regard. That she may live the life of seclusion and self-denial, she must vow perpetual virginity. The thought of marriage should never enter her head, and the society of men must be shunned. On her death she will be swallowed up in nihility.' "—*Ibid.* i. 229–30. See also *Milne, Life in China*, pp. 134–40.

"Most of them [nuns] are taught to read the classics as well as their own liturgies, and a few of the sisterhood are said to be well read in the lore of the country. Each nun has her own disciples among the laity, and cultivates and extends her acquaintances as much as she can, inasmuch as upon them her support principally depends. Each of her patrons, whether male or female, receives a new name from her, as she herself also did when her head was shaven. Contributors' names are written or engraved in conspicuous places in the building; casual fees or donations go to the general expenses. Each nun also receives ten cents when public masses are recited for those who have engaged them. Their moral character is uniformly represented as dissolute, but while despised for their profligacy they are dreaded for the supposed power they can exert by means of their connection with spirits."—*Ibid.* ii. 230–1. *Cf. Chou li*, i. 157, on the *Niu-tcho*, or women charged with intercessory prayers.

"Connected with most of the larger [monasteries are solitaries, or hermits, living] in rude huts or caves among the hills, [spending their time chiefly in prayer and meditation], keeping the taper lighted before their gods, [and] supported by the contributions of friends and temple-worshippers, and supplies from the monastery with which they are connected. [There are also certain devotees, or anchorites, immured, for a certain period, or for life, in cells within the monastery: their food being handed in through a small hole. Rich men sometimes arrange to secure a share of merit by supporting one of these devotees.]"—*Nevius, China and the Ch.*, pp. 96–7.

"The Tauist idols are dressed in Chinese costume, commonly that of the Ming dynasty. . . . In the Buddhist, Hindoo models are followed."—*Trans. C.B.R.A.S.*, v. 83–98.

Sacrifices and Observances.—"One expensive religious rite after another was eliminated at the suggestion of rationalistic sovereigns or sages, until finally nothing was left but the imperial act of homage to heaven and earth and agriculture in the ceremonial ploughing."—*Simcox*, ii. 37.

"The vestiges that remain of the old nature-worship of the Chinese, under their later guise of sacrifices and invocations to Heaven and Earth, have here [in Book IV of the legal Code] their allotted place; and any performance of the sacred rites connected therewith is strictly foribidden, not only to private individuals, but also to Buddhist and other priests. Magic and sorcery, the possession of astrological books, and superstitious associations in general, as well as religious processions, are further prohibited under severe penalties, though in the latter of these the law is more strictly honoured in the breach than in the observance."—*Giles, Historic China*, p. 130.

"The state-worship is divided into three classes:—first, the *Ta-sze* [*Ta Ssŭ*], or great sacrifices; secondly, the *Choong-sze* [*Ch'ung Ssŭ*], or medium sacrifices; and lastly the *Seaou-sze* [*Hsiao Ssŭ*], or lesser sacrifices. Under the first head are worshipped the Heaven and the Earth. In this manner they would seem to adore the material and visible heaven, as contrasted with the earth; but they, at the same time, appear to consider that there exists an animating *intelligence* which presides over the world, rewarding virtue and punishing vice. *Tien* [*T'ien*] and *Shang-ty* [*Shang-ti*], 'the supreme ruler,' appear always to be synonymous in the Shoo-king [Shu ching]. Equal with the above, and like them restricted to the worship of the Emperor and his court, is the great Temple of imperial ancestors." "The objects of worship entitled to the 'medium sacrifices' are (among others) the gods of the land and grain. The former are generally represented by a rude stone, placed on an altar with matches of incense burning before it, which is commonly seen in every street and corner. The Sun and Moon, otherwise called the 'Great light' and the 'Evening light,' come under this head. The rest are various gods, genii, sages, and others, the inventors of agriculture, manufactures, and useful arts. The 'Lesser sacrifices' include a still larger class, among which is the ancient patron of the healing art, together with innumerable spirits of deceased statesmen, eminent scholars, martyrs to virtue, etc. The principal phenomena of nature are likewise worshipped, as the clouds, the rain, wind, and thunder, each of which has its presiding god. The *five mountains*, the *four seas*, are rather figurative than exact expressions for the land and the ocean in general. Like the Romans, they worship their military flags and banners: the *Kuăn-ty* [*Kuan-ti*], a deified warrior of ancient times, much honoured by the military, is especially adored by the present dynasty for his supposed assistance. Their right being that of conquest they properly worship the god of war. *Loong-wăng* [*Lung wang*], the Dragon king, who represents rivers and the watery element, receives much sacrifice from those who have charge of the Yellow river and grand canal, both of which so frequently burst their banks." "Among others of the same class of gods is 'the Queen of heaven,' *Tien-how* [*T'ien-hou*] (worshipped also by the Buddhists), concerning whom the legend says, that she was a native of the province of Fokien, and distinguished in early life for her devotion and celibacy. She became deified during the thirteenth century under the Soong dynasty (*q.v.*), and having originated in a maritime province, she is the peculiar patroness of seafaring people, who erect altars and temples to her on shore, and implore her protection on the water. She is supposed to have the control of the weather; and in seasons of severe drought the government issues proclamations, commanding a general fast and abstinence from animal food: the local magistrate, in his official capacity, goes to the temples and remains fasting and praying for successive days and nights, supplicating for rain." "That the material universe is the object of worship appears not only from the names of those several parts which have been given above, but also from other circumstances. Thus the imperial high-priest, when he worships heaven, wears robes of an azure colour, in allusion to the sky. When he worships the earth his robes are yellow, to represent the clay of this earthly sphere. When the sun is the object, his dress is red; and for the moon, he wears a pale white. The kings (*wăng*), nobles, and crowd of official hierophants wear their court dresses. The altar of sacrifice to heaven is round, to represent the sky; that on which the sacrifices to earth are laid is square, but whether for a similar reason is not stated."—*Ch. Repos.*, iii. 49.

"The priests of the Chinese state religion, subordinate to the Emperor himself as *pontifex maximus*, are the kings, nobles, statesmen, and the crowd of civil and military officers. The *joo-keaou* [*ju chiao*], or philosophic sect, monopolize both the civil and sacred functions. At the grand state-worship of nature, neither priests nor women are admitted; and it is only when the especial sacrifice to the patroness of *silk* takes place, that the Empress herself, and the several grades of female rank at Peking, may take a part." "It is required of the Chinese hierophants that they be free from any recent legal crime, and not in mourning for the dead. For the first order of sacrifices they are required to prepare themselves by ablutions, a change of garments, a vow, and a fast of three days. During this time they must occupy a clean chamber, and abstain,—1. from judging criminals; 2. from being present at a feast; 3. from listening to music; 4. from cohabitation with women; 5. from intercourse with the sick; 6. from mourning for the dead; 7. from wine; 8. from eating onions or garlic; 'for,' says the annotator, 'sickness and death defile, while banqueting and feasting dissipate the mind, and unfit it for holding communion with the gods.' "—*Ibid.* iii. 49. "The victims sacrificed consist of oxen, sheep, and pigs; and the other offerings are principally silks. (These, as well as the flesh of the sacrifices, are probably divided among the worshippers eventually.) It is required that the victims be whole and sound, and a black colour is preferred. The times of sacrifice are specified thus:—those to heaven are offered at the winter solstice; those to earth at the summer solstice; and the others at regularly appointed periods."—*Ibid.* iii. 49. "The punishment annexed to the neglect of due preparation, imperfect victims, etc., is either forfeiture of salary for a month or longer, or a specified number of blows with the bamboo, which may be commuted for the payment of a very small sum of money, according to the *number of blows* adjudged to the delinquent; which, as in other cases throughout the penal code, may often be considered rather as a *measure of the offence*, than as a specification of the real penalty inflicted. The case is far different if the common people presume to arrogate the right of worshipping heaven, for they are punished in such cases with eighty blows, and even with strangulation." —*Ch. Repos.*, iii. 49. See also *Davis, Chinese*, ii. 71–5; *Williams, Midd. King.*, ii. 194–200.

"The winter solstice is the great day of this State worship. The Emperor goes from his palace the evening before, drawn by an elephant in his state car and escorted by about two thousand grandees, princes, musicians, and attendants, down to the Temple of Heaven. The cortège passes out by the southern road, reaching the Ching Yang Gate, opened only for his majesty's use, and through it goes on two miles to the *Tien Tan*. He first repairs to the *Chai Kung*, or 'Palace of Fasting,' where he prepares himself by lonely meditation for his duty; 'for the idea is that if there be not pious thoughts in his mind the spirits of the unseen will not come to the sacrifice.' To assist him he looks at a copper statue, arrayed like a Taoist priest, whose mouth is covered by three fingers, denoting silence, while the other hand bears a tablet inscribed with 'Fast three days.' When the worship commences, and all the officiating attendants are in their places, the animals are killed, and as the odor of their burning flesh ascends to convey the sacrifice to the gods, the Emperor begins the rite, and is directed at every step by the masters of ceremonies. The worship to Heaven is at midnight, and the numerous poles around the great altar, and the fires in the furnaces shedding their glare over the marble terraces and richly dressed assembly, render this solemnity most striking." —*Williams, Midd. King.*, ii. 196–7. For further particulars see pp. 197–8.

"In his capacity of Vicegerent, High Priest, and Mediator between his subjects and the higher Powers, there are many points of similarity between the assumptions of the Emperor and of the Pope at Rome. The idea the Chinese have of heaven seems to be pantheistic, and in worshipping heaven, earth, and terrestrial gods they mean to include and propitiate all superior powers. If, as seems probable, the original idea of *Shangti*, as it can be imperfectly gleaned from early records, was that of a supreme Intelligence, it has since been lost. Of this worship, the effects in China upon the nation have been both positive and negative. One of the negative influences has been to dwarf the State hierarchy to a complete nullity—to prevent the growth of a class which could or did use the power of the monarchy to strengthen its own hold upon the people as their religious advisers, and on the government as a necessary aid to its efficiency."—*Ibid.* ii. 198.

"The High Priests of China love power and adulation too well to share this worship with their subjects, and in engrossing it entirely they have escaped the political evils of a powerful hierarchy and the people the combined oppressions of a Church and State. We have seen that the popular rights which are so plainly taught in the classics have been inculcated and perpetuated by the common school education; we shall soon see, moreover, that the ancestral worship could not admit the interference of priest, altar, or sacrifice outside of the door-posts. Yet it is probable that all combined would have been too weak to resist the seductive influence of a hierarchy in some form, if it had not been that the Emperor himself would yield his own unapproachable grandeur to no man. Being everything in his own person, it is too much to expect that he is going to vacate or reduce his prerogative, surrender his right to make or degrade gods of every kind for his subjects to worship, weaken his own prestige, or mortify the pride of his fellow-worshippers, the high ministers of State. The chains of caste woven in India, the fetters of the Inquisition forged in Spain, the silly rites practised by the augurs in old Rome, or the horrid cruelties and vile worship once seen in Egypt and Syria—in each case done under the sanction of the State—have all been wanting along the Yellow River, and spread none of their evils to hamper the rule of law in China."—*Ibid.* ii. 198–9.

"During last century it was decided not to have dual worship at the Temple of Heaven, but to worship there only the Supreme Ruler."—*Journ. N.-C.B.R.A.S.*, N.S. xxiv. 282.

"The annual ceremony of ploughing is of very ancient origin. At Peking it consists in ploughing the sacred field in the Temple of Agriculture with a highly ornamented plough kept for the purpose, the Emperor holding it while turning over three furrows, the princes five, and the ministers nine. These furrows were, however, so short that the monarchs of the present dynasty altered the ancient rule, ploughing four furrows and returning again over the ground. The ceremony finished, the Emperor and his ministers repair to the terrace adjoining the plat, and remain till it has all been ploughed. The crop of wheat is used in idolatrous services. The rank of the actors renders the ceremony more imposing at Peking, but the people of the capital only know that such a performance takes place, as they are not admitted inside of the enclosure when it is observed by the Emperor and his suite. This ceremony is also required of all high officers throughout the Empire, and is attended with more or less parade in April."—*Williams, Midd. King.*, ii. 13.

"In the provinces its celebration varies, and as there are two festivals coming near together connected with agriculture, one or the other of them is apt to predominate. The annual ploughing ritual is one, and the *lih chun*, or 'First day of spring,' is the other and prior in date. The prefect of every city and his subordinates on that day repair to the appointed spot outside of the walls, accompanied by music and a great procession of the citizens, carrying through the streets a paper image of the buffalo or ox, which, with the idol image worshipped at the same time, are at some places taken into his *yamun*. Here the whole is placed on an altar, and the officials present walk around and whip the effigy with rods before it is set on fire and scrambled for by the people present. Besides the paper ox, a clay one is also made and taken beyond the eastern gate, sometimes accompanied by or holding hundreds of little images inside; after the ceremonies are over it is broken up, and the pieces and small images are carried off by the crowd to scatter the powder on their own fields, in the hope of thereby insuring a good crop."—*Ibid.* ii. 13–14.

"In Ningpo the principal features of the ceremony consist of a solemn worship by all the local officers of a clay image of a buffalo and an idol of a cow-herd. The prefect then ploughs a small piece of ground, and he and his associates disperse till the morrow, when they come together in another temple at dawn. Here a series of prostrations and recitals of prayers are performed by the 'fathers of the people' in their presence, some of whom have no respect for the worship, while others, perhaps, evince deep reverence. As soon as it is over the clay ox is brought out, and a procession consisting of all the officers pass around it repeatedly, striking the body at a given signal, and concluding the ceremony by a heavy blow on the head. The crowd then rush in and tear the effigy to pieces, each one carrying off a portion to strew on his fields."—*Ibid.* ii. 14.

"The most famous temple in the empire now rises over the place of the grave [of Confucius]. K'ang-he, the second and greatest of the rulers of the present dynasty, in the 23rd year of his reign, there set the example of kneeling thrice, and each

time laying his forehead thrice in the dust, before the image of the sage."—*Legge, Ch. Class.*, i. Prol. p. 91.

"Before Confucius' shrine in the temple there are several tables bearing offerings of meats of different kinds, grains of all sorts, fruits, wine, incense, silk, satin, etc." "A remarkable peculiarity of Chinese worship is the firm belief that the spirits in whose honour a ceremony is performed descend from heaven to receive the offerings prepared for them."—*Van Aalst, Ch. Music*, pp. 25, 27.

[A full description of the worship of Confucius by the Emperor, with the accompanying offerings, music, and dancing, is given in *ibid.* pp. 25–35.]

"During the spring and autumn lucky days are chosen for the worship of Confucius and the spirits of departed sages; at other times services are performed at the temples of agriculture, of ancestors, of the sun, of the moon, etc. Most of these ceremonies take place during the early hours of the morning, and are always terminated at sunrise. The Emperor is supposed to attend himself, but if for certain reasons he is unable to do so, he deputes one of the Princes or a high dignitary to conduct the ceremonies in the name of the sovereign. Everything connected with them is minutely regulated: the number of musicians, of dancers, of instruments, vases, and utensils of all kinds, of movements, genuflexions, and even words, is rigorously fixed."—*Van Aalst, Ch. Music*, p. 25.

"A temple called the *Sien-tsan Tao* exists in the palace grounds dedicated to Yuenfi [Silk goddess], wherein she is worshipped annually in April by the Empress. The altar, grounds, sacrifices, ritual and buildings are all in imitation of those in the Temple of Agriculture, of which they are a counterpart."—*Williams, Midd. King.*, ii. 33.

"In the first part of April, one hundred and six days after the winter solstice, during the term called *tsing-ming* [see previous Period], a general worship of ancestors is observed. In Kwang-tung this is generally called *pai shan*, or 'worshipping on the hills,' but the general term is *siu făn ti* [*hsiu fên tî*], or 'sweeping the tombs.' The whole population, men, women, and children, repair to their family tombs, carrying a tray containing the sacrifice, libations for offering, and candles, paper, and incense for burning, and there go through a variety of ceremonies and prayers. The grave is at this season repaired and swept, and at the close of the service three pieces of turf are placed at the back and front of the grave to retain long strips of red and white paper; this indicates that the accustomed rites have been performed, and these fugitive testimonials remain fluttering in the wind long enough to announce it to all the friends as well as enemies of the family; for when a grave has been neglected three years it is sometimes dug over and the land resold. The enormous amount of litigation connected with sepulchral boundaries, transfer of grave glebes or sale of the ancient plats, injury, robbery, and repairs of tombs, all indicate the high importance of this kind of property."—*Ibid.* ii. 252.

"Under the present dynasty the military dancers [see REST. OF UNITY] have been excluded, and the number of civil dancers has been fixed at 36, with two chiefs. The long feather called 翟 (*ti*), which was anciently composed of three feathers bound together in the form of a trident, has also been reduced to a single peacock's feather. The little stick, called 管 (*yüeh*), which the dancers hold in the left hand, was anciently a flute with three holes, on which they played at intervals, now it is a simple stick."—*Van Aalst, Ch. Music*, p. 33.

"At present [no] sacrifices are expiatory; they are regarded as food for gods and spirits, and are presented with the view of securing the kind offices of good divinities, and buying exemption from the inflictions of evil ones. They are not burned, but offered as food. . . . In Buddhist temples, [they] consist of cooked vegetables, . . . to other gods, of meat almost exclusively, of which there are generally 3 or 5 different kinds. This meat is presented on large plates, containing whole fowls or fish, or large pieces of pork. It is generally cooked, but on some occasions most of it is presented raw, with a few cooked dishes, this kind of sacrifice being regarded as of a higher and more reverential kind. Salt and wine are added in separate cups."—*Nevius, China and the Ch.*, p. 154.

"The occasions on which offerings are made are such as betrothal and wedding days, the birth of a child, or the birthday of a parent. Sometimes they are made in consequence of former vows in times of distress, and sometimes with a view of securing the reformation of a dissipated relative."—*Ibid.* p. 154.

"In every instance a paper engraving of the principal god to be worshipped is bought at a shop . . . and placed above the table of offerings. The spirit is supposed to be present in this paper. . . . Candles and incense-sticks are kept continually burning on the table of offerings, and in closing the ceremony, the [picture] is burned, together with paper-money."—*Ibid.* p. 154.

"An explosion of fire-crackers is generally the signal for the spirits to disperse after the repast is over; a few crumbs of meat and vegetables are also thrown upon the roof of the house, though no one knows why."—*Ibid.* p. 155.

"The sacrifices which occur most frequently are those to the shades of ancestors, and evil spirits, . . . called *kung fan*, 'hash and rice,' to distinguish them from offerings to gods, which are called *fuh li*, 'happiness offerings.' They consist, not of large pieces of meat, but of dishes of chopped meat and vegetables, with bowls of rice . . . presented in the same manner as a feast for man. The *fuh li* is often cut up and cooked over for such feasts; but . . . what has once been offered to spirits is never [presented to the gods]."—*Ibid.* p. 155.

"Among the most common, and perhaps the most earnest of all sacrifices are those made to evil spirits in consequence of the sickness of a relative. The diviner [says] what particular spirit has been offended, and gives a minute list of the offerings required. These . . . are presented in the night, on the ground, outside the door of the dwelling. They consist, not only of food, . . . candles, incense and paper money, but a paper sedan or boat is burned with the money, in order to provide a polite mode of conveyance for the spirit, on taking his leave."—*Ibid.* p. 155.

"The worshippers in Buddhist temples are for the most part [old or elderly] women, who hope, by acquiring merit, to be born again as men, and thus escape a repetition of their present hard lot." "In performing idol-worship, the people do not choose lucky days, as they do so commonly in . . . other matters. Unusually large numbers may be seen at the Buddhist and other temples on the first and fifteenth of each month, and also on the birthdays of different gods. Special visits are made for special purposes at all times, [as: to pray for children, to ask for an omen, advice, or medicine, and to make vows." [Lots are cast by shaking numbered sticks in a box till one of them falls out, when a paragraph with the corresponding number is consulted in a book kept for the purpose; or a collection of slips of paper containing replies.] "The same device is used in asking for medicine, though the god interrogated is different, and the slips of paper contain medical prescriptions only. [This] is resorted to both in trivial and alarming cases, when the aid of a physician is either unnecessary, or unavailing. Seeking omens and medicines, though practised in Buddhist temples, are more common in some others."—*Ibid.* p. 98.

"*Vows* are made in cases of distress and uncertainty. The person assuming a vow, in order to secure the assistance and protection of some deity, promises to provide a theatrical exhibition for the god to look at, or to feed hungry ghosts, or to furnish new clothes for some idol in the temple, as some of them which are not painted or covered with gold-leaf wear a variety of clothes, which are changed with the changing seasons."—*Ibid.* p. 99.

"Persons visiting the temples, under circumstances of peculiar urgency, as above described, often worship along the way for the distance of half a mile or more, stopping every few steps to make their prostrations. Worship on ordinary occasions consists in simply burning candles and incense, making prostrations before the gods and giving a few cash to the priests." Some details are given of peculiarities of worship in the Ningpo district, chiefly connected with the system of *tieh*, or cheques on the unseen world, issued by the priests on certain days. These are bought by women, who chant the name of Buddha over them from 3,000 to 10,000 times (after which they are supposed to be worth an equal number of cash) and put them aside: the whole collection to be burnt by the owner's friends, after her death, when they serve to pay her expenses in Hades. The regular occasions for obtaining these *tieh* are: The *Shih wang hwei*, or gathering in honour of the ten kings of hell; The *Hiueh hu hwei*, or Blood Lake gathering—held one day in each month, from the first to the tenth—to save women who may die in childhood, from the penalty of the 'Blood Lake'; The *Tu Tsih hwei*, 1–7 day of the 2nd month; The *Pa fuh hwei*, 1–10 day of 8th month; The *Jun fuh hwei*, the first 10 days of the intercalary month, when one occurs." "Whenever a temple is erected or repaired, a bridge finished, or a bell cast, other days are fixed for obtaining *tieh*, supposed to be more valuable than the ordinary ones. While a temple is being repaired, papers are pasted over the eyes of the idols, and the gods are supposed to withdraw till the work is finished, when the covering is removed." [The *tieh* issued on these occasions are called 'Open Light *tieh*.'] [Some women, regarded as especially religious, practise the ceremony called *Pai king*, or 'worshipping books'—i.e., performing prostrations to each character of certain books in succession. The first book thus used is the *Shwai chan*, the next, the *Shan sang king*—after which others of less importance may be added.] "Those who have purified themselves by the worship of the *Shwai chan* are very careful to keep from becoming again polluted, and . . . are particularly careful not to enter a room occupied by women in childbed. If obliged [to do so], or if they do it by accident, they worship the *Shwai chan* over again. This class of women live on a vegetable diet. When the worship of any particular book is completed, a ceremony is performed in the nunnery or monastery, called *Wan king*, or 'complete book.' . . . Another ceremony . . . is that of procuring a *Lu-yin*, or passport. This is a large sheet of paper, having in the middle an engraving of *Kwan-yin*. . . . Individuals, having bought this sheet, go to the monastery, and worship the engraving, continually chanting *Na mi o mi ta fuh*. The repetition of this name a certain number of times (generally 1,000), is marked by an impression on the paper with a round stamp. When the borders of the sheet are filled with these impressions, . . . the paper is laid aside till the death of the possessor, when it is burned, and it is thus supposed to pass to the departed spirit and secure her uninterrupted entrance to any department of the regions of the dead. The different kinds of worship above described may be performed by proxy, and many persons gain a livelihood by engaging their services in this way to the sick."—*Nevius, China and the Ch.*, pp. 99–112.

Processions, etc.—Besides the ordinary processions, "there are several more strictly religious, such as the annual mass of the Buddhists, the supplicatory sacrifice of farmers for a good crop, and others of more or less importance."—*Williams, Midd. King.*, i. 820.

"Theatrical representations constitute a common amusement, and are generally connected with the religious celebration of the festival of the god before whose temple they are exhibited. They are got up by the priests, who send their neophytes around with a subscription paper, and then engage as large and skilful a band of performers as the funds will allow."—*Ibid.* i. 820.

Festivals.—"The Chinese dread wandering and hungry ghosts of wicked men, and the priests are hired to celebrate a mass called *ta tsiao* [*ta chiao*], to appease these disturbers of human happiness, which, in its general purport, corresponds to All Souls' Day, and from its splendour and the general interest taken in its success is very popular. The streets at Canton are covered with awnings, and festoons of cheap silk, of brilliant colours, are hung across and along the streets. Chandeliers of glass are suspended at short intervals, alternating with small trays, on which paper figures in various attitudes, intended to illustrate some well-known scene in history, amuse the spectators. At night the glare of a thousand lamps shining through myriads of lustres lights up the whole scene in a gorgeous manner. The priests erect a staging somewhere in the vicinity, for the rehearsal of prayers to *Yen wang* (Yama or Pluto), and display tables covered with eatables for the hungry ghosts to feed on. Their acolytes mark the time when the half-starved ghosts, who have no children or friends to care for them, rush in and shoulder the viands, which they carry off for their year's supply. Bands of music chime in from time to time, to refresh these hungry ghosts with the dulcet tones they once heard; for the Chinese, judging their gods by themselves, provide what is pleasing to those who pay for the entertainment, as well as to those who are supposed to be benefited by it. After the services are performed the crowd carry off what is left, but when this is permitted the priests sometimes cheat them with merely a cover of food on the tops of the baskets, the bottoms being filled with shavings."—*Ibid.* ii. 257–8.

"Another festival in August is connected with this, called *shau i*, or 'burning clothes,' at which pieces of paper folded in the form of garments are burned for the use of the suffering ghosts, with a large quantity of what may be properly called *fiat money*, paper ingots which become valuable chiefly when they are burned. Paper houses with proper furniture, and puppets to represent household servants, are likewise made. Medhurst adds that 'writings are drawn up and signed in the presence of witnesses to certify the conveyance of the property, stipulating that on its arrival in hades it shall be duly made over to the individuals specified in the bond; the houses, servants, clothes, money and all, are then burned with the bond, the worshippers feeling confident that their friends obtain the benefit of what they have sent them.' . . . This festival, like all others, is attended with feasting and music. In order still further to provide for childless ghosts, their ancestral tablets are collected in temples and placed together in a room set apart for the purpose, called *wu sz'tan*, or 'corbate temple,' and a man hired to attend and burn incense before them."—*Ibid.* ii. 258–9.

[Koeppen says that Sakyamuni's birthday is kept in May in China, and is, in the Imperial Calendar, enumerated among the festivals of that month, but is somewhat overshadowed by several national festivals which come about the same time, especially that of Agriculture. In 1829, it fell on May 10.]—*Die Rel. des Buddha*, i. 577. See also *Zeitschrift für die Kunde des Morgenlandes*, iii. 113.

Foundation.—"Wherever these pagodas are in good repair (for many are mere ruins), they are found attached to extensive establishments partaking of the nature of foundations, with a portion of their revenues derived from land adjoining. They are enriched by the contributions and bequests of their votaries, and most of them support a crowd of idle and ignorant priests but the government has nothing to do with their maintenance."—*Davis, Chinese*, ii. 88.

In Puto "the revenues are derived from rent of the lands belonging to the temples, from the collection of those priests who go on begging excursions over the Empire, and from the alms of pilgrims who resort to this agreeable locality."—*Williams, Midd. King.*, i. 126. See also *supra, Priesthood.*

Legislation.—"The *ritual laws* assign to the emperor the exclusive privilege of worshipping the Supreme, and prohibit subjects from offering the great sacrifices. Magistrates are required to superintend the sacred rites in their various districts; and on such occasions are to prepare themselves, by fasting and self-denial, and abstinence from every indulgence, under penalty of forfeiting one month's salary. The neglecting to prepare the proper animal and grain for the sacrifice is punished with 100 blows; and a wilful destroying of the public altars is visited with as many strokes, and perpetual banishment. The deities to be worshipped by the magistrate are the local gods, the genii of the hills and rivers, and of winds and rain, the ancient kings and holy emperors, faithful ministers and illustrious sages,—who are all to be honoured with the accustomed rites by the respective officers of each district."—*Medhurst, China*, pp. 133–4. See also *Williams, Midd. King.*, i. 388.

[It was a punishable offence to erect without official authorization (*i.e.*, emperor's permission) any Taoist or Buddhist convent, or to rebuild any (legally established) on a larger scale. The object of this enactment was to keep the number of monasteries at a minimum (see also pp. 107–8). Common temples for the three religions were forbidden (pp. 108–9). It was also an offence to take and grant ordination without an official diploma (see also pp. 109–11). This and the Ming dynasty occasionally temporarily stopped the issue of diplomas. To embrace religious life, where the sons or orphan brothers in a family were less than three, rendered the offender and the officer or abbot privy to the offence liable to exposure in the cangue and deprivation of office or dismissal respectively. Taking pupils before one is forty, or adopting more than one, was punishable with fifty blows, implicated clergy or officials being also liable to punishment. Clerics who committed any offence were secularized. As the same "polity still prevails in our day, extermination of the clergy by withholding the certificates is a matter of imperial caprice, an imminent danger for the two churches."]—*De Groot, Sectarianism*, i. 96–112.

[The duties of the clergy were to have charge of the temple rites; they were not to hold sutra-readings in market-squares, nor to go about with alms-bowls, nor explain the fruits of salvation, nor collect moneys; they were to keep themselves undefiled, wear the customary religious dress, and live in the convents; abbots were to inform the authorities if any monks or nuns sinned against the rules of monastic life, etc.; monks and nuns were not to congregate in one convent; only the Controllers were to carry seals; adoption of pupils or disciples was only to take place with official sanction; a woman under 40 might not become a nun; in a family not having three sons, none might enter the clerical state, nor an only son; exorcists were forbidden to dance about possessed; images were not to be placed in the street nor subscriptions collected there; altars were only to be erected indoors; women were not allowed to appear in convents or temples (frequently re-enacted).]—*Ibid.* i. 113–8.

[For the rescripts concerning Lamaism, see *ibid.* i. 118–20; and for the legislation against the secular priesthood, pp. 120–7.]

[The text of the law against heresies and sects is given on pp. 137–48.]

"A formal discourse, lecture, or harangue is something almost unheard of in China, and which we seldom read of in their books. Their sages and public teachers have influenced the masses through individuals, and have communicated their instructions by adopting the conversational or catechetical method. The recorded teachings of Confucius are all in this form. At present, when the natives wish to instruct or influence others, they generally do it in long conversations with single persons. When a company meets for conference, their business is conducted informally, politeness and deference for each other being the only parliamentary rules for deliberative assemblies for which they are acquainted."—*Nevius, China and the Chinese*, pp. 327–8.

Sects.—The Friends of Virtue (see previous Period) "incurred the wrath of the Manchu potentate and his satellites for existing apart from the Buddhist and the Taoist monastic systems laid by the State under oppressive restrictions. It is certainly remarkable that this tyrant [T'ai Tsung], who . . . showed himself also far from well-disposed towards Buddhist and Lamaist clergy even long before his hosts had gained the throne, marked that poor sect for persecution and extermination merely" for "privately using seals, misleading mankind, and practising falsehoods among the people, thus creating confusion in the regular course of affairs." "Fanaticism, and nothing else, evidently was his true motive. . . . Whether his decree had the desired effect of exterminating the Friends

of Virtue we cannot say. One thing is certain: we have found no more mention of them. Possibly their sect became merged into other sects, or continued to exist under other names."—*De Groot, Sectarianism*, i. 152, 151.

"Necessarily, more must be known about the sects mentioned in the Law against Heresy in the articles not emanating from the Ming dynasty. These sects either have existed under the now reigning house, or still exist side by side with, or merged in, the White Lotus sect. They are (see p. 146) that of the White *Yang* or *Peh-yang kiao*, the Red *Yang* sect or *Hung-yang kiao*, that of the Eight Diagrams or *Poh-kwa kiao*, and the sect of the Patriarch who ascended on high. They were under this dynasty objects of cruel persecution, and hence the reluctant cause of sanguinary revolts, smothered in blood and fire, in some cases after long months and even years of devastating warfare. . . . The three first-named sects exist especially in Shantung, Honan, Chihli, and Shingking, and that of the Lotus and the Patriarch flourish over a much larger area, if not over the whole realm." Ramifications of the sect of the Patriarch are the *Hsien T'ien* and *Lung Hua* sects described below.—*Ibid.* i. 152.

"The further history of the Lotus sect . . . is simply a part of the general history of the state-persecutions and of the disturbances and revolts organized by the sects for self-defence. . . . The fate of the Lotus sect in this still unfinished period of its existence, evinces its bitter suffering and struggling probably as much as it did under the Yuen and the Ming dynasties."—*Ibid.* i. 169.

"The Lotus society was ever under this dynasty the most powerful. Possibly it is the greatest religious corporation in China, embracing all the others, or at least the chief ones." It flourished "over a much larger area [than the others], if not over the whole realm."—*Ibid.* i. 152.

[Other sects mentioned in the *Ta Ch'ing hui tien*, about which, however, with the exception of the Smelling Incense Sect, nothing is known, are: Incense Burners (*Fên Hsiang*), Smelling Incense (*Wên Hsiang*), Origin of Chaos (*Hun Yüan*), Origin of the Dragon (*Lung Yüan*), All-submerging *Yang* (*Hung Yang*), and Rounded or Perfect Intelligence (*Yüan T'ung*).]—*Ibid.* i. 153–4. Numerous other less conspicuous sects and societies are mentioned in *ibid.* vols. i. and ii., *passim*.

The silence of the legislator, which, thus considered [*i.e.*, that the proscribed religious corporation is not of tested Confucian metal without any alloy] is perfectly rational, does not prevent us from forming some idea as to the general character of the sects. Nothing indicates their having been imported from abroad in times relatively modern. We may therefore admit at starting that they have in the main grown out of the old native Heathenism or Taoism, and Buddhism, the only great religions which have had a firm footing on the soil of the empire [see reasons given on p. 155]. . . . "We necessarily come to the conclusion that the various sects are a mixture of Taoist heathen elements and Buddhist material. Like the two main religions which produced them, they cannot possibly be otherwise than eclectic-syncretic." "Further deductions are now permitted. . . . The sects must have strongly marked features and characteristics in common, derived from these common sources. They must on this account be well aware of their brotherhood, naturally precluding mutual accusation of heresy—not counting the fact that the ever-threatening sword of their arch-enemy, the State, hangs over them all alike, and joins them together in a bond of fraternity for common martyrdom and self-defence." We have "no right to conclude that there are as many distinctly different, disconnected religious corporations. Each corporation may have off-shoots, parishes, communities, under various denominations; and the probability is that the number of actual sects is much smaller than that of sect-names. Besides, it must often have happened that a sect, or a branch of a sect, took a new name to mislead the persecuting mandarinate. And so, amongst the names mentioned in the Law against Heresy and in the *Hwui tien* there may be some which in this manner have fallen into disuse. Some may also indicate sects now exterminated or dispersed." "So . . . the sects are altogether pagan-Taoistic, and Buddhist. They must also have marked Confucian characteristics, because Confucianism is simply ancient heathenism petrified. But the Buddhist element largely predominates in this Sectarianism [for reasons see pp. 156–61]. And so, although we can faintly sketch the general outlines of Sectarianism, no Chinese state document or book furnishes the material by means of which we might draw up the religious character and organization of each sect in particular. Hundreds of imperial decrees, however, teach us, that all Sectarianism is proscribed and persecuted by the Government as heretical, and that these persecutions have often induced the sects to arm themselves in self-defence, and even to rise in open rebellion, in consequence of which all are officially branded as dangerous to the imperial authority."—*Ibid.* i. 154–61.

Attitude towards Foreign Religions and Persecution.—"The rigorous state policy followed with regard to" the Buddhist religion "by the Ming dynasty," has in the main been pursued by "the descendants of T'ai Tsung."—*De Groot, Sectarianism*, i. 94.

The adoption by the Manchus of the Ming laws concerning the Buddhist and Taoist clergy, etc., "enforces the conclusion, that the rigorous régime of the Ming prevails to this day. Could we . . . expect anything else from a dynasty which, on conquering the empire, left the foundations of the State totally unaltered, . . . a dynasty which, from the very outset, exactly like its predecessor, sought the highest good and felicity of throne and people in Confucianism, the utmost danger for state and society in non-Confucian heresy, religion, and ethics?"—*Ibid.* i. 95.

"The classical principles are as much in force now as they were in the Fu Yih's time [*v.* REST. OF UNITY]. Christians, remember therefore that, on account of your doctrines, you, like the Buddhists, stand convicted of violating the imperial rights, of weakening the imperial authority, of sowing moral corruption among the mandarinate; that, in a word, you disorganize and demoralize China's government. And again, by collecting money from the converts for the maintenance of your church, as the Buddhists do, you and the latter defraud the imperial house, you sap the dynasty; the highest Confucian bible of politics itself has declared it!"—*Ibid.* i. 38–9.

As in previous Periods, the attitude of the government towards foreign religions was bitterly hostile. It is expressed in the phrase, "conversion to orthodoxy by the expulsion of heresy." Rescripts "against heresy and religion" were issued by almost every emperor. De Groot relates them *seriatim* (*Sectarianism*, ii. 263–565). They are summarized below. They had practically all the same object, namely, that indicated in the phrase here quoted. The mildness of Shih Tsung's decree concerning Mohammedanism (1729) was due to fear of their military power (ii. 269–70). The hostile attitude towards Christianity "was the necessary result of the State-polity with regard to all non-Confucian religions. Even the persecuted missionaries seem not to have been aware of this fact." "The later emperors of the Ming dynasty, and the earlier ones of the now reigning house" were tolerant to Romanism only so long as "the professors of Christianity kept within bounds. But their attitude must have promptly changed when the converts became so numerous that their growth could no longer escape attention; and when they were no longer lost among the masses of the people. As early as 1616 and 1617 the missionaries were expelled from the empire by the way of Canton (*Williams, Midd. King.*, ii. 292–3), and a period of persecutions was entered upon which did not end until 1622."—*Ibid.* ii. 263–71.

"But especially about the middle of that century, when the conquest of the empire by the Ts'ing dynasty had become an accomplished fact, and this house thus got more leisure to attend to Confucian improvement and civilization of the people, the anti-heretical spirit showed itself in its true character also with regard to Christianity. In 1648, the Dominican Capellas who had laboured for six years to establish a Christian community at Fuh-ngan, in Kuhkien, was put to death on the 15th of January, an event followed, of course, by the persecution of his converts. In 1664 and 1665, the seventy-five year old Schaal was imprisoned at Peking, together with Verbiest, owing to the zeal of the regency during the minority of Shing Tsu. Schaal was sentenced by the Board of Rites and that of Punishments to be slashed to death, but thanks to the empress-mother, the sentence was not executed. All missionaries residing in China were hunted up, imprisoned, tortured, and, with the exception of four retained at Peking in the service of the government, banished from the country by the way of Canton; and the profession of Christianity was prohibited throughout the empire (*Huc, Le Christianisme en Chine*, III. i. 3). True, a decree of 1669 allowed Verbiest and his fellow Jesuits to practise their religion in private, but it prohibited anew the promulgation of Christianity among the people (*Lettres Edifiantes*, xix. 16). In March, 1671, another decree peremptorily forbade the people to embrace Christianity, although the missionaries, owing to Shing Tsu's personal affection for Verbiest had been re-established at Peking as official astronomers and almanac-makers."—*Ibid.* ii. 271–2.

"One of the earliest incidents in the reign of Kanghi was an agitation got up by some of the most bigoted courtiers, and fanned by popular ignorance and fanaticism, against the Christian priests, who . . . had obtained various posts under the Chinese government. They had not been very successful as the propagators of religion, but they had undoubtedly rendered the Chinese valuable service as mathematicians and men of science. The Emperor Chuntche had treated them with marked consideration," but the Chinese officials by accusing them of "propagating a false and monstrous religion," caused them to be imprisoned and condemned to death; but they were saved with the exception of the Abbé Schaal, who died from his sufferings, by the interposition of one of the regents named Sony.—*Boulger, Short Hist.*, pp. 132–3. See also *infra*.

"The amplification of Kang-hi's Sacred Edict (A.D. 1670) issued by his son Yung-cheng (A.D. 1724), attacks, in the case of Christianity, not merely abuses as in the case of Buddhism, but it declares Christianity itself to be 'an unsound and corrupt religion,' and expressly calls upon the people that they 'should on no account believe it.' The policy of modern Chinese statesmen consistently carries out the views of Yung-cheng when it declares European Christianity to be as radically dangerous to the welfare of China as Indian opium."—*Eitel, Buddhism*, pp. 38–9.

"Within the last three centuries all [Jews] have lived in Kaifung, the capital of Honan, wherever they may have lived in earlier days."—*Williams, Midd. King.*, ii. 271.

"Enmity and opposition of the high official world against Christianity—which, thanks to the perseverance, tenacious devotion and self-sacrifice of the missionaries, maintained its ground, and even spread, in spite of constant oppression—remained the order of the day. In 1692 the Viceroy of Chehkiang and Fuhkien set to work effectually. The manifesto in which he demanded the arrest of Intorcetta, the head of the mission at Hang-cheu . . . is quite an exposition of the Confucian anti-heretic dogma" already set forth. Intorcetta was saved through court influence, "but the communities of converts were pillaged, the flock persecuted and scattered abroad, until an Imperial resolution taken in favour of the Christians put a stop to the cruel work."—*De Groot, Sectarianism*, ii. 272.

"By the Treaty of Nerchinsk of August, 1689, the Russians agreed to abandon Albazin, and a number of them were removed as prisoners to Peking, where they were incorporated in the 'banner' system. Provision was made for their religious instruction, and this is really the germ of the Russian Orthodox Mission at Peking."—*Parker, China*, p. 97.

"They [Jesuits] were given permission to remain in China on account of their practical knowledge and usefulness, but for many years they were denied leave to publicly practise their religion, and this point they fought for with equal tact and pertinacity. They were willing to give up all thought of returning to Europe, but they would not make this great sacrifice if they were forbidden to follow their religion in the church they had built with their own money at Pekin. The question was discussed and contested for many years; but at last, in 1692, the Tribunal of Rites passed a decision in favour of the foreigners. This order of the Tribunal of Rites has been very appropriately called the great Charter of Christianity in China, and it so happened that in the very year of its being sanctioned, the French missionaries saved the life of Kanghi, after his own doctors had given up all hope. Some years later Kanghi showed his gratitude for this signal service by presenting them with the site for a church next his own palace and a large sum of money towards the building. This exceptionally favourable treatment was entirely due to the sagacity and magnanimity of Kanghi; but unfortunately the Jesuits thought that it signified that the Chinese were ripe for conversion, and came to China in ever-increasing numbers. There was no employment for these persons, and the more they came the greater did the national and official antipathy to them grow. When they travelled into the provinces and attempted to build new churches, their project was opposed on the ground that the edict of 1692 only referred to Christianity being preached in churches already existing; but Kanghi again came to their assistance, and declared that 'they have never been the cause of any trouble to the Empire, nor ever committed any reprehensible act, and that their doctrine is not bad.' . . . Unfortunately, it was becoming too evident that the Christians only enjoyed their position by the favour of an enlightened ruler, and not from the regard of the people or the intelligence of the ministers; and their increasing numbers rather weakened this favour, for even Kanghi had never advocated that the Chinese should adopt the Christian religion. As missionaries, the Jesuits were complete failures."—*Boulger, Short. Hist.*, pp. 149–50.

"As the great ruler grew more feeble from age and ill-health the fanatical opposition of the Chinese officials [to Christianity] increased, and his patronage showed some decline, for in 1718 he sanctioned measures placing some restriction on the construction of churches, and thus arrested the propagation of Christianity."—*Ibid.* p. 150.

"Matters grew worse when the ecclesiastical orders, represented in the mission, drew the Government into their religious disputes, and thus fixed the attention of the State directly upon their heretical work and propagandism. Now the evil moment drew rapidly near in which the Government would make more of the harm done by the Christian heresies to the Confucian State and society, than of the benefits obtained from the missionaries in their functions of imperial astronomers, chronologers, physicians, gun-founders, and topographers. This crisis came in the latter years of the reign of Shing Tsu. In the 'Lettres Edifiantes' we have but to read the frequent complaints of the missionaries about the thwarting of their labours by the grandees, and the increasing difficulties they had to battle against. The chief cause of all this, viz., the prevailing principles regarding heresy, remained a mystery to them, at least they never mention it in their reports. It was especially the Board of Rites—so they frequently state—that was hostile to them, and they dreaded nothing so much as any correspondence between this Department and the provincial Viceroys and Governors. In truth, to this Board, as its name *Li Pu* implies, the maintenance is entrusted of the *Li* or old orthodox rules for private and social life, rites, ceremonies and official religion (i. 8); and accordingly it is also responsible for the maintenance and execution of the Law against Heresy, which . . . is a part of the legislation bearing upon the proper preservation of the *Li*."—*De Groot, Sectarianism*, ii. 272–3.

In 1717, owing to a Brigade General in Canton having pointed out "the dangers for the empire from the missions," Shêng Tsu "prohibited all missionaries from residing in China without a special licence granted by himself, and he let the mandarins in the provinces carry on the work of persecution to their hearts' content. Before the death of this emperor, as Father Gaubil wrote from Canton on November 4th, 1722, the chapels were in ruins, the Christians dispersed, the missionaries banished out of the country. And the new emperor, Shi Tsung, had only been on the throne for a year when he dealt the death-blow to the missions."—*Ibid.* ii. 273.

"It appears as if they [Yung Chêng's brother Sessaka and others] were specially punished for having become Christians, and there is no doubt that their conversion embittered the Emperor's mind against the Christian missionaries and their religion. It enabled him to say, or at least induced him to accept the statement, that the Christians meddled and took a side in the internal politics of the country." "Yung Ching next turned his attention to humbling the old band of foreigners who had established themselves in the capital and throughout the country, as much by their own persistency and indifference to slight as by the acquiescence of the Chinese Government, and who, after they had reached some of the highest official posts, continued to preach and propagate their gospel of a supreme power and mercy beyond the control of kings, a gospel which was simply destructive of the paternal and sacred claims on which a Chinese Emperor based his authority as superior to all earthly interference, and as transmitted to him direct from Heaven. The official classes confirmed the Emperor's suspicions, and encouraged him to proceed to extreme lengths. On all sides offences were freely laid at the doors of the missionaries. It was said of them that 'their doctrine sows trouble among the people, and makes them doubt the goodness of our laws.' In the province of Fuhkien their eighteen churches were closed, and the priests were summarily ordered to return to Macao. At Pekin itself the Jesuits lost all their influence. Those who had been well-disposed towards them were either banished or cowed into silence. The Emperor turned his back on them and refused to see them, . . . the Emperor's brother . . . said . . . 'What would you say if our people were to go to Europe and wished to change there the laws and customs established by your ancient sages? . . . Your disputes about our customs have greatly injured you. . . . I declare to you that China will want for nothing when you cease to live in it, and that your absence will not cause it any loss.' . . . The final expression of Chinese policy with regard to the Christians was given, however, by the Emperor himself, when at last he agreed to receive the missionaries in audience," when, in a speech, Yung Chêng dispelled their illusions respecting their prospects in the country. "The progress of the Christian religion of the Roman Catholic Church in China was quite incompatible with the supposed celestial origin of the Emperor, who was alleged to receive his authority direct from Heaven. . . . There is no room to doubt that the Catholic priests had drawn a too hasty and too favourable deduction from the favour of Kanghi. . . . The difficulties inherent in the task they had undertaken stood for the first time fully revealed, and, having been denounced as a source of possible danger to the stability of the Empire, they became an object of suspicion even to those who had sympathised with them personally, if not with their creed."—*Boulger, Short Hist.*, pp. 155–7.

"There is nothing surprising to learn that in consequence of the pardon and restitution of the men who had nominally suffered for their Christian proclivities, the foreign missionaries began to hope and to agitate for an improvement in their lot and condition. They somewhat hastily assumed that the evil days of persecution were over, and that Keen Lung would accord them the same honourable positions as they had enjoyed under his grandfather, Kanghi. These expectations were destined to a rude disappointment, as the party hostile to the Christians remained as strong as ever at Court, and the regents were not less prejudiced against them than the ministers of Yung Ching had been. The Emperor's own opinion does not appear to have been very strong one way or the other, but it seems probable that he was slightly prejudiced against the foreigners. He certainly assented to an order prohibiting the practice of Chris-

tianity by any of his subjects, and ordaining the punishment of those who should obstinately adhere to it. At the same time the foreign missionaries were ordered to confine their labours to the secular functions in which they were useful, and to give up all attempts to propagate their creed. Still some slight abatement in practice was procured of these rigid measures through the mediation of the painter Castiglione, who, while taking a portrait of the Emperor, pleaded, and not ineffectually, the cause of his countrymen. There was one distinct persecution on a large scale in the province of Fuhkien, where several Spanish missionaries were tortured, their chief native supporters strangled, and Keen Lung himself sent the order to execute the missionaries in retaliation for the massacre of Chinese subjects by the Spaniards in the Philippines. After he had been on the throne fifteen years, Keen Lung began to unbend towards the foreigners, and to avail himself of their services in the same manner as his grandfather had done."—*Ibid.* p. 160. See also *Giles, Bio. Dic.*, p. 143, and *infra*.

"At the request of Man Pao, the Viceroy of Fuhkien and Chehkiang, and of the Board of Rites, he issued a decree on the 11th January, 1724, commanding the expulsion of all missionaries, except a few whom he wished to keep at Peking in official employ —forcing the converts to renounce their religion, and threatening with punishment the mandarins, should they not act rigorously enough against them. The chapels were to be confiscated and even the . . . French church at Peking, according to Huc, was in August converted into a kind of hospital. The direct cause of this *débâcle* was the unfortunate Christian community in Fuh-ngan, founded by Capellas, and sealed with his blood. Some literati of the place had lodged a complaint against those heretics with the local magistrates, who in 1723, by order of the Viceroy, proceeded to persecute and punish them, with confiscation of their eighteen chapels. The history of this persecution, which soon extended over the whole Viceroyalty, has been described in detail by Father De Mailla in his letter from Peking, dated 16th October, 1724. Of especial interest, as characterizing China's polity with regard to the Christians and heresy in general, is the correspondence which passed between the mandarins about this event. It is accurately reproduced in De Mailla's letter."—*De Groot, Sectarianism*, ii. 273–4.

"Since this crusade, which gradually passed over the whole empire, Romanism in China had to share the fate of the sects and religious communities sprung from Paganism and Buddhism: it was given over defenceless to the mercies of a fanatical Confucian mandarinate, equipped by the State with that terrible scourge which we know as the Law against Heresy, until at last, in 1858, the treaties with European powers brought relief. Only in hidden spots could the scattered seed now germinate and grow, thanks to the care and devotion of native priests and catechists. Only carefully hidden amongst his flock could a missionary here and there manage to live, labour, and distribute the sacraments, often protected and succoured with touching fidelity and affection, often also tracked and hunted down, tortured, and martyred, with a greater or less number of converts, of whose sufferings, until doomsday, no human lip can tell."—*Ibid.* ii. 274.

"It is difficult to admit that Shi Tsung acted in this matter under the pressure of a special anti-Christian spirit. Indeed the fact that . . . he issued in that same memorable year 1724 a decree against native heresy, proves, we believe, that he simply wanted to take rank as the Great Exterminator of heresy generally. But Christianity was by no means exterminated. Over and over again the mandarins would have to brandish the sword over it. The *Shing hiun* [*Shêng hsün*] contains a certain number of imperial ordinances on this subject, placed for the most part under the same headings as the decrees for the persecution of native sects and Mohammedans."—*Ibid.* ii. 274.

"As for the emperors who reigned after Shi Tsung—their *Shing hiun* never lack the special subdivision about Repression of Refractory People. They give us a picture of most awful persecution, of tremendous rebellions called forth by heresy-hunting and smothered in streams of blood."—*Ibid.* ii. 274–5.

"A great famine about the same period [1776] is chiefly remarkable for the persecution it entailed on the Christian missionaries and those among the Chinese themselves professing the foreign religion. . . . The famine was laid to the charge of the Christians, and a commission of mandarins drew up a formal indictment of Christianity, which has stood its ground ever since as the text of the argument of the anti-foreign school. . . . Several thousand native converts were branded on the face and sent to colonise the Ili valley."—*Boulger, Short Hist.*, pp. 179–80.

Chia Ch'ing "was strongly opposed to missionaries, and expelled the famous Père Amyot."—*Giles, Bio. Dic.*, p. 126.

"It was almost at this precise moment [when Keying arrived at Canton, 1843] . . . that Taoukwang made the memorable admission that the Christian religion might be tolerated as one inculcating the principles of virtue."—*Boulger, Short Hist.*, p. 248.

[Persecutions of Christians took place in 1746–48; of the Mahayana sect in 1746; in 1747 unclassical religious practices were forbidden; the persecuted sect of Lo-hwai, in Fu Kien, mutinied in 1748; the same sect in Fu Kien and Kuang Tung was persecuted in 1749; the Christians were persecuted in 1754; further persecutions of various heretical sects took place in 1760 and 1763; in 1768 sects in Kiangsu were persecuted on the charge of tail-cutting; in 1772 there occurred a persecution of the White *Yang* sect and its hierarch; leading in 1774 to an insurrection of this and the White Lotus sects, which was put down only after much bloodshed, followed by extermination of the scattered rebels and sectaries; at the same time a fierce persecution of heresy was set on foot in Honan; persecution and slaughter of the Red Yang and other sects continued during the years 1777–8; and in 1779 there was a violent anti-heretical persecution in Ssŭ Ch'uan; suppression of the Wahhabee (Mohammedan) movement in Kan Su in 1781, after what is accurately described as a "religious war," endangered "the State itself, the dynasty and its throne," and led to the issue of stringent decrees against the Moslems, a second rising of the Wahhabees in 1783, and a second campaign and further decrees against them in 1784, followed by the banishment of the Islamic religious leaders; the *Ts'iao Ts'iao* sect was persecuted in 1788 (see also below, 1805), and there was a new collision with the Wahhabees in Kan Su in 1789; general persecution of Christian missionaries and native Christian priests continued throughout the same year; and persecution and mutiny of the sect of the Eight Diagrams from 1786–8; in 1787 persecution was begun of the Heaven and Earth Society, which was also the cause of the rebellion in Formosa, and "drenched that island with blood," and continued during 1788 and 1791; in which latter year repressive measures were taken against the exiled sectaries in Turkestan; a great rebellion in the Western provinces, the result of a "heretic hunt" by the government's agents, led to persecutions in Ho Nan, Hu Pei, and Ssŭ Ch'uan in 1794, which soon spread into Shen Si and Kan Su, the "work of purification" being continued until 1800; in that year imperial decrees forbade pilgrimages; in 1803 sectaries among policemen were suppressed; and mention is made of "sedition and persecution of religionists in Kiang Si and Fu Kien"; 1805 was a year not only of renewed persecution of the *Ts'iao Ts'iao* sect but of persecution of Christians in Peking and the issue of an imperial decree against Christianity; followed by similar decrees in 1806 and 1811; in 1806 a sectarian rising in An Hui was suppressed; in 1812 the *Wu Wei* religion in Ssŭ Ch'uan was persecuted and prohibited, a Hindustanee traveller was expelled from Tibet under suspicion of being a Christian; and in the same year a decree was issued against "kidnappers and Christians"; in 1813 Christians were persecuted in Hu Pei; persecutions of peculiar rigour in Chih Li, Shan Tung, and Ho Nan culminated in the great rebellion of Liu Kuo-ming in 1813, associated with which were the Boxer and other movements, resulting in immense and widespread carnage; a conspiracy of the Mahayana sect in Chü Lu was suppressed in 1814, and orders issued for the extermination of rebels and heretics, persecution of sectaries in various districts continuing unabated; and rigorous measures against the exiles in Turkestan were followed by barbaric sentences on the part of the imperial authorities; persecutions of Christian and other sects are mentioned during the period 1813–20 in Kuang Tung, Fu Kien, Chih Li, Hu Pei, Mongolia, Ssŭ Ch'uan, Turkestan, and Hu Kuang; in 1821 there were persecutions of sects in Chih Li; in 1822–3 in Ho Nan, An Hui, and Shan Tung; in 1823–5 in Chih Li; in 1826 in Chih Li and Jehol; in 1827 in An Hui and Ho Nan; in 1828 in Chih Li; in 1825–37 of the sectaries of the tribute-rice fleet; in 1827–8 of the Blue Lotus Sect in several provinces; in 1830–2 in Kiang Si, Chih Li, Ho Nan, and Kiang Nan of various sects and societies, followed by the usual imperial decrees; 1833, 1834, and 1835 saw persecutions in Manchuria, Chih Li, and Ho Nan, pilgrimages being forbidden and made punishable; a mutiny, the result of persecution of the *Sien T'ien* sect, broke out in 1835; and orders were issued in the same year to prosecute sectarian soldiers and yamên-servants; in 1836, persecutions took place in E. Shan Si and Chih Li, which year also saw the first symptoms of the T'ai P'ing rebellion in a rising provoked by persecution which took place in south-western Hu Nan; in 1837 there was persecution and mutiny in Shan Tung and an imperial order was issued for a general persecution of sects; in 1838, a prince and his son who had adopted Christianity were punished and banished, and the religionists in Shan Tung were further persecuted, sectarian temples being demolished; in 1839, fresh persecutions took place in Chih Li and a new edition of the "Sage Edict" (or Sacred, *sc.* imperial, Edict) was distributed; and in this and the following year persecutions took place in Hu Pei, Chih Li, Ssŭ Ch'uan, and Ho Nan; in the latter year also there occurred persecutions of Christians in Hu Pei, a Lazarite missionary being publicly strangled; the T'ai P'ing rebellion, the result of religious persecution (ii. 537–40), which "drenched China in blood, brought the dynasty quite near to its fall, and would probably have annihilated it if the arms of despised western barbarians had not interfered," broke out in the southern portion of Hu Nan in 1842, and spread first to Kuang Si and Kuang Tung; rebellious movements occurred in Hu Nan and Hu Pei in 1842–3; and in 1844–5 there was further rebellion in Hu Nan and continued persecution; in 1845 there was general persecution of heretics in the Empire; in 1845–7 chiefly in Chih Li, Hu Nan, and Kiang Si; in 1847 persecution and rebellion in Hu Nan; in 1848–9 persecutions in the Two Kuang and rebellion in Hu Nan; the uprising affecting practically all the provinces of the empire until 1864, when the "coercion of Christian armies [under General Gordon] with Confucian heretic-butchers paved the way for the fall of Nanking (19th July), the residence of the T'ai P'ing Emperor, and for the reconquest of the rebellious provinces"; the following year saw new decrees ordering persecution of heretics.]—*De Groot, Sectarianism*, ii. 277–565. See also i. 242–59, and *Ch. Rec.*, xii. 1–15.

"With the opening years of the nineteenth century, during the reign of Chia Ch'ing, Protestant missionaries initiated a systematic attempt to convert the Chinese to Christianity; but the religious toleration of the latter, which on the whole has been a marked feature in their civilisation in all ages [? *v. Persecution*], had been sorely tried by the Catholics, and but little progress was made."—*Giles, Historic China*, p. 118.

[For a Chinese account of Christ see *Davis, Chinese*, ii. 96, and *Ch. Gleaner*, p. 105.]

"French interests in China up to the date of the Second War were almost exclusively religious, and her missionaries during all this long period of self-effacement suffered great persecution. In spite of the noble services done by Bouvet, Regis, Jartoux, and other Jesuits in mapping out the empire, Christianity was prohibited, and many missionaries were martyred in the provinces. But the limited toleration of Christianity secured by the Treaty of Nanking encouraged Louis Philippe to obtain in 1847 a similar treaty (Whampoa) for France, whose missionaries were thenceforward allowed to settle in the five treaty ports."—*Parker, China*, p. 100.

"The great Taiping rebellion of 1850 . . . had for one of its ostensible objects the establishment of Christianity in China. This incongruous mixture of rebellion and religion naturally led to fresh persecutions, for the rebel leader claimed a kind of personal relationship with Jesus Christ. The torture and judicial murder of Father Chappedelaine in 1856 gave Napoleon III. a welcome justification for joining the British in the Second War, as a result of which further advantages were secured, in a rather underhand way, to the missionaries, and the old cathedral at Peking was solemnly reopened."—*Ibid.* p. 100.

"At last, in 1850, the direct connection of Christianity with rebellion was made perfectly clear when the standard of revolt was raised in Kwang Si by a student of the Christian doctrine named Hung Sui-ts'üan: he styled his sect the Shang-ti Hwei, or 'Society of God,' and reigned for ten years as 'King of Heaven' at Nanking, claiming blood relationship with Jesus Christ. It was not until 1864 that the late Marquess Tsêng's father succeeded in retaking the city; and meanwhile half China had been ravaged."—*Ibid.* p. 290.

"During the two first centuries of Manchu rule there were not many serious popular rebellions; but, such as they were, religion was always at the bottom of the trouble. In 1778 a revolt in South Shan Si brought the White Lily Society once more under review. In speaking of a Mussulman schism of the same date, the Emperor says: 'It is similar in principle to the White Lily faith amongst bonzes.' Rebellions were now spreading rapidly all over the Empire, which was really in a very parlous state when the aged Kienlung abdicated in 1795 to his son, after a splendid reign of sixty years. In that year the leading White Lily chief was taken and executed. . . . In 1813 a 'Boxer' revolt broke out once more in the old spot (South Shan Tung), and some of its sectaries even gained admission to the Peking Palace. . . . Though the term 'Boxer' is used by General Nayench'êng in connection with its rising, its lineal descent from the White Lily sect is amply attested by him, though its official name at the time was *T'ien-li*, or 'Heavenly Order' Faith. Its indirect connection with Christianity, or at least with Christian ideas, is evident from the fact that the term 'White Ocean Faith' is also vaguely used by some of the conspirators."—*Ibid.* pp. 289–90.

There was now hardly a trace left of the numerous Taoist monasteries of early periods. "Official persecution has cleared them all away, and the crowds of *Tao-sze*, or 'Taoist doctors,' workers of miracles and anchorites of whom Chinese writings are full, have been converted into a class of popular pagan priests, whose name is legion." "The manner in which the State has achieved this clearance" has been shown under previous Periods.—*De Groot, Sectarianism*, i. 27.

"As a testimony to the fact that in 1869 religious liberty was in an equally sad plight as during previous reigns," there is the imperial decree of that year strenuously prohibiting theatrical performances (at religious services) in Buddhist convents.—*Ibid.* ii. 564; i. 117.

[The prevailing state of decay of Buddhism and Taoism is described by *De Groot*, i. 132–5. "From whatever point of view one considers the matter, conventual life is at best a shadow of what it was in past centuries."]

PROFESSIONAL.

Early Feudal Period (*c.* 2357 *to* 1122 B.C.).—*Table I.*

"Wu P'êng [Yao's physician] was the first doctor."—*Shuo wên, Yüan chien lei han, Fang shih pu, c.* 322, p. 6*b*.

"Wu Hsien, with exceeding ability, fulfilled the post of King Yao's physician."—*Kuo P'u fu hsü, Shih wu yüan hui, c.* 36, p. 1*b*. See, however, *Mayer's Manual*, 861.

"I Yin [Ch'êng Tang's Minister] was the first to decoct [or boil] medicine."—*Shih lei t'ung pien, c.* 62, p. 6*b*.

[Blind musicians are said to have been employed in antiquity (see *Shu ching*, Pt. III. Bk. IV. Ch. II. 4), because their loss of the sense of sight was supposed to sharpen that of hearing (*Legge, Shu ching*, III. i. 166, note).]

[Painting is said to have been introduced by a woman, namely, Miss Lei, the sister of Shun.]—*Ko chih ching yüan, c.* 39, p. 17*a*.

Later Feudal Period (1122 *to* 221 B.C.).—*Table II.*

Physician.—"The *chi i*, official physician, has the control and care of the sicknesses and diseases of the people."—*Chou li T'ien kuan, Pei wên yün fu, Ssŭ chih yün, c.* 4*b*, p. 14*a*.

"There were practitioners in the healing art who looked after the internal and external diseases generated among the people; and by this [their appointment] may be seen the benevolent feeling of the former kings for their people. And there were also practitioners who observed the diseases incidental to cattle, which still further manifests the former king's benevolent regard for all material things."—*Chou li, Gingell*, p. 102. See also *Shih lei t'ung pien, c.* 62, p. 6*a*.

"Pien Ch'iao [Ch'in Yüeh-jèn, 5th century, B.C.] whilst still a youth, met Ch'ang Sang Chün, who made known to him a rare prescription, and took out from the breast of his coat some medicine, which he handed to Pien-ch'iao, giving him also to drink of some superior water from a [certain] pond, saying, 'After 30 days you will have insight [supernatural intelligence].' Pien-ch'iao acted according to his words, drank the water and took the medicine for 30 days, the result being that when he treated diseases he could tell all about the obstructions of the five viscera by no other indication than the pulse."—*Shih chi, Shih lei t'ung pien, c.* 62, p. 7*a*.

"Pien-ch'iao went to Hsien Yang, and hearing that the people of Ch'in were devoted to their offspring, gave himself up to the study of medicine in relation to children."—*Shih chi, P'ei wén yün fu, Ssŭ chih yün, c.* 4*b*, p. 16*a*.

"Whilst crossing Hang Tan [he] heard that women were held in respect, and accordingly set up as a mid-wife."—*Ibid.* p. 16*a*.

"Whilst passing through Lo Yang [he] heard that the people of the Chou State held old people in respect, so he set up in that country as an eye and ear doctor" (lit., a doctor to cure numbness or rheumatism of the eyes and ears).—*Ibid.* p. 14*b*.

"When Pien Ch'iao was passing through Ch'i, [Duke] Ch'i, whose posthumous title was Huan Hou, showed him hospitality and invited him to Court. When [Pien Ch'iao] saw him he said: 'Your sickness is between the skin and the flesh; if not cured it will become worse.' Huan Hou said: 'I (lit., the Lonely One) have no illness.' After the lapse of five days he saw him again, and said: 'The illness is in the veins (or arteries).' After another five days he saw him again, and said: 'The illness is in the intestines and stomach.' After a further period of five days he looked at Huan Hou from afar, and then ran back saying: 'The sickness is in the marrow of the bones;

even a saint could not now effect a cure.' After five days more it was evident that Huan Hou was ill, and he sent for Pien Ch'iao. Pien Ch'iao, however, had already run away. Huan Hou accordingly died."—*Shih chi, Shih lei t'ung pien*, c. 62, p. 6*b*.

"Pien Ch'iao with his brothers, three in all, were clever physicians. Duke Wei asked, saying: 'Of your three brothers which is the cleverest?' He replied: 'The eldest is good at judging by the colour [of the complexion], so his reputation does not extend beyond his house; the second brother is good at judging by the hair and down on the body, so his reputation does not extend beyond the gate; I use acupuncture for [the diseases of] the veins [or arteries], and administer noxious medicines, so my name has spread to all the dukes [of the various States].'"—*Hou kuan tzŭ, ibid.* p. 9*b*. See also *Tzŭ shih ching hua*, c. 116, p. 9*a*.

"The *yang i*, 'ulcer doctors,' had control of the various kinds of medicines for swelling ulcers, broken ulcers, ulcers from cuts, and ulcers from broken bones."—*Chou li T'ien kuan, P'ei wên yün fu, Ssŭ chih yün*, c. 4*b*, p. 14*a*.

"The *shou i*, animal doctors, had the control and curing of the internal and external illnesses of animals."—*Ibid.* p. 14*a*.

"A man of the Ch'in State, named Ho, first made medical prescriptions."—*Shih lei t'ung pien*, c. 62, p. 6*b*.

"The Marquis of Chin, being sick, sent for a physician from the Ch'in State. The Earl of Ch'in ordered a physician named Huan to [go and] cure his disease. Before he had arrived the Marquis of Chin dreamt that two catamites were discussing his sickness, the one saying: 'He [*i.e.*, Huan] is an exceedingly clever physician; I fear that he will injure us [they being the sickness-devils in the patient]. We ought to escape him. The other replied: 'We live above the *huang* (the region between the heart and the diaphragm) and below the *kao* (marrow); how can he injure us?' When the physician arrived, he said: 'The sickness cannot be cured; it is seated above the *huang* and below the *kao*, and can be neither expelled nor dissipated nor reached by medicine—there is nothing to be done.' The Marquis of Chin said: 'Good doctor!' loaded him with presents and sent him back.'—*Tso chuan, ibid.* pp. 6*a*–6*b*.

"In another passage [of the *Chou li*] mention is made of 'hereditary professions,' which are explained to be those referring to magic, medicine, and divination."—*Simcox*, ii. 55.

"According to the rules of propriety, 'The physic of a doctor, in whose family medicine has not been practised for three generations, should not be taken.'"—*Ibid.* ii. 55, note.

[Prayer-makers, writers, doctors, and diviners, are mentioned in *Li chi*, iii. iv. 10, and *Yu hsüeh hsü chih*, c. 4, *Chih yi*, p. 9*a*. See also the case of fortune-telling by written characters respecting the sons of Shu Fu in the *Tso chüan*.]

[The *wu*, exorcising priests, were also "professors of the healing art": they were expellers of demons, and illness was ascribed in the main to demoniacal possession.]—*De Groot, Rel. Syst.*, vi. 1201–4.

Musician.—"We know for certain that before Confucius there were national music teachers."—*Ch. Rec.*, xxi. 307.

"To the year B.C. 523, when Confucius was twenty-nine years old, is referred his studying music under a famous master of the name of Sëang."—*Legge, Ch. Class.*, i. Prol. p. 63.

[The ordinary musicians were blind men (*Shih ching*, III. i. VIII. 4; IV. i [ii.] V.). 'The blind man is arrived,' says this last ode; and in the passage in the *Shu ching* (III. iv. 4) on the famous eclipse of Chung-k'ang: 'The blind man has beaten the drum.']

[Bands of female musicians were sent as presents by one State to another. Musical gatherings took place in Chêng.]

Poet.—"Versification and music have always been two inseparable sisters in the eyes of the poets of China. The *Chou-king* says the Emperor sang the verses he composed, and that his minister Kao-yao answered him by following his example. These are exactly the songs which the *Sse-ki* has preserved for us; the odes of the Chang and Tcheou had their sacred music."—*Hervey-Saint-Denys, Poésies de l'Epoque des Thang*, p. lxi. See also *P'ei wên yün fu*, c. 67*a*, p. 139*a*.

[*Actors* are mentioned.]

Ceremonialist.—[There were professors of ceremony occasionally employed by the people to assist them on occasions of mourning and sacrifice. They were not paid by the imperial treasury (as were the official directors of ceremony, the "priests of the Confucian religion": see GEN. GOVT. and ECCL.). Their assistance was rewarded by fees or wages, varying according to circumstances. Besides their food, they expected a liberal fee from rich patrons. Custom made their employment (which was not legally obligatory) reputable and fashionable in wealthy and literary families. They were "quite numerous and influential" and of good standing.]—*Doolittle, Social Life*, i. 250–2.

Teacher.—"In his twenty-second year, Confucius commenced his labours as a public teacher, and his house became a resort for young and enquiring spirits, who wished to learn the doctrines of antiquity. However small the fee his pupils were able to afford, he never refused his instructions."—*Legge, Ch. Class.*, i. Prol. p. 61. Mencius was also a "professor of morals and learning" (*ibid.* ii. Prol. p. 21).

[It was the rule for retired officers to occupy themselves in the villages with teaching the young.]—*Ying Ta*, quot. *ibid.* III. ii. 442, note.

Painter.—"It is only several centuries after the beginning of our era that the writers of China furnish us with details about their painters. On careful search, however, one finds in the annals of Sse-ma-tsien the memorial of a king of Tsin [Ling Kung], who reigned 600 years before the Christian era, and who had a very keen taste for painting."—*Rev. Contemp.*, xxv. 245.

Absolute Monarchy (221 B.C. *to* A.D. 221).—*Table III.*

Physician and Surgeon.—"Sun-yü opened the skull and healed the brain." The commentator adds: "The surname of the Duke of T'ai Ch'ang was Sun Yü, his second name being I; he was a physician of superior intellect in the Han period."—*Shih lei t'ung pien*, c. 62, p. 8*b*.

The doctor Chua-to [? Hua T'o] "is still venerated as the patron saint of the medical profession, and has incense burnt before his tablet by every member of the faculty. He is said to have invented anæsthetics and to have been put to death by a general who suspected the motives of his offer to try trepanning as a cure for headache"—*Simcox*, ii. 130.

"[Hua] T'o originally was a scholar, but took to medicine for a livelihood. He, however, constantly repented [of having had to do so; for the occupation of a scholar was more respectable]."—*Wei chih, Hua T'o chuan, P'ei wên yün fu, Ssŭ chih yün*, c. 4*b*, p. 15*a*. His skill in surgery is described in *Shên Yüan Chin shu, Yüan chien lei han*, c. 322, *Fang shu pu*, p. 8*b*.

"At the end of the reign of Chao Ti [86–73 B.C.] famous physicians were summoned from all over the empire. [Tu] Yen-ming was appointed to control medical affairs [connected with the government.]"—*Han shu, P'ei wên yün fu, Ssŭ chih yün*, c. 4*b*, p. 14*b*.

[In the time of Chêng Kuan two female *musicians* were presented to the throne.]

[*Actors and actresses* are mentioned.]

Poet.—"The dark years between A.D. 196 and 221, which witnessed the downfall of the House of Han, were illumined by the names of seven writers, now jointly known as the Seven Scholars of the *Chien-An* period. They were all poets."—*Giles, Hist. of Ch. Lit.*, p. 119.

Historian.—"Like the great Italians, these high officials [historiographers] were at once statesmen and scholars, wrote books and led armies."—*Johnson, Or. Rel.—Ch.*, p. 478.

The Emperor Ho-ti was "the patron of Pan-hoei-pan, a sister both of the General Pan-tchao and of an eminent historian, Pan-kou. Pan-hoei assisted her brother in his literary labours during his life, and completed his historical manuscripts after his death. She also wrote on her own account a curious treatise on the duties of her sex, the humility of which is perhaps less profound than it seems, for when emperors issue proclamations about their own lack of virtue, a learned lady with pretentions to good manners could hardly do less than claim for her sex to 'occupy the lowest rank in the human species.' Pan-hoei, at all events, was not without honour in her own country; all the treasures of the Imperial Record Office were placed at her disposal, and the history of the first Han empire, which she published in her brother's name, and for which she received quite half the credit, still ranks among the best of the ancient historical works which survive. She occupied a special post as instructress to the Empress and the other ladies of the palace."—*Simcox*, ii. 117–8.

Calligraphist.—[Shih I-kuan is said to have been the best writer of the *li* character in both ancient and modern times.]—*Chiao chêng shang yu lu*, c. i, p. 12*a*.

Architect.—"Builders or architects form a separate profession. and the occasion for their services is considered to arise when a capital city is to be founded."—*Ibid.* ii. 62.

Period of Disruption (221 *to* 589).—*Table IV.*

Physician.—"Tung Fêng, a hill-dwelling man who, however, did not [any longer] cultivate the ground, daily cured people's illnesses, and did not take any money. Those whom he had cured [of severe sickness] he ordered to plant five apricot trees, those who had had slight sickness [he ordered to plant] one tree, so that the trees becoming more and more numerous [lit., thickly wooded] formed a forest (or grove)."—*Shên hsien chuan, P'ei wên yün fu, Shang shêng êrh chung*, c. 32, p. 47*a*.

"Hsü Chih-tsang, because his mother was often sick, constantly studied medical books, exerting himself greatly [to obtain a thorough knowledge of them]. In [a short] time he became known as a celebrated physician. He then spoke to his sons, saying: 'When a man's sons taste the food or try the medicine, if they do not understand the arts of medicine, how can they be called filial? This profession has accordingly been handed down from father to son.'"—*Pei shih, ibid., Ssŭ chih yün*, c. 4*b*, pp. 14*b*–15*a*.

"Huang-pu Mi, whose style was Shih-an, but who called himself Yüan-an *hsien-shêng*, was constantly occupied in writing down the sayings of the ancient sages as a means of livelihood. Afterwards he got the 'numb-sickness' and in consequence took to studying medicine. He carefully perused the Books of Prescriptions, not laying them down for an instant, and thus acquired great proficiency."—*Chin shu, Yüan chien lei han*, c. 322, p. 8*b*.

[Other celebrated physicians mentioned are Hsü Chien (Ch'êng Po), who could tell the illness of a patient by feeling his pulse; Li Yüan-chung, who had a complete knowledge of acupuncture and drugs; Hsüeh Po-tsung, skilful in the treatment of boils and ulcers; Chang Yüan-su; and Liu Wan-su, author of several medical treatises. Superstition continued to pervade medical treatment.]—*Tzŭ shih ching hua*, c. 116, *Fang shu pu*, p. 3*b*; *Yüan chien lei han*, c. 322, *Fang shu pu*, pp. 11*b*, 12*b*.

[Instances of the *wu* (see previous Periods) acting as exorcising priests occur in this and the following Periods. See *De Groot, Rel. Syst.*, vi. 1227.]

[*Actors and Actresses* were under official control.]

Painter.—[The family of Ho hiu (Ho Hsiin) had specialised in painting pictures of the Goddess of Mercy for successive generations, until perfection was reached in his own productions.]—*Tzŭ shih ching hua*, c. 121, p. 25*a*.

From the Restoration of Unity to the end of the Five Dynasties (589 *to* 960).—*Table V.*

589–907.

The Sui dynasty "is notable as the first in which a famous artist in pottery is commemorated by name, an honour conferred upon one who brought to the capital some vases which were described as 'artificial jade' (*Julien, Hist. et Fabr. de la Porce. Chin.*, p. xxiv)."—*Simcox*, ii. 131.

"Chang Chung-wên when young was well up in all medical practices, and became a Court physician."—*T'ang shu Chang Chung-wên chuan, P'ei wên yün fu, Ssŭ chih yün*, c. 4*b*, p. 15*a*. See a similar instance in *Tzŭ shih ching hua*, c. 116, p. 16*b*; & *cf.* p. 18*a*. Ma Ssŭ-ming was noted for his independent disregard of precedents.—*P'ei wên yün fu, Ssŭ chih*, c. 4*b*, p. 15*a*. Other physicians and medical writers are mentioned in *Yüan chien lei han*, c. 322, pp. 10*b*, 11*a*; *Shih lei t'ung pien*, c. 62, *Chi shu pu*, p. 10*a*; *Tzŭ shih ching hua*, c. 116, *Fang shu pu*, p. 4*b*; *P'ei wên yün fu, Ssŭ chih yün*, c. 4*b*, p. 15*a*; etc.

[Dancers and musicians are mentioned in *Chin T'ang shu Yin yüeh chih, Tzŭ shih ching hua*, c. 105, p. 7*b*. There were departments for teaching the people music. The profession of musician was a popular one.]

[Priests, especially during the reign of the Empress Wu, were also generals, artists, and men of letters.]—*Parker, China*, p. 298.

[Priests were versed in astrology.]—*Wû lai chi*, quot. *Kuang shih lei fu*, c. 15, p. 10*a*.

[Wei Chêng (581–643) was at the same time a scholar and a military commander. Wang Wei (699–759) was equally famous as a poet and physician. Han Yü (Han Wên-kung; 768–824) was a poet, statesman, and philosopher.]—*Giles, Hist. of Ch. Lit.*, pp. 149, 160.

[Shih Chien-wu was a doctor, poet, and essayist.]—*Chiao chêng shang yu lu*, c. 1, p. 10*b*.

Ssŭ-ma Chêng, "who flourished at this period, is the first historian, at least the first whose works survive, who gives an account of the legendary period preceding the sufficiently mythical emperor Fou-hi."—*Simcox*, ii. 143–4.

[Chang Chi 張 繼 was a poet of the 8th century whose poems are still much admired.]—*Giles, Bio. Dic.*, p 11.

"Thou-fou and Li-taï-pé sang their verses."—*Hervey-Saint-Denys, Poésies de l'Epoque des Thang*, p. lxi.

907–960.

"Liu Han's [family] had followed the profession of medicine for generations. Chou Shih-chung ordered him to be a Han-lin doctor."—*Sung shih Fang chi chuan, P'ei wên yün fu, Ssŭ chih yün*, c. 4*b*, p. 16*a*.

Sung Period (960 *to* 1280).—*Table VI.*

Physician.—"Huang-fu T'an, a native of Chia Chiang, in Shu (Ssŭch'uan), was very clever in the arts of medicine. The empress Hsien Jên suffered from an eye complaint, which the government physician could not cure, so an imperial edict was issued summoning other doctors. Chang Ch'êng, a prefect of Lin An, reported [to the emperor] about T'an. The emperor was glad, and amply rewarded him."—*Sung shih Fang chi chuan, P'ei wên yün fu, Ssŭ chih yün*, c. 4*b*, p. 15*a*. Fan Chung-yen, a Prime Minister, was also a physician.—*Chih yen, Shih lei t'ung pien*, c. 62, p. 10*a*.

[The fame of the physician Sunhao survived to the present day. "He has long since been deified, and temples innumerable have been erected to his honour."]—*Macgowan, Lights and Shadows*, p. 164.

[Another skilful physician and reviser of the medical works of Chang Chung-ching, Sun Ssŭ-miao, etc., was Kao Jo-no. Physicians of repute mostly came from Wei Chou, having originally studied under Kao.]—*Sung shih Kao Jo-no chuan, Tzŭ shih ching hua*, c. 116, *Fang shu pu*, p. 4*a*.

[Chang Kao succeeded his father and grandfather in his medical practice. He was also the author of a medical treatise, the *I Shuo*.]—*Ch'in ting ssŭ k'u ch'üan shu chien ming mu lu*, c. 10, *Tzŭ pu, I chia lei*, p. 10*b*.

[Huang-fu Tan is said to have been so skilful a medical physiognomist that he foretold that a girl would become the "Mother of the Empire" (Kuang Tsung's Empress).]—*Tzŭ shih ching hua*, c. 180, p. 14*a*.

[Dancing and music continued to be associated.]

Poet.—"There were few, if any [literary men], who could be ranked as professional poets, that is, as writers of verse and of nothing else, like Li Po, Tu Fu, and many others under the T'ang dynasty."—*Giles, Hist. of Ch. Lit.*, p. 232.

Painter.—[A celebrated artist Hsing Chih, originally the priest Chih Jung, was a physician and then an official, rising to high rank, being also an able poet.]—*Kung k'uei chi, Sung Yüan hua jên hsing shih lu*, c. 36, *Shih tzŭ*, pp. 9*a*–9*b*.

[Ko Shou-ch'ang was a skilful painter of birds, and Chao Ch'ang of flowers, fruit, and insects.]—*Tzŭ shih ching hua*, c. 121, p. 19*a*.

[Hu Yen excelled in painting gods, people, forests, aquatic stones, and trees.]—*Chiao chêng shang yu lu*, c. 2, p. 12*a*.

Kuo Kung-ch'ên, a portrait painter, "thoroughly caught the expression and reproduced the mind of the sitter."]—*Giles, Dic.*, 3120.

LIAO.

[Ti-li-t'ê, an able mounted archer, was also a skilled physician.]—*Liao shih Ni ch'ên chuan, Tzŭ shih ching hua*, c. 116, *Fang shu pu*, p. 4*a*.

KIN.

[Chang Ts'ung-chêng was a famous doctor, who wrote the *Liu mên*, "Six Gates," and *Erh Fa*, "Two Methods," which were universally esteemed.]—*Ibid.* p. 4*a*.

[Actors were not allowed to enter the palace nor to associate with state officials.]

Mongol Period (1280 *to* 1368).—*Table VII.*

Physician.—[Friar Odoric says that, when he was at Peking (1322–8) "of leeches (physicians) to take charge of the Royal person, there be four hundred idolators, eight Christians, and one Saracen."]—*Yule, Cathay*, i. 133.

"The same [Mongol] history . . . recorded the death, in about 1312, of a "Fulin" man from the West who had served Gayuk and Kublai Khan as physician, astronomer, and historian. . . . He was probably at least a Syrian, if not a Frank."—*Parker, China*, p. 99.

[A famous physician and author of medical works, Wei Yi-lin, is mentioned in *Ch'in ting ssŭ k'u ch'uan shu chien ming mu lu*, c. 10, *Tzŭ pu i chai lei*, p. 14*a*.]

[All female musicians were placed under the Music Department. Dancing girls are mentioned.]

Scribe.—"The four scribes [described by Odoric], who wait in readiness 'to take down all the words that the King may utter,' carry the imagination back three thousand years to the origin of such note-making, which furnished the first materials for the classic book of History."—*Simcox*, ii. 232–3.

Man of Science.—"There were three other very excellent Chinese mathematicians [besides Su Sung?] during Kublai's reign; one, Kwoh Shou-king, the best China ever had, was also engineer of the famous Grand Canal."—*Parker, China*, p. 302.

Painter.—Ibn Batuta describes "the skill of the native portrait painters, who were employed, apparently in lieu of passports, to depict the features of foreigners whom the Government may wish to identify."—*Simcox*, ii. 235.

Ming Period (*Restoration of Chinese Supremacy*) (1368 *to* 1644).—*Table VIII.*

Man of Letters.—Chang Erh-ch'i "distinguished himself by his writings on the *Canons of Rites* and of *Changes*, and also on the *Spring and Autumn*."—*Giles, Bio. Dic.*, p. 20.

Painter.—"All the famous artists of this period are known by name. One Lo (1426–35) was celebrated for his representations of cricket fights; and two sisters, the elder and the younger Sieou, excelled at the same time, in making cups

engraved with similar subjects. Between 1465 and 1487 two artists flourished, one of whom excelled in wine cups, while the other made jars ornamented with hens, or with a peony in flower above and group of hen and chickens like life below. Early in the following century, a Governor of Yünnan obtained cobalt blue from foreign parts for twice its weight in gold; and the china of this period (1506–21), known as Tching-te, painted in blue, is justly valued by collectors."—*Simcox*, ii., 256.

"In the middle half of the 16th century, 1522–72, an artist known as the venerable Tsoui was famous for imitations of the best work of the preceding century; his pieces were in request all over the empire. A little later one of the most illustrious artists of the dynasty settled at King-te-tching. The price at which his largest masterpieces are stated to have been sold may have been equivalent to £1,000 of modern money, but this was either a collector's extravagance or, perhaps, a rhetorical phrase. We are told as a fact that a sum equivalent, at the same rate of reckoning, to £40 was given him for a copy of an ancient tripod, undistinguishable from the original, which he made after a single inspection."—*Ibid.* ii. 256.

"In the same period another artist was famous for his reproductions of the work of the elder Tchang, one of two brothers, who flourished early in the Sung Dynasty, and were famous for vases mostly of a pale blue colour, but differing from each other in the enamel and crackle. Not less highly esteemed was the work of a poetical potter, who called himself 'The old man who lives in retirement," a signature which appears on all his works; some of these were of white egg-shell china, others brilliant red, some again blue, like those of the elder Tchang, but without crackle, and others purple and dead-leaf colour."—*Ibid.* ii. 256–7.

Manchu Period (1644 *to* —).—*Table IX.*

Physician.—"The medical profession is open to every one in China, whether it be man or woman, without any of the limitations that in England strictly confine it to those who have studied for it." It is, perhaps, the ease with which every one may become a doctor that induces almost every Chinese to profess some knowledge of medicine. . I have rarely met with any one that could not, at a moment's notice, prescribe for diseases that require the highest skill in their treatment. —*Macgowan, Lights and Shadows*, p. 161.

"The practice of medicine is so entirely empirical and strange that the few experienced practitioners are not enough to redeem the class."—*Williams, Midd. King.*, i. 783.

[Physicians are numerous and influential, and undergo a highly specialized training.]—*Cobbold, Pictures*, p. 79.

"A regular system of fees exists among the [medical] profession, but the remuneration is as often left to the generosity of the patient."—*Ibid.* ii. 128.

[There was a class of doctors who specialized in castrating eunuchs for the palace. *Cf.* Div. of Lab.]

"I have heard that in this city [Soochow] there are two ladies, the daughters of physicians, who trained them in their own professions. They, therefore, have read the usual Chinese medical courses, can write their prescriptions, and they practise amongst the women. . . . [My informant said] the fee for a visit . . . varied, but that the highest charge was three dollars and chair hire. These ladies are both married, and one of them is said to have attained some local celebrity as a practitioner."—*Woman's Work*, ii. 102.

At Canton, an old lady, the principal of a large girls' school, "is also a physician, and spends every morning in visiting patients."—*Ibid.* ii. 136.

[Women dentists at Ningpo are mentioned by *Cobbold, Pictures*, pp. 1–4.]

"The Chinese have a profound faith in doctors, and a capacity for taking large doses of medicine. . . . This well-known infirmity has given rise to a class of strolling quacks who travel about the country and profess to cure every disease that flesh is heir to." "These men are clever scamps who have failed in every other profession, and have taken up this itinerant doctoring as a last resource."—*Macgowan, Lights and Shadows*, pp. 167–8.

[The priestly exorcisers known as *wu* "drive the *sié* of insanity, delirium, fever, etc., out of patients, and the *sié* which cause sterility out of women. They also treat patients with caustics and needles, and blow on buffalo-horns over and around their beds." With no less frequency they "cast out devils by wielding the spectre-whip . . . or 'magic rope.'"]—*De Groot, Rel. Syst.*, vi. 1256.

Musician.—"Professional musicians, like actors, generally belong to the poorest classes of society. In Peking they are for the most part blind men; in Canton nearly all the musician-girls are blind, except courtesans living in 'flower boats.' It need scarcely be said, therefore, that the majority of Chinese professional musicians are totally ignorant of the principles and theory of music."—*Van Aalst, Ch. Music*, p. 36.

[*Gray* (*China*, ii. 3–4) says that blind soothsayers or minstrels are "in some respects among the best informed of their countrymen."]

Orator.—"In oratory the Chinese seem fitted to excel, were any public encouragement afforded to the exercise of the art. I deduce this influence from what we see in the streets, where we should not be prepared to meet with the best samples. Many of the strolling vendors of drugs . . . have a choice of language and arguments just suited to the minds they are addressing; and such a profusion of changes in tone and modulation to give life and reality to their sentences, that many believe their stories while they listen. . . . [This class of men not only speak or recite, but also read with spirit and expression, and a dramatic regard to pauses, &c., from illustrated books which they carry about with them, showing the pictures to the audience.] Dealers in books sometimes [do the same], and read their stories with excellent humour, and a voice rendered flexible and melodious by long and frequent use."—*Lay, Chinese As They Are*, pp. 181–3.

Poet.—The same custom [of singing their verses] rules even at this day amongst modern poets; certain national airs, consecrated by use to the expression of such or such an order of sentiments and ideas are thus transmitted from antiquity from generation to generation.—*Hervey-Saint-Denys, Poésies de l'Epoque des Thang*, p. lxi.

"*Actors* in China are divided into four classes"; (1) those who take the parts of mandarins or royal personages; (2) those who assume the rôle of female slaves or of women in common life, women not being allowed to appear on the stage; (3) those who personate ladies in respectable life; (4) the clowns—not so grotesque as in the West, but naturally full of humour and with a facetious look. The third class is the best paid. "Every actor has to go through a severe course of training by specially qualified masters before he is allowed to take a leading part in any play. As a rule he begins as a boy. The manager of a troupe will either buy some lads from their parents, or he will have them indentured to him for a term of years." "Play-actors in China have a hard life, but this is not entirely the fault of the public. Their dissolute habits are the real cause." "The end of these men is generally a very sad and a very miserable one. . . . Many of them become beggars or street musicians."—*Macgowan, Lights and Shadows*, pp. 185–97.

"It is a very extraordinary fact that though the nation has" a "profound love for theatricals, actors are looked down upon with contempt by every class of society. Their profession is considered to be so disreputable that their children are not allowed to enter the public examinations for any of the four literary degrees. They, consequently, can never become recognized scholars, nor take any position under the government. . . . They are generally opium-smokers, gamblers, and prodigals of the lowest type."—*Ibid.* p. 185.

Man of Letters.—"In his 懷舊詩 *Retrospect* (1779) the Emperor Ch'ien Lung numbered him [Chang Chao 張照] among his 五詞臣 Five Men of Letters, the others being Ch'ien Ch'ên-ch'ün, Liang Shih-chêng, Shên Tê-ch'ien, and Wang Yu-tun."—*Giles, Bio. Dic.*, p. 10.

Lawyer.—Lawyers are unknown in China, and a Chinese cannot understand that a barrister in our sense is not the same as "a certain disreputable class . . . to be met with in every Chinese town of importance, and generally residing in the vicinity of a magistrate's or judge's yamên. These fellows are always ready to undertake for a small remuneration the conduct of cases, in so far as they are able to do this by the preparation of skilfully-worded petitions or counter-petitions, and by otherwise giving their advice. Of course they do not appear in court, for their very existence is forbidden, but their services are largely availed of by the people, especially the poor and ignorant."—*Giles, Chinese Sketches*, p. 78.

"The legal profession, as distinct from the possession of office, is not an occupation in which learned men can obtain an honourable livelihood."—*Williams, Midd. King.*, i. 783.

"These notaries buy their situations, and repay themselves by a fee upon the documents; they are the only persons who are analogous to the lawyers in western countries, and most of them have the reputation of extorting largely for their services."—*Ibid.* i. 504.

"Some moody writers (for the most part, one may conjecture, disappointed litigants) have described China as the happiest of nations, in that lawyers are there unknown. Is not this statement, however, somewhat too liberal? Leaving out of account the problem whether the presence of lawyers in a country is or is not conducive to its higher happiness there remains the question—Do they exist in China? Now of course no one will pretend that the familiar bewigged and begowned species of western lands is to be found haunting the courts of a Chinese yamên, but surely there is evidence enough to show that his humbler congener, the attorney, or something very closely resembling him, has practised there for generations. He is not, it is true, in harmony with the spirit of Chinese polity, which is very severe on what our jurists (who are never so delighted as when they are unintelligible to the profane vulgar) call 'champerty and maintenance.' Nevertheless the Chinese lawgivers had to recognise the logic of facts, and his existence. Section CCCXL of the Fundamental Laws as given by Staunton lays down, that 'the person who draws up the information for the prosecutor and by any aggravation or extension deviates from the truth shall be liable to the same punishment as the false accuser.' This is very hard on a conscientious, but imaginative, solicitor anxious to do the best by his client, and his position would become altogether impossible but for the saving clause that follows: 'If anyone meets with a simple and uninformed person, who is unable to state the injuries and injustice which he has suffered; and consequently advises and instructs such person rightly and truly how to act upon the occasion, and moreover, without extenuating or aggravating the particulars, draws up an information for him in the legal and customary manner, the giver of such assistance shall not under these circumstances, be in any manner punishable.' But how easy to catch the poor attorney tripping! If his instructions to his client are not right and true, if the petition he indites deviates, as Sir George politely puts it, from the truth, or is not drawn up in legal and customary form, he is liable to the punishment of a false accuser; nay, more, and this seems the hardest condition of all, if his client turns out not to have been a 'simple and uninformed person,' but a very wide-awake knave, ruin and the bamboo will stare the lawyer in the face. Social position, anyway, he can hardly aspire to; for he is one of the best abused individuals in the Sacred Edict. 'There is,' observes the Commentator on the Twelfth Maxim, 'a class of idle vagabonds, who, having gained some vague knowledge of the way in which to draw up a sentence or two of a half intelligible indictment, pose as masters of form. They conspire with the yamên runners and clerks to cheat folk out of their money. If a case comes to trial, they get their share; if it is settled out of court, they get their share all the same; while if by some lucky chance their client wins, though both he and his opponent may be losers, they are the gainers, what is more, lay claim to gratitude ever after! If their client loses, they stand aside, and you may take your beating and get angry if you like: it is no affair of theirs.' And so the writer continues through an octavo page or two of wholesale abuse, it never occurring to him, good simple man, that he was doing his best to strangle in its infancy a highly lucrative branch of business that might have afforded many a useful opening for his superfluous grandsons. That he and his Imperial exemplar did not succeed is clear from the present existence in China of a class of beings known as *taishu*, who are defined by Meadows as, 'half official personages somewhat resembling our attorneys, their business being the same in its nature.' Meadows' account of their status and functions is so much to the point, so little accessible (for his *Notes* have long been out of print), and so concise, that it is well worth quoting *in extenso*:—'It would seem that the *taishu* are not recognised by the general government; and it is certain that in looking over the Chinese codes I have never seen them noticed. The great convenience, nay, the absolute necessity where there is much business, of having attached to courts of law some persons to act for litigants acquainted with the forms of business, and able to free documents intended to be presented there from irrelevant matter, has, however, been the cause of the establishment in practice of the *taishu*; and as each mandarin on assuming office holds an examination of persons desirous of acting in this capacity at his yamên, they may be said to have been formally admitted by the courts at which they practise.'" "After the examination just alluded to, the mandarin gives into the custody of such as he may select the wooden stamps held by the *taishu* and which are delivered every time the mandarinship becomes vacant. Usually the same individuals who acted in this capacity before are again selected, but this is not always the case; hence an insecurity of the post, which, joined to the circumstance of its not being recognised by the general government, renders the calling a comparatively much less respectable one than the profession of attorney in England." "The *taishu* pastes up a large red card at his door, stating his occupation and the name of the yamên at which he practises. He generally lives in the neighbourhood of the latter. His business, strictly speaking, is confined to the putting into a proper form his client's accusation or defence; which he generally demands from him in writing, and retains as a proof that he himself has not made additions to the statements contained in it. It is said, however, that the *taishu* sometimes invents stories for his clients when their cases are not strong, and also gives them such advice as 'you should contrive to provoke your opponent to give you a beating, etc., etc.' If it comes out, though, that they have done this, the mandarin will order their stamps to be taken from them. Their incomes are derived from fees paid by their clients for the documents they prepare, or for affixing an impression of their stamp to such as are presented to them ready drawn up, for without an impression of a *taishu's* stamp, no accusations or petitions are formally received at the yamên. The *taishu* hand in the papers of their clients to the yamên, and disburse for them the various customary but illegal fees. This should show conclusively enough that the Chinese have acquired a very fair idea of what the business of an attorney is and of what it ought to be,—that Chinese attorneys exist and that they have not so very much to learn from their brethren of the West. If more evidence is required there is a native essay recently published to maintain the necessity for 'adding dignity to the legal profession.' 'Those,' the essayist remarks, 'who observe the excellence of Western governments, the happiness of the people and their daily increase in wealth, attribute it all to the system of joint government by prince and people, not understanding that the real lever is the law: for the constant operation of justice is a preventive of evil.' Much more follows in the same strain and then he draws his moral: 'If China desires to have a parliament' (which he had previously advocated) 'she must pay honour to the legal profession and to do that must create the dignity of Chief Barrister of the State,' in other words, Lord Chancellor. (The term for 'barrister' is one coined for that purpose a few years ago, when those august beings first dawned on the far East). 'The other pillars of the law in the West are solicitors (*sung-sze* 'masters of litigation,' as Milne would have called them) and policemen. The attorney is the people's mouthpiece in their wrongs, and a powerful instrument for the redress of grievances. But the Chinese solicitor (*sung-sze*, as before) in almost every possible case, turns black into white.' After that, can there be room for further doubt? The lawyer is in evidence in China as in the West, and if there is a difference between them it is so gracefully admitted on the Chinese side, that the Western practitioner should not, could not hesitate to take to his metaphorical embrace his true, if misguided brother."—*N.C. Daily News*, Nov. 8, 1888.

Teacher.—[There were private teachers who taught special learning or science in the family.]—*Chang Shao shih, Pei wén yün fu*, *c.* 92, p. 135*b*.

"Tuition has always been cheap in China, where the remuneration of the learned professions is still as nearly on a level with that of the mechanical arts as it was in mediæval Europe; and the presents of silk, wine, and meat required from the students were very modest in amount."—*Simcox*, ii. 143.

"Scholarship was so ill paid, that professors complained that they had to eke out their salaries by taking to agriculture."—*Ibid.* ii. 144.

"There being no government education board, the elders or leading men of a village or district engaged teachers for a year to instruct the children in the local schools, salaries being paid out of the fees paid by the parents." The teachers "constitute what are called the gentry of the country, and are most tenacious of their rights. They are proud and haughty, intensely conservative, and mortal foes to everything that is not Chinese. From an English standpoint, they are grossly and hopelessly ignorant; for their education has never embraced any of the liberal arts, nor even such elementary subjects as arithmetic, geography, or history. The only one branch in which they have been thoroughly trained are the standard classical books, that are the product of the sages who lived more than twenty centuries ago." "Every teacher is a king in his own school and will brook no interference or reproof from anyone for his conduct of it."—*Macgowan, Lights and Shadows*, pp. 58–69.

"There is one class of scholars in China that is peculiar to the country. The men belonging to it go by the name of 'strolling scholars.' They are all able, clever men, but they are absolutely without any moral character. They are the waifs and strays that float about society, and are a disgrace to the learned profession. They are very generally opium smokers. . . . As they earn no regular salary, and are absolutely without private funds, they make it a practice to stroll round the country, and visit all the schools they come across. An unwritten law compels the teachers of these to invite them to take a meal or to stay the night. If the teacher is incompetent he is induced by threats of losing his post to 'buy him off with a good round sum.'"—*Ibid.* pp. 69–70.

Day-chooser.—[Dr. Nevius (*China and the Chinese*, p. 191) speaks of 'professional day-choosers'—*i.e.*, men who fix on lucky days for undertaking any work, or as a branch of the fortune-telling profession.]

[Divination is a highly specialised profession, with numerous branches. Allied to these is the occupation of the physiognomist. Taouist priests are frequently employed as professional exorcists. Street beggars and singers are in some sort recognised as professionals.]—*Cobbold, Pictures*, pp. 77, 79, and *passim*.

[The "spokesmen of the gods," sorcerers who interpret the wills of the gods (idols) for those who come to them with special presents, are described by *Macgowan, Lights and Shadows*, pp. 99–110. To become qualified they were obliged to pass through an uncanny initiation ceremony. They were "men of dissolute lives and absolutely without moral character."]

ACCESSORY INSTITUTIONS.

Early Feudal Period (*c.* 2357 *to* 1122 B.C.).—*Table I.*

Educational Institutions.—"There were the lower schools which boys entered when they were eight, and the higher schools into which they passed from these. But . . . these institutions are mentioned not in connection with education, but as they were made available for the assembling and cherishing of the aged. They served various purposes. . . . It was the rule in ancient China that the young should be taught and the old ministered to in the same buildings."—*Li chi*, III. v. 10; *Legge*, i. 242, note. See also *I chih lu*, *Shih wu yüan hui*, *c.* 8, p. 1*a*.

[Mêng Tzŭ advised the prince of Teng to establish three kinds of schools on the ancient system: *sin*, *hio* and *hiao*. The first seem to have been intended for learning archery; the *hio* was a superior school at the capital; the *hiao*, local elementary schools. By the Hsia dynasty, the name *hiao* was used; by the Yin, that of *seu*; and "as to the *hio*, they belonged to the three dynasties." "The object of them all is to illustrate the human relations."]—*Biot, Essai sur l'Histoire de l'Instruction*, &c., pp. 16–7; *Legge, Ch. Class.*, ii. 118–9, and note.

[According to the great commentary (*Shang shu ta ch'üan*) on the *Shu ching*, the custom under the Shang dynasty was for boys to enter the lower school (*hsiao hsüeh*) at 15, and the upper (*ta hsüeh*) at 18 years of age. According to the *Li chi* (ch. x. *Ming tang wei*) this dynasty also established a special school for music and dancing (*Ku tsung*) held in a building close to the Imperial palace.]—*Biot*, p. 21.

Charitable Institutions.—[*Biot.* (p. 13) says it is evident from the *Li chi* that there existed, near the Imperial palace, two almshouses for old men, one higher and lower class respectively; and the first at least of these establishments was also a school where reading and writing were taught. The almshouses were called *tsiang*, 'places for feeding' (p. 17).]

"We read in the V chapter of the *Li ki* . . 'The princes of Hia maintained old men connected with the State, or former officials of the higher administration, in the Eastern *Sin* college, and old men belonging to the common people, in the Western *Sin* college."—*Ibid.* p. 18.

[The earliest books consisted of thin slabs of bamboo engraved with a pointed metal stylus, and collections of these would have formed the first *libraries*.]

Later Feudal Period (1122 *to* 221 B.C.).—*Table II.*

Schools and Education.—"The importance of generally instructing the people was acknowledged even before the time of Confucius, and practised to a good degree at an age when other nations in the world had no such system; and although in his day feudal institutions prevailed, and offices and rank were not attainable in the same manner as at present, on the other hand magistrates and noblemen deemed it necessary to be well acquainted with their ancient writings. It is said in the *Book of Rites* (B.C. 1200), 'that for the purposes of education among the ancients, villages had their schools, districts their academies, departments their colleges, and principalities their universities.' This, so far as we know, was altogether superior to what obtained among the Jews, Persians, and Syrians of the same period."—*Williams, Midd. King.*, i. 520.

"This [the peace of the people] having been secured, there ensued the institution of schools."—*Li chi*, iii. iii. 15.

"When the ancients founded a kingdom . . . their first care was education."—*Tzŭ shih ching hua*, *c.* 31, p. 11*a*.

"The Chows founded a university, the shadow of which remains at the present day."—*Giles, Historic China*, p. 11. See GEN. GOVT.

"There [Hau = Si-an-fu] he [Wu Wang] established schools, divided into six classes, the three lower ones of which were to serve for the education of boys of the age of eight to fifteen years. In admitting young candidates to the highest possible degrees of learning, no distinction was made between high and low, between rich and poor. In this he laid the foundation of that democratic principle which has, up to the present day, been characteristic of the system of education and the subsequent promotion to high offices among the Chinese. His own son, the heir presumptive to the throne, was educated at one of these schools like the son of a common labourer."—*Hirth, Anc. Hist.*, p. 99.

"Regular promotion according to merit, by means of examinations, not only for admission to the higher schools, but also for admission to administrative offices, is recognised by all the best-informed authors, as an institution of the *Chou* dynasty."—*Biot*, p. 34.

"When the son of Heaven ordered a prince to institute instruction, he proceeded to build his schools; the children's [*i.e.*, of the princes], to the south of his palace, on the left of it; that for adults, in the suburbs. (The college of) the son of Heaven was called (the palace of) Bright Harmony (and had a circlet of water). (That of) the princes was called the Palace with its semicirclet of water."—*Li chi*, iii. ii. 20; *Legge*, i. 219. See also *P'ei wên yün fu*, *c.* i, p. 60*b*; *Tzŭ shih ching hua*, *c.* 31, pp. 9*b*, 11a.

"According to the Li ki (Bk. xvi., *Record on the Subject of Education*, § 4), there was anciently a school [*tien*] for every twenty-five families, a college [*hsing*] for 500 or the department, an academy [*hsü*] for 2,500 or the county, and a university [*hsüeh*] for the whole kingdom. The ordinary curriculum extended over seven or nine years; examinations took place every other year, and selected candidates from the ordinary colleges were transferred to the Imperial college. The competitors were exempt from forced labours in their own villages, and the students of the Imperial college were excused from all manual work."—*Simcox*, ii. 72.

"The district school was a sort of secondary school, situated near the capital, and open to the children of the people. The most distinguished pupils of this school were chosen to pass into the superior establishment, the *Tching kium*, where they received, as a mark of favour, a cup of wine from the hand of the Emperor." The choice of candidates for promotion by examination to the higher school "seems to have included all meritorious persons, independently of birth." Those who did not satisfy the examiners had to "continue to study and await a new examination." The district school corresponded to the college of Shun, in which was also an almshouse for old men. Hsüan Wang had special schools attached to his court for training the children of the Imperial family, and chose from among the latter those who might be fit to be placed at the head of principalities. It seems to have been a general practice to have colleges attached to the chiefs' palaces.—*Biot, Essai sur l'Hist. de l'Instruction*, &c., pp. 33–37.

"It would be an anachronism to assume . . . that during the Chow Dynasty, or earlier, a system of graduated schools provided a complete ladder of learning from the village to the court. The Grand Director of Public Works is required by Chow-Li to teach the people 'the six virtues, the six praiseworthy actions, and the six branches of knowledge;' *i.e.*, music, dancing, archery, charioteering, writing, and arithmetic. But so wide a curriculum warns us to understand the word 'to teach' as referring to the educational effects of good government rather than to any special supervision of the schools, where virtue can hardly be taught in class."—*Simcox*, ii. 72.

Education was State-conducted. "The Minister of Instruction [or 'superintendent of the multitudes'] defined and set forth the six ceremonial observances:—to direct and control the nature of the people; clearly indicated the seven lessons [of morality), to stimulate their virtue; inculcated uniformity in the eight objects of government, to guard against all excess; taught the sameness of the course (of duty) and virtue, to assimilate manners; nourish the aged, to secure the completion of filial piety; showed pity to orphans and solitaries, to reach those who had been bereaved; exalted men of talents and worth, to give honour to virtue; and dealt summarily with the unworthy, to discountenance wickedness." "This, then, was the conception anciently of what government had to do for the multitudes—to teach them all moral and social duties, how to discharge their obligations to men living and dead, and to spiritual beings."—*Li chi*, iii. iv. 1; *Legge*, i. 230–1, 8, note.

"When the child was able to take its own food, it was taught to use the right hand. When it was able to speak a boy (was taught to) respond boldly and clearly; a girl submissively and low." "At six years they were taught the numbers and the names of the cardinal points; at the age of seven boys and girls did not occupy the same mat nor eat together; at eight, when going out or coming in at a gate or door, and going to their mats to eat and drink, they were required to follow their elders: the teaching of yielding to others was now begun; at nine they were taught how to number the days. At ten (the boy) went to a master outside and stayed with him (even) over the night. He learned the (different classes of) characters and calculation; he did not wear his jacket or trousers of silk; in his manners he followed his early lessons; morning and evening he learned the behaviour of a youth; he would ask to be exercised in (reading) the tablets and in the forms of polite conversation. At thirteen he learned music, and to repeat the odes, and to dance the *ko* (of the Duke of Kâu). When a full-grown lad he danced the *hsiang* (of King Wu). He learned archery and chariot driving. At twenty he was capped and first learned the (different classes of) ceremonies, and might wear furs and silk. He danced the *tâ hsiâ* (of Yü) [see ÆSTHETIC PRODUCTS], and attended sedulously to filial and fraternal duties. He might become very learned, but did not teach others;—(his object being still) to receive and not to give out." "At thirty he had a wife, and began to attend to the business proper to a man. He extended his learning without confining it to particular subjects. He was deferential to his friends, having regard to the aims (which they displayed). At forty he was first appointed to office; and according to the business of it brought out his plans and communicated his thoughts. If the ways (which he proposed) were suitable, he followed them out; if they were not, he abandoned them. At fifty he was appointed a Great officer, and laboured in the administration of his department. At seventy he retired from his duties."—*Li chi*, x. ii. 32–5; *Legge*, i. 476–9.

"A girl at the age of ten ceased to go out (from the women's apartments). Her governess taught her (the arts of) pleasing speech and manners, to be docile and obedient, to handle the hempen fibres, to deal with the cocoons, to weave silks and form fillets, to learn (all) woman's work, how to furnish garments, to watch the sacrifices, to supply the liquors and sauces, to fill the various stands and dishes with pickles and brine, and to assist in setting forth the appurtenances for the ceremonies." "At fifteen she assumed the hair-pin; at twenty, she was married, or, if there were occasion (for the delay), at twenty-three. If there were the betrothal rites, she became a wife; and if she went without these, a concubine."—*Ibid.* x. ii. 36–7; *Legge*, i. 479.

[Respecting the special course of education for young princes, see *Li chi*, xvi. and vi. i. 5–17; and for the system of graduated training, *Legge, Lî Ki*, i. 346, note.]

The above passages treat "of the children in a family of the higher classes, but those of the common people would be dealt with in a corresponding manner according to circumstances. And even in the early feudal times the way was open for talent and character to rise from the lower ranks in the social scale, and be admitted to official employment. The system of competitive examinations was even then casting a shadow before." "There is nothing in what is said of the daughters to indicate that they received any literary training. They were taught simply the household duties that would devolve on them in their state of society; though among them, be it observed, were the forms and provision for sacrifice and worship. It will be observed, also, at how early an age all close intercourse between them and their brothers came to an end, and that at ten they ceased to go out from the women's apartments."—*Legge, Lî Ki*, i. 477, note.

[The higher school was under the regulation of the Superintendent of Music, who taught not only the chords of music, but also virtue, good pronunciation, and dancing.]—*Biot, Essai*, p. 35.

"The fact seems to be that under the first three dynasties the idea of public instruction as a State function, over and above independent local schools, was mixed up with that of other public establishments, such as the official academy of music, the Court of the Heir Apparent, with whom the sons of high officers and nobles were educated, and the 'college,' as it would be called by analogy with mediæval endowments, where State pensioners were maintained at the public cost. 'It was the universal rule in ancient China that the young should be taught and the old maintained in the same buildings' (*S.B.*, xxvii. 242, n.; *Tcheou-li*, i. 82; ii. 211). A prince of Tse, who headed one of the federal leagues formed by the feudal States, was credited with a desire to revive the educational as well as the other good customs of the kings of Chow. His allies pledged themselves to 'honour the aged, protect the orphans, name the deserving to office, nourish capable men, and bring forward virtuous ones'—all of which undertakings would anciently have been included under the head of 'teaching' the six virtues."—*Simcox*, ii. 72–3.

"Ma-twan-lin saw plainly that the system of examinations was only a modern and not very successful expedient for the detection of capacity and virtue, and he supposes that in the good old times men were first recommended for employment on account of their character and reputation, and were then examined to see if they possessed the special knowledge required for the discharge of their duties; whereas subsequently scholars applied themselves to one kind of study with a view to the examinations, and, as soon as the examination was over, all that they had learnt was put aside and neglected, while they began a fresh education in the practical work belonging to their offices, so that science and government were divorced."—*Ibid.*, ii. 73. For the public examinations, see GEN. GOVT.

[Chu Hsi expresses doubts as to whether the State, under the ancient dynasties, could have afforded to maintain more than a part of the institutions described in the *Chou li*, and it may be conjectured that even in the days of the Chou the system described was an ideal rather than a transcript from reality. See *Biot, Essai sur l'Instr.*, &c., p. 375.]

"We are not to conceive of the disciples [of Confucius] as forming a community, and living together. Parties of them may have done so. We shall find Confucius hereafter always moving amid a company of admiring pupils; but the greater number must have had their proper avocations and ways of living, and would only resort to the master when they wished specially to ask his counsel or to learn of him."—*Legge, Ch. Class.*, i. Prol. p. 67.

Mencius "probably imitated Confucius by assuming the office of a teacher—not that of a schoolmaster in our acceptation of the word, but that of a professor of morals and learning, encouraging the resort of inquiring minds, in order to resolve their doubts and inform them on the true principles of virtue and society."—*Ibid.* ii. Prol. p. 21.

Freemasonry.—"Now the *Book of History* embraces a period reaching from the twenty-fourth to the seventh century before Christ, so that even if we begin where the *Book of History* ends we find curious masonic expressions to have been in use, at any rate in the written language, more than seven hundred years before the Christian era. . . . But inasmuch as there are no grounds whatever for impugning the authentic character of that work as connected with periods much more remote, this would give to speculative masonry a far higher antiquity than has ever yet been claimed."—*Giles, Historic China*, p. 380.

"The published *Discourses* of Confucius provide us with several masonic allusions of a more or less definite character. . . . But it is in the works of his great follower Mencius, who flourished nearly two hundred years later, that we meet with a fuller and more expressive masonic phraseology."—*Ibid.* pp. 380–1. Many allusions are also to be found in various other Chinese authors of note such as the philosopher Wên-tzŭ of the fourth century B.C., and others named under later periods.

Charitable Institutions.—"In nourishing the aged, (Shun), the lord of Yü, used the ceremonies of the drinking entertainment; the sovereigns of Hsiâ, those at entertainments (after) a reverent sacrifice or offering; the men of Yin, those of a substantial feast; and the men of Kâu cultivated and used all the three." Those of fifty, sixty, seventy, etc., received their nourishment in the different schools, various kinds of food being provided according to the age of the recipient.—*Li chi*, iii. v. 1–3; see also x. ii.; *Legge*, i. 240.

"Every device for relieving the burden of taxation and public service is exhausted in the older legislation, which is extremely minute and explicit on the duties of government in times of popular distress (*Biot, Tcheouli*, ix. 31–34; *Mencius*, I. ii. 5). . . . In old feudal China, the care of the poor, of widows and orphans, was specially commended by the King to his chiefs, who were expected to provide for these classes by local institutions. (*Plath, Verfass u. Verwalt. d. Alt. China, Abh Phil. d. Bag. Akad.* x.)."—*Johnson, Or. Rel.—Ch.*, pp. 43–5.

"The kings of the three dynasties [Hsia, Shang, and Chou], in nourishing the old, always had the years of those connected with them brought to their notice. Where (an officer) was eighty, one of his sons was free from all duties of government service; where he was ninety, all the members of his family were set free from them. In cases of parties who were disabled or ill, and where the attendance of others was required to wait upon them, one man was discharged from those duties (for the purpose). Parties mourning for their parents had a discharge for three years. Those mourning for one year or nine months had a discharge for three months. Where an officer was about to move to another state, he was discharged from service for three months beforehand. When one came from another state, he was not required to take active service for a round year." Orphans, old men who had lost their sons, old widowers, and old widows received regular allowances. "The dumb, the deaf, the lame, such as had lost a member, pigmies, and mechanics, were all fed according to what work they were able to do."—*Li chi*, iii. v. 12–14; *Legge*, i. 243–4.

"The surplus produce from the common fields was regarded as a sort of national grain bank, and the officers in charge of the stores were allowed to make advances to the cultivators at seed-time, to be repaid in harvest. To the very poor the loans

might be made gratuitously, and in any case the repayment had the effect of renewing the stores with fresh grain for old, while the profit upon some of the advances served to increase the common fund which could be drawn upon in times of dearth."—*Simcox*, ii. 37.

"According to a passage in the Li Ki (*S.B.*, xxvii. p. 261), corn is distributed from the king's vaults to the friendless and destitute in the last month of spring—the time when the pinch of want is most felt by a purely agricultural community."—*Ibid.* ii. 37, note 3.

[Kou Chien (Yüeh Wang, 496 B.C.) sent physicians, nurses, and presents to those who bore children.]—*Kuo yü, Yüan chien lei han, c.* 244, p. 3*b*.

[There were apparently public pharmacies, since those established in the Ming Period were copied from those existing at this time.]—*Mém. conc. les Ch.*, xi. 458.

Absolute Monarchy (221 B.C. *to* A.D. 221).—*Table III.*

Literary Associations and Poetical Gatherings.—"The princes of the house of Lieu gathered round them a choice school of literati and engaged them in discussions on the history of early times and on philosophical and religious dogmas."—*Journ. N.-C.B.R.A.S.*, N.S. xxix. 269.

Libraries, &c.—"During the reign of Han Wu Ti, the prince of 河 間 (near Peking) son of the Emperor King Ti, made a large collection of old books anterior to the Tsin conquest, including the 毛 詩, the 周 禮, Mencius, the Tso Chuan, &c."—*Ch. Rec.*, xii. 442.

"Ts'ao Tsêng, being afraid that the ancient essays might be lost, built a stone storehouse for keeping books in; it was called the Bookstore (Library) of Mr. Tsêng."—*Shih i chi, Yüan chien lei han, c.* 249, p. 31*a*.

"Wên Wêng [179–156 B.C.] of the Han Dynasty established a Lecture Hall in a stone building constructed by him located at the South of the City in the Shu Province."—*Chin Ch'ang Chi Hua Yang kuo chih, Shih wu yüan hui, c.* 8, p. 3*b*.

"In the 6th year *Kêng yin* [A.D. 30] of the reign of Kuang Wu of the Han dynasty, the lecture-hall of the Imperial Academy was built; its length was 10 *chang* and its breadth 2 *chang*."—*Chin Lu Chi Lo Yang chi, Shih wu yüan hui, c.* 8, p. 3*b*.

Schools and Education.—"Accounts of the common schools are given by two writers of the first century A.D. (*E. Biot, Essai sur l'Histoire de l'Instruction publique en Chine*, pp. 54, 64): 'When the plough has been brought under cover, the harvests gathered, and the operations of the year ended, the unmarried youths go to school, at fifteen to the lower school, at eighteen to the higher; at the winter solstice they leave school for forty-five days (as is the usage even until now), and prepare for the labours of cultivation.' So far Ma-yong, while Pan-kow (58–76 A.D.), in his history of the first Han Dynasty, adds that in winter, to save lights and firing, the villagers assembled in the common hall, the women with their work, while the young men not yet taxpayers repaired to the school-house. The lads who entered the elementary school at eight begin at fifteen to learn music and the Rites. The teachers in these schools were not appointed by the State, but the district officers were expected to keep an eye on their efficiency."—*Simcox*, ii. 72.

"Literary degrees were first established."—*Giles, Historic China*, p. 42.

[According to *Han shu P'ing Ti chi, Tzŭ shih ching hua, c.* 40, p. 17*a*, the various classes of schools were now (A.D. 1–6) the *hsü, hsiang, chiao*, and *hsüeh* (*cf.* previous Period). In every *hsüeh* and *chiao* a classical instructor, and in every *hsiang* and *hsü* an instructor in the *Classic of Filial Piety*, was installed.]

[The *T'ai Hsüeh* or High College was re-established by the After Han Emperor Kuang Wu (A.D. 25–58).]—*Ch. Rev.*, xiii. 55.

[Scholars were allowed to bring their mothers and brothers to reside with them in the Imperial Academy.]—*Ku chung sui pi*, p. 66*a*.

"The *T'ai Hsüeh* of the Han dynasty was located about 7 *li* N.W. of Ch'ang An. When Wang Mang was Prime Minister there were 10,000 rooms for students."—*San fu huang t'u, Tzŭ shih ching hua, c.* 31, p. 12*b*.

"When [Yang] Jên became Magistrate of Shih Fang he advised the sons and brothers of petty officers to study in the schools. Those who mastered the Classics and Sciences were selected for merit, and their names put on record, or they were introduced to the Court. By this means Education greatly prospered."—*Hou Han shu Yang Jên chuan, Shih wu yüan hui, c.* 8, p. 3*b*.

"For the sons and brothers of meritorious ministers consisting of 4 families and distant royal relatives the Emperor Ming [A.D. 58–76] built a separate college and selected those who were eminent in ability to be taught a profession. Scholars from the body-guards of Ch'i Mên were ordered to learn the Classic of Filial Piety. The Hsing Nu also sent their sons to this school. There were many more scholars at that time than in the reign of Yung P'ing."—*Hou Han shu, Yüan chien lei han, c.* 201, p. 31*a*.

"When Ho Wu became President of a Board he first entered the Confucian College and visited all the students, examined them in essays, and questioned them on what is advantageous and what disadvantageous (or right and wrong)."—*Han shu, P'ei wên yün fu, c.* 1, p. 63*b*.

"The Emperor Shun [A.D. 126–45] being moved by the words of Ti P'u, repaired the colleges; those he built (or repaired) contained 240 apartments and 1850 bedrooms. He examined those versed in the classics who had not gained degrees, so as to fill the vacancies in the studentships, and increased [the number of] the *chia* and *yi* literary examinations. Also 10 men were selected to be appointed Directors of Studies attached to the prefecture or to fill the post of Collegian."—*Hou Han Ju lin chuan, Tzŭ shih ching hua, c.* 31, p. 10*a*.

"In the first year [A.D. 132] of the period *Yang Chia* the new imperial academy was built. An imperial decree was issued that pupils might be entered after Examination showing their proficiency in the Classics."—*Kuang chih p'ing lüeh, Liang Han hsüeh chiao, c.* 24, p. 2*b*.

"In the *kuei wei* or 8th year [A.D. 203] of the period *Chien An* of the reign of Hsien Ti of the Han dynasty an order was issued that all the provinces should pay more attention to literary matters. Districts of 500 families were to appoint an officer of instruction, who was to select promising youths and teach them."—*Wei chih Wu Ti chi, Shih wu yüan hui, c.* 8, p. 1*b*.

Period of Disruption (221 *to* 589).—*Table IV.*

Schools and Education.—"The 400 years before the accession of the Tang Dynasty belong to the Dark Ages of Chinese history. It was complained that not one in forty of the dignitaries employed at court knew how to handle a pencil (*Biot, Essai sur l'Instruction*, p. 211). The State colleges seem to have degenerated into boarding schools for a class of privileged idlers, as their endowments survived, while the custom of employing collegians fell into obeyance. The private schools, which generally enjoyed and deserved the confidence of the learned, were refused all official countenance, apparently from the suspicion that voluntary schools, as we may call them, were destined to promote the interests of religious sects rather than disinterested study of the native classics; and even if this suspicion was to some extent justified by fact, it is certain that the discouragement of all private schools indifferently had an injurious effect on the standard of education (*De Mailla*, v. 45, 54)."—*Simcox*, ii. 126.

"Cheap paper and good ink and pencils have promoted popular education and enlightenment."—*Journ. P.O.S.*, ii. 149.

Ming Ti, the grandson of the Eastern Han Emperor Hsien, "instituted a system of examinations."—*Ch. Rev.*, xii. 444.

"Education seems to have been kept up during the strifes of the Tsin Dynasty. But in the year 352 A.D. the students at the metropolis were all dismissed."—*Ibid.* xiii. 119.

[The first Emperor of the Liang Dynasty established colleges in every district.]—*Giles, Bio. Dic.*, p. 285.

[Under the Chin, the sons of Great Ministers had posts bestowed on them as government students with the name High Pupils (*Kao Mên Shêng*). At the old palace an east *hsiang* was built, in which the ceremonies *hsiang she* were performed. Every month Mo-jung Fang came to the school to examine the pupils. He was fond of literature and diligent in teaching, and his pupils were more than 1,000 in number. (*Tzŭ shih ching hua, c.* 31, p. 10*a*.) The *hsiang* and *hsü* schools in P'o Yang were repaired (*Yüan chien lei han, c.* 201, p. 32). In 366 the *kuo hsüeh* was rebuilt and the village schools repaired (*Tzŭ shih ching hua, c.* 31, p. 10*b*.) In 438, Wên Tsung established a college for four kinds of learning, Confucianism, science of nature, history, and literature, professors being appointed for each. It was built outside the city on the plan of the *chiao* colleges of ancient times (*Pei wên yün fu, c.* 92, p. 135*a*). In the time of Kao Yün (390–487) a gradation of instructors and students was introduced: in the college of a first-class prefecture, 2 doctors, 4 preceptors, and 100 students; in a second-class prefecture 2 doctors, 2 preceptors, and 80 students; in a medium prefecture 1 doctor, 2 preceptors, and 60 students; and in a small prefecture 1 doctor, 1 preceptor, and 40 students (*Shih wu yüan hui, c.* 8, p. 2*a*). In 466 District Colleges were instituted, to which 20 scholars were admitted, there being in each district a Director of Studies and two Sub-Directors (*ibid.* p. 2*a*). In 505 a decree was issued establishing five colleges for the teaching of the Five Classics (*Ko chih ching yüan, c.* 19. p. 15*b*), and many colleges were built to teach the young. Every college had several hundred students who were provided with board. Separate professors were appointed to teach each classic, and scholars who became proficient were given official posts. "The students gathered in the capital like clouds" (*Yüan chien lei han, c.* 201, p. 32*b*; *Kuang chih p'ing lüeh, c.* 24, p. 3*b*). In 506 the *Chi Ya* College was established with the object of inviting scholars from a distance (*Tzŭ shih ching hua, c.* 31, p. 11*a*). In 541 a *Shih Lin* College was built on the west of the palace, and many scholars assembled there (*ibid.* p. 10*b*). The Emperor Yüan, when Magistrate of Ching Chow, built a college in the Confucian temple (552) (*ibid.* p. 11*a*).]

Poetical Associations.—"During the third century [*c.* 275] A.D. another and more mercurial set of poets, also seven in number, formed themselves into a club and became widely famous as the Seven Sages of the Bamboo Grove."—*Giles, Hist. of Ch. Lit.*, p. 125. See also p. 61.

[Literary associations were formed.]—*P'ei wên yün fu, c.* 68, p. 9*b*.

Libraries.—"Wên Ti of the Wei Kingdom established a library. Anyone who had studied 1,000 works was allowed to make use of it (lit., to ascend to it). But there were only six people in all [who did so]."—*San kuo i lu, Ko chih ching yüan, Kuan lei*, p. 11. Other libraries, public and private, are mentioned in *P'ei wên yün fu, c.* 90*b*, p. 168*b*; *c.* 93*a*, p. 100*b*, &c.

Poor Relief.—The Heir Apparent [of the Ch'i State, 479–501] "established six hospitals for the relief of the poor."—*P'ei wên yün fu, c.* 44, p. 43*b*.

From the Restoration of Unity to the end of the Five Dynasties (589 *to* 960).—*Table V.*

589–907.

Education, Colleges, and Schools.—"Kao Tsu towards the close of his reign had shown preference for laws and punishments and a dislike for schools, which he had abolished, with the exception of one national college containing 72 scholars. 'When the Emperor Yang ascended the throne he re-established the *hsiang, hsü, kuo tzŭ* Imperial Academy, *chien* Prefectural and *hsien* district colleges.'"—*Kuang chih p'ing lüeh, c.* 24, *Wei Chin Lin Ch'ao hsüeh chiao*, p. 3*b*.

[The *Chiu T'ang shu Chih kuan chih* (*Tzŭ shih ching hua, c.* 40, p. 17*a*) says that under the *Chi Chiu* and *Ssü Yüeh* (see GEN. GOVT.) there were six colleges: the *Kuo Tzŭ*, State College, *T'ai Hsüeh*, Great College, *Ssŭ Mên Hsüeh*, Four Department Colleges, *Lü Hsüeh*, Law College, *Shu Hsüeh*, Classic College, and *Suan Hsüeh*, Mathematical College.]

"In the year A.D. 601 the district schools [*chou hsien hsüeh*] were abolished in China, and also the *t'ai hsüeh*, which last name was, however, now applied to the *kuo tzŭ hsüeh*."—*Ch. Rev.*, xiv. 52.

"When the T'ang first received the appointment of Heaven [was founded] an Imperial decree was issued ordering the magistrates to build *Chou Kung* and Confucian temples in the State College. There was the Imperial Academy with 300 students, and also the *Ssŭ Mên* College with 1,200 students. There were colleges for law, writing, and mathematics—the college of law contained 50 students, of writing and of mathematics, each 30. In the metropolitan prefecture there was a college containing 80 students; the students in the college of the metropolitan districts numbered 50. Colleges were established in all departments and districts in the empire; they were divided into three kinds:—Colleges in the large departments contained 60 students; whilst in the medium and small departments the students were decreased by 10. Colleges in the large districts contained 40 students, and in the medium and small districts the number was also decreased by 10."—*Kuang chih p'ing lüeh, c.* 24, *T'ang tai hsüeh chiao*, p. 4*a*.

"The so-called Imperial College consisted of six higher schools, to which youths were admitted between the ages of 14 and 19; the total curriculum extended at furthest over 10½ years. The first school received 300 students, and corresponded to that in which the emperor's sons were anciently supposed to receive their education along with the sons of higher officers of State; it was open to the sons of lower, and the sons, grandsons, and grandsons of higher officers. The second school, or 'Great College,' admitted 500 sons or remote descendants of inferior officers. The third, or 'College of the Four Gates,' received 1,300 students—500 drawn from the class of landowners and inferior officials, while 800 were 'men of the people' distinguished in the examinations held all over the kingdom. The fourth, or school of laws, had only 50 students, and the schools of writing and arithmetic only 30 each, all of whom were taken either from among the people or the sons of the lower officers, and these were doubtless intended to provide a kind of technical training for clerks on the permanent staff of Government boards (*Biot, L'Instr. Publ. en Chine*, p. 256)."—*Simcox*, ii. 143.

"The actual number of the students probably fluctuated with the imperial liberality and the reputation of the schools, and it was said to have reached 10,000 in the reign of Tai-tsong (629–49). Students of the great college who distinguished themselves might be promoted to the college of superior dignity nominally reserved to the sons of high officers. In 729 A.D. we meet with the complaint that correct pronunciation was more attended to than the meaning of words, and Han-yu pleads for less respect of persons and greater strictness in the examinations. But the purely literary and unpractical character of the tests was not yet acquiesced in. Three papers, so to speak, were set, one in the classics, one to test the candidate's style and literary attainments, and one containing five questions relating to affairs of the day,—to one of which the famous denunciation of the eunuchs was an answer."—*Ibid.* ii. 143; *Biot*, pp. 276–9.

[In 624, colleges were established in the departments, districts, and villages. Those versed in the classics had their names put on record (*Kang mu, Shih wu yüan hui, c.* 8, p. 2*a*). In 632 the schools were increased to the number of 1,200. Three colleges were added (1 for instructing licentiates in the composition of official documents and two being departments of writing and arithmetic (*Tzŭ shih ching hua, c.* 31, *p.* 12*a*). In 658 a mathematical college was established (*Parker, China*, p. 52). In 719 an order was issued that students of department and district colleges under 25 years of age, sons of officers of the 8th rank, and common people under 21 years of age, who were versed in the classics, or who, though not so versed, were clever in essays and history, were to be sent to the *Ssŭ Mên* College as scholars (*P'ei wên yün fu, c.* 92, p. 133*a*). In the flourishing *K'ai Yüan* period (713–42) schools were ordered to be established in every department, district, and village throughout the empire: "no village in the empire was left without a school" (*Shih wu yüan hui, c.* 8, p. 2*a*). The establishment of schools in various provinces is also referred to in *T'ang shu, Yüan chien lei han, c.* 201, p. 32*a*; *Kuang chih p'ing lüeh, c.* 24, *T'ang tai hsüeh chiao*, p. 4*b*; *Tzŭ shih ching hua, c.* 31, p. 12*a*.]

[Under Hsüan Tsung schools were established in every village. He also founded a college for training youth of both sexes in music.]—*Giles, Bio. Dic.*, p. 451.

"Fond of music, he [Ming Huang, 712–40] founded a college for training youth of both sexes in this art."—*Giles, Hist. of Ch. Lit.*, p. 168.

"Towards the middle of the eighth century A.D., the Emperor Ming Huang of the T'ang dynasty, being exceedingly fond of music, established a college, known as the Pear-Garden, for training some 300 young people of both sexes. . . . It was apparently an institution to provide instrumentalists, vocalists, and possibly dancers, for Court entertainments, although some have held that the 'youths of the Pear-Garden' were really actors, and the term is still applied to the dramatic fraternity." *Ibid.* p. 257. He also built the *Li Chêng* College, wherein were taught "elegance and correctness" (*Shih wu yüan hui, c.* 8, p. 4*a*).

"By an edict of 706 A.D. the payment to be made by scholars to their teachers was laid down (*L'Instr. Publ. en Chine*, p. 283). Tuition has always been cheap in China, where the remuneration of the learned professions is still as nearly on a level with that of the mechanical arts as it was in mediæval Europe; and the presents of silk, wine, and meat required from the students were very modest in amount. The reason for prescribing the payment probably was that the State had hitherto paid the teachers' salary, and that it was an innovation for the professors to depend on the students' fees."—*Simcox*, ii. 143.

"In 736 A.D. an important change was made, which on the one hand raised the standard of the examinations and on the other diminished the chances of the successful candidates obtaining office. The director of the examinations was transferred from the 'minister of Offices' to the minister of Rites, presumably because the former allowed extraneous circumstances to weigh in the bestowal of degrees. But as the bestowal of office still rested with the department by which the officers were employed, a constant feud between the two was kept up for several centuries. Candidates who had passed successfully the examination conducted by the Board of Rites were only thereby qualified for appointment to office; their actual nomination for active service rested with the Board of Offices, which, not being able to employ all the successful candidates, used its discretionary powers of rejection in a way which the mass of graduates resented as unfair, even when preceded by a third examination (*Biot*, p. 310)."—*Ibid.* ii. 144.

"The famous Han-lin college, which now furnishes the imperial historiographers, examiners, and directors of public instruction, was founded in 740 A.D. to 'answer the emperor's questions about language and literature' (*Biot*, p. 305). Pauthier gives 712 A.D. as the date of the foundation. But its complete constitution might easily occupy a generation."—*Simcox*, ii. 143. The *Shih wu yüan hui* says that the name existed in the period *K'ai Yüan* (713–42) of Ming Huang (= Hsüan Tsung), and that after the period *Chih Tê* (756–8) of Su Tsung, "Eastern" and "Northern" Han Lin colleges were established.

"In the middle of the 8th century orthodoxy was exposed to a danger like that which threatened under the Souy Dynasty, when public examinations were held in the works of Buddhist theology. Hiouen-tsong's partiality for Taoism showed itself by

the attempt to add the works of Lao-tze to the official literature, and between 741 and 763 A.D. students were allowed to 'take up' the works of this philosopher, either instead of or in addition to the regular classics (*Biot, L'Instr. Publ. en Chine*, p. 289). In the next reign this concession was revoked, and we hear no more of Taoist degrees till the beginning of the 12th century; but learning was affronted by the appointment of an ambitious eunuch as examiner, and scholarship was so ill paid, that professors complained that they had to eke out their salaries by taking to agriculture. That the importance of success in the examinations on the whole continued to increase, is proved by the precautions first taken at this time, by order of the Empress Wu . . . to prevent favouritism or corruption, by concealing the authorship of the papers given it."—*Simcox*, ii. 144.

"Special learning or science were taught in the family by private teachers."—*Chang Shua shih, Pei wên yün fu, c.* 92, p. 135*b*.

Libraries.—Wên Ti "opened public libraries."—*Giles, Bio. Dic.*, p. 898.

T'ai Tsung's Empress "was a patron of letters, and an Imperial Library and College in the capital owed their origin to her."—*Boulger, Short Hist.*, p. 30.

"The imperial library was founded in 723 A.D., but the funds at its disposal must have been scanty, as the buildings when injured by rain were not repaired."—*Simcox*, ii. 143. Private libraries also existed; see *P'ei wên yün fu, c.* 36*b*, p. 115*a*.

[Allusions to *freemasonry* occur in the writings of the poet Liu Tsung-yüan (773–819).]—*Giles, Historic China*, pp. 380–1.

Literary Associations.—"[Yang] Shih-tao, after his retirement from Court, used to gather together the eminent and talented scholars of the time and feast them in a flower-garden. Literary meetings never flourished more than at that time."—*Chiu T'ang shu Yang Shih-tao chuan, P'ei wên yün fu, c.* 68, p. 9*b*.

"Formerly when I attended them the poetical gatherings were crowded, but now I find them empty. This was probably only a local decline."—*Mêng Chiao shih, P'ei wên yün fu, c.* 68, p. 12*b*.

[For *newspapers* see DISTRIBUTION.]

[A species of *insurance* is indicated in *Reinaud, Rel. des Voy., etc.*, i. 34–5. "When a vessel arrives from abroad, the agents of the government cause the merchandise to be delivered up to them, and shut it up in certain houses. The goods are subject to the *dork* for six months, till the last vessel has come in (*i.e.*, till the end of the monsoon). Then the Chinese take three-tenths of each kind of goods, and give up the rest to the owner." The *dork* (Arabic) was a sum deposited by the seller in the hands of the buyer, as a guarantee that the thing sold is of good quality.]

Poor Relief.—The Arab travellers of the 9th century noticed the absence of diseased mendicancy: "Scarce a one-eyed or a blind person is to be seen or anyone subject to the like afflictions."—*Ancient Accounts of India and China, &c.*, trans. *Renaudot*, p. 37.

907–960.

"The periodical examinations were held regularly under the five posterior dynasties, though literature and learning were neglected. In 930 we find the head of the imperial college complaining that the students' fees (about twelve shillings) remained unpaid, and Ma-twan-lin regards the attempt to exact them as part of the general venality of the age when poor scholars were oppressed and administrative offices put up for sale."—*Simcox*, ii. 209.

"Lo Shao-wei was fond of learning and books; he was well versed in literary science. Having collected several tens of thousands of books he established a college and invited scholars from all quarters."—*Wu Tai shih chuan, Yüan chien lei han, c.* 294, p. 29*b*.

Sung Period (960 *to* 1280).—*Table VI.*

Schools and Education.—[Education was fostered by T'ai Tsu.]—*Giles, Bio. Dic.*, p. 70.

"In the Sung Dynasty all colleges belonged to the Imperial Academy, and the Academicians were the sons or grandsons of metropolitan officers of the 7th rank, but there was no fixed number. Afterwards it was limited to 200 men. The students of the *T'ai Hsüeh* were the sons or brothers of officers of the 8th rank or of common people who were clever. When the system of *San Shê* was in force, the *T'ai Hsüeh* was in order. The students in the *Wai Shê*, outer school, numbered 2,000, in the *Nei Shê*, inner school, 300, and in the *Shang Shê*, upper school, 100."—*Kuang chih p'ing lüeh, c.* 24, *Sung tai hsüeh chiao*, p. 5*a*.

[The imperial college received steel plates and various other benefactions from the first two Emperors of the dynasty.]—*Simcox*, ii. 209.

"The provincial colleges had almost ceased to exist, and the first step towards their reorganization seems to have taken the form of charters, granted to existing libraries founded by private persons or associations. Such libraries had schools attached to them, and when these were well attended and thriving it was obviously needless for the Government to incur the expense of fresh foundations. In the neighbourhood of the modern Nan-king, one of these libraries was founded and endowed with lands for its support; in all, six such libraries and schools were recognized in different parts of the Empire, and their organization was imitated in the official establishments afterwards founded: the supply of the cantonal schools was left to the discretion of the local functionaries."—*Ibid.* ii. 109.

"When the Sung dynasty was at the height of its prosperity it imitated the S. T'ang in establishing a *Pai hu* College, and this, together with the *Sung Yang, Yo hu*, and *Tsui Yang*, were the four largest colleges in the Empire."—*T'ung k'ao, Shih wu yüan hui, c.* 8, p. 4*a*.

[For the College of Imperial Physicians (*T'ai I Chü*) (1068–86) see GEN. GOVT.]

"M. Biot gives (*Essai sur l'Histoire de l'Instruction*, &c., p. 341), after Ma-twan-lin, full particulars respecting the examinations, including the rules followed in marking papers under the Sung. It was considered a frivolous reason for putting candidates in the first rank that they had finished their papers sooner than others. The list of literary statesmen who made the dynasty famous in spite of its defeats, is enough to show that the examinations did bring men of varied ability into the public service. We hear less than formerly of the jealousy shown by the Board of Offices to the competitors selected by the Board of Rites, and, as M. Biot observes, the bestowal of the highest degrees was regarded as an important affair of State."—*Simcox*, ii. 209.

In 1001 "an imperial decree was issued bestowing [copies of] the Nine Classics on Colleges of Departments and Districts, and on Lecture Rooms."—*Sung shih Chên Tsung chi, Shih wu yüan hui, c.* 8, p. 2*b*.

"Wishing to establish education we should select an Elder out of 25 families, and appoint a teacher out of 100 families. Youths of 13-17 should be sent to learn the classics and be taught records, maps, and law; the principles of filiation, loyalty, humanity, and righteousness; the rules of incorruption, courteousness, diligence, and respect. He [Chou Lang] came to the school every month to examine students to see how they had learnt the classics. Those who finished their course in 5 years' time were reported to the *Ssŭ Tu* (President of the Board of Revenue)."—*Sung shu Chou Lang chuan, Tzŭ shih ching hua, c.* 31, p. 10*b*.

"The Emperor Jin-tsung opened a college for Sanskrit studies in the year 1035 A.D. and appointed fifty youths to study that language."—*Eitel, Buddhism*, p. 26.

"The military school was introduced by Jên Tsung [1023–64] of the Sung dynasty in the 3rd year [1043] of the period *Ch'ing Li*."—*Shan t'ang k'ao so, Shih wu yüan hui, c.* 9, p. 14*a*.

"Jên Tsung promoted education" (*Giles, Bio. Dic.*, p. 55). "The old 'College of the Four Gates' was re-established by Gin-tsong in 1043, and admitted both sons of officers and promising scholars taken from the ranks of the people. The 'Great College' was reorganized later and did not reach its full number of 900 pupils till 1068. About the same time complaints were made of the quality of the teaching at the State Colleges, where the teachers were ill paid, as well as at the surviving private schools. The students came, not for love of learning, but to qualify for a post in the public service, and having got the desired office or degree, troubled themselves no more about their books; hence, the number of competent teachers fell off, with the result of still further lowering the standard of education. It is quite possible, however, that these complaints were partly also a sign that the examinations were being taken more seriously than before, and were being watched by really learned scholars on behalf of the Government."—*Simcox*, ii. 209–10.

"In the year 1071, at the recommendation of the reformer Wang An-shih [*Mayers*, No. 807], poetry ceased to be the sole subject of examination, as it was found then (as now) that northerners were weak hands at such rubbish. Four 'goes' were established, to wit:—1. Classics; 2. Ten passages of Classics and 大義; 3. One stanza of 論; 4. Three passages of 策. At the 禮部 examination two passages of the last were added. At the 殿試 there was nothing but 策. The first two ranks were 進士及第; the third were 進士出身; the fourth 同進士出身; the 5th 同學究出身."—*Ch. Rev.*, xv. 52, and *cf.* vol. vi., and *Sung shih Hsüan chü chih, Tzŭ shih ching hua, c.* 31, p. 12*a*.

The result of the report of a Commission to enquire into the conduct of the examinations was that Wang An-Shih, "under the plea of making the study of the Classics more practical . . . abolished the tests in mere caligraphy and the verse compositions; and, to ensure the Classical texts being understood, instead of only learnt by heart, the examinations were to include the meanings—as expounded in his own commentaries."—*Simcox*, ii. 210.

"In 1071 a thousand *mow* were allotted to each district college, in addition to their other endowments, to provide for the maintenance of the students, and in 1079 a vain attempt was made to enlist the sympathies of the professoriate on the side of the new regulations, by making an allowance for the support of the district colleges, out of the proceeds of the land and house-tax and the interest on the State loans. In the same year the 'Great College' was reconstituted and divided into three grades, with 2,000 students in the first, and 300 and 200, respectively, in the second and third; and the magnificent annual income of 180,000 string of cash was allotted to it. The highest class had privileges in regard to examinations and employment, so it is to be supposed that the object was to attract the best scholars to the college from the open provincial examinations (*Biot, Essai sur l'Instr., &c.*, p. 347)."—*Ibid.* ii. 210.

"Special edicts invited men of virtue and ability to come forward and prove themselves worthy to save their country in a special competition, and the title of graduate was accorded *honoris causâ* to those who furnished corn gratuitously to the armies, or the cultivators in districts which had suffered from the war. This last measure . . . must not be understood as involving the sale of office, only of the honorary degree equivalent to that which, if obtained by competition, would qualify its holder for official employment."—*Ibid.* ii. 212.

"Every hamlet of 25 families [in Lei Chou] had a *tien*, private school, and every lane had a *chiao shih*, school."—*Yü Ching Lei Chou hsüeh chi, P'ei wên yün fu, c.* 22*a*, p. 117*b*.

"In the 7th year [1074] of the period *Hsi Ning* of the reign of Shên Tsung an imperial decree was issued establishing a Law College."—*Wên hsien t'ung k'ao hsiang chieh, c.* 17, *Hsing k'ao*, p. 5*a*. See Ssŭ-ma Kuang's objections to it in *ibid.*

"In the 2nd year [1079] of the period *Yüan Têng* an education order was issued to build 18 *chai* (schools); each *chai* was of five pillars and contained 30 persons. The collegians of the *wai shê* numbered 2,000, of the *hei shê* 300, and of the *shang shê* 100."—*Sung shih Hsüan chü chih, Tzŭ shih ching hua, c.* 31, p. 12*b*.

[The building of schools was general. Many were private and some also free.]—*Yüan chien lei han, c.* 201, p. 32*b*; *P'ei wên yün fu, c.* 90*b*, p. 169*a*; *Tzŭ shih ching hua, c.* 40, p. 17*b*.

"But the literati, who as a body seem never to have much loved or trusted the State colleges, were not likely to be attracted to them when serving as a Propaganda for the views of the hated Innovator. And to overcome their reluctance and obtain a supply of civil servants trained to believe in the new regulations, the very strong measure was taken, in 1103, of abolishing the public competitions for the higher degrees. Three grades like those of the great college were introduced, and success in each degree meant promotion to a higher school, while it became impossible for private students to obtain employment without passing through the training colleges. This was virtually giving the State patronage into the hands of the college staff, who were thought capable of sending up students for promotion in return for bribes. Anyway it was said that the number of graduates was improperly increased, and in less than twenty years the open examinations were restored."—*Simcox*, ii. 210–1.

In 1121, "an imperial decree was issued ordering the colleges of Departments and Districts and the system of *San Shê* to be abolished, leaving only the Imperial Academy."—*Kuang chih p'ing lüeh, c.* 24, *Sung tai hsüeh chiao*, p. 5*b*.

Chu Hsi "introduced a regular system of examinations, dividing the Classics into three groups, the Yi-King, the Shoo, and the Shi forming the first, the three Li the next, and the Chun Tsew with three commentaries the third. He gave out in advance in which King and which historical book the papers would be set, and by taking them all in turn obliged the candidates to go through a serious course of study in all."—*Simcox*, ii. 211.

"In 1142 the Southern Sung opened a 'Great College,' at their new capital, and 5,000 students entered to compete for the 300 vacancies. A few years later we hear of complaints that rich families had appropriated the college lands to their own use; and the Emperor, by way of putting matters to rights, ordered some of the lands belonging to the Buddhist monasteries to be given to the defrauded colleges instead of their own. Choo-hi described the estates of one college, and maintained all to be insufficiently endowed in proportion to the number of students admitted. The State was, however, too poor to do more for them, and the critical commentator frankly admits that he does not know how the ancient dynasties contrived to pay for the elaborate system of education which they are supposed to have maintained (*Biot, Essai sur l'Instr.* 81, p. 375). . . . China could not in his day support more than a part of the institutions described in the Chow Li."—*Ibid.* ii. 211.

"In the 12th century attempts were made to raise the standard of military efficiency by examinations in the theory and practice of archery and other warlike arts; but the civil degrees were in the highest repute, and in 1170 we find the minister of war complaining of the too rapid promotion to high office of brilliant competition wallahs. . . . The Sung princes steadily discouraged the admission of candidates to office by 'protection' or family interest, and the number of sons of officers entitled to employment as such was rigorously limited. During the brief interval of peace and splendour enjoyed by the Southern dynasty, letters and the public examinations were more popular than ever; the half empire produced as many graduates as the whole had done in its brightest days, and even when the Mongols had invaded the provinces north of the Kiang, rather than allow the learned of those provinces to miss the privileges of civilization, supplementary examinations were held for their benefit on the south bank of the river."—*Ibid.* ii. 212.

"In the 6th year [1246] of the period *Shun Yu*, the Emperor bestowed upon all the colleges tablets written by his own hand and a roll of silk to every student in order to encourage him."—*Kuang chih p'ing lüeh, c.* 24, *Sung tai hsüeh chiao*, p. 6*a*.

In 1275 Yang Kung-i "carried a measure by which only men of good character and well-read in the Classics were allowed to be nominated for the public examinations."—*Giles, Bio. Dic.*, p. 909.

Hospitals.—[Marco Polo says that at Kinsay (Hangchow) there were many hospitals "founded by the ancient kings, and endowed with great revenues," for the maintenance of the destitute who were unable to work.]—*Yule, Marco Polo*, ii. 172 (2nd ed.).

Orphan Asylums.—"In connection with the exposure of new-born infants, of which Marco Polo speaks, in Southern China, he mentions the orphan asylums, maintained by the Sung emperors, and the applications made to them by childless rich men wishing to adopt an heir; those not thus provided for were married to one another and started in life at the emperor's expense, as many as 20,000 boys and girls being thus provided for every year."—*Simcox*, ii. 224.

"Ts'ai Lien, a native of Yang Chou, had established an orphan asylum and called on many people to assist him in his good work. The rules in it were that every four men should rear a child and each contribute 1½ mace of silver monthly. If any foundling was found on the roadside it was to be brought into this asylum. If any poor woman offered herself as a wet nurse she was paid 6 mace a month. On the 15th of each month the payment was made, and after examining the children to see whether they were stout or thin, rewards or fines were decided upon. When a term of 3 years was complete, they were allowed to be taken by anyone who wished to bring them up."—*Jên p'u lei chi, c.* 5, p. 61*b*.

Poor Relief, &c.—[Institutions for relieving the poor are mentioned in *Jên p'u lei chi, c.* 5, p. 60*a*. Ch'ên Yao-shou, when Commissioner of Grain Transport in Kuang Hsi, planted trees, dug wells, and built pavilions provided with drinking vessels for the relief of travellers (*Sung shih Ch'ên Yao-shou chuan, P'ei wên yün fu, c.* 53, p. 38*b*).]

[Allusions to *freemasonry* occur in the works of the poet Su Tung-p'o (1036–1101).]—*Giles, Historic China*, pp. 380–1.

Literary Associations, etc.—[An "Aged and Virtuous Society" (*Ch'i Ying Hui*) composed of worthy ministers was formed in Lo.]—*P'ei wên yün fu, c.* 22*a*, p. 110*b*.

"The sayings and doings of the head of a school in China are dutifully written down by his immediate disciples, whose works are faithfully reproduced by the successive generations of commentators."—*Simcox*, ii. 211.

Storehouses.—[Marco Polo says that the houses at Kinsay (Hangchow) "are provided with lofty towers of stone in which articles of value are stored for fear of fire; for most of the houses themselves are of timber, and fires are very frequent in the city."]—*Yule, Marco Polo*, ii. 171 (2nd ed.). These towers had evidently been in existence for a long time when Polo wrote, in fact some of the particulars he gives are taken from a document drawn up by the Queen of Manzi before the conquest of Hangchow by the Mongols.

Libraries.—[Libraries were numerous, and those formed by T'ai Tsung were increased by the books collected from conquered States (*Sung shih I wên chih, Yüan chien lei han, c.* 294, p. 28*a*). In Chên Tsung's time the imperial library was largely destroyed in the burning of the palace, but the rescued portions were housed in the Tsung Wên Hall built by Jên Tsung (*P'ei wên yün fu, c.* 76*a*, p. 123*a*). A collection of 100,000 volumes was transported when the Court removed to Nanking to the Pien Hill in Hsia Ch'uan and stored in a building there (*Wang shih Fei chu lu, Yüan chien lei han, c.* 294, p. 30*b*).]

Museums.—"The Imperial Museum is described [in the *Hsüan-ho Po Ku T'u*] by a contemporary visitor. 'The new Pao-ho-tien, a lofty building with three rows of large pillars, was finished in the eighth month of the present year (A.D. 1119). It is surrounded by clumps of tall bamboos and rows of fine trees in thick leafy groves. The central hall is occupied by the

imperial throne, the eastern and western halls are filled with objects of value and curiosities, with ancient tripods, sacrificial vases, jade ornaments, etc. There are in addition many side halls filled with various antiquities; of which the Stone Drums of Hsüan Wang occupy the first rank, preserved in the Hall of Ancient Research.'"—*Journ. N.-C.B.R.A.S.*, N.S. viii. 141.

KIN.

"In 1151, a great college was founded after the Chinese fashion."—*Simcox*, ii. 174.

Mongol Period (1280 *to* 1368).—*Table VII.*

Education, etc.—"In the Yüan dynasty colleges were established in all the provinces. Every year difficult subjects in the 13 *kwo* (medical practice, such as internal and external) were written out and sent to the College of Imperial Physicians, whence the same were issued to the provincial medical colleges. Licentiates were ordered to study medical works according to the rules. At the end of the year a list (or pamphlet) was made out and sent to the officer in charge, for him to decide as to their capacity."—*Yüan shih Hsüan chü chih, Tzŭ shih ching kua*, *c.* 116, p. 4*a*. The first college was established in 1234 by T'ai Tsung before the conquest had been completed (*Kuang chih p'ing lüeh*, *c.* 24, *Yüan tai hsüeh chiao*, p. 6*b*).

"In the 24th year [1283] of Shih Tsu the Imperial Academy and College of State were established, the students attending them numbering 120. Half of them were Mongolian and half Chinese. Their stationery and board were supplied by the Government."—*Kuang chih p'ing lüeh*, *c.* 24, *Yüan tai hsüeh chiao*, p. 6.

"In 1287 the Imperial Academy was opened."—*Giles, Bio. Dic.*, p. 387.

"In the Yüan dynasty Presidents of colleges began to be appointed. In the biography of the Emperor Shun in the Yüan histories it says: 'In the 3rd year [1343] of the period *Chih Chêng*, the *kuei wei* year and *jen shên* month, the Censor Ch'êng Tsun memorialized the Throne saying: "A disappointed M.A. may be appointed to fill the post of President of a College."' In the *T'an hsing fu* it says: 'By this it would seem that the President of a College in the Yüan dynasty was in the list of appointed officers, not as in the present dynasty filled by engagement."'—*Hsü wên hsien t'ung k'ao, Shih wu yüan hui*, *c.* 8, p. 4*a*.

"[Tuan Chih] repaired the Confucian Temple, and for 1,000 *mow* of cultivated land purchased 10,000 volumes of books. He then engaged Li Tsun-min as teacher to instruct scholars who came from abroad."—*Yüan shih Tuan Chih chuan, Tzŭ shih ching hua*, *c.* 31, p. 12*b*.

Foundlings and Poor Relief.—"In those provinces [Manzi = China S. of the Huang Ho] they are wont to expose their new-born babes; I speak of the poor, who have not the means of bringing them up. But the King used to have all those foundlings taken care of, and had note made of the signs and planets under which each was born, and then put them out to nurse about the country. And when any rich man was childless he would go to the King and obtain from him as many of these children as he desired. Or, when the children grew up, the King would make up marriages among them, and provide for the couples from his own purse. In this manner he used to provide for some 20,000 boys and girls every year."—*Yule, Marco Polo*, ii. 109 (2nd edition).

"A passage found only in the Ramusian text of Marco Polo's travels . . . describes a rather cheap form of charity practised by Kubla, which consisted in giving clothes to the poor and to mendicant monks, the materials for which were obtained by a tax, while the labour of making them up was provided by an onerous corvée, as all artisans were bound to give a day's labour weekly. He makes no mention of the very enlightened Mongol institution of free dispensaries, established in 1237, during the reign of Ogatai, at the suggestion, we may be sure, of his temperance-preaching, rhubarb-collecting minister, Yeliu-tchoutsai [*cf.*, however, Tcheou-li, i. 92–7]."—*Simcox*, ii. 224.

"Chang Yüan-chên established a charity granary, in which 200 *shih* of rice were stored up yearly for relieving his clan and neighbours; also he put by 400 *shih* of rice to lend to villagers, those who wished to borrow having to obtain a certificate from the local magistrate before their address was put on the record."—*Jên p'u lei chi*, *c.* 5, p. 61*a*.

Libraries.—[Several large private libraries are mentioned (*P'ei wên Yün fu*, *c.* 22*b*, p. 119*b*, etc.). Chih Pi, when Governor of Tung P'ing, placed 2,000 volumes of his own in the college for the use of the students (*Yüan chien lei han*, *c.* 249, p. 33*b*).]

Miscellaneous.—"Marco Polo does not exactly give his authority to the description by Mandeville (after Odoric of Pordenone) of the 'gode custome' in Jamchay of the great Chan, whereby innkeepers supply *diners à domicile*, at so much a head, to persons wishing to entertain their friends without trouble; but his description of a pavilion on the . . . Si-hou ['Western Lake'], where glass, china, linen, and service are supplied to picnic parties, points to something of the same kind." Odoric localizes this custom at "Yang-chow."—*Simcox*, ii. 223, 232.

"The existence of fireproof towers for the storage of valuables, and the need for them arising from the frequent conflagrations which spread through the streets of wooden houses," are mentioned by Marco Polo.—*Ibid.* ii. 222–3.

Ming Period (*Restoration of Chinese Supremacy*) (1368 *to* 1644).—*Table VIII.*

Education, etc.—Hung Wu "passed a great measure of gratuitous national education, and, in order to carry out this reform in a thoroughly successful manner, he appointed all the masters himself."—*Boulger, Short Hist.*, p. 81.

"Most of the edicts respecting the public Examinations and the imperial Colleges, which continue in force, date from the earlier years of this period [*circ.* 1368–1427]. Immediately after his [Yung Lo's] accession (1368), Tai-tsou founded an imperial college at the then capital, Nanking, and in the following year he issued an edict for the restoration of provincial and departmental colleges. A decree of 1370, which is still in force, declares that 'all places of civil officers, whether attached to the court or to the government of the provinces, must be obtained by passing the test of examination.' This was repealed for a time in 1373, but definitely re-enacted in 1384 after a short experience of the drawbacks to promotion by favour. In 1375 village schools, after the pattern of the Rites of Chow, were required to be provided, but this decree was never completely carried out. In 1382 a slight alteration was made in the allowance of rice for the maintenance of scholars and teachers in the different district colleges, and grants of newly confiscated lands were made to the latter, so that they might grow their own grain instead of receiving it periodically from the Government."—*Simcox*, ii. 254.

T'ai Tsu "organised the present system of examinations."—*Giles, Bio. Dic.*, p. 193.

"Before T'ai Tsu of the Ming dynasty had ascended the throne he had built an Academy. In the 2nd year [1369] of his reign he issued a decree ordering that a college should be built in every prefecture, department, and district in the empire, and said: 'The Emperors and Kings of ancient times, when cultivating the talents of the people and correcting the manners and customs, first cared about education. Now that I have united the Empire I wish to renew the old practice.'"—*Kuang chih p'ing lüeh*, *c.* 24, *Ming tai hsüeh chiao*, p. 7*a*.

[Particulars as to the schools maintained "at the King's own cost, and the annual inspection," are found on pp. 121–2 of *Mendoza's History*; and Chapter XIV. of Book III. (pp. 124–8) is devoted to "the examination of such whom they prefer to the degree of Loytia, which is with us the degree of a doctor."] See also GEN. GOVT., *Judicial*.

"The king hath in every city colleges or schools at his own cost, in the which they do learn to write, read, and count, as well as to study natural or moral philosophy, astrology, laws of the country, or any other curious science. They that do teach in these schools be such persons as excel in every faculty, such as may be found none better, but specially in writing and reading; for that there is none, although he be never so poor, but doth learn to write and read, because amongst them he is accounted infamous that cannot do both. Unto higher studies come a great number of students, and do travail all they may possibly to profit, for that it is the best course and surest way to obtain the name of a Loytia, or gentleman, or other dignity."—*Mendoza, Hist.*, pp. 122–3.

In 1366, T'ai Tsu "ordered all the magistrates to search for ancient and modern books and place them in the *Pi Fu* [Library] for purposes of research."—*Ming chi, Yüan chien lei han*, *c.* 294, p. 28*b*.

[In 1375, *shê hsüeh*, village schools, were built to give instruction to the sons of the common people in the imperial decrees and works on law.]—*Ming hui tien, Shih wu yüan hui*, *c.* 8, p. 3*a*.

"The regulations of 1384 show that the examinations had become purely literary; law, mathematics, riding, and shooting had dropped out altogether, in spite of the anxiety shown by the Emperor to revive the solemn archery of the Chow, with a view to restoring the military spirit of the people. The first examination for the degree of Doctor took place at the capital in 1385, together with one of a more arduous character for admission to the Han-lin College. Students from Corea, Cochin China, and Japan resorted to the imperial college, and the sons of officers stationed in the remoter provinces, like Yünnan and Sz'chuen, were allowed to send their sons to enjoy the same privileges as foreigners. Special apartments adjoining the Empress's side of the palace were assigned for the residence of wives and children of married students. The local colleges were allowed to send a certain proportion of picked scholars to the imperial establishment, and for some time the ranks of the official hierarchy were recruited to a considerable extent from amongst the imperial scholars, who were transferred to a sort of apprenticeship in the various departments, after which they were qualified for office without examination."—*Simcox*, ii. 254–5.

"In 1391, Tai-tsou complained that the students learnt by heart stock pieces of composition, which they wrote out for the examiners as original; and the side entrance to office, through the administrative bureaux, had to be closed to prevent all the imperial students from deserting the colleges in favour of what they thought an easier road to preferment. Private examinations of the college students were held, and those who did best were allowed to compete in the general examination for degrees, while those who failed were beaten, reprimanded, or dismissed. In the middle of the 16th century the colleges seem to have suffered so much from the competition of unattached students assisted by local libraries, that edicts were passed for the suppression of the latter, but fortunately withdrawn before being executed."—*Ibid.* ii. 255.

"The education of the young is carried on mainly by private tutors, not in public schools; and Semedo explains that unsuccessful candidates for degrees become teachers while waiting to try again. Rich families employ the successful licentiates who are still pursuing their studies with a view to the degree of Doctor, a dignity which those who take office at once are not entitled to go in for. The examinations are described at length. At the second examination of bachelors, the second day's task consists either of three essays on set historical questions, or a memorial to the Emperor as to the course to be taken in a case proposed."—*Ibid.* ii. 267.

"Another abuse, which increased with the financial embarassments of the Government, was the bestowal of degrees in return for gifts of money or grain. In the middle of the 15th century a professor of the Imperial College protested against students being admitted to the college by purchase; and the continuator of Ma-twan-lin waxes eloquent upon the injury done to the public service when degrees, not merely honorary, but carrying with them eligibility to official employment, were bestowed upon men who have only frequented the market-place and cannot even understand the literary style. In the account of the first three Tsin-sse, or doctors, appointed by examination, it appears that each received a special title and had a special duty assigned to him in which his literary attainments would find full scope. The first on the list was employed to revise the works prepared for publication, while the second and third revise the official editions of works which have been published before. On this occasion a fourth officer was also appointed as 'Collector of documents.'"—*Ibid.* ii. 255–6.

"The number of degrees conferred annually seems to have risen from 500 to over 2,000, and this number was sufficient to meet the wants of the administration. In the earlier years of the Ming dynasty, any acting official could retire from his post in favour of his son and secure the reversion to him as a matter of grace. Both provincial governments and court places were so bequeathed, and officers' sons were also considered to have a special claim to admission at the colleges; but these privileges were gradually curtailed, and in 1595 some members of the imperial family were required to pass a regular examination before receiving office."—*Ibid.* ii. 255.

Taitsong, with a view to gain the favour of the Chinese, "established schools in which Chinese were taught."—*Boulger, Short Hist.*, p. 113.

In 1634 the Mantchu emperor "instituted examinations on the Chinese model, and founded schools and prizes for the study of the three languages, Mantchu, Mongol, and Chinese."—*Simcox*, ii. 249.

Libraries.—Hung Wu "also founded many public libraries, and he wished to establish one in every town, but this was beyond his power."—*Boulger, Short Hist.*, p. 81.

[A "thousand volume library" was bestowed by a Mr. Yang Hung upon his son, Wei-chên.]—*Yüan chien lei han*, *c.* 294, p. 31*a*.

Charitable Institutions and Poor Relief.—[Mendoza (*Hist.*, i. 66-8) says no one is allowed either to beg or to give alms; all beggars to be reported to a special "justice of the poor." Parents of deformed or invalid children also have to report them:—if capable of learning any occupation, they were allowed a certain time in which to teach them. If the children were quite incapable, and the parents destitute, and there were no relations able to maintain them, they were supported in a public hospital. Old and disabled soldiers were also received into these "hospitals," whose inmates were allowed to "bring up hens, chickens, and hogs, for their recreation and profit." The institutions were periodically inspected by Government officials.]

"The blind folks are not accounted in the number of those that of necessity are to be maintained by their kinsfolks, or by the king; for they are constrained to work; as to grind with a quern wheat or rice, or to blow smiths' bellows, or such like occupations, that they have no need of their sight. And if it be a blind woman, when she cometh unto age, she doth use the office of women of love, of which sort there are a great number in public places. . . . These have women that do tend upon them, and do paint and trim them up, and they are such that with pure age did leave that office. So by this order, in all this kingdom, though it be great and the people infinite, yet there is no poor that do perish nor beg in the streets."—*Ibid.* pp. 66–8. See, however, following Period.

"Not content with providing for the minds of his subjects, Hongwou did his utmost to supply the needs of the aged. He cut down the court expenses and issued sumptuary laws, so that he might devote the sums thus economised to the support of the aged and sick. His last instructions to the new officials, on proceeding to their posts, were to 'take particular care of the aged and the orphan.'"—*Boulger, Short Hist.*, p. 81.

"Yung lo . . . established public pharmacies for the people, following the example of the ancient Chou."—*Mém. conc. les Ch.*, xi. 458.

Memorial Halls.—"Mention is made of an interesting foundation of the 16th century called the 'temple of emperors and kings'; it contained the tablets of all good emperors, irrespective of dynasty; the tyrants, enemies to liberty, and usurpers were excluded."—*Simcox*, ii. 256.

Manchu Period (1644 *to* —).—*Table IX.*

Schools and Education.—"At the present day education is widely diffused throughout China. In no other country is the schoolmaster more abroad, and in all schools it is Confucius who is taught. The plan of competitive examinations and the selection for civil offices only from those who have been successful candidates—good so far as the competition is concerned, but injurious from the restricted range of subjects with which an acquaintance is required—have obtained for more than twelve centuries. The classical works are the text-books. It is from them almost exclusively that the themes proposed to determine the knowledge and ability of the students are chosen. The whole of the magistracy of China is thus versed in all that is recorded of the sage, and in the ancient literature which he preserved. His thoughts are familiar to every man in authority, and his character is more or less reproduced in him." "The official civilians of China, numerous as they are, are but a fraction of its students, and the students or those who make literature a profession, are again but a fraction of those who attend school for a shorter or longer period. Yet, so far as the studies have gone, they have been occupied with the Confucian writings. In many schoolrooms there is a tablet or inscription on the wall sacred to the sage, and every pupil is required, on coming to school on the morning of the 1st and 15th of every month, to bow before it, the first thing, as an act of worship. (During the present dynasty, the tablet of 文昌帝君, the god of literature, has to a considerable extent displaced that of Confucius in schools. Yet the worship of him does not clash with that of the other. He is 'the father' of composition only.) Thus all in China who receive the slightest tincture of learning do so at the fountain of Confucius. They learn of him and do homage to him at once . . . during his life-time he had three thousand disciples. Hundreds of millions are his disciples now. It is hardly necessary to make any allowance in this statement for the followers of Taouism and Buddhism, for, as Sir John Davis has observed, 'whatever the other opinions or faith of a Chinese may be, he takes good care to treat Confucius with respect.' (*Chinese*, ii. p. 45.) For two thousand years he has reigned supreme, the undisputed teacher of this most populous land."—*Legge, Ch. Class.*, i. Prol. pp. 93–4.

"Education is probably as good now as it ever was, and its ability to maintain and develop the character of the people as great as at any time; it is remarkable how much it really has done to form, elevate, and consolidate their national institutions."—*Williams, Midd. King.*, i. 521.

[Miss H. Kirkland speaks of two native schools in Hangchow (presumably for girls, though this is not expressly stated) taught by old ladies—one in the city, and one in the suburbs. These were indigenous and "heathen" schools, not in any way missionary associations. The teachers seem to have been widows, with no sons.]—*Woman's Work*, iii. 111–2.

"Compared with many other parts of China, a considerable number of the Hangchow women can read and write. It is well known that there are no native girls' schools in China; but sometimes well-to-do people educate their daughters privately. I have had the estimate given by a native of the place, that one-tenth of the respectable women can read and write. My own school teacher [woman] is a very good scholar, and has even prepared pupils for the public examinations."—

Ibid. i. 27. But see preceding extract. One is, moreover, stated to have existed at Canton.

[Mrs. Crossette, writing from Chenanfoo, says that she finds a great many well-taught women, and not all from wealthy circles. On announcing that she wished to start a girls' school, she immediately received three applications from women well qualified to teach (subjects not specified).]—*Ibid.* i. 74.

"In China, studies are carried on in the family. Well-to-do families have tutors; but in every village the poorest can send their children to schools; and there are both day and night schools. The children attending them are so numerous that the fees are very trifling."—*Tcheng-ki-tong, Chinese Painted by Themselves*, p. 67.

"Speaking broadly, an apt parallel [to education in China] is ready to hand, in the strict classical curriculum of our forefathers, before modern languages and the physical sciences had successfully asserted their claims to at least an equal place in the education of Englishmen with the literatures of Greece and Rome. It is a system of mental culture by which the faculties of memory, ratiocination, and judgment are largely developed and rendered more capable of application to the ordinary problems of life. . . . They have one beaten track, along which each and every student must necessarily pursue his way, over precisely the same ground, in each and every case. Nothing is optional, and consequently there are no alternative courses adapted to individual tastes or abilities. The dogmas—ethical, political, and social—of their early sages are, one and all, without reference to the changed surroundings of modern times, regarded as some divine legacy of wisdom, infallible in doctrine, and not to be altered or improved upon by the degenerate race of to-day. It is true that Mencius, 'the second,' as he is called, of China's immortals, expressly warned his countrymen that they should strive to live in harmony with the spirit of the age in which they might chance to be born; but this valuable precept has always been carefully overlooked, and greater prominence given to others, couched in a less liberal and less practical tone. And so it is that the Chinese are now, in the hurry and excitement of this nineteenth century, pretty much where they were hundreds upon hundreds of years ago. A movement is indeed now being made in the right direction; but the Chinese move slowly, and the impulse has moreover arisen, not from any internal conviction of its desirability, but from a forced contact with Western nations. Schools for the study of science and foreign languages have either been formed or are in course of formation at various great centres of population; and so far so good, though as yet no way is open through these channels to the posts of real honour and emolument which the Government of China has to bestow. . . . Until about seven years of age the life of a Chinese boy is an intellectual blank; then comes a mighty change. He must either be sent to school or a tutor must be engaged for him at home. In any case, he must forthwith enter upon that course of study by which alone the wordly successes most prized by the Chinese are to be obtained. Up to this moment he has learned absolutely nothing, save, perhaps, to be respectful to his seniors, and not to step on written paper, or even to let it fall on the ground. But now he has a tedious task before him, to accomplish which we will suppose that he goes to the village school, and thither we will follow his steps, lighter at first starting than a few months later on. Here he is formally presented to the master, to whom he usually conveys some trifling present over and above the wretched monthly fee with which the latter is remunerated for his services. He prostrates himself before the image of Confucius, the recognised fountain of all knowledge; and then the schoolmaster proceeds to choose for him an appropriate personal name to be retained in after life, after which he settles down to his allotted task. For the past six centuries this initiatory task has always been the same—the committal to memory of a tiny primer, called the *Three Character Classic*, containing miscellaneous information on a variety of subjects compressed into the narrowest possible compass. Each character, as it occurs, is associated in the mind of the learner rather with its sound than with its meaning in the sentence where it stands, since some portions of this primer, occasionally simple enough, would be quite unintelligible to a child. The opening verses, for instance:—

Man at birth;
By nature good;
In instinct similar;
In practice diverging."

"This would of course be a hard nut to crack for a totally uneducated boy of six-and-a-half; further on, however, easier subjects are treated, and the pupil is taught that the three great lights are the sun, moon, and stars, and that the six domestic animals are the horse, ox, sheep, pig, dog, and fowl. A little history, biography, and so forth, make up the sum and substance of the work, of which so many lines, or more correctly 'columns,' are daily committed to memory. While learning his task the boy hums the words aloud in a noisy sing-song voice, together with all his schoolfellows at the same time, the result being an almost unbearable din, in the midst of which the master will calmly hear one of them repeat his lesson in a similar but louder tone, while the pupil stands with his back to the magisterial desk to guard against any chance of furtive assistance from the book. When thoroughly familiar with the *Three Character Classic*—so called, by the way, because arranged in columns of three characters to each—our youth will have familiarised himself with the shapes and sounds, and partially with the meanings, of something like 400 separate characters, and he will now be considered sufficiently advanced to take the second set step upon the road to knowledge, and to proceed to commit to memory in like manner the *Thousand Character Essay*. This singular piece of composition was the production of a man who is said to have been supplied in prison with 1,000 different characters jumbled together, and to have been ordered to make out of them a poem. He accomplished the feat in a single night, but his hair turned white with the effort. The poem consists of 250 columns of four characters to each. Its subjects are varied and, from the nature of the case, inconsequent, as witness the following specimen:—

Like arrows, years fly swiftly by;
The sun shines brightly in the sky;
The starry firmament goes round;
The changing moon is constant found;
The heat remains, the fuel spent;
Be then on time to come intent;
etc., etc., etc."

"Here, again, the chief object is to store the pupil's memory with the shapes and sounds of a large number of written symbols; and by the time that the *Thousand Character Classic* has been mastered, it follows that 1,000 new characters will have been added to the boy's stock-in-trade, besides which he will have acquired a knowledge of a very useful cardinal series of numbers from 1 to 1,000, these characters being constantly employed as such in every department of life. The next step is an important one, analogous to the old school transition from *Delectus* to *Cæsar*—from the elementary to the advanced—and it is generally with renewed interest that the budding student opens at the first page of *The Four Books*, a collection of writings which form the leading feature in the great competitive tests, to which he will hereafter be subjected [see ÆSTHETIC PRODUCTS]. These *Four Books* are now committed, one by one, to memory, in precisely the same way as the two foregoing primers, anything like explanation or consultation of the authorised commentary being postponed until some progress has been made in the arduous task of learning by heart. Meanwhile the boy is taught to write, shaping his characters in accordance with accepted canons of elegance and finish, by means of a copy placed under a semi-transparent sheet of paper and traced over and over, until the pupil acquires some freedom of manipulation and is able to imitate from sight. The proper way to hold the camel's hair brush, used as a pen, and the method of rubbing ink on the ink-slab to a due consistency, equally come in for a share of the pupil's attention during the excessively long school hours—9 a.m. to 6 p.m.—which are customary in China. By-and-by, too, he is initiated into the art of essay-writing, perhaps the most practically important, and, at the same time, most unpractical, part of the Chinese educational scheme. It is on his proficiency in this respect that the student's ultimate success for the most part depends. A candidate, receiving a given theme, is not at liberty to sit down and write an essay in the terms or sequence which unassisted fancy may dictate. He must abide by fixed rules, introducing the subject in so many balanced sentences, developing it in so many more, summing up his arguments and finally reaching the conclusion according to received principles of composition. And so also with poems. These are invariably upon the same model—a stated number of characters to each line, arbitrary rules of rhyme, trite similes, and forced allusions to the past. The bookshops of Chinese cities are flooded with collections of essays and poems by famous authors of all ages, and these are carefully studied by intending competitors, in the hope of borrowing therefrom something of their vigour and refinement of style. Successful and even unsuccessful candidates often print their literary efforts in this direction, at any rate for private circulation; and good, bad, or indifferent, these are always much admired by the writers themselves. Hence a curious and caustic saying, that men generally prefer 'their own compositions, but other people's wives.' At this point the youth's name is entered at the bureau of the local magistrate, to accomplish which it is, however, first incumbent upon himself to show that his genealogical record has been unsoiled through the three preceding generations of father, grandfather, and great-grandfather, in the sense that none of these have been engaged in certain tabooed occupations, such as acting, holding the post of executioner, and some other menial offices in government employ. His surname and personal name are then carefully registered, and a note is appended as to his physical appearance, with a view to establish identity in cases of doubt. The first and second examinations to which our new undergraduate is admitted are merely tests leading on to the third, which, in point of fact is really the first of the series, being that at which the bachelor's degree is conferred."—*Giles, Historic China*, pp. 233–42. Examinees must be native born. See also *Tchêng-ki-tong, Ch. Painted by Thems.*, pp. 112–7; *Peking Gazette*, Feb. 20 and April 10, 1891. Though education was private, examinations were public; the system is therefore described under GEN. GOVT. (*q.v.*).

"Nearly opposite to the Observatory [in Peking] stands the Hall for Literary Examinations, where the candidates of the province assemble to write their essays."—*Williams, Midd. King.*, i. 72.

"The *Kung Yuen*, or Examination Hall, lies in the south-eastern corner of the Old City [of Canton], similar in size and arrangement to these edifices in other cities."—*Ibid.* i. 166.

Near the Protestant Cathedrals in Peking "are large schools and seminaries for the education of children and neophytes."—*Ibid.* i. 75.

In the country district of Wang Mo Khi, Ku Kien, "schools are very numerous; we may say that there is one to every fifteen houses; the Buddhist pagodas contain several libraries, besides those which the generosity of some families places at at the disposal of all, in the buildings consecrated to their ancestors and their archives. Lastly, besides these Buddhist temples, there is in each of the ten wards of Wang Mo Khi a peculiar building, called by Europeans a pagoda, but serving many other purposes besides those of worship." It is a large quadrangle, surrounded by colonnades, and serving as a market, a theatre, a kind of club or social meeting-place, and a caravanserai for travellers. It is also the place where the pageants of the trade-guilds and other festivals and processions are arranged, and the starting-point of the latter.—*Simon, Cité chinoise*, p. 255.

[De Courcy says that Kang-hi, struck with admiration by Father Pereira's skill in noting down times by ear, founded a college for studying Western music, of which his third son was president. This body published three large volumes "On the true doctrine of Music," but had no lasting influence.]—*L'Empire du Milieu*, p. 409.

[Yüan Yüan, when Governor of Chekiang, established colleges, schools, soup-kitchens, etc.]—*Giles, Bio. Dic.*, p. 976.

[For a map showing the chief examination centres, see *Little* (*Mrs. A.*), *Int. Ch.*, p. 296.]

[Prince Kung's memorial (1887) on the establishment of a college for the teaching of Western science is quoted in *ibid.* pp. 311–6.]

[For an account of the *Kuo Tzŭ Chien*, see GEN. GOVT.]

Charitable Institutions and Poor Relief.—"These institutions [foundling hospitals] are common all over China. As a rule they are mismanaged, and the children die by hundreds."—*Giles, Historic China*, p. 187.

[There are foundling hospitals, but on a small scale, and dependent on private donations only.]—*Barrow, Travels*, p. 176.

"The Foundling Hospital at Canton has accommodation for 500 foundlings, and, like the other benevolent institutions, is supported out of the salt-tax. The rooms, which are small, are furnished with beds for the nurses, and with cradles, made of rattan, for the infants. The cradles are suspended from the beams by cords, to protect them from the rats. . . . One rule of the institution prescribes a wet-nurse for two infants. I have, however, in my numerous visits not infrequently seen nurses burdened with three infants each. The cries which always assailed my ears as I entered convinced me that the children received little or no nourishment. The many deaths which take place among them afford the most incontestable proof of the fact. I have more than once seen five or six dead infants huddled together in a corner of the room. On entering the gates at an early hour, it is not unusual to see a coolie hastening on his way to the cemeteries . . . with a basket containing dead infants on his shoulder. As a rule the foundlings are French children. When they have reached the age of eight or ten months, they are sold to childless married people, or those who want future wives for their sons [so also in *Lettres Edifiantes*, Rec. xv. 83 *seq.*] . . . which is 'not infrequent among the peasantry in various districts of the southern provinces.' Those who buy them ostensibly for adoption sometimes sell them as slaves, etc., when grown up. There is a temple of Kum Fa attached to the hospital."—*Gray, China*, ii. 49–50. *Doolittle* (*Social Life*, ii. 171–4) describes a native foundling asylum at Foochow.

"In the city of Ningpo there exists a Native Society for the prevention of Infanticide . . . called the Ying-cheng-hwei 嬰孩會, 'Society for saving Infants.' It was certainly in operation here before the Taeping ravages in 1861–62 [but the writer is not aware when it was founded]. [Its] funds were at first dependent upon voluntary contributions, but . . . it has now degenerated into a system of extortion, though some good elements survive. The superintendent . . . appoints agents in different country districts; and these agents receive a reward of some 5,000 cash for each case of infanticide reported by them. Of course this hope of reward leads to numerous abuses; female infants still-born, or dying naturally a short time after birth, are often reported as drowned by the parents. The parents are punished in case of infanticide either by a money fine or by mulcting them in their land. I know a case where a poor man in despair at the birth of his eleventh daughter, drowned her, and was at once pounced down upon by the Society's agent, and a large piece of his field taken from him. Poor persons receive from 3,000 to 5,000 cash on the birth of female children, and with all its abuses the very knowledge of the existence of such an institution must act as a check upon the crime."—*N. and Q. on C. and J.*, ii. 81–2. See also *Milne, Life in Ch.*, pp. 48–72; *Nevius, China and the Ch.*, pp. 213–25.

"Another form of justice is that due to the infirm, mutes, blind, and deaf. . . . They are no more forgotten there than elsewhere, and I may say that the establishments provided for them, whether founded and supported by the State or by private charity, might well serve as models to countries where more is sacrificed to pomp and appearance than to the comfort of the inmates. I have seen instances in Chinese establishments of patients being allowed each a small enclosure of two rooms, with permission to have one of their relatives with them as a nurse."—*Simon, China*, Pt. i. p. 21.

In 1667, Têng Fu, Vice-President of the Board of Civil Office, "established an orphanage at Peking, the pattern for many such institutions throughout China."—*Giles, Bio. Dic.*, p. 225.

There are "orphan asylums in almost every city, and frequently in villages societies for aid to widows; free day schools everywhere, supported by the rich; public asylums for the sick, old, and poor, sustained by the government,—and, as these are apt to be ill-provided, support by the clans, of their own poor; a general belief in the meritoriousness of alms-giving, and in the inauspiciousness of sending beggars away empty; gratuitous distribution of medicines, and of books of moral edification (*Nevius*, pp. 214–225; *Morache*, p. 118). Not less numerous are societies for aiding indigent persons in paying marriage and burial expenses; for distributing second-hand clothing; for establishing granaries; for building roads and bridges to facilitate industry; for saving drowning persons, and furnishing biers for the drowned; for taking care of foundlings and lepers (*Doolittle*, ii. 193–196; *De Mas*, i. 273, 274; *Ch. Repos.*, Aug., 1846; *Speer*, pp. 636–7; *Williams*, ii. 282). There are no hospitals for the insane, for deaf mutes, cripples, or the blind. . . . Mutual-aid Associations have their bureaus and halls in the cities. . . . It is common for wealthy people to furnish great jars of tea under canopies for travellers and wearied labourers, and especially on the mountain roads (*De Mas*, i. 273–4). There is a college at Ningpo to aid the poor in getting educated, deriving its income from lands and products, and founded two hundred years ago (*Ch. Repos.*, Jan., 1844). Many reports from sanitary institutions in Chinese cities indicate great defects in their management during the present century; they have suffered severely from the agitated and depressed condition of the country; and the extreme pecuniary distress of the government has, of course, caused its benevolent activities to fall into decay (*Girard, La France en Chine*, pp. 170–80; *Williams*, ii. 283; *Ch. Rec.*, Feb., 1870; *Ch. Repos.*, Jan., 1844; *Lockhart, Medical Missionary*, for native institutions in Shanghai). Yet in all prosperous times the imperial bounty has flowed out in fixed channels, to relieve the miseries arising from local floods or famines, and to secure the comfort and happiness of the people. The patriarchal theory makes it a prime duty of the ruler to provide for their physical needs, and especially in the matter of food. Hence granaries have been maintained from earliest times on the frontiers, at the capital, and in all the departments, in which the abundance of favourable years has been stored up for years of famine; and edicts exhorting to private benevolence abound at all periods."—*Johnson, Or. Rel.—Ch.*, pp. 43–5.

Yang Tsung-jên, who became Viceroy of Hu-Kuang in 1722, "introduced there many reforms, and also established a system of relief for the poor."—*Giles, Bio. Dic.*, p. 916.

"The Emperor gives liberal alms, from his private purse, to sufferers by fires, drought, or floods."—*De Courcy, L'Emp. du Mil.*, p. 274.

"The flooding of the Hoangho [1723] entailed a famine, which spread such desolation throughout the northern provinces that it is affirmed, on credible authority, that 40,000 persons were fed at the state expense in Pekin alone for a period of four months."—*Boulger, Short Hist.*, p. 157.

"Not only do the rich assist their unfortunate friends, but the poor also come to the aid of those poorer than themselves. If you belong to the literary class, all your literary friends subscribe to help you. If you are a labourer, your comrades act in the same way. It is a custom among people of the same class. There are even subscriptions among friends to contribute towards the marriage of one of their circle . . . to assist a friend's widow or to educate his children. The human being is not isolated."—*Gray, China*, ii. 49–50.

"Independently, however, of Buddhism, the Chinese have a great idea of the efficacy of charitable and merciful acts, and of the merits of alms-giving. 'The good and evil deeds of the fathers (they say) will be visited on the children and grandchildren.' The Emperor himself, on occasions of drought and public calamities, or when some of the imperial house are ill, grants general pardons and amnesties. The same ideas are attached to public fasts, when a severe interdict is laid on the slaughter of animals, and no meat can be offered for sale. . . . The system of promiscuous alms-giving is one principal encouragement to beggary. It has been mistakenly asserted that there are no beggars in China, while there are, in fact, a great many, notwithstanding the religious attention paid to the claims of kindred. Beggars are seldom turned away from houses and shops without a trifle, which they extort by their whining and persevering importunities."—*Davis, Chinese*, ii. 90–1.

"There is a beggars' guild in every Chinese town of any size. Its members levy regular contributions from the various shopkeepers, who thus purchase an immunity from molestation."—*Giles, Historic China*, p. 187.

"Beggars find their lodgings in the porches and squares of temples, or sides of the streets, and nestle together for mutual warmth. This class is under the care of a headman, who, in order to collect the poor-tax allowed by law, apportions them in the neighbourhoods with the advice of the elders and constables. During the day they go from one door to another and receive their allotted stipend, which cannot be less than one cash to each person. They sit in the doorway and sing a ditty or beat their clap-dishes and sticks to attract attention, and if the shopkeeper has no customers he lets them keep up their cries, for he knows that the longer they are detained so much the more time will elapse before they come again to his shop. Many are blind, and all present a sickly appearance, their countenances begrimed with dirt and furrowed by sorrow and suffering. The very difficult question, how to assist, restrain, and employ the poor, has been usually left to the mercy and wisdom of the municipal officers in the cities; and the results are not on the whole discreditable to their humanity and benevolence. Many persons give the headman a dollar or more per month to purchase exemption from the daily importunity of the beggars, and families about to have a house-warming, marriage, or funeral, as also newly arrived junks, are obliged to fee him to get rid of the clamorous and loathsome crowd."—*Williams, Middl. King.*, i. 742.

"Private alms of rice or clothes are frequently given, and the modes of collecting the poor-tax are very direct and economical, bringing the householders into some intercourse with the beggars in their neighbourhoods, but offering no rewards to tramps and idlers. A retreat for poor aged and infirm or blind people is situated near the east side of Canton, the expenses of which are stated at about seven thousand dollars, but the number of persons relieved is not mentioned. The peculation and bad faith of the managers vitiate many of these institutions, and indispose the charitable to patronize them. Lazarettos are established in all large towns in Southern China, where a large entrance fee will secure a comfortable living for these outcasts to the end of their days; the prevalence of the disease leads everybody to aid the measures taken to restrict its ravages." "Similar establishments [foundling hospitals] are found in all large towns, some of them partly supported by the government. . . . These hospitals seem to be of modern origin, less than two centuries old, and may have been initiated from or suggested by the Roman Catholics. Candida, a distinguished convert about 1710, did much to establish them."—*Ibid.* ii. 264–5.

"In large towns other voluntary societies are found, having for their object the relief of suffering. . . . Humane societies for restoring life to persons rescued from the water, and providing coffins if they are dead, exist along the riverine towns. Associations to give decent interment to the poor in a public potter's field are found in large cities, where gratuitous vaccination is often given to all who apply. Soup kitchens are constantly opened as cold weather comes on, and houses prepared for vagrants and outcasts who have been suddenly reduced. Societies for the relief of indigent and virtuous widows are of long standing, and a kind of savings bank for the purpose of aiding a man to get married or to bury his parents exists among the people." "The government is obliged to expend large sums almost every year for relieving the necessities of the starving and the distressed, and strong calls are made on the rich to give to these objects."—*Ibid.* ii. 265–6.

"The bearers were swabbing themselves down and refreshing themselves at a rustic stall (under the inevitable travellers' banyan tree, which shades every Sz Ch'wan village) with a cup of gruel and a smoke."—*Parker, John Chinaman*, p. 313.

"In the summer months wealthy folk cause huge pans of ready-made tea to be placed at the corners of streets or in crowded thoroughfares, for the convenience of the poor; very much as permanent drinking fountains are now erected in our cities."—*Medhurst, For. in Far Cathay*, p. 100.

Vaccination Institutes.—"There are (1870) in Peking several institutions for vaccinating children. Introduced at Canton early in the present century, the practice of vaccination was brought to the capital forty or fifty years ago. . . . The public vaccinators have regular days for vaccinating children brought to them, and also frequently visit the families of princes for the same purpose. New supplies of vaccine lymph, when it fails, are now regularly obtained by the Chinese operators from the English missionary hospital."—*Edkins*, in *Williamson, Journeys*, ii. 367.

Anti-Opium Associations.—"Both in Hong Kong and Canton local associations have lately been formed by natives for the purpose of composing and publishing tracts and placards with a view to warn the people against the evils of opium-smoking. We have seen several such placards issued by the Canton Association. The Hong Kong Anti-Opium Society has not yet, as far as we are aware, published anything, and we are curious to see what this Society has to say on the subject, as we understand the local opium farmer is himself a member of the local Anti-Opium Society's Committee."—*Ibid.* iv. 267.

Foreign Hospitals.—[Over twenty hospitals and dispensaries were opened by missionaries, between 1820 and 1876, in Macao, Canton, and Hong Kong. A total of 1200 *in*-, and 7221 *out*-patients were registered at the Hong Kong Hospital between 1843 and 1847. In 1857, a Chinese named Wong (the first to obtain a European medical degree) conducted a dispensary at Hong Kong, and afterwards (1858–60), the Kam-li-fan Hospital at Canton. The total number of in-patients at the Medical Missionary Society's Hong Kong hospital, from 1854 to 1876 was 10,979.]—*Ch. Rev.*, iv. 329–31.

Life-saving Institutions.—"Admiral Ho 'sat' for many years as Brigadier-General of the Ichang division; . . . he also has under him a very efficient life-saving 'navy,' locally called 'red boats'; . . . one is stationed at every dangerous spot, in order to render gratuitous assistance to any and every person. If (as daily happens) a cargo-junk breaks adrift, gets into a whirlpool, or snaps her rope above a rock, out flies a red boat like a spider from some concealed nook, and with a few sweeps of her powerful oars is on the spot within a few seconds to seize on (and save, not devour) the poor struggling flies."—*Parker, John Chinaman*, p. 236.

"To save their cities from destructive fires the Chinese observe many necessary precautions. In the streets of many of their cities wells are sunk, called Taipingtsieng, or great peace wells. They are large, and contain abundant supplies of water, and over the mouth of each a stone slab is placed . . . only removed when [a] neighbouring house is on fire. It is provided by law that there shall be placed in various parts of a Chinese city large tubs, to be kept at all times full of water. . . . Earthenware jars containing water [are also frequently placed on the tops of houses.] . . . In each large city there are several fire brigades, maintained entirely by . . . the citizens. The fire engines, water-buckets, and lanterns which belong to them, are kept, as a rule, in the different temples of the city; and each brigade is distinguished by a peculiar name. [Each guild defrays the expenses of a fire-brigade of its own, and the men of the latter have a distinctive uniform.] Besides these provisions by the citizens themselves . . . the local government of each city are called upon to render their assistance. [At] Canton, each magistrate . . . has in his service several men, whose duty it is, on the occasion of a fire, to prevent robberies, [and others] to assist in putting out the fire. . . . [There are at Canton 48 guard-houses, from each of which two men are sent, when a fire breaks out. . . . Every month,] the provincial judge and the provincial treasurer . . . are supposed to inspect all the government servants whose duty it is to assist in putting out fires. . . . It is enacted that, in the case of eighty houses being destroyed by fire, all the officers of the city in which the conflagration occurred shall be degraded in rank one step; and that in the case of ten houses being destroyed, the matter shall be reported to the central government at Pekin. (*Cf. Williams, Midd. King.* i. 743, who, however, differs somewhat in his description.) A few days after a conflagration, the members of [the] fire-brigades present [at it] receive, as an acknowledgment, roast pigs, jars of wine, and small sums of money. The men [who hold] the horses attached to the fire-engines, receive . . . extra rewards. Wounded firemen are remunerated according to the nature of their wounds. . . . Persons who, through carelessness or otherwise, are the cause of fires, are, when caught, severely punished."—*Gray, China*, i. 12–14.

Loan Societies and Pawnbrokers.—A loan society "may be started in the first instance, by a deposit of so much per member, which sum, in the absence of a volunteer, is handed over to a manager, elected by a throw of the dice, whose business it is to lay out the money during the ensuing month to the best possible advantage. Frequently, one of the members, being himself in want of funds, will undertake the job; and he, in common with all managers, is held responsible for the safety of the loan. At the end of the month, there is a meeting at which the part manager is bound to produce the entire sum entrusted to his charge, together with any profits that may have accrued meanwhile. Another member volunteers, or is elected manager, and so the thing goes on, a running fund from which any member may borrow, paying interest at a very low rate indeed. Dividends are never declared, and consequently some of these clubs are enormously rich; but any member is at liberty to withdraw whenever he likes, and he takes with him his share of all moneys in the hands of the society at the moment of his retirement. To outsiders, the market rate of interest is charged, or perhaps a trifle less, but loans are only made upon the very best securities."—*Giles, Ch. Sketches*, pp. 47–8.

[*Giles* (*ibid.* pp. 45–7) says that 3 per cent. per month is the maximum interest allowed by Chinese law: the lender has the security of one or more "middlemen," generally shopkeepers whose solvency is unimpeachable—but they may, and often do, repudiate their liability, without giving a reason. Creditors avoid going to law to recover debts, because: 1. Both creditor and debtor have to bribe the gate-keeper of the magistrate's yamên, before they can present their petitions. 2. They have to pay the magistrate and his subordinates ("make a slit"). In many yamêns there is a regular scale of charges, but this is almost always exceeded in practice. 3. When the case is heard, it can as a rule be only gained by bribery. 4. The successful litigant has to "sew up the slit," by paying a further fee before he can be allowed to depart. Creditors therefore prefer taking the law into their own hands, and going, with a tea-pot, a pipe, and a mattress, to the shop of the debtor or his security, and staying there till paid. If the debtor cannot pay at once, he will take a percentage out of the daily receipts till the debt is discharged. No violence is resorted to, as the local officials would then interfere.]

"The act of pledging personal property in order to raise money is regarded more in the light of a business transaction than it is with us, and less as one which it is necessary to conceal from the eyes of the world at large. Nothing is more common than for the owner of a large wardrobe of furs to pawn them one and all at the beginning of summer, and to leave them there until the beginning of next winter. The pawnbrokers in their own interest take the greatest care of all pledges, which, if not redeemed, will become their own property, though they repudiated claim for damage done while in their possession; and the owner of the goods, by payment of the interest charged, is released from all trouble and annoyance." "Pawnshops in China are divided into three classes, one of which has since the days of the T'aip'ings totally disappeared from all parts over which the tide of rebellion passed. This is the *tien tang*, whose property could be left for three years without forfeit, and to establish which it was necessary to obtain special authority from the Board of Revenue in Peking. At present there are the *chih tang* and the *ssŭ ya*, both common to all parts of China, and to these we shall confine our remarks. The former . . . is a private institution, . . . but licensed on payment of a small fee by the local officials, and regulated in its workings by certain laws which emanate from the Emperor himself. A limit of 16 months is assigned, within which pledges must be redeemed, or they become the property of the pawnbroker; and the interest charged, formerly 4 per cent., is now fixed at 3 per cent. *per month*. Before the license can be obtained, security must be provided for the existence of sufficient capital to guard against a sudden or fraudulent collapse. For any article not forthcoming when the owner desires to redeem it, double the amount of the original loan is recoverable from the pawnbroker. Should any owner of a pledge . . . lose his ticket . . . he may proceed to the pawnshop with two substantial securities, and if he can recollect the number, date, and amount of the transaction, another ticket is issued to him, with which he may recover his property at once, or at any time within the original 16 months. Pawn-tickets are not unseldom offered as pledges, and are readily received, as the loan is never more than half the value of the deposit; and tickets thus obtained are often sold either to a third person or perhaps to the pawnbroker who issued them in the first instance. Formerly, when the interest payable was 4 per cent. per month, it was a standing rule that during the last three months in every year, *i.e.* the winter season, pledges might be redeemed at a diminished rate, so that poor people should have a better chance of getting back their wadded clothes. . . . But since the rate of interest has been reduced to 3 per cent., this custom has almost passed away; its observance is, however, sometimes called for by a special proclamation of the local magistrate, when the necessaries of life are unusually dear and the times generally are bad. The following is the translation of a ticket issued by one of these shops, which may often be recognised by the character for *pawn* painted on an enormous scale in some conspicuous position. 'In accordance with the instructions of the authorities, interest will be charged at the rate of 3 per cent. [per month] for a period of 16 months, at the expiration of which, the pledge, if not redeemed, will become the property of the pawnbroker, to be disposed of as he shall think fit. All damages to the deposit arising from war, the operations of nature, insects, mildew, &c., to be accepted by both sides as the will of Heaven. Deposits will be returned on presentation of the proper ticket, without reference to the possession of it by the applicant.' Besides this, the name and address of the pawnshop, a number, description of the article pledged, amount lent, and finally the date, are entered in their proper places upon the ticket, which is stamped, as a precaution against forgery, with the private stamp of the pawnshop. Jewels are not received as pledges, and gold and silver only under certain restrictions." "The other class is not recognised by the authorities, and its very existence is illegal, though of course winked at by a venial executive. Shops of this kind, which may be known by the character for *keep*, are very much frequented by the poor. A more liberal loan is obtainable than at the licensed pawnbroker's, but . . . the rate of interest charged is very much more severe. Pledges are only received for three months, and on the ticket issued there is no stipulation about damage to the deposit. No satisfaction is to be got in case of fraud or injustice to either side; a magistrate would refuse to hear a case either for or against one of these unlicensed shops. They carry on their trade in daily fear of the rowdies who infest every Chinese town, granting loans to these ruffians on valueless articles which in many cases are returned without payment either of interest or principal, thereby securing themselves from the disturbances which 'bare poles' who have nothing to lose are ever ready to create at a moment's notice, and which would infallibly hand them over to the clutches of hungry and rapacious officials. The counters over which all business is transacted are from 6 to 8 feet high, strongly made, and of such a nature that to scale them would be a very difficult matter, and to grab anything, with the view of making a bolt for the street . . . impossible. In a Chinese city, where there is no police force to look after the safety of life and property, and where everybody prefers to let a thief pass rather than risk being called as a witness before the magistrate, it becomes necessary to guard against such contingencies as these. As things are now, pawnshops may be considered the most flourishing institutions in the country, and in these establishments many even of the highest officials invest savings squeezed from the districts entrusted to their paternal care."—*Ibid.* pp. 54–8.

Burial Societies.—"The Foochow correspondent of the *Shên Pao* says that in that city there are burial societies (发毋轩之會), which, on a monthly payment of 300 cash (which ceases after continuing eight years), provide the sum of 20,000 cash, wherewith to defray burial expenses on claim (報故)."—*Ch. Rev.*, xiii. 429.

Libraries.—"It [Nanking] is renowned, too, for its scholars and literary character, and in this particular stands among the first places of learning in the country. . . . Its large libraries and book stores, all indicating and assisting literary pursuits, combine to give it this distinguished position. In the monastery on Golden Island, near Chinkiang, a library was found by the English officers."—*Ibid.* i. 103.

"It is not, I believe, generally known that circulating libraries exist in Canton, and considering the reading and money-saving habits of the Chinese, it is to be presumed throughout the Empire. It would be difficult to distinguish the Cantonese establishments of this kind from ordinary second-hand book-shops, were it not that the upright signboards of the former display the characters 古今書賃 in addition to the shop-name. . . . It will be found that historical romances and novels are the only mental food supplied, and a choice can easily be made by an inspection of a well-thumbed catalogue. A register is kept in which the names and addresses of those taking out books are entered. The usual rate at which books are lent is . . . a cash a day for each volume. . . . Fines are . . . inflicted when a book is lost, torn, or injured in any way, or [not returned at the proper time], and . . . the rules of the library, as well as its name [are] stamped on the outside cover of each volume. A Chinese friend informs me that very few pawnbrokers would venture to make advances on books marked in this way. . . . Security [is] required [of any reader personally unknown to the library keeper.]" "Only four or five circulating libraries of the class I have described, exist, so far as I am aware, in Canton; but the Chinese, not content with these establishments, seem determined that literature should be brought to their very doors, for portable travelling circulating libraries are also to be met with. A man in charge of two large boxes on which also the [above] characters appear conspicuously may be occasionally seen trudging along, and now and then halting at the request of some Chinese [wishing to hire a novel]. Of course these book-lenders always take care to return for the books at the proper time."—*N. and Q. on C. and J.*, i. 100–1.

"Journalism has proved to be a terrible thorn in the official side. It was first introduced into China under the ægis of an Englishman who was the nominal editor of the

Shên Pao or *Shanghai News*, still a very influential newspaper. For a long time the authorities fought to get rid of this objectionable daily, which now and again told some awkward truths, and contained many ably-written articles by first-class native scholars. Eventually an official organ was started in opposition, and other papers have since appeared. An illustrated Chinese weekly made a good beginning in Shanghai, but unfortunately it soon drifted into superstition, intolerance, and vulgarity."—*Giles, Hist. of Ch. Lit.*, pp. 428-9. See also DISTRIBUTION.

Banks and Insurance Companies.—"The mysteries of banking and insurance are familiar to them. In all the great cities the former function is fulfilled by respectable merchants, who afford facilities for commerce, payment of taxes, and the administration of the State. Mercantile credit is everywhere sustained by mutual insurance companies, by which aid is given in business difficulties (*Courcy*, p. 472; *La Chine Ouverte*, p. 166). So universal are mutual loan societies, that, out of twenty millions of people, scarcely a thousand will be found who are not in the course of their lives associated (*N.-C.B.R.A.S.*, Dec., 1868). Neither this nor any other form of joint-stock company was ever reached by the Greeks. There is no class in China that cannot rise in this way to high position. Honest management of such interests is a point of honour (*Giles, Sketches*, p. 51)."—*Johnson, Or. Rel.—Ch.*, pp. 53-4.

"There is no system of insuring against fire."—*Williams, Midd. King.*, i. 739.

Guilds, Clubs, etc.—"The people crystallize into associations; in the town and in the country, in buying and in selling, in studies, in fights, and in politics, everybody must co-operate with somebody else—women as well as men. To belong to one or more *hwui*, and be identified with its fortunes, and enlisted in its struggles, seems to be the stimulus to activity, resulting from the democratic element in the Chinese polity, to which we are to refer . . . many singular features of the national character. In trade capitalists associate to found great banks, to sell favourite medicines, or engross leading staples; little farmers club together to buy an ox, pedlers to get the custom of a street, porters to monopolize the loads in a ward, or chair-bearers to furnish all the sedans for a town. Beggars are allotted to one or two streets by their *hwui*, and driven off another's beat if they encroach. Each guild of carpenters, silkmen, masons, or even of physicians and teachers, works to advance its own interests, keep its own members in order, and defend itself against its opponents. Villagers form themselves into organizations against the wiles of powerful clans; and unscrupulous officials are met and balked by popular unions when they least expect it. Women and mothers get up a company to procure a trousseau, to buy an article of dress or furniture, to pay for a son's wedding. Associations are limited to a year, to a month, to a decade, according to their design. These various forms of co-operation teach the people to know each other, while they also furnish agencies for unscrupulous men to oppress and crush out their enemies, gratify their revenge, and intimidate enterprise."—*Williams, Midd. King.*, ii. 87-8.

"Workmen of the same profession form unions, each person contributing a certain sum on the promise of assistance when sick or disabled, and this custom prevents and alleviates a vast amount of poverty."—*Ibid.* i. 277-8.

"In the towns the guilds represent family life on a larger scale. A man comes from Kiangsi, let us say, to Chungking, over a thousand miles away, and having probably spent months on the journey. He has brought no letters of introduction, but he straightway goes to the guild-house of his province, . . . and there, making due reverence, he relates how he is So-and-so, the son of So-and-so, and straightway everyone there knows all about him, and can easily ascertain if his story be correct. Here are friends found for him at once, a free employment agency, if that is what he is after, or a bureau of information about the various businesses of the city, their solvency and the like. Here is a lovely club-house, where he can dine or be dined, have private and confidential conversations in retired nooks, or sit with all the men of his province sipping tea or eating cakes, while a play is performed before them by their own special troupe of actors, who act after the manner of their province."—*Little* (*Mrs. A.*), *Int. Ch.*, pp. 539-40.

"If occasion needed, the guild would see after the newcomer's funeral, even give him free burial if the worst came to the worst. . . . In every guild-house there is a temple. And before every great banquet part of the ceremony of marshalling the guests to their seats (and a very stately ceremony it is) is pouring a libation of wine before an altar in the banquetting-hall, before which also each guest bows in turn as he passes to the place assigned him."—*Ibid.* p. 541.

"Chinese cities abound in travellers' clubs and mercantile corporations, and in halls for conversation and discussion on trade and administration, on local interests and public rites. Secret societies—benevolent, political, religious, and of all qualities of aim—honeycomb the national life, as vigorously as they did France on the eve of her great Revolution, or as they do America in the present day of political and social transition."—*Johnson, Or. Rel.—Ch.*, p. 55.

"The assembly halls or club-houses are numerous, and in their internal arrangements form a curious feature of native society. It is the practice among residents or merchants from other provinces to subscribe and erect on the spot where they are engaged in business a temple, dedicated to the patron deity of their native province, in which a few priests are supported, and plays acted in its honour. Sometimes the building is put in charge of a layman, called 'a master of ceremonies,' and the current expenses defrayed by subscription. The club-houses are places of resort for travellers from the several provinces or districts, and answer, moreover, to European coffee-houses, in being points where news from abroad is heard and exchanged."—*Williams, Mid l. King.*, i. 122.

"The various guilds among the people, and the clubs of scholars and merchants from other provinces, have, each of them, [in Canton] public halls, which are usually called *consoo* houses by foreigners, from a corruption of a native term *kung sz'*, *i.e.*, public hall; but the usual designation is *kwui kwan*, or 'Assembly Hall.' Their total number must be quite 150, and some of them are not destitute of elegance."—*Ibid.* i. 167.

The portion of Peking "lying south of the cross-wall is inhabited mostly by Chinese, and contains hundreds of *kwui-kwan*, or club-houses, erected by the gentry of cities and districts in all parts of the empire to accommodate their citizens resorting to the capital."—*Ibid.* i. 76.

"The assembly-halls, or club-houses, form a peculiar feature of Chinese society. . . . They are built sometimes by a particular craft as its guildhall, or more commonly erected by persons resorting to the place for trade, study, or amusement, who subscribe to fit up a commodious establishment to accommodate persons coming from the same town. In this way their convenience, assistance, oversight, and general safety are all increased. All buildings pay a ground rent to the Government, but no data are available for comparing this tax with that levied in western cities. The Government furnishes the owner of the ground with a *hung ki*, or 'red deed,' in testimony of his right to occupancy, which puts him in possession as long as he pays the taxes. There is a record office in the local magistracy of such documents."—*Ibid.* i. 739.

"The popular associations in cities and towns are chiefly based upon a community of interests, resulting either from a similarity of occupation, when the leading persons of the same calling form themselves into guilds, or from the municipal regulations requiring the householders living in the same street to unite to maintain a police and keep the peace of their division. Each guild has an assembly hall, where its members meet to hold the festival of their patron saint, to collect and appropriate the subscriptions of the members and settle the rent or storage on the rooms and goods in the hall, to discuss all public matters as well as the good cheer they get on such occasions, and to confer with other guilds. The members often go to a great expense in emulating each other in their processions, and some rivalry exists regarding their rights, over which the government keeps a watchful eye, for all popular assemblies are its horror. The shopkeepers and householders in the same street are required to have a headman to superintend the police, watchmen, and beggars within his limits . . . . Several of the leading men in the city [Canton] are known to hold meetings for consultation in still more popular assemblies for different reasons of a public and pressing nature. There is a building at Canton called the *Ming-luñ T'ang*, or 'Free Discussion Hall,' where political matters are discussed under the knowledge of government, which rather tries to mould than put them down, for the assistance of such bodies, rightly managed, in carrying out their intentions, is considerable, while discontent would be roused if they were forcibly suppressed."—*Ibid.* i. 487-8.

[The Sacred Edict (1661-1723) contains some allusions to freemasonry.]—*Giles, Historic China*, pp. 380-1.

BODILY MUTILATIONS.

Early Feudal Period (*c.* 2357 *to* 1122 B.C.).—*Table I.*

"There was a great drought for seven years. The Astrologer divined and said: 'Human victims should be offered during prayer.' T'ang replied: 'I prayed for rain for the sake of the people; if human victims are to be offered during prayer, I would request that I may bear the sacrifice myself.' At that he fasted, and cut off his hair and nails, and prayed outside the city of Sang Lin, reproaching himself with six matters. [Was the government extravagant? Did the people lack occupation? Was the palace too high? Were the maid servants too many? Did corruption prevail? Were revilers too many?] Before he had finished speaking, a great rain descended over an area several thousands of *li* in extent."—*Kang chien ch'üan pien, Shang T'ang chi*, *c.* 1, p. 41*a*.

[Branding, cutting off the nose, cutting off the ears, cutting off the feet, and castration were among the punishments inflicted. See *Legge, Ch. Class.*, III. i. 38-9; ii. 591, and notes. *Cf.* LAWS.]

"Pi Kan, in giving advice to the sovereign, disobeyed [the sovereign's orders] to take his departure for three days. Chou [Wang], greatly angered, said: 'Pi Kan, you say you are a sage; I hear that the sage's heart has seven openings, but I do not know whether that is really so.' So he killed Pi Kan, and cut out his heart."—*Kang chien ch'üan pien, Shang chou chi*, *c.* 1, p. 53*b*.

"Tai-Po and Yü-Chung, knowing that their father wished to bequeath the rank to Chi Li and then hand it on to Ch'ang, fled [Yü-Chung] to Chin [*i.e.*, Ch'u] and [T'ai-Po] to Mang [*i.e.*, Wu], [the former] covering his body and cutting his hair [after the fashion of the Ch'u State]."—*Shih chi Yüan chien lei han*, *c.* 260, *Jên pu*, p. 17*a*.

"The civilized settlers from Anterior Asia, who reached the north-west of China about 2282 B.C., were, as disclosed by the inquiry argued in my paper on *The Black-heads of Babylonia and Ancient China* (1892), a fair race, with blue eyes and nut-black hair. Unlike the greater part of the populations inhabiting their adopted country, they did not tattoo their bodies for the sake of taste and ornament, as in the focus of culture to which they were indebted for their achievements; marking indelibly the skin by pricking (not by gashing or by burning) was among them a stigma of infamy or servility. Slaves were thus stamped among them, as in Babylonia. Moreover, tattooing the forehead was one of their five standard punishments, reducible by mulcts."—*Bab. and Or. Rec.*, vi. 192.

"If they did not practise tattooing for ornamental purposes, they appear to have practised another custom of a more singular character. They would flatten the skull of their babies, that it should assume in growing an approved shape. This shape was that of a head tapered at the top, so that the lower part, that of the mouth, should have a broad and large appearance. We are not told from where they had derived this ideal of beauty, of which they liked to see the distinctive features thus exaggerated by artificial compression."—*Ibid.* p. 192.

"Their traditional descriptions of their first heroes are plainly suggestive of the practice. Hwang-ti was reputed to have a large front, and a forehead tapering like that of a dragon (*Hok'u*). Of Tchwen-hiüh it is said that his head was as broad as a shield, and pointed as a spear. Yao had a face sharp above, and broad below, and bearded. Yü, the great, had a tiger's nose and a large mouth. Tch'eng t'ang, founder of the Shang dynasty, had the lower part of his face broad, and it tapered down; it was white, and whiskered. Such are the portraits preserved by tradition, and handed down to posterity in the Bamboo Books, several centuries before the Christian era. Their probable genuineness with reference to the ideal standard is shown by the opposite portraits which were made of rebels. For instance, in the last year of Tchwen-hiüh's reign (*c.* 2147 B.C.), a certain Shuh-ki wanted to interfere with the works of damming the great river, which were then going on. This revolt was put an end to by the Prince of Sin, the future Ti-Kuh. Shuh-ki was not of Chinese descent, and his head was square, not tapered above. This is specially stated in the *Shan Hai King*, and in the annals of the Bamboo Books."—*Ibid.* p. 194.

"A confirmative evidence of the antiquity of that custom among the early civilized Chinese occurs in one of their ancient written characters, where so many features of their customs, habits, and notions were forcibly registered for our enlightenment. The complex symbol *shih*, great, made of stone and head, and therefore meaning head made great by stone, occurs among their oldest characters, thus describing the flattening of the head by a stone. . . . The favourable meaning of the complex symbol shows the esteem with which it was looked upon in olden times."—*Ibid.* p. 194.

"Having in mind the indisputable origin from Anterior Asia of so many features of the civilization introduced by Nai Hwang-ti and his followers, we cannot help thinking that so peculiar a custom must have come from the same source as so many others have done. And it seems at first glance that we are not mistaken in our surmise. Going westward to the old focus, we met it twice on our way. We are indebted for the following remarks to the famous Buddhist pilgrim, Hiuen-tsang:—At Kiu-tchi, the former Kiu-tse and the modern *Kucha*, he noticed that the children of common parents had their heads flattened by the pressure of a wooden board. At *Kie-sha*, the modern Kashgar, he noticed also that the custom was, when a child was born, to compress his head with a wooden board (*Cf.* S. Beal, *Buddhist Records*, I. 19, ii. 306). This was in the 7th century of our era, and therefore may or may not be survivals of olden times left *in situ*. A more satisfactory evidence is that which we can derive from the classical writers, Jornandes, Ammianus Marcellinus, and Priscus about the same practice among the Huns of Attila. Cranial deformation was also customary among the Colcharoi or Makrokysteloi of Hippocrates, and the Signum of Strabo, near the Caspian Sea, but it belonged to another class of deformation."—*Ibid.* p. 194-5. See also *Lacouperie, West. Orig. of Early Ch. Civ.*, p. 318.

Later Feudal Period (1122 *to* 221 B.C.).—*Table II.*

"It was customary to cut the ears from the bodies of the slain."—*Giles, Historic China*, p. 10.

[The *P'ei wên yün fu* (*c.* 95, p. 59) quotes the *Li chi* to the effect that at the end of the 3rd moon the hair was cut so as to form a top-knot. The *Yü p'ien* explains this as applying to children.]

"If babies do not have their heads shaved they will have stomach-ache."—*Han Fei-tzŭ* [*Hsien hsüeh p'ien*], *P'ei wên yün fu*, *c.* 55, p. 38*b*. The heads were pricked with a needle, only once, and soon after birth.

"In the Wu State they cut off the hair and tattooed the body."—*Ku liang chuan, yen shan wai shih*, *c.* 7, p. 9*b*.

"Wu Ch'i, when going away from home to seek an official post, bit his arm [swearing that if he did not succeed in obtaining office] he would not return."—*Yüan Chieh-jang Jung Chou piao, P'ei wên yün fu*, *c.* 63, vol. 4, p. 58*a*. Other instances of biting the arm occur in *Shih chi Wu Ch'i chuan*, *c.* 65, p. 2; of cutting off the arm, in *Yüan chien lei han*, *c.* 261, *Jên pu*, p. 19*a* (*bis*); of cutting off the feet, in *Han Fei Tzŭ, P'ei wên yün fu*, *c.* 98, p. 94*a*; *Kang chien ch'üan pien, Chou Hsien Wang*, *c.* 3, p. 17*a*; of biting or biting off fingers, in *Sou shên chi, P'ei wên yün fu*, *c.* 34*a*, p. 68*b*; *Pan Ku Yu t'ung fu, Yüan chien lei han*, *c.* 261, *Jên pu*, p. 16*a*; of cutting off hands and feet, in *ibid.*, p. 12*b*; of cutting off flesh, in *Kang chien ch'üan pien, Chou Hsiang Wang*, *c.* 2, p. 52*a*; of cutting off the nose, in *Han Tzŭ, Yüan chien lei han*, *c.* 260, *Jên pu*, p. 13*b*; of plucking out the eyes, in *Kang chien ch'üan pien, Chou An Wang*, *c.* 3, p. 10*a*; and of piercing the ears in *Tso chuan chü chieh, Hsi Kung*, *c.* 2, p. 39*a*.

[An instance of pulling out teeth as a punishment is given in *Kang chien ch'üan pien, Chou Nan wang*, *c.* 3, p. 49*a*.]

"Kou Ch'ien, Prince of Yüeh, ordered Lien Ch'i to present the people [*i.e.*, some territory] to Prince Chin [of Ch'u]. An official belonging to Chin came out to receive him, and said: 'Unless you wear a head-covering, you cannot have audience of my sovereign.' Lien Ch'i said: 'The people of Yüeh live on the Chekiang seaboard; they clothe their bodies and cut their hair, and that is all. Now, having come to your State, if it is insisted that unless I wear a head-covering I cannot see your sovereign, then when your State sends an Envoy to Yüeh, he in turn will be required to clothe his body and cut his hair before he will be admitted to audience."—*P'ei wên yün fu*, *c.* 95, p. 59.

[Shaving the head was a punishment for criminals, and was substituted in the palace for castration (*Giles, Dic.*, No. 6552; *Li chi chu su, P'ei wên yün fu*, *c.* 7, p. 56). See also LAWS. Other instances of shaving the head or beard are given in *P'ei wên yün fu*, *c.* 95, p. 59*b*; *Yu t'ung fu chu, Yüan chien lei han*, *c.* 260, *Jên pu*, p. 30*a*; etc.]

[For palace eunuchs, see GEN. GOVT.]

"Su ch'in, when he felt inclined to sleep during study, took an awl and pierced the flesh of his leg."—*Shih chi Su ch'in chuan, P'ei wên yün fu*, *c.* 37, p. 108.

"Tight-lacing . . . never obtained among women in China, and but transiently among the men . . . [it] came into vogue in the court of King Sing, of the State of Chu, 539–28 B.C., [who] admired small-waisted courtiers ; . . . all his officers starved and tight-laced themselves by their belts to such an extent that they were unable to rise without reclining against the wall, by which regimen, in the course of a year, they acquired a ghastly appearance. (This anecdote is given by Mo-tzu . . . to show what discipline may effect)."—*Ch. Rev.*, xix. 290.

Absolute Monarchy (221 B.C. *to* A.D. 221).—*Table III.*

[Ho Ti was surrounded by numerous eunuchs (*Hou Han shu Huan ché chuan, P'ei wén yün fu, c.* 75, p. 39).]

[Eunuchs seem to have increased greatly in numbers when they had grants of land made to them and could be promoted to be officials in the palace. See *ibid. c.* 14, p. 124*a* and *b*.]

"From the time of the Empress Dowager Ho Hsi, she, a woman, being in charge of government affairs, did not see the great ministers, but had eunuchs to wait upon her."—*Yuan chien lei han, c.* 96, p. 19.

"The Empress Dowager of Ch'in [Ch'in Shih Huang's mother] plucked out Lao Ai's beard and eyebrows, in order that he might be a eunuch."—*Shih chi, Yüan chien lei han, c.* 260, *Jén pu*, p. 27*a*.

[Shaving the head and eradicating the beard are mentioned in *Hsiao Kuang-chi Hsiao Tzŭ chuan, Yüan chien lei han, c.* 271, *Jén pu*, p. 6*b* ; *Hsing shu shih ming, P'ei wén yün fu, c.* 24*a*, p. 68*b* ; *Ch'ien Han Chi Pu chuan, Yüan chien lei han, c.* 288, *Jén pu*, pp. 28–9 ; *Lin Yi Kuo chi, ibid. c.* 260, *Jén pu*, p. 19*a* ; branding the face and cutting off the nose, in *Han shu Hsüan Ti chi, Hsing che pu k'o hsi chu, P'ei wén yün fu, c.* 63, p. 216*a* ; *Lieh nü chuan, Yüan chien lei han, c.* 260, *Jén pu*, p. 15*b* ; biting fingers, arms, etc., in *Shih chi Chang Erh chuan, P'ei wén yün fu, c.* 34*a*, p. 68*b* ; *Hou Han shu, Wu Yu chuan, ibid.* p. 68*b* ; *Hou Han shu Yang Hsüan chuan, ibid. c.* 63, p. 58*a* ; *Hsü Han shu, Yüan chien lei han, c.* 261, *Jén pu*, p. 19*a* and *b* ; cutting off hand, feet, etc., flaying the face, and plucking out eyes, in *Kang chien ch'üan pien, Hui Ti chi, c.* 6, p. 1*b*, *Yüan chien lei han, c.* 315, *Jén pu*, p. 16*b*, etc.]

Ts'ao Ts'ao bit his tongue, making it bleed, "as an example to subsequent generations to avoid indiscretion in speech."—*Ying hsiung chi, P'ei wén yün fu, c.* 98, p. 99.

[There seemed to be an idea that bodily injury could affect any one of the "same flesh and blood." See a story of a mother biting her fingers to bring her son home in *Hou Han shu, Yüan chien lei han, c.* 271, *Jén pu*, p. 30.]

[An instance is given in the *Shih lei t'ung pien, c.* 60, p. 4, of a widow in Ch'ao Chün cutting off her ears and nose because she did not wish to be compelled to marry again. See similar cases in *Hou Han shu, ibid.* p. 5*a*, etc.]

"We do not know when this curious practice [head-flattening] fell into disuse, but in the dynastic history of the Tsin, it is said in the 4th century, that a princely head must be small and tapered above. When the King of Ts'in, founder of the Empire, conquered the region forming the principality of Han, in 230 B.C., in South Shansi and Honan, a part of the population, afraid of the new yoke, fled away, and took refuge in Corea. They were described during the Han dynasty, as flattening with a stone the head of their infant boys. This was apparently a survival of the ancient Chinese practice which was still lingering in a part of the country when they had left it."—*Bab. & Or. Rec.*, vi. 194.

"Among the *Shin-Han* of the south-west, at the beginning of our era and long afterwards, when a child was born they pressed his head with a stone in order to flatten it (*Hou Han Shu*, Riv. cxv.), and the practice was followed so extensively that they all had flat heads."—*Ibid.* vii. 256.

Period of Disruption (221 *to* 589).—*Table IV.*

[Widows mutilated themselves to prevent re-marriage.]—*Nan shih, Kuang shih lei fu, c.* 18, p. 9*b* ; and see MARITAL.

"Chang Mi was exceedingly filial. When he was employed as Censor, his mother being ill, he abstained from food, and cut off flesh from his thigh, mixed it with medicine, and gave her to eat—by which means she was restored to health."—*Wei shu Hsiao tzŭ chuan, P'ei wén yün fu, c.* 37, p. 108.

[Chi, wife of Su Ch'i, cut off her ears and nose as a token of fidelity to her deceased husband (*Lieh nü chuan, Shih lei t'ung pien*, sect. *Ho pi*, comm. *c.* 60, p. 4 ; p. 3*a*). An instance of a husband cutting off his nose on the abduction of his wife occurs in *Tsê fu yüan kuei, P'ei wén yün fu, c.* 63, p. 176*a* ; cutting off the hair, shaving the head, and plucking out hair, are mentioned in *Chin shu, Yüan chien lei han, c.* 260, *Jén pu*, p. 19*a* ; p. 22*a* ; *Pei shih Ch'i Yu chu chi, c.* 67*b*, p. 18*a*, etc.]

"The punishment of castration was abolished by the Western Toba dynasty in A.D. 547."—*Ch. Rev.*, xiv. 226.

"It is recorded that Hau-Chu, of the Chin dynasty, in the year A.D. 583, ordered Lady Yao to bind her feet so as to make them look like the new moon ; and that the evil fashion has since prevailed against all subsequent prohibitions."—*N. and Q. on C. and J.*, ii. 27, 43. But see REST. OF UNITY AND SUNG PERIODS.

From the Restoration of Unity to the end of the Five Dynasties (589 *to* 960).—*Table V.*

589–907.

[Cutting off, piercing, and marking the arm, in confirmation of an oath, are mentioned in *T'ang shu, Li Ssŭ-yeh chuan, c.* 138, p. 1 ; *Ts'é fu yüan kuei, P'ei wén yün fu, c.* 63, p. 59*a* ; *T'ang shu Tung chang chuan, ibid.* p. 58*b* ; cutting off flesh, in *Jén p'u lei chi, c.* 5, p. 63*b* ; cutting off the ear, in *T'ang shu, Chang Shuo chuan, c.* 125, p. 5*b* ; *c.* 79, p. 1 ; *Hsin Tang shu, c.* 110, p. 5 ; cutting off the hair, in *Ch'üan T'ang shih hua, P'ei wén yün fu, c.* 67 *hsia*, p. 20*a* ; and shaving the beard, in *T'ang shu, Yüan chien lei han, c.* 260, *Jén pu*, p. 28*b* ; *Liu tien, ibid.* p. 29*a*.]

"At the end of the Sui dynasty, when the levies and enactions were oppressive, people frequently broke their arms and legs and called it 'happy arm' and 'happy leg,' because it would not have to work."—*Hui yüan, Yüan chien lei han, c.* 261, *Jén pu*, p. 22*b*.

"Military offenders [*chün fan*] were branded on the face, from the time of Liu Jên-kung onwards."—*Shih wu yüan hui, Wu tai shih pu, c.* 15, p. 4.

"In Hu [Hsien] people used to cut their flesh to offer to their mothers, who thereupon recovered from their ailments."—*Han Yü wên chi, P'ei wén yün fu, c.* 37, p. 109.

"When [Wang] yu-chên's mother was ill, the doctor said : 'You must get some human flesh for her to eat, and then [the disease] will certainly be cured.' Yu-chên scraped some flesh from his leg and gave it to her ; whereupon his mother recovered. [The Emperor] commanded an honorary distinction [to be affixed] on the door of his house."—*T'ang shu Wang Yu-chên chuan, ibid. c.* 37, p. 109.

"[Wu ch'ung-i] being very fond of the military under his control, treated even the small officials with benevolence. When he died, over 30 of them cut off flesh from themselves and offered it in sacrifice."—*T'ang shu Wu Ch'ung-i chuan, ibid. c.* 37, p. 108.

"The Empress [Chang] pricked her [skin to obtain] blood wherewith to write a Buddhist book, in order to show her sincerity."—*T'ang shu Chang hou chuan, ibid. c.* 98, p. 95.

"[Wan Ching-yu], when one of his parents died, built a hut on the tomb, and pricking [his skin used] the blood to write a Buddhist book, and cut off two of his fingers."—*T'ang shu Wan Ching yu chuan, ibid. c.* 98, p. 94.

[Nan Chi-yün cut off one of his fingers to show his concern for the starving people of Chü Yang, when Ho Lau refused to entertain his petition for their rescue (*Han Yü Chang Chung-ch'êng chuan hou hsü, Yen shan wai shih, c.* 5, p. 3).]

"Before the time of Ta li, officials' wives, when jealous of serving maids and concubines, when they even but slightly displeased them, branded them on the face, so that it became a common saying that they bore [*i.e.*, so-and-so's maids were covered with] 'moon' or 'cash' marks."—*Shih lei t'ung pien, c.* 60, p. 9.

[Castration continued to be performed. See *P'ei wén yün fu, c.* 89, p. 19*a*.]

"The practice of deforming up[wards ?] the skull of a child was disused in East China at the time of the Arab travellers (9th century A.D.). Abu-zeid (*Relation* II. 115, ed. Reinaud) says positively that they did not do it, contrariwise to the custom of the Arabs."—*Bab. and Or. Rec.*, vi. 264.

907–960.

[Castration was forbidden by imperial decree.]—*Hsü t'ung tien ch'i yao, c.* 20, *Hsing*, p. 2*a*.

"From the time of Liang T'ai Tsu, soldiers [lit. strong men] were branded on the face."—*Shih wu yüan hui, Wu tai shih pu, c.* 15, p. 4.

[When Miss Li was travelling through the K'ai Têng Prefecture she rested in a lodge, but the owner would not allow her to pass the night there, but seized her by the arm and dragged her out. Miss Li said, "I am a woman, and my arm has been grasped by a man." So she procured an axe and cut off her arm.]—*Wu Tai Shih, P'ei wén yün fu, c.* 63, p. 54*b*.

"Ho Jo-pi's father Tun, an official under the [Hou] Chou, who was put to death for murmuring [against the emperor], when about to suffer the penalty of the law, called Pi to him, and said : 'I am dying on account of my tongue ; do not fail to keep that in mind.' Thereupon he took an awl and pierced his son's tongue so that it bled, as a warning to keep a watch over his words."—*Pei shih Ho Jo-pi chuan, P'ei wén yün fu, c.* 98, p. 100.

"The discreditable custom of cramping women's feet into the so-called 'golden lilies' belongs probably to this date, though referred by some to a period several hundred years earlier. How it originated there is really no sufficient or trustworthy evidence to show."—*Giles, Historic China*, p. 60. See also *N. and Q. on C. and J.*, ii. 27.

"Yao *niang*, a concubine of Li Hou-chu, slight in figure and handsome, and accomplished in dancing, bound her feet with pieces of silk, causing them to be small and graceful in [the shape of] a small bow, the upper part resembling the shape of the new moon. Consequently every one imitated them. Thus the fashion of binding the feet originated in the time of the Five Dynasties."—*Shih wu yüan hui, Tao shan hsin wên, c.* 40, p. 7.

[A writer in *The Far East* for Feb. 1877, says (pp. 27–8), that the custom of foot-binding dates from the time of the Five Dynasties, . . . and repeats the story of the empress (name and date not given) who had very small feet. The court ladies, anxious to imitate her, forced their feet into shoes too small for them, and finally hit on the device of shoes which could only accommodate a part of the foot,—the wearer merely inserting her toes, and being supported, when walking, by two maids. The next step was to bandage the feet of children, so that their shape might be modified to fit the shoes. The writer adds that it was early foreseen that women whose feet were thus crippled would need assistance, and so "it became an established custom never to employ maid-servants with compressed feet ; and thus some of the poorer classes ceased to observe the custom, which the richer classes continue to the present day."]

[The *Ko chih ching yüan, c.* 18, *Kuan fu lei*, p. 17*a*, quotes a passage from the *Tai tsui pien* in which it is argued that binding the feet was not introduced during the Five Dynasties.]

"A difference of opinion exists respecting its origin. Some accounts state that it arose from a desire thereby to remove the reproach of the club feet of a popular empress, others that it gradually came into use from the great admiration of and attempt to imitate delicate feet, and others that it was imposed by husbands to keep their wives from gadding. Its adoption was gradual, however it may have commenced, and not without resistance."—*Williams, Midd. King.*, i. 766–7.

"The honour of having first set this fashion is ascribed to one of the concubines of the last prince of the latter T'ang dynasty, A.D. 934. By means of bandages she compressed her feet into the shape of the new moon. Reference is made by some authorities to a similar process in the Chên dynasty A.D. 583, but the likeness in the names of the two Emperors, their characters, and their being each the last princes of dynasties, may have given rise to a similar origin. The Empress of Hieuntsung (A.D. 713) had large feet ; it is therefore highly probable that the practice does not date farther back than the 10th century. The poetical term for small feet, "golden lilies," is as old as the Chên dynasty. It originated in this way—Chen heu chu caused the palace floor to be adorned with lilies figured in gold, and exclaimed, as his favourite concubine P'an fei walked upon them, 'every step produces a lily.' Some date its origin as far back as the Shang dynasty (B.C. 1766–1122), but this is not to be relied on."—*Report of the Peking Hospital*, 1868.

"The age at which the cramping process begins varies with regard to the social status of the family. The usual period is from 6, 7, or 8 years to 13 or 14 years of age. The feet are bandaged each day, and undone each night, when sleeping shoes without soles are worn to prevent the feet expanding. The bandages are about six feet long by three inches broad. The feet often suppurate, and the sores are very difficult to heal, because they cannot intermit the bandaging. At night, when unloosed, they are dusted with alum to dry the perspiration. They do not seem to suffer much. It is wonderful that this severe and constant suppuration does not lead, in many cases, to disastrous results." "The fashionable size is about 4 inches, but many reach to 5 and 7 inches. The size depends upon the time when it was begun and the regularity and tightness with which it is maintained. The bandages are never left off, for after the standard size has been attained, they are still retained to keep the shape and give strength to the feet. The feet are not encased in iron shoes. Simple bandages are all that are employed, and are applied across the foot so as to carry the 2nd, 3rd, 4th, and especially the 5th toe quite under the foot, and thus obtain the least possible breadth, and by one or two turns of the figure-eight bandage the foot is shortened ; the heel is brought close to the ball of the big toe, and, instead of forming an angle with the leg bones, it looks more like a continuation of them. The bones of the instep are thus pushed out of their place and made to bulge, thus giving a great prominence and arched crescentric form, resembling the new moon, to that part. The three joints, therefore, upon which the foot rests are, the heel in its new position, the ball of the great toe, and the 4th and 5th toes. The foot and leg are greatly atrophied and the skin shrivelled. The leg tapers from the thigh joint to the foot without the usual feminine risings and depressions, owing to the undeveloped calf, and that again is caused chiefly by want of exercise and proper motion to call these muscles into action. Were it from atrophy entirely we should expect the limb to grow from bad to worse until it was entirely destroyed. The knee and ankle joints do not bend. The gait is mincing, the arms slinging from side to side, and the body is never straight or steady. They walk or stand, as we might say, on their heels, and yet from the nature of the shoes with the heel one or two inches higher than the toes, they might be said to walk on their toes. The heel extends upwards and backwards beyond the heel of the shoe, sometimes entirely outside the shoe, thus showing a smaller foot than is really possessed. In this way also Chinese ladies look taller than they truly are."—*Ibid.*

"A good account of the effects of this practice is given in a paper contained in the *Transactions of the Royal Society of London*, written by Dr. Cooper, detailing the appearances presented on dissection. The foot belonged to a person in low life ; it was five and one-fourth inches long, which is full eighteen lines over the most fashionable size. The big toe was bent upward and backward on the foot, and the second twisted under it and across, so that the extremity reached the inner edge of the foot. The third toe somewhat overlapped the second, but lying less obliquely, and reaching to the first joint of the great toe. The ball of the great toe, much flattened, separated these two from the fourth and fifth toes. The fourth toe stretched obliquely inward under the foot, but less so than the little toe, which passed under and nearly across the foot, and had been bound down so strongly as to bend the tarsal bone. The dorsum of the foot was much curved, and a deep fissure crossed the sole and separated the heel and little toe, as if the two ends of the foot had been forced together ; this was filled for three inches with a very condensed cellular tissue ; the instep was three and one-half inches long. The heel bone, which naturally forms a considerable angle with the ankle, was in a direct line with the leg bones ; and the heel itself was large and flat, covered with a peculiarly dense integument, and forming, with the end of the metatarsal bone of the great toe and the two smallest toes bent under the sole, the three points of taction in walking. When the operation is begun earlier, and the bones are more flexible, four of the toes are bent under the foot, and only the big toe laid upon the top. The development of the muscles of the calf being checked, the leg tapers from the knee downwards, though there is no particular weakness in the limb. The appearance of the deformed member when uncovered is shocking, crushed out of all proportion and beauty, and covered with a wrinkled and lifeless skin like that of a washer-woman's hand. It is surprising how the circulation is kept up in the member without any pain or wasting away ; the natural supposition would be that if any nutriment was conveyed to it, there would be a disposition to grow until maturity was attained, and consequently constant pain ensue, or else that it would be destroyed or mortify for want of nourishment."—*Williams, Midd. King.*, i. 767–8. See also *Morache, Note sur la déformation du Pied chez les Femmes Chinoises*, and *Fuzier, Rec. des Mém. de Med. Mil.*, 3rd *Sér.*, t. vii.

Sung Period (960 *to* 1280).—*Table VI.*

"[Li] T'ai-po sang the praises of women with natural feet. This shows, I think, that footbinding did not originate before the end of the T'ang dynasty. It flourished in the Sung and Yüan periods."—*Shih wu yüan hui, c.* 40, p. 7. It is said by some to have been first instituted in a state ruled by Li Yü, Prince of the pseudo Southern T'ang dynasty in the year corresponding to the 3rd year of Chien Lung (962). Li Yü succeeded to the throne in 961. The *T'ai p'ing yü lan* (published 983) speaks of the shoes used by women as round at the toes, and evinces no knowledge of the practice of foot-binding. *Giles* (*Strange Stories*, No. 12) refers the custom to A.D. 970. See *Ch. Rev.* xx. 51 ; *Ch. Repos.*, iii. 537–42 (quoting *Du Halde* to the effect that the custom was invented by Ta-Kê, the last Shang Empress, *Morrison, View of China, etc.*) ; *Recueil de Mém. de Méd. Mil.*, III Sér., vol. vii, 1862, where it is stated that the earliest [foreign] mention of foot-binding is by Sir John Mandeville (1322–55), but Yule (*Cathay*, i. 153) says that Mandeville stole his account of China from Friar Odoric (in China for 3 years between 1322-8) : *Bull. de la Soc. d'Anthr.*, II Sér. tom. vi. 304–13 ; and previous period.

"Before the periods *Hsi Ning* and *Yüan Fêng* [*i.e.*, 1068-1086] footbinding was not much in vogue, but after this everyone imitated the fashion, and not to bind was considered a disgrace."—*Shih wu yüan hui, Tao shan hsin wên, c.* 40, p. 7.

"In 1071, the Chinese, like modern Egyptians, Servians, etc., took to mutilating themselves [截指斷腕] to escape conscription."—*Ch. Rev.*, xv. 52.

[Soldiers when impressed for service were branded on the back of the hand.]—*Ibid.* xiv. 357. See also MILITARY.

[Piercing the tongue is mentioned in *Su-Shih shih chi, P'ei wén yün fu, c.* 98, p. 100*a* ; cutting out the liver, in *Sung shih*

Hsiao i chuan, ibid. c. 25, p. 79*a* ; cutting off the finger, in *Sung shih Hui Tsung chi, ibid. c.* 63, p. 59*a* ; cutting off the wrist, in *Sung shih Shih huo chih, ibid. c.* 70, p. 138*b* ; cutting off the arm, in *Ou-Yang Hsiu Kung pu Lang chung Ou-yang kung mu chih, ibid. c.* 63, p. 54*b* ; pricking marks on the face (tattooing), in *Sung shih Jên Tsung chi, ibid. c.* 70, p. 138*a* ; scorching the back and branding the forehead, in *Sung shih Chu Shou Ch'ang chuan, ibid.* p. 93*a* ; tattooing the back, in *Sung shih Ho Chu chuan, ibid.* p. 91*a*.

[People who took refuge in temples in order to escape work or taxes imposed by officials were ordered to shave their heads and become priests (*P'ei wên yün fu, c.* 25, p. 145). See also *Nan shih, ibid. c.* 7*a*, p. 57*a* ; *Su Ch'ê shih, ibid.* p. 58*a* (plucking out the beard was common in T'ang and Sung times) ; *T'an yüan, Yüan chien lei han, c.* 260, *Jên pu*, p. 30*b* ; etc.]

[In 1110 branding the crown, cutting off fingers, and other priestly practices were forbidden. See ECCLESIASTICAL.]

"Eunuchesses and eunuchs undermined the nation incurably" (like white ants, eat into its vitals).—*Sung shih Hsü chiao chuan, P'ei wên yün fu, c.* 75, p. 39*b*.

"Under the *Sung* dynasty, a description of the inhabitants of Kao-li says that they have no salient bone at the occiput, as their head is bent flat (*Ma-tuan-lin, Wên hsien t'ung k'ao*). The old custom of deforming the child's skull had therefore not yet died out."—*Bab. and Or. Rec.*, vii. 256.

[In *Ch. Rev.*, vol. xix., in an article on "Gynæcocracies in Eastern Asia, with Anthropological notes" (pp. 285–308), Mr. D. J. Macgowan says (p. 287), quoting from the Sung Geography (2–4), that "the Breaking-loins Pu (折腰濮) broke the backs of their children to give them a forward bend. Head-flattening, by stones, of infant boys was practised by the Chen-han in Korea, and on the coasts of Mongolia. . . . ; a similar custom prevailed among the Kashgarians."]

[For mutilations practised by various tribes, see *Ch. Rev.*, xix. 288–91.]

LIAO AND KIN.

"Whenever Tê Kuang took captive any Chin [*i.e.*, Hou Chin dyn.] men, he had them branded on the face, the characters being : 'By imperial command not to be killed, but to be sent back to the south.'"—*P'ei wên yün fu, Ch'i tan lu, c.* 76, p. 27.

[An instance of branding on the arm is given in *Yüan lieh nü chuan, Yüan chien lei han, c.* 261, *Jên pu*, p. 19*b*.]

"The Ch'i Tan were fond of human blood. Many of the maids and concubines pricked their arms to suck [the blood]."—*Wu tai shih, P'ei wên yün fu, c.* 63, p. 59*a*.

Mongol Period (1280 *to* 1368).—*Table VII.*

'Ch'ên Yu when young was fond of study, but his family was poor. His mother Mrs. Chang, cut off her hair in order to buy books (with the money from its sale) so that he might study them."—*Yüan shih Ch'ên yu chuan, P'ei wên yün fu, c.* 95, p. 59*b*.

"When Yang Te-erh died, a powerful minister wished to take his wife by force to give to another. But Lady Lin took a vow and cut off her hair and disfigured her face, thus escaping [the disgrace]."—*Yüan shih lieh chuan, Yüan chien lei han, c.* 260, p. 21*a*.

[An instance of a wife cutting off a piece of her leg to make soup for her sick husband, is given in *Lieh nü chuan, Yüan shih, P'ei wên yün fu, c.* 8, p. 22*a*, where similar cases are quoted.]

Odoric describes "the long nails and compressed feet cultivated by men and women of gentility."—*Simcox*, ii. 232.

Ming Period (*Restoration of Chinese Supremacy*) (1368 *to* 1644).—*Table VIII.*

[Various disfiguring punishments were abolished. See *Ming shih, c.* 3, p. 30*b*, and LAWS.]

[Cutting the nails is mentioned in *Yung Pei lei p'ien, Yüan chien lei han, Jên pu, c.* 261, p. 23*a*.]

[The very large number of eunuchs at this time shows castration to have been common. See *Ming shih, c.* 6, p. 6*a* ; *c.* 7, p. 11*b* ; *c.* 8, p. 1*b* ; p. 5*a* ; etc.]

Manchu Period (1644 *to* —).—*Table IX.*

1621. "The garrison [of Liaoyang] was massacred to a man. Yuen Yingtai, brave, if incapable, committed suicide, and those of the townspeople who wished to save their lives had to shave their heads in token of subjection. This is the first historical reference to a practice that is now universal throughout China, and that has become what may be called a national characteristic."—*Boulger, Short Hist.*, p. 109. See also *Tung hua lu, c.* 5, p. 13*a*.

"In the 10th month of the 3rd year [1629] of T'ien Tsung, a military official named Li fêng, serving under the banner of a Ming colonel, ordered his soldiers to shave their heads and go out to receive [the conquerors]."—*Tung hua lu, c.* 2, p. 7.

"In the 3rd year [1638] of Ts'ung Tê an imperial decree was issued to the Board of Ceremonies to the effect that if anyone imitated the costume of the Ming Dynasty, or the manner of doing the hair, or of binding the feet, they were to be severely punished."—*Ibid. c.* 3, p. 8.

"In the 8th year [of Ts'ung Tê, 1643] Wu San Kuei, being advanced to the rank of P'ing Hsi Wang, had bestowed upon him the jade girdle, the dragon robe, and other articles, and ordered that all the troops and people within the city wall of Shan-hai Kuan should shave their heads."—*Ibid. c.* 4, p. 12.

1644–5. "The Manchus established themselves in that city [Nanking], and reinstated all the Chinese officials, who agreed to shave their heads and recognise the Tartar authority."—*Boulger, Short Hist.*, p. 123.

"The Manchu cavalry, operating in small bodies, occupied towns at a considerable distance from the main army, and compelled the Chinese to shave their heads in token of surrender."—*Ibid.* p. 123.

"It did not become the rule in China to shave off the hair all round the crown from any religious motive but simply by military compulsion. . . . . The change was made from the north-east province as the conquest proceeded, till the whole nation had their heads shaved except the crown."—*N.-C. Herald*, Jan. 23, 1891, p. 87.

[At Foochow at the time of the Manchu conquest, small presents were given to Chinese who shaved. The system of pecuniary rewards was adopted to aid in the carrying out of the law. Many were most unwilling to adopt the Manchu fashion. At last the new law prevailed, and the whole population in that city fell in with the new arrangement. Only the Taoist priests and women are now allowed to wear their hair in the old fashion (*Doolittle*).]

"As to the satisfaction felt by the immense Chinese race in losing this natural ornament by the shaving process three times a month or oftener, there seems little doubt. They do not show a desire to return to their ancient fashion."—*N.-C. Herald*, Jan. 23, 1891, p. 88.

"The complete shaving of the head and beard of the common Buddhist, and unshaven hair of the hermits who are bound by the higher vows," continued.—*Ibid.* p. 87.

"In the 6th moon of the 3rd year [1646] of Shun Chih, the Board of Ceremonies was instructed that the former regulations concerning shaving the head had not been uniformly observed, but that [the officials], following their own convenience, wished to wait until the whole empire was at peace before putting the regulation into force. Now, interior and exterior [*i.e.*, capital and provinces] being one family, and the emperor, as it were, a father [to the people], and the people, as it were, a son [to the emperor], and father and son having one body, how can they rightly be differentiated? If a uniform system is not followed, and the people are of two minds, will not this be as if they were another nation? In this matter do not [you, the Board of Ceremonies] wait for our command. We think that the officials and people throughout the empire must also be aware of this. From now, after the publication [of this edict], both in the capital and out of it, let a limit of ten days be fixed, and in the metropolitan and every other province let a limit of ten days also be fixed from the day of the arrival of the Board's despatch, within which it will be obligatory to shave the head, and those who obey shall be reckoned as people of my nation, whilst those who, when the period has elapsed are still undecided, shall be [considered as] criminal offenders against my command, and must be heavily punished. If any make objection and evading [the regulation] spare their hair, and by plausible excuses cause disputes, they must on no account be leniently dealt with. All the civil and military officials of the district must make a strict investigation [of the circumstances.] If any official again on account of this matter causes annoyance by [repeated] memorials, and shows a desire to allow the regulations of the Ming [dynasty] to be preserved in any place in which the people have become pacified (*i.e.*, subject to our rule), and refuses to follow the laws and regulations of the present dynasty, he shall be put to death without hope of pardon. Clothing, headgear, and fashions in dress, may be gradually altered in accordance with the regulations of the reigning dynasty, and no departure from them will be allowed. The Board will take the necessary steps to make this edict known both in the capital and out of it, in the [metropolitan province of] Chihli, and in the *fu, chou*, and *hsien* of each province, the transport stations, the large and small walled cities, and other places, and cause the officials, clerks, teachers and scholars in the civil and military yamêns, uniformly with the common soldiers and the people, etc., and one and all to obey this edict."—*Tung hua lu, c.* 2, p. 10.

"Most of this class [eunuchs] are compelled to submit to mutilation by their parents before the age of eight (and not always from poverty), as it usually insures a livelihood. Some take to this condition from motives of laziness and the high duties falling to their share if they behave themselves. From very ancient times certain criminals have been punished by castration."—*Williams, Midd. King.*, i. 407–8. See also *Tung hua lu, c.* 5, p. 2*b*.

"The ancient Israelitish ceremony of circumcision is practised in China at the present time by the Jews and Mahommedans. The former perform this ceremony on every male child on the eighth day after its birth, and the latter in the sixteenth year after birth."—*Mesny, Ch. Misc.*, ii. 148. See also *Prejevalsky, From Kulja to Lob-Nor.*

"The custom of compressing the feet of female children is much practised. . . . In the northern provinces, I noticed that nearly all the women had contracted feet, and the same may be said of the island of Formosa. In some other portions of the empire, the custom does not prevail to the same extent. . . . It is not unusual to see women with small feet riding along the high roads on the backs of their female attendants. When houses are on fire, the female inmates who have small feet often perish from sheer helplessness."—*Gray, China*, i. 233.

"He [K'ang Hsi] tried to prevent the Chinese women from cramping their feet, and contrary to the stipulations agreed to by his predecessor, he actually forbade the custom. Prejudice, however, proved too strong, and at the end of four years the prohibition was unwillingly withdrawn."—*Giles, Historic China*, p. 114.

"In the 3rd year of K'ang Hsi . . . an edict was issued to the deliberative body of princes, the *beiléh*, the great ministers, the 9 chief ministers, the [6] Boards, the [13] circuits of the censors, commanding these officials to consult together and report on a measure for preventing footbinding in the case of any girls born after the first year of the reign. The Board of Ceremonies reported the decision [arrived at], *viz.*, that if anyone broke the law by binding the feet of any girl born after the first year of the reign, if the girl's father were an official, he should be handed over to the Board of Civil Office or of War [according as he was a civil or a military official], for the determination of a penalty ; [ordinary] soldiers or common people were to be sent to the Board of Punishments, beaten with 40 strokes of the bamboo, and banished for 10 years."—*Edict of K'ang Hsi.*

Footbinding "is practised by all classes of society except the Manchus and Tartars, poor as well as rich."—*Williams, Midd. King.*, i. 766–7.

[The Hakkas do not bind the feet.]—*Ch. Rec.*, ix. 358.

[The method and age at which the binding was begun remained the same as before.]—*Little* (*Mrs. A.*), *Int. China*, p. 137.

"A peculiar kind of mutilation is practised on the feet of girls belonging to families of acrobats. It is begun almost at birth ; but instead of the ordinary bandages, the foot is confined in an inelastic shoe, so that while keeping its shape, it cannot grow. It is said that two-thirds of the girls subjected to this treatment die under it, though the greatest care is taken of them ; and healthy, well-formed infants (sometimes kidnapped, or bought at high prices) are specially selected for this purpose."—*Bull. de la Soc. d'Anthr., II Sér.* VI. 310.

"The Manchus, not satisfied with his death, sent his head to Pekin to be placed on its principal gate in triumph, and the body of Wou Sankwei himself was exhumed so that his ashes might be scattered in each of the eighteen provinces of China as a warning to traitors."—*Boulger, Short Hist.*, p. 137.

[Filial children cut off pieces of their flesh to make soup or medicine for their invalid parents. See instance in *Peking Gazette*, Feb. 6, 1891, and *passim*.]

"In the 8th year of K'ang Hsi, in Ch'in Hsien in Shantung, a filial son named Wang Tso-ch'ang excised his liver to cure his father ['s sickness]. The father's sickness was immediately cured."—*Tung hua lu, c.* 9, p. 17.

"Last summer, at our temple, a priest cut off his finger as a work of merit ; and another whom we met had cut off two fingers. An elderly priest who had endured the agony of slowly burning off two of his fingers, thought there was very little merit in cutting them off."—*Woman's Work*, iii. 33.

"Many [Buddhist priests] have marks burned on their heads or arms, as the means and evidence of merit. Not a few have one of their fingers burned off for the same reason."—*Nevius, China and the Ch.*, p. 98.

"An amusing account is given in the *Shên Pao* of the slicing off of a piece of a Chinese pickpocket's ear by an irate Mongol who took him in the act. Unimportant though this act may seem, it may have historical connection with the Turkish custom of running an arrow through thieves' ears."—*Ch. Rev.*, xv. 253.

"The *Shên Pao* of the 4th of April mentions certain offenders at Port Arthur [旅順] with arrows run through their ears [插耳箭]."—*Ch. Rev.*, xiv. 357.

[Dr. Ernest Martin, in *Revue d'Ethnographie*, Vol. II. (Paris, 1888), pp. 504–6 (*Les Déformation Craniennes en Chine*), says that the Emperor Kien-lung, in a work entitled *Mandchou-yuen-liou-kao* states that the Manchus lay their new-born children down on their backs, so that the skull may be flattened behind ; while the Chinese lay them down on their side, so that the head, resting on the temple, may be flattened sideways. Martin says that these practices are kept up at the present day ; the infant's head is laid on a little cushion filled with rice called *Tchan-tou*, in North China, with the back of the head resting on the cushion so as to flatten the occiput and broaden the face and so make it approach the type achieved in that part of the country. The Southern Chinese prefer a long head and narrow face, and always lay a child on its side, first on one, then on the other, taking care that the head rests on the *tchan-tou* in such a way as to be flattened in the right direction. He adds that what Kien-lung says of the Manchus should equally apply to the Coreans and Tunguses, who, with the Manchus, formed the San Han.]

"I have often been struck with the flat appearance of the back of the heads of children of the better class here [not said where] and especially among the Manchus. There is no occipital protuberance whatever. In difficulties between Taipings and Manchus this test has sometimes been the sole one resorted to in distinguishing the latter [? former] prior to beheading them. In the third year of Hienfung this test was put in force at Tien-tsin. This effect is the result of the practice of keeping children for the first 100 days on their backs, lying on hard pillows. The development of the muscles of the shoulder from the bow exercise, may sometimes help to decide a Manchu."—*Ch. Rec.*, iii. 163. See also *Ch. Rev.*, xiii. 44 ; xiv. 171, 220.

FUNERAL RITES.

Early Feudal Period (*c.* 2357 *to* 1122 B.C.).—*Table I.*

Re-calling the dead.—"The custom of calling back the dead was highly developed in China in olden times. Confucius cherished the conviction that it prevailed there already at the dawn of civilization, for, according to the 30th chapter of the *Li ki* (l. 20) he said : 'when ceremonial usages were coming into existence, people, in case of death, went up to the housetop and exclaimed : 'Ho . o . o . So-and-so, come back!'"—*De Groot, Rel. Syst.*, i. i. 245–6. For the death-howl, dancing, etc., see following period.

"The literature of the empire affords abundant evidence that the practice in question [recalling the soul] has obtained throughout all ages both amongst the ruling classes and the common people as a sacred custom."—*Ibid.* i. i. 253.

Feeding the soul.—"If we . . . call to mind the rooted belief of the Chinese of all ages that the soul does not abandon the body after death, it appears quite natural the conviction arose at a very early date, that it is the soul which enjoys the food, as nobody ever saw the body touch it. The numerous presentations of edibles and liquors to the dead body even after it has been nailed up in an enclosure of six substantial planks, are in this way easily accounted for."—*Ibid.* i. i. 360.

Burial.—"Burial having been practised in China since semi-historical and even legendary times, it would appear at first sight a rather hopeless task to try to find out how it came into existence. But a careful examination of the ancient writings acquaints us with some curious customs of historical China, which were evidently survivals of times more ancient, and these enable us to build up a theory on the subject, especially if we consider them in connection with the ancient

belief in the resurrection of the dead." "Knowing as we do . . . that the ancient Chinese, as we have learnt from their oldest records, systematically delayed the dressing, coffining and burying of their dead for a considerable time, in hopes that the corpse might revive, we are certainly not going too far when we suggest that in the very deepest night of barbarous ages they may have kept their dead unburied for even a much longer time. Families in which a case of death occurred may then have shrunk altogether from removing the corpse out of their dwelling, den or cavern, and have abandoned the latter to the deceased, taking up their dwelling elsewhere."—*Ibid.* ii. i. 363.

"Taking now for granted that in very ancient times the dwellings of the living were used in China as graves, it is easy to see how burial in the earth has there become the prevalent method of disposing of the dead; for we may presume that the ancient Chinese lived in caverns excavated in the clay [see HABITATIONS]." "Considering now that in primeval times the dwellings of the living were caves excavated in the clay, or hollow heaps of clay strengthened inside by means of branches or rude pieces of wood; admitting also that the ancient Chinese, when a case of death occurred, left the corpse alone in such a dwelling, covering it up with branches or pieces of wood over which they put some clay—then we have not only an answer to the question how the custom of burial arose, but also a fair idea of the shape of the oldest graves. As civilisation advanced, improved methods of house-building arose [see *Shih ching*], . . . and the houses gradually became too valuable among the well-to-do to be deserted for the sake of the dead. Then the custom will have arisen of depositing the latter elsewhere in a hut constructed after the more ancient and cheaper fashion; and it is remarkable that during the Cheu dynasty and that of Han this is still recognizable in the graves in so far as we know them from the ancient descriptions. Indeed, at the temporary burial inside the dwelling [see following Period] . . . pieces of wood were piled up around the coffin and a wooden shed plastered over with clay was constructed around these, and this was done as late as the Han dynasty at the final burial in the grave, a wooden vault taking, however, the place of the shed. . . . But further, even at the present day the graves in the central and northern provinces of the Empire resemble the huts of the living in ancient times, being round heaps of clay, either vaulted on the top ∩, or semi-globular ⌒, or conical △ in shape; the coffin inside is in many cases not sunk deep beneath the level of the soil around, and people hardly ever neglect to cover it with reeds, rushes, or mats before piling the earth over it. It is remarkable also that at such tumuli of the better class there often is a stone standing in front, inserted in the clay, about one foot in size, and cut so as to represent a closed door, like these figures:  . No practical object being connected with this stone, we can scarcely doubt that it represents the entrance to the dwellings of clay in which, in times past, the living left the dead behind. It will be seen . . . that in former centuries many of the large grave hills, such as were thrown up for kings and grandees, possessed a sort of tunnel, denoted in the books by the character 隧, being evidently nothing more than a modification of the door of graves of humbler size [*cf.* MING PERIOD]."—*Ibid.* ii. i. 372–4.

"Among savage and semi-civilized people in general, families do not separate when their numbers are increased by birth. They remain together for many generations, thus forming a clan or tribe, the members of which display great mutual coherence. Such is still the actual state of affairs in the Chinese Empire, and has undoubtedly been handed down from antiquity. Under these circumstances, the custom of burying the dead in their houses must, in primeval times, naturally have called into existence a village of the dead in or near each settlement of the living [*cf.* MANCHU PERIOD]."—*Ibid.* ii. i. 376.

"Burial underneath a layer of earth, in coffins, is the usual way in which the Chinese dispose of the dead throughout their Empire. Other methods . . . are exceptional." "Such burial of the dead has generally obtained in China since the remotest times into which written documents of the Empire allow us to penetrate. Whenever record is made of the disposal of the bodies of sovereigns and rulers, even of fabulous or prehistoric ages, it is stated that they were buried. From the oldest times, the written character generally used in the native literature to denote burial is 葬, pronounced *tsang*, or whatever the local pronunciation may be in the different parts of the realm. . . . On analyzing this character, we find that it designates a dead person (死) placed upon grass and shrubs (艹) and with grass and shrubs over him; indeed . . . there are grounds for believing that, in the dark mist of ages, burial consisted of a simple covering up of the dead with brambles over which some clay was laid. In ages less remote, the character for *tsang* more commonly occurs in this shape 塟, the element grass at the foot being replaced by 土 ('earth')."—*Ibid.* ii. i. 361.

"When the ancients buried their dead, they covered the body thickly with pieces of wood, having laid it in the open country. They raised no mound over it, nor planted trees around; nor had they any fixed period for mourning. In subsequent ages the sages substituted for these practices the inner and outer coffins."—*I ching*, App. III. Sect. II. ch. 2. 22; *Legge*, p. 385.

"In the eleventh chapter of the *Li ki* (l. 29) we read that a grandee of the state of Ts'i, who bore the name of 'Kwoh Tszĕ-kao,' said that the word *tsang* meant hiding away (藏), and that such hiding away arose from a desire that men should not see the corpse." This "seems . . . to indicate that burial was not originally a deep burial in the ground, but rather a superficial concealing of the corpse—in a word, a mode of dealing with the dead in such a way as is graphically depicted by the character 葬."—*De Groot*, ii. i. 361–2.

"Besides the word *tsang* and its various local forms, the languages of China contain other words denoting burial. Of these we shall mention only *mai* (埋). . . . As the *Shih ming* said . . . about a score of centuries ago, 'burying without observance of the customary rites is called *mai*, this word being synonymous with *mei* (to disappear, to do away with), and signifying a hasty delivery of the body to interment and decay.' In Amoy, only the very poorest burials are sometimes denoted by the word *bâi* or *tâi*, but in all other cases people prefer to use the word *siu* [*shou*] (收), which means 'to put by, to clear away,' and is almost synonymous with *tsŏng*. In the compound *siu-bâi*, which is likewise in general use to denote burying, the element *siu* totally does away with the disagreeable impression aroused by the word *bâi* when it stands alone."—*Ibid.* ii. i. 362.

Coffins and grave-vaults.—"Embalming having never played a part of any importance amongst them, the Chinese were naturally thrown back upon the coffins as a means of preventing the decomposition of the dead. The ways in which they have concentrated their attention and sharpened their inventive genius upon coffins, form an interesting page in the book of their religion of the body and the soul."—*Ibid.* i. i. 281.

"All the Chinese records, either authentic or apocryphal, show that, from the highest antiquity, burial in the ground has been the usual method of disposing of the dead in the Kingdom of the Midst, and that coffins have always been inseparably connected therewith. Only one classic, the *Yih king*, pronounces another opinion. 'In times of antiquity,' it says (ch. 15), 'those who buried their dead covered them thickly with firewood and committed them to the earth in the open field; they did not raise a tumulus over the grave, neither did they plant trees on the spot. The length of the period of mourning was not regulated by numbers. The holy men of subsequent ages modified this state of things by introducing coffins and vaults.'"—*Ibid.* i. i. 281. But De Groot discredits this statement respecting the absence of coffins as disagreeing with the evidence furnished by the *Li chi*; *v. infra.*

"When the Emperor Yao was buried, they used a hollow tree for a coffin and Dolichos creepers for coffin-bands; in digging the pit they did not disturb the springs of ground-water, but they took care that the smell of death should not escape to the surface."—*Ch'ien Han chi*, ch. 67.

"An ancient tradition preserved in the *Li ki* (ch. 9, l. 23), . . . runs as follows: 'In the time of Yiu-yü (*i.e.*, the Emperor Shun, . . . 23rd century B.C.) they used coffins of earthenware.'"—*De Groot*, i. i. 282.

"To further the resurrection of the dead being the most important point in the use of coffins and vaults, it is quite natural that these were anciently made of special sorts of timber of great durability, and by preference of such kinds as were believed to be imbued with vital energy, that is to say, with *shen*, or afflatus produced by the great *Yang* element. . . . The ancient books mention as such: I 杝, Rottlera 梓, Pine 松, and Cypress 栢. . . . Throughout Chinese literature, even in recent works such as the *Tu Ts'ing hwui tien* and the *Ta Ts'ing thung li*, the expression 'structure or building of Rottlera' occurs as a special name for the imperial coffins, which fact shows that the wood of this tree played a prominent part in their construction." "A place no less important is occupied by the Pine and the Cypress," both on account of their durability and as being "the two other possessors of vital energy which are universally used in this capacity of protectors of the dead from putrefaction."—*Ibid.* i. i. 293–7.

[Other kinds of timber used for coffins in former ages were the *Chang* (樟), *Chia* (檟 or 榎), *P'ien* (椑), and the *Tung* (桐) or *Wu-t'ung* (梧 桐). The last is called *Ch'ên* (櫬) in the *Erh Ya*, and in the oldest Chinese documents, the word *ch'ên* is very frequently used to denote an inner coffin. "The word denotes the coffin nearest the body, and the wood got the name *ch'ên* from the fact that it was placed *next to* (親) the body." (See K'ang Hsi's Dic.)]—*Ibid.* i. i. 301–2.

"The word by which they [coffins] are denoted throughout the native literature reads *kwan* [*kuan*]; and as the written form of this word (棺) is composed of 木, 'wood' and *kwan* 官, 'official,' there is ground for supposing that wooden coffins were at the outset used for the ruling classes only; but we have nowhere any direct evidence for this in the books."—*Ibid.* i. i. 285.

"Under the sovereigns of Hia (22nd—18th cent. B.C.) they built brick enclosures over the same [coffins]."—*Li chi*, ch. 9, l. 23; *ibid.* i. i. 282.

"The people of the Yin dynasty (18th—12th cent. B.C.) used coffins and grave vaults of wood."—*Li chi*, ch. 9, l. 23; *ibid.* i. i. 282.

Soul inhabiting the grave.—"A belief in the cohabitation of the body and the soul after the former has been deposed in its last resting place is traceable, by means of Chinese literary remains, to very high antiquity. . . . It lies at the bottom of a very large category of conceptions and practices relative to the tomb, the treatment of the body which lies therein, and the worship of the soul residing on the spot." "The *Li ki* (30, l. 20) has bequeathed an allocution of Confucius to his disciples, in which the following passage occurs: 'When ceremonial usages were coming into existence, people in case of death, went up to the housetop and there exclaimed: "Ho . o . o . o So-and-so, come back!" After this, they filled the mouth of the dead with uncooked rice and placed cooked food upon stands. They looked up to heaven and hid the corpse on the ground; the soul connected with the body descended, while the sentient afflatus remained on high.' This extract shows that Confucius cherished the conviction that the belief in the soul's abiding at the grave had existed from times immemorial, as also that the human manes were thought to consist of two parts which separated after death (Bk. II. ch. i)." "The prevalence in pre-Christian times of a belief in the presence of the soul in the grave is also evidenced by the 27th chapter of the *Li ki*. This relates (l. 29) that Confucius, on being asked by Tseng-tszĕ what the son of a concubine must do when his eldest brother by the principal wife happened to die in a foreign country, answered: 'When such an heir-son dies, the other shall announce it at the graves of the ancestors.'"—*Ibid.* ii. i. 378–9.

"The Chinese not only think that the soul of a dead man intimately coheres with the coffin in which his body is enclosed, provided such a coffin be properly made of wood imbued with *Yang* afflatus [i. 348] . . . they extend this belief also to the grave, feeling convinced that the manes thoroughly pervade the earth which envelops the coffin. This conception is closely connected with the doctrine preached by the *fung shui* system [see PERIOD OF DISRUPTION] . . . that a grave works efficaciously upon the prosperity of the offspring in case it is placed on such a spot and in such a position that the life-emanating influences of the heavens or the *Yang* principle can freely concentrate upon it and pervade it in all its parts."—*Ibid.* ii. i. 381.

Food, drink, etc., placed in the grave.—"We have described how the Chinese, in the most ancient times on record, filled the mouth of the dead with rice, and set eatables by the side of the corpse, that it might have food ready at the moment of revival. And . . . we have stated that they placed scorched grain with dried fish and meat near the corpse when it was temporarily buried inside the dwelling. No wonder then that they observed this same custom also on depositing the corpse in the grave, graves being, according to our theory . . . originally the common human dwellings of clay wherein the living left the dead alone in expectation of their return to life."—*Ibid.* ii. i. 382.

"The Chinese of antiquity satisfied the imaginary wants of their dead with a lavish hand, and few things afford stronger proof of the veneration in which they held them than the treasures and valuables which they have buried in their tombs until comparatively recent times." "Considering that by far the most savage tribes, in whatever part of the globe they are living, are in the habit of deposing in the grave articles of daily use, and that the same custom widely prevailed among the Chinese in ancient historical times, it can scarcely be doubted that the articles buried with the dead by the prehistoric Chinese must have been exceedingly numerous."—*Ibid.* ii. i. 390.

Grave-clothes prepared during life.—"The material way in which the Chinese prepare for making their appearance in the next world is, like most of their funeral customs, rendered sacred by precedents set by the venerated forefathers of the nation. Speaking of the three most ancient dynasties of the empire the *Li ki* states in its 19th chapter (leaf 8): 'After sixty they [grave-clothes] are put in order every year; after seventy, once in every season; after eighty, once a month; and after ninety, they are kept in good repair every day. Only the swaddling-bands, the sheet which is to be wound around the corpse, the palls, and the sack enveloping the body, are put in order after death.'"—*Ibid.* i. i. 64.

Status of corpse.—Confucius said, "According to the statutes of Hea, the corpse was dressed and coffined at the top of the eastern steps, treating the dead as if he were still the host." "Under the Yin," this ceremony "was performed between the two pillars, as if the dead were both host and guest."—*Legge, Ch. Class.*, i. Prol. p. 88.

Clothes buried with corpse.—It "has been described [pp. 34, 340 etc.] how in ancient times zealous superiors, relations and friends used to contribute large numbers of grave garments to notable persons. As already suggested [p. 341] . . . it seems not improbable that those garments, inasmuch as they could not be used for dressing the corpse, were placed in the grave, or that at least it was so in the earliest ages."—*De Groot*, ii. i. 392.

Size of graves, etc.—"As has been shown . . . the style in which the dead were anciently equipped for the grave in China were regulated by the position and wealth of the deceased. Taking this fact into consideration, it may readily be suggested, without documentary evidence, that the dimensions of the graves and the mode of constructing them were likewise proportioned to the social standing of the occupants and to their pecuniary circumstances in life. This is in point of fact the case. At the outset the clay dwellings of the living became their graves; and as the better classes naturally improved their dwellings under the influence of steadily advancing civilization, so they began to pay more attention to their graves." "Indeed, some tumuli which tradition pointed out as having covered the remains of sovereigns of China in mythical times, were of considerable size. According to the Memoirs of the Department of P'ing-yang (a part of the province of Shansi), 'the mausoleum of the monarch Nü Kwa (28th cent. B.C.), situated near the village of Heu-ts'un in the district of Chao-ch'ing, contained two grave mounds, east and west of each other with a distance of forty-nine *pu* (of six feet?) between them; each of these mounds was two *chang* (of ten feet) high and had a circumference of forty-eight *chang*. The ancient mausoleum of T'ao T'ang (*i.e.*, Yao, 23rd cent. B.C.) was at a distance of seventy miles to the east of the capital of the (P'ing-yang) department; the hill was one hundred and fifty feet high and over two hundred *pu* broad. And the mausoleum of Shun of Yü (23rd cent. B.C.) was twenty miles to the west of the district city of Ngan-yih; the hill was three *chang* high and begirt with bricks, and on every side it was over forty *pu* broad. The demains belonging to it inside and outside covered an area of more than a hundred *mau*, and all the old cypresses on the spot had a circumference of about ten spans.'" "So far for the alleged tumuli of monarchs of a fabulous or semi-fabulous antiquity."—*Ibid.* ii. i. 418–9.

Sepulchral trees.—"If there be truth in the theory . . . that, in China, graves were at the outset the clay dwellings of the living, it necessarily follows that the planting of grave trees came into vogue at a later period. This is confirmed by the *Yih king*, which avers that in the highest antiquity no trees were planted upon the graves [*v.* p. 281]."—*Ibid.* ii. i. 460–1.

Mourning.—[From the Works of Mencius (sect. 滕 文 公, i.) it appears that the customs with regard to mourning were the same during the dynasties of Hsia, Shang, and Chou.]—*Ibid.* ii. i. 503.

"In the most ancient times on record in native literature music was forbidden to mourners. Mourning being in point of fact a renunciation of all superfluous luxury, it is but natural that music, a means of merry-making for the living, should before all things be vetoed by customary law. Moreover, in the darkest mist of ages, when nearly everything the dead man left behind was placed in his grave, the rude instruments of music in the possession of the family followed to the same place, as they could be dispensed with by the survivors better than anything else." "It is recorded of Yao . . . that, in the twenty-eighth year of his reign, when he died and the whole people mourned for him for three years as for a father or a mother, the musical instruments between the four seas were stopped and stored away (*Shu king*, sect. 舜 典, Pt. II. bk. i. ch. v. 12)."—*Ibid.* ii. i. 605–6.

If "the religion of the Chinese people commenced with the worship of the dead, it is highly probable that the most ancient and, perhaps, the original form of all fasting was fasting on behalf of the dead. As a matter of fact, in the oldest relics of the native literature which afford data on religious subjects, we find it so intimately, not to say inseparably coupled with mourning, that it would seem as if a proper observance thereof could not exist without mourning; and if we take into consideration that the origin of mourning is doubtlessly rooted in the very dawn of Chinese life and religion . . . the natural conclusion is that the origin of fasting must likewise be traced back to the same stage. Nothing is found by us in the ancient books which refutes this conclusion."—*Ibid.* ii. i. 646.

"In the *Li ki* (ch. 27, l. 46) we read: 'Confucius said: During the reign of the House of Hia, those who had to mourn till in the third year resigned their public duties when the temporary burial in the dwelling had been completed.'"—*Ibid.* ii. i. 571.

"Dwelling for a time in . . . mourning sheds is mentioned already in ancient records treating of the epoch covered by the house of Yin. Speaking of Kao Tsung, a monarch also known by the name of Wu Ting, who was seated on the throne fourteen centuries before our era, the *Shu king* says: 'When the sovereign was in mourning, he dwelt in a *liang-ngan* until the three sacrifices had been offered, and he did not speak until he was entirely discharged from mourning.' This term *liang-ngan*, 亮陰, which seems to mean 'shed of meditation,' or 'shed of enlightenment,' is written differently in other ancient works."—*Ibid.* ii. i. 480; *cf. Shu ching*, IV. viii. i. i.

[Under the dynasty of Yin those who had to mourn till in the third year resigned their public offices after the final burial.]—*Ibid.* ii. i. 571; *Li chi*, ch. 27, l. 46.

Later Feudal Period (1122 *to* 221 B.C.).—*Table II.*

Preparations for death.—"Like many other customs now-a-days observed by the Chinese, that of removing a dying man from his sick bed and changing his clothes can be traced to very ancient times. The *I-li* (儀禮) has in chapt. 31 (leaf 1 *seq.*) the following passages, referring to the ages prior to the Han dynasty: 'An officer is placed in the principal back-chamber, and lies down there with his head towards the east, under the northern wall. If sick, he composes his mind, and those who attend on him all compose their minds too. Lutes and lyres are removed. When the illness is extreme, they sweep the premises both inside and out. They take the contaminated clothes off and put new ones on the sick man. Four attendants sit down to hold his limbs, and males and females change their dress. Some fine floss of cotton is put on the mouth and nostrils, to mark when the breath is gone. A man does not expire in the hands of women, nor a woman in the hands of the men. They go and address prayers to the five objects of sacrifice, and at the demise the chief mourner cries, and the brothers wail. They then erect a bed with mats near the lattice-window. As for these sleeping mats, one of *kien*-straw is placed under, and one of fine bamboo above. They place on the bed a pillow for the head, and subsequently transfer the corpse to it.' Nowhere is it said that the patient was allowed to expire on a bed; so it would follow that, while still alive, he was merely laid down upon the floor. This is, indeed, admitted to be so by commentators, who base their opinion on this passage in ch. 57 of the *Li-ki* (leaf 1): 'When the illness is extreme, he lies down with his head towards the east under the northern wall, having left his bedstead.' Although, in those times, people of distinction were not allowed to die on a bed, it was considered bad form to leave the body on the floor while preparing it for the coffin. Besides the above quotation from the *I-li*, it is proved by the following clause, taken from chapter 11 of the *Li-ki* (l. 22). 'Pen, the superintendent of officers, said to Tszĕ-yin (a disciple of Confucius): "I beg permission to dress the corpse on a couch," whereupon Tszĕ-yin said: "I allow you to do so." Hien-tszĕ, on hearing this, said: "How arrogant is this senior, he privately allows people to do what is the proper rule."' In the age of Confucius some classes, however, seemed to have deemed it sufficient to ensure a happy and fashionable demise if the sleeping mat of the dying man was simply changed for a fresh one. Chapter 9 of the *Li ki* (l. 38) says: 'Tseng-tszĕ (a disciple of the sage) was lying in his chamber very ill. "Yuen," said he (to his son), "get up and change my mat." But Tseng-Yuen replied: "The illness of my master is extreme, therefore it may not be changed. If we are so happy as to see you survive until the morning, I will beg your leave to reverently change it." To which Tseng-tszĕ replied: "What do I ask of you, nothing but to die in the correct way." Whereat they took him up and changed the mat. When he was replaced upon the mat he expired before he could compose himself.'"—*De Groot*, i. i. 6–8.

The water-bed.—"In many cases, especially with the rich, it [the 'water-bed'] is screened from view by means of a white sheet hanging down from the ceiling at a distance of a few feet—obviously a very old custom, as in chapt. XI (leaf 17) of the *Li ki* we read: 'Tsang-tszĕ (a disciple of Confucius) said: "Because the ornaments are not yet put on the corpse they curtain off the main apartment of the house, and when the slighter dressing is over they remove the curtain." Chung Liang-tszĕ said: "They curtain the main apartment off because husbands and wives are in confusion at that time, but after the slighter dressing they take the curtain away."'"—*Ibid.* i. i. 4.

The death-howl.—"It appears that in ancient China the dead were bemoaned in much the same way [as in modern times]. Besides the testimony of the *I-li* . . . we have in chapter 57 of the *Li ki* (l. 10 and 13): 'Immediately after the demise the principal mourners cry, the brothers wail, and the women wail and stamp their feet. . . . Whenever they wail beside the corpse in the back chamber the chief mourner, while wailing, holds up the shroud with both his hands.'"—*Ibid.* i. i. 10.

"'Calling the soul back,' it is said in chap. 12 of the *Li ki*, 'bears the character of a prayer.' . . . This statement implies that, during the Cheu dynasty, the departed spirits of the dead were wailingly addressed in coaxing terms to induce them to revive the corpse, as is still the case at the present day. . . . It also suggests to us that a connection exists between the recalling of the dead and the methodic lamenting to which the modern Chinese give themselves up at some important moments of the funeral rites, a lamenting which has, through all ages, obtained in Chinese life as a sacred rite regulated by minute rescripts and well-defined customary rules. We do not hesitate to say that at one time *both rites were probably one and the same thing*. This is decidedly confirmed by the statement of the *Li ki* . . . that 'nothing but howling preceded the recalling of the soul.' Bearing in mind the fact . . . that recalling the dead anciently held a place in China as a ceremony of the greatest import, and as a sacred rite which nobody might presume to neglect, our theory then fully explains why in those same ancient times a place of no less importance was assigned to the death-howl."—*Ibid.* i. i. 254–5.

The *Li chi* "'shows that, like the recalling of the soul, so the death-howl was observed for everybody, from the emperor downwards; princes even wailed for members of their family who had expiated crimes under the executioner's hands.' Chapter 9 has on leaf 28: 'Tseng-tszĕ said: "The sorrow displayed by the wailing and weeping, the feelings expressed by the deep mourning garments, and the food of congee and rice, extend from the Son of Heaven to all."' And ch. 29 relates on l. 26: 'When a kinsman of the Ruler's had committed a crime, the Ruler did not offer condolence, wore no mourning, and wailed for him in a temple of people of another surname, because he kept the man who had disgraced his ancestors aloof from the latter.' This passage, showing that the ancestral temple was selected as a place for performing the death-howl, confirms the supposition that this was intended to cause the soul to return, for indeed, one must have naturally wished the dead man to take up his abode with the spirits of his ancestors in the place of worship specially dedicated to them all. The formal recalling . . . took place in the ancestral temples in point of fact. Chapter 10 of the *Li ki* moreover has (l. 12): 'Poh-kao having died in Wei, news of the event was sent to Confucius. He said: "Where shall I wail for him? For a brother I wail in the ancestral temple, for my father's friend outside the temple gate, for a teacher in the back chamber, for a friend outside the *ts'in* gate, for an acquaintance in the field. If I now wail in the open field, I behave as if there existed only a remote relationship between us; if I do so in the back chamber I make too much ado about him."' We see from this that the death-howl was performed in exactly the same places as the formal calling back of the soul. . . . The close relation between the two rites is further manifest by the fact that people were accustomed to wail also on the tombs, that is to say, on the very place where the body lay which it was desired to resuscitate. According to ch. 13 of the *Li ki* (l. 39), Yen Yuen, a disciple of Confucius, said to Tszĕ-lu, his father, who was also a disciple of the sage: 'I have been taught that, on leaving the country, one wails at the grave before starting, and that, on returning, one goes to look at the grave without wailing, and then enters the city.' Finally, it is deserving of attention that, in ancient times, those who wailed for a person who had recently died repeatedly placed their hands on the corpse, pulled at its clothes and leaned over it, the greatest amount of enthusiasm being displayed by those whose relationship was closest. This practice . . . must undoubtedly be regarded as a very ancient survival of barbarous attempts to resuscitate the dead by shaking them while speaking to and shouting at them."—*Ibid.* i. i. 255–7.

The spots where, and the times when, the death-howl was to be made, were regulated by minute rules. "There are even precepts fixing the length of the period during which the howling was to be kept up: 'For the Son of Heaven,' says ch. 70 of the *Li ki* (l. 23), 'they wail nine days, for a feudal prince seven, for a nobleman and a great officer five, for an ordinary officer three days.' And ch. 9 (l. 18) adds: 'Tseng-tszĕ declared that, when on the tomb of a friend there are shrubs of one year old, one should wail for him no more.'"—*Ibid.* i. i. 257.

"The death-howl being in those ancient times thus minutely regulated by precepts with regard to time, place, and duration, it follows that it had then already become a studied rite and was no more than an artificial expression of grief. . . . We have incontrovertible evidence of this in the following passage, occurring in ch. 71 of the *Li ki* (l. 3): 'The howling of one who wears the deepest mourning is as if breath were constantly emitted without returning (in other words, it is without the slightest intermission). That of one wearing the mourning of the second degree is as if breath were alternately exhaled and inhaled. In the third degree one sobs after every three dirges, and in the fourth or fifth degree it is allowed to lament. In this manner grief is manifested by the modulations of the voice.' In the *Cheu li* we read amongst the instructions of the Master of Collocation . . . that 'at great funerals he orders the titled ladies, whether or not belonging to the royal house, to set up the death-howl in turns'; besides this one, there are many more precepts in the same codex which show that much howling was done by command."—*Ibid.* i. i. 258–9.

The death-howl was in some cases carried to the verge of fanaticism, but Confucius preached moderation. "'In Pien,' says Chapter 10 of the *Li ki* (l. 53 *seq.*), 'there were people who, at the death of their mother, wept like children. Confucius said: "Such grief is grief indeed, but it would be difficult to persist in it. The rites are institutions which require to be handed down and to be observed with persistency; hence there should be moderation in howling and in stamping the feet."' On the other hand the sage showed himself fully impressed with the importance of the howling as a rite, manifesting an anxiety lest it should fall into disuse; at least, the same chapter of the *Li ki* (l. 37) reports that his disciple 'Tszĕ-lu said: "I have heard the sage declare that, in the rites of mourning, insufficient grief with a superabundance of ceremonial is not so good as an insufficient ceremonial with an excess of grief."'"—*Ibid.* i. i. 257–8.

"The howling of the nearest relatives of the deceased is in the ancient books of rites very often mentioned in the same breath with the stamping of the feet (踊), in some instances also with beating the breast (辟). . . . These manners of expressing grief . . . probably . . . may be also considered as remnants of savage life, when the bereaved worked themselves into a wild and ecstatic frenzy not only by screaming and howling, but also by leaping, dancing, tearing their hair and clothes. Perhaps the beating of the breast represents in a milder form the more ancient lacerating of the flesh. This supposition derives confirmation from the circumstance that, as native commentators unanimously declare, this manner of displaying grief was a special act of the women; and it is well known that, among savages, the weaker sex are particularly vehement and frantic in their grief, losing all self-control in the expression thereof."—*Ibid.* i. i. 260–1.

"The howling to revive the dead having been changed by the ancient Chinese into a formal rite, it is a matter of course that the leaping and the beating of the breast, which were inseparably connected with it, have been dealt with in exactly the same manner. Chapter 12 of the *Li ki* (l. 27) says: 'Beating the breast and stamping the feet are the highest expressions of grief. They are restricted by fixed numbers, and there exist written precepts regulating them.' . . . The *I li* frequently speaks of a rite which it calls 'a full stamping of the feet' and which, according to the commentators, consisted of three stamps thrice repeated."—*Ibid.* i. i. 261.

"Facts have been adduced [pp. 128, 156, 206] clearly intimating that men, and even gods, are averse from coming in contact with the dead. Consequently it cannot but be recognized as logical on the part of the Chinese to consider it dangerous to attend at other people's death-howl, as this naturally suggests the presence of the soul which is called back by it. Now it is also clear why, as the *Li ki* (ch. 11, l. 53) says, 'Confucius detested those who howled for their dead in the open field,' and why this classic, in giving rules how to behave when hurrying to the funeral rites of relations who have died at a distance, prescribes (ch. 70, l. 2) that, 'while howling, one shall avoid the markets and the Court.' Formal prohibitions against howling in public seem to have been in existence during the Cheu dynasty, as the code of political institutions of this house contains a clause running thus: 'The Officer of Mouth-gags forbids screaming and crying, lamenting and uttering wailings of woe inside the capital, and prevents people from singing and pouring forth death-howls on the ways in the capital.' And ch. 9 of the *Li ki* (l. 6) relates: 'Ki Wu-tszĕ'—a contemporary of Confucius and, like him, a grandee of the state of Lu—'had built a dwelling, at the foot of the western steps of which there was a grave of the Tu family. This family having asked his permission to bury a second person in that grave, he granted them leave to do so. When they entered the premises (with the coffin), they did not dare to wail, whereupon the Wu-tszĕ said: "Burying two persons in the same place is not a custom which dates from high antiquity; nevertheless, since the time of the Ruler of Cheu (the founder of the Cheu dynasty) nobody has abolished it. I have allowed them to do the principal thing, why should I not grant the smaller portion of it as well?" And he ordered them to set up their death-howl.'"—*Ibid.* i. i. 261–2.

"The ancient conception . . . that it was improper to howl in other people's premises [p. 24] is still in full sway at the present day."—*Ibid.* i. i. 262.

Re-calling the soul.—"The *Li ki* gives also very valuable particulars connected with the custom [of recalling the soul] as it was practised in the pre-Christian era. In its 57th chap. (l. 5 sqq.) it has: 'In calling back the dead, if there are forests and thickets in the territory, the foresters arrange the steps, but if there are no woodlands, the serfs do so. The calling back is done by an officer of low rank, who uses the court dress of the defunct. . . . In all cases he ascends by the corner on the east, advances to the middle of the roof where it is dangerous to stand, and, turning his face to the north, there shouts to the dead three times. Then rolling up the dress, he casts it down in front, where the Officer in Charge of the Official Dresses receives it, after which it descends by the corner on the north-west.' 'In case the deceased is a visitor from another country, his soul is called back in the mansion of the head of the State, not in a private house. If he dies in the open country, they call his soul back standing on the left wheel of his carriage. The garments which have been used in calling the dead back are not used for dressing the corpse, neither for the second nor the third dressing. In calling back the soul of a woman her wedding garments are not used. Whenever a soul is called back, a man is called by his personal name, a woman by her title. Nothing but howling precedes the calling back. The calling finished, they perform what is required in cases of death. In calling back the soul of a Son of Heaven, they exclaim: "Come back, O Son of Heaven!" (ch. 6, l. 50). In calling back a feudal prince, they say: "Return, Sir So-and-so" (ch. 7, l. 32). In calling the soul back and in writing the soul banner the same terms are used for all, from the Son of Heaven down to ordinary officials' (ch. 46, l. 6)."—*Ibid.* i. i. 246–7.

"It will be seen from the above extract that a suit of the deceased was made to play an important part in the ceremony. It must be his court dress, the principal costume he possessed, and which therefore was dearest to him;" chap. 53 of the *Li ki* (l. 25 *sqq. q.v.*) describes the dresses used for various ranks. "There is scarcely any doubt that the dresses mentioned in this extract were special uniform attires connected with the dignity and rank of the persons to be recalled. It is, indeed, quite natural that the use of such dresses should have been preferred in alluring the soul, since it would feel particularly inclined to slip into such of its garments as it had been proud to wear during life. Kia Kung-yen (賈公彥), a renowned commentator on the ancient books who lived in the 7th century, says: 'They used the clothes he was wont to wear during his lifetime, supposing that the vital spirits, on recognizing them, would re-enter them and seek refuge therein.' In the end they were placed upon the body, just as is done at the present day in the case of a sick person or one who has fainted. . . . This we may learn from the *I li*, whose account of the way in which the calling back was performed at the death of ordinary officers, their parents and wives, runs as follows: 'A person charged with calling back the soul takes the dress which was worn by the defunct with his official cap or his cap of leather, and fastening the petticoat to the coat he hangs both over his left shoulder, putting the collar into his girdle. Ascending by the eastern corner of the gable-front of the building, he advances to the middle of the roof, turns his face to the north and holding the clothes, he calls the soul, exclaiming: 'Ho-o-o. So-and-so, come back.' He holds the collar of the court dress in his left hand and the waist in his right, and, whilst calling, moves his hands to the left side. Having ejaculated his exclamations three times, he lets the clothes down by the frontside of the building; they are received in a basket and taken up the eastern steps, to be placed upon the dead body. The man who called the soul then descends at the back of the house, by the western corner. 'The garments,' the Khienlung editors add, 'were received in a basket because the soul had taken shelter in them, therefore people of low rank were not permitted to receive them in their hands; this was a mark of care, of respect.' As the above extract shows, the men who performed the calling back ascended the roof by the eastern corner of the gable-front and descended at the back of the dwelling, on the west side;" *i.e.*, at the south-eastern and north-western corners, the east and south, and west and north being the regions assimilated with the *Yang* and *Yin* parts of the Universe respectively. "The learned Khung Ying-tah says: 'Calling back the soul immediately after death was an attempt at finding back the life of the deceased; hence the man who had to do the calling ascended by the eastern wing. But, after having tried in vain to find the soul, he felt averse from going back without having gained his object; hence he proceeded in the direction of the dark *Yin* and then went down from the house.' The assimilation of the north with *Yin* and death also explains why the dead was called from this region, as both the *Li ki* and the *I li* have told us. 'Calling back the soul,' says the *Li ki* (ch. 12, l. 21), 'is the way to manifest one's love and affection in all

their fulness; it partakes of the character of a prayer. To look for their return from the region of darkness is the right way when seeking for disembodied spirits in general; hence the custom of turning one's face to the north in calling back a soul signifies that it is sought for in those dark regions. The West being likewise a part of the great domain of the *Yin*, the man who called the soul held the clothes up in that direction . . . ; moreover, it was on the west side of the others that the principal caller stood when calling back the soul.' This statement, which occurs in ch. 53 of the *Li ki* (l. 28), is doubly important, as it also intimates that in some instances more than one person was employed to perform the ceremony."—*Ibid.* i. i. 247–50.

"The great importance anciently attached to calling back the dead is manifest from the numerous passages in which the three Books of Rites refer to it, as well as from the fact that these passages contain very minute descriptions as to the way in which this ceremony was to be observed in peculiar and exceptional cases." See the instances given.—*Ibid.* i. i. 250–1.

"The following passage occurring in ch. 11 of the *Li ki* (l. 38) . . . points to the prevailing conviction that, the longer revival absented itself, the further the soul was away, so that, in calling it back, the circle of activity must be gradually widened. 'In the case of the ruler of a state, the soul is called back in the smaller back chamber, in the larger back chamber, in the smaller ancestral temple, in the greater ancestral temple, at the gates of the arsenals and treasuries, in the four suburbs of the capital.' 'The Hia-ts'ai,' adds the *Cheu li*, 'when officiating at Great funerals, takes the robe which is worn with the crown and calls back the soul in the great ancestral temple; then, on the driving car on which the yak's tails of the defunct are erected, he calls back the soul in the four suburbs of the city. The Servants attending at the sacrifices, at Great funerals call back the soul in the small ancestral temple, and the Assistant Servants on such occasions recall it in the smaller back chamber and in the larger one.'"—*Ibid.* i. i. 251–2.

De Groot, who is the only scholar who has systematically investigated the funeral rites, proceeds to deal further with the custom of recalling the soul. "In those ancient times it seems to have been customary after battles to call back the souls of the brethren slain in arms. In chap. 9 of the *Li ki* it is related on l. 42, that 'in Chu-lü they used arrows for recalling the dead, a practice which had taken its rise from the battle at Shing-king.' This bloody conflict between the armies of Chu and Lu, which took place in the year 637 or 638 B.C., is recorded in the *Tso ch'wen*, under the heading: 'Twenty-second year of the ruler Hi'; those of Chu carried the day. 'Notwithstanding their army then remained in possession of the field,' says Ching Khang-ch'ing, 'the number of their slain and wounded was very great, and they had no clothes wherewith to call back their souls.' 'The men of Chu,' adds Khung Ying-tah, 'having set their minds upon carrying the day, they had taken their arrows closely to heart. Hence the victors, in calling back the souls, availed themselves of these arrows on which the slain had been so bent, in hopes the souls might be brought back by the same.'"—*Ibid.* i. i. 252.

Washing the corpse.—"The great solicitude manifested by the ancient Chinese to keep the bodies of their dead in a good condition, that they might at any time be fit to be re-occupied by the soul, naturally suggests their being very particular in subjecting corpses to a scrupulous cleansing before enclosing them in their coffins. The correctness of this inference is fully confirmed by the old books of the nation."—*Ibid.* i. i. 331.

"The *I-li*, describing the funeral rites of ordinary officers, their parents, wife and eldest son, has: 'The overseers of the waste and cultivated grounds dig a pit between the steps, a little towards the west side, and contrive a furnace under the western wall (of the court-yard) with its frontside facing the east. Water-basins, washing-tubs, a water-dipper, a vase without feet, and double-cauldrons, all new, are washed clean at the foot of the western steps. The servant in charge of the apartment draws water, and without removing the rope from the bucket, coils it on his hand. The Invoker (after the manner of the Hia dynasty) rinses rice in the hall, turning his face southwards and using a water-basin (wherein to pour the rinsings). While he performs this work, he separates, on filling the water-basin, the bad grains from the good ones. The servant in charge of the apartments now ascends the whole flight of steps. Without going so far as the hall, he receives the rinsings and boils them on the furnace, employing a double-cauldron. An attendant for the outer apartments occupied by the males accepts the thus prepared wash for the head and enters with it; the principal mourners all leave the door to stand outside with their faces turned to the north, after which the head is washed, combed, and wiped with a towel. Subsequently the body is washed with towels and wiped with bathing clothes, that is to say, the four attendants lift up the shroud, and so the washing is performed. There is then no mat upon the couch. At the death of an officer's mother, the washing is done by attendants of the inner apartments where the women live; no hair-pin is in this case put in the coiffure. The washing water is cast into the pit. The nails are pared and the beard trimmed as on other days (before death); the coiffure is bound with a tape and the hair-pin put into it. They then place the grave-clothes on the body, the chief mourners finally entering and repairing to their places."—*Ibid.* i. i. 16–18. "A similar account very likely referring to Rulers and Great Officers also," is given in the *Li chi*, ch. 37, ll. 35–6 (*ibid.* i. i. 18–19).

"During the Cheu dynasty, other substances besides water and washings of rice and millet were, in the case of Rulers, used for cleansing the dead. We have ample evidence of this in the *Cheu-li*. 'When the sovereign dies, at the great exposition (of his body on the couch), the Underintendent of Religious Worship washes the corpse with fragrant spirits made from millet. The Master of Collocation (whose function is to arrange the seats and implements at sacrifices), at great funerals, when the great washing with fragrant spirits takes place, puts up the cooking implements. When, at a great funeral, the great washing of the body is performed, the Officer of the Millet-wine lays out the ladles and furnishes the millet-wine for perfuming the corpse. At a great funeral, immediately after the demise, the Great invoker washes the corpse with the millet-spirits set out at the exposition of the body, assists in putting rice into the mouth of the dead, helps with the dressing, and removes and puts out the sacrificial implements. And the Sub-invoker, at a great funeral, assists at the washing of the corpse, sets out scorched grain, and erects the banner which is inscribed with the name of the dead.'"—*Ibid.* i. i. 19–20.

Hiding the corpse.—The custom of hiding the dead from view is "mentioned by both the *I-li* and *Li-ki* . . . ; moreover, the latter classic (ch. 57, l. 34) says: 'Immediately after the demise, the corpse is transferred (from the ground . . .) to the couch and covered with the shroud that is to be used also at breath was drawn are taken off.'"—*Ibid.* i. i. 21.

Placing lights near the corpse.—"The *Li-ki* (ch. 57, l. 34) also has: 'In the case of a Ruler, there are two candles above in the hall and two below. In that of a Great officer, the numbers are respectively one and two, and in that of an ordinary officer, one and one.' And the *I-li* says: 'At night they light a torch in the central part of the courtyard.'"—*Ibid.* i. i. 21.

Removing the furniture.—"No doubt there is a close connection between it [the modern custom of removing the furniture] and this ancient prescript occurring in chap. 4 of the *Li-ki* (l. 2): 'He who has suffered a loss by death sits on a single mat. In the China of ancient times the mourners used to occupy small sheds of wood and clay, specially erected for the purpose and entirely without furniture of any kind, there to spend the days in wailing and fasting, their nights on straw or matting 'with a clod of earth for a pillow.'"—*Ibid.* i. i. 27–8.

"This theory [of removal of the deceased's family] will appear more probable on learning that such a line of conduct was pursued" during this period. . . . "The *I-li* has: 'The sacrificial articles set out on the last are the following:—Two earthen jars, holding must and spirits. Round wine cups with a handle, and similar cups without a handle. Wooden spoons. A couple of white pots filled with uncut *kwei*, pickles, taro, and pickled meat of snails. Two baskets without strings (to fasten the covers), but with pieces of linen (to place over them), the one containing chestnuts, unselected, and the other four slices of dried meat. Mats to place the offerings on, stand on the north side of the articles, and mats to stretch the corpse upon while it is being dressed stand on their east. The pit for storing away the coffin is now dug, but only so deep as to leave the pegs which fasten the lid to the case visible.' The *Li ki* (ch. 10, l. 25) states: 'Confucius said "Under the sovereigns of the Hia dynasty the coffin was stored away at the top of the eastern steps. The people of Yin stored it away between the two pillars, but those of Cheu do so at the top of the western steps."' 'When the coffin is brought in through the gate,' . . . the *I-li* continues, 'the principal mourners do not wail. It is taken up the steps by means of a bier-carriage, and the lid is at that moment placed underneath the case.' According to Ngoa Ki-kung and the editors of the Khienlung edition, it was forthwith placed in the above-mentioned pit. 'On the south side of the western stand of earth they place scorched corn, to wit, two baskets of millet and two with panicled millet, each containing also dried fish and dried meat. And outside the gate they arrange three cauldrons, the principal one to the north of the others. (They contain respectively): a pig, being a full set of joints; nine fishes belonging to the *chwen* and *fu* kinds; dried meat, namely, the left side (of a pig)' without the ham. For the rest everything is the same as on the previous occasion,' that is to say, as at the sacrifice of the slighter dressing, (p. 84)."—*Ibid.* ii. i. 363–4.

Visits of condolence.—"The ancient books of rites teach us that, during the Cheu dynasty, even sovereigns and potentates were in the habit of sending messages of condolence at the death of their officers, also of going in person to the house of mourning. Their consorts acted in a similar manner; noblemen and grandees attended part of the funeral rites of their colleagues, not excluding those of lower rank; everybody, from the very ruler down to remote kinsmen and friends of the deceased, presented grave clothes, obviously the forerunners of the modern 'coffin-paper.' Even the curious idea that pollution is incurred by such visits was strongly entertained in those times. The *I-li* says in its chapters on the funeral rites of ordinary officers: 'The Ruler sends a man to condole with the mourners. The curtain (suspended in the hall to screen the back-chamber from view) is tucked up, and the principal mourner receives the man outside the *ts'in* [inner] gate, but he does not wail on seeing the visitor. He then precedes him in entering the gate, turns to the right, and stands there with his face towards the north. The condoler, after entering, ascends the western steps and places himself with his face eastward, whereupon the principal mourner advances to the middle of the courtyard, and the condoler delivers his message. This done, the principal mourner wails, bows, knocks his forehead against the ground, and performs a full stamping (consisting of three stamps with the feet, thrice repeated); the visitor then leaves the gate, and the principal mourner bowingly sees him off outside the outer gate. The Ruler sends a man to bring grave clothes. The curtain having been tucked up, the principal mourner acts as in the foregoing case. The messenger with the clothes, holding the collars with his left hand and the waists with his right, enters, ascends the steps, and delivers his message, the principal mourner making his reverences as in the last case. The man with the clothes then enters (the back-chamber) and places the clothes on the corpse; this done, he leaves the gate and is bowingly seen off by the principal mourner as in the case before-mentioned. Only if a message comes from a Ruler, the principal mourner appears (from the back-chamber to receive it). But when he ascends or descends the western steps, he makes reverences to the visitors (that happen to be present at that moment). If there is a Great officer, he makes reverences to him separately from the others and places himself at the foot of the western steps with his face to the east, but he does not stamp his feet, and enters the back-chamber again even though the Great officer has not told him to go.' He has, of course, to show the utmost anxiety to be at the side of his father's corpse." "'The near relatives (uncles, aunts, sisters, and so on of the dead) present grave garments. They do not deliver a message with them, but lay out the clothes immediately (in the apartment on the east side of the back-chamber).' 'The several kinsmen present grave clothes, but through messengers who have to deliver an address in the back-chamber. The principal mourner makes reverences to them from the place assigned to him, whereupon the clothes are deposited on the east-side of the corpse, upon a couch. The friends present grave clothes. They bring them in person; the principal mourner bows to them, and they put down the garments as in the last instance.' 'And when (such a messenger or friend) retires, the principal mourner wails, but without stamping his feet.'"—*Ibid.* i. i. 33–5.

[Visits of condolence amongst various ranks and the subtile rules of etiquette observed are given in the *Li chi*, ch. 58. (l. 26) and *I-li*, ch. 28 (ll. 24–34), reproduced by *De Groot*, in *ibid.* i. i. 35–9. See these passages also for allusions to the stamping of feet, the running out of the chief mourner, the leaning on the corpse, plastering of the coffin, offering of sacrificial articles, etc.]

Imposition of hands.—"Another act of great importance was the imposition of hands. It implied great reverence for the dead, hence we find it minutely regulated in the ancient rites by rescripts. 'The Ruler,' says chap. 58 of the *Li ki* (l. 16), 'lays his hand on a Great officer and on his own principal wife; a Great officer does so on his palace-elder, on his niece, and his brother's wife. A Ruler and a Great officer lean on the bodies of their parents, wife, and eldest son, but not on those of their other sons; an ordinary officer leans on his parents, wives, eldest son and other sons. If such a son but the eldest has a son, then the parents do not lean on his body. The parents of the dead do it prior to the man who generally performs the ceremony (*i.e.*, the principal mourner), and the wife and sons after him.' 'A Ruler lays his hands on the bosom of his minister. A father and mother hold (the dress on the breast of) their child with their hands, but a child leans over the body of its father or mother. A woman pulls up the dress (on the breast) of her father-in-law or mother-in-law, but a father-in-law and mother-in-law only lay the hand on the bosom of the woman. A wife grasps the dress of her husband firmly, but a husband merely holds that of his wife and his own brother with his hands.' 'On leaning over a corpse, the spot which the Ruler occupied on doing the same thing may not be trodden on. And everyone who performs the act must, on rising, surely stamp his feet.' So, leaning over a corpse implied the deepest sorrow and affection, merely imposing the hands, the slightest. Between these two extremes lay consecutively: pulling up the dress at the breast (奉), grasping it firmly with the hands (拘), and merely holding it in the hands (執)."—*Ibid.* i. i. 39–40.

"A few words now remain to be said on the Exorcist and the Invoker, who escorted the Ruler on his visit. We may not pass these men by in silence, as they distinctly point to the existence in those ancient times of similar ideas on pollution by contact with death as we have found prevalent at the present day. . . . Exorcists are, under the name of *Wu* (巫), very frequently mentioned in ancient Chinese literature. Already the *Shu king* makes distinct mention of them. By collating all the passages relating to them, it is seen that they were a certain class of priests and priestesses entirely possessed by spirits of *Yang* material . . . and, as such, were deemed especially fitted to perform chiefly three several functions: (1) to call upon the spirits of the dead in order to make them partake of offerings; (2) to foretell future events by interrogating the spirits and communicating their will to the living; (3) to expel diseases and evil in general, especially droughts, by neutralising through the *Yang* power residing in their persons the influence of the element of darkness *Yin* . . . and the evil spirits that are identified with it. Now it is in this last quality that we see them in the retinue of the ancient Chinese potentates when about to expose themselves in a house of death to the attacks of invisible agencies. Commenting on the passage referring to the Exorcist in the above extract from the *I li*, the learned Ngao Ki-kung (敖繼公) of the Yuen dynasty says indeed: 'Certainly a *Wu* and an Invoker were employed by him because he had also to come in contact with the ghost.' Chap. 12 of the *Li ki* says on l. 46: 'When a Ruler goes to the funeral rites of a minister he has with him a *Wu* and an Invoker holding respectively a piece of peach wood and reeds, as also lancers—because he dislikes (the influences of death).' 'The peach tree,' says Ching Khang-ch'ing (鄭康成), the most famous of all the commentators on the books of rites, who lived in the second century, 'is dreaded by ghosts, and bundles of reeds are available for sweeping inauspicious things away; they were used then because there were inauspicious and evil influences about.' It is a pity that the books say nothing about the doings of those men on that occasion, for it can scarcely be doubted that they performed many superstitious rites during the Ruler's visit, or at the moment of his arrival and departure. The *Cheu li* says in the 25th chap., on ll. 30 and 39: 'When the Sovereign pays a visit of condolence, the Invoker for the funeral rites marches in front of him in company of the *Wu*,' and 'The male *Wu* on the same occasion walks ahead of him with the Invoker, but no noteworthy information whatever is afforded by any of the books of rites. Turning over the pages of the *Tso ch'wen* (左傳), the well-known commentary of Tso Khiu-ming (左邱明) on Confucius' *Ch'un ts'iu* (春秋), we find under the heading '29th year of duke Shang' (B.C. 543): 'The people of Ch'u required the duke to bring grave clothes in his own person (for their King Khang). He disliked doing so, but Muh-shuh said: "Have the inauspicious influences driven away from the place in the hall where the coffin is stored away awaiting burial, and then take the grave clothes thither: they will then be mere (harmless) cloth and silk." Accordingly a *Wu* was despatched first to dispel such influences from the spot by means of peach wood and reeds, which the people of Ch'u did not prevent; but after it had been done, they were sorry for it.' It follows from this, that the practice had already in those early times fallen into some discredit; indeed, though highly salutary for the safety of the Ruler's holy person, it could not but be looked upon as rather insulting to the dead person against whom it was directed."—*Ibid.* i. i. 40–2.

"Considering now that even at the present day scarcely anybody related to the deceased or the mourners would dare to fail in going up to the house of death, in order to discharge himself of what he deems a holy duty on his part, it may be taken for granted that in the entire succession of generations lying between ancient and modern China, such visits have formed an inseparable, nay, an integrate part of the range of social customs. It would lead us too far from our subject to confirm this, if confirmation were necessary, by long quotations from the native literature. Let a single extract suffice for the purpose. It is taken from the sixth section of the *Yen-shi kia hiun* (顏氏家訓) or 'Domestic Instructions by Mr. Yen,' a highly interesting ethical work of the sixth century, treating of the rules of conduct to be observed in domestic life. 'In the countries south of the Yang-tszĕ, at every heavy loss by decease, connections with acquaintances living in the same town are broken off, if they do not pay a visit of condolence within three days after the death. And even on coming across them when the mourning rites are all over, all contact is avoided, owing to the grudge entertained against them for not having shown sympathy. Those who have an excuse, or a long way to go, are allowed to send a letter, and if they neglect to do this, they also are dealt with in the same

way. In the north there are no such customs.'"—*Ibid.* i. i. 42–3.

Feeding the corpse.—"Confucius himself was convinced that, like the calling back of the soul, these customs [feeding the dead] had originated in the darkest ages; for, according to the *Li ki* (ch. 30, l. 20), he said: 'When ceremonial usages came into existence, people, whenever a case of death occurred, went up to the housetop and exclaimed: "Ho-o-o So-and-So, come back!" After this they filled the mouth with uncooked rice and put cooked food upon stands.'"—*Ibid.* i. i. 356.

"At the time of the Cheu dynasty we find that stuffing of the mouth [of the dead] was considered a rite of so much importance that it had a place allotted to it among those funeral observances which no one might neglect. This may be inferred from the following passage in the *Li ki* (ch. ii. l. 37): 'Calling back the soul, plugging open the teeth, binding the legs on a seat to keep them straight, filling the mouth with rice, laying out the clothes for the dead, and curtaining the hall—these things are performed conjointly.' According to the unanimous assertion of commentators, this plugging open the teeth served to prevent the mouth from closing tightly when the body grew cold, which would have rendered the stuffing very difficult; therefore it was done almost immediately after the last breath had escaped from the lips of the dying man."—*Ibid.* i. i. 356–7.

"The practice of stuffing the mouth of the dead is denoted in the *Li ki* and the *Cheu li* by the character 飯. This occurs in all the works of antiquity in the sense of 'a meal, or to take a meal,' as its composition from the elements 反, 'to come back,' and 食, 'to eat,' implies; which clearly shows that the stuffing of the mouth was indeed conceived . . . by the people as a feeding process."—*Ibid.* i. i. 358.

Placing food near the corpse.—"Chap. 13 of the *Li ki* (l. 11) says: 'Presently after the demise dried meat and pickled meat are set down.' And the *I li*, immediately after giving rescripts as to the calling back of the soul, plugging open the mouth, and tying the legs to a stool, says: 'They set down dried meat, pickled meat, must and wine. These articles having been taken up the eastern steps, they are deposed on the east side of the corpse. They are set down near the couch, close to the shoulder. No funereal vessels are employed. Either must is offered, or spirits, but no covers of cloth are used, nor spoons.' The *I li* thus explicitly forbidding the food to be placed in such vessels as were used for the service of the dead, we are justified in suggesting that the patient was not considered dead in reality, but only in appearance. It is also noteworthy that Ngao Ki-kung says in his commentary upon the above passage: 'Those articles were set down after the demise as if a living person were being waited upon. The dead man was now lying with his head southward, so that the east was on his right hand, and the articles were placed on this side to enable him to partake more easily of the food and the drink.'"—*Ibid.* i. i. 359.

Placing precious objects in the mouth of the corpse.—"The idea that death is merely a long protracted sleep and that corpses may come to life again, has, besides recalling the soul, howling, and postponing of burials, given rise in China to some other practices. . . . In the first place, it has prompted the people since times immemorial to stuff the mouth of the dead with things that are supposed to be imbued with vital energy derived from the great element *Yang*, and therefore deemed able to facilitate revival and at the same time to retard decomposition, so that the soul, on returning, might at any time find its flesh and blood in a state fit for re-occupation. Among these articles, a certain class of minerals called *yuh* [*yü*] (玉), embracing probably sundry sorts of jade or jasper, nephrite and agate, have always obtained a first place. The *Cheu li* informs us that, 'at funerals of the highest order, the Manager of the Signets of Jade provided (bruised) jade, to be mixed up with the rice for the mouth, as also (pieces of) jade to be put into the mouth.' A similar duty at those times was incumbent upon a certain official styled Manager of the Stores for Jade. The *Li ki* contains many references to the custom with which the above passage acquaints us, which proves that it held a very important place among the funeral rites at that time. This is still more evident from the fact that princes and sovereigns were in the habit of sending to one another, by special messengers, the jade required for stuffing the mouth." See *Li chi*, ch. 14, l. 19, for instances.—*Ibid.* i. i. 269–70.

"Of the way in which such jade for the mouth was presented by such a messenger," see ch. 54 of the *Li ki* (l. 29). "We see from this passage that jade for the mouth was still offered even though the messenger came too late for the family to make use of it, which is a proof of the great importance attached to the custom in question."—*Ibid.* i. i. 270.

"Already in those ancient times it [jade] was identified by philosophy with the heavens, whereas the *Yih king* (ch. 17) says: 'Heaven is jade, is gold.' Now, the empyrean region being . . . the depository of all life in Nature, of the vital energy which Nature deals out over the world, its symbols must likewise be bearers of these good things. Moreover, the celestial sphere is unchangeable, indestructible, beyond the influences of decay, and the same qualities attach to its symbols. Hence jade and gold naturally endow with vitality all persons who swallow them, in other words, they intensify their souls or *shen*, which are, like the heavens, composed of *Yang* matter . . . ; and they hold at a distance from the dead corruption and decay, thus furthering their return to life. That such ideas were prevalent in ancient China may be inferred from time-honoured works and from opinions expressed by native authors on the point." [See *Chou li* and the writings of Ch'ing K'ang-ch'ing and Wang Chao-yü.]—*Ibid.* i. i. 270–1.

"One question still requires elucidation, to wit, why jade and gold were, in China, so especially identified with heaven. No satisfactory answer to this is supplied by any of the ancient books; so we can only guess at the reasons. Semi-civilized, simple-minded man naturally cherishes puerile ideas about the Cosmos, the constitution of which he does not at all understand. So it is not surprising to find the ancient Chinese identifying the source of precious rains, warmth and light with the most precious thing they possessed on earth and, in a reverse sense, simply regarding such things as emanations from the *supremum bonum*. The beautiful azure colour by which many sorts of jade are distinguished from other minerals, may likewise have had some share in establishing this identification. If the above hypothesis be correct, it is as natural . . . that the ancient Chinese used also other precious metals for preserving their dead. To this end they availed themselves, in the first place, of cowry shells obtained from rivers, lakes and seas, which were so valuable in ancient times that they were generally used for currency [See EXCHANGE]. 'The mouth of the Son of Heaven,' says ch. 56 of the *Li ki* (l. 14), 'is stuffed with nine cowries, that of a feudal lord with seven, that of a Great officer with five, and that of an ordinary official with three.' The way in which they were introduced into the mouth in the case of an ordinary official, is described in the *I li*" (ch. 26, l. 50, 52; 27, l. 9–14; 31, l. 14). "People in those times were in the habit of plugging the teeth open immediately after death by means of a kind of spoon of horn, lest the mouth should shut and render the stuffing thereof difficult." Uncooked rice was also used in the stuffing.—*Ibid.* i. i. 274–5, 276.

"The same reasons why gold and jade were used for stuffing the mouth of the dead holds good for the use of pearls in this connection; indeed, the latter are also very frequently alluded to in Chinese literature as depositories of *Yang* matter, and as such ranked amongst the bearers of vitality. Medical works . . . say that pearls can be useful for recalling to life those who have expired or are at the point of dying. The native literature abounds with tales about pearls so full of *Yang* matter that they emitted rays of light; it has much to relate of 'effulgent pearls,' 'pearls shining during the night,' 'pearls lighting like the moon,' 'flaming or fiery pearls,' etc., etc. Similar legends have always been current in the empire about jade stone, and these are all based, of course, on similar conceptions. The 'Record of Forgotten Matters' . . . says that at the time of the Emperor Shen-nung (28th cent. B.C.), 'there existed jade which was obtained from agate rocks under the name of "Light, shining at night." If cast into the water, in the dark, it floated on the surface, without its light being extinguished.'"—*Ibid.* i. i. 277–8.

Dressing the dead.—"Despatching the dead to the next world in sacrificial robes was generally practised already during the Cheu dynasty."—*Ibid.* i. i. 51.

"The dressing of a dead body was usually done in three stages: first, they put on the body clothes, which proceeding they denoted by the character 襲; then came the so-called slighter dressing, and finally the greater or fuller dressing. These proceedings are referred to by the *Li ki* so frequently, as to fully justify the conclusion that they were matters of the greatest concern to the ancients."—*Ibid.* i. i. 331–2.

Confucius said, "The rule of Chow is to perform it [the dressing and coffining] at the top of the western steps, treating the dead as if he were a guest."—*Legge, Ch. Class.*, i. Prol. p. 88.

"Dressing the dead in numerous suits obtained as an established custom already during the dynasty of Cheu. This is clearly proved by the *I li*. 'The articles of dress for the deceased are arranged in the apartments, the collars on the west side. The principle articles are placed on the south of the less important ones. The clothes are not folded. The coats and petticoats for the manes (the body clothes) are of linen.'" "'These coats and petticoats are of curtain-linen; the sleeves are as wide as the breadth of the linen, and so long as to reach below the knees. The petticoat consists of a front and a back part, but it is not open at the sides.' (In other words, this garment was composed of two broad square pieces hanging down from the waist, the one in front and the other behind, and passing a little over each other at the sides); 'it hangs down upon the upper part of the feet. There is a hem of a light red colour along the openings and along the lower edge, and a black hem round the neck, as also round the cuffs.'" "'The pin for the hair-knot is of mulberry wood' (according to the commentators this was so because the mulberry is called *sang* 桑, which word is synonymous with another *sang* 喪, meaning 'funeral, loss by death'); 'it is four inches long and tapers away in the middle. The cowl for the head is of well finished taffety, as broad as a full width of cloth and five feet long; a slit is made in the lower end. The ear-plugs are of fine white floss. The cover for the eyes is of black silk; it is one foot two inches square, has a red lining and strings to fasten it (behind the head).' 'The object to be placed in the hands of the dead is of a dark stuff with a red lining. It is one foot two inches long and five inches broad. In the middle (where the hands grasp it) it is narrower by one inch on either side. A string to fasten it by is attached to it.' 'The archer's thumb ring is of genuine royal Kih wood, or of Tseh kih wood. It is tied on by means of strings. The covers for the fingers, made of cotton floss, are two in number.' (In ancient China such covers were put on the fingers of the right hand to prevent them from being singed by the string of the bow.) 'As to the corpse-sack, the sack proper is of black silk and so long as to reach to the hands. The red half, which tapers away, covers the legs.' In ch. 55 of the *Li ki* (l. 25) we read: 'What is a corpse-sack? It serves to conceal the corpse.' And ch. 58 of this Classic (l. 11) says: 'For the Ruler of a state the corpse-sack is embroidered; the part which tapers away is ornamented with axes, and the side is closed with strings in seven places. For a Great officer it is black, the tapering part is likewise ornamented with axe-like figures, but there are only five strings at the side. For an ordinary officer it is of dark silk; the part which tapers away is red and has three strings at the side. In general, such a sack is long enough to reach down as far as the hands, and the tapering part measures three feet.' So the sack was not exactly a sack, as one of the sides was open and had to be tied by cords or ribbons after the body had been wrapped up in it."—*De Groot*, i. i. 66, 332–4.

"The *I li* continues its enumeration of the grave-clothes as follows: 'The attire such as is worn with the official cap, and a dress of fine silk. The attire such as is worn with the leathern cap. A black attire with a red hem. A girdle of black silk. Knee-pads of leather. A tablet of bamboo (such as courtiers hold before their breast at audiences). Shoes of Dolichos cloth in summer, white shoes in winter, in both cases with strings between the sole and the upper leather, with strings of black silk at the points, and loops serving for button holes of the same material. On the shoes there are also ribbons and strings to fasten them at the heels. All the clothes that have been presented by the Ruler, friends and relations . . . are laid out along with the rest, but are not used for dressing the dead.'"—*Ibid.* i. i. 334.

"The clothes were not put on the dead man until he had been properly washed . . . and the mouth had been stuffed with cowries and rice. . . . 'The Invoker after the manner of the Shang dynasty lays the clothes out on a couch, successively placing upon it the sacrificial garments' (they were called sacrificial garments because they were worn by the officials when in attendance on the Ruler while he sacrificed to his ancestors), 'and the black attire with red hemmings. Having placed the cowl on the head of the dead man, he puts the plugs into the ears and binds the cover before the eyes; then he puts on the shoes, knotting the strings over the top of the foot and fastening the bindings of the points. (After the dead man has been placed upon the clothes laid out on the couch just mentioned), he dresses the body, which has three suits put on, in addition to the body clothes. He then adjusts the knee-pads and the girdle, and sticks the tablet into the latter. The archer's ring is now put on the lower part of the thumb, so that it is held up by the base of the thumb, and the object for the hands of the dead is fixed in its place by being tied to the lower parts of the fingers. This is done in such a way, that the lining comes in contact with the skin; the cord is wound round the middle finger and knotted on the lower parts of the fingers. The corpse-sack having been laid out, the body is sheathed up in it and covered with a shroud. The cloth (which is placed over the face when the mouth is being filled with rice and cowries), the plug for the teeth, and the spoon (used for pouring in the rice), are buried in the pit . . . , together with the trimmings of the hair, beard and nails, the pit being thereupon filled up by the Overseers of the waste and cultivated grounds.' 'On the next day they again arrange clothes in the apartments, the collars on the south. The principal of these articles of dress is placed on the west side of the less important. They are folded. The scarfs for winding round the corpse, three crosswise and one straight, are as broad as a whole piece and have a slit at the ends. Then follows a black sheet with a lining of a dark red colour, but without the usual hem at one end. Next comes a sacrificial attire, then the upper clothes, in all nineteen suits; subsequently they display the clothes (presented by the Ruler, friends and relations), but it is not necessary to use all these.' Some particulars about this display of the grave garments to be used at the slighter dressing are to be found also in the *Li ki* (ch. 58, l. 1)."—*Ibid.* i. i. 33–46.

"'Strong men,' continues the *I li*, 'having washed their hands, take up a position in pairs at the foot of the western steps, with their faces to the east. Mats are spread out in-doors (in the back chamber), one of Kien straw underneath and one of fine bamboo over it, and the Invoker after the manner of the Shang dynasty lays out over them successively the scarfs, the sheet, the upper clothes, and the sacrificial garments. These (two) sacrificial garments he does not place in irregular order, but the finest he lays underneath the other. Thereupon the said strong men lift the corpse up and transfer it (to the dresses), returning them to the spot which they previously occupied.' 'All those,' says the *Li ki* (ch. 58, l. 8), 'who dress the corpse, have the upper parts of their bodies naked, but those who transfer it to the clothes are dressed. At the obsequies of a Ruler, the Great Adjuncts do the dressing, assisted by the ordinary Adjuncts; at those of a Great officer the Great Adjuncts merely stand by, while the others do the work; and at those of an ordinary officer the ordinary Adjuncts stand by, while the strong men perform the dressing.'"—*Ibid.* i. i. 336.

"'A couch with mats,' so the *I li* continues, 'is now placed between the two pillars and covered with mats as before.' (That is to say, as in the case when the dead had just expired.) 'A pillow is placed on it for the head. The dressing finished, they remove the curtain. The principal mourners, their faces turned to the west, now lean on the corpse . . . stamping their feet an unlimited number of times, and the female mourners, their faces turned eastward, lean on it also, acting in the same manner. The strong men then lift the corpse up; the males and the females sustain it, and so it is carried to the hall, where (placing it on the aforesaid couch) they cover it with a corpse-pall.'" "'The next morning, after having extinguished the torches, they lay out the garments (for the fuller dressing) in the apartment, the collars on the south side and the principal garments on the west side of the others. They are folded up. There are scarfs for swathing the corpse, a sheet and two palls, further the grave clothes presented by the Ruler . . . , a sacrificial attire, upper clothes, and grave clothes presented by relations and friends, thirty suits in all, without counting the sheet. It is, however, not necessary to use them all.'"—*Ibid.* i. i. 337.

"Now the *I li* describes the fuller dressing. . . . 'The principal mourners support the corpse while (the strong men) deposit it in the coffin. They stamp their feet in the same manner as they have done before, and the lid is fixed on. The scorched corn having been arranged on the spot, one basket (of each kind) on either side, the coffin is covered (or plastered over) with clay, while the bystanders stamp their feet a number of times not subject to any fixed rules.' Chap. 58 of the *Li ki* (l. 38) says: 'In the case of the ruler of a state they use eight baskets of scorched grain, containing four different kinds; for a Great officer six baskets are used, containing three kinds, and for an ordinary officer four baskets of two kinds. Besides, fish and dried meat are put in them.'"—*Ibid.* ii. i. 364–5.

"'For the fuller dressing,' the *Li ki* says (ch. 58, l. 3), 'there are scarfs of linen, three laid straight and five laid crosswise, further, a sheet of linen and two palls; this holds good as well for a Ruler as for a Great officer and an ordinary officer. In the case of a Ruler they display one hundred suits of clothes in the court-yard, with the collars towards the north, while the principal clothes are laid out on the west side of the others. For a Great officer there are fifty suits, displayed in the eastern corridor, the collars towards the west and the principal clothes on the south side of the others. For an ordinary officer they exhibit thirty suits in the corridor on the east, with the collars towards the west and the principal clothes on the south of the others. The scarfs and the sheet are of the same quality as the court robes. Three scarfs are cut out of one width of cloth, and they are not split at the ends. The sheet is made of five pieces of full width, and has not the usual hem at one end.'"—*Ibid.* i. i. 337–8.

"'The hall,' continues the *I li*, 'having been curtained off, the women arrange themselves on the west side of the corpse, turning their faces towards the east. The principal mourner and the near relations ascend the western steps, pass by the feet of the corpse, and stationing themselves with their faces westward, they bare the upper part of their bodies. The strong men, having washed their hands, take up a position as before (*viz.*, as at the slighter dressing), and mats are also spread out as at the slighter dressing. The fuller dressing takes place near the eastern flight of steps.' 'The Invoker after the manner of the Shang dynasty successively lays out upon these mats the scarfs, the sheet, the palls and the clothes, so that the finest of the latter shall be outermost when the corpse is dressed. The grave clothes which have been presented by the Ruler are not

placed upon one another in reverse order. Now the strong men lift the body (from the couch between the two pillars) and transfer it (to the pile of clothes). As they return to their place, the principal mourners stamp their feet an unlimited number of times. The dressing finished, they remove the curtain, and the chief mourners lean on the corpse as they did at the slighter dressing, the principal female mourners acting in a similar manner.'"—*Ibid.* i. i. 338–9.

"The fact that in ancient China the dead were dressed in so many expensive suits, indeed in more suits than ever living man wore, is a most convincing proof that this part of the funeral observances was the object of peculiar interest. We read in the Domestic Discourses of Confucius . . . that, 'when Confucius died, the clothes put on him at the first dressing consisted of eleven suits, to which was added one court dress, besides a *chang-fu* cap,' that is to say, a cap after the fashion of the Yin dynasty. Over these eleven suits the numerous attires of the slighter and the fuller dressing were put on."—*Ibid.* i. i. 339.

A "proof . . . of the interest bestowed by the living upon the dressing of the dead" is "the anxiety shown by relations and friends in presenting garments for the purpose; . . . it was an established custom for all the kinsmen and friends, and in the case of an ordinary officer even for the Ruler in whose service he was, to contribute grave garments. Rulers even went so far as to send them to their princely colleagues of other feudal kingdoms. 'This was an established ceremonial usage,' as the *Tso ch'wen* relates. 'The feudal princes presented to one another their condolences and congratulations, and even when the garments could not be of service (because they arrived too late), they were accepted as a mark of courtesy and recorded as such, that the good understanding which had existed heretofore between the parties, might not fall into oblivion.'"—*Ibid.* i. i. 340.

"The grave clothes presented in such large quantities by anxious relations, friends, and superiors were . . . displayed during the dressing. The object of this no doubt was to express the willingness of the family to make use of all of them in behalf of the dead. The question now arises: what was done with them, in so far as they were not used for dressing the corpse? Nowhere do the ancient books clearly express themselves on this head; but considering that in ancient China it was customary to stow away in the tombs of grandees all sorts of articles, implements and valuables which might be useful to the dead, it is not beyond the bounds of probability that the clothes in question went the same way, at least in the earliest ages. This supposition assists us in explaining why the ancient works denote them by the character 襚, that is: clothes 衣 which follow 遂. This character is nowhere found in the books in the sense of garments which were really used for dressing the dead, nor in that of any other sort of garments."—*Ibid.* i. i. 342.

"It is worthy of notice that the high importance which was attached in ancient China to the dressing of the dead, is testified by the fact that, in the case of grandees and their wives, the Ruler of the state and his consort attended at it personally, resorting to the house of mourning for the purpose (p. 35). . . . Besides this, the *I li* shows that Great officers were in the habit of displaying the same interest at the decease of ordinary officers. 'The fuller dressing,' it says, 'takes place near the eastern flight of steps. The Great officers ascend the western steps and station themselves on the east side of the same, where they turn their faces to the north, and each higher officer stands on the east of the one of lower rank. And when the mourners have finished leaning on the corpse, the Great officers descend the steps in reverse order and return to their places.'"—*Ibid.* i. i. 342.

Delay in dressing, encoffining, etc.—"The belief that death is only a suspended animation and that the soul may return and recall the corpse to life, having so strongly taken possession of the minds of the ancient Chinese, . . . it is but natural that they should have systematically delayed the dressing of the corpse, put off the coffining till the dead body had reached an advanced state of decomposition, and finally deferred the burial for months, nay for years. Chap. 70 of the *Li ki* says on l. 31 and 34: 'The deceased is dressed on the third day. . . . When someone asks: "Why is the dressing not performed till three days after the breath has expired?" the answer is: At the death of a parent, the filial sons are sad and sorrowful, and their minds are full of grief. Hence they crawl over the floor, pour forth their death-howls as if they would bring back life into the body in this way; how then can they allow the corpse to be wrested from them to be dressed for the tomb? Therefore, when we say that the body is not dressed until the third day, this means that we wait so long for its revival. If re-animation does not follow in three days, it will not come at all, and the heart of the filial son is still more broke down. Meanwhile the plans of the family with regard to the line of conduct they are to follow are brought to maturity, and preparatory measures as to the grave garments are taken; moreover, the relations who live at a distance have time to arrive. These are the reasons why the sages have given a decision on the matter, making three days the rule.' It appears to us that this extract fairly explains why, during the Cheu dynasty, the dressing of official persons was divided into three distinct stages separated from one another by an interval of time, the last clothes not being put on the corpse until the moment before it was deposited in the coffin. By this usage . . . the relatives clearly expressed the reluctance they felt to preparing a body for the grave, the resurrection of which they might at any moment expect."—*Ibid.* i. i. 263–4.

[For the periods of delay in encoffining and burial for various ranks, and the reasons therefor, see *ibid.* i. i. 264–5.]

"It is also interesting to see that attempts were made to prevent decay, in order that the soul, on returning, might find the body in a fit state to be re-occupied. 'For a ruler,' says ch. 57 of the *Li ki* (l. 33), 'they put down a large basin with ice, for a Great officer a corpse-basin with ice, for an ordinary officer only an earthenware vessel without any ice in it;' but, says the *I li*, 'if, for an ordinary officer ice is used, a corpse-basin may serve for it.'"—*Ibid.* i. i. 264–5.

"The rescripts regulating the lapse of time after which the dressing, coffining, and burial were to take place, do not seem to have borne the character of imperative laws during the Cheu dynasty. The *Li ki* itself declares in its 57th chap. (l. 32) that 'at the death of an ordinary officer his body was encoffined on the second day,' which in China means the day following the decease; but this may be a printer's error. The *Ch'un ts'iu* contains instances of princes who were buried after a lapse of time entirely different from that prescribed in the *Li ki*, even considerably exceeding it in length; *e.g.*, it relates that 'in the tenth year of Ruler Suen's reign (B.C. 598), in the fifth month, Hia Ch'ing-shu of Ch'en killed his ruler P'ing-kwoh (the feudal prince Ling) . . . and in the twelfth year, in spring, they buried this prince.' Which makes a postponement of the burial for at least twenty months."—*Ibid.* i. i. 266.

Sacrificial ceremonies at dressing.—"Sacrificial ceremonies connected with the dressing of the corpse were in vogue already in the age of Cheu. Indeed, in its elaborate account of the funeral rites for ordinary officers the *I li* describes them in detail, . . . no doubt the work places before us the most ancient prototype of those rites to be found in the literature of China. Having described the first part of the dressing, which took place in the back chamber, the *I li* says: 'On the east of the hall, below stairs, they set out dried meat, pickled meat, must and spirits. Linen of coarse or fine texture, to be used for covering these offerings, is placed in a basket on the east side of the articles displayed; and a wash-basin with ewer are put down on the east of those articles, with a towel. They further place one three-legged caldron outside the *ts'in* gate, near the eastern gate-room, a little southward. Its frontside is turned to the west. It holds a sacrificial pig, to wit, the four limbs (hams and shoulder-pieces) from which the hoofs have been removed, the two rib-pieces, the spine, and the lungs. They also place on the spot a carrying pole to pass through the ears of the caldron, and a cover for the caldron, which has its end on the west side; moreover, an unornamented stand is placed on the west of the caldron, in a direction from east to west, and a ladle is deposed upon it with its handle pointing eastward.'"—*Ibid.* i. i. 83–4.

"Upon this follows a description of the second part of the clothing ceremonies or the so-called 'slighter dressing,' which took place in the hall, and then the *I li* continues: 'Now follows the presentation of the sacrificial articles.'" A full description of this ceremony follows: see *ibid.* i. i. 84–5.

The double which was used during the ceremony was "a very rough human image, doing duty as a seat for the soul, which was put up in the middle of the court-yard. . . . This was evidently the prototype of the modern *hûn pêh* [*hun po*: see above]."—*Ibid.* p. 85.

Keeping the corpse unmutilated.—"The belief in the resurrection of the dead having obtained such a firm hold upon the Chinese of ancient times as to prompt the creation of numerous practices for the purpose of preserving corpses from decay, it is but natural to find them also cherishing a conviction that mutilation renders a body unfit to receive the soul again. That this notion has ever been deeply rooted in their minds may be inferred from the fact that the *Li ki* (ch. 58, l. 36) says: 'The hair and nails of the Ruler of a state and of a Great officer must be placed in the corners of his coffin, and in the case of an ordinary officer they must be buried.'"—*Ibid.* i. i. 342–3.

"The royal house of Cheu went so far as to exclude from its grave-yards those of its blood who had died from wounds inflicted by weapons. 'Those who have been killed by arms do not enter the burial grounds,' says the *Cheu li*. This passage throws a remarkable light upon the destination [? purpose] of those burial places. Indeed, whereas such people as by the mutilation of their bodies had lost all prospect of returning to life were not suffered therein, it is evident that at that time grave-yards were not grounds laid out by the living to dispose of useless human remains, but places where the dead were devoutly collected to await resurrection."—*Ibid.* i. i. 343.

"It is related in the historical documents of the Empire that Wu Tszĕ-sü, a minister of the kingdom of Wu in the sixth century before our era, having at the head of an army conquered the town of Ying, he there exhumed the body of P'ing, a former king of the state of Ch'u, and had it flogged, as a retaliation for the execution of his father who, when a minister in Ch'u, had been put to death by P'ing. The Historical Records say: 'When the troops of Wu entered Ying, Wu Tszĕ-sü tried to lay hands on King Chao (P'ing's successor); but being unable to discover him, he opened the grave of king P'ing of Ch'u, dragged his corpse out of it and gave it three hundred lashes.' This act would have been perfectly devoid of sense if Wu Tszĕ-sü had not been firmly convinced that, when flagellating a corpse, something more than a lifeless lump of flesh and bones was struck at." For official announcements made to deceased monarchs, v. *Li chi*, ch. 26. l. 1 *seq.*—*Ibid.* i. i. 349.

"The ideas of the resurrection of the body . . . have naturally prevented the Chinese from ever adopting any system of deposition of the dead which entails a quick destruction of the body, such as cremation, water burial, exposition in the open air, etc. From the earliest times we find them clinging to the system of burying their dead in the ground, in coffins of great solidity, sometimes in several coffins inclosed one within another, in receptacles calculated to ward off putrefaction for a long time. Coffins are, moreover, made of certain sorts of wood which, as philosophy teaches, are pervaded with *Yang* matter, and thus in a condition to further a speedy revival of the body."—*Ibid.* i. i. 280.

"There is no evidence that the art of embalming the dead, carried to such perfection by the ancient Egyptians, was ever known to the Chinese. Neither in their literature, nor in actual life do we find any trace of it."—*Ibid.* i. i. 280. *Cf. supra.*

Coffins and grave-vaults.—"The ancient method of burying the dead in the houses under brambles and wood over which came a layer of clay, may perhaps render it clear how it happened that . . . coffins or vaults of earthenware came into vogue even before coffins and vaults of wood were generally used [see i. 282.] The art of burning clay must have been known at a very early date, as it may be supposed that human dwellings, when filled with provisions of dry wood or other combustible matter, often fell an easy prey to conflagrations which turned the clay into one solid mass. And so it naturally occurred to the people to discontinue the use of unburnt clay for covering up the dead at home, and to use burnt clay instead thereof. Yet the ancient method was not so soon entirely supplanted by the new, as is seen from the fact that unburnt clay was still in vogue for the home-burial during the Cheu dynasty."—*Ibid.* ii. i. 376–7.

"The sovereigns of the House of Cheu . . . put in the grave the side curtains of the catafalque, and the *shah* [*v. infra*]. The people during the Cheu dynasty buried those who died between sixteen and nineteen in the wooden coffins and vaults of the people of Yin; those who died between twelve and sixteen and between eight and twelve they interred under the brick enclosures of the sovereigns of Hia, and those who died in infancy, for whom no mourning is worn, in the earthenware coffins of Yin-yü's time."—*Ibid.* i. i. 282.

"Chinese literature contains also hazy references which point to the use, during the Cheu dynasty, of coffins of solid stone, by which term may be understood marble, dolomite or granite. . . . It was considered a great privilege to be interred in a coffin of solid stone, and . . . was a mark of honour for a family to have one of its members committed to the earth in such a receptacle. . . . We may conclude from this that they were used only in very exceptional cases."—*Ibid.* i. i. 283–4.

"To prevent decomposition of the corpse being the main object of the coffins of antiquity, it is perfectly natural they should be made of very thick, substantial wood."—*Ibid.* i. i. 288.

"'For a Son of Heaven,' says ch. 11 of the *Li ki* (l. 46), 'the coffin is fourfold. One of buffalo and rhinoceros leather covers the body; it is three inches thick. Then comes a coffin of the *I* tree, then two of Rottlera wood. The four are all complete inclosures. Of the coffin bands two pass lengthwise around the coffin, and three crosswise. For each band there is one *jên*.'" And see the descriptions and numbers of the coffins of various ranks in ch. 58 (l. 34). "No doubt this rule was founded on the idea that the body of a pre-eminent person ought to be better preserved for the resurrection than that of a less important individual, an idea which . . . also prompted the ancient Chinese to defer the dressing, coffining and burial of eminent personages longer than in the case of less distinguished people." The *jên* were pegs used to clamp the case and lid together. "Three centuries after Ching [K'ang-ch'ing], Khung Ying-tah wrote: 'In ancient times coffins were not nailed; hence leather straps were used to join the different parts together. The straps laid lengthwise were wound around them twice, and those laid crosswise three times, and to each strap there was one *jên*.'"—*Ibid.* i. i. 285–6.

"It is curious to see that even in such an advanced stage of civilization as that represented by the age of Cheu, when iron was generally used, the custom still obtained of joining the different parts of coffins together by ropes or straps and wooden pegs, instead of using nails for the purpose. We do not hesitate to conclude that we are here face to face with a survival of centuries still more remote, in which iron was unknown." In "ch. 58 of the *Li ki* (l. 35) . . . we read: 'For a Ruler the coffin is lined with red stuff, fastened with nails of sundry metals; for a Great officer it is lined with dark coloured material fastened with nails of ox-bone; for an ordinary officer it is not nailed.' We feel strongly inclined to believe that those nails of bone and of various metals—probably copper and bronze—were instruments which, as late as the age of Cheu, had survived the general introduction of iron."—*Ibid.* i. i. 287.

"The custom of varnishing the receptacles of the dead . . . is proved by the *Li ki* to be of very old standing. . . . Considering that the object of coffins was to protect their contents from decaying influences, it is not improbable that such varnishing also included a previous caulking; but for this there exists no written evidence."—*Ibid.* i. i. 287–8.

"In all books, ancient as well as modern, they [grave vaults] are represented by the character 槨, now pronounced *kwoh* [*kuo*]; by way of abbreviation this is often written 椁. The fact that the prefix 木, 'wood,' enters into the composition of the character already in such early times, gives us a right to suppose that wood was the common material out of which grave vaults were constructed from the first. Nevertheless there are instances on record of vaults having been built of solid stone during the Cheu dynasty; these instances are, however, so scanty, that we cannot but conclude that such vaults were only constructed in exceptional cases. [See the instances given.] . . . There are also one or two references to copper grave-vaults, but they are unreliable."—*Ibid.* i. i. 288–90.

[As to the construction of wooden vaults, see *ibid.* i. i. 290.]

"'In the case of an emperor,' says chap. 11 of the *Li ki*, (l. 47), 'the funeral vault is made of cypress wood, cut from the foot of the trunk in pieces six feet long.' Chap. 58 (l. 47 *seq.*) adds: 'Rulers have a vault of pine, Great officers of cypress wood, ordinary officers of sundry sorts of wood. The space between the coffin and the vault can, in case of a Ruler, contain a music-stopper; in that of a Great officer it can hold a water jar, in that of an ordinary officer a liquor jar. In the case of a Ruler they line the vault, in that of a Great officer they do not do so.' Thus the width of the vaults cannot have been very large, a music-stopper being, according to commentators, a square tub which, at musical performances, was beaten from time to time with a clapper, as a sign to the musicians to begin or to stop."—*Ibid.* i. i. 290–1.

"In the age of Confucius grave vaults were by no means considered indispensable for the burial of the dead. Chap. 13 of the *Li ki* (l. 28) reports that the sage said on a certain occasion: 'If you wrap the body round from head to foot and quickly bury it without using a vault, this being suitable to your means, you may be said to act in obedience to the established rites.'" And see in the *Lun yü* on the death of Yen Yüan.—*Ibid.* i. i. 291.

"Knowing . . . how firmly they believed in the possibility of resuscitation, there is no reason for believing that the numerous and substantial enclosures for their dead served any other object than that of preserving the corpses from decay, that they might at any time be fit to harbour the soul once more." "This conclusion is confirmed by" a passage in ch. 11 of the *Li Chi* (l. 4).—*Ibid.* i. i. 292. Coffins and grave vaults must consequently have been objects of great solicitude. The ancient writings prove that this was the case (*Li chi*, ch. 11, l. 16; *K'ung-tzŭ Chia Yü*, etc.).—*Ibid.* i. i. 303.

"The expectation of a bodily resurrection . . . also led them to make provisions with regard to the coffins and vaults to be used for themselves after death. Two instances of vaults prepared during life" are "one relating to a Minister of War in the kingdom of Sung . . . the other to the Emperor Shi Hwang. . . . The *Li ki* moreover says (ch. 11, l. 36): 'When the ruler of a state ascends the throne, he has his innermost coffin made; it is varnished once every year and then stored away.' And in ch. 27 (l. 19) we read" that the innermost coffin accompanied the ruler of a state when crossing the boundaries of his territory.—*Ibid.* i. i. 304.

"So far as we are aware, the pre-Christian literature of China does not contain any clear reference to the boards of the seven stars [See PERIOD OF DISRUPTION].—In the *Tso ch'wen* it is stated that Yuen, a feudal lord of the state of Sung, in 515 B.C. said to his ministers: 'If by your energetic help I save my head and neck till I die a natural death, I pray you do

not then let the flat piece of wood, which will serve to support my body, equal that used for the former rulers.' Though this passage unmistakably shows that this piece of wood was an object of great solicitude, yet there are no means of ascertaining whether it was a seven stars' board or not."—*Ibid.* i. i. 318.

Storing of encoffined bodies.—"During the Cheu dynasty, encoffined bodies of grandees and office-bearers used to be stored away for a considerable time inside the dwelling, under the western wall of the hall, where they were screened from view by means of a structure of timber plastered over with clay. Between this timber and the coffin the survivors placed baskets with scorched grain and dried fish and meat, which would keep a long time, obviously a continuation of the . . . process of feeding the corpse."—*Ibid.* i. i. 99.

"Ch. 12 of the *Li ki* (l. 19) says: 'To have a curtain before a coffin stored away for burial is not a custom of antiquity. It originated with King Kiang's bewailing her husband Muh Poh.' This Muh Poh was a contemporary of Confucius and a minister of the state of Lu, in which the sage was born."—*Ibid.* i. i. 98.

"The *Li ki* supplies us with some further information about this custom of storing away the coffin in the hall of the dwelling. 'In storing away the corpse of a Son of Heaven,' says its eleventh chapter (l. 50), 'they place pieces of wood around the hearse, which is painted with dragons, and plaster these pieces over with clay, so that the coffin is covered with a vault. Over this vault they spread out a pall on which axe-heads are depicted, whereupon they contrive around the whole a houselet (of wood) plastered over with clay. This is a custom to be observed in the case of a Son of Heaven.'" For the custom with regard to the graduated ranks and the elaborate ceremonial see ch. 58, l. 37. . . . "We find now that in the end, when decay sets in, compelling the living to keep themselves at a distance, they cast a layer of branches or brambles over the corpse, covering these with clay, to prevent such animals as might be attracted by the smell from destroying the corpse. . . . But before thus withdrawing the dead from the teeth and claws of wild animals, the living placed a provision of eatables at their side; grain deprived of its germinating power by the process of scorching, dried fish and dried meat—food indeed which keeps good for a long time and would thus be fit for use at any moment, should the expected revival occur. Neither was the soul, hovering outside the wood and clay, forgotten; it was fed by means of a special set of provisions, arranged in a separate part of the den, well closed in, so that it might likewise be out of the reach of wild animals. All these preparations made, the living wailingly called to the corpse for the last time, in order to bring life back into it, and then withdrew, closing the entrance of the den and taking up their abode in a temporary shed, with the intention of returning to the old quarters as soon as the revival should have taken place."—*Ibid.* ii. i. 365–8.

"The inscription [placed by the Invoker on the spot where the coffin is stored] . . . was a seat for the soul, the prototype of the modern soul banner [pp. 174 *seq.*] . . . Though the custom of placing it near the spot where the corpse was stored away may have arisen in a more advanced state of civilization, this nevertheless strengthens our theory of burial inside the dwelling being closely connected with the hopes of the living, that the body might be repossessed by the soul and thus return to life. Ngao-Ki-kung says: 'The encoffined body having been covered with clay on the spot where it was stored away, the filial sons mournfully bore in mind that the soul might be in doubt whether it had to do with its own body or not, and therefore erected the Inscription on the spot, to give the soul cognizance of the place where the body had been deposited. They did this out of love and respect.'"—*Ibid.* ii. i. 368–9.

"In the historical antiquity of China as it is revealed to us by the *I li* and the *Li ki*, the storing away of the dead in the hall of the house was not a final burial, as we believe it to have been in times still more remote. After a certain lapse of time which . . . varied in length according to the dignity and rank of the deceased [see p. 264], it was then followed by a burial outside the house."—*Ibid.* ii. i. 369.

Mourning sheds.—"When, says the *I li*, the deceased was properly stored away in the house underneath a layer of wood and clay, and the nearest kindred had retired, closing the gate behind them, they took up their abode in mourning sheds. It was indeed an established custom in the pre-Christian epoch for such relations, whenever a case of death occurred, to retire to such sheds, rudely built of wood and clay. This had then even become more than a custom, being considered by the nation as a sacred rite; and as such it has been observed through all ages down to the present day, though now in the modified shape described [p. 27; and vol. ii. ch. vi.]."—*Ibid.* ii. i. 369.

Sacrifices.—Ch. 28 of the *I li* says: "In the morning and evening they wail, not omitting to do so, too, on the days *tszĕ* and *mao*. The women go to their place in the (eastern part of the) hall, the principal amongst them standing on the south, and then they wail. The males take their station outside the (inner) gate, facing the west, and the principal among them stand on the north; the male relatives of a different surname" and the visitors being stationed in their proper places [see also the following passages in the text.] . . . "We have here a simple description of the manner in which the different groups were first arranged outside the gate to receive the salutations of the principal mourner by way of a silent invitation to enter, and then how they re-arranged themselves in a corresponding manner in the court-yard. The *I li* here suddenly stops short, but Ching Khang-ch'ing is probably right in saying: 'When all the visitors had occupied the places described above, the wailing commenced, not to cease until their grief was entirely poured out.' The *I li* then goes on to describe how the sacrificial articles, offered to the soul the day before in the back chamber, were removed and forthwith replaced by fresh ones; this last proceeding which is the prototype of the modern *haò pīng*, is told in the following words (l. 44 *seq.*): 'The sacrificial articles are now set out. When the must, spirits, dried meat and pickled meat are taken up the steps, the males stamp their feet. These articles having been brought inside the chamber, they are set down in the same order as on the former occasion, but no napkins are laid over them. The men who put them down in their places then leave the chamber and station themselves to the west of the door, the principal amongst them on the west, and the torch-bearer with extinguished torch retires also. The Invoker now closes the door and precedes the others in going down by the western steps, at which moment the women stamp their feet. They then pass by the south side of the Double and proceed eastward, while the males stamp their feet.' 'The visitors now leave the gate, while the women stamp their feet. With bows the principal mourner sees them off. The chief male mourners now go out of the gate also, the women again stamping their feet, but they cease their lamentations and all go to their places when the mourners have left. The gate is then closed, and the principal mourner, having seen the visitors off with bows and made reverences to the other mourners, repairs to his shed.'"—*Ibid.* i. i. 116–8.

"That the same sacrifice was repeated in the evening is fully proved by the *Li ki*, which says in its 11th chapter (l. 41): 'The morning sacrifice is presented at sunrise, and the evening sacrifice when the sun is about to set.' By way of addition to the above particulars, the *I li* has in ch. 31 (l, 34 *seq.*): 'A meal of the usual food, eatables, exquisite dishes, warm water, and washing water for the dead are set out, as used to be done in former days; but on the new moon, and when first fruits are offered, no eatables are presented in the lower chamber.' In other words, a sacrifice was also set out in the private apartment of the dead, and the articles necessary for his toilet were taken there to him at the same time. This passage is especially important because it reveals at once the true nature of the sacrifice, which was nothing more than a continuation of similar acts of filial devotion, which dutiful children were anciently taught to observe regularly every morning while their parents were alive [see FILIAL]."—*Ibid.* i. i. 118–9.

"The close connection between the . . . precepts [of filial devotion] and the sacrifices now under notice was frankly acknowledged . . . in the second century of our era by Ching Khang-ch'ing, the ever famous founder of the authoritative school of criticism on the ancient classics. . . . Commenting on the above passage of ch. 31 of the *I li*, he says: 'Filial sons can not bear to neglect for one day their duty to serve their parents; therefore, every day they set out the articles in the lower chamber as if the deceased were still abiding with them alive.' Confucius taught: 'Serving the dead as they were served when alive, and those who have passed away as if they were still abiding amongst us, this is the summit of filial conduct.' Now considering that such filial conduct, or, in other terms, implicit submission or devotion to parents denominated among the Chinese by the special word *hiao* [*hsiao*] (孝), has since the oldest times stood foremost in China amongst all ethics, and has been preached by all philosophers as the highest of domestic and national duties, it can by no means be a matter of surprise to find that sufficient importance was attached to the ancient howling and sacrificial rite described above to induce even dignitaries of the highest rank and noblemen from other kingdoms to congregate and attend it in the case of an ordinary servant of the State."—*Ibid.* i. i. 120.

"Sacrificing to the dead outside the dwelling at the moment the coffin is carried out for the tomb, is a custom of old standing. After having described how, in case of ordinary officials, the coffin was, on the day preceding the burial, taken to the ancestral temple and left there in the open court-yard with an offering of eatables at its side, the *I li* gives an account of a bounteous farewell sacrifice presented on the same spot, which reads as follows:—'On the next morning, five caldrons are arranged outside the gate as formerly (that is, as at the sacrifice connected with the coffining). They contain the left side of a goat without the leg, and its five intestines and five stomachs, exclusive of the lungs. Further there is a similar part of a pig, cut into pieces, but without any of its intestines or stomachs. There are also fishes, dried meat, and fresh meat of quadrupeds, altogether the same as formerly. On the east of the court-yard are set out: four pots, respectively holding *p'i sih* [perhaps *pai yeh* 百葉, centifoil], pickled meat of bivalves of the kind *pi*, uncut *kwei* pickles and pickled meat of snails;—four baskets, respectively with jujube fruits, cakes of parched rice or of flour, chestnuts and dried fruit;—must, and spirits. The torches having been extinguished, candle-bearers keep near to the thill ropes of the catafalque, facing the north. The guests who enter the gate are saluted with bows (by the principal mourner). Now the caldrons are taken inside the gate and the offerings put down (on the west side of the catafalque). The pots are so placed that the principal ones come on the south; they are tilted over. The baskets come on the south side of the dried snail's meat, the principal on the north, and they lie tilted over also. Each stand for the meats is loaded with two pieces, of which the principal is on the south. They are not tilted over. There is an extra stand for the fresh meat of quadrupeds. The must and the spirits are on the west side of the baskets, the principal article (*i.e.*, the must) on the north.' 'The men who have put the offerings in their places now leave the gate, the mourners stamping their feet at the important moments.' That during the Cheu dynasty the sacrifice in question, which the *I li* calls 'sacrifice at sending away the dead,' did not merely exist in theory, is fully testified by the *Li ki*. Chap. 13 . . . (l. 11) relates that Tszĕ-yiu, Confucius' disciple . . . said on a certain occasion: 'Immediately after the demise there is an offering of dried and pickled meat; when the corpse is about to be carried off, the sacrifice of sending it away is performed and thereupon it is conveyed away; and after the interment food is presented to the deceased. Nobody has ever seen the dead enjoy these offerings, and yet, from the remotest ages to the present time nobody has ever neglected them.'"—*Ibid.* i. i. 151–2.

Music in funeral procession.—"Sundry passages in the *Cheu li* show, that the custom of having music in this connection [in funeral processions] is, in China, as ancient as the remotest ages into which the literature of the empire allows us to penetrate. Describing the functions of a Great Director of Music, the book states that 'this dignitary, at Great Funerals, controls the arrangement of the musical instruments and does so too when, at the interment, those instruments are stored away.' Further it says: 'The Master of the Music, at obsequies in general arranges the instruments of music and then takes the lead of the musical functionaries. He acts in the same manner at the wailing by regular turns.' . . . 'At Great Funerals, the Grandmaster heads the blind musicians and starts the elegy. The clear-sighted musicians start the instruments of music at Great Funerals. At Great Obsequies the Masters of the Pandean Pipes start their instruments, and at the interment they present the same and store them away (in the cave of the tomb). The Master of the Musical Bells and the Master of the Flutes start their instruments at Great Funerals; they present them and store them away in the grave. The Director of the Instruments of Merit arranges, at Great Funerals, the stands for the bells and for the sonorous stones.'"—*Ibid.* i. i. 158–9.

The spirit that clears the way.—"Chinese authors trace the use of such images [as the *k'ai-lu shên*, or 'spirits that clear the way'] at the head of the funeral cortèges back to the dawn of their national history. The *San kiao yuen liu shing ti fuh shwai shou shen ki* [*Sān chiao yüan liu shêng ti fu shuai shou shên chi*] (三教源流聖帝佛師搜神記), 'Description of Holy Sovereigns, Buddhist Leaders and sundry Divinities of the Source and Branches of the Three Doctrines,' says in its 4th chapter: 'The Divine Prince who clears the Road is the Rescuer of the Country mentioned in the *Cheu li*. A tradition says, when the emperor Hien-yuen (*i.e.* Hwang-ti, whom chronology places in the 26th century before our era), travelled through the nine provinces of his territory, his chief concubine Lo-tsu died on the road. He then ordered his concubine next in rank, who bore the name of Hao-jü, to take care of the dead body, and this woman brought a Rescuer to watch over the corpse during the night. This is the origin of the divinity in question. His popular name is Spirit of the dangerous Roads; another appellation runs: General who vociferates along the Roads and the Streets; a third is: Spiritual Prince who clears the Roads. This divinity is over 10 feet high; his forehead is three feet broad, his beard three feet 5 inches long and of a red colour. His face is dark blue, his hair is tied in a knot on the top of his head, and he wears a metal hood. He is clad in a red war-tunic and wears black leather boots; his left hand holds a seal of jade, his right a painted halberd with a square blade. When a coffin is carried out with this being in front, all baleful influences are suppressed and malevolent spectres conceal themselves. He is the spirit who ensures happiness to coffins that are in motion. This has survived, and has been transmitted as a custom to subsequent generations.' We see from this, that the *khai lō sin* have their origin in the employment of living individuals as exorcists. This explains why people are still in the habit of placing the intestines of an animal inside the image. The above extract speaks of a Rescuer of the Country, mentioned by the *Cheu li*. If we open this book, we find indeed a description of the functions of certain exorcists bearing that title; these consequently were actual officers of the state, probably also in the feudal kingdoms, among which the greatest part of the empire was divided in those times. 'It is incumbent on the Rescuer of the Country to cover himself with a bear's skin, to mask himself with four eyes of yellow metal, to put on a black coat and a red skirt, and thus, lance in hand and brandishing a shield, to perform, at the head of a hundred followers, a purification in every season of the year, which means the finding out of (haunted) dwellings and driving away contagious diseases. At royal funerals he walks ahead of the coffin and, arriving at the grave, he leaps into the pit to beat the four corners with his lance, in order to drive away the *fang-liang* spectres.'"—*Ibid.* i. i. 161–2.

Presents of friends, etc.—"It was usual for princes and dignitaries to send horses and carriages to the obsequies of deceased servants of the State and to those of friends and acquaintances, always adding some pieces of silk, which were to be placed in the tomb with the dead. The *I li*, after having related how, on the day preceding the burial of an ordinary officer, the corpse was transferred to the ancestral temple and placed there underneath the catafalque in the open court-yard, in details described in ch. 30, the sending of presents of silk and horses and the elaborate ceremonial observed. . . ." "'The brothers of the dead are allowed to give presents and to sacrifice; but acquaintances give presents without sacrificing.' These presents consisted likewise of horses and silk. The fact that they are denoted in the *I li* and all other ancient books by a peculiar character, viz. (賵), which nowhere occurs in any other sense, certainly points to a custom of established importance at that time and, very likely, also of high antiquity.' "Horses were not only presented to the deceased, in order to make them draw the carts loaded with articles and implements that were to be placed in the tomb for the use of the soul, but also to the family, for the transport of carriages and objects that were only to do service in the funeral procession. This follows from chap. 48 of the *Li ki*, which says, on leaf 6: 'Horses presented to the dead enter the gate of the ancestral temple but neither horses presented to the family, nor the additional silk, large white flags, nor war-chariots enter that gate.'"—*Ibid.* i. i. 167–9.

"The *Li ki* [ch. 54, l. 32] also gives an account of the way in which the messenger of a Ruler acquitted himself of his charge to present horses to a mourning family."—*Ibid.* i. i. 170.

"Contemporary works contain so many passages relative to the custom now under notice, that there is no room for doubt that it prevailed on a most extensive scale." See *Tso chuan*, under 471 B.C.; *Li chi*, ch. 10, ll. 11, 21.—*Ibid.* 170–1.

Linen banners.—"We read in the *I li* that, when the coffin of an officer had to be removed for burial and to this end was taken from the shed wherein it had been stored away for a time, . . . 'the Invoker, after the manner of the Shang dynasty, having bared his head and the upper part of his body, entered the gate with a cloth of linen of which mourning clothes of the third and fourth degree were made, and ascended the western steps to their top; there, without going up to the hall, he cried three times to the soul, and exclaimed thrice, "Open the shed!" finally ordering the mourners to wail. . . . Subsequently he wiped over the coffin with the cloth and covered the latter with a corpse-pall.' And describing the arrangements for the funeral procession, the *I li* says: 'The Invoker after the manner of the Shang dynasty holds the cloth of mourning material in his hands, using it to direct the movements of the coffin.' He placed himself, adds Ching Khang-ch'ing, in front of the coffin, and all the way gave signals to the men who drew the catafalque."—*Ibid.* i. i. 177–8.

Catafalques and bearers.—"However much their shapes may differ in the several parts of the Empire and for the sundry classes of society, they are all decided imitations of the wheeled catafalques, which tradition and some passages in the ancient works on ritual teach us were in use for the Rulers, nobles and officials during the oldest historical period of the empire. Chap. 58 of the *Li ki* says on leaf 39: 'In decorating a coffin they use, for a Ruler, side curtains with dragons depicted on them, three rain-catchers with moving streamers, further a roof with figures of axe heads and showing three flames side by side, as also three 卍 figures arranged side by side. There is also a tent-like cover of plain tapestry (placed immediately over the coffin), and over this comes a false roof. The scarlet strings (for connecting the roof with the curtains) are six in number. The top of the roof is composed of material of five different colours, and decorated with five cowries. There are, moreover, two *shah* with the figure of an axe depicted on them, two with the figure 卍, and two painted (with clouds); all of them are

surmounted . . . by sceptres of stone. The fishes jump and wave the rain-catchers to and fro. For a ruler there are also six scarlet cords to tie the ropes of the coffin to the catafalque, with six scarlet ends drawn through the side curtains.' In translating this passage we have closely followed the interpretation of Ching Khang-ch'ing, who, standing nearer to the Cheu dynasty than any expounder of the *Li ki*, has generally been recognized by all as a standard authority. This renowned scholar explains the rain-catchers as a sort of bamboo trays covered with blue cloth, which were suspended under the roof to represent the gutters that, on the houses of the living, catch the rain from the eaves ; in fact, says he, the catafalque represented for the dead man the dwelling he occupied during his life. A copper fish was suspended underneath each tray, and under each fish hung a moving streamer, upon which, according to the commentators, a pheasant was depicted. Such things were, however, not suspended on the catafalque of a Great officer, as may be inferred from chap. 53 of the *Li ki* (l. 28), where it is said : 'For a Great officer yellowish blue pendants are not affixed underneath the water-catchers.'" For official persons of lower rank than a Ruler, the catafalques were similar but less elaborate.—*Ibid.* i. i. 182–4. The *shah* of this period was probably of the same shape as that of the Han dynasty. See following period.

"A *shah* consists of a frame made of wood, three feet broad by two feet four inches high ; it is square, has raised corners and is covered with white linen. As to the figures painted on them, they represent clouds and for the rest they exhibit the respective insignia of the person for whom they are made. The handle is five feet long. When the funeral car moves on, men are employed to carry them behind it, and when the coffin has been lowered into the grave, they are planted inside the pit."—*Ibid.* i. i. 185.

"The *shah* formerly displayed the rank of the grandee, though not by characters, but by emblematical figures. Apart from the testimony of Ching Khang-ch'ing, who explicitly states this . . . it is proved by the yak-tails suspended over them, these objects being in ancient times symbols of official dignity. Moreover, the number of *shah* was increased in proportion to the rank of the person, as is proved by chap. 34 of the *Li ki*, which has on l. 13 : 'In some ceremonial usages the quantity of things forms the mark of distinction : the Son of Heaven has eight *shah*, a feudal prince six, a Great officer four. The symbolic meaning of the axe-heads and 亞 figures depicted on them is not clear ; the clouds which . . . decorated the ancient catafalques, and are still found on the modern ones, may have represented the blessings of the dragon or rain-god, which has from time immemorial been an emblem of a blissful government represented by the emperor and by the officials as his deputies. The Khienlung editors of the Three Rituals suggest that the two *shah* which . . . the Son of Heaven had in addition to the six of a feudal prince, were painted with a dragon, the characteristic symbol of the imperial dignity. The pendants hanging down from the two circular sceptres of stone, which surmounted the top of each *shah*, consisted of feathered ornaments ; for this reason, perhaps, the element 羽, feathers, enters into the composition of the written form of the word *shah*, which is 翣."—*Ibid.* i. i. 186–7.

The catafalques "of antiquity were, like those of modern times, moved forward by a large number of men. In ch. 56 of *Li ki* we read, on l. 17 : 'When they go up to the ancestral temple [where the coffin remained during the day previous to the burial] and there put the coffin in its place, the ropes attached to the carriage of the bier for drawing it forth are, in the case of a feudal prince, grasped by five hundred men. The men at these four ropes are all gagged. The Minister of War holds the clapper. He has eight men on his left and eight on his right (to shout out his orders). The chief of the artizans directs the movements of the coffin by means of a bundle of feathers, suspended from the top of a pole. And at the obsequies for a Great officer, when they go up to the ancestral temple and there put the coffin in its place, three hundred people grasp the ropes for drawing the coffin. The man with the clapper has then four men on either side, and the movements of the coffin are guided by means of *alang* grass.' The curious custom of gagging the men put to the carriage of the bier naturally points to a prevailing custom of loudly vociferating while conveying the coffin forward, a custom which was disliked by the higher classes. Chen Hao of the Yuen dynasty, commenting on the passage just quoted, describes such a gag as being 'something like a chopstick, which was tied in the mouth by means of two cords attached to either end and knotted together behind the neck.'"—*Ibid.* i. i. 187–8.

"On the meaning of this crying while conveying a coffin to the grave, some light is thrown by the Historical Books of the Tsin dynasty," which show "that the gags in question were used with the object of changing, in burials of the highest official classes, the customary singing into a wailing hubbub or monotonous bawling, which moralists considered to be more in harmony with the mournful character of a funeral procession. . . . It does not appear improbable that it [the singing and crying of the holders of the bier-ropes] simply originated in the ancient practice of calling back the soul by chanting death-dirges and expostulating with it in terms of reproach and grief—in short, in the death-howl already referred to. . . . This view is confirmed by the fact revealed in the *Li ki* that, in ancient times, the men who drew the catafalque to the tomb were those who resorted to the mortuary house to offer condolences, persons, in fact, closely allied to the family by ties of blood or friendship, so that wailing was incumbent on them as a duty. 'Those who condole at the time of the burial,' says the said Classic (ch. 12, l. 9), 'certainly grasp the drawing-ropes. And when they have followed the coffin to the grave, they all take hold of the veering-ropes.' Commenting upon this passage, Khung Ying-tah, one of the most renowned interpreters of the ancient books in the 7th century, says : 'Condoling at a burial in point of fact consisted in lending a helping hand in the management of the matters connected with it ; therefore the condolers did not fail to assist in pulling forth the funeral car. As for the men employed at the ropes, their number was adequate to the social rank and position, and when the number was complete, the rest arrayed themselves behind the corpse. But at the grave, when the coffin was set down and lowered into the pit, they all, in unlimited numbers, took hold of the ropes.'"—*Ibid.* i. i. 188–90.

"We have in each of the Three Rituals evidence that the dead were formerly carried to the tomb by their fellow villagers or clansmen. This is the same as to say, by the members of their family in the broadest sense of the word, for in China, even down to the present day, every clan and village is but the extension of a single family. In its description of the burial of an ordinary officer, the *I li* says : 'When the pit has been filled up with earth for one-third, the principal mourner bows to the villagers,' thus expressing, as Ching Khang-ch'ing says, his gratitude for their activity and exertions. The *Li ki* has (ch. 55, l. 32) : 'Condoling does not simply consist in following the principal mourners (to the grave), but those of forty years (and under) must hold the ropes when the coffin is let down into the pit. And as to the villagers : those who are fifty (and upwards) go home with the mourners to wail, while those of forty (and under) wait till the grave is filled up.' Finally, the *Cheu li* says : 'The clan chieftains order their people to protect and receive one another . . . in order that they may bury each other.'"—*Ibid.* i. i. 190–1.

Following the corpse to the grave.—"Both the *I li* and the *Li ki* prove that in the ages of the Cheu dynasty the female mourners went to the grave. Describing the interment of ordinary officers, the first-named work says : 'The women stand with their faces towards the east, and, while everybody abstains from wailing, the coffin is lowered. Parcels of black and scarlet silk in pieces of eighteen feet long are now presented to the dead . . . and, this rite accomplished, the principal mourner bares the upper part of his body and makes reverences to the guests, the principal female mourner imitating him in this.' The *Li ki* also says (ch. 13, l. 8) that women stood behind the men, and all had their faces towards the west."—*Ibid.* i. i. 196.

"Carts for conveying articles of food to the grave at burials are mentioned also in the *Cheu li*. 'At great funerals,' says this book, 'the Decorator of Carts decorates the carts which are sent away to the grave, subsequently arranging them in order and starting them.'"—*Ibid.* ii. i. 384.

Sacrifices.—"Sending to the tomb parts of the offerings which have done service at the farewell sacrifice, is again a usage borrowed from holy antiquity. After the description of the said sacrifice [see *supra*] . . . the *I li* says : 'While the mourners stamp their feet as before, the persons charged with removing the offerings enter the gate. They remove the napkins placed over the offerings, and put the sacrificial meats into baskets, taking only the lower quarters of the victims, and not the fish, neither the dried meat. These baskets, which are of *Phragmites* grass, are three feet long and made of stalks of fully the same length.' And in describing the interment, the book mentions these baskets as among the articles which are deposited in the tomb all around the coffin, to remain buried there as an offering to the dead. We also read in the *Li ki* (ch. 13, l. 5, and ch. 54, l. 7–9) : 'The Ruler of a State has seven parcels of offerings and seven carriages for despatching them, a great officer has five parcels and five such carriages. The number of the carriages is proportioned to the parcels of meat. They are covered in with coarse linen and ornamented on the four sides. The parcels are placed in the four corners of the burial pit. Rice is also loaded upon the carts, but Yiu-tszĕ (a disciple of Confucius) has said that this is not consistent with the ceremonial usages, as, at funerals, nothing except dried and pickled meat must be offered.'"—*Ibid.* i. i. 197–8.

"We have not come across any passages in the ancient books of rites . . . whence it might be inferred that the sacrifice [to the Goddess of the Soil] . . . existed . . . before the Christian era. But summing up in its 12th chap. (l. 35) a few practices anciently connected with burials, the *Li ki* says that, when the principal mourners have left the grave to return home, 'an officer sets out sacrificial articles on low tables and mats to the left of the grave.' Though Ching Khang-ch'ing, the Nestor of commentators, declares that this sacrifice was undoubtedly intended for the soul of the dead, yet Khung Ying-tah, an authority of no less renown, who lived more than four centuries after Ching, . . . advocated the view that it was addressed to the spirit of the Soil."—*Ibid.* i. i. 234.

Articles, etc., buried with the dead.—"Burying food with the dead was a custom of wide prevalence during the Cheu dynasty, as may be inferred from the fact that it was then an established rite of generally acknowledged import. In those times . . . sacrificial meat which had done service at the farewell sacrifice was carried to the tomb in baskets placed in carts specially assigned for this purpose, and concealed inside the vault by the side of the coffin [see *supra*]. The *I li* sums up the articles of consumption destined for the grave in the case of ordinary officers and their nearest relations as follows : 'Two baskets (for the meat). Three hampers holding respectively millet, panicled millet, and wheat. These hampers are made of *kien* grass, and their contents are all washed clean. Three earthen pots with pickled meat, preserved meat, and sliced food ; they are covered with coarse linen. Two earthen jars with must and spirits, covered with linen of fine texture. All these articles are placed on wooden trays.' 'The must,' adds chap. 54 of the *Li ki* (l. 16), 'is distilled from rice. The wooden trays containing the pots, jars, and hampers having been placed inside the visible part (*i.e.*, the vault), the wooden frame [see i. 290] . . . is inserted in the pit.' The quantity of victuals placed in the grave was proportioned to the position of the deceased. This is proved by the extract from the *Li ki* reproduced on i. 198."—*Ibid.* ii. i. 382–3.

"After having had a mighty hold upon the people for a long series of ages, the custom [of burying articles with the dead], though it waned away in process of time, had retained a character for sacredness even in the Confucian epoch." See *Li chi*, ch. 9, l. 18. "It was a prevailing conviction in those times that evil might easily overtake those who fell short in richly equipping the dead in their tomb ; and doubtless such evil was regarded as being inflicted by the revengeful soul itself."—*Ibid.* ii. i. 390.

"Among the articles the placing of which in the tomb had become an established rite during the Cheu dynasty, silken stuffs, such as were probably used in making clothes, first claim our attention. Already [see i. 168, etc.] . . . it has been shown by quotations from the *I li* that it was then customary for princes and dignitaries to present such articles to deceased servants of the state, that friends gave them to their friends, and acquaintances to their acquaintances. Silks were even offered to the dead while the funeral procession was on its way to the burial ground."—*Ibid.* ii. i. 391.

"The custom of burying silks with the dead is mentioned also a couple of times in the *Li ki*" (ch. 54, l. 27).—*Ibid.* ii. i. 391–2.

"During the Cheu dynasty, burying clothes with the dead did not occupy . . . a place amongst the prescribed rites, if we are allowed to draw this conclusion from the fact that nowhere in the Three Rituals do we find any clear reference to it. Nevertheless the matter was then by no means obsolete, for an extract from the *Si-king tsah ki* [v. p. 398] . . . says that during the reign of the House of Han decayed remains of a large number of clothes were discovered in the tomb of a feudal prince of the third century before our era."—*Ibid.* ii. i. 392.

"Besides clothes, or material to make clothes of, articles of all kinds and descriptions were in the pre-Christian epoch buried with the dead. For people of rank, the side curtains of the catafalque which had served to convey the corpse to the tomb were placed inside the grave, as also the boards exhibiting the rank of the deceased. [See extract from *Li chi*, p. 282.]"—*Ibid.* ii. i. 392.

"During the Cheu dynasty, at burials of royal personages the musical instruments which had been played by the court musicians during the interment, went the same way, as appears by three quotations from the *Cheu li* [p. 159]. . . . Even the shields, plumes, and flutes which had done service at the dances executed during the funeral were buried, as it is stated in the *Cheu li* 'that the Officers of the Shields at Great Funerals arrange the implements used at the execution of dances, and at the interment take them up, to store them away in the grave.'"—*Ibid.* ii. i. 392–3.

"Objects of every kind which were believed to be useful to the dead and which were placed in the grave with them, are very often denoted in the Three Rituals as 'implements or utensils of death' (凶器), or 'implements for the manes' (明器). These terms may include also dishes and bowls, such articles being likewise denoted in Chinese by the character 器. In the *Cheu li* we read that 'the Officer for the Graves, after the coffin has been placed in the grave, enters, in order to store away therein the implements of death.' And in its 46th chap. (l. 41) the *Li ki* says : 'As to the course of conduct to be followed with regard to the articles for the manes, even though a large number of these be exposed, it is allowed to place a small number in the grave ; and it is permitted also to bury them all with the dead when only a small quantity are displayed.' Ching Khang-ch'ing and Khung Ying-tah both think that this passage refers to a custom, then prevalent among friends and relatives, of contributing articles for the tomb, and that many of these were only presented and exhibited for the sake of show. If they are right, then this custom may be ranked side by side with that of presenting grave clothes, these being likewise displayed during the preparation of the dead for the grave [see pp. 334, 337, 340, etc.] . . . and buried along with him."—*Ibid.* ii. i. 393.

"Such exhibitions of articles for the grave took place first at home, before the deceased was carried away for burial, and afterwards once more, near the burial ground. This appears by the following extract from the *I li*, which is also interesting as showing what sort of things used to be buried with ordinary officers. 'The implements for the manes are exhibited on the west side of the driving cars. They consist of objects of use, to wit, bows and arrows, ploughshares, a couple of vases, a couple of bathing tubs, and a washbasin in which a ewer is placed ; this ewer is placed in such a way that its spout is on the south side. Sacrificial utensils there are none, but there may be instruments of music, such as are used when celebrating festive meals. Of instruments of war there are coats of mail, helmets, shields and quivers ; and as to articles for use when at leisure, there are staffs, parasols of bamboo, and fans. Arrived at the burial pit, the implements are arranged on the east side of the road, the principal being placed on the north-west side. . . . The coffin is let down into the grave. . . . The utensils are stored up at the side of it, and then the screens and the roof of the catafalque are placed over them, the baskets with sacrificial meat and the hampers being stored away at the side.' Elsewhere in the *I li* particulars are given concerning these bows and arrows and their appurtenances. 'They are new, but of a coarse construction, tipped at both ends and ornamented. They may also be flexible. There are furthermore pieces of bamboo to tie on the inside of bows when unstrung, lest they should lose their good qualities. On the spot are laid out pieces of leather to wrap around the strings, and pieces for the centre of the bows, through which the arrows, when shot off, may slip away. Further there are quivers to keep the bows in. There is one set of four waiting arrows' (so called because they were used when lying in wait to surprise an enemy, or an animal) ; 'they have heads of bone and short feathers. Also one set of four training arrows, the centre of gravity of which lies in the middle and which have likewise short feathers.' Note that the arrows with heads of bone were buried with the dead even in times when the use of iron was common. This introduces us to the survival of a custom of pre-historic ages, maintaining itself by religious conservatism, and which may be classed among instances of similar survivals given [pp. 287, 397]. Ching Khang-ch'ing says : 'That these arrows had heads of bone and short feathers shows that they were unfit for use, since the arrows in use among the living were well-feathered and had heads of metal.'"—*Ibid.* ii. i. 393–5.

"The sovereigns of the house of Cheu had also horses interred with them. 'At great funerals,' the *Cheu li* says : 'the Great Marshal presents horses as victims at the funeral sacrifice, announcing this to the deceased.' 'These horses were led to the grave and stored away therein, while an announcement thereof was made to the dead,' adds Ching Khang-ch'ing. This assertion seems to be based upon another passage in the *Cheu li*, to this effect : 'At Great funerals, the Officer for the Horse-pens decorates the horses of the carriages which are sent to the tomb, and buries them at the interment.' It does not appear from these passages whether such horses were buried alive or whether they were first immolated."—*Ibid.* ii. i. 395.

"Jade stone, so valuable to the ancient Chinese, was likewise interred with their sovereigns and feudal lords. The *Cheu li* says : 'At Great funerals, the First Minister of State is to assist when jade is bestowed upon the defunct and when jade is placed in his mouth. And the Manager of the Signets of Jade provides, at Great funerals, the bruised jade which is to be mixed up with the rice for the mouth of the dead ; further he provides the pieces of jade for the mouth, and the jade which is to be presented to the deceased in the grave.' The reader is aware that, in ancient times, jade used to be placed both upon and inside corpses because of a prevailing conviction that the precious stone could prevent corruption and facilitate revival [see *supra*]. No doubt this conviction also prompted the placing of ornaments of jade in the grave outside the coffin.

Similar ideas having . . . obtained in regard of pearls, gold and cowries, we may well suppose that during the Cheu dynasty and subsequent Royal houses these and similar valuables played an important part in the equipment of the dead [*cf.* foll. Period]."—*Ibid.* ii. i. 395–6.

"Turning over the leaves of the *Yueh tsueh shu*, we find the following notice about the mausoleum of Hoh Lu . . . who wielded the sceptre over the kingdom of Wu between the dates 514 and 496 before our era. 'The mausoleum of Hoh Lu is situated outside the Ch'ang gate. It was called the Tiger's Hill. The lower tank was sixty *pu* broad and fifteen feet deep. The copper grave vault was composed of three layers. Near the tumulus there was a tank six feet deep, and also a brook, called the Jade Mallard's stream. The grave contained three thousand swords of the *p'ien-chu* kind, three thousand square and round objects, and also *shi hao* swords and *yü-ch'ang* sabres. Thousands and tens of thousands of people were employed in building this monument. The earth required for it was obtained from the lakes. On the third day after it was finished a white tiger settled on the summit, and therefore it was called the Tiger's Hill.' "—*Ibid.* ii. i. 396.

"The Miscellanies about the Western Metropolis relates . . . how a prince of Kwang-ch'wen had, during the Han dynasty, several ancient tombs broken up and what was discovered therein, giving the following particulars about the mausolea of king Siang and his son Ngai, who ruled the state of Wei, which comprised the southern part of the present province of Shensi and the north of Honan, between the dates 334 and 286 before our era: In the grave of king Siang of Wei the vault was entirely of veined stone and over eight feet high. There was room enough in it to hold forty people. To the hand it felt smooth and chilly, as if it were new. Inside there was a couch of stone and a screen of the same material, elegantly finished on all sides; but there was no trace of a coffin, nor of implements for the use of the manes. On the couch stood nothing but a spittoon of jade, with two swords of copper and sundry instruments of gold and jade, all as good as new. The prince took these for his own private use.' 'Over the tumulus of king Ngai molten iron had been poured, and it was not opened until after three days had been spent in boring and chiselling. A yellowish mist inside so disagreeably affected the nose and eyes as to render it impossible to enter Therefore the grave was left to the care of a guard of soldiers, and after seven days the mist had cleared away. Then first a door which had neither rings nor bolts was found, and subsequently a couch of granite, four feet square. On this couch stood a stool of stone, on both the right and the left side of which there were in attendance three stone images in a standing attitude, all wearing military caps, girdles and swords. Then came a second stone door of one leaf only, well provided with bars and bolts. Having broken it open, the eye fell upon a coffin, the black colour of which was so bright that it cast a glare over the men. Sword-strokes had no effect upon it; but when they attacked it with heated saws, they found it to consist of sundry varnished rhinoceros hides; it was several inches thick, and the hides were placed over one another in more than ten layers. Their exertions to break it open proving fruitless, they desisted from all further attempts.' 'Again they passed through a stone door of one leaf, protected by bolts and bars. A couch of stone was then discovered, seven feet square; also a stone screen, and a set of copper curtain-hooks, some of which lay scattered about in disorder on the couch and on the floor; obviously the ribbons, by means of which these curtains had been fastened, had decayed, and the copper hooks dropped out in consequence. On the couch there was one stone pillar and, moreover, dust in very high convex heaps, evidently the remains of clothes and ceremonial garments. And on the right and left, stone figures of women, twenty on each side, were standing near the couch in attendance, some holding imitations of towels and combs [showing that they represented concubines], mirrors and hair-pins in their hands, others dishes, as if they were serving up a meal. No other curious things were detected, except iron mirrors, several hundreds in number.' This discovery of clothes crumbled to dust in consequence of their having passed so many ages under the ground, confirms our supposition . . . that the clothes which used to be presented in such large quantities by superiors, family members and friends at the death of persons of note during the Cheu dynasty, were sent to the tomb along with the defunct. But what are we to think of those hundreds of mirrors placed in the graves? Considering that uncivilized or semi-civilized man has no rational notions about the reflection of light, and easily confounds this with light itself, there scarcely remains a doubt that the ancient Chinese placed such smooth objects in the tombs under the supposition that, as in an apartment dimly lighted they would produce light, so here they would enable the soul to distinguish the images, treasures and implements stored up in the crypt. All really luminiferous matter, experience told them, can give light for a short time only; mirrors, however, can do so for ages." [*Cf.* MANCHU PERIOD.]—*Ibid.* ii. i. 397–9.

"A large discovery of literary treasures in an ancient tomb is made mention of in the Books of the Southern Ts'i Dynasty. 'At that time (viz, between A.D. 465 and 472), a gang of robbers in Siang-yang (province of Hukwang) dug up a tomb of ancient date, which tradition asserted to be that of a king of Ch'u. They possessed themselves of a large quantity of valuables, shoes and screens of jade, and inscribed tablets of bamboo, strung together with blue silk. These tablets were a few inches broad and two feet long; the bark and the nodes looked as if they were new. The robbers bundled them together into torches, in order to obtain light. Afterwards some one came into possession of more than ten of these tablets and informed the military governor Wang Sang-khien of the fact; this grandee declared them to be the "Artificer's Records," a missing part of the Official Book of Cheu (*i.e.*, the *Cheu li*), written in frog-shaped characters. The authorities then deputed a commission to make further inquiries; and as this commission discovered more of such relics, their identity with or difference from other copies became a topic of discussion for some time.' "—*Ibid.* ii. i. 417.

"It appears that in Confucius' time the quantity of edibles placed in the grave in case of members of princely families was sometimes excessively great. 'When Siang, the Ruler of the State of Sung, committed his consort to the earth, there were,' it is stated in the eleventh chap. of the *Li ki* (l. 24), 'one hundred pots of pickled and preserved meat. Tseng-tszĕ said: "They call such things articles for the use of the soul, and yet he filled them!" ' This disapprobation pronounced by the principal disciple of Confucius shows that in those times the victuals placed in the tomb were no longer regarded as being destined for the body, but were rather believed to constitute a sacrifice to the manes which, according to the prevailing opinions, dwelt with the corpse in the grave. The passage furthermore seems to indicate that it had then become habitual not to fill the pots, which signifies a decline of the ancient custom bordering on extinction. And finally, we learn from it that ethical philosophy at that time had raised its voice in favour of simplicity in regard to the custom. Exaggerated simplicity was nevertheless decried as sinful, for in chap. 13 of the *Li ki* we read: 'Yin Joh (a disciple of Confucius) said: "Ngan-tszĕ, who wore the same robe of fox fur for thirty years, had only one cart of victuals sent off, and this, on arrival at the grave, was sent back home. The Ruler of a state has seven victims, and seven carts for sending them to the tomb; a Great officer has five victims and five such carts; how can Ngan-tszĕ (whose father was a Great officer) be said to know well the established rites?" ' "—*Ibid.* ii. i. 383–4.

"It is not unnatural that public opinion in ancient China interpreted the duty of consigning the dead to their graves in a proper way in the sense of conducting their obsequies with very great waste of wealth. Orthodox conservatism upheld in this respect the customs of primeval times, during which, as we may suppose, almost the whole of the property of the surviving relatives accompanied their dead into the grave; indeed . . . it has been shown that still during the Cheu dynasty the dead were placed in their graves with enormous quantities of articles of value and for daily use. . . . In those times a strong reaction against such practices was already at work. Advancing culture could, of course, feel no satisfaction in such barbarous destruction of wealth. Thus an opposition school arose against the old conservatism, that in its turn gave rise to another school which defended the maintenance of expensive funerals, fearing their abolition would necessarily entail a decline of the *hiao*. This last-named school stood its ground for centuries; but, though displaying great tenacity of existence, it has been unable to maintain its cause in the long run. It disappeared entirely from the scenes after a hard struggle, in which the first school gained an absolute ascendancy over it in mediæval and modern times. The oldest documentary evidence now extant concerning a spirit of reaction against waste of wealth in disposing of the dead is probably the . . . episode relating to the renowned statesman Kwan Chung (管仲) or Kwan I-wu (管夷吾), who died B.C. 645." See *Han Fei-tzŭ*, *Li chi* and *Lün yü*, quot. in *De Groot*, ii. i. 660–4, for this and other instances. "The school of economy in the disposing of the dead, in vogue in the time of Confucius, seems to have developed its energies especially in the fifth and fourth century before our era under the influence of Mih-tszĕ (墨子), a most remarkable figure among the philosophers of ancient China."—*Ibid.* ii. i. 660, 664; and see pp. 666–86.

Mencius' mother "had been with him in Ts'e, and he carried the coffin to Loo, to bury it near the dust of his father and ancestors. The funeral was a splendid one. Mencius perhaps erred in having it so from his dislike to the Mihists, who advocated a spare simplicity in all funeral matters. . . . He defended himself on the ground that 'the superior man will not for all the world be niggardly to his parents.' " He mourned for three years.—*Legge, Ch. Class.*, ii. Prol. p. 35.

The people "have been slowly reducing their grave-offerings by making use of less costly articles, without, however, diminishing the quantity, and in course of time have given the preference to articles of no real value. The ancient books afford sufficient proof that this process of substitution was at work already during the Cheu dynasty. . . . We have stated that at that time, according to the *I li*, the bows and arrows, interred with ordinary servants of the State, were of coarse make, and that those arrows were unfit for use, the feathers being too short. Besides, we read in the *Li ki* (ch. 11, l. 2): 'Confucius said: "If we were to deal with our dead as if life were really extinct in them, we should be inhumane, and therefore we ought not to do so; but if we were to treat them as if they were quite alive, we should betray great ignorance, and therefore neither may we do so. For this reason, the bamboo instruments are not quite fit for use, those of stoneware cannot be well washed, nor can those of wood be carved. The citherns and lutes are strung, but not tuned; the mouth-organs and Pandean pipes are in good order, but not attuned to the same key; there are also bells and sonorous stones, but no stands to suspend them from. These things are called instruments for the manes, because they are for the use of human souls." ' As Confucius had sided with the party of economy in funeral matters (p. 662), he and his principal disciple acted quite logically in thus advocating burying articles which represented but little value. According to the *Li ki* (ch. 12, l. 48), 'Confucius also said: "Those who make such implements for the manes of the dead show they are acquainted with the right method of conducting funeral rites; for those implements, though ready at hand, are unfit for actual use. The carts of clay and straw images of men and horses, which have been in vogue since ancient times, are founded on the same principle as the implements for the manes." ' From this extract we learn, that already in the sixth century before our era it was an established usage to replace the carts and horses, which . . . used to be buried with persons of royal blood (p. 395), by valueless substitutes."—*De Groot*, ii. i. 706–8.

Sacrifices of human beings at burials.—"Just as the burying with the dead of lifeless property, the immolation of living beings on their behalf doubtless dates in China from the darkest mist of ages. Yet the cases on record in the native books are of relatively modern date, which, we think, must be ascribed to the circumstance that in high antiquity they were so common, that it did not occur to the annalists and chroniclers to set down such everyday matters as anything remarkable. The oldest case on record we owe to the pen of Szĕ-ma Ts'ien. 'In the twentieth year of his reign (B.C. 677) the ruler Wu (of the state of Ts'in) died, and was interred at P'ing-yang (the present Fung-ts'iang 鳳翔, a department in the province of Shensi), in Yung. Then for the first time people were made to follow the dead into the next world. The number of those who followed the deceased was sixty-six' (Historical Records, ch. 5, l. 8). [See also *Journ. N.-C.B.R.A.S.*, N.S. xii. 13.] We must not, it is evident, take this expression 'for the first time' in its literal meaning. It is indeed hardly admissible that such a barbarous practice could then have sprung up all of a sudden, without precedents to legalize it, or that it should have been inaugurated as a new custom by the immolation of so many victims. The passage more probably implies that Wu was the first sovereign *of his House* for whom victims were immolated, or the first sovereign for whom *so large a number of victims* were sent to the realms of death. Indeed, if we peruse the historical treatise on the kingdom of Ts'in, from which it is drawn, we learn that Wu was the first monarch of significance who ruled that country, having greatly extended it by successful wars; all his predecessors on the throne had been mere ciphers, or princes of no repute at all, and it is natural therefore that he should be sent into the next world with exceptional wealth and attendance. Nor is mention made of human sacrifices at the burial of any of the three rulers who were seated on the throne after Wu, but they were also sovereigns of no significance; again, however, record of such sacrifices is made in the case of Muh, Wu's brother's son, whose reign, which lasted thirty-nine years, was also marked by a large conquest of territory. 'In the thirty-ninth year of his reign (619 B.C.) the ruler Muh died and was buried in Yang. Those who followed the defunct to the next world were one hundred and seventy-seven in number. Amongst them were three exquisite ministers of Ts'in, members of the family Tszĕ-yü, named Yen-sih, Chung-hang and Ch'en-hu. The people of Ts'in, deploring their fate, composed and sung 'The Lay of the Yellow Birds' (Historical Records, ch. 5, ll. 16, 17. This episode is recorded in the Tso ch'wen, seventh year of the Ruler Wen's reign)." See also *Ch. Rev.*, xiii. 417–8. Ying-Shao (應邵, 2nd cent. A.D.), says that this was an act of voluntary self-sacrifice. In this connection "attention must be called to the fact that the character 殉, which is used in the ancient writings to denote burying human beings with the dead, has in the Shu King (Sect. 伊訓) also the meaning of 'to desire, to seek.' Is this mere accident? Or does it confirm the belief that, in ancient China, to be buried with the dead was sought after as a favour?"—*Ibid.* ii. i. 721–3.

"Four cases of burying living persons with grandees of rank in the sixth century before Christ, are on record in the *Tso ch'wen*." "Mention is also made in the *Tso ch'wen* of a man who interred two daughters of his own with his deceased sovereign, as a mark of gratitude for his having, on a certain occasion, shown clemency to his father." And Hoh Lü, the monarch of Wu, in 510 B.C., "at the burial [at the modern Soochow] of his daughter, who had committed suicide, enticed large numbers of people into the tomb, when engines, suddenly set to work, closed the gate upon them. These sacrifices were by no means popular, as is shown both by expressed aversion and lamentations, and by the refusal in certain cases to carry out the wish of the deceased to have living persons buried in the same tomb or coffin (see *Li chi*, ch. 13, ll. 27 and 31)."—*Ibid.* ii. i. 724–7. Also referred to in *Yuan chien lei han*, bk. 181, p. 5.

"Whereas in still earlier ages it had been usual to bury wooden puppets in the tombs of princes, we now read of slave-boys and slave-girls barbarously interred alive with the body of every ruler of a State, in order, as was believed, to wait upon the tyrant's spirit after death. But public opinion began during the Confucian era to discountenance this savage rite; and the son of a man who left instructions that he should be buried in a large coffin between two of his concubines, ventured to disobey his father's commands."—*Giles, Historic China*, p. 11.

"The people of Ts'in had the habit of putting to death slaves and even youths of good families on the occasion of the burial of their dukes."—*Ch. Rev.*, xiii. 417.

"The native literature affords sufficient evidence that also after Confucius' time entombments of living persons with the dead were far from exceptional in the cases of princes and magnates. According to Mih-tszĕ, it was in his time a prevalent opinion that 'in the case of a Son of Heaven, the maximum number to be killed and buried should vary between several hundreds and several times ten, and, in that of a Prince or a Great officer, between several times ten and a certain minimum.' Though this statement be, perhaps, exaggerated, it corroborates what the miscellanies about the Western Metropolis relate concerning a discovery made by the prince of Kwang-ch'wen (p. 397) in the tomb of one of the first princes of the kingdom of Wei," in which more than a hundred dead bodies were found. "No mention is made of human bodies being found in the graves, opened by the said prince, of Siang and Ngai (pp. 397, etc.);" but two corpses were found in the grave of Ngai's son.—*De Groot*, ii. i. 728–9.

Burying effigies with the dead.—"The Chinese at an early period of their history replaced the articles of value and domestic appliances which they had been accustomed to bury with the dead, by less valuable and even worthless things (pp. 706 *seq.*). From the same early times they have placed images in the tombs as substitutes for human victims, which change of custom was likewise caused by the progress of civilization and still plays a part in Chinese life to this day. The burying of images instead of human victims has obviously been in vogue since the time when cases of human sacrifices at burials are first mentioned by native authors. This is perfectly explicable, for such immolations were probably not entered in the annals and chronicles until a growing aversion to them had, under the impulse of advancing culture, gained considerable ground. Indeed, it may be admitted that they were not deemed worthy of note so long as no one was shocked by them or pronounced his aversion to them. Already the *Cheu li* makes mention of the use of human effigies at burials. It has (ch. 21, l. 46): 'At interments, the Officer of the Grave Mounds addresses the human images which are placed upon the cars adorned with phenixes.' No doubt these images were regarded as animate, as there would be no sense in making speeches to lifeless puppets."—*Ibid.* ii. i. 806–7.

"Confucius declared that those who made straw souls were virtuous, but those who made wooden puppets were inhumane, for was there not a danger of their leading to the use of living victims? [*Li chi*, ch. 12, l. 48 *seq.*] These straw substitutes for human victims, thus warmly commended by China's great philosopher, were like the images of which the *Cheu li* speaks, regarded as being inhabited by human manes, as their name 'souls of straw' indicates. They seem to have co-existed with the wooden burial puppets the use of which Confucius stigmatized as capable of leading to the burying of living persons; according to the general opinion of Chinese authors, these dangerous objects were a kind of automata with movable limbs, more closely resembling human beings than did the souls of straw. According to Mencius, Confucius also said: 'Did not he who first made wooden puppets remain without offspring because of his having manufactured and used counterfeits of men?' (Works of Mencius, Sect. 梁惠王, i. 4). Chinese authors have never revealed to posterity the name of the individual thus chastised by the unseen powers for his execrable invention."—*Ibid.* ii. i. 807–8.

Dwelling upon the tomb (semi-sutteeism).—"The ancient Chinese principle that women, children, subjects and slaves, as being the absolute property of their husbands, parents and masters, ought not to be separated from them at death, has powerfully operated upon the nation in many respects. It created and long maintained the immolation of human beings at burials, and when this barbarous practice gradually disappeared under the influence of growing culture, upheld for a long series of ages a systematic suicidism, highly approved of by the people and publicly panegyrized by the Government. Still, step by step its power over the people relaxed, and the principle would have tottered to its downfall had it not assumed a milder form, less repulsive to the softened habits of the nation. It no longer forced the nearest relations and slaves to enter the grave with the dead, but suffered them simply to settle on the tombs, there to sacrifice regularly to the manes and, in the case of women, to avoid becoming the property of another by second marriage. As the immediate consequence of the reaction against placing human victims in the graves, dwelling upon tombs is first mentioned in the native books after that reaction had gained a considerable footing. Indeed, the first instance on record dates from the fifth century before our era, and bears reference to Confucius, who . . . was a great antagonist of human immolations (pp. 807–8). 'Formerly,' thus Mencius relates, 'when Confucius had died and the three years of mourning were elapsed, his disciples packed up their luggage, intending to go home. On entering to take leave of Tszĕ-kung (their fellow disciple), they faced each other and wailed till all of them had lost their voices, and thereupon returned to their several homes. Tszĕ-kung, however, returned (to the tomb) and built a dwelling within its precincts, where he lived alone for another three years before returning home' (The Works of Mencius, Sect. 滕 文 公, i.). Commentators generally infer from this extract that the disciples had lived on the grave for three years when Tszĕ-kung, who had conducted the mourning observances as master of ceremonies, settled there once more for the same length of time." This is confirmed by The Domestic Discourses of Confucius, ch. 9, § 終 記 解.—*Ibid.* ii. i. 794–5.

Burying husband and wife in one grave.—"The reaction created in China by advancing civilisation against the vestiges of ancient barbarism, has modified the old custom of immolating human victims at burials in another respect. It has induced the people to postpone the burying of women in the tombs of their husbands until these women themselves have lived out their natural lives. Little sophistry was needed to convince the people that, by thus modifying the human immolations, the interests of the dead would be but little affected. They would only have to wait somewhat longer for the delivery of their property in the next world. The modified custom met with the full approval of sages and philosophers, nearly all of whom had joined the antagonists of the ancient immolations, and it became unnecessary to discard the time-honoured custom when divested of its original cruelty."—*Ibid.* ii. i. 800–1.

"The burying of women after their death by the side of their predeceased husbands obtained as a custom already in the most ancient times of which Chinese writings make mention. The *Shi king* contains a piece of poetry, generally believed to date from the eighth century before our era, which calls up before us a woman yearning for the return of the good man of her heart, and pouring out her feelings in the following words: 'In life I dwell in a different house, but in death we shall share the same grave' (Sect. 王 詩, ode 9). In the same ancient work there is the following funeral dirge of a woman bewailing her husband: 'O! should it be after a hundred years with their long winter-nights and their lengthy summer-days, yet in the end I shall be moved to his (underground) dwelling place' (Sect. 唐 詩, ode 11). It is reported that Confucius buried his mother in the same grave to which his father had formerly been committed (*Li ki*, ch. 9, l. 21)."—*Ibid.* ii. i. 801.

The practice of burying husband and wife in one grave "was denoted in pre-Christian ages by a special graphic sign, viz., 祔. This in itself is a proof that burying wives in the graves of their husbands was widely extended in those times. The said character has been used with the same meaning ever since in the books, though frequently with the affix 葬, *tsang*, which means 'to bury.' . . . The binomium *ho tsang*, 'to bury unitedly' . . . is of no less frequent occurrence in the native literature of all ages (*cf.* p. 443)."—*Ibid.* ii. i. 802. Chinese literature abounds with instances.

Confucius' "mother died in the year B.C. 528, and he resolved that her body should lie in the same grave with that of his father, and that their common resting place should be in Fang, the first home of the K'ung in Loo. But here a difficulty presented itself. His father's coffin had been for twenty years, where it had first been deposited, off the road of *The Five Fathers*, in the vicinity of Tsow:—would it be right in him to move it? He was relieved from this perplexity by an old woman of the neighbourhood, who told him that the coffin had only just been put into the ground, as a temporary arrangement, and not regularly buried. On learning this, he carried his purpose into execution. Both coffins were conveyed to Fang, and put in the ground together, with no intervening space between them, as was the custom in some States. And now came a new perplexity. He said to himself, 'In old times they had graves, but raised no tumulus over them. But I am a man who belongs equally to the north and the south, the east and the west. I must have something by which I can remember the place.' Accordingly he raised a mound, four feet high, over the grave, and returned home, leaving a party of his disciples to see everything properly completed. In the meantime there came on a heavy storm of rain, and it was a considerable time before the disciples joined him. 'What makes you so late?' he asked. 'The grave in Fang fell down,' they said. He made no reply, and they repeated their answer three times, when he burst into tears, and said, 'Ah! they did not make their graves so in antiquity.'"—*Legge, Ch. Class.*, i. Prol. pp. 61–2.

Post-mortem weddings.—"Human immolations at burials naturally imply the prevalence of a conception that it is urgently necessary to be accompanied into the next life by a wife or concubines, to prevent one's being doomed there to the dreary life of a solitary widower. Consequently, it is only natural that in ancient China there existed the curious custom of placing deceased females in the tombs of lads who died before they were married. The prevalence in those times of such *post-mortem* weddings for the next world is revealed to us by the following passage in the *Cheu li* (ch. 13, l. 46): 'The Officer charged with the Preparation of Marriages is to prevent women already buried from being transferred to other tombs, to be thus given in marriage to deceased minor youths.' The legislators of the time, disliking the sacrilegious removal of women from their graves, deemed themselves in duty bound to forbid the practice in question; but they do not appear to have included in their veto such marrying of deceased women at the time of their burial. The latter weddings may *a fortiori* be supposed to have been very common; and that they were firmly rooted in the then customs and manners of the people may be inferred from the fact that they have prevailed ever since, being frequently mentioned in the books of all ages."—*De Groot*, ii. i. 802–3.

Placing stone images in and upon tombs.—"The burying of living persons with the dead gave rise in times relatively ancient to a custom of erecting human figures of stone in the burial crypts. The oldest reference hereto is contained in the miscellanies about the Western Metropolis. In describing the exploits of Prince Khü-tsih (p. 289) in ransacking the mausolea of ancient sovereigns and magnates, this work relates (ch. 6): 'The tomb of Ling, a ruler of Tsin (between the years 619 and 605 before our era), was gorgeous and imposing. Gibbons, hounds and torch-bearers in stone were placed at the four corners, and further there were over forty stone statues of males and females in waiting.' Half a dozen stone body-guards in full armour stood, according to the same work, arranged in the sepulchral chambers of Ngai, the king of Wei; besides, there were forty stone women, quite a harem, enclosed in the back part of his crypt, in an apartment which was evidently intended to serve his manes as a bedroom" (pp. 397–8).—*Ibid.* ii. i. 811.

The grave as the dwelling of the soul.—The customs of leaving the dead in their dwellings in the hope of their revival, and the setting out of food and drink by their side for the manes, "prove that the primeval grave was believed to be occupied by the disembodied soul, either for all time, or occasionally. And this belief we may suppose to have been cherished also in later ages with regard to the huts which were then built on purpose to store away the dead, and which have ever since been constructed under the name of graves."—*Ibid.* ii. i. 378.

Sacrifices on the grave.—"It had become an established notion already in the time of Confucius that the victuals placed in the grave were destined for the *soul*. In later ages, this notion gradually induced people to replace such offerings by sacrifices *upon* the tomb, it being more convenient for the living to present them in this wise, while on the other hand, the soul could partake of them just as easily. Moreover, such victuals could be renewed from time to time, and thus answer the purpose of refreshingthe disembodied soul better. As a matter of fact, the books of the pre-Christian epoch contain but very scanty references to sacrifices *upon* the graves, while in later times the practice of placing food inside the grave has become entirely obsolete. Neither do the said books say a single word about sacrifices on the tomb at the time of burial; and from the fact that the *Li* is silent about such a ceremony, notwithstanding . . . it contains elaborate descriptions of several sacrifices connected with other funeral customs, we may conclude that sacrificing on the tombs was, in the age of Cheu, by no means an integrate part of the rites connected with deaths."—*Ibid.* ii. i. 384. For the references alluded to see p. 385.

"After having supplanted the ancient custom of placing provisions inside the grave, sacrifices upon the tomb have maintained themselves as an integral part of the Religion of the Dead down to the present day."—*Ibid.* ii. i. 386. For sacrificial offerings at interment, see pp. 225, etc.; and for yearly offerings, bk. ii.

Size of graves, etc.—"The mausoleum of King Hoh Lü was of a size so enormous as to have required the labour of tens of thousands of serfs to build it [see i. 396]; this mausoleum may have still existed in the time when the *Yueh tsueh shu*, which records the statement, was written. The same book also contains the following description of the mausoleum of Hoh Lü's daughter which shows that her grave covered a large area of ground: 'The grave of Hoh Lü's daughter was situated outside the Ch'ang gate (of the capital), on the north side of the road. Its lower square tank was forty-eight *pu* wide, and had a water depth of twenty-five feet. The other tank measured sixty *pu*, with a depth of ten feet five inches. The grave tunnel opened upon the road which led to the temple, and which ran further in a southern direction through the Ku-sü gate. The whole ground had a circumference of six miles. Playing with cranes in the market streets of Wu, they killed living people to make them accompany the defunct.'" "The mausoleum of King Siang was undoubtedly very large, since the crypt alone could hold forty people [see pp. 289, 397]. The grave of the ruler Ngai must likewise have been of respectable dimensions, for it is recorded [see pp. 397, etc.] that Kü-tsih discovered therein not only an underground passage which contained stone images representing a military guard, but also a crypt containing the coffin, and another crypt, evidently designed to be a dormitory for the soul."—*Ibid.* ii. i. 419–20.

"The *Li ki* . . . says . . . 'the thickness of coffins and grave vaults, and the size of grave hills and grave mounds, are a mark of rank and position.' In other words, just as the dwellings which people occupy during life signalize by their dimensions their social standing, so after death do their graves." See further *Li chi*, ch. 25, l. 15. "The royal burial grounds at those times were actually family graveyards in which the tombs were arranged in two sets of parallel rows, diverging to the right and left from a central point occupied by the grave of the common ancestor. Hence, in respect of the arrangement of the graves, these burial grounds did not essentially differ from the graveyards of distinguished families still to be found in the northern provinces at the present day."—*Ibid.* ii. i. 420–2.

"That grave mounds of respectable dimensions must have been pretty common already in pre-Christian times is evident from the fact that most of the terms used in the books of those ages to denote burial places also signify a height or eminence." (See the illustrations given.)—*Ibid.* ii. i. 442.

A "passage in the *Cheu li* [see p. 421] . . . shows that during the Cheu dynasty sovereigns and persons of royal descent were generally buried together in one plot of ground, and that their tombs were laid out after a regular plan. Considering that these tombs were often very large, such family graveyards must undoubtedly have covered an enormous area. Queens were probably buried there also, it having always been a fundamental principle of Chinese social life that a woman on marrying becomes in the fullest sense a member of the family into which she is received, breaking off the ties which bind her to the family in which she was born. Documentary evidence supports the fact of such burials." (See the Historical Records, ch. 5, l. 32.)—*Ibid.* ii. i. 442–3.

"We have shown that, in ancient China, numerous attempts were made at calling back the dead to life and preserving their bodies against decay, in order that these latter might at any time be fit to receive the soul again and to revive in consequence thereof. It has also been pointed out that such attempts were made with special energy in the case of the great ones of the earth, whose lives were more valuable than those of the common people, and that, as a direct consequence, the number of the coffins and the thickness of the boards were increased in proportion to the position and rank of the deceased to be enclosed therein. Official rules regulating these affairs were laid down as early as the Cheu dynasty [*cf.* p. 285]. If now we take into consideration that, at the same epoch, the dimensions of the grave mounds were likewise regulated in such wise as to bring them into direct proportion with the rank of the dead (see p. 420), we come to the conclusion that, just as the coffins, so those mounds were intended to preserve the corpses from the reach of destructive influences. Indeed, by preserving the body well by covering it with a big pile of earth, great service was rendered to the soul, which in this way remained in constant possession of a natural support, by clinging to which it escaped evaporation and annihilation (see p. 348). And the more illustrious and powerful a dead man had been during his life, the greater the desire of his offspring and subjects to serve and propitiate him in this way; for since times immemorial the dead have ever been looked up to as natural protectors and patron divinities." This explains also "the covering of the tumulus of King Ngai [6 B.C.] with iron or some iron-like substance, which rendered it almost impossible to force a way into the crypt (see p. 397). We can hardly doubt that the custom of hiding the possessions of the dead along with them in the tombs has been as much the cause of the erection of large grave mounds as all other considerations put together. An immense mound of earth rendered the disinterring of such treasures difficult—nay, almost impossible. Hence it is quite natural that under the dynasties of Ts'in and Han [see following Period] when . . . the said custom took vast proportions in the case of emperors and magnates, the imperial grave hills increased to a size bordering on the gigantic. But, for the protection of the treasures and the sacred corpse against rapacious attacks much more was done in those times. We have stated that ramparts or walls were constructed around such mausolea, and that these monuments were further strengthened by means of balistic engines contrived on the gates, and by hidden fire; in a word, they were converted into real strongholds, and, moreover, permanently garrisoned by troops and placed under the protection of a city built near the spot for this purpose."—*Ibid.* ii. i. 455–7.

[The horse-shoe tombs, which spread from the south up to Corea are "clearly a figure of the *Yoni*," and point to inland intercourse with Burma and N. India. They were known in the time of Confucius, but not general.]—*Lacouperie, W. Origin,* p. 119.

People constructing tunnels for officials.—"The patriarchal theory which has ever borne supreme sway in the Chinese Empire, although it regulates in the first place the relations between parents and children, also teaches that the same *hiao* or absolute subjection and devotion which every son of man owes to the author of his days . . . every subject owes to the authorities who have been appointed by the Son of Heaven to administer the Empire. Cold practice may to a certain extent render this theory a dead letter, yet the theory remains unshaken, and so it is perfectly natural we should find instances on record of people who, of their own free will, have erected grave mounds over those deceased Mandarins who by their conduct had obtained the love and respect of the community."—*De Groot*, ii. i. 459.

Grave-tunnels.—"Grave-tunnels . . . were constructed in the tumuli of the sovereigns of the Cheu dynasty. . . . They are denoted . . . by a special graphic sign, viz., 隧 or 遂, pronounced *sui*. It seems that in the age of Cheu only monarchs were entitled to have them, as it is written in the *Tso ch'wen:* 'The feudal lord of Tsin was granted an audience by the king (of Cheu), and asked that the privilege of having a tunnel might be granted to him; but the king refused, saying that this was a distinction reserved for kings.'"—*Ibid.* ii. i. 425.

Sepulchral trees.—"Like the construction of big hills, ramparts and battlements over and around the remains of the distinguished dead, and the establishing of garrisons and guards on the spot, so the planting of . . . trees [upon burial grounds] had for its original object the protection of the corpses from destruction; they rendered the graves undistinguishable at first sight from the surrounding knolls and forest-grounds, and so caused them to escape the attention of rebels and banditti raiding the country. Sepulchral trees are mentioned in Chinese literature at a very early date, the *Cheu li* (ch. 21, l. 44) stating that the Officer for the Grave Mounds [p. 421] fixes the dimensions of the hills and mounds, and also the number of the trees, in accordance with the rank of nobility.' Besides, the *Li ki* (ch. 17, l. 2) says that 'for the common people no grave mounds are made, nor trees planted.' Accordingly, already many ages before our era the size of tumuli kept regular pace with the number of trees planted about them, and both were equally proportionate to the rank of the dead or his kindred. The object connected with the erection of grave mounds and that of the planting of trees thereon, were substantially analogous."—*Ibid.* ii. i. 460–1.

"We must still call attention to another motive prompting the planting of trees upon tombs. . . . Since very ancient times pines and cypresses have played a prominent part as producers of timber for coffins, and that this was the case because these trees, being believed to be imbued with great vitality, might counteract the putrefaction of the mortal remains [see pp. 294 *seq.*]. It has been stated, moreover [see p. 348], that, according to the popular conception, such vitality, called *Shen* and emanating from the *Yang* part of the Universe, is also the principal material of which the human manes are composed, so that a dead body, if properly circumvested with wood of pines and cypresses, may be a seat for the manes for ever, as they are greatly strengthened and intensified by the vitality communicated to them by the wood. These ideas fully account for the fact . . . that since very ancient times pines and cypresses were planted upon tombs in preference to any other sort of trees, and this was done in the expectation that they might (1) counteract the putrefaction of the corpse and thus facilitate its resurrection, and (2) sustain the manes still cohabiting with the soul, so that a mystic relation between the trees and those manes

naturally rooted itself in the mind of the people, nay, both were identified and assimilated with each other, thus creating a second reason why the living should regard sepulchral trees with awe and respect."—*Ibid.* ii. i. 462.

"According to the *Shuh i ki*, cypress trees were already planted in the burial grounds of the ancient princes of Lu, and if this statement . . . may be credited, it is the oldest reference on record about the cypress as a sepulchral tree. There is reason for believing that, at that time, the Rottlera too, which [see p. 294] likewise played an important part in the manufacture of coffins, used to be planted upon graves."—*Ibid.* ii. i. 462.

"There still remains something to be said about the part . . . [grave] trees play in protecting buried corpses from decay, and concerning their close connection with the names of the dead imbedded at their roots." "Ancient mythology is the sole source from which any written evidence can be derived concerning the popular ideas prevailing on the first point. A tradition preserved in the *Shuh i ki*, which work was probably written in the sixth century . . . says: 'In the time of Muh, a feudal lord of Ts'in (seventh century B.C.), some one in Ch'en-ts'ang (in the present province of Shensi), while digging in the earth, had found a beast resembling a sheep or a pig, but it was neither of these animals. On the road the said ruler came across two lads, who said to him: "This beast is called *ngao* (蝯); in the earth it devours the brains of the dead, but if its head be pierced by means of pines and cypresses it dies." Hence cypresses are now-a-days planted upon the tombs, to prevent it from doing mischief.'" This incident is also mentioned in an earlier work, the animal being there called *wei* (猬). "Here we have before us a people in a low state of culture who, having but very vague ideas about the natural decomposition of animal matter in the earth, ascribe it, in the puerile way natural to semi-civilization, to the action of an unseen voracious animal which is to be extirpated by the operation of grave trees." For illustrations of the second point, the identification of grave trees with the manes residing in the grave, see pp. 469–73.—*Ibid.* ii. i. 468–9.

"The cypress tree and the tiger were believed at a very early period to exercise a special power of guardianship against the attacks of goblins or ghoul-like monsters upon the remains of the buried dead; and these are the earliest among the objects which are recorded as having been planted or represented in the neighbourhood of tombs. We find . . . with them the traces also of other creatures believed to be invested with supernatural powers. The monumental tablets erected in honour of a deceased person are crowned . . . in some cases by the head of the *li* or 'harmless dragon,' and in others by that of the *ki-lin*, or beast of happy omen. For personages of a still lower degree—the third grade of official rank—the regulations provide that the crowning border is to represent the *t'ien luh* 天祿 and the *pih-sieh* 辟邪. These two fabulous creatures, the meaning of whose names, translated literally, is 'the good fortune of Heaven' and 'a charm against evil,' were anciently represented in full effigy, according to the authorities quoted by Wu Yung-kwang, in front of tombs."—*Journ. N.-C.B.R.A.S.*, N.S. xii. 9–10.

Mourning.—"We feel no hesitation in stating that there was a period when death in China entailed the total ruin of the family of the defunct. Afterwards, under the constant influence of advancing culture, the custom of burying valuables along with the dead gradually fell into disuse . . . without entirely dying away. At the same time, the original doctrine that it is a sacred duty on the part of children to give up their property for the sake of the deceased authors of their being, and to remain behind in a state of the direst poverty, was prevented from dying out by the theory of the *hiao*, which commands unbounded devotion to parents even after their departure from this life. This theory, having obtained greater hold as civilization advanced, led to the inevitable result that children, though discontinuing the actual renunciation of their property, kept up with all the more ardour the outward appearances of faithfully observing it, dressing for this purpose in the cheapest possible garments and contenting themselves with the simplest possible food. Thus wearing mourning and fasting became a dual rite, thenceforth as inseparably connected with death as the rich equipment of the dead with clothes and food had formerly been. That in the time of Confucius mourning and fasting held such a place in point of fact, can be proved by documentary evidence. Both rites were then declared by wise men to be amongst the chief things to be observed in case of death by all classes of society, and as such to take rank with howling or calling back the soul. . . . We read in the *Li ki* (ch. 9, l. 28): 'The mother of the ruler Muh having died, the latter sent a man to ask Tseng-tszĕ how he ought to act, and Tseng-tszĕ answered: "I, Shen, have heard from my father that the sorrow expressed by the wailing and weeping, the feelings manifested by hemmed and frayed mourning garments, and the eating of rice-porridge extend from the Son of Heaven downward to all."' The wearing of mourning has since very ancient times been maintained in Chinese society as an institution of undisputed weight, and has never suffered any significant decline. Not only in domestic and social life, but even in legislation, it has always played a part of great importance, a part curious and interesting, and highly characteristic of the Chinese nation. This is not the case with the custom of fasting, which as a funeral rite has been gradually dying away, without, however, having entirely disappeared."—*De Groot*, ii. i. 474–5.

"That at the outset it [assumption of mourning] really consisted in ceding one's own raiment to the dead, is confirmed by the fact that in the age of Confucius it was customary for the mourners to throw off their own clothes as far as decency allowed, *when the corpse was being dressed.* Chap. 10 of the *Li ki* relates that, 'when at the death of the mother of Shuh-sun-wu-shuh the slighter dressing had been completed, and the men who had lifted up the corpse had gone out at the door of the back chamber, he went out at this door himself, bared the upper part of his body and flung away his cap, tying his hair in a knot. Tszĕ-yiu (a disciple of Confucius) said of him: "He knows the rites."' Indeed, to behave like Shuh-sun-wu-shuh was prescribed as a good custom at that time, for the *I li* (ch. 27, l. 41, 44) says, immediately after the rescripts on the slighter dressing . . . 'The principal mourner ties his hair together and bares the upper part of his body; the other principal mourners tie up their hair with a lace in the apartments, and the women coil up theirs in the back chamber.' Similar rescripts occur in the 57th chap. of the *Li ki* (l. 17)," and further proof is to be found in the *I li*, ch. 27, l. 47, and ch. 28, l. 35, and in the *Li ki*, ch. 57, l. 32.—*Ibid.* ii. i. 475–6.

"It was a general custom under the Cheu dynasty to bare the upper part of the body during the dressing of the dead [pp. 36, 336, 338], both for the principal mourners and all those who took an active part in this ceremony. Moreover, the baring of the chest and shoulders is mentioned more than once in the *I li* in direct connection with interment. This too is quite a matter of course, as clothing material offered to the dead used for the greater part to be placed in the grave along with the coffin . . . . The principal mourners bared their breasts when messengers, despatched by the Ruler on the day before the burial, arrived to present material for clothes and other articles to the defunct [p. 168]. . . . The same was done by the Invoker, when he entered upon his functions at the commencement of the immediate preparations for the interment, and that this sacerdotal functionary then moreover bared his head [p. 177]. . . . The principal mourner bared the upper part of his body when parcels of black and scarlet silk were deposited in the grave by the side or on the lid of the coffin [p. 196]. To this we may add that it was customary in those times for officials to be partly undressed when following in the funeral procession of their sovereign; for we read in the *Tso ch'wen* (the fourth year of the Ruler Chao's reign) that the ruler of the State of Lai (賴), on being attacked by the united armies of some confederated states, in token of his absolute submission to their arms, repaired to their headquarters, his hands tied together, his mouth holding a piece of jade as if he were a corpse, and followed by a coffin, and by his officers who had bared the upper part of their bodies."—*Ibid.* ii. i. 477.

"That the wearing of mourning virtually stands in the closest connection with interment, is furthermore proved by the circumstance that, during the Cheu dynasty, the nearest relatives used to put it on again at the burial when this took place so late that the customary period of mourning had already elapsed. This was done even in the case of brothers, the *Li ki* stating (ch. 46, l. 50): 'When the interment of an elder or a younger brother takes place after the mourning for him has been cast off, then the mourning dress which is prescribed for a brother must be put on again.'"—*Ibid.* ii. i. 477–8.

"During the Cheu dynasty, stripping the upper part of the body was, however, by no means exclusively confined to the period of the dressing and the burial of the dead. The principal mourner did the same while stuffing the mouth of the deceased with rice and cowries [pp. 275 *seq.*], although in this case he might have done so to prevent the sleeves from incommoding him in the performance of his function. Further, according to a rescript attributed to Confucius, a newly born successor to the Throne had to be introduced to the manes of his deceased father undressed, and thereupon to be attired in a coat of sackcloth, all the attending officers, from the highest to the lowest, baring the upper part of their bodies at the same time [pp. 350 *seq.*]. The *Li ki* moreover says (ch. 46, l. 53): 'Hastening to the spot on his father's death, a son gathers his hair together in a knot inside the hall, bares the upper part of his body, goes down the steps, stamps his feet, puts on his clothes and ties on a waistrope on the eastern side (of the courtyard). Hurrying to the funeral rites of his mother, he does not bind his hair into a knot, but bares his body likewise inside the hall; thereupon he descends into the courtyard and, having stamped his feet, redresses there on the eastern side, binding his hair with a lace, and then putting on a waistrope. Then he proceeds to his appointed place, performs a complete stamping of the feet, and goes out from the gate, whereupon the wailing ceases. In the course of three days there are five periods of wailing, and the upper part of the body is bared three times.'" This custom of baring the upper part of the body and doing away with the headgear as a token of mourning "may have been greatly influenced, nay even initiated, by the practice, peculiar to savage life, of tearing one's hair and rending one's clothes in case of death, as a token of despair. We have, indeed, every reason to believe that in ancient China mourners were much addicted to such showy signs of grief, for . . . they also screamed and wailed, stamped their feet and beat their breasts in mad infatuation, probably even going so far as to lacerate their flesh."—*Ibid.* ii. i. 478–9.

"We read in the seventieth chapter of the *Li ki* (l. 29): 'Immediately after his parent's death, a child tucks up the skirts of his dress and inserts them in his girdle.' . . . Doubtless this act, like baring the head and the upper part of the body, was intended to represent an undressing, the lower limbs being thereby uncovered."—*Ibid.* ii. i. 641, note 2.

"There cannot be a doubt that wearing the hair quite loose on the two most important occasions of mourning betokens a sacrificing to the deceased all one's articles of dress to the very last, including even the head-gear. Anciently . . . it was customary to divest one's self of cap and other things serving to keep the hair together, and simply to coil it up on the top of the head. Considering the matter from this point of view, it is quite clear why the unbraided hair ceases after the burial. Originally, everything, including the clothing, was offered to the dead in the last instance at his burial, having to be enclosed with him in the grave; but after the interment this self-bereavement was gradually relaxed, and it ended at the close of the mourning period. That mourners wear no silk for braiding up their cues must, it seems, be ascribed to the *Li ki*, which has (ch. 45, l. 2): 'In the mourning of the first degree [*v. infra*] the hair is tied up with hemp, and this material is used also for binding it together when in mourning for a mother. Abjuration of all the comforts of the tonsorial art is likewise rooted in antiquity. . . . Mourners were imperatively commanded in the seventh century before our era to abstain from washing their heads and bathing their bodies; . . . cleansing the head and body was anciently prohibited for about three months."—*Ibid.* ii. i. 602–3.

"The correctness of our theory that fasting and wearing mourning originated in the practice of abandoning everything to the dead, is strongly confirmed by the fact that, in ancient historic China, it was an established mourning custom to give up to the defunct even the dwelling in which he had lived and breathed his last, with all its belongings, the children removing elsewhere, to miserable huts of clay, destitute of all bedding and furniture [pp. 363 *seq.*]. In the *Li ki*" this custom "is mentioned in the same sentence with fasting and wearing mourning apparel, which is another proof that the three things were connected together by the closest ties. 'A large wound,' says that book (ch. 71, l. 22) 'remains long, and sharp pain passes tardily away. The shabby coat with its edges roughly cut off and the mourning staff; dwelling in a shed reared against the wall; eating rice-gruel there and sleeping on straw or matting with a clod of earth for a pillow—these things are the outward signs of the deepest grief.'"—*Ibid.* ii. i. 479–80.

"The *Li ki* (ch. 58, l. 18) says: 'When a father or mother dies, the children dwell in sheds reared against the wall. These are not plastered with clay, and they sleep therein on straw or matting, with a clod of earth for a pillow. They do not speak there except on matters concerning death. When such a shed is made by a Ruler, it is fenced around, but no fence is made when it is erected by a Great officer or an ordinary officer. After the burial, posts and lintels are inserted, and the sheds are plastered, but not on the visible outside; then they are also fenced, if they be intended for the occupancy of a Ruler, a Great officer, or an ordinary officer. All the sons but the eldest by the principal wife have sheds made for themselves before the burial, in out-of-the-way places.' 'When,' says the *Li ki* (ch. 71, l. 7), 'at the death of a father or mother the great sacrifice which follows on the burial has been celebrated and the period of wailing is concluded, posts and lintels are fitted in, and the walls are clipped (to remove the superfluous straw); the mats of *hu* [? foxglove] rushes also are then clipped, but their edges are not bent over to the inside. Subsequently, after a year, when the Lesser Sacrifice of Felicity has been offered, the mourners occupy unplastered rooms and sleep there on mats; at the end of another year, when the Great Sacrifice of Felicity has been presented, they re-occupy their bedrooms, and after one month more, when the sacrifice which concludes the mourning has been offered, they may make use of their beds again.' Accordingly, the unplastered rooms served as the transition from the sheds to the usual dwelling; in them they passed what may be called the period of slighter mourning or of semi-mourning."—*Ibid.* ii. i. 480–2.

"Only for the male members of the family of the dead was it obligatory to dwell in mourning sheds. 'Women,' says the *Li ki* (ch. 58, l. 22), 'do not dwell in mourning sheds, nor do they sleep on straw or matting.' How matters stood with respect to more removed relatives, is stated by the *Li ki* (ch. 71, l. 6, *q.v.*)."—*Ibid.* ii. i. 482.

"The regimen to be observed by the mourners while occupying the sheds or the unplastered rooms was likewise minutely regulated by customary laws. 'Those,' says the *Li ki* (ch. 55, l. 15), 'who are in the (deepest) mourning which lasts into the third year, speak, but do not discourse; they give answers, but do not ask questions. In the sheds or the unplastered rooms they do not sit down in company with other people. While occupying the unplastered rooms, they may not, when they visit their mother at unfixed times, enter the house through the gate. Those who wear slighter mourning dwell in unplastered rooms all the time, and not in mourning sheds, as the latter represent the severest form of mourning.' This statement that the wearing of deep mourning dress was intimately connected with the deep mourning shed, and slight mourning dress with a slight mourning room, proves how fully Chinese documents testify that wearing mourning and living in mourning apartments were two customs linked together by the closest ties."—*Ibid.* ii. i. 482–3.

"If it be correct that wearing mourning originated in China in the custom of sacrificing to the dead even the clothes on one's own back, it is natural that, in such ancient times as the native literature makes us acquainted with, mourning dress must have been characterized by a total absence of ornaments. These being among the last of the necessities of life, the survivors might give them up to the defunct first of all. 'The removal of finery,' says the *Li ki* (ch. 12, l. 28), 'means doing away with an attractive appearance, and the utmost one can do in removing finery is to bare the upper part of the body and to tie the hair in a knot;' indeed, it would have been difficult to do more than thus to surrender to the dead even one's last piece of clothing and headgear. Further, the *Li ki* has (ch. 13, l. 26): . . . 'Shih Khi-tszĕ said: "Whoever, being in mourning for his father or mother, washed his head or his body and wore girdle-pendants of jade?"' This removing the ornaments from the body in times of mourning is the more significant, if we keep in view that in those ages it was implicitly prescribed by the laws of morals that such things should be worn from the girdle when not in mourning. From the most ancient times down to the present day, the emperors are always dressed in an unembroidered fur gown of a plain dark colour (called a *ch'iu* 裘) while performing the sublimest religious ceremony of the State, *viz.*, the sacrifice to Heaven, the highest divinity of the Pantheon."—*Ibid.* ii. i. 488–90.

"Seeing that, in ancient China, mourning was in point of fact a renunciation of all property for the benefit of the dead, and that such renunciation was not carried out with a like degree of rigidity for every deceased kinsman, it naturally follows that mourning dress was deepest for the nearest relations, and less so for kinsmen more removed. It was subdivided into five degrees [called 五服, *wu fu*, 'five sorts of dressing'], denoted by the following names, generally used with the same meaning in all the works of both ancient and modern literature:—

The first or highest degree, for the nearest relatives, is called 斬衰, *chan-ts'ui*, 'the shabby coat which is cut off roughly'; it might therefore be styled 'the shabby coat with ravelled edges.'

The second degree is called 齊衰, *tsi-ts'ui*, 'the shabby coat, the edges of which are cut even.'

The third degree 大功, *ta-kung*, 'material of coarse fabric.'

The fourth degree 小功, *siao-kung*, 'material of finer fabric.'

The fifth degree 緦麻, *szĕ-ma*, 'finespun hemp.'"

"In point of fact there always existed a few other degrees; but they were only regarded as subdivisions of the five. 'Mourning,' says the *Li ki* (ch. 70, l. 62), 'consists of many things, but the mourning dress consists of five degrees.'" "As their names indicate, each of these degrees was connected with a special dress, which was the poorer in proportion as the relationship to the defunct was closer. Moreover, there was prescribed for each degree a certain mode of dwelling, the poorness of which was similarly graduated. . . . In a corresponding manner there was prescribed for each of the five degrees a special regimen of fasting: 'In mourning for a father or mother,' says the *Li ki* (ch. 71, l. 5), 'when the coffin has been stored away in the hall, the mourners eat rice gruel made of a handful of rice in the morning, and the same quantity in the evening. In the second degree the mourners take their food at long intervals and drink water, not touching vegetables or fruit. In the third degree

they (may take vegetables and fruit, but) must abstain from pickled food; in the fourth degree and in the fifth they do not drink must or spirits. These are the manifestations of sorrow in drinking and eating.' Furthermore, for each degree of mourning there was prescribed a peculiar mode of speaking and conversing. 'In the first degree of mourning,' we are told in the same chapter of the *Li ki* (l. 4), 'the mourner merely shows that he has heard what is said to him, but does not answer in words. In the second degree he answers, but does not enter upon a conversation. In the third degree he converses, but without discussing. When mourning in the fourth or fifth degree, he may discuss, but not take pleasure therein. These are the manifestations of sorrow in speech.' Finally we may add that the death-howl also had to be ejaculated in five different ways, the one more, the other less piteous, according to the degree of mourning of the howler. . . . That such gradations in each of the principal mourning usages were for the greater part merely theoretical, is self-evident."—*Ibid.* ii. i. 491–2.

Mourning dress of the first degree consisted of "a shabby coat and skirt, both roughly cut off; a headband and waistrope of the female [inelegant] hempen plant and a staff adorned with female hemp; a twisted girdle; a cap with a rope for a tassel; shoes of *kien* grass." Female mourners wore "a linen band in their hair and a pin of the arrow-bamboo, and they coiled their hair up into a knot." The object of the staff was support of the mourner during illness or infirmity caused by mourning and fasting. This degree of mourning is also denoted in Chinese works by the term "three years' mourning," *i.e.*, mourning lasting into the third year after death. It lasted for twenty-seven months and was divided into four periods, at the end of each of which changes were made in the mourning attire, the mourning sheds, comfort, food, conversation, and deportment of the mourners. Sacrifices were made at intervals. The head and body of the mourners during mourning of the four highest degrees was not cleansed until the third month, except at the time of sacrifice. Combing the hair was also forbidden. Visits of condolence to others were considered inappropriate during this period, though the *Li ki* says they might be made at the end of one year. Mourning of the first degree was observed for a father, an emperor, by a father for his eldest son by the principal wife, etc. (For complete list see ii. i. 506.)—*Ibid.* ii. i. 493–511.

Mourning dress of the second degree consisted of "a shabby coat and skirt, both of plain coarse material, the edges of which are cut off even . . . ; a headband of the male [more elegant] hempen plant; a cap [of coarse fabric] with a tassel of linen; a staff scraped smooth; a girdle of linen; shoes of plain and coarse material." "The hempen ropes worn respectively around the head and the waist were subjected to a regular reduction of one-fifth of their volume for each lower degree." Some of the male mourners only in this degree carried the staff, which was of *T'ung* wood, scraped smooth. Mourners of the second degree dwelt in unplastered apartments, and wore the mourning costume for twenty-seven months (the same period as prescribed for mourners of the first degree) for certain relations on certain conditions (see ii. i. 513), and for one year in the majority of cases (ii. i. 515). Improvements were made at intervals in a similar manner as in the first degree. Visits of condolence were permitted in the four lower degrees of mourning. For other modifications see ii. i. 516–20.—*Ibid.* ii. i. 511–22.

[Mourning dress of the third degree consisted of a coat and skirt of a coarse material made of male hemp. Respecting the headband and waistrope see above. For those mourned for in this degree see ii. i. 522–5. Between this degree and the fourth an extra costume was worn by Great officers during the seven months intervening between the death and burial of a ruler.]—*Ibid.* ii. i. 522–5.

The dress for the fourth degree of mourning consisted of "a coat and a skirt made of a textile of finer fabric, with a waistrope and a headband of cleansed hemp" (see above). It was worn for five months. For a list of the relations for whom it was worn and for modifications at the end of three months see ii. i. 525–7.—*Ibid.* ii. i. 525–7.

For the last and slightest degree of mourning the dress was "made of fine-spun hemp. It was worn for three months only." This dress "formed a kind of transition from the mourning garments to the dress of ordinary life." For list of relations for whom this degree of mourning was worn see ii. i. 529–31.—*Ibid.* ii. i. 528.

"Apart from the five categories of mourning, some exceptional attires were in vogue in ancient China for special grandees who were exempt from the ordinary mourning on account of their high position or dignity, and for some relations and circumstances not specified in" the lists of relations mourned in the five degrees. See *I li*, ch. 25, l. 27–44.—*Ibid.* ii. i. 531–2.

"The custom of the K'ung family not to mourn for a mother who had left it herself, or been divorced, took its rise from Tsze-sze."—*Legge, Ch. Class.*, i. Prol. p. 39.

"The opinion, generally prevailing among Europeans and pronounced by many an author on China, that white is the colour of mourning in the Middle Kingdom, is totally false. The truth is, that the mourning colour there consists in the absence of any artificial tint, in other words, it is the original colour which nature has lent to hempen and other textiles. Even the white colour produced by simply bleaching the material is . . . excluded from deep mourning and allowed only in slighter mourning; hence it takes the part of what we might call semi-mourning. White is not even mentioned by name in any mourning rescript of the *I li*, the *Li ki*, or other works consulted by us, but they all indicate mourning dress, very often by the term 素服, which means properly a dress of plain material, unbleached and undyed. The term 白衣, 'white dress,' is never used in China in any other sense than that of the dress of the laity, in contradistinction to that of the Buddhist clergy, who wear no undyed garments. It probably owes its existence to the fact that, during summer, nearly the whole of the higher and middle class in China dress in white; and this would certainly not be the case were white the colour of mourning, every Chinaman being thoroughly convinced that mourning clothes exercise a disastrous, nay, a deadly, influence on whomsoever and whatsoever they come in contact with." "After white, or, correctly speaking, the colour of bleached linen or cotton, light blue plays a part in semi-mourning. . . . The reason is obvious; light blue is a colour produced by a slight quantity of indigo, which is the commonest tincture for clothes the Chinese possess, and wearing garments of this hue therefore is naturally considered as a first step from undyed garments to brightly coloured materials."—*De Groot*, ii. i. 601–2.

The opinion "that mourning rescripts were created in ancient China chiefly to enforce the great principle that subjection and mutual devotion should prevail in the family circle and clan, is perfectly justified by the register of persons to be mourned for in the five degrees, as given by the *I li*." "Mourning for kinsfolk living in another clan, however close their parentage by blood or affinity might be, counted for next to nothing in comparison with that which was to be worn for one's own clan's people."—*Ibid.* ii. i. 534–5.

The stringency of the rules respecting mourning dress is shown in the *Li ki* (ch. 10, l. 19): "it was better to wear no mourning at all than not have it of the proper materials." People over eighty years of age were exempted from fasting and mourning rites.—*Ibid.* ii. i. 532–3.

"The *Li ki* (ch. 13, l. 20) states: 'Confucius declared that in ancient times, when a son of Heaven died, the heir-son left the administration to his prime minister till in the third year.' By thus refusing to accept the reins of government immediately after their father's death, or—which is exactly the same thing in despotic China—to take possession of the Empire as their private property, the emperors evidently acted in obedience to the doctrine that everything which a man possesses while alive, continues to be his property after his death. And mourning being, moreover, in point of fact nothing else but a renunciation of wealth in behalf of the defunct, an imperial heir-son who properly observed mourning could not do otherwise than decline the great patrimony, until the mourning period, the time of renunciation of all wealth, was entirely past. During the Cheu dynasty such a line of conduct was followed also by feudal rulers. In the *Li ki* (ch. 58, l. 20–1) we read: 'After the burial a feudal prince may speak of the affairs of his sovereign liege-lord, but not of those of his own principality. He does not deliberate about the administration of his state until silk has been assumed by him at the end of one year.' A similar line of conduct was followed by the officers of the State."—*Ibid.* ii. i. 570–1.

"The obligation to resign public duties in order to observe the best possible forms of mourning, extended in ancient China to all the relatives of the five degrees." See *Li chi*, ch. 19, l. 21; 55, l. 37.—*Ibid.* ii. i. 571.

"In the *Li ki* the prohibitions against having music while in mourning are pretty numerous. Its sixth chapter (l. 20) says: 'When in mourning, one does not talk of music,' and in the eleventh chapter (l. 55) we read: 'After the Sacrifice of Felicity (at the end of the second year) a cap of plain undyed silk is assumed; in the month which follows thereon comes the sacrifice which concludes the mourning, and in the ensuing month the mourners may take to their music.' . . . Of Confucius we read in the same work (ch. 9, l. 48), that 'after the Sacrifice of Felicity he began to handle his cithern during five days, without, however, producing perfect sounds out of it; and ten days later he played the Pandean pipe and sang.'"—*Ibid.* ii. i. 606. *Cf. Legge, Ch. Class.*, i. Prol. p. 62.

"People mourning in the second and in the third degree had also to abstain from music, but, as was the case with all other forms of abstinence dictated by the rules of mourning, this rescript was not pushed so far in their case as in that of mourners of the first degree." See *Li chi*, ch. 56, l. 8. . . . "But the customs of social life went even further than forbidding music in cases of death to mourners only. . . . 'When there are mourning rites in his neighbourhood, one should not accompany his pestle with his voice. And when there is a corpse in his village temporarily buried, one should not sing in the streets' (*Li chi*, ch. 4, l. 36, ch. 9, l. 23). Still another chapter of the *Li ki* (12, l. 8) says: 'When one pays a visit of condolence, he does not make any music on the same day.' All these rescripts evidently referred to such music only as was made for the amusement of the living. Music performed for edifying or worshipping the soul of the deceased was not forbidden, for . . . it occupied an important part at the burial [See pp. 158 *seq.*]."—*De Groot*, ii. i. 606–7.

"Mourning in ancient China meant expropriating one's self temporarily of all one's possessions. As a natural consequence custom then required mourners to divest themselves for a time of their wives and concubines, who constituted mere objects of wealth, as is nearly always the case among uncivilized and semi-barbarian peoples. It is therefore not surprising to read in the *Li-ki* that Ming Hien-tszĕ did not indulge in intercourse with his women until the seven and twenty months of his mourning were past, and that he earned Confucius's praise for this commendable conduct. . . . Just as little can we be amazed to find in the same work the following passage (ch. 58, l. 22): 'After the sacrifice which concludes the mourning of twenty-seven months, the mourner re-occupies himself with his wives. And if he occupies the shed in the one year's mourning (*i.e.*, at the death of his mother [cf. p. 482 and ii. i. 515, No. 5]), he has no intercourse with the women in his inner apartments, until the end of the mourning, if this is for his mother while his father is still alive. But if he wears the one year's mourning of the coat with trimmed edges for his wife [see ii. i. 515, No. 6], or the coat of coarse stuff for nine months, he then abstains from intercourse with the inmates of his inner apartments for three months.'"—*Ibid.* ii. i. 608–9.

"Sexual intercourse during mourning being prohibited by the law of custom, it is quite natural that marriages during that period should also be prohibited. No doubt a second consideration then entered into the matter:—marriage being the happiest event in one's life, and as such connected exclusively with festivity and merriment, it could not be combined with mourning which represented the greatest adversity." . . . "Confucius went so far as to order that weddings which were on the point of being consummated, should be postponed at the last moment, if the father or mother of one of the parties died suddenly" (*Li-chi*, ch. 26, l. 25 *seq.*).—*Ibid.* ii. i. 609–10.

People in mourning for their parents or paternal grandparents were forbidden to separate themselves from their clan or to divide the property until the mourning was ended. "As by separating their persons from the clan, so by separating their wealth therefrom children commit a revolting sin against *hiao*, which the Law cannot leave unpunished." The reasons for this appear to be the maintenance of the personal authority of parents and union of the clan. See *I li*, ch. 23, l. 22.—*Ibid.* ii. i. 619–22.

[The patriarchal idea led to observance of mourning rites by ministers for rulers and by the people for the sovereign.]—*Ibid* ii. i. 623–8.

"Besides one's own kinsfolk and the ruler with his nearest relations, still a third category of persons had to be mourned for in ancient times, namely teachers. This fact itself suggests that custom had invested these men with great authority over their pupils, and that the latter had to show them a submissive devotion adequately proportionate. . . . The *Li ki* (ch. 9, l. 4) places teachers unreservedly on a par with parents and rulers." No mourning dress, however, was required except a change of hat-button or adoption of a head-band.—*Ibid.* ii. i. 638–9.

"Numerous passages in the ancient Chinese books indicate that, in pre-Christian times, it was a prevailing conception in the Empire of the Midst that people dressed in mourning ought to avoid contact with others. It is difficult to attribute this to anything but a fear that the misfortune by which the mourner had been struck, and the influences of death still sticking to his person and dwelling, might pass over to others like a contagion, and thus entail new disasters or new cases of illness and decease" (*Chou li*, ch. 7, l. 18; *Li chi*, ch 6, l. 21 : 13, l. 5). "In Confucius' time it had become quite a rule for people in mourning also to avoid entering other mansions than those of the Chief of the State."—*Ibid.* ii. i. 640–1.

"If mourning be offensive to man, must it not then be more so to the gods? And must it not on this account be kept at a distance from them as well? No Chinaman has ever hesitated to answer these questions in the affirmative." "Already in ancient China this conception prevailed, even with regard to Heaven and Earth, the two highest divinities of the Pantheon. These were solemnly sacrificed to yearly for the welfare of the country, on fixed days, by every Son of Heaven in the suburbs of his capital, and mourning dress was banished to a distance from the spot on such occasions by severe laws. How, indeed, could divinities be propitiated, if they were outraged and irritated at the same time on their own altars by the presence of unpropitious mourning? 'At the sacrifices in the suburbs,' says the *Li ki* (ch. 60, l. 27), those who have sustained a loss by death do not presume to wail, nor do they who wear inauspicious mourning garments venture to enter the gates of the capital then. This constitutes the highest degree of reverence. And (ch. 37, l. 11) during the day of the sacrifice, those who have been visited with a case of death do not howl, neither do they venture to wear inauspicious mourning dress.' Howling too was accordingly deemed to work mischief."—*Ibid.* ii. i. 644–5.

"In ancient historical China, sacrificing food for the dead under different forms was . . . widely prevalent. They put food into a corpse's mouth after the last breath was drawn; they placed some at its side while it was lying on the death-bed or concealed in the principal apartment of the house under a pile of wood and clay; they also stored up large quantities of victuals in the grave [pp. 357, 363, 382, etc.]. And though in those early historical times it was no longer customary for children to give the dead all, or nearly all the food they possessed, yet fasting was not thereby divested of its reality, since it had then assumed the shape of a time-honoured religious rite, the observance of which was imperiously demanded by the *hiao*, a virtue which . . . claimed just as much sacrificial devotion for defunct as for living parents."—*Ibid.* ii. i. 646–7.

"As the sacrificing of food to the dead in various ways anciently commenced immediately after life was extinct, fasting, being a natural result of such sacrifices, began at the same moment. We read indeed in the *Li ki* (ch. 70, l. 29): 'Immediately after the death of their father or mother, the children tie their hair with a head-scarf and fasten it with a pin; they then go barefoot, have the skirts of their coat tucked up and inserted in their girdle [p. 641, note 2], and howl, their hands folded on their breast. Their grief and distress, their painful and bitter thoughts injure their kidneys, dry up their liver, and scorch their lungs. Water or moist food does not enter their mouths, and for three days no fire is kindled (to cook food); hence the neighbours prepare rice gruel to feed them and to quench their thirst. Internal grief and distress produce a change in their outward countenance; because pain and affliction dwell in their hearts their mouths do not relish any savoury food, nor do their bodies find rest upon anything which is of good quality.'" The custom "of having no fire in the dwelling for some days after the decease, must in course of time have given rise to the custom . . . of begging in the street for the ashes that are required for the coffining of the corpse" [pp. 24, 27]. The *Li chi*, ch. 14, l. 43, and ch. 10, l. 8, shows that fasting sometimes was prolonged for five or even seven days; but admonitions against exaggeration of mourning rites in general were frequently made by ethical teachers during the Confucian age (see *Li chi*, ch. 14, l. 15; ch. 55, ll. 33, 35; ch. 4, ll. 28–30; ch. 19, l. 11). Fasting was less vigorous in proportion to the distance of relationship to the deceased and the time which had elapsed since the decease.—*Ibid.* ii. i. 647–51.

Seeing that (*Li chi*, ch. 71, l. 5) "meat, must and spirits were forbidden even in the last month of the deepest mourning, when other sorts of food had long been allowed . . . ; seeing, moreover, that must and spirits were not permitted to mourners of even the two lowest degrees and that moralists had to give implicit orders to sick and aged mourners not to abstain from such liquors or from flesh—the conclusion is forced upon us that the three articles in question stood quite foremost in the list of foods which mourners were not allowed to touch. This fact coincides with the circumstance that it was just the same three things which in ancient China played the principal part at every sacrifice that was offered to the dead" [pp. 83 *seq.*, 363 *seq.*, 118 *seq.*, 151 *seq.*, etc, and bk. ii].—*Ibid.* ii. i. 651.

"The law of custom during the Cheu dynasty went so far as to make fasting incumbent upon those who dressed a corpse or went to condole with people who had sustained a loss by death (see *Li chi*, ch. 58, l. 10; 12, l. 9). . . . It is worthy of notice also that it was prescribed (ch. 11, l. 1), that 'people eating by the side of a mourner might not eat their fill.'"—*Ibid.* ii. i. 652.

Fasting also once formed a part of the mourning to be observed by grandees on the demise of their Ruler. "On the death of the feudal Ruler Tao (of the State of Lu)," thus the *Li ki* states (ch. 13, l. 3), "Ki Chao-tszĕ asked Ming King-tszĕ what sort of food ought to be taken for a deceased prince. The answer ran: 'To eat gruel for him is the general rule for the whole Empire.' 'But,' retorted the other, 'nobody throughout the four quarters of the world is ignorant of the fact that we three ministers have not been able to live (in harmony) with the royal family. I could by an effort emaciate myself, but would it not make men doubt whether I was doing so in sincerity? I will continue taking my usual food.'" Accordingly, fasting for a ruler was even severe enough to entail bodily emaciation; and hence it is quite natural to read in the *Li ki* (ch. 12, l. 3): "On the demise of a feudal lord, the seniors of the whole body of officers have to carry a staff." "Elsewhere the *Li ki* gives some details about such official fasting (ch. 57, ll. 39 and 41)." "Rulers in those times were obviously in the habit of fasting a little for their grandees" (*Li chi*, ch. 56, l. 17).—*Ibid.* ii. i. 657.

Absolute Monarchy (221 B.C. *to* A.D. 221).—*Table III.*

Lavishness in burials.—"All indications point . . . to the rulers of the Ts'in dynasty as the introducers of a style of funeral magnificence unknown to earlier Chinese tradition, and mingled with practices of immolation which came near to taking root among the imperial ordinances of the State."—*Journ. N.-C.B.R.A.S.*, N.S. xii. 12.

Ch'in Shih Huang Ti's "funeral was magnificent, and, like the Huns, his grave was dug in the bed of a river [but *v. infra*], and with him were buried his wives and his treasure."—*Boulger, Short Hist.*, p. 8.

Reaction towards economy.—"During the Han dynasty, the principles of the school of economy in funeral matters had so far gained ground that even the highest classes were imbued with them, the Sons of Heaven and their kindred not excepted. Already the third sovereign of that House, Wen (179–157 B.C.) . . . formally decreed that bare simplicity should be observed with regard to his funeral, which is, so far as we can trace, the first case of a monarch about whom a statement of this kind is on record." Hsüan Ti (73–48 B.C.) was probably "also an opponent of excessive waste of wealth in burying the dead." The Emperors Yüan, Kuang Wu, Ming, and An also held the same views, and issued edicts prohibiting expensive burials. For Wang Hu's protest see ii. i. 689–92.—*De Groot*, ii. i. 687–9.

"As stated in . . . the Books of the Tsin Dynasty, not one of all the graves of the Han family was equipped like that of the Emperor Wu. . . . During the reign of the Emperor Yuen (48–33 B.C.) the statesman Kung Yü (貢禹) memorialized the Throne to protest against the prodigality displayed by the Court in cases of death. This address, which has been preserved in the Books of the Early Han Dynasty, contained the following passage: 'When the Emperor Wu died (187 B.C.) the Emperor Chao was still young and weak. Hwoh Kwang . . . then assumed authority, but he did not know the right way of observing the ceremonial rescripts. He recklessly concealed in the tomb large quantities of gold, money, valuables, birds, animals, fishes, tortoises, cows, horses, tigers, and leopards, burying no less than one hundred and ninety live animals in all. And all the ladies of the back palace he relegated to the mausoleum and its park. In this he sinned heavily against the rites, and revolted against the natural feelings; moreover, it has till now not been made out whether his proceedings were in accordance with the will of our Emperor Wu himself.'"—*Ibid.* ii. i. 409.

"Among the men of letters of the Han dynasty there are some who severely rebuked their contemporaries for making the coffins of the dead objects of extravagant solicitude. Pre-eminent among them stands a certain Wang Hu [Fu] (王符). In the first half of the second century this man composed a book entitled *Ts'ien fu lun* [*Ch'ien fu lun*] (潛夫論), 'Disquisitions by a man living in seclusion,' in which he censured, often with unsparing sarcasm, many practices and doctrines of his age."—*Ibid.* i. i. 310–1.

Wang Mang "prevailed upon the empress to allow him to open the tombs of the royal family, as well as of wealthy private persons; and he issued an edict forbidding in future the burying of valuables in the graves of the deceased. He offended the moral sense of the community by confiscating the treasures brought to light by his sacrilegious researches, but the prohibition itself was only slightly in advance of the time. In the reign of Hwan-ti (A.D. 147) a benevolent officer opened his father's grave in order to give away the buried treasures it contained during a time of distress, and the fact is recorded without censure. It was contrary to the national creed to dedicate to the unconscious spirits of departed ancestors valuables which could be converted into food for men in want; and besides, when distress was common and intense, the tombs were certain to be violated by force."—*Simcox*, ii. 115.

"The monarchs of the Han dynasty, in bestowing upon deserving statesmen coffins and all sorts of things required for a proper equipment of a corpse, ordering out their troops to do honour to the obsequies, and levying serfs to work at the grave, were obviously acting according to precedent, for, as has been pointed out [pp. 34, 168 *seq.*, 340 *seq.*], donations for the funeral and the burial of noblemen and officers had been in vogue in earlier ages. Their behaviour in this respect, which might be illustrated by many more instances recorded in the Annals of those times, reminds us of the French practice of interring statesmen of high merit at the expense of the State. And although the Han dynasty hardly falls short of the famous tyrant of the House of Ts'in in wasting wealth on the equipment of the abodes of their dead, yet this practice evidently was considerably on the wane during its rule, for horses of straw were then buried instead of real horses [p. 403], and even an emperor's father in-law, viz., Liang Shang, objected to having valuables with him in the grave. This process of deterioration was not at all of recent date even then. It was in full force already in the Confucian age, and has been slowly making progress ever since, in constant strife with the religious conservatism of the sacred observances of antiquity."—*De Groot*, ii. i. 412–3; and see ch. viii.

[Vain attempts to introduce simplicity in the construction of imperial mausolea are mentioned in *ibid.* ii. i. 434–5.]

Temples built over graves.—"The sacrifices offered upon the graves gave rise to grave altars already at an early date. . . . We need not wonder that such buildings [temples] were erected on imperial tombs in pre-Christian times. 'Anciently,' thus we read, 'there was no sacrificing on the tombs, but during the dynasty of Han a park with a temple was added as an appendage to each of the imperial mausolea, in imitation of the House of Ts'in.' Elsewhere we read: 'In ancient times there was no sacrificing on the tombs, but Shi Hwang of the House of Ts'in erected a temple at the side of his tomb, and this was imitated by the Han dynasty and has not since been abolished.' It may be asked, however, whether it is not somewhat improbable that such buildings should have come into vogue so suddenly, and whether it would not be more natural to consider them as products of a gradual development of the altars which were erected on the graves [? caves or huts in which the dead were buried, the grave-mound developing into the altar] in far earlier times. The truth may be that Shi Hwang, having subjected the whole Empire, and thus covered himself with an aureole of fame hitherto unparalleled, was the first to have a temple erected on his grave mound in a style so grand as to attract the attention of historians; at any rate it is certain he bestowed more labour upon his mausoleum than ever any Chinese monarch had done before."—*Ibid* ii. i. 387–8; and see further pp. 399, etc.

Structure of grave-vaults and articles, &c., deposited therein.—"That in former ages of the Chinese Empire the great of this earth did not neglect to do whatever was within the limits of human power to light up the cave of death is proved by the interesting account which the Historical Records give of the mausoleum and the obsequies of the martial Shi Hwang, the famous monarch of the dynasty of Ts'in . . . . 'In the ninth month they buried Shi Hwang in Mount Li. Not long after his accession to the throne this monarch had that mountain excavated and prepared, and when he had reduced the whole empire to subjection, people were transferred from all parts of it to this spot, and to the number of over 700,000 excavated the ground underneath three wells of ground-water. Of copper they then made a crypt [or, if 鍋 be read for 銅, they dug up three wells of ground-water, stopped these up by means of molten metal, and constructed a grave-vault], and all the rare articles and precious curiosities of the palaces and the sundry offices were conveyed thither, and hoarded up inside till the crypt was full. Mechanicians were then ordered to make balistic machines which, whenever anyone ventured too near the spot, would suddenly discharge arrows. Of water limpid like silver they made numerous brooks converging into a river and a great lake, and machines revolved in them, throwing out the water from one to the other. Above they arrayed the stars and asterisms, and below the configurations of the earth; they made torches of the fat of the man-fish, which were calculated to burn for a long time. 'Rh-shi (Shi Hwang's son and successor) commanded: "It shall not be allowed to such of the inmates of the late Emperor's seraglio as have no sons, to leave the gates of the mausoleum," and they were all made to follow him in death. Those destroyed in this wise were very numerous.' 'When the coffin had been deposed in the grave, some one suggested that, whereas the workmen and mechanicians who had made the machines and concealed the valuables knew all about the same, the buried treasures might forthwith be scattered in all directions. So, when the great ceremony (*i.e.*, the burial) was finished and the valuables had been stored away, the interior gate of the road leading to the tomb was closed, and the lower and exterior gates of that road were both shut to, so that none of the workmen, artisans, or men who had been employed in storing away the treasures ever came out again. Trees and shrubs were planted about the spot, to give it the appearance of a natural mountain.'"—*Ibid.* ii. i. 399–401.

"An important discovery of books in a tomb is recorded in the *Books of the Tsin Dynasty* in the following words: 'In the second year of the *T'ai Khang* period (A.D. 281) some lawless parties in the department of Kih broke open the grave of king Siang of Wei' [according to the *Si-king tsah ki*, this tomb had been ransacked before that time by a prince of Kwang-ch'wen. . . . This magnate seems therefore not to have done his work thoroughly], or, according to others, that of king Ngan Li (who died in 243 B.C.), and discovered some tens of cart-loads of inscribed bamboo tablets. (According to chapter 3 of the *Book of the Tsin Dynasty*, l. 18, the discovery took place in the year 479, and the tablets contained more than a hundred thousand words written in the small seal character.) Among these there was a set of Annals in thirteen chapters ['The Annals of the Bamboo Books'], beginning with the Hia dynasty and extending down to the overthrow of king Yiu of the Cheu dynasty by the Dog Barbarians (771 B.C.), the matters therein recorded thus embracing three Houses of sovereigns. The tablets treated, moreover, of matters relating to the realm of Wei down to the 20th year of the reign of king Ngan Li, so that they constituted an historical book of that state."—*Ibid.* ii. i. 415–6.

"The royal house of Ts'in, to which . . . the most ancient cases of burying living people with the dead are set down by Chinese books, faithfully kept up this institution to the end. It is stated that 'the ruler Hien abolished it in the first year of his reign (383 B.C.).' . . . But the practice was carried to its highest pitch by the same House on the death of Shi Hwang." For the deeds of his son and successor Êrh-shih on this occasion, see p. 400.—*Ibid.* 729–30.

Size of graves.—"The custom of erecting graves of large dimensions for monarchs seems to have reached its culminating point in the case of Shi Hwang . . . . P'ei Yin (裴駰), the learned commentator on the Historical Records who lived in the fifth century, says: 'According to the Imperial Mirror, the grave mound was over fifty *chang* high and had a circumference of over five miles [*li*].' This statement is confirmed by the *Poh wuh chi*, a little work probably composed in the third century, when, as this book states, the mound was still extant. 'The grave hill of Shi Hwang,' it says, 'is to the north of mount Li. It is several tens of *chang* high, and has a circumference of six or seven miles [*li*]. Now it is situated on the borders of the Yin-p'an district, in the north.'"—*Ibid.* ii. i. 422.

"The *Kwan chung ki* [*Kuan chung chi*] (關中記) . . . says: 'The grave hills of the Han dynasty were all twelve *chang* high and one hundred and twenty *pu* square, and the Meu ling alone was fourteen *chang* by one hundred and forty *pu*.'"—*Ibid.* ii. i. 424.

"Ching Khang-ch'ing . . . states that, 'according to the laws of the Han dynasty, the grave mounds of Imperial princes were four *chang* high, while those of the princes inside the mountain passes and of the nobles still lower in rank down to the people all varied in size" (Ch'ien Lung ed. of *Chou li*, ch. 21, l. 45). "This shows that the Han dynasty changed into a law what, under the Chou, was only a custom."—*Ibid.* ii. i. 449.

Feeding the dead.—"Even during the Han dynasty the true purport of the custom [filling the mouth of the dead] was not lost sight of, as the *Po hu thung i* (白虎通義), a work of the first century . . . says: 'Wherefore exists this custom of filling the mouth of the dead with rice? It is a continuation of the feeding of the living.'"—*Ibid.* i. i. 358; and see pp. 277–8.

Placing valuables in the mouth of the dead.—"We do not find one word in the native literature prior to the Christian era about the use of gold for filling the mouth of the dead."—*Ibid.* i. i. 274.

"During the Han dynasty pearls also occupied a place among the objects which were introduced into the mouth of the dead. At least it is stated in the funeral ritual for the sovereigns of this house that, 'their mouths were filled with rice, and pearls and jade stone were put therein, in accordance with the established ceremonial usages.' (Books of the Later Han Dynasty, ch. 16, l. 1.) And the *Poh hu thung i* . . . says: 'On stuffing the mouth of the Son of Heaven with rice, they put jade therein; in the case of a feudal lord they introduce pearls; in that of a great officer and so downwards, as also in that of ordinary officials, cowries are used to this end.'"—*Ibid.* i. i. 277.

Time of burial.—"Similar uncertainty [respecting the time of burial] prevails with regard to the emperors of the Han dynasty. The Old Ritual of the House of Han records indeed that the founder of the dynasty was dressed on the third and encoffined on the seventh day after his death, so that the rules laid down in the *Li ki* were observed in his case. It is also probable that ice was used for him, as among the Records of the ritual of the said house we find that 'basins were filled with ice in obedience to the established rites.' But as to the burials of that family of sovereigns, there never was any question of a fixed time for them, the dates, as they are given in the official books of history of that epoch, varying between the month in which the death took place and the three following months. In those ages, however, the opinion strongly prevailed that it was improper and indicative of a great lack of devotion to the deceased to confide their bodies hastily to the earth. This is sufficiently evinced by the *Shih ming* (釋名), a small vocabulary professedly composed during the Han dynasty, which has: 'When the burial takes place ere the usual number of days and months have elapsed, it is spoken of as a rash burial, which expression means that people for want of devotion are anxious to perform the interment without delay. But if the corpse is not interred when the said periods have elapsed, one calls it a retarded burial, that is to say, a burial which proves that people, slow and indolent, do not care to set the soul at rest at an early date.'"—*Ibid.* i. i. 266–7.

Devil-dispeller in funeral procession.—"Such a curious devil-dispeller, or perhaps more than one, also figured at the head of imperial funeral cortèges during the Han dynasty, as the Books of the After Han Dynasty say: 'The Rescuer of the Country has four eyes of yellow metal; he is covered with a bear's skin and dressed in a black coat and a red skirt. Bearing a lance and wielding a shield, he stands on a cart drawn by four horses and drives on in the van.'"—*Ibid.* i. i. 162–3.

Coffins.—[In the Books of the Later Han Dynasty, and in the Records of Ching-chou there are one or two references to stone coffins.]—*Ibid.* i. i. 284.

"In the Books of the Early Han Dynasty we come across an episode in the life of the emperor Wen (179–156 B.C.), which proves that the idea underlying the use of substantial coffins and vaults was at that time much the same as in the Confucian age."—*Ibid.* i. i. 292–3.

"The scarcity of timber entailed by the wanton destruction of forests readily accounts for the fact that, from the Han dynasty downwards, double, triple, and quadruple coffins are scarcely ever mentioned in Chinese books, and that grave vaults gradually fell into disuse at the same time."—*Ibid.* i. i. 313.

"During the Han dynasty, only grandees were entitled to a burial in a red coffin, and . . . they jealously watched against encroachments on this prerogative by officials who had fallen into disgrace and consequently no longer belonged to their order. We read also in ch. 46 of the Books of the Later Han Dynasty that Liang Shang, father-in-law to the Emperor Shun, who reigned between A.D. 126–145, was buried in a vermilion coffin procured by the official department specially intrusted with the care of providing coffins for the court."—*Ibid.* i. i. 315.

"It was an established custom with the ruling classes during the Han dynasty to decorate their coffins with 'the colours of the four seasons.' No doubt these colours were blue, red, white, and black, these having always been identified by Chinese philosophy respectively with the Spring or the East, the Summer or the South, the Autumn or the West, and the Winter or the North. . . . The coffins of grandees in those times displayed 'a blue dragon on the left side, a white tiger on the right, a golden sun and a silver moon on the top'; moreover, the Books of the Later Han Dynasty state that the imperial coffins 'used to be decorated and painted with a sun, a moon, a bird, a tortoise, a dragon, and a tiger.' These four animals denoted in ancient China the four quarters of the celestial sphere, the eastern quarter being called the Azure Dragon (蒼龍), the southern the Red or Vermilion Bird (朱鳥), the western the White Tiger (白虎), and the northern the Black Tortoise (玄龜). For the sake of convenience we may draw up all the above cosmogonal elements in a table as follows:—

East . . .	Spring . . .	Blue . . .	Dragon.
South . . .	Summer . . .	Red . . .	Bird.
West . . .	Autumn . . .	White . . .	Tiger.
North . . .	Winter . . .	Black . . .	Tortoise."

—*Ibid.* i. i. 316–7.

'Here, then, we have also a thorough explanation of a custom prevailing during the Han dynasty, and probably also in times still more ancient: that of piling up, in case of persons of rank, an extra number of pieces of cypress wood round the coffin in the grave. This evidently served no other purpose than to increase the vital power already emitted by the coffin and the vault."—*Ibid.* i. i. 300.

"Already in the Books of the Later Han Dynasty the term 'longevity receptacles' (壽器) is used as a synonym for coffins."—*Ibid.* i. i. 323.

Survival of home-burial.—"There are faint traces of final home-burial discoverable as late as the post-Christian era."—*Ibid.* ii. i. 369.

Burying articles with the dead.—[The victualling of the grave was an institution strictly upheld at the imperial burials of the Han dynasty.]—*Ibid.* ii. i. 386.

"During the Han dynasty burying clothes and sacrificial garments was an established rite connected with imperial obsequies."—*Ibid.* ii. i. 392; see also pp. 403 *seq.*

"Thao Hung-king (陶宏景) . . . wrote, . . . 'It was an established rule with the house of Han to bury every prince or feudal lord with clothes adorned with pearls and with boxes of jade, in order to prevent putrefaction.'"—*Ibid.* i. i. 273–4.

"In the earlier centuries of our era, it was not unusual to place also books or other written documents in the graves of the dead. Many instances hereof are on record." . . . These "render it highly probable that the traditions on record about the discovery of ancient books of note in some of the tombs of grandees of the Cheu dynasty are not quite so untrustworthy as they may perhaps at first sight appear to be. Seeing that in the earlier centuries of our era men of high moral standing were so often desirous of being laid in their

graves with such books as they had tried to frame their conduct upon during life, it is not beyond the bounds of reason to suppose that, in times still more ancient, monarchs and princes were entombed with the annals and historical records, which had regulated their conduct in matters of government by placing before their eyes the glorious feats of the ancestors as examples worthy of imitation, and their odious deeds to serve as warning examples."—*Ibid.* ii. i. 414–5.

Burying living persons with the dead.—"From the absence of references to the practice in contemporary records, we are almost tempted to conclude that under the Han dynasty, and during the time of the Three Kingdoms, the immolation of living persons to the dead was of rare occurrence. Our studies of the standard histories of that epoch have not acquainted us with a single case of such human sacrifices, nor do the biographies of empresses and imperial concubines contained therein mention a single instance of a woman having been immolated to the manes of her consort. However, some cases on record may have escaped us, and some allowance must be made for the supposition that slaves and concubines continued to be immolated without the annalists and official historiographers deeming it worth their while to put on record such common-place occurrences. This supposition almost forces itself upon us when we take into consideration, on the one hand, that such practices were so deeply rooted in the institutions of ancient China as to be in very active force under 'Rh-shi, whose reign immediately preceded that of the Han dynasty, and, on the other hand, that history proves its prevalence at the beginning of the fourth [? fifth] century, that is, more than a hundred years after the period of the Three Kingdoms."—*Ibid.* ii. i. 730.

Sutteeism.—"Though burying living people with the dead has been gradually obliterated from the customs of the Chinese people by advancing culture, yet it has struggled hard in its decline, and insensibly assumed a modified shape, under which it still maintains itself. Daughters, daughters-in-law, and widows especially, being imbued with the doctrine that they are the property of their dead parents, parents-in-law, and husbands, and accordingly owe them the highest degree of submissive devotion, often take their own lives, in order to follow them into the next world. Numerous cases of such suicides are mentioned already in the works of the Han dynasty, and are found in the books of subsequent ages in gradually increasing numbers, which is quite natural, seeing they slowly took the place of immolations at burials." "The instances of such suicides, on record, are so exceedingly numerous and so much resemble each other, that we . . . shall . . . confine ourselves to noting their general tendency." "First of all, we see that self-immolation on behalf of the dead is chiefly confined to the women kind. The reasons are obvious :—as a son, a man was never entitled by any moral law to destroy himself, his highest duty being to preserve his body for the perpetuation of his family and the maintenance of the ancestral worship; and, as a husband or a father, a man could never become the slave or property of his wife or child." "Generally, self-destruction on behalf of the dead is denoted in the books by the character 殉, which . . . is constantly used in ancient and modern works to express the burial of living people with the dead (p 723). This fact of itself alone clearly sets forth the intimate connection between the two subjects; and the circumstance that, in many recorded cases, suttees first requested to be placed with the object of their devotion *in the same tomb*, serves to confirm the same. Many were even placed in the same coffin. We read, furthermore, of suttees hanging, starving, or otherwise killing themselves *on the grave* of their parents, husbands, or parents-in-law, or immolating themselves there by swallowing the earth of the tumulus; and we have come across instances of women who, after having thrown themselves into the grave pit at the burial and being dragged out of it by the attendants, have taken their own lives." "The manner of committing self-destruction has always varied considerably. By far the greater number of victims are reported to have simply hung themselves, or cut their own throats, starved or drowned themselves; it is, however, recorded of a great number of women that they took poison, threw themselves down from some high building or into an abyss, or asphyxiated themselves in a well, or even a privy. We read frequently of one suicide entailing others, as when devout wives were voluntarily followed to death by their women slaves. Many destroyed their children's lives along with their own; some took their own lives while holding the soul tablet of their deceased husband in their hands, or strangled themselves with the remnants of the linen used to swathe his corpse, or accomplished the deed in the temple devoted to the worship of their ancestors, or at the side of the coffined or uncoffined corpse. It is stated in many instances that the suttee formally invoked her ancestors beforehand, praying them to gracefully receive her soul, and that she donned her best clothes, in order to appear before them neat and tidy in the next world (*cf.* p. 702)." "The deliberateness thus displayed in thousands of cases is a proof that suicide was far from being always provoked by unreasoning grief, or by a sudden fit of despair, or by the fear that dire poverty would be the woman's future fate. Otherwise, numerous acts of self-destruction, now on record, would certainly not have been so faithfully committed to paper by historians and chroniclers as deeds worthy of the highest praise of the nation. That suttees were accustomed to premeditate the act is no less obvious from the fact that a very great number are stated not to have taken their lives until they had properly conducted the dressing, coffining, and burial of the defunct. . . . Sometimes they waited till the funeral was completed, and even observed the three years' mourning to the end. The books extol in numerous cases suttees who did not take their lives until they had, in strict accordance with the laws of filial devotion, provided for their parents or husband's parents to the end of their days." "Sutteeism performed by fire, as in India, can never have flourished in China to any great extent, where cremation of the dead has never been practised otherwise than exceptionally. Still, instances of it are found in native books."—*Ibid.* ii. i. 735–6, and see pp. 744–69 for the praise bestowed upon suttees, the honouring of their memory, and rewards conferred upon their relatives and descendants.

Presence of the soul in the grave.—"The presence of the soul in the grave was a prevalent article of faith in the first century of our era." And statements in the Authentic Histories show that the same belief prevailed in the third century.—*Ibid.* ii. i. 380.

Dwelling upon tombs.—"During the Han dynasty, the custom of dwelling upon the graves extended to considerable proportions. This coincides remarkably with the circumstances that . . . human sacrifices at burials were then greatly reduced in numbers, no cases being mentioned in the contemporary records. When an Emperor was committed to the grave, thus say the Standard Annals of those times, the highest ladies of the back palace and those who stood most in favour with the monarch, all settled in his mausoleum-grounds as warders of the park and the grave hill. And on the mausoleum of an empress there were abodes for lady-chieftains of the seraglio and for ladies of lower rank, which were assigned as a mark of favour to female dignitaries of merit among the relatives of the defunct (p. 406). Accordingly, it was a distinction to be allowed to live there, just as it had formerly been looked upon as a favour and an honour to follow one's sovereign into his grave. Another direct reference to the custom in question we find in the Histories of that epoch in the following words: 'In the fourth year of the period *Yang shi* (13 B.C.) the Emperor caused those wives who had borne no children to leave the Tu mausoleum (of the Emperor Suen who had died twenty-five years before), and sent them home' (Books of the Early Han Dynasty, ch. 10, l. 13)."—*Ibid.* ii. i. 796.

"The custom [of dwelling upon tombs] also prevailed in the case of magnates and grandees. We read that on the death of Hwoh Kwang, the minister . . . 'freemen, slave-women and concubines were concealed in his grave-grounds, in order to take care of it' (Books of the Early Han Dynasty, ch. 68, l. 14). In the Standard Histories of those times numerous cases are recorded of people of good family and members of the lower classes who voluntarily settled on the graves of their parents or husbands. Li Siün in the first century of our era lived on a grave for many years (p. 464); in the second century, Chao Suen made his dwelling in the passage which formed the entrance to the grave of his parents (p. 611), thus burying himself with them without sacrificing his life; and Chen P'an (p. 414) . . . about the same time 'lived in a shed at the side of the grave when his mother had died, even after the time of mourning had elapsed' (Books of the Later Han Dynasty, ch. 69, l. 15)." And there are many other examples of the same kind.—*Ibid.* ii. i. 796–7.

Burying effigies with the dead.—"The national Sage having pronounced his anathema against the immolation of human beings at burials and earnestly pleaded for the use of substitutes [see previous Period], these latter have, thanks to the mighty influence of his doctrines and followers, ever been considered as requisites for the equipment of graves. . . . It was customary during the Han dynasty to place straw puppets in great numbers in the imperial graves (p. 403): but counterfeits of another make were at the same time used as well. It is recorded that the emperor Kwang Wu, who reigned in the first century of our era, said on a certain occasion, that 'anciently, at every burial of an emperor or king, human images of stoneware, implements of baked clay, wooden cars and straw horses were used, in order that later generations might take no notice of the sepulchral place.' (Books of the Later Han Dynasty, ch. 1, second part, l. 19). Wang Hu refers in his *Ts'ien fu lun* to the use of human counterfeits at burials of the higher classes (p. 690)."—*Ibid.* ii. i. 808.

"A considerable expansion was given to this process of substitution [of counterfeits in sacrificing to the dead] during the Han dynasty. We see that the rights of substitution were then fully acknowledged even by the supreme governors of the nation for the . . . official rescripts concerning imperial burials prescribed the use of candlesticks of earthenware, useless short feathered arrows, bells and sonorous stones without stands from which to suspend them, straw images of men and horses, stoves, kettles, rice-steamers, caldrons and tables of burnt clay (pp. 402–3). This is perfectly in accordance with the fact . . . that in those times many Sons of Heaven and many eminent men openly sided with the party of economy in funeral matters. It must also to some extent be ascribed to the influence of the *I li* and the *Li ki*, which . . . prescribed the use of such objects (pp. 394, 707–8); indeed, the recovery and study of these and other Classical works then occupied the entire attention of the literary world. But the burying of the real and genuine objects of value was by no means entirely discontinued at that time (pp. 402–13). . . . Not even the custom of placing horses and carts in princely mausolea was given up (pp. 405–6, 409). . . . It prevailed to the very end of the dynasty, for it is recorded that 'the emperor Ling, when he buried his concubine Ma, placed in her tomb, underneath her coffin, a team of four horses, in addition to a canopy of blue feathers.' (Books of the Later Han Dynasty, ch. 16, l. 10)." "But, just as the placing of victuals in the graves was at an early date changed into sacrifices of food outside the graves (p. 384), so burying horses with the dead was also modified under the Han Dynasty into presenting them to the dead without interring them, and valueless counterfeits were on such occasions substituted for the real animals. The Historical Records (ch. 28, l. 36) state: 'In the next year (103 B.C.), some officers memorialized the Throne, stating that no horned cattle were presented on the five altars of the most ancient sovereigns, which were situated in Yung (the circuit embracing the Metropolis Ch'ang-Ngan and surrounding districts), so that all the sacrificial savours were not produced there. Orders were now issued to the officers entrusted with the sacrificial service, to deliver the sacrificial bulls required for those places of worship, as also the best of everything that was to be had in articles of food, but to substitute for the colts wooden images of horses, as real horses were to be sacrificed henceforth only in the fifth month, or when the Emperor, while travelling past the spot, should present a sacrifice there in his own person. And with regard to the spirits of famous mountains and streams, the sacrificial colts were always to be replaced by wooden images of horses, except when the Emperor himself should cross the spot.' (See also the Books of the Early Han Dynasty, ch. 25, ii. l. 4)."—*Ibid.* ii. i. 708–9.

Mock money.—"It would be a great mistake to suppose, that sending mock articles of paper to the next world through the agency of flames was ever considered in China as only an expression of the good will of the survivors to enrich the dead on yonder side of the grave. Numerous exhortations, addressed to the people in sundry books, never to neglect such sacrifices because they really do enrich the dead, point unmistakably to the contrary. Moreover, many legends occur in the books and are current in the mouths of the people, concerning human spirits which have begged paper money from the living, or have expressed their gratitude to those people who had generously endowed them with it. Further, they contain stories of spirits who, assuming a visible shape, have spent money which turned into paper or ashes immediately afterwards. Instead of being considered as legendary, such tales are generally received by the people as records of actual events, about the truth of which not a shadow of doubt ever crosses their minds."—*Ibid.* ii. i. 719.

Equipment of imperial tombs.—[A detailed description of the exceedingly elaborate equipment of the imperial tombs, the numerous articles and animals (including horses, tigers, leopards, etc.) deposited therein, and the minute ceremonial, are given in *ibid.* ii. i. 401–8. Only less elaborate was the equipment of the tombs of princes, ministers, etc. : see pp. 409–10.]

[The imperial presents, etc., to a deceased minister are described in *ibid.* ii. i. 410–1.]

The wish of Liang Shang (A.D. 141), a high magnate, to be economically buried was disregarded. "At his death, the Emperor personally attended the mourning rites [showing that the customs of the Chou dynasty were still maintained in some cases by the Han sovereigns]. The sons wished to carry out their father's instructions, but the Court would not allow them to do so. The Emperor gave a vermilion longevity receptacle (coffin) from the Eastern Park, silver works, yellow intestines, boxes of jade, and twenty-eight kinds of miscellaneous objects, together with two millions of candareens, and three thousand pieces of cloth. The Empress made a donation of five million candareens and ten thousand pieces of cloth. And for the obsequies the Emperor gave light war chariots and harnessed soldiers; the posthumous title of Faithful Prince was conferred upon the defunct, and the inmates of the interior palace attended the burial in person. The Emperor repaired to the balcony of the Gate of Universal Sunlight, for the purpose of regarding the carts and horsemen."—*Ibid.* ii. i. 411–2.

"Every emperor had his own mausoleum. The construction was commenced immediately after his accession to the throne." For detailed description see *ibid.* ii. i. 423–7.

"Warriors and serfs, continues the Imperial Mirror, were levied from the neighbouring districts for the protection of the mausolea, and placed under command of a military chief specially appointed to this office (p. 406). . . . Thus garrisoned, the imperial burial places in those times were strongholds in the true sense of the word, being surrounded either by a single or by a double wall, whilst the entrance to the hill was defended by a sword-gate, hidden ballistic machines, and secret fire. Bands of robbers and hosts of rebels might otherwise invade the sacred grounds and pillage the treasures hoarded up in the crypt, and any harm done to the remains or the spirit would entail the downfall of the Throne, nay, the death of the imperial offspring [ch. xii.]." With a view to emergencies of this sort, the emperors in some cases went so far as to found a walled city in the neighbourhood, and to render it incumbent upon the inhabitants to defend the mausoleum for the protection of which it was built." "Such draconical measures, compelling thousands of people to shift their place of abode, were doubtless enforced at the cost of numberless human lives and unheard of misery." "The forced removal of so many thousands of people from their homesteads at the same time furnished the manual labour required for the building of the mausoleum. Hence it took place as soon as the works were begun." But the eighth emperor Yüan, "forbade the building of a district city in the neighbourhood of his own burial place."—*Ibid.* ii. i. 427–30.

"The circumjacent grounds annexed to each mausoleum were undoubtedly reserved, either partly or entirely, for the maintenance of the serfs settled on the spot; probably these men obtained a livelihood by tilling them. After the beginning of our era, cities for the defence of the mausolea, it would appear, ceased to be founded. . . . It may, however, be taken for granted that the mausolea in all subsequent ages were built by forced labour just the same as before, the arbitrary disposal of their subjects never having ceased to be an undisputed right of Chinese sovereigns, a right of the first order in the fundamental principles of public law." "The custom of relegating people to the imperial burial grounds for the defence and protection of the same was not allowed to fall into disuse without an equivalent. Henceforth each mausoleum received a regular garrison of soldiers, and also a restricted number of persons to keep it in good order and watch over it. Already of Ming, the second emperor of the Later Han dynasty, it is stated that 'when he had his mausoleum made, he ordered that a certain number of menial servants and soldiers should be assigned to watch over it and to water and sweep the grounds.' This institution was probably not abolished by any succeeding dynasty."—*Ibid.* ii. i. 435–6.

[For the brook, rivulet, or tank within the precincts of the tomb, see *ibid.* ii. i. 436, 98, ch. xii; and ref. pp. 396, 400, 419.]

[Empresses were buried with their consorts and (?) high ministers with their rulers.]—*Ibid.* ii. i. 443–6.

"Grave grounds of grandees of the Han Dynasty were miniature copies of the then imperial mausolea, and were also approached by avenues of stone men, animals, and pillars."—*Ibid.* ii. i. 447.

"There are instances of mausolea of grandees having been constructed, during the Han dynasty, by statute labour, the people being relegated to the spot by imperial decree, just as in the case of a mausoleum of an emperor." And "a certain number of families were officially appointed to dwell on or around such grounds and take constant care of them, and it further says explicitly that 'this was in accordance with the usage of former times.' Indeed, similar measures had been taken already by the very first emperor of the Han dynasty with regard to the graves of feudal princes of former epochs."—*Ibid.* ii. i. 447. *Cf.* MING and MANCHU PERIODS.

Sepulchral trees.—It is "explicitly stated in the account of Shi Hwang's burial . . . that trees were planted upon his grave to give it the aspect of a natural hill" and so serve as a protection from robbers, etc.—*Ibid.* ii. i. 460.

"During the Han dynasty, and ever since, pines and cypresses are mentioned in the books as sepulchral trees almost to the exclusion of all others," and the first instance occurs of the "mysterious connection between sepulchral trees and the names of the dead buried underneath them." "During the same period such trees were looked upon as objects of the greatest importance." "Instances of children who not only raised with their own hands grave mounds for their parents, but moreover planted and nursed the trees themselves, begin to occur also during the reign of the House of Han." "Similar instances become more numerous in the works of subsequent ages."—*Ibid.* ii. i. 463–4.

Images in and upon graves.—"Erecting stone statues in the graves seems to have been unusual during the Han dynasty, no mention of the custom being made in the books of that period. . . . There are . . . on record a few cases of copper images

being placed in graves of persons of note. The *Sheu shen ki* (ap. *Ku kin t'u shu tsih ch'ing*, sect. 坤輿, ch. 138), makes mention of a grave in Kwang-ling (廣陵), in the present province of Kiangsu, which, when opened in the third century, was found to contain 'several human images cast in copper, five feet in size.' We read also that Wang Yuen-siang (王玄象), a magistrate of Hia-p'ei (下邳), in the province of Kiangsu, in the fifth century, on opening the mausoleum of a certain princely magnate, 'found therein more than a hundred pieces of gold in the shape of silkworms, and human images in copper' (Hist. of the Southern Part of the Empire, ch. 16, l. 15). But it became a general rule to erect stone statues *upon* the graves. This fact, no doubt, is connected with the circumstance that . . . in the same period it became an established rule on the death of an emperor or magnate to relegate the ladies of his seraglio to his sepulchral grounds and to make them settle there (p. 796; and *Journ. N.-C.B.R.A.S.*, N.S. xii. 12: they being known as 'concubines of the mausoleum,' *yüan ch'ieh*), which custom owed its origin to the ancient practice of interring them alive in the crypt. It also coincides with the commencement of the custom of stationing military guards upon such mausolea (*cf.* pp. 435–6). We may presume that, in high antiquity, men of arms were often buried in the tombs of illustrious dead to serve them as life-guards in their future life, and we have stated . . . that guards in stone were arrayed *inside* the crypt in historical antiquity. Putting those facts together, it becomes obvious why, down to the present day, stone effigies of military men are found upon graves, keeping alive the memory of loyal ministers such as Yen-sih, Chung-hang, and Ch'en-hu, who, in the dawn of history, followed their royal master into death as his faithful servitors and slaves (*cf.* p. 722)."—*Ibid.* ii. i. 811–2.

"The oldest reference to statues erected upon graves is found in the Books of the Early Han Dynasty, where it is stated that 'many grave-statues were made and arrayed in the mountains' for Hwoh Khü-ping (霍去病), a celebrated magnate who died in the year 117 before our era. 'This means,' adds the commentator Yen Shi-ku, 'that in front of the grave there were placed men and horses in stone.' We may regard those horses as the substitutes of the living steeds that used to be concealed in the graves during the Cheu dynasty and even during that of Han (pp. 395, 406). But . . . tigers, leopards, cows, and various other animals used also to be placed in the mausolea of the Han emperors (pp. 406, 409). This usage undoubtedly arose from the conception that the best of a defunct emperor's possessions ought to be sent with him to the next world, and that amongst these the rare and precious animals, sent from all parts of the Empire and its dependencies as tribute to the crown and kept by the monarch as curiosities, occupied a first place, thus naturally leading to the erection of the images of such animals in his sepulchral grounds." "References to such grave-statues are sufficiently numerous to justify the conclusion that they have been in vogue ever since the Han dynasty. The Water Classic Commentary makes mention of them in connection with the mausolea of Chang Pohnga and Yin Lien, two grandees of the Han dynasty (p. 446); besides it describes some other graves of the same period, which were likewise adorned with such statues. . . . The *Shuh i ki* says: 'In the Ta-ku mausoleum at Tan-yang there are to the north two stone unicorns (*ki-lin*) of unknown date. Tradition asserts it is the tomb of a high nobleman who lived under the dynasties of Ts'in and Han, at which time evil was warded off from the graves by means of stone figures representing such animals.'"—*Ibid.* ii. i. 812–3.

The erection of figures of unicorns on tombs may also be due to the fact that they are regarded as animals of good omen. "Their presence on a grave must, moreover, have been esteemed a great boon to the soul dwelling thereunder, in view of the fact that peace and happiness were expected to prevail wherever they made their appearance." "It is not improbable that the other grave animals were equally connected with superstitions relating to the invisible powers of evil and the means of counteracting them."—*Ibid.* ii. i. 823–5.

From an "extract assigned to the *Fêng Suh T'ung*, as quoted by Wu Yung-kwang, it would appear that in times posterior to the Chow dynasty, an image of the exorcist or *fang siang* was erected by the side of the tomb."—*Journ. N.-C.B.R.A.S.*, N.S. xii. 9.

Mourning.—"From the Han dynasty downward, the entire mourning system of China, inclusive of the mourning dresses, has always been regulated by rescripts and information contained in the *I li* and the *Li ki*, and, to a very small extent, by some other Classics. . . . No other subject is treated in these works with a like minuteness of detail."—*De Groot*, ii. i. 490.

During the Han dynasty the custom of resigning office during mourning "was observed so scrupulously that emperors found themselves obliged to reduce the length of mourning periods for officers, lest the administrations of the Realm should suffer too much under the general mourning zeal."—*Ibid.* ii. i. 572.

"The Books of the Later Han dynasty show that already as early as the first century of the Christian era the Emperors took measures with a view to restrain the carrying of this ancient usage to an exaggerated pitch." But the custom was ordered to be observed in full strictness at various times during this and the following century.—*Ibid.* ii. i. 574–7.

"It seems that . . . the procreation of children while in mourning for a father or mother was severely condemned by the orthodox, though by no means considered wrong by the bulk of the people."—*Ibid.* ii. i. 611.

"Mourning for the ruler was likewise a recognised institution of the State. . . . Wen, one of the first sovereigns of that House, ordained that thirty-six days of mourning should be observed for him. He thus curtailed the more ancient period of three months considerably. His testamentary dispositions said that 'it should not be forbidden to take wives or to give daughters in marriage, or to sacrifice, or to drink spirits and eat meat (Books of the Early Han Dynasty, ch. 4, l. 19; Historical Records, ch. 10, l. 17), which indicates that, up to that date, weddings were forbidden during the mourning for a sovereign. There is, however, as far as we know, nothing to be found in the ancient works which gives us a right to conclude that such prohibition prevailed in ages prior to the Han dynasty." "While this family ruled the Empire, the observance of mourning for the Son of Heaven was forced upon ministers and grandees with a vigorous hand."—*Ibid.* ii. i. 628–9.

"The duty of wearing mourning for a teacher was evidently regarded by the nation as a very sacred one. Such a conclusion necessarily follows from the circumstance that there are cases on record of mandarins who went so far as to resign their office on the death of the master who had taught them (see Books of the Later Han Dynasty, ch. 94, l. 4; 97, l. 24; Memoirs of the Three Kingdoms, Memoirs of Shuh, ch. 1, l. 1). . . . It seems, however, that such an exaggerated form of mourning had fallen into disuse already at the end of the Han dynasty, or very soon after, for we have not come across any instances . . . in the native historical records of later ages."—*Ibid.* ii. i. 639.

"Once firmly rooted in the ancient Chinese nation as an indispensable religious rite, fasting for the dead naturally maintained itself as a sacred custom during a long series of ages. . . . In the second century of our era, 'one Shen T'u-p'an lost his father, when he was a mere lad of nine years. His sorrow was more intense and his emaciation greater than the law of morals demanded. Even after he had put off mourning, neither spirits nor meat entered his mouth for over ten years, and on each anniversary of the demise he did not touch food for three days' (Books of the Later Han Dynasty, ch. 83, l. 9)."—*Ibid.* ii. i. 652–3.

"That fasting on the death of sovereigns was binding during the Han dynasty is sufficiently proved by the fact . . . that the Emperor Wen himself ordained that on his death there should be no abstinence from spirits and meat observed for him."—*Ibid.* ii. i. 658. *Cf. supra.*

Period of Disruption (221 *to* 589).—*Table IV.*

Re-action against extravagance.—"In the third century of our era, when China was swayed successively by the dynasties of Wei, Wu, and Shuh, some monarchs continued to show themselves partisans of the doctrine that there should not be any great waste of wealth connected with burials." Ts'ao Ts'ao, founder of the Wei Dynasty and Wen, his son and successor, both gave orders that their burials were to be of the simplest kind.—*Ibid.* ii. i. 692–3.

[Shih Pao (石苞), a magnate of high rank, who died in A.D. 272, was presented by the Emperor with many valuables for a splendid funeral procession. Nevertheless, his last depositions (Books of the Chin Dynasty, ch. 33, l. 17) show that he considered display to be out of conformity to the enlightened principles of the ancients. A similar protest was made ninety years later on the death of the Emperor Mu (*ibid.* ch. 83, l. 11).]—*Ibid.* ii. i. 693–4.

The death-howl.—"In succeeding centuries people have even gone so far as to employ howlers who did not stand in any degree of relationship whatever to the dead, as the following extract from the History of the Southern Part of the Realm shows. 'Wang Siu-chi died in the first year of the period Lung ch'ang (A.D. 494). His *post-mortem* dispositions ran as follows: "You must not place me in the coffin with red garments. Sacrifice spirits and dried meat to me, but nothing else. People of the present age employ slaves and concubines to assist in howling right in front of the soul, but this howling should go out from the principal mourner, and it can be no generosity on your part to desire that many human voices should mingle together in a disorderly concert. If my soul possesses sentient entity, I shall laugh at such behaviour."'"—*Ibid.* i. i. 259.

Re-calling the soul.—"Yen Chi-thui, the ethical writer of the sixth century . . . ordered his children 'not to take the trouble to call back his soul.'"—*Ibid.* i. i. 253.

Filling the mouth of the dead.—"The part this metal [gold] has played in philosophy and alchemy . . . leaves scarcely any room for doubt that it was widely made use of [for filling the mouth of the dead] . . . in subsequent ages" [to the Christian era].—*Ibid.* i. i. 274.

"Koh Hung says: 'If there be gold and jade in its nine openings, the result is that the corpse does not putrefy.'"—*Ibid.* i. i. 273.

"Thao Hung-King (陶宏景), who lived in the fifth century, wrote: 'When a grave of ancient date is dug up and the corpse is found to look as if it were alive, then there is everywhere, both upon and inside it, a great quantity of gold and jade.' . . . In the latter part of the fifth century there lived a certain statesman Li Yü (李預), of whom the following is related in the Books of the Wei Dynasty (ch. 33, l. 18 *seq.*) and in the History of the North of the Empire (ch. 27, l. 7 *seq.*). He applied himself ardently to the ancient methods of eating jade. Once upon a certain day, with his own hands he dug out of a field over a hundred pieces of jade and powdered them, giving part of them away to others and swallowing the rest himself in the course of a year. Thereupon he died in consequence of debauchery. His body was not coffined until the fourth day, and although it was in the seventh month, the hottest of the year, his colour did not change in the least. His wife asking him to open his mouth, that she might place two pearls of jade in it, he at once obeyed her, and no smell at all issued from his throat."—*Ibid.* i. i. 273–4.

Coffins.—"'The San [*Shan*, 杉],' he [Kuo P'o] says, 'resembles the pine. It is suitable for shipbuilding, as well as for coffins and pillars. It does not rot when buried in the ground.'"—*Ibid.* i. i. 324.

The seven-stars board.—"For the first time we meet with the name [seven-starred board] in Yen Chi-thiu's Domestic Instructions, written in the sixth century. In his *post-mortem* dispositions recorded in this book, the author prescribed as follows: 'I must have a coffin of pine wood, two inches thick and on the spot where my body is to lie, nothing may be placed but a seven-stars' board.'"—*Ibid.* i. i. 318.

The "partiality for surrounding the dead in their subterranean dwelling with the universe in miniature [see previous period] explains the custom . . . of stretching them in their coffins on a board with seven holes or circles arranged in the same order as the stars of the Great Bear. In China this asterism—called the Northern Bushel (北斗) on account of its shape—anciently held a prominent place among the ruling powers of Nature. . . . It is quite natural that a people which was in the habit of depicting the heavens and the seasons on their coffins, should add thereto a representation of the power which, as they believed, brought about their rotation and was thus the real creator of all life and all the blessings of Nature."—*Ibid.* i. i. 317–8.

Burying articles with the dead.—"Yü Fan (虞翻), who in the third century of our era wrote a commentary upon Lao-tszĕ's *Tao teh king*, the famous bible of Taoism, 'gave orders that he should be buried with economy, and with nothing else about him but the two chapters of Lao-tszĕ's work, as a proof that he held in high veneration the *tao teh*, or benefits of the Universal Order of Nature.'"—*Ibid.* ii. i. 414–5.

"Hwang-fu Mih (皇甫謐), an author or statesman of high repute who died in A.D. 282, declared in his last will that he desired to be buried without a coffin and without being washed for the grave, and that there should be placed along with him in the earth 'nothing but a copy of the Classic of Filial Devotion . . . as a proof that he never had lost sight of the laws of filial devotion.'"—*Ibid.* ii. i. 415.

"Discoveries of ancient tombs, in which large quantities of valuables have been hoarded up, are often recorded by Chinese authors, even by some of times relatively modern. In the History of the Southern Part of the Realm we have: 'In those times (*viz.*, between A.D. 483 and 493) people dug up the grave of the daughter of Hwan Wen (a famous warrior and grandee who had lived nearly a century earlier), and they found scarfs and boxes of gold, and magnificent objects made of splints interwoven with gold. There was, moreover, in that tomb a very large quantity of golden silkworms, seals of silver, and such like things.' The same work relates that, when Kien, a son of the emperor Kao, of the Ts'i dynasty, was Governor of Yih-cheu (益州) in the present province of Szĕ-ch'wen, 'there was discovered in a garden of that district an old grave. Nothing was placed over the coffin except a stone vault, which contained over ten different sorts of copper articles, three old-fashioned signets of jade, and a very large quantity of precious objects, a part of which were not recognizable. There were also several pecks of gold and silver objects shaped like silkworms and snakes; besides, a mound had been made of red sand and a tank of silvery water.'" These articles were not, however, confiscated, as had been done on previous occasions.—*Ibid.* ii. i. 413–4.

Sacrificing counterfeits.—"The replacing of articles, buried with the dead, by valueless counterfeits apparently gained ground in the ages subsequent to the Han dynasty, the historical works of those times containing many instances of persons who gave explicit orders that they were to be interred with mere imitations in burnt clay or earthenware. An instance of this, in connection with the Emperor Wen of the Wei dynasty, has been given (p. 692); besides, we read that one P'ei Ts'ien (裴潛), a grandee who died A.D. 244, 'prescribed in his last will that he was to be buried with bare simplicity, and that absolutely nothing should be deposited in his grave except a set of a certain number of stoneware articles' (Memoirs of the Three Kingdoms, Memoirs of Wei, ch. 23, l. 18)."—*Ibid.* ii. i. 709–10.

"The learned Sü Miao (徐苗), 'who died in A.D. 302, ordained in his testamentary dispositions that there must be nothing used (for the disposal of his body) but pieces of washed cloth, washed garments, a coffin of elm wood, bricks of sundry kinds, an open cart for his corpse, mats of water-rushes, and implements of earthenware or burnt clay' (Books of the Tsin Dynasty, ch. 91, l. 7)."—*Ibid.* ii. i. 710.

"The more costly among the articles which were anciently buried with the dead, *viz.*, horses, valuables, and expensive garments, probably first of all ceased to be generally buried as 'articles for the manes,' and that cheap household furniture and the requisites of life, either in their genuine shape or as valueless counterfeits, were used the longest. Indeed as late as the fourteenth century, the quality and quantity of these things was officially fixed by the Ming dynasty (pp. 698, &c.). . . . The burying of horses with monarchs and magnates was modified into sacrificing horses, or counterfeits thereof, on special altars devoted to the worship of their manes, or somewhere else, a practice which . . . was still in vogue under the Liao dynasty (pp. 709, 698). This modification having begun during the Han dynasty, we may suppose that it attained its full development in the centuries succeeding that epoch. Now it was just at this period that a similar process in respect of valuables and precious clothing was gaining ground, that is to say, burying them with the dead died away as a custom, and valueless counterfeits, especially mock money, were sacrificed to the dead outside their graves." "This process went on, of course, slowly, insensibly almost. Hence it is impossible to fix the exact date at which people began thus to endow their deceased ancestors with mock riches. It is a positive fact that burying real money with the dead was still common during the Han dynasty (ch. iv., and previous Period)." "The information which the native literature gives about the transformation of the custom of burying money and clothes with the dead into that of sacrificing mock money and mock clothes outside the tombs is very scanty. In a biography of a certain Wang Yü (王璵), Grandmaster of Sacrifices and Censor under the emperors Huen Tsung and Suh Tsung in the eighth century, we read: 'His exorcisms and observances to ward off evil were, generally speaking, of the same stamp as the practices of spiritist mediums. During the Han dynasty and in subsequent times money had been placed in the tombs at every burial, and in later ages the country people had gradually replaced such money by paper in worshipping the manes of the dead; and now Yü was the first to use it (in the sacrifices entrusted to him)' (New Books of the T'ang Dynasty, ch. 109, l. 13). This assertion has since been received as fully warranted historical truth by several writers of good authority (see *De Groot*, ii. i. 713). . . . Chao Yih, the able author and critic . . . wrote in the last century: 'Fung has averred in his *Wen kien ki* that paper money has existed already since the dynasty of Wei and that of Tsin . . . and that at the time in which he lived there was nobody who did not use it, from the Imperial princes down to the petty officials and commoners. He lived under Teh Tsung (A.D. 780–805) of the T'ang dynasty . . . and what he saw with his own eyes is certainly not unworthy of belief. Hence there is no reason for doubting that paper money came into vogue during the dynasties of Wei and Tsin' (*Kai yü ts'ung khao*, ch. 30, l. 18)."—*Ibid.* ii. i. 711–3.

Burying living persons with the dead.—[For an instance of living persons being buried with the dead at this time, see Books of the Chin Dynasty, ch. 124, l. 15, quot. *ibid.* ii. i. 730–1.]

Dwelling upon tombs.—"In the four centuries which lie between the Han dynasty and that of T'ang, cases of devout relatives dwelling upon the tombs of their parents or husbands continue to abound in the books." See the cases of Yü K'un in Books of the Tsin Dynasty, ch. 88, l. 9; of Hsü Tzŭ, *ibid.* l. 7; of Wang P'ou and Hsia Fang (alias Wên Chêng), *ibid.* l. 5; of the daughters of Ch'en in the fifth century, Books of the Southern Ch'i Dynasty, ch. 55, l. 4; and of Chên Ch'ên, in the

6th century, Books of Wei Dynasty, ch. 68, l. 5.—*Ibid.* ii. i. 797–8.

"Establishing people upon graves of persons of imperial lineage and grandees of the Empire no doubt took place so frequently in the centuries between the Han dynasty and that of Ming, that in the end it became an established institution of the State."—*Ibid.* ii. i. 448.

Sutteeism.—[For Sutteeism generally see previous Period.]

[For a case of attempted sutteeism by fire see Hist. of the Northern Part of the Realm, ch. 13, l. 10; also Books of the Wei Dynasty, ch. 13, l. 6, quot. by *De Groot*, ii. i. 740.]

[Honorary gates and tablets began to be conferred upon suttees in the 5th century.]—*Ibid.* ii. i. 746.

Size of graves.—During the Han dynasty, or somewhat later, the tumulus of Confucius and its demesnes also covered a large plot of ground, it being stated by the Imperial Mirror that 'the ground for his grave covered an area of one hundred *meu*; the grave measured ten *pu* from north to south, and thirteen from east to west, and was twelve feet high.'"—*Ibid.* ii. i. 420.

Mausolea.—"Of the mausolea of the dynasties following that of Han in an unbroken line on the throne of the Empire no elaborate descriptions occur in Chinese books, neither are the notices and data, which those works supply about such monuments, sufficiently clear and numerous to enable us to draw up a distinct picture of them. But, taking into consideration that a most rigid spirit of conservatism in regard to what has been established by the forefathers of the nation has always reigned supreme in Chinese State religion and in whatever is connected with it, we may be pretty sure that in all material points these mausolea have always closely resembled those of the Han dynasty. Short notes scattered about in the books tend to confirm this."—*Ibid.* ii. i. 437.

Stone images on tombs.—In the Books of the Sung Dynasty (ch. 15, l. 30) we read: 'Since the reign of the Han dynasty the dead throughout the Empire have been sent to their tombs with extravagant prodigality. Stone buildings and animals in stone, slabs of stone carved with characters, and similar ornamentations have been made for them on a large scale. . . . In the fourth year of the period *Hien ning* (A.D. 278) the emperor Wu of the Tsin dynasty issued a decree, stating that such stone animals and honorary memorial stones, inasmuch as they served for underhand glorification and for the exalting of insignificant acts of no essential merit, were more injurious to the people than anything else in exhausting their wealth, and therefore were entirely forbidden and abolished by him.'"—*Ibid.* ii. i. 813.

"Stone figures of animals adorned . . . the [Yung-ku] mausoleum [situated on the peak of Mount Fang] of the fifth century. . . . The grandee Chao Siu (趙 脩), who lived in the first half of the sixth century, is recorded to have erected such figures, together with inscribed commemorative stones and pillars of the same material, in his father's sepulchral grounds (Books of the Wei Dynasty, ch. 93, l. 12; Hist. of the Northern Part of the Realm, ch. 92, l. 7). We read also that 'in the sixth year of the *T'ien kien* period (A.D. 507) the rules of burial were officially expounded in this sense that no stone images of men or animals, nor inscribed slabs of stone, might be made on ordinary graves, but only stone pillars, and a tablet bearing the name of the defunct' (Books of the Sui Dynasty, ch. 8, l. 3). And 'The Memoirs of the district of Shang-yuen' in the present province of Kiangsu, speaking of the mausoleum of the Emperor Wu of the Ch'en dynasty, who died in A.D. 559, make mention of 'stone animals still extant on the spot, which was at that time called the Stone Horses Avenue' (*Ku kin t'u shu tsih ch'ing*, ch. 130)."—*Ibid.* ii. i. 813–4.

Temples over graves.—"Sacrificial temples erected on graves of grandees are oftentimes cursorily mentioned in the literature of subsequent ages. The General Memoirs of Shantung Province say that a temple stood on the grave of Tseng-tszĕ, the principle disciple of Confucius, and that long before A.D. 1037 there was one on the tomb of Mencius also. It seems to have always been customary with the emperors, in the case of deserving statesmen to allow the costs connected with the erection of such buildings, and also those of the grave itself, to be defrayed either partly or wholly by the official treasury, *i.e.*, up to the end of the Mongol Period."—*Ibid.* ii. i. 388.

"Sacrificial temples are mentioned often enough in connection with the imperial mausolea both of mediæval and modern times to justify the conclusion that they were hardly ever wanting. That they were extremely beautiful in many cases is sufficiently proved by the . . . description of such an edifice" given in the *General Memoirs of Shansi, Ku chin tu' shu chi ch'êng*, ch. 130.—*Ibid.* ii. i. 439–40.

Post-mortem weddings.—"In the Memoirs of the Three Kingdoms we read: 'The daughter of Ping Yuen died when still young, at the same time as Ts'ang-shu, the favourite son of the emperor T'ai Tsu (A.D. 220–227), breathed his last. The Emperor tried to have them buried in the same grave, but Yuen refused his consent, saying that such burials were not recognized by the laws of morals (Memoirs of Wei, ch. 11, ll. 17–8). Therefore the prince was betrothed to a deceased daughter of the family Chen, and she was placed with him in the same grave. And when Shuh, the young daughter of the emporor Ming of the same dynasty (A.D. 227–239) had died, he buried together with her one Hwang, a grandson of the brother of the empress Chen, conferred the posthumous title of Imperial Prince upon him, and appointed for him a Continuator with the hereditary rank of a noble' (*Kai yü ts'ung khao*, ch. 31, l. 5). This event becomes all the more curious when we are told that this Hwang was a mere baby. It is in fact stated in the Standard Annals of that time that the magnate Ch'en Khiün (陳 群) rebuked the emperor for having the obsequies of this child, though not a year old, conducted with the same ceremonies as appertained to up-grown people (see the Memoirs of Wei, ch. 22, l. 5). *Post-mortem* marriages in those times being concluded even in the Imperial family, and between infants so very young, we may safely draw the conclusion that they were the order of the day between adults among the people."—*Ibid.* ii. i. 803.

Marriages between deceased persons of very frequent occurrence from the earliest times, continued to be performed in large numbers. For instance, "P'ing-ch'ing, son of Mu Ch'ung, died when he was still young. During the reign of Hiao Wen (A.D. 471–499), the Imperial princess Shi-p'ing died in the Palace. The posthumous dignity of Prince Consort was then conferred upon P'ing-ch'ing, and he was united to the princess in marriage for the World of Shades (Hist of the Northern Part of the Realm, ch. 20, l. 15)."—*Ibid.* ii. i. 804.

Mourning.—[In 280, on the recommendation of Chi Yü, the mourning rites were revised.]—*Ibid.* ii. i. 544–5.

"The old rule of twenty-seven months' mourning for parents was re-established, and has continued in force until the present day."—*Giles, Historic China*, p. 51.

Resigning office.—"Resigning public duties when in mourning was the order of the day not only during the Han dynasty, but also during all subsequent Houses. The Standard Histories give numerous instances of such resignations, even on the death of brothers and sisters, though younger than the mourner, of grandparents, paternal uncles, nay of brothers' sons, and teachers."—*De Groot*, ii. i. 573.

"During the dynasties which occupied the Throne subsequently [to the Han] . . . it continued to be lawful, nay obligatory, for officials to resign their posts when in mourning; but at times the emperors forbade their doing so."—*Ibid.* ii. i. 577.

"During the Wei dynasty, magistrates who did not keep the mourning for the Emperor in a proper manner were . . . severely dealt with." (See Books of the Wei Dynasty, ch. 68, l. 10). The dynasty "introduced a considerable modification in the duration of the mourning for emperors." The Ch'ien Lung editors of the *I li* (ch. 22, l. 32) "aver that 'under the reign of the emperor Wu it was ordained for the first time that this mourning should be put off when the burial was completed.'"—*Ibid.* ii. i. 631.

[During the Chin Dynasty mourning by ministers and officials was strictly enforced. See Books of the Chin Dynasty, ch. 70, l. 22, quot. *ibid.*]

Avoiding marriage.—"In the books of later ages [than the Han] we have not found any more of such passages justifying the conclusion that conception and procreation during mourning were stigmatized as crimes. Probably this is to be attributed to the circumstance that another tenet, teaching that every one is in duty bound to procure a numerous progeny with a view to the perpetuation of ancestral worship, has imposed silence upon all opposite considerations of whatever sort or kind. This tenet was advocated with special order by Mencius." "Hence it is that successive dynasties have not troubled themselves very much about forbidding marriage during mourning. However, probibitions of this kind have not been expunged for good from amongst the matters which claim the attention of the legislator. We read, *e.g.*, that Shih Lih (石 勒), a warlike adventurer, who having assumed in A.D. 319 the sovereignty of the realm of Chao (趙) . . . 'issued a decree which forbade the people of his realm to marry while in mourning' (Books of the Chin Dynasty, ch. 105, l. 2)."—*Ibid.* ii. i. 612.

Fasting.—"We find it recorded of a certain grandee Sié Hung-wei (謝 弘 微), who lived from A.D. 391 to 433: 'Being in mourning for his mother, he resigned his office, and was spoken of in lofty strains because of the filial devotion which he displayed during the time of mourning. Even after this had elapsed, he continued to restrict himself to vegetables and plain food for a time. . . . And when his brother died in the service of the government, his grief and sorrow exceeded what is required by the law of morals, and even after he had put off his mourning dress he neither took fish nor flesh.' (History of the Southern Part of the Realm, ch. 20, l. 3)." And there are many other instances.—*Ibid.* ii. i. 653.

"We are inclined to believe that, since the Han dynasty, fasting for the Sons of Heaven has never been imposed upon the nation by official rescripts. Doubtless this may be ascribed in the first place to the circumstance that the precepts relating to it, which the ancient books of rites contain, are extremely vague and are nowhere stated to have applied to the nation in general."—*Ibid.* ii. i. 658.

"P'ei Chi-li (裴 之 禮), governor of western Yü-cheu (豫 州), a part of the present province of Honan, 'ate nothing but wheat and rice during the mourning for his mother' (History of the Southern Part of the Realm, ch. 58, l. 15)."—*Ibid.* ii. i. 653.

Avoiding the apartment.—Chinese books acquaint us with still another curious custom evidently engendered by the practice of giving up one's dwelling and furniture to the dead to whom it belonged when alive, *viz.*, that of abstaining from entering the private apartments of a deceased parent or parent-in-law. In the 'Domestic Instructions by Mr. Yen' . . . we read: 'After the death of their parents, the sons and their wives cannot find it in their hearts to enter the private apartments and bedrooms which were occupied by the deceased. Under the Northern Dynasties (fifth and sixth centuries), Li Keu, an inhabitant of Tun-khiu, after the death of his mother, Madame Liu, kept the hall in which she had been wont to dwell locked and closed to the end of his life, not suffering himself to open or enter it.' Other passages of this kind we have not come across in the native literature, which, however, is no proof that the custom was not widely spread and may even prevail in these days. Seeing it is explicitly stated . . . that it was practised only by the sons and their wives, that is to say, by the nearest relations who had to observe the deepest mourning, we cannot suppose that it was based merely upon a fear of the soul of the defunct, which may have been thought to hover about in the apartments. If such were the case, the . . . author would probably have stated that the apartments were avoided by everybody without exception."—*Ibid.* ii. i. 487.

From the Restoration of Unity to the end of the Five Dynasties (589 *to* 960).—*Table V.*

589–907.

Extravagance.—"In perusing the voluminous Dynastic Histories of China, one comes across several instances of persons who, when giving instructions about their own obsequies, ordered that economy should be observed with regard to the same and that the coffin should be of the plainest description. This suggests not only that good timber was scarce and dear, but also that people in general were so lavishly addicted to wasting their money upon the receptacles for their dead, that men of higher intellectual standing felt obliged to raise their voices against such extravagance."—*Ibid.* i. i. 314. See also *infra*, *Mausolea*.

"Although the persistency with which the higher and better classes of the nation clung to the time-hallowed custom of burying wealth or costly articles with the dead, grew considerably weaker under the constant blows dealt out by the party of economy and the frequent denunciations of emperors, still even during the T'ang dynasty the government found it necessary to take official measures against it. We read, *e.g.*, that Kao Tsung, the third emperor, 'in order to bring about a retrenchment of expenditure after the famine which had visited the country for a series of years, sent an order" against the extravagance of the people in regard to funeral rites to Li I-ch'en, governor of Yung-chou (*Yüan chien lei han*, ch. 181, l. 11), and in 741 an Imperial rescript modified grave structures and implements in size, quantity, and quality (*T'ung tien*, quot *Ku chin t'u shu chi ch'êng*, sect. *Li i*, ch. 56).—*Ibid.* ii. i. 695–6.

Recalling the soul.—"The Codex of the *Khai-yuen* period formally sanctioned the ceremony [recalling the soul] as part of the funeral rites of the official classes, prescribing that it should be performed by three men, successively in the back chamber and on the roof of the building, with observance of the rules laid down in the *I li* and the *Li ki*. But in the case of officials under the fourth degree and other people, the calling back was to be done by two persons only."—*Ibid.* i. i. 253.

Placing articles in the mouth of the dead.—"In the *Khai-yuen* Codex it is ordained that grandees and officials of the first, second, and third rank 'shall receive in their mouth circular pieces of jade, those of the fourth and fifth rank blue jade, those of the sixth and lower ranks cowries.'"—*Ibid.* i. i. 278.

Coffins prepared during life.—"The emperors of succeeding dynasties [to the Chou] seem to have held these rescripts [respecting the carrying of their coffins with them on journeys] in esteem during a long series of ages, for they were still complied with as late as the eighth century, when Huen Tsung of the Thang dynasty abolished them. The New Informations on the Great Thang Dynasty (大 唐 新 語) state on this head: 'Huen Tsung was on a tour of inspection in the north. Near a pass on the road along the slopes of the Thai-hing mountains he came across a cart loaded with a coffin. He asked the bystanders what there was in that cart, and was told: "A coffin. The Books of Rites prescribe that, when a Son of Heaven ascends the throne, he shall have his inner coffin made and have it varnished once a year, to show that, though he is alive, he does not forget his death. Its being carried in his rear on a cart when he goes abroad, is also an institution of the ancient sovereigns." But Huen Tsung said: "Why should we maintain this custom?" and he ordered the coffin to be burnt. Since that time the emperors have gone abroad without a coffin in their rear.'"—*Ibid.* i. i. 304–5.

Decoration of imperial coffins.—"During the Thang dynasty the imperial coffins 'displayed a sun, a moon, stars and asterisms, a dragon, a tortoise, and their appendages, painted on the lid.'"—*Ibid.* i. i. 317.

The seven-stars board.—"Among the rescripts concerning the obsequies of Tai Tsung, an emperor of the Thang dynasty who died in the year 779, we read: 'A seven-stars' board was placed inside the Rottlera structure (*i.e.*, the coffin), and the things which were to be arranged collectively underneath were all placed below it first.'"—*Ibid.* i. i. 318.

Postponement of burial.—"Succeeding dynasties [to the Han] have never revived the old rescript that the Son of Heaven should be buried in the seventh month, including that in which he has breathed his last. The Dynastic Histories teach us that, previous to the reign of the family of Thang, such burials used to take place in the month following the decease, and that, during this dynasty, the period of postponement varied between the fourth and the twelfth month. This information gives us a right to conclude, that in the case of official persons and the common people the time of burial was not bound by strict customary rules. We can easily understand why this should be the case. The *I li* prescribes that a lucky period must be selected for a burial, and this precept having been faithfully conformed to by the whole succession of dynasties, including that which is now seated on the throne, it has pushed the ancient rule into the background, as being inconsistent therewith. Consequently, as a matter of course neither the Khai yuen Rituals, nor the *Thung li* of the present dynasty prescribe any fixed period for the burial of anyone."—*Ibid.* i. i. 267.

Victualling the grave.—"The propensity inherent to the whole Chinese nation of maintaining customs simply because they are ancient, has caused the victualling of the graves to remain an institution of the State for ages. [*Cf.* ABSOLUTE MONARCHY.] . . . As late as the eighth century the following rescript was laid down in the *Khai yuen* Codex: 'As for the carts sent to the grave: when the sacrifice at the sending away of the dead [see p. 152] is finished, the assistants take the baskets of Calamus rushes and fill seven of them with pieces cut from the lower parts of the sacrificial victims. In the case of official persons of the fourth or the fifth degree, however, the number of baskets is five; for those of the sixth degree and all those of lower rank there are two baskets. The five kinds of cereals and the uncooked rice are put in five hampers, each holding one peck and three pints; covers of plain linen are spread out over these. And the spirits are in jars of five pints each, covered with linen of fine texture; the preserved meat is in two earthen pots, each holding two pints and covered with plain linen.' Amongst its rules for interment the same Codex carefully prescribes in which way all these things must be arranged around the coffin in the grave, and where the 'eating dishes,' which are to be buried at the same time, must be placed."—*Ibid.* ii. i. 386–7.

Burying articles with the dead, effigies, mock money, mock clothes, etc.—The custom of burying with the dead the side curtains of the catafalque and the boards exhibiting the rank of the deceased "was still maintained as late as the T'ang dynasty, the Codex of the *Khai yuen* period prescribing its observance for officials of the three highest classes, while those of the fourth class and of lower rank were to have the boards only placed inside the grave."—*Ibid.* ii. i. 392.

"Even an empress of the great T'ang dynasty, *viz.*, Wen-teh, consort of the second monarch of that House, formally declared it to be her wish that only things of burnt clay and wood should be laid in her grave. . . . The exclusive use of articles of clay for the grave was made obligatory by Imperial rescript under the same dynasty (p. 696)."—*Ibid.* ii. i. 710.

"The *Yiu-yang tsah tsu*, written in the eighth century, has (ch. 13): 'Houses and sheds, cars and horses, male and female slaves, horned cattle and so forth are made of wood. Before the dynasty of Chen ruled the Empire, cars of clay and souls of straw were in vogue; after that dynasty wooden puppets were used.'"—*Ibid.* ii. i. 808–9.

"In the seventh century of our era, the paper money used in the worship of the dead had probably taken the shape which it possesses at the present day, that is to say, it consisted of

paper sheets upon which tin-foil was pasted, and this was converted into mock gold by giving it a yellow colour (*cf.* pp. 25–6, and *Fa yuan chu lin*). "That the sacrificing of mock money and mock clothes to the dead had a hard struggle against orthodoxy, which, as a matter of course, obstinately refused approval of things unknown to the holy ancients, appears from the fact . . . that it lasted until the eighth century of our era before it was admitted, through the intermedium of Wang Yü, in the religious worship observed by the Court. Cases are, moreover, quoted by Chinese authors of grandees who disdained using it at that time (*Kai yü ts'ung khao*, ch. 30, l. 19). It is not improbable that the counterfeits were burned from the time they came into use, being thus sent to the manes through flame and smoke. This conclusion is naturally arrived at when we consider that real clothes and valuables were destroyed in this way even as late as the T'ang dynasty (New Books of the T'ang Dynasty, ch. 5, l. 8; Hist. of the Five Dynasties, ch. 9, l. 2)."—*Ibid.* ii. i. 714–5.

Positions at grave.—"In the great codex of the State religion enacted in the 20th year of the Khai-yuen period (A.D. 732) we find it formally stated amongst the rescripts regulating the burial of official persons, how the males and females have to station themselves at the tomb during the interment."—*Ibid.* i. i. 196.

Sacrifice to the spirit of the soil.—"It is perhaps to be ascribed to his [K'ung Ying-ta's] influence and that of his school that a sacrifice to this divinity [Spirit of the Soil] was adopted by the Thang dynasty as an institution of the State and as such found a place in the great codex of official rites enacted in the 20th year of the Khai-yuen period (A.D. 732). This codex . . . prescribes that it shall be presented by an official on mats spread out on the left side of the grave, and that it shall be connected with a short offertory answering to a given formulary. It is probably owing to this precept that the sacrifice, based on what seems to us a rather arbitrary interpretation of a hazy classical passage, has been maintained by subsequent generations as an integrate part of their funeral rites."—*Ibid.* i. i. 224.

Placing stone images on graves, etc.—"The edict of the period *T'ien kien* [see PERIOD OF DISRUPTION] . . . proves that the placing of stone figures upon graves had before the T'ang dynasty already been consolidated into a formal institution of the State and had been enrolled among the prerogatives pertaining to emperors and magnates exclusively. This state of affairs has continued unaltered in ensuing ages."—*Ibid.* ii. i. 814.

"It can scarcely be doubted that during the T'ang dynasty stone figures were also included among the appurtenances of the Imperial mausolea, for we learn that T'ai Tsu, the founder of the Chen dynasty or the last of the five Houses which occupied the throne during the half century between the downfall of the T'ang dynasty and the rise of the Sung, forbade their erection for himself (see Old Hist. of the Five Dynasties, ch. 113, l. 10)."—*Ibid.* ii. i. 814–5.

"There is sufficient reason to believe that grave images were sometimes made for the purpose of glorifying the dead by representing their brilliant exploits or some important event in their lives. We read, *e.g.*, concerning the mausoleum of T'ai Tsung, the second monarch of the T'ang dynasty, that 'images of Hieh Li and other foreign princes and chieftains whom he had captured and subdued, fourteen in all, were cut in stone in the *Ching kwan* period (A.D. 627–649) and arrayed (in his mausoleum) inside the northern Marshall's Gate' (Memoirs of the District of Li-ts'uen, quoted in the *Ku kin t'u shu tsih ch'ing*, sect. 坤輿, ch. 130)."—*Ibid.* ii. i. 826.

Sutteeism.—[See previous Periods.]

Dwelling on the tomb.—"Many cases [of dwelling on tombs] are on record in works dealing with the period when the T'ang dynasty ruled the Empire." See the cases of the maiden Li in New Books of the T'ang Dynasty, ch. 205, l. 5, and of Ch'u Wu-liang, *ibid.*, ch. 200, l. 2. "We read also that the concubine Wei-hien of the Emperor Teh Tsung on the death of the latter requested to be allowed to spend the period of mourning in his Ch'ung mausoleum, and there waited upon his manes in the park of the soul temple' (Old Books of the T'ang Dynasty, ch. 52, l. 12)."—*Ibid.* ii. i. 798.

Post-mortem marriages.—"'The Imperial concubine Wei caused her deceased younger brother Siün, after the dignity of Prince of Jü-nan had been conferred upon him, to be united in marriage for the next life with a deceased daughter of (Siao) Chi-chung, and she had them buried together in one grave. But after this lady Wei had been defeated (in an attempt to usurp the throne), Chi-chung opened the grave, took his daughter's coffin out of it and brought it home' (Old Books of the T'ang Dynasty, ch. 92, l. 27; also New Books of the T'ang Dynasty, ch. 123, l. 6), thus showing that the ties of relationship with a traitress to the cause of lawful government were cut off by him."—*Ibid.* ii. i. 804.

Mausolea.—"It is stated that, 'when the Emperor Kao Tsu died (A.D. 626), an imperial decree was issued, to the effect that, as to the style and dimensions of his burial place, the Ch'ang mausoleum of the Han dynasty should be taken as a pattern, and that the number of people to be summoned to work at it hould be fixed in a liberal spirit.' (Old Books of the T'ang Dynasty, chap. 72, l. 4)."—*Ibid.* ii. i. 437.

"Probably all the mausolea of the T'ang dynasty had a grave mound. They embraced, moreover, buildings and mansions in great numbers, for it is on record that in the fourteenth year of the period *Ching yuen* (A.D. 798) an imperial decree was issued to erect or rebuild around each of the five imperial mausolea no less than 378 buildings, and around some other mausolea also a great number of edifices (*Wên hsien t'ung k'ao*, ch. 125, l. 27). The same fact is confirmed by the following episode from the life of Wen T'ao (溫韜), a turbulent chieftain who played a prominent part at the time of the troubles, warfare and bloodshed, intervening between the Sung dynasty and the T'ang. 'When he had resided in his dominion for seven years, he broke open such mausolea of the T'ang dynasty as were situated within the borders of his territory, and appropriated to his own use all the gold and valuables stored up there. But the Chao mausoleum (of the emperor T'ai Tsung) was stronger than the others. From the road which led to the hill T'ao saw that the buildings and mansions were grand and beautiful, both in regard to architecture and size, but that they did not differ in style from human dwellings. Inside there was a central temple; couches of stone were arranged in rows in the side rooms on the east and west, and upon those couches stood receptacles of the same material, in which were iron boxes entirely filled with antique cards and manuscripts, bells, royal handwritings, paper and ink, all looking quite new. T'ao took everything away, and so these relics found their way among the people' (New History of the Five Dynasties, ch. 40, l. 11)."—*Ibid.* ii. i. 438–9.

Guards.—"During the reign of the House of T'ang, 'it was a general rule to appoint for every mausoleum a guard, which must settle for good in the place; and the military chiefs made tours of inspection with the intendant of the mausoleum.'"—*Ibid.* ii. i. 436.

Size of graves.—"Under the House of T'ang it was decreed that the area of ground for officers of the first rank, which had been theretofore ninety *pu*, should be reduced to seventy, and the height of the mound from eighteen feet to sixteen. For officers of the second rank the size was reduced from eighty to sixty *pu*, and the height from sixteen to fourteen feet, and so on, in a regular sequence, down to the sixth rank, whose graves and the graves of those of lower rank might be of the size of fifteen *pu* and have mounds of seven feet only. Finally the same decree allowed the common people, about whose graves no written prescriptions had hitherto existed, to have graves of seven *pu* and mounds of four feet (*Ku kin t'u shu tsih ch'ing*, sect. 禮儀, ch. 56)."—*Ibid.* ii. i. 449.

Co-burial.—"During the T'ang dynasty the ladies of the imperial seraglio were, in many cases, buried in their consorts' mausoleum. Moreover, it was an established custom during that epoch to bury princes and princesses of imperial blood and distinguished public servants near the imperial mausoleum, the civil to the left, and the military to the right. This was officially styled *p'ei tsang* (陪葬) or *fu tsang* (祔葬), 'to bury together.' Several persons on whom this honour was conferred are enumerated by Ma Twan-lin in his *Wen hien t'ung khao* (ch. 125, l. 15 *sqq.*); they were especially numerous in the time of T'ai Tsung, the second sovereign of the dynasty."—*Ibid.* ii. i. 443.

Mourning.—"The ancient custom of dwelling in mourning sheds was perpetuated as an official rite in subsequent dynasties. In the *Khai yuen* Codex it is prescribed for all classes of society." "The Rituals for Family Life too give rescripts with regard to the dwelling in mourning apartments."—*Ibid.* ii. i. 484–5.

The special clauses contained in the *I li* exempting certain high officials and others from mourning are "wanting in the Codex of the *Khai yuen* period."—*Ibid.* ii. i. 566.

The Ch'ien Lung editors of the *I li* "state also (ch. 22, l. 33) that in the eighth century 'the mourning for the emperors Ming and Suh Tsung of the T'ang dynasty was again abridged, the old number of thirty-six days being reduced to twenty-seven'"—originally the number of months during which the mourning lasted.—*Ibid.* ii. i. 631.

"There is evidence on record in the Standard Histories that the ancient rule, which prohibited any one's entering a ruler's palace in mourning attire, obtained in ensuing ages. We read, for instance, that during the reign of Wen Tsung of the T'ang dynasty (827–836) 'the emperor ordered Li Hiun to put on garments of a glossy material, because it was difficult to permit him to enter the inner Palace in the coarse dress with jagged edges which he was wearing' (Old Books of the T'ang Dynasty, ch. 169, l. 1)."—*Ibid.* ii. i. 642.

"When the T'ang dynasty was seated on the throne, fasting for the dead ranked amongst the political institutions of the State. As such it received a place among the statutary rituals laid down in the Codex of the period *Khai yuen*. 'Not until three days have passed,' thus we read therein, 'do mourners take food again. And when their father or mother has been buried the children may take rice gruel, which in the morning is made of four times as much rice as the hand can scoop up, and in the evening of the same quantity. If they cannot eat such gruel, they may cook the rice dry, and this latter way of preparing it is allowed to all the women.' And severe punishments were inflicted on those who, while in mourning, indulged in banquets and revelries (see Old Books of the T'ang Dynasty, ch. 15, l. 20)."—*Ibid.* ii. i. 654.

"The oldest official mourning codex that has been preserved entire, forms a part of the great compilation of statutory rites of the *Khai yuen* period. Tu Yin gave it a place in his *T'ung tien*, and from this thesaurus it found its way into the gigantic *Ku kin t'u shu tsih ch'ing* (sect. 禮儀, ch. 53). On examination it turns out to be no more than a copy of the mourning rescripts as systematically arranged in the *I li*, with a few modifications and additions of little interest. This fact gives us a right to conclude that the *I li* was the acknowledged *lex scripta* for matters relating to mourning and mourning dress during the whole period extending from the Han to the T'ang dynasty."—*Ibid.* ii. i. 545.

907–960.

Economy.—[T'ai Tsu, the founder of the Posterior Chou dynasty, forbade his son to perform the usual expensive rites at his burial (*Ma Tuan-lin, Wên Hsien T'ung K'ao*, Bk. 125, quot. *ibid.*); and ordered that no stone figures should be erected on his tomb: (see *supra*).]

Dwelling on the tomb.—He also "explicitly declared in his last will that 'he desired no inmates of the Palace to live upon his mausoleum as warders' (Old Hist. of the Five Dynasties, ch. 113. l. 7)."—*Ibid.* ii. i. 798.

Burying human beings with the dead.—"In ensuing ages [to the Chin dynasty], the native books are generally silent upon immolations of human beings on behalf of the dead. This might lead us to the conclusion that such immolations then fell into disuse, did not some references here and there point to the contrary. T'ai Tsu, who died in 953, is stated in the Standard Histories of that period to have ordained that 'no human lives under any pretext whatever should be destroyed when his corpse was consigned to the grave' (Old Hist. of the Five Dynasties, ch. 113, l. 7)."—*Ibid.* ii. i. 732.

Sung Period (960 *to* 1280).—*Table VI.*

Washing the dead.—"The practice of buying water for washing the corpse . . . was observed at least seven centuries ago on the extreme south-western part of the Chinese coast, as is shown by the *Ling-wai-tai-tah* (嶺外代答), which has in its sixth chapter: 'When a native of Khin (the extreme western coast district of the present Kwangtung province) has died, the filial sons forthwith unbraid their hair, put on a hat of bamboo, take a water-dipper, a jar, and mock paper money, and repair to the water-side. Here they lament bitterly, cast the money (the paper money aforesaid?) into the water, and, having dipped up water, return home to wash the corpse. They call this "to buy water." If they do not act in the way described, their neighbours and fellow villagers will look upon them as unfilial people Now-a-days, the natives of Khin use water, purchased for money, for their meals and for the supply of their kitchen. They call it "sold water," and it is reputed to avert fatal events.'"—*Ibid.* i. i. 16.

Recalling the soul.—"Kao Khang (高閌), who lived in the 12th century, records the following custom of the inhabitants of Hwai-nan, *i.e.*, the central part of the provinces of Nganhwui and Kiangsu:—'Now-a-days, in Hwai-nan, it is customary, when any one among the people has died suddenly, to send a certain number of men on to the roof of his dwelling and along the roads to call for the deceased everywhere. Some have in this way been resuscitated.'"—*Ibid.* i. i. 245.

"During the reign of the house of Sung, the recalling of the dead obtained as a custom in Hwai-nan country. . . . In the official obsequies of that period the temporary soul tablet . . . was used in lieu of the clothes of the deceased for calling back the soul, as may be inferred from the following extract from Ma Twan-lin's *Wen hien thung khao:* 'In the 31st year of the Shao hing period (A.D. 1161), Kin Ngan-tsieh, Vice-President of the Board of Rites, with some others memorialized as follows: "Scrutinizing the Collective Statutes of the empire, we have made earnest enquiries into the rules relative to the temporary soul tablet; and we have arrived at the conclusion that, although no direct references to it are to be found in the Classics, yet this tablet can be traced back to ancient times, it being based upon the ideas connected with the custom of calling back the dead. Indeed, the Li yun (ch. 30 and 31 of the *Li ki*) informs us that, when a case of death occurred, people went upon the roof of the house and there exclaimed: 'Ho. o. o. So-and-So, come back!' . . . Upon this practice is based the ancient custom of recalling the dead with his clothes, as well as the present custom of doing it with the temporary tablet."'"—*Ibid.* i. i. 253–4.

"The ancient method of climbing upon the house top has fallen into disuse at Amoy, in spite of Chu Hi, who formally prescribes it in his Rituals for Family Life. It appears that it had already become obsolete in the 11th century, as Szĕ-ma Kwang then wrote: 'At present people fear to alarm the community if they ascend the house and shout there. Hence they merely repair for such purpose to the south side of the back chamber and of the court-yard.'"—*Ibid.* i. i. 254.

Objects placed in the mouth of the dead.—"Chu Hi's Rituals for Family Life prescribe one coin in the left side of the mouth, one in the right side, and one in the middle."—*Ibid.* i. i. 278–9.

Preserving the corpse.—"So far as we know, there is only one instance on record of a faint attempt at preserving a body from decay in an artificial way; it occurs in ch. 242 of the History of the Sung Dynasty (l. 12). Li Ch'en, a concubine of the emperor Chen Tsung, had borne him a son, who in A.D. 1023 ascended the throne under the name of Jen Tsung. When Li Ch'en breathed her last, the emperor, her son, was still totally ignorant of the fact that she was his mother; some high dignitaries, acquainted with this circumstance, but not at liberty to reveal it, nevertheless dressed her carefully in the attire of an empress and had mercury put into her coffin. After a time, being apprized of the truth, Jen Tsung had the corpse transferred to a new coffin, and on this occasion it was found that 'she looked like jade stone and as if she were alive; her attire was that of an Empress-Dowager, and corruption had not done its work, the mercury having preserved her body.'"—*Ibid.* i. i. 280–1.

"The *Kia li* prescribes that, 'when the corpse has been lifted up with united force and placed in the coffin, the teeth and the hair which have fallen out during life are to be put in the corners together with the parings of the nails.'"—*Ibid.* i. i. 343.

Vaults obsolete.—"In the eleventh century vaults had become so obsolete that Szĕ-ma Kwang wrote: 'Although vaults were instituted by the holy ancients and have been in vogue since times of old, it is better not to use them, for the wood of the boards decays in the long run, which causes the pit to become too spacious, so that it no longer tightly encloses the dead. Moreover, when Confucius buried Li, he had a coffin only, and no vault, and the sage approved of the poor burying their dead without a vault [*v. supra*]. . . . If people at the present time do not use vaults because of their poverty, they abstain from using them because they desire to secure the repose of their dead.'"—*Ibid.* i. i. 313–4.

Survival of home-burial.—"The *Kai yü ts'ung khao* [陔餘叢考] moreover relates: 'The *San liu hien tsah* [三柳軒雜], written by Ch'ing Khi (during the Sung dynasty), says that Hu Khiai, having purchased a house, whilst repairing it found between two walls standing close to each other an old hall with a stored-away corpse. The corpse was lying down as if it were alive, but on touching it it crumbled to dust. Having informed the authorities of the case, he transferred those remains elsewhere for burial.'"—*Ibid.* ii. i. 370–1.

Reaction against extravagance.—"The custom of burying considerable amounts of valuables in graves had not died out. In the first year of the *Yuen fu* period (A.D. 1098), Chen Shang (a grandee of very high position) memorialized the Throne as follows: "Nothing but earthen and metal articles, clothes and ornaments used to be employed for the mausolea of the Imperial ancestry, both pearls and jade being excluded, simplicity having been cultivated to serve as a lesson to mankind. But since the inauguration of the (Yung)-yü mausoleum (of the late Emperor) up to that of the temple for the worship of the soul of the (last) Empress Suen-jen, gifts of gold and pearls have come into vogue again. I hope that these valuables may be stored up in the King-ling hall, in obedience to the lessons left by former monarchs." Upon this the Emperor ordered the things to be deposited in the *fung-chin* treasuries' (Hist. of the Sung Dynasty, ch. 356, l. 22). Chu Hsi also, in his Rituals for Family Life, discountenanced the placing of valuables in graves."—*Ibid.* ii. i. 696–8.

Burying living persons with the dead.—"During the Sung dynasty, 'one Tung Tao-ming, a native of Pao-sin in Ts'ai-chen, when his deceased mother was buried, concealed himself in her grave, and was thus buried along with her. After three days had elapsed, his family opened the grave and took him out of it, quite hale and healthy. He thereupon settled at the side of the grave in a shed till the end of his life' (Hist. of the Sung Dynasty, ch. 456, l. 8)."—*Ibid.* ii. i. 732.

Counterfeits.—"During the Sung dynasty, the principal moral leaders of the nation likewise held that it was the duty of every one to make use of counterfeits of 'implements for the manes.' We read in the Rituals for Family Life: 'Wooden carts

and horses; servants, followers, and female attendants, all of them handing up articles for use and food; they must resemble living beings, but be of smaller dimensions.' Pieces of black and scarlet silk were allowed, but, 'no articles of gold or jade, nor any valuable trinkets.'"—*Ibid.* ii. i. 710.

"The Confucian school of philosophy, which flourished during the Sung dynasty, and has exercised a considerable influence over the minds of all succeeding generations, sanctioned the use of paper money in the worship of the dead. Chi Hsi, however, opposed its use, but his writings did not prove sufficient to abolish the general use of mock money and mock clothes in the worship of the dead." [See MANCHU PERIOD.]—*Ibid.* ii. i. 715–6.

"Chu Hi taught in his *Ritual for Family Life* the custom of burying the dead with a good many wooden servants, followers, and female attendants, all holding in their hands articles for use and food (p. 710)."—*Ibid.* ii. i. 809.

[For *Sutteeism* see ABSOLUTE MONARCHY.]

Dwelling upon the tomb.—"Empress-dowagers during the Sung dynasty were permitted to devote themselves on the mausolea to the manes of their consorts, it being on record that the empress Ch'en Khin-tszĕ (陳欽慈) 'on the death of the emperor charged herself with the care of his temple and mausoleum, and grew so lean and emaciated by pondering upon the favours he had formerly bestowed upon her, that her bones became visible. Her attendants brought her rice, gruel, and medicine, but she declined these things, and ordered them to go away, saying: "To be allowed to attend upon the wishes and desires of the late Emperor is enough for me." Shortly afterwards she breathed her last, at the age of thirty-two' (Hist. of the Sung Dynasty, ch. 243, l. 3). In a collection of miscellaneous jottings, entitled *Lan chen tszĕ* (蠹眞子) and written in the 12th century by Ma Yung-khing (馬永卿), it is stated that the dwelling of widowed consorts upon the imperial mausolea 'had been imitated (since the Han dynasty) by succeeding generations without modification' (*Kŭ kin t'u shu tsih ch'ing*, sect. *Li i*, ch. 103)."—*Ibid.* ii. i. 798–9.

"Dwelling upon the tombs of parents and husbands was as much in vogue during the Sung dynasty as it had ever been. The works of the time contain numerous cases; in the Official Histories of the dynasty alone we have found a dozen." See Hist. of the Sung Dynasty, ch. 456, ll. 11, 20. The case of "Ch'en Suen is especially worthy of attention, as showing us a man who dwelt *inside* his mother's grave, being himself partly buried with her, thus setting an example of semi-sutteeism, like Chao Suen of the Han dynasty (p. 797). Many instances represent such devotees to the manes of their dead as capable of defying the colds and snows of winter, robbers, tigers, and wolves. It is related how wild beasts, held in restraint by the unseen powers, or overawed by such a display of virtue, refrained from doing them any harm. Residing upon the graves seems to have been, as a rule, extended to the end of the three years' mourning, and the time was . . . in many cases chiefly spent in personally raising the tumulus."—*Ibid.* ii. i. 799–800.

Post-mortem marriages.—"An interesting account of the manner in which . . . *post-mortem* marriages were concluded at the period when the Sung dynasty governed the Empire, is given by a contemporary work in the following words: 'In the northern parts of the Realm it is customary, when an unmarried youth and an unmarried girl breathe their last, that the two families each charge a match-maker to demand the other party in marriage. Such go-betweens are called match-makers for disembodied souls. They acquaint the two families with each other's circumstances, and then cast lots for the marriage by order of the parents on both sides. If they augur that the union will be a happy one, (wedding) garments for the next world are cut out, and the match-makers repair to the grave of the lad, there to set out wine and fruit for the consummation of the marriage. Two seats are placed side by side, and a small streamer is set up near each seat. If these streamers move a little after the libation has been performed, the souls are believed to approach each other; but if one of them does not move, the party represented thereby is considered to disapprove of the marriage. Each family has to reward its match-maker with a present of woven stuffs. Such go-betweens make a regular livelihood out of these proceedings' (*Tsoh mung luh*, by Khang Yü-chi, ap. *Kai yü ts'ung khao*, ch. 31, l. 6)."—*Ibid.* ii. i. 804–5.

Disuse of certain customs.—"The *Khai yuen* Codex alone gives it [the custom of covering the coffin with wood and clay] amongst its prescriptions. 'One basket of scorched corn shall be placed at the head of the coffin, one basket at the foot, two baskets on the left, and two on the right; but for officials of the sixth degree and for persons of still lower rank there shall be on either side only one basket. Subsequently the coffin must be covered with wood; this wood shall be plastered with clay, and over the coffin thus stored away shall come a tent or awning as a protection from dust. An Invoker must take the Inscription and place it on the spot, but for persons of the sixth degree and still lower in rank a soul tablet must be placed there after the storing away, on the east side.' The *Rituals for Family Life* contain only this rescript relative to the Inscription, so that there is reason to conclude that the other aforesaid practices mentioned in the *Khai yuen* Codex had already fallen into disuse in the twelfth century. Szĕ-ma Kwang leaves the plastering at the option of the individual."—*Ibid.* ii. i. 371.

Victualling the grave.—"It is prescribed also in Chu Hi's *Rituals for Family Life* that, 'when the pit has been filled up halfway with earth, the articles destined for the manes must be placed inside and covered with a cloth, after which come the baskets, hampers and pots, which are stowed away in a little room at the side, the opening to which is subsequently closed with boards.' A sacrifice *upon* the grave at the time of burial was prescribed by both the *Khai yuen* Codex and the *Rituals* of Chu Hi; they say, namely, that offerings must be arranged in front of the cart with the soul tablet, when this has arrived on the spot."—*Ibid.* ii. i. 387.

Imperial mausolea.—"It is explicitly stated in the History of the Sung dynasty that 'the Emperor Jen Tsung having died in 1056, Ying Tsung (his successor) laid down the rules for the mourning dress to be worn for the Emperor, and had the Yung-chao mausoleum made ready and delivered up, both matters being regulated with observance of what had been done previously in the case of the Ting mausoleum (of Jen Tsung's predecessor). He relegated 46,700 serfs to the spot from sundry parts of the Empire to work at it.' Such a measure was not desisted from, even though the deceased monarch had explicitly declared in his last will that economy and moderation should be observed with regard to the style and dimensions of his burial place."—*Ibid.* ii. i. 433–4.

"That as late as the Sung dynasty the hills over the imperial mausolea had a very spacious tunnel or subterranean entrance leading into the crypt is proved by the books of history, which inform us that in A.D. 964, 'while the Ngan mausoleum was being built, the tunnel fell in, crushing to death two hundred serfs and soldiers' (History of the Sung Dynasty, ch. 1, l. 16)."—*Ibid.* ii. i. 440.

Sepulchral plants.—"In the literature of the Sung dynasty the bamboo is sometimes mentioned as a sepulchral plant."—*Ibid.* ii. i. 468.

Stone figures at tombs.—"The placing of stone figures upon tombs is [now] but rarely referred to in the native literature. . . . This must certainly be ascribed chiefly to the circumstance that the custom has sprung up in times relatively modern, and Chinese authors hardly deign to write upon subjects that are not mentioned in the old classic works. It is, however, perfectly superfluous to refer to the books for proofs of its having been widely prevalent during the two great dynasties of Sung and Ming, relics of those periods being sufficiently numerous to place this beyond all doubt. Archdeacon Gray relates (*China*, p. 310) that in the vicinity of Hang-cheu-fu, the capital of the province of Chehkiang, he saw the grave of Yoh Tei (岳飛), a celebrated military commander of the 12th century . . . ; the statues, he says, which form the approach, represent two ministers of state, four warriors, two horses, two rams, and two *ki-lin* or unicorns."—*Ibid.* ii. i. 816.

Co-burial.—"Under the Sung dynasty it was the usual thing to bury empresses and other inmates of the harem in the imperial mausolea. Biographical notices about some of these women, inserted in the Standard Histories of that epoch, say that the honour of being entombed underneath the emperor's grave hill was specially reserved for the principal consort or empress proper, and for her among the secondary wives who had given birth to the successor to the throne. Other consorts were interred somewhere near the hill, some even in the neighbourhood of the mounds of former monarchs of the dynasty, a great many probably elsewhere. If thus entombed apart, their mausolea were called *yuen ling* (園陵) or 'park-hills,' in distinction to those of the emperors themselves, which were styled *shan ling* (山陵), 'hill-mounds.' Judging from certain figures given in the short descriptions of some of these female burial places in Chapter 123 of the History of the Sung Dynasty, they were of a large size; for the rest these descriptions are highly uninteresting, as they do not even give us a superficial idea of those graves. The mausolea of imperial princes were styled *yuen miao* (園廟), 'park-temples.'"—*Ibid.* ii. i. 444.

Mourning.—"The Sung dynasty adopted the mourning institutions of the House of T'ang in their entirety, introducing, however, in the register of relatives to be mourned for in the five degrees some alterations which are mostly recorded with the whys and wherefores in the 125th chap. of the History of the Sung Dynasty."—*Ibid.* ii. i. 545–6.

"In the biography of a certain scholar and statesman Ts'ai Ting (蔡挺), who lived in the eleventh century, it is recorded that 'the emperor Jen Tsung, wishing to be informed about the Kitan Tatars, sent for him and consulted him in a private apartment. At that time this grandee was in mourning for his father, and hence he was allowed to enter the Palace in an everyday dress and with an ordinary hat on' (History of the Sung Dynasty, ch. 328, l. 14)."—*Ibid.* ii. i. 642.

"New life having . . . been infused into it by the official rescripts of the House of T'ang, the mourning fast was in full vigour when the Sung dynasty occupied the throne (see History of the Sung Dynasty, ch. 265, l. 20). . . . It was also during the rule of the Sung dynasty that fasting for the dead found a place among the Rituals for Family Life, compiled by Chu Hi." "In spite of Chu Hi's rescripts, fasting on behalf of the dead was slipping into abeyance in his time in some out-of-the-way corners of the Empire, for in the *Ling wai tai tah* (ch. 6), which dates from the eleventh century, . . . we read that in the far south-west of the province of Kwang-tung people openly evaded it by the aid of deep-fetched subterfuges. 'When among the people of Khin a father or mother dies, the children touch no meat or fish, but they freely consume sea-crabs, large shell-fish, oysters, univalves, and the like, pretending in this way to fast and to eat plain food, because these animals have no blood. The aborigines of Hainan, instead of feeding on gruel and rice on their parents' death, then drink spirits and devour raw beef, considering supreme filial devotion to lie therein.' . . . The extract suggests that, with them [Hainanese], a frequent sacrificing of food and drink to the dead has given rise to a systematical feasting upon the leavings, and much eating and drinking has become a mark of devotion to the dead by reason of its proving that many head of cattle have been killed on their behalf, and large supplies of spirits been set out for their manes."—*Ibid.* ii. i. 654–6.

LIAO.

"The Tatar dynasty of Liao . . . likewise had among its monarchs one who considered it his duty to forbid the burial of precious articles in the tombs. The Official Annals of this House state that 'in the tenth year of the *T'ung hwo* period (A.D. 992) the killing of horses for funeral and burial rites was interdicted, as also the putting into the tombs of coats of mail, helmets, and articles and trinkets of gold and silver' (Hist. of the Liao Dynasty, ch. 13, l. 2)."—*Ibid.* ii. i. 698.

"The burning of counterfeits, after it had come into general practice, by no means did away with the older forms. Bonfires of genuine articles and valuables continued for a long time to hold a place side by side with bonfires of counterfeits. We read *e.g.*, that at the demise of the emperor Shing Tsung of the Liao dynasty (A.D. 1030), the departure of the cortège of death from the Palace was marked by a sacrifice, at which 'they took clothes, bows and arrows, saddles, bridles, pictures of horses, of camels, life-guards and similar things, which were all committed to the flames' (Hist. of the Liao Dynasty, ch. 50, l. 1). Before that time, the new emperor had, on visiting the place where the encoffined corpse was stored away awaiting burial, 'reduced to ashes the bows and arrows which the deceased monarch had been wont to handle himself' (*ibid.* ch. 18, l. 2); and on a similar occasion 'he had the deceased's dresses and imperial trinkets and valuables taken outside and burnt' (*ibid.* ch. 18, l. 3)."—*Ibid.* ii. i. 718–9.

"The practice of burying living people with the dead seems to have been maintained specially by the Tatar family of Liao, who during the Sung dynasty ruled over modern Manchuria and part of Kirin, often extending its sway also over adjacent portions of Northern China. Of Shunkhin (禋欽), the consort of T'ai Tsu, the first emperor, it is stated that, 'when he breathed his last (in A.D. 925), she declared she would have herself buried at his funeral. Her kinsmen and several officers energetically protested against this plan, and therefore she merely cut off her right hand and placed it in the coffin' (Hist. of the Liao Dynasty, ch. 71, l. 4). The same work narrates: 'In the first year of the period *T'ung hwo* (A.D. 983), Kiai-li, who in the Puh-hai region held the office of Tah-ma, asked permission to be interred with the deceased emperor (King Tsung), having received so many favours from him. The new emperor did not, however, allow this, but sent him some presents as a mark of distinction. . . . When King Tsung was buried in the Khien mausoleum, his intimate favourite Tah-lu was enclosed with him in the tomb' (*ibid.* ch. 10, l. 2)."—*Ibid.* ii. i. 732–3.

KIN.

"Burying empresses in the tombs of their consorts was also an established custom with the Kin dynasty, instances thereof being regularly mentioned in the Statute Histories of that House."—*Ibid.* ii. i. 444.

"Of the emperor Chang Tsung of the Kin dynasty it is recorded: 'In the fifth year of the period *Ch'ing ngan* (A.D. 1200), in the third month, he decreed that, in regard of the consummation of marriages while in mourning for a deceased wife, it should be lawful to set aside the prevailing rescripts. And in the seventh month of the same year he ordained that it should henceforth be permitted to disregard the law in cases of marriage concluded by those in mourning for a grandfather or his wife' (History of the Kin Dynasty, ch. 11, l. 7)."—*Ibid.* ii. i. 612–3.

Mongol Period (1280 *to* 1368).—*Table VII.*

Imperial tombs and burials.—"No doubt the splendour and dimensions of all these mausolea varied considerably. Some are said to have had no hill at all; such was the case with those of the Mongol Yuen dynasty, if credit may be given to the *Ch'un ming mung yü luh* (春明夢餘錄), which says that 'the House of Yuen had no grave hills.' The first Supplement to Ma Twan-lin's *Wen hien t'ung khao* reports: 'There are no means of examining into the funeral rites of the Yuen dynasty (as documentary evidence fails). The corpse was dressed in a coat of sable fur, a cap of leather, leather boots, and covering for the legs of the same material, and a bowl (a Pâtra or alms bowl of a Buddhist mendicant monk?) was tied to the waist. In every case a white-powdered skin (a woman's?) was buried along with the dead, as also a couple of metal jars and jugs, one saucer, an eating bowl, a platter, a spoon, and a chopstick. After the dressing, four belts of gold were tied round the corpse. The funeral car was of white felt and had curtains of blue and green *nah-shih-shih* (?), and the coffin, too, was covered with such material. A Mongol female exorcist, dressed in new attire, rode on horseback at the head of the procession, and one single horse was led by hand in it, the saddle of which was ornamented with gold. The box of the car was ornamented with *nah-shih-shih*. The horse was called "the golden steed for the manes." "'And, according to the Book of Plants, Trees, and Seeds, the coffin was made of two logs from a *nan* tree. Excavations of the shape and size of a human body were chiselled out therein, and the two pieces, fitted together, formed the coffin, in which the corpse was placed. Having been carried to the grounds of the park-temples, situated due north, it was buried deep in the ground, and the place was trampled by the hoofs of ten thousand horses. Consequently, when the grass had become green, the spot resembled the plain, and no trace of it could be discovered or kept in mind any more.'"—*Ibid.* ii. i. 437–8.

Mirrors in coffins.—"The *Kwei sin tsah shih* (癸辛雜識), a collection of miscellaneous writings by Cheu Mih (周密) in the earlier part of the 14th century, says: 'The present generation when coffining a body suspend a mirror against the lid of the coffin to shed light upon the corpse, and now and then they aver that the object of this is to break the darkness by means of light.'"—*Ibid.* ii. i. 399.

Burying living persons with the dead.—[From the *Hsü wĕn hsien t'ung K'ao*, ch. 131, l. 9, it may perhaps be inferred that during the Yüan dynasty living women were buried with deceased monarchs.]—*Ibid.* ii. i. 437, 733.

Sutteeism.—[For cases of sutteeism by fire see *Hist. of the Yüan Dynasty*, ch. 200, l. 3; 201, ll. 8, 9; also The Memoirs of Chang-cheu-fu, ch. 24, l. 30; and The Memoirs of the Department of Jao-cheu, ap. *Ku kin t'u shu tsih ch'ing*, section *Kwei yüan*, ch. 47, quot. ii. i. 736–8. Cases of sutteeism of all kinds were very numerous.]

Dwelling on the tomb.—"A goodly number of persons who dwelt upon the graves of their parents or husbands are on record also in the works of the Yuen dynasty; suffice it to refer . . . to Khung Ts'uen" (*Hist. of the Yüan Dynasty*, ch. 197, l. 6 *et seq.*; *De Groot*, ii. i. 458).—*Ibid.* ii. i. 800.

Post-mortem marriages.—"The following instance of a marriage between deceased persons, which occurred in the fourteenth century, must not be passed unnoticed, because it proves more clearly than any other case on record that in times relatively modern the whole conception still obtained that a wife's place is at the side of her deceased husband in the life hereafter, and that she may not suffer another woman to occupy her place there. 'Madam Yang was a native of Sü-ch'ing in Tung-p'ing (province of Shantung). Her husband Kwoh San marched off for Siang-yang with the army, and she, being left behind, served her parents-in-law so perfectly that she obtained a great repute for filial devotion. In the sixth year of the period *Chi Yuen* (A.D. 1340) her husband died in his garrison. Then her own mother laid schemes for taking her home and marrying her again, but, bitterly wailing, she took such an oath that these schemes were not carried out. After some time, when the mortal remains of her husband were brought home, her father-in-law said: "She, having been married to him only a short time and being still young, will certainly marry again in the end; ought I leave my son under the ground in a state of loneliness?" But when he was on the point of requesting a fellow

villager to give him the bones of his deceased daughter, that he might bury them in the same grave with his son, Madam Yang being informed of his project became still more overwhelmed by grief, and refused all food. Five days afterwards she hung herself, upon which she was buried with her husband in the same grave'" (*Hist. of the Yuen Dynasty*, ch. 200, l. 3). "Such posthumous marriages are peculiarly interesting as showing that the almost unlimited power of parents in choosing wives or husbands for their children does not cease to exist even when the latter have been removed to the Realms of Death, so that in fact children are there subject to the will of their parents. They further prove how faint the line of demarcation between the living and the dead is in China, even if it exist at all."—*Ibid.* ii. i. 805–6.

Rites and mourning.—The following is Marco Polo's account of the funeral rites at Kinsay. "They burn the bodies of the dead. And when anyone dies the friends and relations make a great mourning for the deceased, and cloth themselves in hempen garments, and follow the corpse playing on a variety of instruments and singing hymns to their idols. And when they come to the burning place, they take representations of things cut out of parchment, such as caparisoned horses, male and female slaves, camels, armour suits of cloth of gold (and money), in great quantities, and these things they put on the fire along with the corpse, so that they are all burnt with it. And they tell you that the dead man shall have all these slaves and animals of which the Effigies are burnt alive in flesh and blood, and the money in gold, at his disposal in the next world; and that the instruments which they have caused to be played at his funeral, and the idol hymns that have been chaunted, shall also be produced again to welcome him in the next world; and that the idols themselves will come to do him honour."—*Yule, Marco Polo*, ii. 191 (3rd ed.). See also i. ch. xl.

Ming Period (*Restoration of Chinese Supremacy*) (1368 *to* 1644).—*Table VIII.*

Preservation of the corpse.—The author of the *Pên-ts'ao kang mu* says: "Jade cannot positively prevent the living from dying, but it can prevent the dead from decaying away."—*De Groot*, i. i. 274.

"The *san* is peculiarly valuable for making coffins, because its wood does not fall a prey to white ants."—*Pên ts'ao, ibid.* i. i., 324.

Victualling the grave.—"Among the official regulations laid down in the Collective Statutes of the Great House of Ming for the funerals of deceased servants of the State, there was one to this effect that uncooked rice, spirits, dried meat, preserved meat and pickled meat should be placed in the pit, together with eating implements; but for the common people the work prescribed nothing of the kind."—*Ibid.* ii. i. 387.

Economy.—"The Imperial House of Ming imitated the T'ang dynasty in restricting by official rescripts the quantity of the articles that might be buried with the dead. But it went further, even prescribing the sorts of things the equipment of the dead was to be composed of." For the various articles prescribed for the different degrees of officials and a list of the numerous implements, etc., to be put in the tomb, see ii. i. 698–9. There were simpler rules for the common people.—*Ibid.* ii. i. 698.

Burying living persons with the dead.—"An almost certain proof that immolation of human beings at Imperial burials must have been continued uninterruptedly in China, is the fact that it was done on an extensive scale during the first hundred years of the Ming dynasty. It is difficult to believe that it could then have cropped up anew all of a sudden, if it had really been allowed to slip into abeyance during a series of ages. It is stated in the Official Annals of the House of Ming that the Emperor Ying Tsung in the first year of his reign (A.D. 1436) bestowed posthumous honorary titles upon ten women 'who had been palace concubines of (his father) Suen Tsung, buried along with this monarch. When T'ai Tsu (the first emperor of the dynasty) died (A.D. 1398), ladies of the palace followed him to death in great numbers. For (the third, fourth, and fifth emperors) Ch'ing Tsu, Jen Tsung and Suen Tsung such immolations also took place, and the same rule was followed again in the case of the emperor King, who died in the quality of Prince of Ch'ing, for, at that time it was usual to act similarly in the case of every prince of imperial lineage. The practice was only abolished when Ying Tsung prohibited it by his testamentary behests' (*Hist. of the Ming Dynasty*, ch. 113, ll. 12 *seq.*)." This is confirmed by *ibid.* ch. 12, l. 7, which states that "Ying Tsung forbade by his last will the immolation of palace concubines." The *Suh Wên hien t'ung khao* (ch. 133, l. 14) informs us how many in number the women were who fell victims to the practice on the death of the first, the third, the fourth and the fifth monarchs of the dynasty. T'ai Tsu was followed to death by no less than thirty-eight of his forty concubines, Ch'ing Tsu by all his, sixteen in number, Jen Tsung by four of the seven, and Suen Tsung by seven out of eight."—*Ibid.* ii. i. 733–4.

Effigies.—"During the rule of the House of Ming sixteen musicians, twenty-four armed body-guards, six bearers, ten female attendants and ten warriors, all made of wood and one foot in size, took rank among the things which were officially allowed by the statute rules to be placed in the tombs of grandees (p. 699)."—*Ibid.* ii. i. 809.

Sutteeism.—[For cases of sutteeism by fire see The Memoirs of the Department of Su-cheu, *ap. Ku kin t'u shu tsih ch'ing*, section *Kuei yüan*, ch. 51; The *Memoirs of the Department of Sung kiang, ibid.* same sect., ch. 62; quot. *De Groot*, ii. i. 738–41. Cases of sutteeism of all kinds were very numerous.]

Dwelling on the tomb.—"Under the rule of the House of Ming there are still numerous instances [of dwelling on tombs]. A perusal of the *Traditions of Filial and Dutiful Persons* (孝義傳), contained in chaps. 296 and 297 of the Official History of that dynasty, teaches us that such exemplary children and wives were then very often rewarded by the authorities, and even by the Emperor, with laudatory inscriptions for their house-doors or with honorary gates."—*Ibid.* ii. i. 800.

Post-mortem marriages.—"Yang Yung-siu (楊用修), an author who lived under the Ming dynasty, asserts that the custom of uniting dead persons in marriage was prevalent in his time. 'Now-a-days,' he writes, 'it is still practised among the people, and it is not forbidden by anybody or anything. . . .' (*Tan yuen luh, ap. Kai yü ts'ung khao*, ch. 31 l. 6)."—*Ibid.* ii. i. 806.

Stone figures at tombs.—"This House [Ming] regulated the number of images [to be placed on tombs] by . . . rescripts (p. 452). . . . In general the following rules have been observed with regard to their construction and arrangement. They are placed in two parallel rows, on either side of the avenue leading to the tumulus. Every two images placed opposite each other form a pair, being perfectly alike, both in size and attitude. In general they face the road, but in many cases their faces or heads are turned to the beginning of the avenue, and their backs or tails to the grave. A uniform distance separates each pair from the next, but these distances differ for each grave, being in proportion to the superficies of the sepulchral grounds and the number of images, which two elements in their turn depend upon the rank and position of the occupant of the grave. The images are of granite or other natural stone, and each is cut out of one solid block. The human statues always stand upright, which is quite natural, as the laws of etiquette in China forbid anyone to sit down when in attendance upon a superior. They are placed either at the beginning or the end of the rows, or partly at the beginning and partly at the end. They represent unarmed civil mandarins, dressed in long gowns with wide sleeves, and military officers, clad in armour and helmet. The former are always nearer the grave than the military, these either following next to them, or being placed at the beginning of the rows. They often carry a sheathed sword on the left side, or have both hands resting upon the hilt of a sword placed on the ground between their feet. And as for the animals, they are either recumbent on their bellies or on their hind legs, or they are standing, the animals of each pair being in the same position. The horses are sometimes without harness, sometimes saddled." "In general the images are somewhat above life-size. The largest known by us to exist in China, *viz.*, those which are placed along the approach to the Imperial mausolea of the Ming dynasty . . . are fully double the natural size. Sculpture has never developed into an art of high order in China. Consequently the grave statues are roughly carved, the features and attitude being devoid of life and expression, and exhibiting no idea of art on the part of the sculptor. On a few occasions we have met with images rudely cut from flat slabs of granite, probably in imitation of painted figures. It need scarcely be said that in most instances time and weather have done much in effacing the lines and features, especially in the southern provinces, where many of them have become no better than defaced and formless blocks of stone. Sometimes the avenue describes a curve, because the art of constructing graves to bring a maximum of prosperity to the offspring of the occupant objects to straight lines, as being extremely injurious when they terminate at a tumulus. In some cases, a little roofed wall, with either one or three gate-like entrances, opens upon the avenue and has over the middle entrance a wooden board, upon which a few large characters exhibit the name and dignity of the occupant of the tomb. When kept in good repair by the descendants, such grave-grounds are sometimes surrounded on all sides by trees and thickets, inclosed by a wall."—*Ibid.* ii. i. 816–8; and see pp. 818–21 for description of the stone images erected at the imperial mausolea of the Ming dynasty.

[For an instance in which the object of the statues placed on the tomb was the glorifying of the deceased, see ii. i. 826–7 and *cf.* REST. OF UNITY.]

Temples over graves.—"It is stated in the Collective Statutes of the Great House of Ming that the first sovereign of this dynasty 'in the 26th year of the *Hung wu* period (A.D. 1393) issued an edict, stating that from that moment no more sacrificial halls might be built at the decease of officials of merit; that the burial ground and the requisites of the obsequies should be entirely provided by themselves, and that the outlay was to be defrayed by the government only in case the individual in question had perished on the field of battle.'"—*Ibid.* ii. i. 388–9.

Guards.—"During the Ming dynasty 'there was appointed for each mausoleum an Inspector of the Palace of the Manes, and a garrison.'"—*Ibid.* ii. i. 436.

"Under the Ming dynasty it was an officially recognized prerogative of the scions of the Imperial family and of the governing classes to have a certain number of families placed upon their graves, which number varied in accordance with the rank of the defunct. The Collective Statutes of the Great House of Ming say that 'in the third year of the *Hung Wu* period (A.D. 1370) the number of families guarding the graves of meritorious servants of the State was fixed in such wise as in each case to be in proportion to the grade of nobility conferred upon the person concerned, or to his official rank' (*Ku chin t'u shu tsē ch'ing*, sect. 坤 輿, chap. 133.)"—*Ibid.* ii. i. 448. *Cf.* PERIOD OF DISRUPTION.

Co-burial.—"During the reign of the House of Ming, some two or three consorts were entombed in grave hills of emperors. The earlier sovereigns of this dynasty were probably accompanied into the tomb by all or nearly all their concubines; whether they were first immolated, or simply shut up alive in the imperial crypt, is not stated. And when about the middle of the fifteenth century this savage custom was discontinued by Ying Tsung, it became customary to bury most of them either in the T'ien-sheu shan (天壽山), a mountain range which now girds the back of the thirteen imperial mausolea of the dynasty, or in another range, called Kin shan (金山), in which some empresses and concubines of the earlier monarchs of the same House had been entombed; a few were buried in other places. Thenceforth those who had been married in common to one emperor were, as a rule, entombed in one and the same burial ground containing only one sacrificial temple for them all, and each of such plots of ground contained nine graves, corresponding to the number of concubines whom, since 1551, it had become the official rule for the Emperors to keep in their harems (*v. Hsü wên hsien t'ung k'ao*, ch. 133)."—*Ibid.* ii. i. 444–5.

Preservation of mausolea.—"In times of anarchy the imperial mausolea scarcely ever escaped destruction. They were broken open, plundered of the treasures hoarded up therein, and the entombed corpses were mangled and destroyed, with the object of bringing ruin on the imperial descendant seated on the tottering throne." "The last in the series of imperial burial places destroyed in this way, is that of T'ai Tsu, founder of the Ming dynasty, which is situated in the close vicinity of Nanking. It is almost entirely in ruin and irreparably lost for ever. Hence there is reason for satisfaction that those of the other emperors of the same family, who were the last monarchs of Chinese blood that wielded the sceptre over the Empire, have escaped the destroying hand of man and the tooth of time. They occupy a first place among China's most interesting relics of bygone ages. Being evidently built after the plan followed for the mausolea of the ancient House of Han, and the same being undoubtedly the case with those of all the intermediate dynasties they enable us to form a fair idea of the Chinese imperial mausolea of all periods."—*Ibid.* ii. i. 441.

Size of tombs, etc.—[Minute rescripts regulated the size of burial grounds and tombs.]—*Ibid.* ii. i. 449–51.

"The ancient system of having family grave-yards (see LATER FEUDAL PERIOD) . . . was officially adopted by the dynasty of Ming."—*Ibid.* ii. i. 451; and *c.* pp. 449–51.

Mourning.—"From the Sung dynasty the register [of relatives to be mourned for in the five degrees] was taken over by the house of Ming, which assigned it a place among its Collective Statutes."—*Ibid.* ii. i. 546.

"When the House of Ming ascended the throne, it was customary for mandarins to resign their posts at the death of relations who had to be mourned for only in the second degree. Giving ear to his Board of Civil Office, T'ai Tsu, the founder of the dynasty, restricted a custom so detrimental to good administration in the Realm." "Although he checked the mourning zeal of his mandarins, T'ai Tsu manifested a great deal of sympathy with officials who had to resign office on the death of their father or mother."—*Ibid.* ii. i. 578–9.

"Marrying while in mourning was officially forbidden during the Ming dynasty. It is stated that Kih-shun (倩 煚), a prince of imperial blood, in the year of our Lord 1459 requested the Son of Heaven to grant him permission to marry a concubine, and at the same time to allow his sister to be married out, in spite of their mourning for their father. Soothsayers had declared that in the year following after the close of their mourning there was not a single auspicious day suitable for the solemnization of their weddings. But the President of the Board of Rites protested, declaring that not only the ritual institutions were opposed to such a thing, but that also 'the Law contained clauses, clearly and plainly forbidding the solemnization of marriages while in mourning' (*Jih chi luh*, ch. 15, l. 29)."—*Ibid.* ii. i. 613.

Manchu Period (1644 *to* —).—*Table IX.*

Preparations for death.—"As in Western lands, so it is in Amoy a matter of great concern, a most sacred duty on the part of the nearest relations, to be present when a beloved and respected kinsman breathes his last. Wives, sons, daughters, grandchildren, brothers and sisters should not be absent at a death-bed. Neither are daughters-in-law allowed to stay away, as, in virtue of an established social law, any married woman has to behave in every respect towards her parents-in-law as if they were the very authors of her being." "In order to enable the relatives to be present in good time, they are, when the sick man is bad enough to cause the worst to be feared, as frequently as possible informed of his condition. Those who live far off do not even shun difficult journeys for the sake of exchanging a parting-word with the beloved senior and receiving his last instructions. It is, indeed, generally in presence of the whole of the nearest kindred that last dispositions are made, or, as Amoy people call it, 'orders are given about the things to come,' *hoan hú hō sū* [*fên fu hou shih*] (吩附後事);—they may, of course, be taken down on paper as they come from the lips of the dead man, but written wills made beforehand while still hale and healthy are, in Fuhkien, quite exceptional. This is the reason why, if there is something to be bequeathed, the presence of interested parties as witnesses cannot be dispensed with."—*Ibid.* i. i. 3.

The water-bed.—"A dying person is scarcely ever allowed to remain on his bed till he has expired. Even before matters take this fatal turn, he is transported to a couch of three boards supported by a couple of trestles or benches and covered with the same mat on which he was lying sick; sometimes, however, they give him a new one, if there is one at hand. This peculiar death-bed goes by the name of *tsúi-ts'ng* [*shui ch'uang*] (水床), 'water-bed,' because the moribund is to be washed on it. In many cases, especially with the rich, it is screened from view by means of a white sheet hanging down from the ceiling at a distance of a few feet."—*Ibid.* i. i. 3-4. The water-bed was as a rule placed in the principal apartment. See further pp. 4–5, and *cf.* previous Periods.

Washing the dying.—[The dying is then washed, shaved, and clad in clean clothes, the grave cloths being placed ready for use.]—*Ibid.* i. i. 5–6.

"The doctrine that a dying person must give up the ghost on a water-bed is, now-a-days, far from obtaining as a peremptory customary law. The 'removal of the bedding' before life is extinct, on the contrary, occurs only in case the dying man is so wasted by the infirmities of old age, or is in such a desperate condition by slow and continued illness as to make the family give up all hope of recovery. In any other case, nobody would suffer the dying man to be touched as long as there remained a single sign of life in him. Consequently, numbers of people are not washed and laid out until they have actually breathed their last, so that not so many have their end hastened by the process as one might at first surmise."—*Ibid.* i. i. 8–9.

Cleaning the premises.—"When the time of dissolution is evidently drawing near, the orthodox and notable among the citizens have their hall and premises swept and cleaned, with a view to the sympathizing friends and kinsmen, who are expected to come on the news of the death to offer condolences to the afflicted family."—*Ibid.* i. i. 9.

The death-howl.—"Until the fatal moment of death, the relatives confine the expression of their sorrow to a good deal of suppressed sobbing and tears. But scarcely the last gasp over they all break out into loud wailing and passionate lamentation. The voices of the women are loudest in this dismal concert; kneeling down at the water-bed and holding a piece of white cloth to their eyes, they pour forth at times with great vehemence bitter cries and piteous wails of woe. It is a melancholy concert of death dirges, a catenation of complaints addressed to the dead, in accents of reproach for leaving them. A son, in a slow, doleful cadence, asks: . . . 'My father, can you allow yourself to go and leave me behind, not yet grown a man!' And a wife wailingly chants: . . . 'My husband how can you allow yourself to go! The dark regions will harm you,' and so forth." "That loud and clamorous bewailing of the dead is by no means the expression of a deep emotion of the soul, of bitter sorrow or painful grief. It is, on the contrary, mainly a ceremonial observance prescribed by customary law, part of the conceived duties of nearest relatives towards a departed one, in a word a mere rite. . . . No doubt we have

here a relic of uncivilized ages, as savages are well known to be very clamorous in their grief."—*Ibid.* i. i. 10-11.

"Though in process of time the original signification of the howling has been lost sight of, and it now merely survives as a formality betokening grief and woe, yet the fact remains that it has never lost its position as a rite of as much significance at least as the recalling of the dead."—*Ibid.* i. i. 255. See p. 260, as to who wailed.

"Down to this day women-mourners may be frequently seen striking their breasts and waddling and tottering while wailing, but it seems that such acts are not regarded by them as formal ceremonies."—*Ibid.* i. i. 261.

Re-calling the soul.—"At Amoy, they say of one who is in a fainting fit that 'his soul is not united with his body': *sîn put hū thé* [*shên pu fu t'i*] (神 不 附 體). And when a baby is taken with convulsions, the affrighted mother finding her first attempts to coax her darling back to consciousness by repeatedly calling out its name to be in vain, hastens up to the roof of her house and, waving about a bamboo pole to which is affixed a garment belonging to the little one, exclaims several times in succession: 'My child So-and-so, come back, return home!' In the interim another inmate of the house is loudly beating a gong, to arouse the attention of the soul. After a while the vital spirits are expected to recognize the garment and to slip into it; and so, along with it, they are taken back to the sufferer and placed either upon or at the side of his bed. If recovery does not follow in a few minutes, it is a proof the soul has not yet returned. The mother once more repairs to the roof of the house to repeat the same ceremony, and, if necessary, she does so over and over again, until her efforts are crowned with success. Chinese people in general believe that convulsions and fits are in most cases due to a certain class of mischievous spectres, who are fond of drawing the vital spirits out of men. In the case of babies and children, these unseen beings are, at Amoy, designated as the *tsaó bé thien-kong* [*tsou ma t'ien-kang*] (走 馬 天 罡), 'celestial agencies bestriding galloping horses,' and as the *poāⁿ thiⁿ sin-tsâi* [*pan t'ien hsiu-ts'ai*] (半 天 秀 才), 'literary graduates residing halfway up in the sky.'"—*Ibid.* i. i. 243-4.

"Similar attempts to bring back the other-self are resorted to in case a full-grown person suddenly sinks down in an inert state and betrays a total loss of feeling and consciousness; also when anyone is taken ill or dying, sickness, especially if coupled with unconsciousness of mind, being likewise regarded as a sign of the absence of the soul. Under such circumstances, people hurry to a priest of the class [of *shih kung* 師 公] . . . that he may, as they call it, 'snatch the vital spirits away,' *ch'iōⁿ tsing-sin* [*ch'iang ching-shén*] (搶 精 神), in other words, rescue them by certain ceremonies from the claws of the invisible being who has stolen them from the body."—*Ibid.* i. i. 244.

"In China we find the nearest relations [to the dead] behaving in this way [attempting to recall the soul] even at the present day . . . repeating their lamentations over and over again during the funeral rites."—*Ibid.* i. i. 244-5.

Closing the eyes, etc.—"In case the dead person did not close his eyes and mouth himself, this is taken as a sure evidence that his departed soul feels uneasy about some matter. His wife, son, or another near relative will then try to comfort him by declaring in a coaxing tone of voice that there is nothing to depress his mind, everybody being sure to take the greatest possible care of his body and grave, to faithfully execute his last dispositions [? depositions], and to regularly sacrifice food and clothing to his soul for years and years to come. After this, they gently close his eyes and mouth, thus dealing with their beloved dead as we are accustomed to deal with ours."—*Ibid.* i. i. 11.

Opening the sky-light.—"If the dead died in the flower of life or in full manhood, one of the first things for the family to do is to open one of the sky-lights, in order to allow the disastrous influences, which have caused the death and might attack others also, to escape from the house. But in the case of an elderly man or woman this wise precaution is as a rule dispensed with, such a death being attributed rather to the natural course of terrestrial matters than to abnormal influences operating in an unnatural way. Never, however, is this neglected when death has resulted from leprosy, for, owing to the loathsome character of this disease, the contagion emanating from such a corpse is dreaded far more than any other. Many Chinese hold that the window is simply unclosed for the convenience of the soul, which ought to be allowed to wander freely in and out."—*Ibid.* i. i. 12.

Closing the shop.—"Knowing that people generally dislike visiting places where they may come in contact with death or anything connected with it, any family of shopkeepers that has a death to bewail will, if the house is small, close the premises on the street-side by means of the wooden shutters which are used in ordinary times during the night to keep out thieves. In this way they silently intimate that the trade stands still for the time being. No such measures, however, are taken in many cases when the dwelling is large enough to allow business to go on quite separated from the funeral rites, a friend or distant relative being then, as a rule, charged with the management of the shop, whereas the nearest kindred have no time to look after it themselves until the coffining or the burial is over."—*Ibid.* i. i. 12-13.

Removing the furniture, etc.—"Meanwhile, the part of the dwelling which is the principal scene of the funeral rites has been made to undergo an important change. The altar with the ancestral tablets and the images of the domestic divinities was . . . removed from the hall when death was imminent or seemed to be so. But as soon as life is actually extinct, the same measure is extended to the whole of the furniture including the two lanterns, with censer betwixt them, that in fashionable houses hang down from the ceiling in honour of the spirits presiding over heaven, earth, and water, or the so-called *Sam-kài-kong* [*San chieh kung*] (三 界 公), 'Lords of the three Spheres.' The paper scrolls inscribed with antithetical sentences, that ornament the walls by pairs, are taken down, and so are the pictures of landscapes and scenes of domestic life, the pieces of red cloth fixed over the lintels of the doors and windows to keep out pernicious influences, etc., etc. Only a few stools or chairs are left for the convenience of condoling visitors, as the rules of etiquette forbid the receiving of the same without offering them a seat." "Thus the water-bed with its appurtenances is about the only thing to be seen in the hall. In many cases, a small moveable furnace, called *kim-lô* [*chin lu*] (金 爐), or 'furnace to burn gold,' is placed on the floor in front of it, and made to consume from time to time a quantity of small paper sheets which kinsmen, friends, and acquaintances, on calling to condole with the family, offer for the purpose. These sheets, being all partly turned over on one side, are, according to the prevailing conviction, turned by the process of fire into real silver currency available in the world of darkness, and sent there through the smoke to the soul; they are called *gûn-tsoá* [*yin chih*] (銀 紙), 'silver paper.' Most families prefer to previously fold every sheet in the shape of a hollow ingot, a 'silver ingot' *gûn-khò* [*yin k'o*] (銀 錁), as they call it. This requires a great amount of labour and time, but increases the value of the treasure immensely. It is also customary to add to every portion burnt a number of such sheets coloured yellow with a decoction of certain flowers, to represent gold. This 'gold paper,' *kim-tsoá* [*chin chih*] (金 紙), is likewise folded beforehand into what they call 'ingots of gold,' *kim khò* [*chin k'o*] (金 錁), but it is designed for the benefit of the local divinity of the Soil, the patron divinity of departed souls. . . . In many cases a furnace is dispensed with for the paper-offerings, everything being simply burned on the bare floor." "The hall thus strongly reminds us of very ancient, not to say savage times, when all the possessions of the dead man were thrown into a fire, kindled for the purpose by the side of the corpse." "Now, on seeing that the modern Chinese convert a great deal of their possessions into mock paper money and . . . also into paper-and-bamboo models of houses, furniture, and other necessaries of life, finally turning the whole collection into smoke and ashes for the dead man's use, it is certainly not against the laws of logic to believe that we have to do with a survival of a more ancient destruction of real property." "Conjecture, in fact, seems useless to establish a reason for this custom, and for many others . . . unless we trace them back to such ancient times."—*Ibid.* pp. 25-8.

"The wife, sons, daughters, daughters-in-law, and the eldest grandson renounce their beds also, and pass their nights by the side of the corpse on a mat or some straw spread out on the floor. This usage, which goes by the term *tsiú si* [*shou shih*] (守 尸), 'to watch over the corpse,' is likewise of very ancient standing. . . . That the modern mourners lie down in the immediate vicinity of the corpse with the professed design *to watch over it*, resembles our own practice of watching the dead."—*Ibid.* i. 25-8.

"Even on its outside the house of mourning is stripped of its ornaments."—*Ibid.* i. i. 28.

Intimation to passers-by.—"The most conspicuous intimation to passers-by that some one in the house has departed this life, is a sedan-chair of bamboo splints and paper, placed outside the door for the use of the soul. It goes by the name of *kè-soaⁿ kiō* [*kuo shan chiao*] (過 山 轎), 'palankeen, to cross the country.' Its dimensions vary from two feet to the ordinary size, and are proportionate to the means of the family. The carrying poles are affixed on the shoulders of two or more human images, likewise made of bamboo and paper. As these beings are appointed to convey the soul on their shoulders wherever it should desire to go, and thus to save it all physical fatigues in the realm of shades, the surviving relatives, of course, take good care to propitiate them, lest they should fall short in their duty and prove intractable and lazy. Each of them is regularly refreshed with a tea-cup of cooked rice and a few cakes, one of the kinsmen inviting them with bows and holding a few incense-sticks between his fingers, to partake of the food; moreover, a few threaded sheets of mock money are hung round the neck or on the arm of each, every Chinaman knowing by experience that chair-bearers are always strongly opposed to moving when no advance wages have been paid them." "The well-to-do sometimes have, during the funeral rites, a kind of awning, constructed of bamboo poles and white cloth or matting in their court-yard in front of the hall. It is designed for affording protection against rain and sunshine to all those who take a part in the preparation of the body for the grave and in the funeral rights."—*Ibid.* i. i. 28-9.

Donning sackcloth garments and loosening the hair.—"Among the requirements of the funeral rites, clothes of brownish sackcloth of the coarsest description stand foremost. They are worn by the nearest relatives by way of deep mourning-dress whenever they have to go through a rite of importance connected with the disposal of the dead, sons and grandsons then unbraiding their cues, and laying aside the silken cords, which in ordinary time used to be twisted in them to make them longer. It is, indeed, requisite to have the hair hanging down upon the back dishevelled and neglected when in deep mourning; but the daughters, daughters-in-law and wife of the deceased need not unbraid their plaits. They only lay aside the ornamental pins, flowers and the like, not to use them again until the burial is over." "The said sackcloth garments . . . are, in most cases, hired for money in a kind of establishments called *kó-ch'e-tiàm* [*ku ch'ui tien*] (鼓 吹 店), lit. 'shops of drums and wind-instruments,' or *hún-tîng-tiàm* [*hun t'ing tien*] (魂 亭 店), 'shops of soul-pavilions,' where everything required for the equipment of funeral trains and bridal processions may be procured for temporary use, inclusive of the music. Well-to-do people sometimes have the clothes made for themselves at home, which, owing to the low quality of the material, requires but very little time and money; but nobody ever keeps them in his house ready made, as they would exercise a deadly influence over the inmates, and very likely entail cases of untimely death."—*Ibid.* i. i. 13-14.

Washing the Dead.—"Attired with that coarse apparel, all the sons and grandsons, even those who are scarcely able to walk, silently repair to some well in the vicinity, the eldest carrying a bucket in his hand. On their way they mournfully droop their heads, so that their eyes behold nothing but the pavement of the street. Arrived at the well, the eldest son throws in a few coppers as an offering to the water-ghost, who does not like to be deprived of a part of his property without being paid for it; then the son draws some water and takes the bucket home, all his brothers in the rear keeping up the same kind of lamentations and death dirges which the family chant and wail at the moment of the decease. As soon as the females, who have staid at home, become aware of their approach, they join in the melancholy concert. In many cases, the oldest of the water-fetchers may be seen going along the street supported by a friend, or, if he is a stout and heavy man, by two friends, one on either side, for a mourning son or grandson, who understands his duties well, ought to be, or at least appear to be so bowed down with grief and sorrow as to be unable to walk without assistance." "The ceremony described, which has for its object the procuring of water for washing the dead, is at Amoy called *khit-tsúi* [*ch'i shui*] (乞 水), 'to beg for water.' If the family is of some standing, the 'water-beggars' are accompanied by a servant who carries the bucket and draws the water, it being incompatible with high-life to perform any coarse labour whatever. But, while the dipping of the bucket is done by the servant, the sons loosely grasp the end of the rope, to take at least the appearance of doing the work themselves. In default of sons and grandsons, the duty of fetching water devolves on the wife, the daughters-in-law or the unmarried girls. And if the eldest male descendant is a baby, he is borne in sackcloth garments to the well in the arms of a full-grown person who, having put the coppers in the hand of the little one, opens it, thus causing them to drop into the water." "The office of washing the dead is, as a rule, performed by one of the female inmates of the house, or if there are none who dare do the work, by an elderly woman, whom experience has rendered familiar with matters of this kind. The corpse is not stripped for the washing, but the hand is passed under the garments, it being simply wiped clean with a wet towel. In very exceptional cases, *e.g.*, when death has been caused by a loathsome or contagious disease, or if the deceased has become very unclean while dying, in short, whenever there is nobody in the family who dares do the washing, the intervention of hirelings is secured, who are accustomed to demand a comparatively high pay for the unpleasant job."—*Ibid.* i. i. 14-15. Gray (*China*) states that a fish is sometimes cast into the stream with the cash to inform the river-god that the water has been bought and paid for. The rite is also described in *Ch. Repos.*, ix. 397.

Hiding the corpse.—"In case the family should have the grave-clothes quite ready when the washing is over they at once proceed to dressing the body in the way described [below]. . . . Otherwise they first leave the corpse in the clothes that were already put on it when death was imminent, . . . or change these clothes again, in each case, however, covering the body with a white shroud over which comes a red sheet of smaller dimensions. This hiding the dead from view is considered a matter of great importance, because it represents a sacred custom handed down by holy antiquity."—*De Groot*, i. i. 20-1.

Lighting the corpse.—"The ancient custom [of placing a light near the corpse] . . . is also observed by modern Chinese down to the lowest classes. As soon as the deceased is stretched on the water-bed, one of the first cares of the family is to place a lighted candle in an ordinary candlestick near his feet, either on the couch or on a form or chair at the side of it. They call it a *kha-bé-tsik* [*chiao-wei-chu*] (腳 尾 燭) or 'feet-candle.' Poor people in many cases take a bowl instead of a candle, put some sand in it and place upon the sand a small round open saucer of iron filled with oil in which a wick of water-rush is swimming. Such saucers, placed on a wooden stand, form the ordinary houselamps of daily life." "The usage . . . goes at Amoy by the name of *ch'iō-ch'i* [*chao shih*] (照 尸), 'to light the corpse.'"—*Ibid.* i. i. 21. For the reason *see* pp. 21-3.

Paper slaves.—"So far for the candle and the lamp. As the family sagely surmise that the soul wants servants in the world of darkness too, they place two puppets near the feet of the dead, either upon or by the water-bed. These puppets, made in the roughest possible manner of paper pasted on bamboo splints, are not more than a foot in size; they represent one male and one female, and are known as *khu-bé kán* [*chiao-wei chien*] (腳 尾 [扞]), 'feet-slaves.' Afterwards they are placed in the coffin at the feet of the dead."—*Ibid.* i. i. 24.

Begging for ashes.—"As soon as the washing of the corpse is over, the sons, in their sackcloth garments, once more leave the house, this time carrying an ordinary basket, in which they have placed a rice measure upside down. They go out for what they call *khit hé-hu* [*ch'i hui-hui*], 'begging for ashes.' Each laying one hand on the basket, they slowly and solemnly repair to the next dwelling, and kneeling down in front of the entrance, their eyes silently fixed on the pavement, patiently wait for the master, who soon appears and places some ashes from his kitchen on the turned-up bottom of the measure. In return for this gift the eldest son silently hands a couple of candles to him, intended to be burned upon his domestic altar. This done, the mourners resort to the house of a second neighbour, and even to a third, there going through the same ceremony, and finally they return home. Whilst performing these acts of filial devotion, the mourners do not wail, as it is rude, nay, cruel and criminal, to bring influences of mourning over other people by pouring out lamentations on their premises." "If the deceased has no sons living, the ashes are collected by the next-of-kin, in accordance with the classification of rank recognized in Chinese family life, just as in the case of buying water for washing the corpse. . . . The ashes are designed for the equipment of the coffin."—*Ibid.* i. i. 24-5.

Feeding the corpse.—When "describing the Chinese practice of wailingly calling to the dead, we saw in it an attempt to induce the soul to return and re-animate the corpse, an attempt pointing to a prevailing belief that death is by no means absolute, but may, like other insensibilities, be only temporary. This belief has created another custom . . . to wit, that of feeding the corpse by actually putting food into its mouth and placing eatables by its side." "Filling the mouth of the dead with morsels has now well-nigh fallen into disuse in Amoy and its environs. . . . But setting out food at the side of the corpse is still faithfully observed by all classes of society as a holy customary law allowing of no infringement whatever." "Before taking their usual breakfast, the deceased's wife and children arrange a bowl of cooked rice, and in many cases also a dish of vegetables, bean-curd or the like, on a table at the right-hand side of the bed. They carefully add a pair of chop-sticks. . . . Then taking burning incense-sticks between their fingers, they kneel down on the floor and wail and lament for a few minutes in the usual way, some silver mock money being in the meantime kindled in the furnace to enrich the dead. And after a time, when the deceased is supposed to have satisfied the wants of his stomach, the mourners proceed to take their own meal, consuming in most cases the food offered to the corpse; but in some families they prefer giving that food to the beggars in the street, as the influences of death which stick to it might perhaps injure them."—*Ibid.* i. i. 29-30.

"The *Ta Ts'ing thung li* gives no rescripts about the practice

[feeding the dead]. This explains in some measure why the custom has now fallen into disuse at Amoy and its environs. . . But we do nôt suppose it has died out all over China, the influence of the ancient works and the *Rituals for Family Life* being too great to justify such a supposition."—*Ibid.* i. i. 358–9.

Placing articles in the mouth.—"Legends about lighting pearls and jade being current in the native literature in considerable numbers, it is easy to understand why people of the present time . . . give as one of the reasons for their placing precious stones in the mouth of the dead, a desire to procure light to the soul, that it may be safely conducted along its paths in the dark Tartarus. But they have not forgotten that the principal object of this practice is to save the body from a speedy decay."—*Ibid.* i. i. 278.

"These things [jade, gold, cowries, and pearls] have in all ages played their part in the disposal of the dead. Silver has obtained a place amongst them, as also coins, probably because these have replaced the ancient cowries as currency."—*Ibid.* i. i. 278. And *v.* p. 279 for distinctions of rank and use of armlets.

Sacrificing to the god of the soil.—"A petty offering, also composed of a bowl of rice, to which a few dainties are added occasionally, is at the same time set out for the use of the local divinity of the soil. . . . If properly propitiated in this way, this being is expected to safely pilot the soul through the regions of darkness, of which he has the control. It is the duty of one of the mourners to invite him to help himself; for this purpose the man makes a polite bow in front of the offerings, at the same time holding one or three burning incense sticks in his joined hands on a level with his head. Prudent and intelligent people take care to lay out only one chopstick for the use of the god, thoughtfully calculating that it must take him in this way a long time to consume his meal and so prevent him from hurrying off before the soul is properly prepared to follow him."—*Ibid.* i. i. 30.

Visits of condolence.—[Visits of condolence by kinsmen, friends, and acquaintances, and the accompanying ceremonial, are described in *ibid.* i. i. 30–2.]

Pregnant women "are scarcely ever allowed to pay visits of condolence."—*Ibid.* i. i. 32.

[For purification of condolers after the visit, see *ibid.* i. i. 32–3.]

Precautions against cats.—"As soon as the last breath has been drawn, the family at once manifest a great anxiety to transfer all the house cats to the neighbours, or, at least, to tie them fast and not release them again in their own house until the coffining is over. In fact, if Pussy were not secured, it might occur to her to leap or walk over the death bed, and so cause the corpse to rise up at once. A long pole would, in this case, be required to push it down into its former position, or a piece of furniture would have to be used as a projectile, though nothing can serve the purpose so well as a broom. The handle, namely, renders it eminently fit for being grasped with the hands, so that the corpse, frantic with rage, will pull the broom at once against its breast to cool its wrath upon it, and by this vehement motion sink down into its inert state. That it is far from advisable to expose one's self to the danger of being seized instead of the broom, we need not say: a horrible death in a ferocious embrace would be the inevitable consequence." "To account for this curious superstition it is necessary to dwell for a moment on the domain of tiger-lore. A tiger, the Chinese say, has on its tail a very miraculous hair, endowed with the power of bringing the soul back into any human body that lies motionless and insensible; it is known by the popular term of *hoân hân mîng* [*huan hun mao*] (還魂毛), 'hair that causes the soul to return.' Now, whenever the monster has dragged a man into a mountain recess, it takes good care first to wag its tail all round and over him, knowing by experience that the unfortunate victim, on returning to life, will in his second agony of death, stupidly tear off his clothes and thus enable his assailant to eat him without being incommoded by troublesome shreds and threads. Moreover, the Chinese are very well aware that the cat resembles the tiger not merely in outward shape, but also in all its characteristics, manners, and habits. How easily therefore might it happen that such a tiger in miniature should likewise be possessed of a 'soul recalling hair' and, by jumping on the water-bed, cause the dead body to turn into a dangerous vampire!" "The contact of cats with a corpse is particularly unsafe on days which are styled 'tiger days,' it being believed that, then, the influence of the feline race predominates more than on other occasions."—*Ibid.* i. i. 43–4.

Precautions against infection.—[Precautions were taken against infection from leprous corpses.]—*Ibid.* i. i. 45.

Neutralizing the effect of thunder.—"Many Chinese say, thunder has the property of causing the bodies of the dead to swell. It has even been known to have puffed corpses up to such tremendous dimensions that no coffins were big enough to contain them. Therefore, as soon as a peal of thunder is heard in the distance, the family hasten to place a heavy looking-glass of metal, the weight of a steel yard, or some other heavy object of small size on the breast or belly of the corpse, fully convinced that it will perfectly neutralize the bad effects of the storm."—*Ibid.* i. i. 45.

Dressing the dead.—[The grave-clothes for men, women, and children, their preparation during life, the superstitions regarding them, and the method of dressing the corpse, are described in detail in *ibid.* i. i. 339–40, 46–69.]

Sacrificial rites between dressing and coffining.—[The dressing was followed by offerings of edibles (called "taking leave of life"), two sacrificial meals, preparation of the soul-tablet ("silken cloth for the soul"), induction of the soul, cleansing from inauspicious influences, sending paper money to the dead, and divining with coins the wishes of the deceased.]—*Ibid.* i. i. 70–86.

Coffins.—[Coffins varied in both quality and price, but were usually strongly made of very thick boards, were often pasted inside and varnished outside (those belonging to officials being coloured red), lined (except the lid, which contained a covered framework) with coarse red linen or cotton stuff, decorated outside, made by special workmen (funeral appurtenances being sold in special shops), and prepared during life, pegs being still used to fasten down the lid (only those of the poorest quality being nailed).]—*Ibid.* i. i. 319–330, 304.

"The ancient custom of making a microcosmos of coffins by ornamenting them with the principal sub-divisions of the Universe . . . still shows faint signs of life among the people of Amoy. They seldom call the lid by its vulgar name of *koà* [*kai*] (蓋), 'cover,' mostly preferring the word *thien* [*t'ien*] (天), 'heaven'; the bottom they call *tōe* [*ti*] (地), 'the earth,' the sides respectively *jît* [*jih*] (日), 'the sun,' and *goát* [*yüeh*] (月), 'moon.' The upper end they often style *khoe thâo* [*k'uei t'ou*] (魁頭), 'the head of the Great Bear,' and the lower end *khoe hē* [*k'uei wei*] (魁尾), 'the tail of the Great Bear,' which expressions owe their existence to the board of the seven stars which is still much in vogue, though not among the very poor. This board is not sold with the coffin as a natural appendage. It has always to be ordered apart from the coffin, and the price charged for it is exorbitant. This circumstance alone compels the poor to do without it."—*Ibid.* i. i. 322.

The seven-stars board.—"The *Kia li* [*cf.* PERIOD OF DISRUPTION] also prescribed the use of this board, and so does the *Ta Ts'ing thung li*, in its precepts regulating the funeral rites of the sundry classes of officers and of the common people."—*Ibid.* i. i. 318. See also *supra*, *Coffins.*

Cremation.—"Deceased members of the Buddhist clergy are either buried or burned. In the former case their coffins do not differ from those used by the laity; but when one is burnt, he is placed in a sitting posture in a large square box which has a door or a slide in front, and so he is reduced to ashes with box and all."—*Ibid.* i. i. 330.

In the *Hai-chwang sz'* at Canton is "a burial ground, where are deposited the ashes of priests after cremation."—*Williams, Midd. King.*, i. 164.

Encoffining.—[The elaborate ceremonial, etc., accompanying the encoffining, the packing of the corpse in the coffin, the articles placed therein, the closing of the coffin, and the proceedings after the encoffining, are described in *De Groot*, i. i. 87–99.]

[For the swathing of the corpse practised in Amoy, Foochow, etc., see *ibid.* i. i. 93, and *Doolittle, Social Life*, ch. vi.]

Keeping the corpse unmutilated.—"Amongst its rescripts for the disposition of the dead, laid down for all classes of officials, the gentry and the common people, the *Ta Ts'ing thung li* . . . says, that the teeth and hair which have dropped out during the life of the deceased should be placed in his coffin." It is "very probable that the above precepts are still conformed to in many parts of the empire."—*De Groot*, i. i. 343.

Mirrors placed in the coffin.—"To this day, a 'mirror to light the corpse' is in Fuhkien province placed in the coffin with the dead [p. 93]: a weak survival, indeed, of an ancient usage widely prevalent."—*Ibid.* ii. i. 399.

The soul-banner, etc., placed in the coffin.—That "a belief in the cohabitation of the body and the soul really exists among the modern Chinese as vividly as ever is shown by many of their funeral customs. . . . Amongst them is that of systematically entombing part of the manes with the corpse by placing the soul-banner and the temporary soul tablet in the grave with the coffin. This custom is of special importance, because it introduces us to a new series of practices and conceptions relative to the tomb and the treatment of the body and the soul which dwell therein (vol. ii.). . . . The ideas about such cohabitation of body and soul in the grave are closely connected with the conception that, if a body is properly circumvested by objects and wood imbued with *Yang* matter or, in other words, with the same *Shen* afflatus of which the soul is composed, it will be a seat for the manes even after death, a support to which the manes may firmly adhere and thus prevent their nebulous, shadowy being from evaporating and suffering annihilation. Coffins with a corpse inside are, in accordance with this notion, designated throughout the whole range of Chinese literature as 'animated encoffined corpses' (靈柩), or 'animated coffins' (靈櫬)."—*Ibid.* i. i. 348–9.

Return presents and mourning cards.—"As the Chinese rules of etiquette strictly require all favours and gifts to be returned in a manner proportionate to their value, it is incumbent on the family to present to all those who have condoled with them and given paper money to the dead . . . articles to serve the same purpose as this paper, *viz.*, as a sacrifice to *their* family manes. Incense sticks, candles, mock money, sweetmeats, red cakes of flour, and other edibles form the principal part among these presents." For further information respecting these, the obituary notices, and the mourning cards, etc., see *ibid.* i. i. 110–3.

Portraits of the deceased.—[Polychromic, full-length, and often also among the rich so-called "miniature," portraits of the deceased, taken either before or after death, were hung in the hall of the home.]—*Ibid.* i. i. 113–4.

Observances while the coffin remains in the house.—[As long as the coffin remained in the house, various sacrifices, rights for the salvation of the soul, and acts of filial devotion were performed, see *ibid.* i. i. 114–20.]

Home-burial obsolete.—"Home-burial may now be supposed to have disappeared from amongst the customs of the nation. But the temporary storing away of coffins at home until a suitable burial site has been procured beyond the precincts of the quarters of the living, survives [see pp. 105 *seq.*, 268]. . . . That the ancient custom of covering such coffins, while in the hall, with wood and clay has quite died out, we may conclude from our own investigations in China and from the absence of all reference to it in the native literature." The practice relating to the Inscription (see SUNG PERIOD) probably still survived.—*Ibid.* ii. i. 371.

"The *Ta Ts'ing tung li* does not say a single word about the matter in question, from which we venture to infer that the ancient semi-burial in the hall of the dwelling has been totally abolished as an official rite since a couple of centuries."—*Ibid.* ii. i. 372.

Out-storing and cities of the dead.—[For the storing of coffins outside the dwelling-house and for cities of the dead, see *ibid.* i. i. 127–32.]

Suitable days, etc.—[As to the selection of suitable days for encoffining, burial, &c., and postponement of burials, see *ibid.* i. i. 99–107; 267–8; 132–5; *Doolittle, Social Life*, ch. vii; and for coroners' inquests, *De Groot*, i. i. 136–9.]

Purification of the house.—[The ceremonial purification of the house is described in *ibid.* i. i. 107–10, and bk. ii.]

Rites preceding burial.—[For the elaborate preparatory and introductory rites preceding burial, the parting sacrifice, the sacrifice to the spirit of the hearse, the sacrifice in the street, etc., see *ibid.* i. i. 140–51; and bk. ii.]

Funeral procession.—"Funeral processions, as a rule, may be said to differ from one another rather with regard to show and length than with regard to arrangement. The wealth of the family, the social rank of the dead, and the consideration in which he was held during his life, the position of his sons, the number of his friends and acquaintances, etc., have a most decisive influence on the pomp displayed in the train and on the number of persons and groups composing it. One may sometimes see cortèges of not more than a dozen people, whilst others consist of many hundreds. Public opinion is wont to judge of the filial devotion of mourners from the way in which they celebrate the obsequies of their parents. Consequently, in burying a father or a mother, sons scarcely ever neglect to spend as much as they can afford on the cortège, everybody in China being most anxious to show that he possesses such filial conduct—the cardinal virtue of the nation—in the highest degree."—*Ibid.* i. i. 152–3.

The following is a description of a funeral procession as seen amongst the highest classes of Chinese society. "A kinsman or a friend of the family, in a mourning dress of white linen and with a cap of the same material on his head, opens the procession. His function is to clear the way in a polite and peaceful manner. Wherever he comes across anything which obstructs the passage, as *e.g.*, a bench or a counter on which articles are exposed for sale, . . . or any obstacle of the sort, he requests the owner to remove it, at the same time offering him, by the hands of a coolie who follows at his heels, a piece of a betel-nut and a little wet lime-dough, wrapped in one or two siri-leaves. This coolie, who wears no mourning, carries a basket of these articles for distribution." This is a sign of apology for incommoding the owners of the obstacles. "In many instances, clearing the road is simply entrusted to the coolie alone; at most of the plainer funerals it is entirely omitted." Next follows a so-called *pàng tsoá é lâng* [*fang chih chih jên*] (放紙之人), or 'paper-scatterer.' . . . This is a distant relation, a friend, or an acquaintance, likewise dressed in a white robe and cap, or in some cases in sackcloth. His function is to strew round octangular sheets of tinned paper, from eight to ten centimetres in diameter, along the road, and also in the water when the train has to cross a creek or stream by a bridge or in boats. A great number of these sheets, strung on a little stick like metal coins on a cord, he carries in his hands for the purpose. This paper money is destined for the malevolent spirits who, according to the popular conception, prowl about everywhere and infest streets and thoroughfares, mountains and forests, rivers and creeks, causing all sorts of mishap to befall men. Wisely concluding that great numbers of these beings, hungry and miserable because of their not having been cared for by a dutiful posterity, must be swarming chiefly on the roads where coffins have to pass, for the express purpose of robbing, by importunate begging or by brute force, every deceased person of the money wherewith the living have so unselfishly enriched him during the funeral rites, the measure in question is recurred to in order to divert their attention. Like famished wolves on their prey, the spirits rush upon the money, and thus forgetting both coffin and soul, permit the procession to pass by unmolested. In numerous cases the tin-foil is coloured yellow, that the sheets may represent golden coins. Many families in easy circumstances prefer to use square sheets of good white paper, such so-called *péh tsî* [*pai ch'ien*] (白錢), or 'white money,' being higher in price than tinned paper and consequently more valued by the unseen spirits. Both sorts of mock money bear the generic name of *bóe lō tsî* [*mai lu ch'ien*] (買路錢), 'paper to buy off a passage.'" "Not seldom the distribution of siri-cuds is also entrusted to the paper scatterer. It is, moreover, incumbent on this man to affix a small shred of red cloth to every street gate, through which the procession passes, and to every bridge which it has to cross. The baneful, inauspicious influences emitted by the cortège of death are thus kept away from those spots, and prevented from settling on the spirits which inhabit and control the same; if the family should neglect to show this little attention, it might experience the wrath and anger of those beings—in other words, incur sundry misfortunes. For a similar reason, the man with the siri-cuds and the paper-scatterer, at every temple they pass, warn the custodian, or the persons loitering about the premises, to shut the door quickly, in order to prevent the divinities from being seen by the cortège. At some temples, instead of closing the door, they lower a nicely sculptured and painted triangular wooden board, which, with a view to such cases, hangs from a pulley in front of the gods." "Much though the unseen spirits may be propitiated by such liberal gifts of paper money, these are by no means deemed a decisive expedient to keep them at a respectable distance from the funeral train. Two long trumpets of copper, with a thin sliding tube and curved-up mouth, are still required to frighten away those among them on whom the distribution of money has no effect. These instruments, which are called *hō thaô* [*hao t'ou*] (號頭) or *hō siú* [*hao shou*] (號首), 'signal-heads,' are not proper musical instruments, as they only give two or three notes; the men who carry them behind the paper-scatterer . . . simply emit monotonous, protracted sounds through them at intervals. These persons wear a jacket of black linen, which is fastened on the middle of the breast and has along each side of the opening a broad hem of red colour; moreover, there is on the middle of the breast and on the back a piece of white cloth bearing the inscription *hō siú*. They wear a low round hat, likewise black, with a small brim. A fringe of red silken threads fastened on the top hangs down upon their hat." "At their heels follow two dirty . . . boys, without either uniform, shoes, or stockings; each carries over his shoulder a banner of white cloth about one metre by three decimetres, the long side being fastened to a pole. . . . Of such *ts'ái kî* [*ts'ai ch'i*] (彩旗) or 'decorative flags' there are, as a rule, several in the procession. Most of them are red, because this colour dispels malevolent spirits." "Thanks to all these ingenious arrangements, both the soul and the mortal remains are now pretty well insured along the whole way against the attacks of invisible ghosts. But in several parts of Fuhkien many families consider it advisable to add a third efficacious means for keeping them away: they at intervals explode fire-crackers in the van of the procession." "So far for what we may call the vanguard of the procession, which consists exclusively of clearers of the road. The second division opens with two men, in a dress resembling that of the trumpeters, each carrying on a straight pole a great cylindric lantern of paper, the upper part of which is covered with as many flounces of sackcloth as there are generations of the dead man's family, himself counting for one generation. . . . Each flounce only partly covers the one underneath, so that they are all visible. On one side these lanterns are inscribed with the official titles and the surname of the dead; the other side displays, in case of a man, the inscription: 'Illustrious father of (*e.g.*) four generations' (四代大夫), in case of a woman: 'Illustrious mother of four generations' (四代大毋). They are called

pêh ting [*pai têng*] (白 燈), 'white lanterns,' or *mod ting* [*ma têng*] (蔴 燈), 'hempen lanterns.' In this part of the train there are, besides, two very big lanterns of red colour, called *kam ting* [*kan têng*] (柑 燈) or 'orange lanterns,' on account of their resemblance to that fruit. They are suspended from the top of a curved pole and display, in variegated characters, the names and official titles of the deceased." "At the outset lighted candles are placed in all these lanterns; but they are soon burnt up or blown out by the wind, and nobody troubles himself to light them again. Their use in broad daylight shows decidedly that they are designed to pilot the soul, which lives in complete darkness, along the right path to the burial ground, and we believe that the inscriptions they bear are intended to prevent the soul from being led astray by other lanterns, which it may happen to see along the road." "The lantern bearers are followed by a band of professional musicians, consisting of six or eight men. . . . They play the following instruments. Either two or four wooden clarionets with wide copper mouths and, at the upper end, a flat mouth-piece of reed. One small drum, in most cases carried on a handle which passes through the barrel; it is beaten by the right hand with a single stick. Very often this instrument is replaced by a small flat drum which has a body of wood covered with buffalo skin on one side only, and which is likewise beaten with one stick. One pair of cymbals. A small gong with a boss in the middle. A frame in which two little gongs are affixed side by side by means of silk cords; this instrument is carried on a handle and beaten with one stick. The musicians, who always belong to the lowest classes of society, wear hats with red tassels . . .; on their red uniform coats is stitched, on the middle of the breast and back, a square ornamental piece of white cloth, displaying a painted animal or some other figure. If it is hot, they usually tie their coats like a bundle on their backs and walk along with the upper parts of their bodies quite naked. This band is, in many cases, accompanied by two trumpeters like those who march in the van of the procession. Quite independent of the music, they send forth, from time to time, grave and dismal ghost-frightening sounds through the streets." "The music of such bands, of which there are many in the train, is called mourning music, as being quite different from that played on joyful occasions." "With the Chinese, the use of music in funeral processions and at other important moments of the rites connected with the disposal of the dead, is declared to have for its object the gratifying of the soul of the dead with dulcet tones, but is not intended to increase or decrease the melancholy character of the rites." "The musical band described serves as an escort to a white portable tent or pavilion of wood, open in front and on the two sides; it has a roof of white cloth, linen, or silk, on which dragons of gold thread are embroidered, and which has a deep fringe on every side. . . . By means of two large and two small poles it rests on the shoulders of four bearers, of whom one couple walks behind each other in front and the other behind each other at the back. In most cases these men are dressed in the poorest possible way, without the shade of a pretence to uniform dress; they even go half-naked when the weather is hot. On each side, this white pavilion is escorted by a boy, carrying a *ts'ai ki* which is likewise white; in addition there is, in some cases, on each side a boy bearing aloft a paper lantern on a wooden pole. The pavilion contains an image, composed of a hollow frame of bamboo splints covered with variegated paper. . . . This is never more than three-quarters of a metre high, the dimensions of the pavilion not allowing the use of a larger figure. Its appearance is, according to Chinese conceptions, exceedingly terrific, and therefore well fitted to strike the whole host of evil spirits with terror. The face, of a blood-red colour, has two large white eyes, from which black, protruding eye-balls cast about terrible looks; a third eye stands perpendicular in the middle of the forehead, and a long purple beard of woollen threads heightens the intimidating aspect. The dress is that of a warrior: a helmet covers the head, a coat of mail the breast, thigh-plates the lower limbs. A long red gown hangs down from underneath the armour; the broad girdle, which encircles the waist, bears the character 王, 'King,' to make manifest to the evil spirits that they have to do with a being of great importance and power. This image is always made to stand, as an erect attitude renders it more formidable, martial, and imposing. Its right [? left] hand brandishes a trident, its left [? right] hand, which is stretched out aloft, holds a red seal as a token of authority. Variegated ornaments like flowers and stars are affixed to sundry parts of its body. On the whole, the figure is a motley mixture of colours, amongst which, besides gold and green, red, which is so much feared by the spirits of darkness, is most conspicuous." "Although bamboo and paper are the ordinary materials of which such a clearer of the road is made, cloth and inferior sorts of silk sometimes enter into its composition at the burials of the rich. For reasons of economy it has in most cases no back, because this part of the body, if constructed, would be rendered invisible by the back-panel of the pavilion. The name by which this image is generally denoted, reads *khai-lō sin* [*k'ai-lu shên*] (開 路 神), 'spirit that clears the way.'" "In some instances its size is enormous. It is then often wheeled along the road on an open cart, no pavilion being large enough to contain it. When so big, it is usually stuffed with the heart, the liver, the paunch, and other intestines of a pig. . . . Mr. Doolittle writes, that in Fuhchow two immense *khai-lō sin* may sometimes be seen at the burial of high mandarins, the one dressed to represent a civil, the other to represent a military officer." The *k'ai-lu shên* had "their origin in the employment of living individuals as exorcists." "Living exorcists at burials are by no means out of fashion in the present age. At Amoy it is still fresh in the memory of the people how at the burial of a gentleman, who had been the prefect of a department in Kiangsi province, four men, clad in fanciful spectral attire, walked in front of a *khai-lō sin* of colossal size, dancing and screaming all the way. At the grave they worked themselves into a fit of raving which resembled a demoniacal possession; they cast themselves by turns into the pit, frantically yelling and brandishing their swords, and thus brought about a general *sauve qui peut* in the unseen world of spirits. People at that time denoted them by the name of *khòng ch'iâng* [*k'uang ch'iang*] (壙 蹡), which perhaps means: 'grave-pit hoppers.' Eye-witnesses have told this writer that it cost the family much trouble and expense to find persons to act this dangerous part in the burial. Indeed, everybody felt sure that some of the spectres, mad with fear and acting on an impulse of desperate self-defence, might throw themselves upon the exorcists and strike them with illness, nay, with death."—*Ibid.* i. i. 153–63.

"It must be noted by the way that, when the procession is on the point of starting, a petty sacrifice of sweetmeats, cups of tea, and such like articles is arranged by the family in front of the *khai-lō sin*, and offered to him as a luncheon by one of the attendant relatives, who, holding burning incense-sticks in his joined hands, makes a reverence to the image. This ceremony clearly shows that the figure is in point of fact conceived of as being possessed by a soul. Indeed, the Chinese scarcely believe in the existence of any inanimate object. Most families belonging to the middle and lower classes go to no expense for a *khai-lō sin* image. They only make use of a pavilion intended for its occupancy, obviously expecting that, though there is no image inside it, the soul of one of the ancients who formerly acted the part of Rescuers of the Country will nevertheless settle in it, or, at any rate, that the spirits of darkness will be intimidated by the mere aspect of the vehicle."—*Ibid.* i. i. 163.

It has already been stated, "that scarcely any well-to-do Chinese gentleman neglects to purchase an official degree, wherewith to crown the distinguished position to which his money has raised him. . . . After his death, the original imperial brevet of his rank is paraded in his funeral behind the *khai-lō sin*: thus men may see how illustrious a personage they have to do with, and evil ghosts, awe-struck, keep their distance. The document is rolled up and wrapt in a piece of yellow cloth; at either end a gilt flower is affixed, and so it is placed over two pins projecting like cloak-pegs from a small wooden stand, which is placed in a pavilion. . . . This pavilion and its embroidered roof are of the imperial yellow colour, in honour of the imperial document which lies inside."—*Ibid.* i. i. 164.

"It is quite a matter of course that this *khò hong ting* [*kao fêng t'ing*] (誥 封 亭), or 'pavilion for the dignity conferred,' should be surrounded with awe-inspiring pomp. Everything, in fact, which stands in any relation whatever to the Son of Heaven ought to be attended with becoming respect. A couple of boys, each with a yellow 'decorative flag,' walk on the right and left of the pavilion, and a complete band of musicians marches ahead; moreover there is, in front, an escort of attendants and lictors. . . . The gongbearers in this case have flags over their shoulders. In addition there are some men bearing each a square board on a long wooden handle. Two of these *tîng-kha pâi* [*ch'ang chiao p'ai*] (長 脚 牌), 'tablets with a long leg,' display, in raised characters, the official title of the dead; two others the name of the dignity with which he has been invested during his life; a third pair bears the words: 'Be respectful and keep silent' (肅 靜), and the fourth: 'Turn away and abscond [withdraw]' (廻 避). The dress of the bearers resembles that of the trumpeters [who follow the 'paper-scatterer' referred to above]. . . . This party of men are supposed to escort the dead, who is the bearer of the dignity, not the patent, which is merely a badge of it."—*Ibid.* i. i. 164–5.

"But the principal group in this subdivision of the train, the pride and glory of the mourning family, is a set of two or four literary graduates of the lowest degree, so-called 'Cultivated Talents,' *siu ts'ai* [*hsiu ts'ai*] (秀 才), who have been engaged to act as *tsiáng khò-hong tîng* [*chang kao-fêng t'ing*] (掌 誥 封 亭) or 'directors of the pavilion with the dignity conferred.' It is very grand, in fact the height of fashion, to have such miracles of learning in the train. No wonder they are dressed in the full uniform their rank entitles them to wear, lest anybody should mistake them for ordinary individuals. As long as the procession is passing through inhabited wards these worthies walk a foot behind the yellow pavilion, most stately and majestic; but when the open country is reached, where not so many eyes are fixed upon them in silent admiration, they immediately betake themselves to the palanquins, designedly posted there by the family for their ease and comfort." "Even though the departed has never been invested with an official rank or dignity, a mandarin's retinue may likewise be seen in this part of the procession. The long-legged boards are then borrowed, either gratuitously or for money, from some relative or acquaintance who, being in reality the bearer of a grade or title, keeps such instruments in his house as a necessary appendix to his dignity. This manner of decking one's deceased parent in borrowed plumes does not in the least shock anybody. On the contrary, every one highly approves of this sort of thing, as the doctrines of filial devotion teach that it is a sacred duty on the part of children and grandchildren to exalt and magnify their seniors as much as is in their power."—*Ibid.* i. i. 165–6.

"The reader will have recognized already in these *shah* the forerunners of the square boards inscribed with the titles and dignities, and fixed on the top of long handles, which are now carried in the retinue of mandarins whenever they appear in public, and at the death of a titled person in his funeral procession. . . . The part they played in the obsequies of antiquity sufficiently accounts for the reason why even at the present day people are most partial to having them in the funeral train of their dead: as we have said, if the dead man be not entitled to have them himself, the family will borrow them for the purpose from titled friends or from mandarins with whom they are acquainted (p. 360)." These "'long-legged boards,' or *tîng kha pâi* [*ch'ang chiao p'ai*] (長 脚 牌)," like their prototype the *shah*, indicate by emblematic figures the rank of the deceased. "Apart from the testimony of Ching Khang-ch'ing, who explicitly states this . . ., it is proved by the yak tails suspended over them, these objects being in ancient times symbols of official dignity."—*Ibid.* i. i. 186.

"A red pavilion with an embroidered cover of the same colour, and accompanied by a couple of red decorative flags, appears next in the procession. It contains a shallow slide box of red lacquered wood, which is placed erect on one of its small sides, so that the slide on which gilt dragons are sculptured comes in front. A gilt flower is affixed to either side of the box. This is designed as a receptacle for one or more square plates of thick slate stone on which a short necrology of the dead is engraved, and which are to be deposed in the grave [*cf.* vol. ii. ch. 14]. Still, for some obscure reason, these stones are not enclosed in the box, but are brought to the grave by a common coolie, who makes his way thither after his own fashion, regardless of the procession. This course of conduct is so generally followed, that the box, which, like all the funeral instruments, is provided by the undertaker, in most instances has not even a side which can be opened, and is merely the imitation of a box. Inside the pavilion one may also see a censer with burning incense, and two tapers in candlesticks, all likewise destined to be put into the grave. In many cases these implements of worship are conveyed in a special pavilion, which precedes that with the box for the slate stones."—*Ibid.* i. i. 166.

"For relations, acquaintances, or friends, who wish to give a visible testimony of their sympathy with the mourning family and the deceased, it is customary to enlarge the funeral train with a red pavilion carried by four bearers. In this way they express their willingness to provide the family with the necessary means of carrying the soul and the implements of burial to the tomb; in other words, each pavilion represents a gift to help the family in defraying the expenses of the obsequies. A piece of inscribed red paper, posted on the back panel, shows who the donor is or the donors are; it expresses this in plain terms, *e.g.*: 'The family Wu allied by marriage' (姻 家 吳 府), 'The sworn brethren' (金 蘭 兄 第), and the like. Not seldom each pavilion is escorted by a couple of lanterns carried on poles, and bearing the same inscription as the back panel; two boys with decorative flags act as satellites to the pavilion, and in most cases a band of musicians marches ahead as another appendage.' "These vehicles, which are called *tsân ting* [*ts'an t'ing*] (贊 亭), 'auxiliary pavilions,' or *kheh ting* [*k'o t'ing*] (客 亭), 'guest pavilions,' remain quite empty, because the family have nothing to put inside. It is scarcely necessary to say that in funerals of persons of distinction they are often numerous; we have sometimes seen a row of several dozens. The undertakers, who provide them, do not charge much over one dollar or one dollar fifty cents apiece, bearers, musicians, flags, and lanterns included, so that the costs do not weigh heavily upon the donors. For the mourning family, however, the case is different, because custom compels them afterwards to repay the attention of all these officious people with a present equal to the outlay they have made. No wonder, therefore, that the family often see with reluctance such numerous proofs of friendship enforced upon them. At all events the undertaker is the greatest gainer, as this useful man wisely increases his own profits by providing fewer bearers and fewer musicians than have been contracted for. It is easy for him to do this. For most of the persons who are so intimately connected with the dead as to send a pavilion are also in duty bound to accompany him to the grave; and, whereas they then walk in the rear of the procession, they cannot see what happens so far ahead of them. But, not likely to be fleeced if he can avoid it, many a donor sends a servant to guard against the rapacious proceedings of the undertaker. This ingenious measure generally entails much clamorous discussion and, occasionally, hot quarrels."—*Ibid.* 166–7. The custom of sending these pavilions, etc., is a survival of that according to which, under the Chou dynasty, horses and carriages were sent by princes to join in the funeral processions of deceased servants of the State. (See LATER FEUDAL PERIOD.) "After the auxiliary pavilions comes the last and most important subdivision of the train, in which are the soul, the coffin, and the mourners. It opens with a dark blue pavilion, having a dark blue roof, and, besides a band of musicians, is escorted by two dark blue decorative flags. It contains a small closet or tabernacle, beautifully carved, painted and gilded, and having folding doors in front; inside this stands the tablet with all its adjuncts. . . . In front of the tabernacle are arranged the 'incense-burner for the ancestors,' . . . and two candles, each inside a small lantern to prevent the wind from blowing them out. At the burials of the rich, the censer and the candles, which are respectively designed to gratify the olfactory nerves of the soul that follows behind, and to light it along its way to the grave, are carried apart in a green pavilion, just ahead of that which contains the tablet. Four so-called *tsiáng sin-tsú ting* [*chang shên-chu t'ing*] (掌 神 主 亭) or 'directors of the pavilion with the tablet' walk in this part of the procession. If practicable, they are sons-in-law or other distant relations of the dead. They are dressed in the mourning prescribed for each special rank of relationship to the deceased." "At the back of the pavilion containing the tablet, outside, at each corner, hangs a white lantern of paper, bearing the inscription: 'Hundreds of sons and thousands of grandsons' (百 子 千 孫). And on the frontispiece of this vehicle two narrow boards are suspended perpendicularly on the right and left. In characters, neatly carved on a coloured ground, each of these boards bears one line of a distich referring to the soul. As an illustration of Chinese funereal poetry we quote the following specimen:—

'Bestriding a crane, he has already departed for the Western Heaven,
'But we have called his soul back to this earth, and it obligingly abides amongst us.'"—*Ibid.* i. i. 171–2.

"The tablet inside the pavilion is not yet inhabited by the soul. It will be so when, after the completion of the interment, the procession returns homeward from the grave. On the way out, the soul dwells in the temporary tablet or *hûn pêh*, which is placed in the next vehicle. This is a palanquin of state, like those in use with official persons, and therefore called *toā kiō* [*ta chiao*] (大 轎), 'great palanquin'; many people also call it *hûn kiō* [*hun chiao*] (魂 轎) or 'sedan-chair of the soul.' The painted portrait of the deceased, which, as we saw . . ., is also a seat for his soul, is likewise placed inside this sedan chair, suspended from the back panel. Four relatives or friends in mourning dress escort the soul in the quality of so-called *tsiáng kiō* [*chang chiao*] (掌 轎), 'directors of the palanquin,' and two 'orange-lanterns,' shaped, inscribed, and carried like those in the van of the train, are scarcely ever wanting. These move in front, to assist the soul in keeping the right path to the grave. In a great many cases two white paper lanterns, which display in red characters the titles of the deceased, are suspended from the back of the palanquin, at the two outside corners."—*Ibid.* i. i. 172.

"If the burial follows quickly on the demise, so that the portrait of the deceased is not yet ready, there is as a rule no state palanquin. The provisory soul-tablet is then placed in the blue pavilion, behind the other tablet, or at the side of it. But if the burial takes place while the great Buddhist mass, already mentioned on several occasions, is in course of celebration, there is then always a palanquin of state in the funeral train. It now contains a so-called *hûn sin* [*hun shên*] (魂 身) or 'body for the soul,' *i.e.*, a bamboo-and-paper image in which the manes of the dead man reside during that mass in order to receive the homage and the sacrifices of the living, and which in consequence is an object of the greatest attention and solicitude during the long series of days those ceremonies last." "The Buddhist clergymen, who have officiated at the farewell sacrifice . . . and are to

continue their salutary work of opening the road for the soul on the way to the grave, march immediately in front of the vehicles described. Their keeping so near the same prevents evil spirits and contrary influences from inserting themselves between them and the soil, and so the effects of the meritorious sacerdotal work cannot be neutralized. A few performers of music are adjoined to the priests, to give a certain solemnity to their ceremonious mutterings."—*Ibid.* i. i. 173.

"At the burials of bearers of an official dignity, either purchased or gained by merit and literary attainments, there is in the train still another seat for the soul in the shape of a very long streamer or pennon of dark rosy satin, flying from the top of a pole. It is known as *ling tsing* [*ling ching*] (靈 旌), 'soul banner.' . . . It usually varies in length from two to three metres, having a width of from three to four decimetres. At the top it is attached to a small triangular wooden board, which hangs from the top of the pole by means of which the streamer is carried aloft. A decorative strip of blue satin is affixed over the upper rim of this board, in such a way that the ends may hang down a few feet on either side of the streamer and freely flutter about in the wind. To prevent the streamer itself from flying up too high and getting entangled with the surrounding objects, a small painted board of sufficient weight is affixed to its lower extremity." "As in the case of the *hûn péh* . . . the 'soul banner' is rendered fit to be an abode for the soul and so to replace the body enclosed in the coffin, by means of a description of the deceased, which is painted on it in one single column of characters running down the middle from top to bottom. A second column of smaller characters mentions the name, the titles and dignities of the person who, theoretically, wrote the inscription." "The characters on such streamers have the square form generally used in printing, or, in other words, they are the so-called *pien tszĕ* [*pien tzŭ*] (扁 字), 'flat or low characters,' or *Sung thi tszĕ* [*Sung t'i tzŭ*] (宋 體 字), 'characters of the shape in vogue during the Sung dynasty.' They are painted on the silk with a yellow water-colour in which some glue is mixed to fix it; in a few cases the whole inscription is gilt, which looks very pretty on the pink ground."—*Ibid.* i. i. 173–6.

"It would be a mistake to suppose that such a soul banner is merely a symbolic representation of the deceased. On the contrary, it *is* actually the soul, or, at any rate, the streamer and the manes of the dead person are most intimately fused into one. At the interment it is placed in the tomb upon the lid of the coffin, and thus the soul is made to establish itself in the grave, from whence it is expected henceforward to issue blessings of every kind to the offspring. The part which the streamer performs in the obsequies being of so much importance, it is natural that in every respect it becomes an object of great solicitude. It is written by a person invested with an official rank, the higher the better, because in this way the soul, which it harbours, is surrounded, nay infused, with influences which cannot fail to endow it with the capacity to help to high official dignities from out of its tomb. But this end is attained all the same if the grandee merely writes the banner in theory, that is to say, if his illustrious name and his titles only figure on it as if he had actually written it. Accordingly, the relations simply ask his permission to use his name for the purpose, and then the streamer is inscribed by an ordinary workman, or by some clever member of their own family. A grandee will scarcely ever refuse to lend his name and titles for a funeral streamer when a fashionable family applies to him, because he knows custom requires that he should be liberally rewarded for his kind permission when the burial is over."—*Ibid.* i. i. 176.

"To increase the power of the streamer for ensuring titles and dignities to the offspring, it is nominally carried to the tomb by a military mandarin, either titular or in active service. This grandee appears in the procession on horseback, in the rear of the customary cortège of lictors, servants, and bearers of title-boards; and if he is actually in the service of the State, he is generally escorted by a certain number of soldiers with matchlocks, swords, and other weapons of every description, in many instances with bows and arrows. In everybody's eyes this cortège adds great dignity to the obsequies, and, of course, the family are very proud of it. Civil mandarins are never engaged to act as bearers of a soul banner. For, these worthies cannot ride on horseback; they scarcely ever use any other means of locomotion than a covered palanquin, and a man sitting in such a vehicle cannot possibly carry a long object like a streamer on a staff." "The work [of carrying the streamer] is actually done by a servant in a kind of uniform, or even by a dirty coolie who walks on foot behind. . . . The practical effect which the streamer is expected to have on the glory of the offspring, is not in the least diminished by this measure."—*Ibid.* i. i. 176–7.

"Finally we come to the rear of the procession, which consists of the coffin and its attendant mourners, musicians, and others. Two youthful male relations of the family, dressed in white mourning, come first, each with an oblong piece of white linen, suspended from the top of a pole like a banner, and inscribed with the characters 功 布, 'linen of which mourning clothes of the third and fourth degree are made.'" "A band of eight musicians comes next. They play a gong, a drum, a pair of cymbals, and, instead of the detestably discordant clarionets, two or three stringed instruments and a flute. Four so-called *tsiáng pán* [*chang pan*] (掌 板), or 'managers of the coffin,' being kinsmen or friends of the family, in white garments, walk immediately in front of the bier, which is, as their title indicates, intrusted to their care. In many parts of southern Fuhkien, and sometimes in Amoy also, these men and the musicians ahead of them are preceded by either two or four bearers of long torches of bamboo splints drenched with oil or other combustible matter, designed, like the lanterns at the head of the procession, to light the spirit of the dead along the road. If the torch-bearers are members of the family, they are dressed in a mourning attire; but when common coolies are hired for this work, a simple band of white cloth is tied around their foreheads."—*Ibid.* i. i. 177–9.

"The coffin follows immediately behind the four *tsiáng pán*. The manner in which corpses generally are conveyed to the tomb and the instruments used therefor are easily described. . . . The coffin is placed on a strong oblong frame of wood, which is strengthened by some extra bars inserted athwart. . . . When this bier has been placed on a couple of trestles . . . , and the coffin arranged lengthwise upon it, a triangular frame of wood is inserted upright in the middle of each long bar of the bier, in two holes made there for the purpose. Across the lid, through the tops of these two triangles, which reach a little over the coffin, is then passed a strong piece of wood; finally, on either side of the coffin, a strong rope passing over this cross-beam is tied firmly to the bier on the right and left of each triangle, so that all the different pieces of the catafalque are held tightly together and cannot be dislocated unless the ropes are removed or snap off." "Over this bier, which is popularly styled a *ch'ia* [*ch'ê*] (車) or 'carriage,' a large rafter, called 'big ox,' *toā gû* [*ta niu*] (大 牛), or 'big dragon,' *toā ling* [*ta lung*] (大 龍), is made fast by means of an iron bolt, which passes loosely through a hole in the middle of the rafter and the centre of the cross beam mentioned above. It will be clear now that, when the coffin bearers take the rafter upon their shoulders, the whole catafalque hangs down and can turn on the bolt as on a pivot. This is of great advantage in carrying the cumbersome burden through the narrow alleys, . . . otherwise short corners could never be turned. With the better classes, the coffin and hearse are generally so bulky and weighty that a good number of men are required to remove them. Therefore, at each end of the rafter a cross pole is contrived by means of a loose bolt of iron or wood, so that there is room for four bearers, one at each end of these poles. This number can be doubled by fixing to each end of the two cross poles another cross pole in a corresponding manner, and so on. Thirty-two may be said to be the largest number of bearers ever employed in Fuhkien; even sixteen are rare, eight being the usual number, also with the well-to-do. A desire to make a show is as often an element in determining the number of bearers as the weight of the coffin itself."—*Ibid.* i. i. 179–80.

"No family, not even the poorest, will ever send a kinsman to the grave without having the coffin concealed on the road thither by means of a so-called *koan tà* [*kuan chao*] (棺 罩) or 'coffin cover,' . . . a rough frame of bamboo is placed over the lid, underneath the rafter. Over this frame is cast a sort of roof-like awning, consisting in most cases of drapery, sometimes of silk; further, a piece of the same material is suspended by tapes from each of the four sides of the frame, so that the coffin is entirely hidden from view. In the case of a male person the *koan tà* is red, in that of a woman it is dark blue. On all sides it is beautifully embroidered with figures of gold thread and variegated silk. The side curtains generally exhibit episodes illustrating the most striking historical or would-be historical instances of filial devotion, which Chinese moralists have for centuries held up to the nation as standard examples and models for all generations present and to come. On the front curtains are a couple of dragons rising out of the waves, surrounded by clouds and with a sun between them; the back displays a tiger or unicorn, the top exhibits dragons, sundry ornamental flowers, and figures representing clouds. Thanks to these clouds and to the dragons which produce the same in their quality of watergods, the greatest blessings which the universe can bestow, *viz.*, fertilizing rains causing crops to grow and so giving food, raiment, and wealth, surround the dead, and he may avail himself of those blessings for dissemination among his descendants from out of the tomb. The unicorn enables the dead man to cause famous persons to be born into the family. . . . And as to the tiger, its portrait keeps evil spirits away from the coffin, all Chinamen being convinced that ghosts and demons fear nothing so much as this monster. For this reason there is also on the most conspicuous part of the catafalque, *viz.*, over the great bolt by means of which the latter is suspended underneath the rafter, the wooden effigy of a tiger, nicely gilded and painted."—*Ibid.* i. i. 180–1.

Catafalques.—"The modern Chinese still embroider dragons and a tiger on the drapery of their catafalques, on the top and the two opposite sides."—*Ibid.* i. i. 317.

"The catafalques are not everywhere in China made and decorated after the same plan. In many parts of the empire, where the narrowness of the streets is no impediment, they are, for rich burials, of a size bordering on the gigantic. Instead of being suspended from one single pole, the coffin is then placed lengthwise upon two parallel rafters, which at the same time bear a huge square canopy, the corners of which are elegantly turned up after the well-known Chinese house-roof fashion. Underneath this canopy embroidered screens of drapery hang down along the sides of the coffin, which in this way is rendered invisible, while other pieces of drapery are affixed to the rafters, so as nearly to reach the pavement when the catafalque stands still. A catafalque of this description may have a length of over three metres, with an equal height, reckoning from the tiger at the top of the canopy; it is carried by means of a similar system of poles and cross-poles as has been described above, and often requires thirty-two, and even sixty-four bearers. Catafalques of various sizes and styles fall between the ones described and those used in Amoy by the very poor, who merely have a rafter tied lengthwise over the lid by ropes passing underneath the bottom of the coffin, with some pieces of coarse drapery carelessly thrown over it." All the modern catafalques are imitations of the wheeled catafalque used in the earliest times.—*Ibid.* i. i. 181–2.

[For coffin-bearers, and their duties, etc., and associations for assisting burial, see *ibid.* i. i. 191–3.]

Following the corpse to the grave.—"If in by-gone ages the family members and clansmen, who drew the coffin gravewards, howled and chanted so loudly that gags had to be used to muffle their voices, it is not so surprising to see that still now-a-days the nearest kinsmen of the dead, while following the corpse to the grave, howl and lament bitterly. The wailing sons of the dead man follow immediately behind the coffin, in the deepest sackcloth mourning, and with straw sandals on their feet. Their pigtails are unbraided, so that the long dishevelled hair flows down their back from under a mourning cap of sackcloth. Each one of them carries the small mourning staff already mentioned. Sometimes one or more of the sons walk at the side of the coffin, having one hand on the catafalque as if to help in conveying it gravewards, or as if to prevent it from carrying away their beloved father or mother. It is by no means unusual to see a man walking on either side of the eldest son to support him, the principal mourner being supposed to be so deeply bowed down by grief as to be unable to walk alone."—*Ibid.* i. i. 193.

"Like every important rite in respect of the disposal of the dead, the journey to the grave is connected with loud lamentations on the part of the nearest kindred. Their melancholy concert may often be heard at a great distance. But, like all Chinese death howling, this too is chiefly a ceremonious wailing, a rite prescribed by the laws of custom and having little concern with real feelings of affection and grief . . .; in fact, tears are very rarely shed, and the howling is done with the same ardour and passion even if the dead man have departed this life years ago and can scarcely be remembered by the offspring. It is quite natural therefore that the wailing should cease in the open field, where there are no passers-by, and that it should immediately be resumed when the procession arrives at inhabited quarters, meets with remarkable persons, or approaches dwellings of note."—*Ibid.* i. i. 194.

"Should ceremonies instituted to gain the soul admission to the Western Paradise . . . have been celebrated before the burial, and a *hoan* provided by the family as a seat for the soul . . . this streamer is carried in the funeral procession by the eldest son of the principal wife of the dead man, to the exclusion of the elder sons by concubines or by adoption. Only in the event of there being no sons by the principal wife, have the other sons a right to carry it and thus to support the soul on its way to and from the grave. When the burial happens to take place while the great requiem mass . . . is being celebrated the streamer also appears in the train, for during these rites likewise it is made to play an important part."—*Ibid.* i. i. 193.

"Those of the sons who cannot attend the burial because they live abroad or are prevented by severe illness from leaving their homes, are represented in the funeral cortege by a complete suit of sackcloth garments together with a mourning staff, carried either on a tray or in an open basket by a servant or a remote kinsman in white mourning apparel. Besides implying that the child, who is unable to perform in his own person the sacred duty of burying his father or mother, is present in mind, the custom serves to show the number of sons the deceased has left behind, male offspring being in China not only a reason for happiness, but also for display and pride. Should the eldest or only male descendant of the deceased be an infant, it is, in sackcloth dress, taken to the tomb, in the arms of its mother or nurse seated in a sedan chair. Other male babies are usually represented by a suit of mourning clothes each, but infant sons, who are able to walk, are always taken to the tomb, carried, if necessary, on the back or the shoulder of full-grown relatives. They are attired in sackcloth garments quite similar to those of their elder brothers. Some mothers think it prudent to tie a copper coin between their eyebrows by means of a red silken string fastened behind the head, to protect, as they think, their tender age from the attacks of nefarious influences."—*Ibid.* i. i. 193–4.

"Besides the sons, all the grandsons and great-grandsons in the male line of descent walk behind the coffin, also, in the order of proximity, the brothers, male cousins and other relations by blood. Everyone of them wears the deepest mourning attire prescribed for his specific degree of kinship to the dead. Finally come such distant relatives as take an interest in the deceased and his family, as also the friends and acquaintances, many of whom, not falling within the terms to wear mourning, are dressed in their best attire, or in the ceremonial robes *thò p'aò* [*t'ao p'ao*] described [above]. . . . Scarcely ever is a dead man followed to his last resting place by anyone occupying a higher rank in the hierarchy of the family because the rigid rules of social life, which demand that every one should adhere firmly to his position of superiority or inferiority in the domestic circle, cannot be changed by death itself in a country where the line of demarcation between the living and the dead is so faint. A father does not follow his child to the grave! This rule, however, does not hold good for the dead who belong to the same generation and are of inferior rank only on account of their age or sex; *e.g.*, a brother may appear in the funeral of his sister, an elder brother in that of his younger brother, a husband in that of his wife. But a husband does not *follow* his consort to the grave. He never followed her, *she* always followed *him*, and so it must ever be even after death. Accordingly he walks in front of her coffin wearing a specific mourning costume prescribed for widowers and carrying a long staff."—*Ibid.* i. i. 195.

"The female members of the family, even the next of kin such as the wife, the unmarried daughters, and the daughters in-law, only follow the coffin at the outset. Having gone a few dozen paces, they return home, without interrupting their wailing, always taking another street, as if ashamed that people who have seen the procession start should perceive that they have not followed it to the grave. It is the execrable custom of disabling the women by crimping their feet which compels them to abandon the procession so soon. The holy ancients acted otherwise, so that the present generation is blameworthy from an orthodox point of view, which accounts for the women's choosing another way in going home." "The ancient rule [see LATER FEUDAL PERIOD] probably still obtains in many parts of the empire. In southern Fuhkien it is, at the present day, only followed in the event of the dead man having no male issue, so that all the duties of the sons devolve on his wife or unmarried daughters. These women are then carried behind the coffin in sedan chairs, if their crimped feet prevent them from walking, and they continuously wail and lament, as the sons would do in like case. Whether they accompany the dead for only a few paces or all the way to the tomb, the females are dressed in the deepest mourning prescribed for their respective degrees of relationship."—*Ibid.* i. i. 195–7.

Exceptional rites.—"To accompany a dead man to the tomb is called *sàng tsòng* [*sung tsang*] (送 葬), 'to see off a burial.' The persons who perform this sacred duty, and those who follow behind them to show affection and esteem to the deceased and the bereaved family, generally form the rear of the procession. Hence we might herewith close our description of the funeral cortèges if there did not remain a few things to be mentioned which appear in the same only exceptionally." "In the first place, in many parts of the Empire one may see, a little in front of the pavilion with the soul tablet, a set of sacrificial meats, dainties and instruments of worship. These are carried either in one or more pavilions, or on large, square wooden trays, each suspended from a pole which rests on the shoulders of two men. The eatables are destined to be offered to the soul at the grave. They have formed a part of those which were placed on the tables at the great farewell sacrifice. Moreover, an assortment of fresh offerings destined for the God of Earth is carried gravewards in a similar manner." "We have said that such sacrificial articles only exceptionally appear in the procession. In fact, excepting [at] the burials of high officials, when an entire goat and pig may be seen amongst the offerings, the latter are nearly always carried to the tomb by men who go their own way, regardless of the train, taking the shortest cut, to save time and labour."—*Ibid.* i. i. 197.

"As a second category of things seen only exceptionally at burials, must be mentioned large square pieces of coloured silk or broadcloth, each fastened to a lath which is suspended from

the top of a pole carried aloft, in the same manner as inscribed banners used to be carried amongst Europeans. They are decorated with eulogistic phrases implying respect and veneration for the dead, or referring to him and his future fate. Amongst the rich, such honorary banners are presented by friends and relatives to families who celebrate a great Buddhist mass for the repose of a deceased kinsman, that they may use them for decorating the walls of the hall. Hence they do not appear at a funeral unless that mass has already been celebrated, or is in course of celebration when the burial takes place." "In many parts of the empire it is customary to ornament such banners with boughs of green leaves affixed to the top of the pole."—*Ibid.* i. i. 199.

"In the event of the coffin having been kept unburied for a considerable time, it is not unusual to see on the way to the grave a live white cock with its feet tied standing upon the catafalque. In many instances, this bird is kept in a state of drowsiness by spirits which are poured down its throat, lest it should endeavour to fly away or disturb the bearers by fluttering its wings. Though most Chinamen confess they do not know the meaning of this custom, saying it is merely a legacy handed down by a wise ancestry to its offspring who without reasoning must act as they have done, yet it is not difficult to find a plausible explanation of it, if notice be taken of some ideas which are prevalent amongst the people about the cock and expressed in native books." "Since very ancient times the cock has been the acknowledged emblem of the sun, because every morning it loudly announces the rise of the God of the Day. The ancients even went so far as to identify it with the sun: 'It is,' so an author of the 11th century tells us, 'an old saying that in the sun there is a cock, and in the moon a hare.' But, whereas the sun is the chief embodiment of the great *Yang* element which . . . represents the light, warmth and life of the universe, the cock naturally represents also an important depository of *Yang* matter: 'The cock' says the *Ch'un-ts'iu shwoh thi tsze* (春秋說題辭) or Disquisitions on passages occurring in the *Ch'un-ts'iu*, 'is the emblem of the accumulated *Yang* (*i.e.*, the sun) and of the South Etherial things which partake of the character of fire and of the *Yang* element, have the property of flaming up; hence, when the *Yang* rises above the horizon the cock crows, because things of the same nature influence each other.' Now . . . the human vital energy also consists of *Yang* matter. Therefore it is not surprising to find that the Chinese have recourse to a cock, in order to strengthen a soul which is enfeebled to a great extent by having been so long compelled to wander about miserably in consequence of the delay of the burial, and which must make a wearisome journey to the grave. In this they act on exactly the same principle which teaches them to place a candle or lamp on the couch of persons who have just breathed their last . . . and to carry lighted lanterns and torches in funeral processions." "Besides, the use of the cock in funerals serves still another purpose; it keeps spirits of darkness away from the coffin. Indeed, such spirits being identified in Chinese philosophy with the principle of darkness *Yin*, everything which is embued with much *Yang* matter naturally exercises a neutralizing, nay, destructive influence over them. Moreover, it is an article in the creed of all classes of Chinese society that the spirits of darkness, being unable to withstand daylight, are every morning put to flight by the crowing of the cock, standing as they do in perpetual awe of this bird. . . . We must not omit to note . . . that Chinese books furnish evidence that white cocks were anciently preferred to those of other colours for exorcising purposes, a fact which explains the reason why now-a-days such birds are used in funerals to the almost total exclusion of others. . . . Some light is also thrown on the custom of placing a white cock on coffins by the following passage, occurring in the *Pen-ts'ao Shih i* (本草拾遺) or 'Omissions in the works on Botanics,' a work written in the first half of the 8th century by Chen Tsang-khi (陳藏器): 'If a white cock be fed during three years, it is fit to be employed by disembodied souls to serve them.'"—*Ibid.* i. i. 199–201.

[For the procedure when two persons are buried at the same time see *ibid.* i. i. 201–2.]

General character of procession.—"Let us now make a rough estimate of the number of people composing a funeral procession of the highest order. In some that passed before us we counted more than fifty pavilions, including those contributed by friends and relations. Now calculating that each is carried by four men and escorted by two flag-bearers and a band of eight musicians, we obtain the considerable number of seven hundred. Add to these the mandarins' escorts, the persons in charge of the more important pavilions and of the coffin, the sixteen or thirty-two coffin bearers, the numerous mourners, friends, and kinsmen in the rear, and so forth, the total number may without exaggeration be fixed at over one thousand persons. This cipher will still be considerably increased in wet weather, the undertaker having then an extra number of men in the train for the purpose of placing covers of oiled paper or linen over the catafalque and the roofs of the pavilions whenever a shower occurs, lest the costly material should be spoiled by the rain. Against this the highest cipher we may place as the opposite extreme that of burials of the very poor, who have to content themselves with what is strictly required, *viz.*, one paper-scatterer, one shabby pavilion for the soul tablet escorted by one or two clarionet players only, and four coffin bearers, with a few mourners in the rear."—*Ibid.* i. i. 202–3.

"It would be a mistake to imagine that a Chinese funeral presents an edifying spectacle bearing the character of a civilized people under mournful circumstances. By far the most inspire a foreigner from the West with a feeling of disgust. In order to make as much money as possible, the undertakers employ as bearers of the coffin and the sundry pavilions the very scum of the streets, abject individuals addicted to opium, the upper parts of whose bodies are naked in summer, and in winter covered with only a few dirty garments. As to the banners, lanterns, &c., they as a rule are entrusted to the care of impertinent, dirty, paltry boys, who are to be had cheaper than full-grown men. Even those amongst the hirelings who wear something like a uniform do not make a more favourable impression, their clothing bearing traces of very long usage and a total absence of any idea of cleanliness. . . . 'You are the bearer of a soul pavilion,' and . . . 'You are the bearer of a decorative flag,' are in Amoy favourite expressions in the mouths of people when calling each other hard and ugly names, and also daily on the tongues of mothers when scolding their children." "As soon as the procession starts, these wretched, shabby creatures deem it prudent to yell and cry in a most unedifying manner. The bearers behind every pavilion give directions to those in front by loud screams and revilings, and are answered in like manner. A number of men run up and down the procession to maintain order, and to prevent the one part from going too fast and the other too slow, and they are continuously yelling and shouting at the top of their voices. The lictors, at short intervals, send forth their loud Jû-o-o-o, accompanied by the deep tones of the heavy gongs. But all the hubbub produced in this way is as nothing compared with the shrill tones of the detestable clarionets, of which there are so many in the train that the noise of the still more numerous drums and cymbals, mingled with the long plaintive sounds of the copper sackbuts, is drowned by them. After all, seeing that each band plays as it thinks best, regardless of those marching in the immediate neighbourhood, and seeing, moreover, that streets in Southern China are for the most part mere narrow lanes crowded with busy passers-by, through which the procession can scarcely make its way without endless altercations, the reader will easily understand that a Chinese funeral is anything but a decent mourning ceremony intended as the last honour to the dead. From the variegated pavilions, flags and lanterns, and from the numerous bands of musicians, a foreigner not accustomed to such scenes might easily imagine he saw before him a cavalcade of semi-barbarians going to a feast." "Chiefly owing to the narrowness of the streets and the numerous impediments from the pedlars, coolies and shopkeepers, with which the train is every minute coming in contact, the order is continually being disturbed, in spite of the most strenuous efforts of the men appointed to maintain it. Even the undertaker, who has generally to provide for several burials on one day, will cause large gaps by hurrying on the van, in the hope of compelling the rest to make haste. Often, on entering a city, we have seen the van of a funeral train calmly waiting outside the walls, and have met the rest of the procession in the streets a long while after. At nearly all funerals the undertaker is present in person to superintend the arrangements, and this reminds us of the *designator* of ancient Rome, who used to walk at the head of the cortège followed by a certain number of lictors." "It is a fixed rule for burial processions to move forward to quick time. This may have something to do with a rescript in the *Li ki* (ch. 10, l. 59) to this effect: 'It is desirable that in affairs of mourning there should be urgency, and that festive affairs should be gone about in a leisurely way. But, although affairs of mourning require urgency, one must not violate the prescribed rules.'"—*Ibid.* i. i. 203-5.

Sending back friends, etc.—[The sending back of friends at three or more spots, and the behaviour and superstitious acts of spectators, are described in *ibid.* i. i. 205. See also pp. 206-7.]

Interment.—"In case the grave is situated on an eminence, the place where the ground begins to ascend . . . is selected as the last spot for 'dismissing the guests.' At this final summons all the friends and acquaintances retire, because . . . the presence of persons whose horoscopes do not agree with the hour of burial may have a bad influence upon the fate of the deceased, as well as on that of the owner of the horoscope." "Lest these retiring friends should have to make the long journey back on empty stomachs, the family of the dead have taken care to station at this spot some members of a numerous class of people who make it their special vocation to move about the streets with a portable furnace, selling cooked food to passers-by, workmen, etc. Macaroni and vermicelli soup, mixed with boiled shrimps and oysters, is the special fare on such occasions, the long threads of this food being considered very useful in counteracting the life-shortening influences which the contact with death may have exercised. For every bowl of soup delivered, the pedlar receives a stamped counter-check from a friend or relative of the family who is stationed for the purpose on the spot with a large provision of such documents; when the burial is over, he then calls at the house of mourning and converts them into hard cash. Similar soup stalls are in some instances also stationed on the other spots where guests leave the procession."—*Ibid.* i. i. 207–8.

"The bearers of the catafalque, setting down their cumbersome load, break it up entirely. They tie the big rafter lengthwise over the coffin by winding some ropes several times around both, and, casting the pall loosely over it, they carry the coffin uphill, disembarrassed of all superfluous weight. This practical measure is not taken when the grave is situated in the plains, and the path presents no difficulties to carrying the whole catafalque to the edge of the pit. All the empty pavilions presented by the friends are left behind with the hearse, as well as their bands of musicians."—*Ibid.* i. i. 208.

"Arriving at the grave, the procession finds the pit perfectly ready to receive the coffin. It has been dug by some of the so-called *thó kong* [*t'u kung*] (土工), or 'earth-workers,' under supervision of the same professor of geomancy who was employed by the family for finding out the grave. . . . If the burial has been deferred over seven days, so that it has been necessary to select a fit hour for lowering the coffin . . . it may happen that this hour has not yet come when the procession arrives, in which case they must wait patiently on the spot. The coffin having been set down on the edge of the pit, everybody, the mourners not excluded, sit down on the grass, or idly stroll about, gossiping and smoking. No lamentation, not a single sound of mourning is heard all the while, and the music too keeps perfectly silent."—*Ibid.* i. i. 208.

"In many instances, it is considered highly salutary, even necessary, to subject the pit to a certain preparative and purgative process. One of the grave-diggers, descending, places one or more copper coins, provided by the family for the purpose, in each of the four corners, saying in a loud voice: *An tsî*^{n}, *beh hō kiá*^{n}*-sun tsin tsâi* [*An ch'ien, yao yü chien-sun chin ts'ai*] (安錢要與囝孫進財), 'I depose money here, in order to cause your sons and grandsons to acquire wealth.' All the bystanders respond to this by exclaiming in the affirmative *hó ah*. It is clear we have here to do with a continuation of the practices observed at the preparation of the coffin for receiving the body [see *supra*] and that, therefore, the ceremony is intended to cause the grave to emit influences which may assist the offspring in earning money. The five kinds of cereals and a few iron nails are subsequently scattered about over the bottom of the grave, with accompanying sentences worded like those pronounced on sowing the same things in the coffin."—*Ibid.* i. i. 208–9.

"This *an khòng* [*an k'êng*] (安壙) or 'deposing things in the pit' can, however, only secure wealth, food and offspring to the family if all the contrary influences, which might prevent the grave from freely operating in the way desired, are exorcised away. For this purpose, a fire-pan in which smoulders some 'purification-incense' . . . is held inside the pit by one of the grave-diggers and moved along its four sides. Much more effective, however, than this *tsing khòng* [*ching k'êng*] (淨壙) or 'purging the pit,' is a ceremony which in exceptional cases is performed at burials of the rich by the professor of geomancy. Barefooted, with blackened face and dishevelled hair, this worthy man, otherwise extremely dignified in his habits, as it becomes every man of learning in China to be, stands, sword in hand, on the summit of a neighbouring knoll, where his observations have taught him the so-called *t'ien-tik hng* [*t'ien-tê fang*] (天德方) or 'region of the benefits of the heavens' is situated, in other words, where the centre of the beneficial influences of nature lies, which the art of geomancy purports to converge upon the resting places of the dead. Having stood there for a while, crying and wielding his sword like a raving madman, in order to induce the said influences to rise out of their latent state and begin their operation upon the grave immediately, the professor scatters about him a great number of sheets of mock money for the unseen spirits which, if not propitiated in this way, might cool their wrath by neutralizing the effects of his work. Then he suddenly rushes down-hill, yelling at the top of his voice and brandishing his sword, with the object of bringing about a general *sauve qui peut* among the spectres. Subsequently he casts himself into the pit, wallows, for a moment at the bottom, scatters more paper about him, and finally climbs out, to allow the coffin-bearers to let the coffin down. All the while the musicians make as much noise as their drums, gongs, cymbals, and sackbuts can possibly produce, thus co-operating with him in driving the evil agencies away; besides, a great quantity of crackers are fired, and shots out of blunderbusses of the kind which are employed in China for firing salutes for mandarins." "This odd proceeding of the geomancer goes by the term *hoah soa*^{n}*-ling* [*ho shan-ling*] (喝山靈), 'to halloo the influences of the mountains,' or *kún soa*^{n}*-ling* [*kun shan-ling*] (滾山靈), 'to stir these influences up, to make them boil.' It will easily be understood that this matter entails an extra expense for the benefit of the professor. Indeed, dispelling evil spirits is a business so extremely dangerous, that nobody can be reasonably expected to undertake it unless adequately indemnified for the risks he runs."—*Ibid.* i. i. 209–10.

"The coffin-bearers now place the rafter lengthwise over the pit and unknot the ropes by means of which the coffin is affixed underneath the rafter, slowly veering them away amidst the beating of gongs, cymbals, and drums. In case the dead possessed an official rank entitling him to a salute of blunderbusses on entering or leaving an official mansion, the same number of shots are fired when his body is lowered into the grave. The musicians play their instruments with all the power that is in their hands and lungs, the lictors shout out their *Jû o-o-o*, and the mourners loudly wail in obedience to the *I li*, which says in its description of the funeral rites for official persons: 'They now lower the coffin into the grave, the principal mourners wailing and stamping their feet an unlimited number of times.' Most of the bystanders recoil a few paces, lest their shadows should fall into the grave and harm thus be done to their persons. In this they act on the same principle as those who attended the coffining, these persons . . . preventing their shadows from being shut up in the receptacle of the dead. The grave-diggers and coffin-bearers, however, do not take this precaution. They deem themselves sufficiently beyond the reach of evil consequences by having wound the long strip of cloth, which in Southern Fuhkien people of the lower classes are in the habit of wearing round their heads, tightly round their waists, so that their shadows cannot be separated from their bodies. The geomancer and his assistants are wise enough to stand on the side of the grave which is turned away from the sun. Many men pick a blade of grass and put it in their mouths, this likewise serving, as they think, to protect them from any evil connected with the interment."—*Ibid.* i. i. 210–11.

"As soon as the coffin has reached the bottom of the grave, the professor approaches, to ascertain by means of a compass and with a thread which he stretches lengthwise over the pit, whether the corpse lies exactly in the line which his calculations have taught him will best ensure repose to the dead and prosperity to the family. By means of the ropes, hoes and handspikes, the coffin-bearers and grave-diggers adjust the coffin according to his orders, and finally lift it up a little with their hoes, to enable the other men to draw away the ropes. In many cases much time and labour are wasted ere this *lóh khòng* [*lo k'êng*] (落壙) or *tsin khòng* [*chin k'êng*] (進壙), 'lowering or entering (the coffin) into the pit,' is finished to the perfect satisfaction of the professor. For, according to the geomantric doctrines, the luck of the family may be spoiled for ever if the corpse deviates one single inch from the calculated direction."—*Ibid.* i. i. 211.

"The soul streamer, which served to convey the soul gravewards, is now taken down from its staff and folded lengthwise over the lid of the coffin. But the family does not venture to place the name of the grandee, the supposed writer of the inscription, in the grave. If they did, they would undoubtedly bring the influences of death over the man and endanger his life. Therefore they remove the name by tearing off from the streamer a small piece of silk loosely pasted on it, on which, with a view to this, the name has originally been painted. "The proceeding in question shows that the Chinese have a tendency to identify names with the persons who bear them, a tendency which may be classed on a level with their inability . . . of clearly discriminating between semblances or symbols and the realities which these call to mind. The surname of the writer of the streamer is not torn off, for, being borne by tens of thousands of people it does not represent a special person." "The provisory soul tablet, which likewise served the purpose of carrying the afflatus of the dead to the tomb, is also placed in the pit. The grave-digger, however, pulls off the pedestal and throws it away outside the pit as useless. At burials of the poor, who have to economize as much as possible, the man in some cases removes the silk also, that the family may take it home and use it for some other purpose; but the part of the silk which bears the names, etc., of the dead is left in the grave, as being the seat proper of the soul." "The slate stones engraved with the biography of the deceased, as also the censer and the candlesticks that were carried along with them in the pavilion destined for those stones, are placed at the foot of the coffin, in a small vault made expressly for their occupancy. With the event of the corpse having been coffined on a day of 'reduplication of death' [see *supra*], . . . the box with the

cockroach, bed bug, or louse is also put into the pit. Then come the ashes of the 'treasury money,' neatly wrapped in paper sheets . . . ; subsequently the coffin is covered all over with oiled paper, over which comes a layer of straw, and finally the pit is filled up with a watery mixture of earth and lime. In time this mixture becomes very hard and forms a vault, which prevents the coffin from being crushed under the weight of the earth when it loses its solidity from the decay of the wood."—*Ibid.* i. i. 212–3.

"If during the earthing up of the grave rain happens to fall, the family feel greatly gratified. Indeed, China being so often visited by crop-destroying droughts, rains are ranked there among the greatest blessings which nature can bestow, for, without rains there is no food, no raiment, no wealth. Consequently, abundance will reign in the family if the heavens pour down those blessings into the very place which is to become the source of their prosperity, the centre from whence their future luck is to emanate."—*Ibid.* i. i. 213.

"The sons now throw their mourning staves away and, while one of the attending kinsmen picks them up to stick them side by side in the ground at the head of the pit, they proceed towards the pavilion which contains the soul tablets. Then, all the musicians playing their instruments and the lictors shouting out an awe-inspiring *Iû o-o-o*, the eldest son takes the *hûn péh* out, the second son the permanent tablet, and the third the incense-burner of the ancestors, and these three objects they place at the foot of the pit, the censor coming in front of the tablets. The permanent tablet is now deposed upon the lid of the coffin by the headman of the grave-diggers, and the sons, with or without incense-sticks between their fingers, kneel down, exclaiming: *Laō-pē* (*laō-bú*) *ah*, *khí lâi* [*Lao fu* (*lao m'u*) *ah*, *ch'i lai*] (老父老母呵起來), 'Father (or mother), rise!' These words have the effect of inducing the soul to enter the tablet. From this very moment the tablet is considered to be imbued with afflatus of the dead, and to have become his perpetual duplicate, to serve as a patron divinity in the domestic circle and there to receive the offspring's sacrifices and worship." "The grave-digger hereupon takes the tablet away from the coffin and hands it to the eldest son, who respectfully puts it back into its place at the foot of the grave. This calling upon the soul to take up its abode in the tablet is considered a ceremony of great import. Only those persons to whom the sacred laws of filial devotion especially assign the regular worship of the soul, *viz.*, the sons, may make the summons. Hence, if the only male child be a baby, the person in charge of it at the tomb gives himself much trouble to make it stammer out the words, and only in case it cannot speak at all does he pronounce them in his stead."—*Ibid.* i. i. 211–2.

"In most parts of southern Fuhkien it is an established custom for the sons to take a handful of earth in the lap of their sackcloth garment and drop it on the coffin. They perform this ceremony in regular order of seniority. In Amoy it is known as *p'è thô* [*p'a t'u*] (帕塗), 'to take earth in the corner of the garment.' No doubt it is expressive of the idea that, as burying one's parents is a holy duty, a child ought really to take an active part in it."—*Ibid.* i. i. 212.

The custom "of dropping some earth out of the lap of one's garment upon the coffin of a parent just lowered into the burial pit owes its origin to the ancient conception that it is highly becoming in children to erect a grave mound themselves over the remains of a father or mother."—*Ibid.* ii. i. 459.

Victualling the grave.—"The dynasty which now bears sway in China has abolished the burial of victuals as an official rite, at least the *Ta Ts'ing t'ung li* does not give any precepts on this head. This work orders, however, that at burials of members of the Imperial family offerings and libations shall, with the accompaniment of the wailing voices of all those attending, be made upon the tomb by the principal mourner, while at those of the nobility, the official classes, and the common people, such sacrifices shall be set out on the spot in front of the soul tablet. The actual state of matters seems to be in conformity with these precepts, for we have never seen or heard anything of a still prevailing custom of placing food in the graves, while, on the other hand, offerings upon the tombs, both at the burial and afterwards, are very general."—*Ibid.* ii. i. 387.

Economy.—"The dynasty at present seated on the Chinese throne has laid down in its *T'ung li* some rules for the garments in which servants of the State ought to be dressed for the tomb [see p. 339 *seq.*]. No regular rescripts are found, however, in that Codex containing the quantity or quality of other articles to be buried with the dead. In the rules it gives for the preparation of the graves of grandees and commoners, it barely mentions 'implements for the manes' by name, adding in a note that 'in regard of such implements, which are sometimes made of wet clay, and in other instances of bamboo, wood, or paper, the prevailing customs may be followed in any case of death' (ch. 52, l. 12). All this suggests that legislators deem the matter to have become of too little importance to claim their attention, burying objects of value with the dead having almost entirely ceased as a custom, and no longer entailing such an alarming waste of wealth as to require their interference." The "people no longer trouble their minds about furnishing the graves with valuables or requisites of life," with the exception of small articles and trifles (see pp. 92–3). "They sacrifice, in addition thereto, some things which the dead man was wont to use regularly, such as his last clothes, his bed with its appurtenances, his lamp, stoneware, tobacco-pipes, etc., by throwing . . . or giving them away (pp. 69, 97). Nevertheless, Mencius's doctrine, that the *hiao* is especially evident from the way in which the dead are seen to the tomb (p. 685) is literally conformed to by them, much wealth being spent upon funeral processions. Pompous and long cortèges of death have in their opinion a threefold advantage. First of all, a dead man who is seen out of this world with show, rises higher in the estimation of the public, so that children who bury their parents opulently make sure of fulfilling a sacred duty imposed upon mankind by both ancient and modern moral law, *viz.*, that of 'glorifying and exalting their ancestry.' In the second place, such burials cause the offspring to enjoy the satisfaction that everybody will praise their filial conduct in lofty strains, and sink down in silent admiration before the eminent social position which permits them to afford such outlay. And last, not least, such good children escape the risk of violating an ancient rescript which forbids men to mourn for their dead in silence (*Li chi*, ch. 10, l. 15)." "The rich equipment of the dead in their graves has suffered the least decline in their dressing" (pp. 46 *seq.*). That "a sumptuous dressing of the dead has outlived all other forms of equipping them richly in their graves" is due to "the ancient belief of the people in the co-habitation of body and soul after death" and "the conviction that the body ought to be dressed in a way worthy of the manes." "Besides, the same belief must . . . have caused every deceased body with the soul that had dwelt therein to be continuously blended together in the memory of the surviving relatives, who have consequently ever figured to themselves the soul in the shape of the corpse in the grave, and in the same dress (*cf.* p. 355). With such ideas, but one step was wanting to lead men to the custom of clothing the dead in such good and costly attire as their souls were thought to require in the next life." "Nevertheless, dressing the dead richly for the grave is considerably on the wane. . . . Matters have arrived at this pitch that, at Amoy, the use of precious grave garments has become matter of public derision." "In the northern parts of the province of Fuhkien, a great part of the indigent class even go so far as to dress their dead in paper garments" (*cf. Doolittle, Social Life*, ch. vii). "The conviction that expensive clothes and ornaments may offer a temptation to robbers and thieves has done much in deterring the well-to-do from dressing their dead in expensive attire. The penal laws threaten very severe punishment for those who violate the abodes of the dead (*Ta Ch'ing lü li*, vol. iii, ch. xl); and yet such crimes are apparently of frequent occurrence, owing chiefly to the fact that graves are not concentrated in special burial grounds, well guarded and looked after, but are scattered about in the mountains, especially on unfrequented slopes and in out-of-the-way recesses."—*De Groot*, ii. i. 700–4, and see pp. 704–5.

Burning counterfeits, etc.—[For the burning and burying of mock money and other counterfeit articles, effigies of men and animals, etc., see *ibid.* ii. i. 716–7; 809–11.]

Burying living persons with the dead.—"The dynasty of Manchu origin, which now rules the Empire, at the commencement likewise sacrificed human lives at burials." De Guignes (*Voyages*, ii. 304) says that at the death of one of his princesses, Shun Chih ordered thirty persons to be immolated; and that when K'ang Hsi's mother died in 1718 four young girls who wished to immolate themselves on the tomb were forbidden to do so by the emperor, who "prohibited for the future the burning of stuffs, furniture, or slaves." "We cannot say whether such immolations have taken place under the more recent sovereigns, as both trustworthy native and foreign evidence on this point is wanting. But it is perfectly certain that they are not a recognized institution of the State, not being mentioned as such in the dynastic Codices of Rites."—*De Groot*, ii. i. 746.

Sutteeism.—"Numerous cases of sutteeism are recorded in the Memoirs of provinces, departments, and districts. Matters finally became so bad that the emperor Shi Tsung in 1729 found himself obliged to check sutteeism by publicly decreeing that he would no longer confer honour upon its victims." "In spite of this edict (p. 747), and though it may have been followed by others of subsequent monarchs, sutteeism of widowed wives and brides has continued to flourish in China down to this day. Now as ever it meets with the same public applause; the aureola which covers the victim and her family is as eagerly coveted as it was in former ages. Hence, no doubt, many a woman is prevailed upon, nay compelled, by her own relations to become a suttee. There are but few Chinamen who cannot relate some case which has occurred of late years in their neighbourhood."—"The modes in which suttees despatch themselves seem to be much the same as in former ages. Some drown, hang or strangle themselves; the greater number, however, take poison, mostly opium, which is within everybody's reach, and lie down by the side of their husband's corpse, to die. But the height of fashion is attained when the bereaved wife, concubine or bride hangs herself in public. Such a suicide entails so much expense that only rich families can afford it. Indeed, in order that it may have the intended effect, that is to say, bring glory and fame to the family concerned by being officially reported to the Throne and rewarded with an honorary tablet or gate, it is requisite that the high local authorities should be fully interested in the case and honour the suicide with their presence. Such a condescension on their part must be purchased by presents, and these can only reach them by the intervention of very notable and influential persons, whose services must be dearly paid for, or acknowledged by expensive attentions. The rules of etiquette require that the direction of the affair should forthwith devolve upon the highest mandarin who promises to attend, and it is he who fixes for the ceremony a day and an hour which suits him best. The date is announced to the community by placards posted up all around, which carefully state the names of the two families, the ward and the street." "Pending the arrival of the great day, the principal actress in the drama dons her finest garments and, seated in a palankeen, makes a round of calls on her family, friends and acquaintances, allowing them to regale her sumptuously. She is much congratulated by all, and extolled to the skies. By order of the authorities, but at the expense of the family, a platform is raised in due time on the chosen spot, and beautifully decorated with flowery canvas and lanterns. Each mandarin who arrives at this place with his usual escort of underlings, is received with the customary honours due to his dignity. Forthwith kneeling down, he knocks his head a few times against the ground before the suttee who, seated on a chair upon or near the platform in her choicest costume which she desires to wear in the grave and in the Realm of Shades, receives motionlessly this highest homage ever paid in China by proxies of the Son of Heaven to commoners." "When all are assembled and tea and dainties have been served, the highest mandarin present gives the signal for the woman to ascend the platform. In a few moments she adjusts the fatal noose around her neck, and launches herself into eternity by kicking away a stool upon which she stands; the mandarins then leave, and the large crowd of spectators attracted by the scene, disperse. A number of notables from the environs, who have arrived in palanquins to shed lustre over the heroic suicide by their presence, throng round the family to offer their congratulations, flattering them about the imperial distinctions of honour which are to be expected. Many of these notables, and also the mandarins, are afterwards presented with money sent them by the family, which is not only to serve as a mark of gratitude for their having honoured the ceremony by their presence, but also to indemnify them for their outlay for palanquin-bearers and attendants. And during several days these worthies are in turn invited to festive repasts, which more than anything else helps to drain the coffers of the family. But what does this matter, seeing they have covered themselves with fame and glory for good and ever?"—*Ibid.* ii. i. 746–9.

"Although by no means of everyday occurrence, these public suicides are not at all rare. . . . That the authorities do not refrain from honouring such scenes by their presence, is a proof that the self-destruction of devout widows still enjoys the official approbation of the Government. It is even sometimes rewarded with Imperial honours. These are the same as have been in vogue for many ages, viz., the permission to have an honorary inscription over the lintel of the dwelling, and to erect a gate somewhere in the neighbourhood, for the special purpose of displaying that inscription publicly. In most cases it is composed of the two characters 節烈, 'The ardour of chastity,' or 忠烈, 'The ardour of fidelity or attachment.'"—*Ibid.* ii. i. 749; and see further pp. 749–51, 754, and generally, 756–69.

Disuse of vaults.—"As for the Chinese of to-day, there is every ground for believing that the use of grave vaults has entirely disappeared from their funeral customs. It is possible they are still in vogue in some parts of the empire, and for persons of imperial blood or dignitaries of the highest ranks, but we have no information on this head."—*Ibid.* i. i. 314.

Dotting the tablet.—"At a short distance from the grave, a mandarin who is actually in office, or one with a purchased title, has been patiently waiting with a complete retinue of lictors, soldiers and attendants. For his convenience a small house is hired there by the family for the day, or if there are no habitations in the neighbourhood, a tent or shed is put up for the occasion. This grandee has been prevailed upon to come to the grave, in order to perform a certain ceremony, the object of which is to fix the soul of the dead in the permanent soul tablet. To none but very notable families is the glory reserved of securing to this end the services of such a distinguished person." "As soon as the coffin is let down into the grave, the two graduates who acted in the train as attendants on the deceased's brevet of rank . . . are dispatched with a complete band of musicians, to politely invite the mandarin to enter upon this duty. He quickly finishes his tea, many cups of which beverage he has, thanks to the care of the family, swallowed while waiting, and gets into his sedan-chair; his whole retinue follows, and so he is carried in procession to the grave, in the rear of the music. The graduates march ahead of him with an air of great importance. A majestic *Iû o-o-o* resounds over the hills; shots from the blunderbusses and blows on the large gongs mark the moment at which he sallies forth. Approaching the burial site, he falls in with the mourners, who lie prostrate on the ground to receive him. If his rank be not too high to allow of such condescension, he descends from his palanquin to decline such marks of respect from the mourners, urging them to rise to their feet, after which he continues on his way, under a renewed concert of *Iû-o-o* shouting and gong-beating."—*Ibid.* i. i. 213–4.

"At the grave, the mandarin is offered a seat; this is placed behind a table, on the front side of which hangs a cloth between the legs. His attendants arrange themselves on both sides and everyone draws near, while the eldest son, followed by all the chief mourners, fetches the tablet from the border of the pit, or has it brought to him by one of the notable bystanders. Turning his back towards the sun, or to the east, which is the region specially devoted to light, because every day this makes its appearance there above the horizon, he kneels down in front of the table. While all the musicians exert their lungs and hands to the utmost and the lictors cry *Iû o-o*, the son holds the tablet with both hands on his back, allowing one of the principal attendants to untie the writing brush and the vermilion ink, which are fastened to the tablet. The ink is then moistened by a servant with some drops of spirits or, if a white cock has been carried along upon the catafalque, with some blood obtained by making a little incision in its comb; the pencil is dipped in it, and the mandarin rising, solemnly proceeds towards the kneeling mourner. At this moment the musicians and lictors become, if possible, more noisy than ever. All the bystanders with their parasols draw near, to assist the bearer of the large state umbrella in screening the head of the mandarin from the sun's rays. This grandee now removes the string of coins and the red cloth from the tablet. Holding both these objects in his hands he receives the writing-brush, breathes over it, slowly points with it to the sun, and solemnly marks the front side of the tablet with several dots. First he dots the topmost part, which in most cases is engraved or painted with the image of a sun in the midst of clouds, saying: *Tiém thien, thien ch'ing* [*Tien t'ien, t'ien ch'ing*] (點天, 天清), 'I mark the heavens, pour out all your purity, O heavens!' Then he marks the pedestal, pronouncing the words: *Tiém tē, tē ling* [*Tien ti, ti ling*] (點地, 地靈), 'I mark the earth, operate efficaciously, O earth!' In this way the natural influences of the Universe are summoned to work upon the tablet and thus insure the happiness of the soul for all time to come. Now the frontside is dotted on the right and left at about the middle of its height, the words pronounced running: *Tiém oû, oû ts'ong* [*Tien ērh, ērh ts'ung*] (點耳, 耳聰), 'I dot the ears, be acute, O ears!'; then come two points at about the same height, but a little nearer to the centre, with the words: *Tiém bók, bók bing* [*Tien mu, mu ming*] (點目, 目明), 'I dot the eyes, be sharp, O eyes!' Then follows a dot on the character for 'males,' which stands in a smaller column of characters at the side, indicating the male descendants who erect the tablet as an object of worship for the family, the accompanying words being: *Tiém lâm', lâm tiōng siū* [*Tien nan, nan chang shou*] (點男, 男長壽), 'I mark the males; males, live long!'—and in the end a dot is placed on the character 主, 'tablet,' the last one in the large central column. Not unfrequently this character has the shape 王, and, receiving the dot on the top, is transformed into the required figure. The words pronounced here are: *Tiém tsú, tsú hién ling* [*Tien chu, chu hsien ling*] (點主, 主顯靈): 'I mark the word tablet; display spirituality, O tablet!' This and all the foregoing formulas are uttered in so low a tone, that even the nearest by-standers can scarcely catch a word of it. In fact, fashion prescribes total abstinence from vociferousness in any man of position and rank, especially when he appears in public."—*Ibid.* i. i. 214–5.

"The object aimed at by the ceremony described is fully implied in the last words of the dotter: 'May the tablet display spirituality.' Already imbued with the afflatus of the dead by the summons described [above] . . . it will, thanks to the power of the words pronounced over it, henceforth be surrounded with the vivifying energy emitted by heaven and earth; it will hearken to the prayers and desires of the offspring; it will have an open eye for their wants and for those circumstances of life in which they may be in need of the soul's protection and help; finally, it will cause the male descendants to enjoy long and happy lives, and so ensure to the soul itself

sacrifices and worship for all generations to come. In short, the dotting is intended to infuse life into the tablet, or rather into the manes which inhabit it and are incorporated with it. A high mandarin is employed to perform the ceremony, because it is believed that the influences, emitted by his person over the manes, will endow them with the power of causing the offspring likewise to become men of elevated position; in other words, it is done on grounds similar to those which induce people to employ such grandees for nailing up the coffins and bearing the soul streamer in funeral processions. Families who cannot afford to employ a mandarin have the tablet dotted without much formality by a literary graduate, by some person of learning, or by an old or a wealthy man. Should this person happen to be in mourning, having, as a relative of the dead, followed the procession, he is required by custom to put off his white or sackcloth dress before entering upon the dotting, as this rite is considered not to be of a mournful character. In many cases he first puts on the ceremonial *thò p'aò* attire [see *supra*]. . . . At burials of the common people, the dotting is often performed by the geomancer, this man being reckoned to belong to the learned class, the highest caste existing. As a rule, he does not demand an extra fee for this additional work."—*Ibid.* i. i. 215–6.

"It is not difficult to understand why, during the ceremony, the tablet is made to face the sun or the east, that is to say, the luminary, or the region from whence all light, warmth, and *life* of nature emanate. It is likewise easy to comprehend why the mandarin, besides pointing with the writing-brush to the sun, breathes over it; breath is indeed considered by the Chinese to be one of the principal manifestations of animal life. The ink used for the dotting must be red, because red is the colour of fire and light and, consequently, particularly identified by Chinese philosophy with the *Yang* or the chief principle of life. And when the soul has been so much weakened by a long postponement of the burial that a cock is required in the procession to strengthen it, some blood of this bird is taken to moisten the ink, because it contains the vital energy of the very being which . . . is a principal depository of the energy of the *Yang* and the sun, in short, of the life of nature [see *supra*]. That the blood is taken out of its comb may, we believe, be safely ascribed to the puerile reasoning of the people that the fiery-coloured portion of the head, or the most important part of the bird, must naturally be the focus of its *Yang* energy. This suggestion is strengthened by the fact that in the Chinese pharmacopœia blood taken out of a cock's comb holds a pre-eminent place amongst the means employed for pouring vital energy into bodies lingering between life and death, or even quite dead."—*Ibid.* i. i. 216–7.

"Dotting a tablet at the grave is, in Amoy, denoted by the term *tiĕm tsú* [*tien chu*] (點 主), 'to mark the tablet.' The string of coins which was suspended on it and which the mandarin holds in his hand while going through the ceremony, has for its object to endow the tablet and manes with the property of rendering the offspring rich. The cock whose blood has been used is immediately seized upon by the bearers of the pavilion in which the tablet was placed on the way to the grave, as lawful booty allotted to their profession in virtue of an established custom."—*Ibid.* i. i. 218.

"The dead man has vacated the ancestral home, but his tablet will occupy the place left open by him; it will live on with the offspring as a patron divinity without whose help there can be no prosperity; it will henceforth be the focus upon which the religion of the family is to concentrate itself. Considering the important part the tablet has to play in the future, it cannot be a matter of surprise that the ceremony by which the manes are fixed into it is looked upon by the people with the greatest interest, and therefore associated in many cases with even more display than we have described. So, at pompous burials, it frequently occurs that two masters of ceremonies are appointed by the family to attend on the mandarin. One of these replaces him in pronouncing the formulas, and then, to increase their efficacy, he adds good-omened phrases. . . . And when the grandee, having finished his task, throws the writing-brush away, honour is rendered him by firing as many shots as his rank entitles him to." "At this moment the illustrious man approaches the grave to the foot of which the eldest son or a kinsman has, in the meantime, brought back the tablet, his intention being to prostrate himself there in worship of the soul. But it is exceptional for the sons to permit him to execute his purpose. They throw themselves on their knees before him, thus humbly entreating him to retire, as neither the deceased nor themselves are worthy of such condescension on the part of a man of his standing; but the real motive for their protest is a fear the service may become too expensive for their purse, as custom requires that at least double the fee be paid to the mandarin if he also worships the soul. When the dignitary prepares to get into his palanquin amidst the sound of gongs and loud *Iû o-o* cries, all the sons throw themselves on their knees to express their gratitude for his valuable services. Now it is the great man's turn to decline these acts of reverence. Rushing up to the prostrated men he urges them to stand up, at the same time extending both his arms as if to assist them in rising; then he disappears in his sedan chair and goes off with a salute of shots. One of the attendants has meanwhile taken good care to place a large piece of red cloth over the roof of his vehicle, as was also done in the case of the mandarin or graduate who came to the house to nail up the coffin [see *supra*]. . . . Occasionally a couple of gilt paper flowers are added to the cloth. Hurrying on a dozen paces in advance of the mandarin the mourners once more prostrate themselves, to which courtesy the dignitary tries again to put a stop in the way above described, or, if he is too high in rank to descend from his palanquin, he merely pours forth a few polite phrases."—*Ibid.* i. i. 218–9.

Sacrifice to the god of the soil, etc.—[Here follow the sacrifices to the god of the soil and the deceased. They are fully described by *De Groot* (*ibid.* i. i. 219–27).]

Return of the procession.—"The cortège returns in the same order in which it proceeded to the grave. As the tablet now plays the principal part, the procession is spoken of as *hoán tsú* [*fan chu*] (反 主), 'the return home of the tablet.' The man who scattered about paper money in the vanguard now places himself amongst the relatives in the rear ranks, no such distribution to the evil spirits being deemed necessary on the way home. The empty bier is never allowed to get mixed up with the train. In fact, since the soul is taken home to be happy and prosperous in the midst of its offspring, whom it in turn is to render happy and prosperous by its blessing, the procession now bears a festive and cheerful character; hence there is no room in it for signs of mourning. For this reason the mourners entirely abstain from wailing and lamenting, until they come within sight of the house. All the bands, however, play assiduously in a cheerful key, as the Chinese say." "Care is always taken to go home by the same road which was followed to the grave, the soul having become to a certain extent familiar with this way and being therefore less exposed to the danger of going astray. To assist it in finding its way, the torches, which were extinguished on reaching the grave . . . are relighted and carried in the van of the tablet. The lanterns bearing the inscription 'Hundreds of sons and thousands of grandsons,' suspended from the palanquin of the soul . . . now do excellent service by bringing influences, which may enable the soul to bless itself and its offspring with an endless line of descendants, from the tomb homewards, influences which . . . were carefully sown in the coffin and the grave by artificial means [see *supra*]." "Before reaching the house, the procession comes across the female members of the family in sackcloth garments, who wailingly lie prostrate on the pavement of the street to receive the tablet. This act of respect and courtesy towards the departed is called *tsih hoán tsú* [*chieh fan chu*] (接 反 主), 'to receive the returning tablet.' As soon as the procession, the females in the rear, halts on the premises, the principal mourner takes the tablet out of its vehicle, the next mourner the 'soul-body,' if this has figured in the procession [see *supra*] . . . , and the third one the incense-burner, and these sacred objects they reverently carry through the main entrance, to arrange them on the table which stood in front of the coffin before the burial. The lictors and musicians give solemnity to this act by respectively crying and playing with their most strenuous efforts. And now, while the crowd of attendants with the musicians take their station in the lower part of the hall or in the court-yard in front, the priests recite a few formulas before the tablet to set the soul at rest, upon which the mourners, having changed their sackcloth garments for gowns and caps of white linen, commence a series of prostrations, in every instance preceded by the usual presentation of incense-sticks, being assisted herein by two masters of ceremonies. The more removed kinsmen generally confine themselves to prostrations only, carefully observing one another's social position, age, and order of relationship as they succeed each other. If they are numerous and time is short, they prostrate themselves in couples or great numbers at a time. When all the males have taken their turn, the women emerge from the inner apartments and go through similar acts of reverence."—*Ibid.* i. i. 227–8.

Funeral banquet.—[After the return of the procession a sumptuous funeral banquet took place. It was sometimes postponed until the following day.]—*Ibid.* i. i. 228–31.

Rites after burial.—[These were the *chih kuan wei*, "putting things in the place where the coffin stood," the ceremonious cleansing of the house, sending slices of pig's head to the condolers, and presents to persons of distinction who assisted at the burial, and to the sacrificer to the god of the soil, etc. For details see *ibid.* i. i. 232–4.]

Mausolea.—All the terms used to denote the mausolea of emperors, their empresses, and concubines, and imperial princes during the Sung dynasty "are employed by the present dynasty, which denotes, moreover, the mausolea of imperial concubines, as well as those of princes of imperial lineage, by the term *yuen ts'in* (園 寢), *i.e.*, 'park-temples' or, more literally, 'back chambers situated in the park-grounds.'"—*Ibid.* ii. i. 444.

In the earliest times "the princely mausolea, like most government buildings, were constructed by means of forced labour. . . . In the long series of centuries which lie between the Han dynasty and the present day, matters have not much changed."—*Ibid.* ii. i. 433.

"The dynasty now seated on the throne of the Empire allows the erection of grave temples exclusively for certain members of the Imperial family."—*Ibid.* ii. i. 389; and see Chaps. v. and xiv.

"The now reigning House has each of its mausolea garrisoned by Manchu Bannermen, of whom there are eighty for each of the earlier ancestors, and forty in the burial grounds of their consorts."—*Ibid.* ii. i. 436.

"The same rule [as to establishing people upon or near graves of exalted persons] has been adopted by the present dynasty, which prescribes in the *Ta Ts'ing t'ung li* (ch. 52, l. 11) that 'for the *kung*, *heu*, and *poh*, or members of the three highest classes of nobility, there shall be appointed four families to guard their graves, for officers of the first and second rank two, for those of the third, fourth and fifth rank one family, and for those of the sixth and seventh rank two persons only.'"—*Ibid.* ii. i. 448.

Dwelling on the tomb.—"Whether the custom of dwelling upon graves still obtains at the present day, we cannot vouch for. Considering how deeply it has rooted itself into the habits of the nation from early ages, we may venture to presume it has not yet died out; but during our long stay in China we have never met with a single instance, nor even heard of such an occurrence. It may possibly have been superseded by the custom . . . of sleeping or keeping watch by the side of the corpse or the coffin in the house, previous to the burial (pp. 27, 114). This custom is mentioned already in works of the Ming dynasty among the meritorious practices observed by devotees of filial piety and conjugal attachment."—*Ibid.* ii. i. 800.

Co-burial.—"Now-a-days the custom [which has been in vogue from the earliest times] of burying wives at the side of their husbands is generally prevalent among the well-to-do who can afford to buy ground for double graves."—*Ibid.* ii. i. 802; and see ch. xiv.

Post-mortem marriages.—"Whether the custom [of marrying deceased persons] still exists at the present day we are not able to say, as no case has come under our notice whilst in China. But considering that it has flourished for so many ages, we can scarcely believe it has entirely died out even now."—*Ibid.* ii. i. 806.

Size, etc., of tombs.—The institutions respecting the dimensions, etc., of tombs of hereditary and acquired rank "of the Ming dynasty were adopted almost unaltered by the present reigning House. . . . A very few figures only were slightly modified, too slightly, however, to deserve notice." The *Ta Ch'ing lü li* (ch. 17, l. 14) and the *Ta Ch'ing t'ung li* (ch. 52, l. 11) give these regulations. The *Ta Ch'ing hui tien* (ch. 76 of abridged ed.) "contains moreover some regulations for the graves of Princes and Princesses of imperial lineage." *v. De Groot*, p. 453.—*Ibid.* ii. i. 452.

Sepulchral trees.—"From the Sung dynasty onwards . . . episodes relative to sepulchral trees are seldom recorded in the books. But it is by no means necessary to have recourse to written documents to learn that the important position of those trees in social and religious life is still maintained in modern China. Graves dating from the last five centuries are extant in sufficient numbers to clear away any doubt on this head. Pines and cypresses play a principal part as grave trees in nearly all cases, and in the southern provinces a prominent place is given to the *San*, which . . . is widely made use of also in the construction of coffins [p. 324]. The 'Interesting Book on the Art of Becoming Rich' (ch. 1) says that 'in Wu (Chehkiang province) this tree is planted exclusively in grave parks and grave gardens.' All this does not, however, shut out the fact that, especially in the south eastern provinces, many graves are found planted with quite other trees, beside countless numbers without any trees at all."—*Ibid.* ii. i. 468.

Stone figures at tombs.—"In the neighbourhood of the cities of Shanghai, Amoy, Chefoo, and probably others among the Treaty ports also, the tombs of deceased servants of the present dynasty are to be seen, at which figures of the same description, although less in number and of smaller size, than those which keep watch over the burial places of the departed Sovereigns near their respective capitals, are erected. In the vast walled enclosures containing the tombs, sacrificial halls, and other buildings which, collectively, form what is known as the Mausoleum of each emperor of the dynasty now occupying the throne of China, similar avenues of colossal figures exist."—*Journ. N.-C.B.R.A.S.*, N.S. xii. 3.

"At the present day, the name *t'ien luh* is given to the small couchant figures of nondescript animals which crown the *wang chu* or monumental pillars forming part of the array on either side of the pathway leading to the tomb. The *wang chu* themselves are considered as the tokens by which the spirit, when wandering from its earthly resting-place, finds its way back again to the tomb."—*Ibid.* xii. 10.

"It is well known that there exists also an avenue of stone figures in the mausolea of the emperors of the present dynasty. The *Ta Ts'ing hwui tien* (ch. 76, l. 2) states that 'there must be arrayed to the right and left stone figures of civil ministers and military officers, of unicorns, lions, elephants, horses, camels and so forth.' No detailed description can be given either of those statuary works or of other parts of the sepulchral grounds, as they are not open to public view, being jealously guarded by Manchu Bannermen against foreign and native intruders (*cf.* p. 436)."—*De Groot*, ii. i. 821.

"In imitation of previous dynasties, the one now seated on the throne of China has made the decoration of tombs by an avenue of stone figures the exclusive privilege of the high nobility and the mandarinate. Such statuary works are never to be found on the tombs of commoners, however wealthy or distinguished they may be. The Imperial ordinance in force on this head runs as follows: 'As to the erection of stone figures: for men of the first order of nobility (*kung*) down to mandarins of the second rank there may be two human figures of stone, two horses, two tigers, two sheep, and two pillars. For mandarins of the third rank the human figures shall be omitted; for the fourth rank the human figures and the sheep shall be omitted; for the fifth rank the human figures and the tigers shall be omitted' (*Ta Ts'ing t'ung li*, ch. 52, l. 11). . . . A regulation precisely similar was in force under the Ming dynasty (p. 452). But these prerogatives, warranted by the institutions of the State, are seldom made use of by those for whose sake they were created. Not one out of the many graves with statues and figures, which we have seen in various provinces of the Empire, belonged to the present dynasty."—*Ibid.* ii. i. 821–2; *cf.* ch. xii.

Annual sacrifices.—[The desire of securing a male representative of the family originated chiefly in the importance attached to the annual performance, by a lawful descendant, of the sepulchral rites consisting of sacrificing at and sweeping the graves of ancestors at certain seasons of the year.]—*Trans. C.B.R.A.S.*, Pt. iv (1854), p. 28.

Grave-yards and villages of the dead.—"Family grave-yards, or clan grave-yards as we might call them, still abound in China at the present day, though they are exclusively laid out by the well-to-do who can afford to procure a plot of ground required for the purpose. . . . The grave of the oldest ancestor is placed in the centre. It is the largest of all, and those of younger date gradually decrease in size, it being customary to add some clay to every tumulus once a year, at a great festival devoted to the reparation of tombs. The aspect of such grave-yards vividly reminds one of villages of clay huts, 'resembling potters' kilns,' and the inexperienced eye cannot at first sight distinguish them from ordinary hamlets. Anciently every village was, no doubt, protected against inimical neighbours by a wall of clay. This wall is in many cases still retained for burial grounds such as the above. It sometimes runs only along the back of the ground, but in most instances encloses three sides, leaving the front open, where the entrance to the village must have been. For family graves of the nobility and of the Imperial kindred these primitive walls have become walls of bricks, high and strong, with a large gate in front [*De Groot*, ch. xiv]."—*Ibid.* ii. i. 376.

Mourning.—"It is a legal rescript laid down in the *Ta Ts'ing t'ung li* (ch. 52, l. 3), that amongst the official classes of the Empire complete mourning is to be assumed *on the self-same day on which the dead are dressed*."—*Ibid.* ii. i. 477.

"At the present day it is an established social custom for any one who follows the dead to the grave to dress in the very deepest mourning prescribed for the degree of relationship in which he stands to the defunct, no matter how long a time intervenes between the ceremony and the termination of the period of mourning."—*Ibid.* ii. i. 478.

"Dwelling in a shed upon the grave has perhaps been entirely discontinued now-a-days, at least we never saw, heard, or even read of a case having actually occurred of late years [*v. supra*]. But the custom of renouncing the dwelling and its furniture as a token of mourning is far from having disappeared (pp. 27, 114, 25). . . . We may add that," in Amoy, "during the great Buddhist mass celebrated in the house of mourning, and lasting amongst the well-to-do for a long series of days, sheds of curtains, popularly styled *kaó tiaô* (狗 寮) or 'dog-kennels,' are constructed in the hall for the occupancy of the mourners." "Not only the people, however, conform to the ancient custom, the Imperial family does so too. It is prescribed in the *Ta Ts'ing t'ung li* that, at the death of an Emperor, the new sovereign must dwell in a 'side room' (翼 室), and his sons and grandsons in 'other apartments of the palace than those they are accustomed to live in' (ch. 47, ll. 2 and 3); further, at the death of his mother, the Son of Heaven must likewise take up his abode in a side room (ch. 48, l. 1), and the Imperial princes of sundry degrees must, when the Emperor is dead,

dwell in 'a room of abstinence, each in his private mansion' (ch. 47, l. 3). Similar rules have been laid down in the same work for observance on the death of other members of the Imperial family. It prescribes, moreover, that in cases of death of officers and of members of the gentry 'the sons shall dwell in sheds outside the central gate of the house, and sleep there on straw or matting, with a clod of earth for a pillow, not then even putting off their mourning band from the head, or their hempen girdle. The wife and daughters must dwell in sheds constructed inside the central gate; they must use curtains, pillows, and coverlets of plain linen, and wail by day and by night without regard to times, whenever their grief reaches its highest pitch' (ch. 52, ll. 2, 3, and 19). And as to the common people, with them the sons, wife, and daughters have to behave in the same manner, but 'the sons must dwell at the side of the coffin, the others in other apartments than those they usually abide in' (ch. 52, l. 23)."—*Ibid.* ii. i. 486–7.

"Like the dynasties of T'ang, Sung, Ming, and probably all those which have borne sway over the Chinese Empire, that of T'sing recognizes five degrees of mourning, generally styled *wu fuh* (五 服), 'five attires or dresses.' It distinguishes them by the same names as are used in the *Li ki* and the *I li* [See LATER FEUDAL PERIOD]. . . . Rescripts on the cut and make of the dresses are given by the *Ta Ts'ing luh li*, in its second chapter. On closer examination these rescripts are found to be for the greater part a compendium of extracts from the *Rituals for Family Life*."—*Ibid.* ii. i. 546.

"The rescripts concerning the coat and the skirt to be worn for this [first] degree are mere imprints of what the *I li* prescribes with regard to these articles of dress; only the wording is somewhat different. . . ." "The Code of Laws contains no rescripts whatever concerning changes to be made in the mourning dress at fixed periods, so that the regulations which the ancients made on this head have not been received by the present dynasty among the institutions of the State. The same is the case with respect to the second degree; consequently the rules of mourning have undergone a considerable simplification in the hands of modern legislators." For list of relatives for whom mourning of the first degree is to be worn for twenty-seven months, see ii. i. 549–50. "If we compare this list with the mourners of the first and the second degree as they are registered in the *I li* . . . we find that, since the first ages of the Empire, the family law has undergone important modifications. The principal amongst these is, that the mourning duties for a mother, whether she died before her husband or after him, have been raised for her children to the same high level as those which they have to observe for their father, so that the maternal rights, contemplated from the stand-point of the children, are officially decreed not to stand behind the paternal rights in any respect." "The position of a woman towards her husband, however, has been left unaltered; whether she be the *materfamilias* or a concubine, she owes him the same absolute subjection of a child, as formerly. We further perceive that the principle that the *paterfamilias* should reign supreme in the family, is now-a-days carried to its highest pitch also in this respect, that even the privileged position of the Continuator [the lineal male heir], which anciently was such as to place him on a par with his father, has been totally abolished, the mourning to be worn for him by his parents having been made the same as that for ordinary sons (see ii. i. 552, No. 6). In accordance with the same principle, each daughter-in-law has now to mourn for the parents of her husband in the highest degree, instead of in the second, as formerly, her absolute incorporation with the family of her husband naturally placing her as much under the authority of his *paterfamilias* and *materfamilias* as if she were their own child."—*Ibid.* ii. i. 547–51.

The modern mourning attire is designed from the ancient, "in so far as the people are capable of imitating it by the aid of the details in the *I li* and the *Li ki*, which are, however, . . . extremely ambiguous on many points." But "the nation's idiosyncrasy of closely imitating everything bequeathed to posterity by the holy ancients has indeed not been strong enough to prevent the people of the present day from indulging in considerable deviations from the mourning dress of olden times, which cannot be properly ascribed to a wrong understanding of the ancient works." "The deepest mourning dress, supposed to be designed also from that which is prescribed by the Code of Laws for the mourners of the first degree [*cf.* p. 547], is made of the fibres obtained by tearing hempskin asunder very rudely, or by combing it very insufficiently. . . . It is the coarsest textile the Chinese possess. . . . Amoy people call it *moâ* (麻), 'hemp,' or *moâ pò* (麻 布), 'hempen textile.'" The principal article of this attire is a coat or cloak of sackcloth, called *moâ sa*^{m} (麻 衫), or 'hempen coat,' which reaches to just below the knees and has very wide sleeves." It is an imitation of that worn under the Chou dynasty, but considerably modified, as are also the waist-rope and twisted girdle [pp. 493–6; ii. i. 586–7]. A "'hempen helmet,' *moâ khoe* (麻 盔) . . . the military helmet of the Code of Laws [p. 547]" around which runs a "*moâ tsoâ* (麻 蛇) or 'hempen snake'"; "*hī-à t'at* (耳 子 塞), 'ear-plugs'" [p. 500]; and straw sandles, complete the costume. For dress of female mourners of the first degree, see ii. i. 589–90. The staff is now "no more than a thin stick of bamboo, rattan, or wood, of scarcely an arm's length, pasted all over with thin curls of white paper, which are perhaps intended to represent the female hemp wherewith it was adorned in ancient China [p. 494]. Its name is *hà t'ūg* (孝 杖), 'mourning staff.' . . . It is now used exclusively at interments, and may then be seen in the hands of every son who follows in the funeral procession [p. 193]. After the coffin has been lowered into the pit, they all throw away their staves, upon which somebody sticks them in the ground, in a row, at the head of the pit. Here they remain, until decayed away by rain and weather" [p. 211]. "The wearing of the *moâ hók* [*ma fu*] (麻 服) is restricted to a few occasions only, and usually hired when wanted. The sack-cloth attire is now, as in ancient times, replaced after the burial by a dress of finer quality, but made of good linen or cotton, neither bleached nor dyed [see *De Groot*, ii. i. 592–3]. An important article in the mourning costume is the *t'âo-peh* [*t'ou chin*] (頭 帛) or 'head-kerchief,'" also a survival from the earliest times.—*Ibid.* ii. i. 585–94.

The staff "has become in later ages a mere badge of mourning, an emblem of the privations to which, anciently, the children devoutedly submitted in order to benefit their beloved dead as much as possible. At present it plays absolutely no other part than that of a badge."—*Ibid.* ii. i. 650.

"During the Cheu dynasty the deepest mourning dress was replaced by a slighter mourning attire at the end of one year after the decease, and again by a still slighter one at the end of two years. This rule still prevails now-a-days. When on the first anniversary of the demise the usual sacrifice has been presented in the house of mourning to the tablet wherein the soul resides—a ceremony in which all the principal mourners take an active part—the white threads braided in the cues are changed for blue ones, and the skull-caps or hats, and also the shoes, are replaced by others of a slightly coloured material, mostly by light blue ones, though other tints are allowed, red and reddish excepted. Also the women change their head-gear on this occasion, observing corresponding rules." All kinds of sedate colours may then be worn, and the coarse clothing is often not worn. "The fundamental principle of mourning, according to which it should consist in wearing the coarsest and poorest possible clothing, is much abused now-a-days." "And when another sacrifice is presented to the soul on the second anniversary of the demise, black strings are braided in the cues, and the everyday dresses of ordinary times are once more assumed, but silken stuffs and red colours are still prohibited. The women may now begin to wear in their hair artificial flowers of a pink or rosy colour, in lieu of the soft blue ones with which they have ornamented it in the preceding year." "Finally comes a sacrifice in the course of the twenty-seventh month, on an auspicious day fixed by the almanac or a 'day-professor.' On this occasion all mourning is put off for good and replaced by a dress of silk, that is to say, by such people as can afford to wear red in the cue in ordinary times. Up to this date, wearing silk in any form whatever is systematically avoided, even in spite of the fact that during the . . . Cheu dynasty the use of such material was allowed at the end of the first year. . . . This does not, however, necessarily imply that the mourning rescripts are severer now than they were at that time. For, the choice of clothing material was much more restricted in pre-Christian ages than at present, woollen textiles, broadcloth, etc., now imported in enormous quantities from abroad, being then entirely unknown in China." The wearing of ornaments, with the exception of charms and amulets, is still forbidden during mourning.—*Ibid.* ii. i. 594–6.

[For the mourning costumes for the 2nd, 3rd, 4th, and 5th degrees, the relations mourned in each, and the modifications introduced in both dress and time, see *ibid.* ii. i. 551–8.]

Promoted in 1680 to be President of the Censorate Hsü Yüan-wên "insisted that the period of mourning should be uniform for all officers, bannermen and Peking officials having hitherto got off with short periods."—*Giles, Bio. Dic.*, pp. 312–3.

Mourning costumes of the third, fourth, and fifth degrees practically "do not differ from each other in any respect worthy of notice. All three are similar to the dress of the second degree" with slight modifications. For special degrees of mourning, see *De Groot*, ii. i. 599–600. It must not be supposed "that all classes of society observe the standard rules in respect of mourning attire with the same degree of care and accuracy. The common peasantry, coolies, and such like people do not bother their minds at all about it" except on rare occasions; "they continue to wear their ordinary blue garb, changing nothing but the threads in their cue, for which they substitute white ones on the death of their father or mother. . . . In some parts of the country, mourners of this class of people are wont to sew a square scrap of white linen or cotton, about a couple of centimetres in breadth, on their sleeve or their breast, and to wear a narrow ribbon of the same material around their hat."—*De Groot*, ii. i. 599–601.

"Besides the five degrees, the *Ta Ts'ing luh li* mentions an extra mourning, consisting in 'baring the breast and wearing a tape of linen around the head.' It is worn for kinsfolk who do not fall within the five degrees. When attending the burial of such people, 'a plain dress' ought to be worn therewith. The Code also quotes a rescript from the *Ta Ts'ing hwui tien*, to this effect: 'If a man attends funeral rites, he removes the red tassels from his ceremonial cap, and a female then puts off her ear-rings.'"—*Ibid.* ii. i. 562.

"Both in ancient and modern times, the treatment of the hair during the period of mourning was in China subject to certain rules." "Now-a-days, in a case of death, the principal mourners of the male sex remove the braiding threads from their cues when they go out into the street to receive the empty coffin, and also during the burial, on both of which occasions they wear also the very deepest mourning attire. . . . The long hair, quite dishevelled, flows down over the back in disorder. After the burial the cue is always braided up, even on occasions when the sack-cloth is put on; but the threads used may not be of silk until the end of twenty-seven months. They are of white linen or cotton during the first year, and of blue during the second."—*Ibid.* ii. i. 602.

"From the moment life has passed away, the sons and the other male mourners of the highest degree may not have their heads or faces shaved, but it is not necessary for them to abstain from the regular unbraiding of the cue by the barber. . . . As a consequence, the black hairs grow up like bristles around the long hairs of the crown which form the cue, giving to a man in mourning a rather unsightly, sometimes a repulsive appearance, which is not improved by the stray black hairs which show themselves on his cheeks and chin. This neglecting of the hair and face extends until the hundredth day. Many people, however, get shaved immediately after the burial, and then abstain from the use of the razor for one hundred days." The *Ta Ts'ing t'ung li* (ch. 52, l. 6) has: 'All those who are in the three years' mourning have their hair shaven after a hundred days; those who mourn for a year, after two months; those who mourn for nine or five months, after one month; and those who mourn for three months, after ten days.' Abstaining from washing the body has, it seems, fallen entirely into disuse, nothing of the kind being, as far as we are aware, required now-a-days from mourners, either by written law or by custom." The rule as to not shaving the head and face is conformed to but very irregularly by mourners of the four lower degrees.—*Ibid.* ii. i. 602–4.

"As to female mourners of the first degree—until the completion of the burial, or, if this be deferred for a considerable time, till the coffin is stored away in the house or in some spot out of doors [pp. 106, 127, etc.], their neglect of the coiffure consists in the first place in not using ornamentation of any kind for the head, including hair-pins and ear-rings of even the simplest description. During the whole of that time they dispense, moreover, with cosmetics, face-powder, and other ingredients for painting and rouging. When the burial, or the storing away of the coffin is over, hair-pins and similar instruments begin to play their part once more" though under certain restrictions (p. 604). "For the same hundred days during which the men are not shaven, the women under no pretext whatever subject themselves to a so-called 'plucking the face,' *bán bīn* [*pa mien*] (挽 面), an operation which girls and coquettish young wives are wont to undergo from time to time. It has for its object the removal of the downy hairs from their faces."—*Ibid.* ii. i. 603–4.

"Popular custom at Amoy requires the house in which a father or mother has died to be draped with badges of mourning, as long as the children have to wear mourning dress." "The last breath is scarcely drawn when the three long strips of red paper, which are affixed horizontally at nearly every house-door over the lintel and vertically along the posts, mostly displaying inscriptions which betoken bliss and happiness, are each pasted over with a sheet of unwritten paper of a white or black colour, so that they are entirely, or almost entirely, hidden from view. And the inscriptions or human figures, which are painted or drawn on paper, pasted on each door-leaf of the main entrance at the houses of the moneyed and fashionable class, are dealt with in a similar way. After a year, when . . . the family assume the slighter mourning, they post up new inscribed strips on the old spots, using blue paper in case it is the father of the family who has departed this life, and yellow in case it is his wife proper. And at the end of the second year, when the mourning is again reduced, the strips are replaced by others of a pink hue, which are finally exchanged for red ones, such as are in use in ordinary times, on the day when the sacrifice which concludes the mourning is solemnly presented to the dead at the domestic altar. A similar course is followed by many in regard to the big globular paper lanterns, which are suspended under the roof on the premises of fashionable Chinese houses."—*Ibid.* ii. i. 604–5.

"To have music during mourning is still forbidden now-a-days not only by custom, but also by the laws and statutes of the Empire. It is, however, not so much the music itself that is struck at, as the festivities at which music is employed. The *Ta Ts'ing t'ung li* (ch. 52, l. 6) has: 'Those who are in mourning abstain altogether from participating in festive meals or musical entertainments.' And the Code of Laws has heavy penalties in store for those who violate this rescript . . . the Code contains also the following clause: 'Should such individuals among the people as are in mourning or have a burial to perform, club together and have theatricals or miscellaneous pieces played, or other representations of the kind; or should they have Buddhistic theatricals performed and sung, with accompaniment of bamboo flutes and silken strings, the local officers shall interfere with severity, and put a stop to it. Should these officers disobey this rescript, they shall be punished according to the articles which provide against the transgressions of the laws' (*Ta Ts'ing luh li*, ch. 17, § 喪 葬)."—*Ibid.* ii. i. 607–8.

"Now-a-days, at Amoy and its environs, any person who is recognizable as a mourner by his dress avoids all occasions of merry-making at which music is made, and also theatricals and punch-and-judy shows, these being invariably accompanied with music and singing. Popular odium would attach to anyone behaving otherwise, at least there would be plenty of tongues to criticize such conduct in an unfriendly spirit. Devotion to the memory of the deceased kinsman or kinswomen has not much to do with this matter, nor has the fear of the law, this being not so much directed against mourners who attend the festivities of others, as against mourners who might be shameless enough to organize for themselves occasions for amusement."—*Ibid.* ii. i. 608.

The Ch'ing dynasty, "carrying to its ultimate consequences the great principle that good government consists in moulding all institutions carefully upon those of ancient China, has revived the rescripts of the *Li ki* concerning sexual intercourse and marriage during mourning by re-casting them into an article for its *T'ung li*, and by inserting at the same time in its Code of Laws some clauses which threaten with severe punishments those who venture to solemnize such marriages. In the first-mentioned work we read (ch. 52, l. 6): 'Those who are in the three years' mourning may not abide in the inner apartments (reserved for the women), and those who mourn for one year shall not marry so long as their mourning lasts.' For the three lower degrees of mourning this work contains no such prohibitions." For the punishments prescribed by the Code, see *Ta Ching lü li*, ch. 10, §§ 居 喪 嫁 娶 and 嫁 娶 違 律 主 婚 媒 八 罪. "In spite of official rescripts and the written law, many a man in Amoy does not refrain from marrying a wife while in mourning even for his father or mother." But the marriage ceremony on such an occasion is devoid of all the usual gay and joyful accompaniments. "Such marriages are openly defended as being in perfect harmony with the maxim of Mencius, re-echoed by the whole nation, that it is a heavy sin against *hiao* to have no sons." "Provided such marriages be solemnized privately, the magistrates generally shut their eyes to these flagrant transgressions of the Code," though they could not with impunity venture to disobey it themselves.—*Ibid.* ii. i. 613–7.

[As under the Chou dynasty, so at the present time, people in mourning for their parents or paternal grandparents are forbidden to separate themselves from the clan or to divide the property until the mourning is over; and are punished if they do so. See *Ta Ch'ing lü li*, ch. 8, § 別 籍 異 財 and *De Groot*, ii. i. 618–23.]

The registers of the relatives that are to be mourned for in the five degrees embrace in the first place what the Chinese consider to be a clan with the exclusion of the dead, viz., a *tsuh* (族). . . . The word *tsuh* seems to have a plural sense, and to mean the generations which compose a clan; indeed, the *Ta Ts'ing luh li*, like Chinese works in general when speaking of a clan, often calls it 'the nine *tsuh*' (九 族), meaning thereby all the generations from paternal great-great-grandparents down to great-great-grandchildren [see tables in *De Groot*, ii. i. 563–6]." It is "beyond a doubt that the cardinal political principle underlying mourning in ancient times not only remains intact in the modern rescripts, but has even been carried by modern legislators to its utmost limits. Considerable modifications have, however, been made in the registers; . . . the special clauses which the mourning registers of the *I li* contain for grandees and officials are entirely wanting in the lists of the *Ta Ts'ing luh li*, so that these lists are evidently

intended for all classes of society, high or low. . . . We likewise search the lists of the present dynasty, and those of the House of Ming, in vain for any special clauses regarding those who die under age, although they were still retained in the *Khai yuen* Codex. Considering that it is not customary now-a-days to wear regular mourning for such minors, the silence of the actual books of law on this subject justifies the conclusion that no mourning is required for them by Government."—*Ibid.* ii. i. 562–6.

"Down to the present day no other changes have been made in it [the register of relatives to be mourned for in the five degrees], the sovereigns of the dynasty of Ts'ing . . . having adopted it in the shape in which they found it at the conquest of the Empire. They have given it a place in the *Ta Ts'ing hwui tien* and in the *Ta Ts'ing t'ung li*, as also in the Code of Laws known as *Ta Ts'ing luh li*, in which last work it appears as an introductory part."—*Ibid.* ii. i. 546.

"Mourning having always been regulated by devotion, respect, and submission to parents and elders, which virtues the nation expresses by the word *hiao*, pronounced *hà* in Amoy, mourning attire is there denoted by the term *hà sa*^{m} (孝 衫), '*hiao* clothes,' and *hà hók* (孝 服), '*hiao* attire,' and the wearing thereof by *ū hà* (有 孝), 'to have *hiao*,' or *toà hà* (帶 孝), 'to wear *hiao* round the waist.' These terms show that mourning and *hiao* have become almost synonymous."—*Ibid.* ii. i. 586.

"Penal laws were enacted, threatening with punishments those who neglect mourning, and furthermore, the governing classes were obliged to observe the rules of mourning most faithfully, thus silently inducing the people to follow their example."—See *Ta Ch'ing Lü Li*, ch. 17. Similar laws probably existed also in previous dynasties. "It is officially prescribed in the Statute rituals of the Empire that the Son of Heaven should mourn in a proper manner for his deceased parents. As soon as an Emperor has breathed his last, the Crown Prince and his consort, the Empress Dowager, the Concubines, and others immediately remove the ornaments from their heads, and after the fuller dressing of the corpse assume complete mourning attire of white linen, the same being done by all the imperial children and grandchildren. Every one of them has his hair cut off previously. At the death of his father or mother, the Emperor mourns till in the third year and dwells in a shed of mats erected in a side-room; he does not bestow any care on his hair until the hundredth day, when he also changes his dress for a better suit. But he does not defer his ascension to the throne. This ceremony is solemnized without delay on a lucky day."—*Ibid.* ii. i. 568, 570–1.

"Mandarins as well as the common people are threatened with punishments by the laws of the Empire if they venture to neglect the mourning for their parents." See *Ta Ch'ing lü li* ch. 17, § 匿 父 母 夫 喪. The laws are far less severe in the case of military officers.—*Ibid.* ii. i. 582, 584–5.

"In strict accordance with the great political principle that the distinctions of rank between high and low in the clan must be maintained to their utmost limits, legislators have adopted as a fixed rule that for one and the same crime there must be different punishments, varying in severity according to the mourning the perpetrator has to observe for the victim. When the latter falls in a higher class, the punishment must be increased proportionately, and if in a lower, it must be diminished."—*Ibid.* ii. i. 566–7.

"When an officer in the provinces receives intelligence that he has come under the obligation of the three years' mourning, he howls on the arrival of the message of death. Then addressing the messenger, he enquires after the cause of death and wails anew, giving the fullest vent to his grief; and this done, he changes his dress for a mourning suit, in accordance with the rules of mourning. . . . After having informed the other magistrates of the death, he hurries off without delay." "He sets out (every morning) while the stars still shine over his head, and does not interrupt his journey until the stars again become visible. On the road he wails whenever grief overcomes him, but he represses wailing in market-places and towns. He likewise wails when, about to arrive, his eyes espy the country, the walls of the capital of the province, department or district, and his native place." "On reaching the dwelling he wails again. After having passed through the gate he ascends the western steps, leans on the coffin with his face turned to the west, howls, and stamps his feet. The women, their faces turned eastward (standing on the other side of the coffin), wail and stamp an unlimited number of times, and after a short time the superiors and inferiors amongst the family members also face each other and pour out their lamentations. This done, he enquires in detail about the causes of the illness and death, and thereupon wails again, after which he unbraids his hair and bares his feet. The women, however, do not bare their feet. On the next day he assumes full mourning dress and ties up his hair in a knot, the women coiling up theirs, and all affix the hempen headband thereover." "The above rescripts contained in the *Ta Ts'ing t'ung li* (ch. 52 l. 10) have been copied almost verbatim from the *Li ki*, the book which . . . has served the present dynasty as a groundwork for most of its rites and ceremonial institutions. A whole section therein, forming the great part of the 70th chapter of the Khienlung edition, is entitled: *Hurrying to Mourning Rites* (奔 喪), and gives elaborate rules of conduct for those who are hastening to the obsequies of parents, husbands, and kinsmen further removed, with detailed rescripts as to the demeanour to be observed by the mourner in the event of his arriving before the burial, after the burial, and after the mourning rites have been completed." The same chapter contains also the rules to be observed by officials in cases where the relation lost is other than a father or mother and it is not necessary to hurry to the scene of death.—*Ibid.* ii. i. 580–1.

The present dynasty "has assigned to the mourning for the Emperor an important place amongst its own institutions. Minute regulations have been drawn up by it on this subject, and laid down in the *Ta Ts'ing t'ung li*" (ch. 47, ll. 1–6; 48, ll. 1–2, 11).—*Ibid.* ii. i. 632.

"The Chinese of to-day, in faithful obedience to the doctrines of antiquity, continue to recognise teachers as persons of high importance in social life," and they are mourned for accordingly by their pupils. "In obedience to the *Li ki*, it is a mourning in their hearts, a mourning which, in imitation of the disciples of the great national Sage, they only display outwardly by signs on their heads. They change the red bunch on the top of their skull-caps for a blue or black one, and have not their heads shaved for a hundred days; but this is all they do. Nobody, however, mourns for a teacher who taught him formerly; but there may be exceptions to this rule."—*Ibid.* ii. i. 640.

"To this day matters have remained unaltered in this respect [the hurtfulness of contact with mourning], it being prescribed in the *Ta Ts'ing tung li* (ch. 52, l. 6) that 'none of those who are in the three years' mourning shall enter the gate of the Ruler,' by which term is understood not only the Imperial Palace, but also any public building, fortress or other important structure belonging to Government." "The conviction that contact with people in mourning can entail evil consequences has equally imbued the mind of the Chinese of all classes. The evil is deemed to keep pace with the depth of the mourning; hence sack-cloth garments are feared most of all. Their influence is even supposed to be of a killing nature. . . . For the same reason, sack-cloth garments are never kept at home ready made." [For further instances, see ii. i. 642–4.] "Even persons whose first year of mourning has elapsed and by whom the *sàm pó sa*^{m} [unbleached linen coat, see ii. i. 592] is virtually no longer worn [p. 595] are in general very unwillingly received in their houses by most people. This has given rise to the use of special visiting cards, from which can be seen at a glance whether the person whose name they bear is in mourning or not, and which enable people to decide whether they shall decline his call. Under ordinary circumstances, visiting cards are oblong sheets of red paper, inscribed with the name. Mourners of the first degree use no cards for a year, then yellow ones during the second year, pasted upon an extra piece of red paper of a somewhat larger size, so that they look as if framed in red. This yellow colour represents the natural tint of unbleached bamboo paper, and therefore betokens the same abstaining from the use of dye which characterizes also the mourning dress [p. 601]. And when the second year has elapsed, red paper alone is used, now bearing, besides the name, the character 制, which signifies 'rules,' but points in this case to the rules of mourning, the observance of which is still incumbent on the owner of the cards. Cards such as the latter are used also by mourners of the second degree, till the end of their mourning."—*Ibid.* ii. i. 642–3.

"Still in our days it is an official rescript that 'all those who are in the three years' mourning shall not take part in any proceeding which has for its object the promotion of happiness' (*Ta Ch'ing t'ung li*, ch. 52, l. 6). Among such proceedings are understood in the first place numerous sacrifices which are presented annually by the Emperor and his mandarins in the Metropolis and in the provinces to the several divinities of the State, with a view to promoting thereby the welfare of the Empire and its several sub-divisions. Where the authorities up to the highest set the example, the people naturally follow, and keep those who are in mourning away from their gods as far as possible. They carry this so far as not even to allow mourners to contribute with the other inhabitants of the ward or village towards the celebration of festivals which are intended for the propitiation of the local tutelary divinities. No names of such persons may appear in the subscription lists circulated for this purpose, as it cannot be doubted that their names, not less than their money, would greatly neutralize the good effects the feast is intended to produce in the shape of blessings from the gods. For the same reason contributions and subscriptions from mourners are refused when money is being collected for the constuction or restoration of a temple."—*Ibid.* ii. i. 645.

"Fasting for the dead has now almost entirely disappeared from the list of customs of the people of southern Fuhkien. In a case of death there, the inmates of the mortuary house are accustomed to bestow little care on their cooking, as the disposal of the corpse claims nearly all their attention and time; but this cannot be called systematic fasting. Clearer vestiges of a former methodical abstinence from forbidden food and drink still survive. In Amoy, mourners never give festive entertainments, nor do they attend those of others, because meat, duly washed down with spirits distilled from rice, is an indispensable dish at every banquet (see pp. 608, 568, etc., and *Ta Ch'ing lü li*, ch. 17, § 喪 葬)." "Considering that fasting was at the outset abstaining from food with a view to being able to sacrifice so much the more to the dead, it is a natural consequence that the ancient Chinese likewise observed a special fast as an introductory rite to the sacrifices which custom required to be offered to the manes of the dead at regular periods after the demise, and even after the close of the mourning. In course of time, such sacrificial fasting, as we may call it, was gradually disconnected from its original material base. Ceasing to be considered as an auxiliary expedient for feeding the soul the better, it became a means of raising the mind up to the soul, a means to enable the sacrificer to perform in a more perfect way the acts of worship incumbent upon him, by bringing about a closer contact between himself and the soul."—*Ibid.* ii. i. 656–7.

LAWS OF INTERCOURSE.

Early Feudal Period (*c.* 2357 *to* 1122 B.C.).—*Table I.*

Concrete Distinctions.—Distinctive head-dress, garments, and badges were worn by various ranks, and vehicles were drawn by a different number of men, and later of horses, according to the rank of the occupant. "Before the times of T'ang [Yao] and Yü [Shun] the ceremonial cap was made of cloth without strings. In the *Chiao T'é Shêng* [it is stated that] in the most ancient times the ceremonial cap was made of cloth, and during times of fasting it was dyed black and the strings were taken off. [The object of] Huang Ti [the alleged inventor] in making this ceremonial cap with the pendants was that [the wearer's] eyes should not look aside, and that the ear-flaps might prevent him listening to slander."—*Wén hsien t'ung k'ao*, c. 14, sect. *Wang li*, 6.

"The distinctive name of the ceremonial bonnet or crown under the Yin or Shang dynasty was 冔 (see the *Record of Rites*, 王 制, Pt. V., p. 11). Here (*Shu ching*, Pt. IV. Bk. V. Pt. ii. i), however, the general term 冕 is used. . . . Whether the practices under the Shang dynasty were the same [as under the Chow, see LATER FEUDAL PER.], we have no means of knowing. The crown was always in the form of a student's cap, with tassels on which pearls were strung hanging down before and behind, except on the occasion of sacrificing to Heaven, when it is said there were no tassels; on the other occasions the number of pendants and pearls and gems varied, and perhaps the colour."—*Legge, Ch. Class.*, III. i. 206, note.

"The sacrificial robes of the Emperor had all these 12 figures [see *Object Dec.*] painted or embroidered upon them, emblematic of various attributes. . . . The 公 or highest nobles were restricted from the use of the sun, moon, and stars; the 侯 and 伯 were further restricted from the mountain and dragon; and, by a constantly decreasing restriction, five sets of official robes were made, indicating the rank of the wearers."—*Ibid.* III. i. 80, note.

"The cars in which the Emperor of this dynasty rode were invariably drawn by twenty men."—*Gray, China*, ii. 177.

"During the Shang . . . the Imperial car was drawn by eighteen men. . . . In the seventeenth century before the present era it was usual to yoke horses to the cars."—*Ibid.* ii. 177.

[Some contend that it was not till the Ch'in dynasty that the emperor used six horses to his carriage; but the point is doubtful.]—*Legge, Ch. Class.*, III. i. 159, note.

[Badges of distinction and of favour were conferred by the sovereign on his princes and ministers.]—*Ibid.* III. i. 334, note.

[The nobles and officers carried writing-tablets of gem, ivory, or other material, according to the rank of the bearer, with them into the court.]—*Ibid.* III. i. 81, note.

Ceremony.—"The baron E delivered the statutes of ceremony."—*Shu ching*, Pt. V. Bk. XXVII. 8.

"Simplicity was a characteristic of the ceremonies of Yin as compared with those of Chow."—*Legge, Ch. Class.*, III. ii. 439, note.

"The king did obeisance with his face to his hands, and his head to the ground." I Yin, his minister, performed a similar ceremony.—*Shu ching*, Pt. IV. Bk. V. Pt. ii. 3, 4; *Legge*, III. i. 206, 207.

[For the use of ceremony as an instrument in governing see GEN. GOVT. and MORAL SENT.]

Presents.—The feudal princes brought presents to the king's court and "received chariots and robes according to their services."—*Shu ching*, Pt. II. Bk. I. Ch. III. 8–9; *Legge*, III. i. 36–7.

The feudal princes brought to the king's court "articles of introduction,—the five instruments of gem, the three kinds of silk, the two living animals, and the one dead one."—*Shu ching*, Pt. II. Bk. I. Ch. III. 8; *Legge*, III. i. 36.

"It was one of the ceremonies of investiture, to give part of the furniture of the ancestral temple of the emperor to the deputed noble."—*Legge, Ch. Class.*, III. i. 8, note.

Forms of address.—[The son of an emperor, when 18 years of age, received a special title. 小 子 is often used in the *Shu ching* by emperors, whether old or young, in mock humility, as a depreciatory designation of themselves. 寡 人 was used as a similar designation by the princes of States (see *Mencius*, I. Pt. I. iii. i; *et al.*).]—*Ibid.* III. ii. 384–5, note. *Cf. infra.*

Ts'ae Peen says:—"In an announcement to the myriad regions, and in distinction from their multitudes, the emperor calls himself 'the one man.' Realizing his relation to God, and feeling as in His presence, he calls himself 'the little child.'"—*Ibid.* III. i. 174, note.

"When the princes of the empire took up their residence at court as high ministers, their style was changed from 侯 to 后."—*Ibid.* III. i. 163, note.

"陟 and 配 天 [*Shu ching*, Pt. V. Bk. XVI. 8] are predicates of the emperors of Yin . . . the former character describing them as 'deceased' (see 'The Canon of Shun,' p. 28), and 配 天 declaring the fact of their being associated with Heaven in the sacrifices to it. In the present dynasty all its departed emperors are so honoured at the great sacrificial services. Under the Chow dynasty only How-tseih and King Wăn enjoyed the distinction" [see following Period].—*Ibid.* III. ii. 478, note.

[It was the custom of Shang to flatter superiors.]—*Shu ching*, V. xxiv. 8.

Later Feudal Period (1122 *to* 221 B.C.).—*Table II.*

Concrete Distinctions.—"In some ceremonial usages the multitude of things formed the mark of distinction," as the 7 shrines in the ancestral temple of the Son of Heaven, 5 in that of a prince of a state, etc., the number of dishes, attendants, oxen, mats, coffins, etc. "In other usages the paucity of things formed the mark of distinction" (see illustrations in viii. i. 8). "In others, greatness of size formed the mark," as in the dimensions of palaces, apartments, thickness of coffins, etc. "In others, smallness of size formed the mark," as when the highest in rank presented a smaller cup of spirits to the representative of the dead than the low. "In others, the height formed the mark," as in the number of steps to halls, towered gateways, etc. "In others, the lowness formed the mark," as when the highest reverence was not shown on the raised altar, but on the ground beneath, etc. "In others, ornament formed the mark," as in the decorations on imperial and official robes. "In others, plainness formed the mark," as *e.g.*, "the relatives of a father do not put themselves into postures (like other visitors). The Grand jade-token has no engraving on it. The

Grand soup has no condiments. The Grand carriage is plain, and the mats in it are of rushes."—*Li chi*, viii. i. 7–14; *Legge*, i. 397–401. See also *infra*.

"The *Commentary on the Kung Yang Chronicles* says: 'The city wall of an emperor is 1,000 *chih* (雉) in length, and 7 *chih* high; of a duke, marquis, or earl, 5 *chih* high; and of a viscount or baron 3 *chih*.'"—*Yüan chien lei han, Chü ch'u pu*, *c.* 340. See also *Ko chih ching yüan*, *c.* 20, *Kung shih lei*, p. 14*a*.

'The royal palace had five courts and gates; that of a feudal lord had three."—*Legge, Lî Kî*, i. 71, note

"The Emperor had three towers (or observatories): the 'Spiritual Tower' for studying astronomy; the 'Seasons Tower' for studying the changes of the seasons; and the 'Garden Tower' for studying natural history [*lit.*, birds, animals, fish, and turtles]. But as neither the greater nor lesser feudal princes studied astronomy they had no observatories, only 'Seasons Towers' and 'Garden Towers.'"—*Wu ching yao i, Ko chih ching yüan, Chu t'ai lei*, p. 8.

"Throughout the Chow dynasty, . . . fifteen men seem to have been considered sufficient" to draw the imperial car. The custom of yoking horses to cars "was very generally observed" during this dynasty.—*Gray, China*, ii. 177. To the emperor were assigned 40,000 war-horses; to the princes and other nobles, a smaller number according to their rank.

"Under the Chow dynasty, the emperor had six different crowns, with robes appropriate to each. In sacrificing to Heaven, he used one kind of crown and robes, in sacrificing to his ancestors, a different kind; etc. (see the *Rites of Chow*, *c.* 21, *Ch'un Kuan, Ssŭ fu*)."—*Legge, Ch. Class.*, III. i. 206, note.

[The Emperor wore a black cap with black tassels; a prince, a white cap with white tassels; and a Great Minister and lesser officials, a shining cap with shining tassel.]—*Ko chih ching yüan*, *c.* 13, *Kuan fu lei*, p. 1*b*.

"The shoes of the emperor were black and square; of a prince, white and square; and of a Great Minister, white and round."—*Ibid. c.* 18, *Kuan fu lei*, p. 13*a*.

[For the foods appropriated for the ruler's use, which others were forbidden to eat before the dates on which they were served in the palace, see *Giles, Dic.*, No. 8504.]

"The mat for the Emperor was five-fold; for a prince, three-fold; for a Great Minister, two-fold; and for a scholar, single."—*Ibid. c.* 54, *Chü ch'u chi wu lei*, p. 7*b*.

[For the different kinds of boats used by the Emperor, princes, and ministers, see *ibid. c.* 28, *Chou chü lei*, p. 1*b*.]

[In hunting expeditions the imperial team was the only one which consisted of six horses. These were harnessed abreast, and the trappings were adorned with metal ornaments and bells. The centre of the road was reserved for the imperial chariot. Red bows and arrows were given by the Emperor as a token of merit to distinguished princes. (*Journ. N.-C. B.R.A.S.*, N.S. viii. 151–4.) Flags of different kinds were lowered to indicate captures by the emperor, princes, etc. (*Ko chih ching yüan*, *c.* 31, *Ch'ao chih lei*, p. 7*b*).]

"太 常 is the name of the grand imperial banner. The Chow Le, Bk. XXVII., makes mention of the 司 常, or 'superintendent of banners,' who had charge of all the 'nine flags or banners' (九 旗). 常, therefore, is in that passage used apparently as synonymous with 旗. Commonly, however, we find it used with reference to the grand standard, on which were figures of the sun and moon, with figures of dragons, lying along its breadth, one over the other head above tail. The sun and moon, however, were the distinctive features of the grand banner. It was born aloft when the emperor went to sacrifice. . . . The names of meritorious ministers, moreover, were inscribed on it during their life-time, preparatory to their sharing in the sacrifices of the ancestral temple after their death."—*Legge, Ch. Class.*, III. ii. 579, note.

"The different ranks in ancient China were marked by the number of carriages, robes, etc., conferred by the king. The prince of a great State had *seven* of the symbols of rank or, as we may call them here, orders, on his robes: on the upper robe three; on the lower robe four."—*Ibid.* IV. i. 185 note.

"The practice of the earlier times in the use of these ornaments [on official robes; see EARLY FEUDAL PER.] was a good deal altered during the Chow dynasty."—*Ibid.* III. i. 80, note.

"The old symbols of distinction gave rise to 'the Insignia of Civil and Military Officers' of the present dynasty, called *Kiu phin* (九 品)."—*Legge, Lî Kî*, i. 214, note 3.

[The secondary chiefs, placed at the head of the different principalities, received as the sign of their dignity, two sorts of tablets or sceptres of precious stone, one of which, called a *kuei* (圭) was oblong, and the other, called a *pi* (璧), was oval (*Shih ching*, I. v. I. 3; III. iii. V. 5). Of the *kuei* there were three forms, and of the *pi* two; in all five, corresponding to the five orders of nobility. When they came to court, they held these opposite the breast, in speaking to the sovereign.]

"The convex symbols were put on their altars and he [duke of Chou] himself held his mace, while he addressed the kings T'ae, Ke, and Wăn" (*Shu ching*, Pt. V. Bk. VI. 4). "璧 and 琥 (= 圭) were two of the 'five tokens of gem,' mentioned in the Can. of Shun, p. 7, conferred by the emperor upon the various princes in connection with their investitures. There were two *peih*, belonging to the *tsze* and *nan* respectively, and three *kwei*, that appropriate to the duke of Chow being the 桓 圭. But we can hardly understand the terms here of the badges of nobility, or tokens of imperial appointment. Gan-kwŏ says the *peih* were brought and laid upon the altars of the three kings in reverence to them, and the *kwei* was the duke's proper *hwan kwei*, which he held in his hands as the evidence of his person and rank in appearing before them. But from p. 8, we should rather conclude that all the articles were proper to the worship of the three kings. The 璧 is described as resting on a square base, while outwards it was round like the arch of heaven."—*Legge, Ch. Class.*, III. ii. 353, note.

"As a High duke, K'e had the robes and cap, the carriage, flag, &c., appropriate to his rank, and which were the accompaniments of his investiture:—See the Le-ke, Bk. 王 制, Pt. ii. p. 7."—*Ibid.* p. 379, note.

"The conferring on a prince of a bow and arrows was understood to invest him with the power of punishing all within his jurisdiction who were refractory to the imperial commands, but not of taking life without first reporting to the court."—*Ibid.* pp. 618–9, note.

[The emperor used a carved bow; a prince, a red one; and a Great Minister, a black one.]—*Ko chih ching yüan*, *c.* 41, *Wu pei lei*, p. 10*b*.

[The leather bow-cases of the princes of the blood were painted red, the Chou colour.]—*Legge, Ch. Class.*, IV. ii. 278, note.

[For the battle-axes borne by different ranks see *Chung hua ku chin chu, Ko chih ching yüan*, *c.* 42, *Wu pei lei*, p. 19*b*.]

"The instruments formerly used by the Emperors were made of jade stone; with princes the *Ch'ing* [磬: see *Music*] was made of stone only; if they used the jade kind, they exceeded the limits of propriety."—*Journ. N.-C.B.R.A.S.*, N.S. viii. 105.

[For the various uses of the *to* (鐸) "tongued bell" see *ibid.* p. 106.]

"The shells of the tortoise employed for imperial divinations were larger than those employed by the princes."—*Legge, Ch. Class.*, III. ii. 355, note.

"According to the regulations, any one of the three ducal ministers might wear one additional symbol of distinction,—that of the descending dragon (see *Shih ching*, Part I. xv. Ode 6, 1). But if such an addition were made (to his eight symbols), it must be by special grant. There were only nine symbols (in all). The ruler of a state of the second class wore only seven of them, and the ruler of a small state only five." "The high minister of a great state could not wear more than three of the symbols, and the ministers below him only two. The high ministers of a small state, and Great officers of the lowest class, wore only one."—*Li chi*, iii. ii. 8–9; *Legge*, i. 214–5.

Ts'ai Shu, the younger brother of the duke of Chou "was allowed an attendance of 'ten chariots and 70 footmen.'"—*Legge, Ch. Class.*, III. ii. 488, note.

"The benches used at various imperial ceremonies were of five kinds, of which the 'gem-adorned' was the most honourable. See the Chow Le, Bk. XX., on the duties of the 司 几 筵. Different accounts are given of their size. They were all, according to Ma Yung, 3 feet long. Yuen Ch'in (阮 諶) says they were 5 feet long and 2 feet high."—*Ibid.* III. ii. 546, note.

[A skin cap, called 弁, was worn in court at audiences.]—*Ibid.* III. ii. 359, note.

"As in Egypt, all classes anciently carried staffs, but about 500 B.C. the right to do so was restricted to men of rank, because a wheelwright was seen using his as a tool."—*Simcox*, ii. 77.

"The staff being not only a badge of mourning, but also a symbol of authority, one was not allowed to carry it in the presence of a higher authority, nor in that of a person acting as his substitute."—*De Groot, Rel. Syst.*, i. i. 168.

"In ancient times a trading broker on one foot wore a white shoe and on the other a black one."—*Chin ling, Ko chih ching yüan*, *c.* 18, *Kuan fu lei*, p. 13*a*.

[For the number of attendants permitted to different ranks, see *Li chi*, xlv. i.]

[For the concrete distinctions between the various classes in regard to sacrificial ceremonies see ECCLESIASTICAL.]

Ceremony.—"In comparing the regulations of Chow with those of the earlier dynasties, Confucius gives the preference to Chow, which profiting by the experience of the past, had excelled it in the 'complete and elegant' character of its ordinances. These ordinances are embodied in the voluminous work known as the Chow Li, or 'Rites of Chow,' the authorship of which is ascribed to the Duke of Chow, the virtuous and disinterested brother of King Wu. The Duke of Chow, like Confucius, did not claim to be an innovator, and the latter is probably right in his belief that the Rites of Chow differed from those of Yin and Hia mainly in the 'completeness and elegance' with which they were written out."—*Simcox*, ii. 22.

"There is hardly an act in official, and even social, life which is not performed with certain ceremonies. This applies to the mode of dress to be worn, the speeches to be made, and the postures to be assumed on all possible occasions, whether at court or in private life."—*Hirth, Anc. Hist.*, p. 109.

"Ceremonies (might be said to) commence with the capping; to have their root in marriage; to be most important in the rites of mourning and sacrifice; to confer the greatest honour in audiences at the royal court and in the interchange of visits at the feudal courts; and to be most promotive of harmony in the country festivals and celebrations of archery. These were the greatest occasions of ceremony, and the principal points in them."—*Li chi*, xli. 4; *Legge*, ii. 430.

"The Chow period was pre-eminently one of ceremonial observances, pushed to an extreme limit. Even Confucius was unable to rise above the dead level of an ultra-formal etiquette, which occupies in his teachings a place altogether out of proportion to any advantages likely to accrue from the most scrupulous compliance with its rules. Happily 'ceremonies' were not for the poor and illiterate. They were confined chiefly to the proceedings of vassal courts and courtiers *vis-à-vis* the Imperial court and each other; to the daily life of personages of leisure and social standing. The quiet dignity of the modern mandarins, surrounded as it is by a host of harmless formalities which seem to us out of keeping with the nineteenth century, is in part a legacy from the exaggerated ceremonial of the Chows."—*Giles, Historic China*, p. 7.

[Ceremonies were classified as the Auspicious (*chi*, including all acts of religious worship); the Mourning (*hsiung*); those of Hospitality (*pin*); the Military (*chün*); and the Festive (*hsi*) (*Li chi*, xxii. i.; *Legge*, ii. 236, note). They were also arranged under six headings: capping; marrying; mourning rites; sacrifices; feasts; and interviews (iii. iv. i.; v. 28). They comprehended 300 greater rules and 3,000 smaller (xxviii. ii. 38). They were the greatest of all things by which men live (xxiv. i.).]

[Reverence and gravity, with careful speech, were regarded as essential in Propriety (ceremonial intercourse), which was considered as of importance to the community and indispensable for the regulation of the individual and society.]—*Li chi*, i. i. i.

"The emperor's personal life was regulated by strict ceremonial in its most minute details, in which respect the most powerful man among millions was less free than any of his subjects. His mode of dress, the work he had to do during every hour of the day, the postures he had to assume in performing certain ceremonies, and the words he had to pronounce on every possible occasion were regulated by that cruel tyrant, state ceremonial. Even his daily meals, the nature and the quantity of food to be served to him at each season of the year and on special occasions were subject to fixed rules. . . . The same rigid ceremonial was brought to bear on the feudatory princes."—*Hirth, Anc. Hist.*, p. 115. See also p. 109.

[The "son of Heaven" held audiences at the four seasons. See *Legge, Lî Kî*, i. iii, and note.]

"The king came forth and stood in the space within the fourth gate of the palace, when the Grand-guardian led in all the princes of the western regions by the left half of the gate, and the duke of Peih those of the eastern regions by the right half. They then caused their teams of light bay horses, with red manes and tails, to be exhibited; and the princes, raising aloft their sceptres and other presents, said, 'We, your servants, defenders of the throne, venture to bring here the productions of our territories and set them forth.' With these words, they did obeisance twice, bowing their heads to the earth. The king, righteously continuing the virtue of his predecessors, returned their obeisance" (*Shu ching*, Pt. V. Bk. XXIII. 1). The maces or gem-tokens conferred on the princes by the Emperor they brought with them when they appeared at court. The princes had attendants with them to raise the presents aloft before the Emperor. As a rule the sovereign did not return the obeisance of the ministers, but though K'ang was now the declared successor to the throne, until the year of his father's death had elapsed, his reign could not chronologically commence. His returning the obeisance, therefore, was a recognition by himself and all the princes that he and no other was to be their sovereign (*Legge, Ch. Class.*, III. ii. 562–4, and notes). *Cf.* the *Li chi*: "By the rites of audience, the Emperor should not go down from the hall" (*Tzŭ chih t'ung chien kang mu*, *c.* 9, *Ch'ien pien*, p. 15*b*).

[For the court etiquette observed on the special occasion when king Ch'êng delivered his testamentary charge to his principal ministers and other officers around his death-bed, the ceremonies connected with the publication of the charge, and the accession of Ch'ao to the throne, see *Shu ching*, Pt. V. Bk. XXII; *Legge, Ch. Class.*, III. ii. 544–61.]

"At a grand reception of visitors at court there were the attendants and officers who received them, and went between them and the prince. They and their function were called 介 紹."—*Ibid.* III. ii. 365, note.

"On common occasions the order to repair to the imperial presence was given to the 'six K'ing,' who would 'lead on the officers belonging to their several departments,'" but on extraordinary occasions "the order was sent directly to all, of whatever rank."—*Ibid.* III. ii. 546, note.

"The ceremonies to be observed on various occasions in the imperial court have not been transmitted."—*Ibid.* III. ii. 568, note.

"The descendants of K'e held the dukedom of Sung till nearly the end of the Chow dynasty, but by the time of Confucius many of the ceremonies and relics which it was their business to preserve were lost. The sage bewailed this" (*Con. Ana.*, III. ix.).—*Ibid.* III. ii. 377, note.

"The highest minister, in a state of the second class, ranked with one of the middle grade in a great state; the second, with the one of the lowest grade; and the lowest, with a Great officer of the highest grade. The highest minister in a small state ranked with the lowest of a great state; the second, with the highest Great officer of the other; and the lowest, with one of the lower grade."—*Li chi*, iii. i. 6; *Legge*, i. 211.

[For the ceremonies to be observed when princes of states were about to go to the court of the king, and when they were about to visit one another, see *Li chi*, v. i. 4, 5.]

"On the roads, men took the right side and women the left; carriages kept in the middle. A man kept behind another who had a father's years; he followed one who might be his elder brother more closely, but still keeping behind, as geese fly after one another in a row. Friends did not pass by one another, when going the same way. (In the case of an old and a young man, carrying burdens), both were borne by the younger; and if the two were too heavy for one, he took the heavier. A man with grey hair was not allowed to carry anything, though he might do it with one hand." "An officer of superior rank, of the age of sixty or seventy, did not walk on foot. A common man, at that age, did not go without flesh to eat."—*Li chi*, iii. v. 15–16; *Legge*, i. 244. See also *Tzŭ chih t'ung chien kang mu*, *c.* 6, *Ch'ien pien*, p. 24*a*.

"When one has ascended the wall of a city, he should not point, nor call out. When he intends to go to a lodging-house, let it not be with the feeling that he must get whatever he asks for. When about to go up to the hall (of a house), he must raise his voice. When outside the door there are two (pairs of) shoes [left outside by those who had entered the apartment], if voices be heard, he enters; if voices be not heard, he will not enter. When about to enter the door, he must keep his eyes cast down. As he enters, he should (keep his hands raised as high as if he were) bearing the bar of the door. In looking down or up, he should not turn (his head). If the door were open, he should leave it open; if it were shut, he should shut it again. If there be others (about) to enter after him, while he (turns to) shut the door, let him not do so hastily. Let him not tread on the shoes (left outside the door), nor stride across the mat (in going to take his seat); but let him hold up his dress, and move hastily to his corner (of the mat). (When seated), he must be careful in answering or assenting."—*Li chi*, i. i. ii. 5, 22–6; *Legge*, i. 70–1.

"In many cases the formal rules of propriety only emphasize the requirements of natural politeness and good feeling. . . . The exercise of hospitality and the interchange of friendly gifts were common . . . in giving and receiving presents the self-respect of both parties was to be protected with the utmost refinement. A poor man will not *ask* for what he wants, he must be entreated to accept it. No one will *take* a gift; it must be offered or presented to a private person just as much as to a ruler (see *S.B.*, xxvii. 89)."—*Simcox*, ii. 74–5.

"The common people were not expected to observe all the minuter rules of ceremony. Such rules as that 'In a house of mourning one should not laugh'; 'When eating (with others) one should not sigh'; 'When there is a body shrouded and coffined in his village one should not sing in the lanes'; and that in 'Walking with a funeral procession one should not pick his way,'—these might be observed by everybody; but it is only the superior man who is required to sacrifice his convenience to decorum: he, 'though poor, will not sell his vessels of sacrifice; though suffering from cold, he will not wear his sacrificial robes; though he wants wood to build a house, he will not cut down the trees on his grave mounds' (*S.B.*, xxvii. 104)."—*Ibid.* ii. 75.

"The superior man must act consistently, at whatever cost (*S.B.*, xxvii. 137). . . . Friendly regard and helpful action

ought to go together: it is equally improper to offer help without expressing friendly feeling and to manifest friendly feeling without offering help, and having done the one the superior man will not fail to do the other in due proportion."—*Ibid.* ii. 76.

"The same refinement of feeling is to be noted in a variety of other rules. It is not proper for a man to take office while in mourning for his parents; but if his services are needed by the State, he may give them gratuitously (*S.B.*, xxvii. 342; xxviii. 466). During the same period he might speak of public affairs concerning his superiors, but not of those in which he himself had an interest (*ibid.* pp. 191, 233). On the other hand a prince may call at the house of a minister to enquire for the sick or to condole with mourners, but he must not visit there for amusement. It is not proper for men to praise their seniors or superiors; but at all times it was a point of good manners to give somebody else the credit of whatever merit one was supposed to possess. A private citizen gave the glory to his parents, a minister to his prince, and the ruler to high heaven: 'it was thus that they showed submissive deference.'"—*Ibid.* ii. 76.

"Minor instructions on points of etiquette are equally rational. 'When sitting by a person of rank, if he began to yawn and stretch himself, to turn round his tablets, to play with the head of his sword, to move his shoes about or to ask about the time of day, one might ask leave to retire' (*S.B.*, xxviii. 72, 76, 81). Several other passages recall fragments of the Egyptian rules of propriety—one should not speak positively if one has the slightest doubt; but if one has no doubt, one should not seem to be expressing one's own opinion only. In the presence of a superior one should not answer a question without looking round to see if any one else is going to speak. It is not stated anywhere that unpalatable advice or criticism ought not to be delivered point-blank, but should be wrapped up in the most delicately suggestive of allegories. But this sort of diplomacy came too much by nature to the Chinese official for it to need enjoining."—*Ibid.* ii. 76–7.

When Confucius "put his social theories to a practical test, the people of Chung-tu, the district over which he had jurisdiction, had now to conform to his rules of propriety with all that pendantry which, even to this day, governs the life of educated Chinamen. His government was one of interference with all individual liberty. Every act of life had its prescribed ceremonial; ceremonial in every detail, such as we are wont to see only in the courts of rulers and the households of high dignitaries, became obligatory on the people at large; and all matters of daily life were subject to some rigid rule. Even the food which the different classes of people were allowed to eat was regulated; males and females were kept apart from each other in the streets; and even the thickness of coffins and the shape and situation of graves were made the subject of his regulations. The result of this system is said by the admirers of the sage to have been marvellous; for the manners of the population were changed entirely, and they became patterns of good behavior."—*Hirth, Anc. Hist.*, pp. 244–5.

[For the right conduct of the scholar see also *Li chi*, xxxviii.]

"It is unchivalrous to inflict a second wound, to take prisoner a man with grey hairs, to fall upon the enemy in a defile, or to sound drums to attack an unformed host. The Tso Chuen is full of stories of Chinese chivalry and very Chinese magnanimity. Famous warriors are slain because they cannot resist the appeal of an enemy to let him shoot first, and a rather pretty bit of courteous bravado is described, in which two heroes, who are being hotly pursued, shoot, not at their enemies, but at a passing deer, stop courteously to offer the game to their pursuers, and then set off again, repeating the process till the chase is abandoned. The mediæval counterparts of these heroes would, however, hardly understand the view of good manners, which requires self-depreciation to be carried so far that the warrior must always pretend politely to be the greatest coward present, like the general praised by Confucius for saying, after he had brought up the rear of a retreating force, 'It is not that I dare to be last; my horse would not advance' (*Analects*, vi. § 13)."—*Simcox*, ii. 82.

"It is curious to note how, in this state of general anarchy, a few rough principles of feudal law struggled to the front, which are the more interesting to us because of their dim resemblance to the expedients spontaneously adopted in mediæval Europe. They were not inspired by the ancient classics or their modern admirers, but were the natural outcome of the new state of things which required and developed an etiquette of its own. Thus, if an army passed through neutral territory, usage required that the prince (presumably an inferior) should man the walls of his capital and send an embassy to ask wherein he had offended, otherwise he was liable to be treated as an enemy. Chinese etiquette and knightly generosity were sometimes curiously mixed, as in the story of the small state of Yen, which had been attacked by Tartars and effectively helped by Tse; upon which the Prince of Yen accompanies his departing ally beyond his own frontier, a compliment properly due to the emperor alone. Tse thereupon makes the prince a present of the lands he has committed the incorrectness of crossing, so as to put them both 'in order.'"—*Ibid.* ii. 81–2.

Towards superiors.—"Entire self-denudation for the benefit of one's parents having once attained to the highest possible form of devotion and respect, we can easily understand why it has become customary in China for those who have to appear before superiors, to wear plain and inexpensive garments as symbolizing such self-denudation. 'In some ceremonial usages,' says the *Li ki* (ch. 34, l. 32), 'plainness is the sign of dignity. The deepest respect admits of no ornaments.'"—*De Groot, Rel. Syst.*, ii. i. 490.

[Mencius refused to go to the princes when they called him, maintaining that in accordance with precedent princes should come to their ministers: v. *Legge, Ch. Class.*, ii. Prol. pp. 27–30 and pp. 86–91.]

When Mi Tzŭ-chia, a Minister of the Wei State under Duke Ling, was "walking in the garden with the Duke, he plucked a peach, and finding it sweet to the taste handed the remainder to his sovereign. For this act of familiarity he was put to death."—*Giles, Bio. Dic.*, p. 586.

That laying aside the sword on approaching the sovereign "was also a custom at the contemporaneous Chinese Courts is evident from the exceptional privilege of 劍履上殿 occasionally granted to powerful subjects."—*Ch. Rev.*, xiii. 359.

[From an incident recorded in *Shih lei t'ung pien, Kuo pu*, *c.* 84, p. 14*a*, it would seem that officers eating fruit in the presence of the Emperor were not supposed to slice them, unless permitted to do so.]

"A great officer or (other) officer should go out or in at the ruler's doors, on the right of the middle post, without treading on the threshold."—*Li chi*, i. i. ii. 6, 27; *Legge*, i. 71.

"There are several instances where posturing or dancing [蹈 舞] at Court is mentioned, and, as a special mark of favour conferred upon veteran statesmen, exemption from this posturing was accorded."—*Ch. Rev.*, xiv. 357.

"In going to take counsel with an elder, one must carry a stool and a staff with him (for the elder's use). When the elder asks a question, to reply without acknowledging one's incompepetency and (trying to) decline answering, is contrary to propriety."—*Li chi*, i. i. ii. 1, 1; *Legge*, i. 67.

"When (a pupil) is about to go to his mat, he should not look discomposed. With his two hands he should hold up his lower garment, so that the bottom of it may be a cubit from the ground. His clothes should not hang loosely about him, nor should there be any hurried movements of his feet. If any writing or tablets of his master, or his lute or cithern be in the way, he should kneel down and remove them, taking care not to disarrange them. When sitting and doing nothing, he should keep quite at the back (of his mat); when eating, quite at the front of it. [The dishes were placed before the mats.] He should sit quietly and keep a watch on his countenance. If there be any subject on which the elder has not touched, let him not introduce it irregularly. Let him keep his deportment correct, and listen respectfully. Let him not appropriate (to himself) the words (of others), nor (repeat them) as (the echo does the) thunder. If he must (adduce proofs), let them be from antiquity, with an appeal to the ancient kings. When sitting by his side, and the teacher puts a question, (the learner) should not reply till (the other) has finished. When requesting (instruction) on the subject of his studies, (the learner) should rise; when requesting further information, he should rise. When his father calls, (a youth) should not (merely) answer 'yes,' nor when his teacher calls. He should, with (a respectful) 'yes,' immediately rise (and go to them). When one is sitting in attendance on another whom he honours and reveres, he should not allow any part of his mat to keep them apart [he should sit on the front of his mat, to be as near the other as possible], nor will he rise when he sees others (come in) of the same rank as himself. When the torches come, he should rise; and also when the viands come in, or a visitor of superior rank. [The torches were borne by boys. They were often changed, that the visitors might not be aware how the time was passing.] The torches should not (be allowed to burn) till their ends can be seen. Before an honoured visitor we should not shout (even) at a dog. When declining any food one should not spit."—*Li chi*, i. i. iii. 3, 8–19; *Legge*, i. 74–6.

"When one is sitting in attendance on another of superior character or rank, and that other yawns or stretches himself, or lays hold of his staff or shoes, or looks towards the sun to see if it be early or late, he should ask to be allowed to leave. . . . Do not listen with the head inclined on one side, nor answer with a loud sharp voice, nor look with a dissolute leer, nor keep the body in a slouching position. Do not saunter about with a haughty gait, nor stand with one foot raised. Do not sit with your knees wide apart, nor sleep on your face. Have your hair gathered up, and do not use any false hair [which women were accustomed to do]. Let not the cap be laid aside; nor the chest be bared, (even) when one is toiling hard; nor let the lower garment be held up (even) in hot weather."—*Ibid.* i. i. iii. 4. 20–6. For the rules when attending elders at meals see 18. 63–7.

[Diffidence was shown by youths in drinking with elders.]—*Ibid.* i. i. iii. 15–60.

[A gift could not be declined when offered by an elder to a youth or anyone of mean condition.]—*Ibid.* i. i. iii. 16. 61.

[The ways of a young man who is sorrowful in consequence of the illness or death of a parent, are described in *ibid.* i. i. iv. i. i.]

"One should not kneel in handing anything to a (superior) standing, nor stand in handing it to him sitting."—*Ibid.* i. i. ii. 7. 32.

"A lad should not wear a jacket of fur nor the skirt [to leave him free to execute any service required of him]. He must stand straight and square, and not incline his head in hearing. When an elder is holding him with the hand, he should hold the elder's hand with both his hands. When the elder has shifted his sword to his back and is speaking to him with the side of his face bent down, he should cover his mouth with his hand in answering. When he is following his teacher [one 'born before him,' 'an old man who teaches youth'], he should not quit the road to speak with another person. When he meets his teacher on the road, he should hasten forward to him, and stand with his hands joined across his breast. If the teacher speak to him, he will answer; if he do not, he will retire with hasty steps. When, following an elder, they ascend a level height, he must keep his face towards the quarter to which the elder is looking."—*Ibid.* i. i. ii. 5. 17–21; *Legge*, i. 70.

[For the rules to be observed towards the ruler by his carriage-driver, see *Li chi*, i. i. v. 7. 28–33; by a driver in other cases, *ibid.* i. i. v. 8. 34–5; for various rules about driving out, for the ruler and people generally, i. i. v. 10. 37–48; as to the manner of carrying things belonging to superiors, and standing before them, i. ii. i. i. 1–5; as to not calling certain parties by their names, i. ii. i. 2. 6; as to designations of themselves to be avoided or used by certain other parties, i. ii. i. 3. 7–8; as to modesty in answering questions, i. ii. i. 4. 9; as to the practice of ceremonies in another state, i. ii. i. 5. 10–11; as to the conduct of an orphan son, a son in mourning for his father, and other points, i. ii. i. 6. 12, 7. 13–14; as to certain offences to be punished, and things to be avoided in the palace, and in private, i. ii. i. 8. 15–17; the conduct of a superior man in building, preparing for sacrifice, and cognate matters, i. ii. i. 9. 18; of a great or other officer, leaving his own state to go to another, and in that other, i. ii. i. 10. 19–21; of officers in interviews with one another and with rulers, i. ii. i. 11. 22–23; as to the rules for the spring hunting, for bad years, for the personal ornaments of a ruler, and the music of officers, i. ii. i. 12. 24–26; as to the reply of an officer to a question of his ruler, i. ii. i. 13–27; as to a great officer leaving his state on his own business, i. ii. i. 14–28; as to parties entreating a ruler, and others, not to abandon the state, i. ii. i. 15–29; as to a minister and a son in remonstrating with a ruler or parent, and in seeing about their medicine when ill, i. ii. iii. i. 1–2; as to the rule in making comparisons, i. ii. iii. 2. 3; as to the rules to be observed in asking about the age and wealth of different parties from the king downwards, i. ii. iii. 3. 4–5; as to the terms in which the deaths of different men, and of animals, are described, i. ii. iii. 5. 11–12; as to the names of near relatives, when they are sacrificed to, and when they are alive, i. ii. iii. 6. 13–14; as to how different parties should look at others, i. ii. iii. 7. 15; as to executing a ruler's orders, and things to be avoided in the conduct of business, i. ii. iii. 8. 16–17; as to avoidance of display of wealth, etc., at great entertainments, i. ii. iii. 9. 18; as to presents of introduction, i. ii. iii. 10. 19; as to the language used in sending daughters to different harems, i. ii. iii. 11. 20; as to the differences in the services rendered to a parent, a ruler, and a master or instructor, ii. i. i. 2. And see *supra* and *infra* respecting several of the above.]

[Minute directions for a youth in sweeping for an elder and in carrying and placing his mats are given in the *Li chi*. i. i. iii i. 1–4; for a youth, especially a pupil, in attendance on his elders and in serving a superior (3, 8–26); for a youth and host eating (11. 52) and drinking (15. 60) together; and for dealing with the kernel of a fruit given by an elder in his presence (17. 62), etc. See *Legge, Lî Kî*, i. 73–82.]

"For all sons it is the rule:—in winter, to warm (the bed for their parents), and to cool it in summer; in the evening, to adjust everything (for their repose), and to inquire (about their health) in the morning; and, when with their companions, not to quarrel."—*Ibid.* i. i. ii. 2. 2; *Legge*, i. 67. Also in *Li chi chieh yao*, *c.* 1, p. 3*b*.

"When a father calls a son must give an immediate answer."—*Li chi chieh yao*, *c.* 1, p. 7*b*.

"Father and son should not sit on the same mat."—*Li chi, Yüan chien lei han*, *c.* 242, p. 23*a*. See also *Han shu, ibid. c.* 243, p. 11a, and *cf.* FILIAL.

[A "filial" son did not advance, retire, or speak in presence of one of equal rank with his father, unless addressed first.]—*Li chi chieh yao*, *c.* 1, p. 4*a*.

"A son when going out should ask his parents, and on his return should go to see them."—*Li chi chieh yao*, *c.* 1, p. 4*a*.

"When he sees an intimate friend of his father, not to presume to go forward to him without being told to do so; nor to retire without being told; nor to address him without being questioned:—this is the conduct of a filial son. A son, when he is going abroad, must inform (his parents where he is going); when he returns, he must present himself before them. Where he travels must be in some fixed (region); what he engages in must be some (reputable) occupation. In ordinary conversation (with his parents), he does not use the term 'old' (with reference to them). He should serve one twice as old as himself as he serves his father, one ten years older than himself as an elder brother; with one five years older he should walk shoulder to shoulder, but (a little) behind him. When five are sitting together, the eldest must have a different mat (by himself) [four being the proper complement for a mat]. A son should not occupy the south-west corner of the apartment, nor sit in the middle of the mat (which he occupies alone), nor walk in the middle of the road, nor stand in the middle of the doorway [the most honourable places being reserved for the father]. He should not take the part of regulating the (quantity of) rice and other viands at an entertainment. He should not act as personator of the dead at sacrifice [that is, in the ancestral worship. A son, acting such a part, would have to receive the homage of his father]. He should be (as if he were) hearing (his parents) when there is no voice from them, and as seeing them when they are not actually there. He should not ascend a height, nor approach the verge of a depth; he should not indulge in reckless reviling or derisive laughing. A filial son will not do things in the dark, nor attempt hazardous undertakings, fearing lest he disgrace his parents. While his parents are alive, he will not promise a friend to die (with or for him), nor will he have wealth that he calls his own. A son, while his parents are alive, will not wear a cap or (other) article of dress with a white border [as if in mourning]. An orphan son, taking his father's place, will not wear a cap or (other article of) dress with a variegated border."—*Li chi*, i. i. ii. 4. 4–16; *Legge*, i. 68–9.

"Whenever a son, having received the three (first) gifts (of the ruler), declines (to use) the carriage and horses, the people of the hamlets and smaller districts, and of the larger districts and neighbourhoods, will proclaim him filial; his brothers and relatives, both by consanguinity and affinity, will proclaim him loving; his friends who are fellow-officers will proclaim him virtuous; and his friends who are his associates will proclaim him true."—*Ibid.* i. i. ii. 3. 3; *Legge*, i. 67–8.

[Personators of the dead, having for the time the dignity of the deceased whom they represented, received the same homage, the ruler dismounting from his carriage on recognising them. See *Li chi*, i. i. iii. 4. 30.]

[For the ceremony of drinking in the country districts and the honour paid thereat to elders, see *ibid.* xlii. 8.]

[For presents made at interviews with superiors see *Presents.*]

Between equals.—"Whenever (a host has received and) is entering with a guest, at every door he should give place to him. When the guest arrives at the innermost door (or that leading to the feast-room), the host will ask to be allowed to enter first and arrange the mats. Having done this, he will come out to receive the guest, who will refuse firmly (to enter first). The host having made a low bow to him, they will enter (together). When they have entered the door, the host moves to the right, and the guest to the left, the former going to the steps on the east, and the latter to those on the west. If the guest be of the lower rank, he goes to the steps of the host (as if to follow him up them). The host firmly declines this, and he returns to the other steps on the west. They then offer to each other the precedence in going up, but the host commences first, followed (immediately) by the other. They bring their feet together on every step, thus ascending by successive paces. He who ascends by the steps on the east should move his right foot first, and the other at the western steps his left foot. Outside the curtain or screen [in front of the raised hall, in the courtyard] (a visitor) should not walk with the formal hasty steps, nor above in the hall, nor when carrying the symbol of jade. Above, in the raised hall, the foot-prints should be alongside each other, but below it free and separate. In the apartment the elbows should not be held out like wings in bowing. When two (equals) are sitting side by side, they do not have their elbows extended crosswise."—*Li chi*, i. i. ii. 7. 28–31; *Legge*, i. 71–2.

"Except in the case of guests who are there (simply) to eat and drink, in spreading the mats a space of ten cubits should be left between them [to allow space for gesticulation]. When the host kneels to adjust the mats (of a visitor), the other should kneel and keep hold of them, declining (the honour). [Two or more mats might be placed over each other in honour of the visitor.] When the visitor wishes to remove one or more, the

host should firmly decline to permit him to do so. When the visitor steps on his mats, (the host) takes his seat. If the host have not put some question, the visitor should not begin the conversation."—*Ibid.* i. i. iii. 2. 5 ; *Legge*, i. 74.

"If a guest be of lower rank (than his entertainer), he should take up the rice, rise and decline (the honour he is receiving). The host then rises and refuses to allow the guest (to retire). After this the guest will resume his seat. When the host leads on the guests to present an offering (to the father of cookery), they will begin with the dishes which were first brought in. Going on from the meat cooked on the bones they will offer of all (the other dishes). After they have eaten three times, the host will lead on the guests to take of the sliced meat, from which they will go on to all the other dishes. A guest should not rinse his mouth with spirits till the host has gone over all the dishes."—*Ibid.* i. i. iii. 10. 48–51. The rules for rightly placing the dishes for an entertainment are given in 10. 47.

"When eating with others from the same dishes, one should not try to eat (hastily) to satiety. When eating with them from the same dish of rice, one should not have to wash his hands." "Do not roll the rice into a ball ; do not bolt down the various dishes ; do not swill down (the soup). Do not make a noise in eating ; do not crunch the bones with the teeth ; do not put back fish you have been eating ; do not throw the bones to the dogs ; do not snatch (at what you want). Do not spread out the rice (to cool) ; do not use chopsticks [but a spoon] in eating millet. Do not try to gulp down soup with vegetables in it, nor add condiments to it ; do not keep picking the teeth, nor swill down the sauces. If a guest add condiments, the host will apologise for not having had the soup prepared better. If he swill down the sauces, the host will apologise for his poverty [since the sauce should be too strong to be swallowed largely and hurriedly]. Meat that is wet (and soft) may be divided with the teeth, but dried flesh cannot be so dealt with. Do not bolt roast meat in large pieces." "When they have done eating, the guests will kneel in front (of the mat), and (begin to) remove the (dishes) of rice and sauces to give them to the attendants. The host will then rise and decline this service from the guests, who will resume their seats."—*Ibid.* i. i. iii. 12. 53–9.

"One should not scold his dog before a guest."—*Chia li ta ch'êng*, *c.* 1 ; *Hsüeh li yao wu*, p. 5*b*.

[As to the removal of the shoes when visiting, see *Li chi*, i. i. iii. 5. 27–9.]

[There were rules about not interfering with people's private affairs, and avoiding, between male and female, what would cause suspicion.]—*Ibid.* i. i. iii. 6. 30–9.

[Concerning the message of congratulation to a friend on his marriage, see *ibid.* i. i. iii. 7. 40.]

Towards inferiors.—"If the son of Heaven wished to put questions to (an officer) of ninety, he went to his house, and had rich food carried after him."—*Ibid.* iii. v. 6 ; *Legge*, 1. 241.

"Complete virtue allows no contemptuous familiarity. When a prince treats superior men with such familiarity, he cannot get them to give him all their hearts ; when he so treats inferior men, he cannot get them to put forth for him all their strength. If he be not in bondage to his ears and eyes, all his conduct will be ruled by correctness. By trifling with men he ruins his virtue ; by finding his amusement in things he ruins his aims."—*Shu ching*, Pt. V. Bk. V. 4–6 ; *Legge*, *Ch. Class.*, III. ii. 348.

Presents.—[There were nine gifts of distinction conferred by the sovereign on officers, ministers, and feudal princes, including appointment to rank, or office, the robes belonging thereto, the chariot and horses, etc.—See *Legge*, *Lî Kî*, i. 68, note.]

[Introductory presents were proper on an interview with a superior.]—*Legge*, *Lî Kî*, i. 311, note.

"We [the Jung] do not exchange silks or other articles of introduction with their [the Chinese] courts."—*Lacouperie*, *Languages of China before Chinese*, p. 18.

[The various rules in giving and receiving, and the messages connected therewith were exceedingly minute—*e.g.* a horse or sheep when presented were led with the right hand, but a dog with the left, and a bird was presented with its head to the left, a captive when presented was held by the right sleeve (to frustrate violence), etc.]—*Ibid.* i. i. 4, 2 ; *Legge*, i. 84–6. And see *Li chi*, i. i. iii. 2, 3–26.

[Presents of silk at audiences are mentioned in *Tzŭ chih t'ung chien kang mu*, *c.* 14, *Ch'ien pien*, p. 7*b*, and exchange of presents between old acquaintances in *Kuang shih lei fu*, *c.* 18, p. 5*a*.]

"The ancient Chinese showing themselves so strongly opposed to interment without a coffin, their rulers naturally fell into the habit of bestowing coffins upon deceased men of state as a mark of favour. Such gifts being a recognition of services rendered the Government, much value was set on them ; hence we find them frequently recorded in the Dynastic Histories as matters of high significance. In most cases they were connected with a donation of money and valuables for equipping the deceased, carts, horses and other requisites suitable for the burial."—*De Groot*, *Rel. Syst.*, i. i. 315–6.

"The presents made by women on paying visits to each other did not go beyond the fruit of the Tsin nut, chestnut, date, or dried flesh, &c. They were used to show respect and esteem."—*Tso chuan*, *Yüan chien lei han*, *Shih wu pu*, *c.* 389, p. 30*b*.

"On the occasion of this event [birth of Confucius' son Li], the duke Ch'aou sent him a present of a couple of carp. It was to signify his sense of his prince's favour, that he called his son Le (*The Carp*), and afterwards gave him the designation of Pih-yu (*Fish Primus*)."—*Legge*, *Ch. Class.*, i. Prol. p. 60.

"The only law of a directly sumptuary character is one limiting the expenditure on weddings : presents of silk were an essential part of the rites of betrothal, but not more than ten pieces were allowed to be given as the marriage offering."—*Simcox*, ii. 64.

[For presents of handmaids at weddings see MARITAL.]

Obeisances.—"The duke's bowing and putting his head to the ground [in the *Shu ching*, Pt. V. Bk. XIII. 1] was intended for the king, but performed in the presence of the messenger, who was to carry the report to court."—*Legge*, *Ch. Class.*, III. ii. 436, note.

"When one ruler is visiting another, they bow to each other."—*Li chi*, xxv. 9.

The ruler "himself met him [the messenger from another State] and bowed to him inside the great gate," and on various occasions afterwards.—*Ibid.* xlv. 4.

"A scholar receiving a Great Minister need not bow to him, but when accompanying him out he should make a bow."—*Ibid.* *P'ei wên yün fu*, *c.* 60, p. 1*b*.

Forms of address.—"As ruling over all, under the sky, (the king) is called 'The son of Heaven.' As receiving at court the feudal princes, assigning (to all) their different offices, giving out (the laws and ordinances of) the government, and employing the services of the able, he styles himself, 'I, the one man.' When he ascends by the eastern steps, and presides at a sacrifice, if it be personal to himself and his family [in the ancestral temple], his style is, 'I, so-and-so, the filial king' ; if it be external to himself [at the great sacrifices to Heaven and Earth], 'I, so-and-so, the inheriting king.' When he visits the feudal princes [on his tours of inspection], and sends to make announcement (of his presence) to the spirits (of their hills and streams), it is said, 'Here is he, so-and-so, who is king by (the grace of) Heaven.' His death is announced in the words, 'The king by (the grace of) Heaven has fallen.' In calling back (his spirit), they say, 'Return, O son of Heaven.' When announcement is made (to all the states) of the mourning for him, it is said, 'The king by (the grace of) Heaven has gone far on high.' When his place is given to him in the ancestral temple, and his spirit-tablet is set up, he is styled on it, 'the god.' The son of Heaven, while he has not left off his mourning, calls himself, 'I, the little child.' While alive, he is so styled ; and if he die (during that time), he continues to be so designated."—*Li chi*, i. ii. i. 16, 30–3 ; *Legge*, i. 107–8.

"The emperor [K'ang] called himself—'I, the one man,' and did not add his name. It was the rule, however, for the successor to the throne to do so, while the period of mourning for the deceased sovereign lasted.—See the case of the young emperor 猛, mentioned in the 左傳, 昭, 二十二年."—*Legge*, *Ch. Class.*, III. ii. 566, note.

[The dignitaries received at court said to the sovereign after the feast following the seasonal sacrifices (*Shih ching*, III. i. VI.) :—"May your happiness be like a large mountain, like an elevated plain, like a perpetual spring ; may it increase like the moon going on to be full ; like the sun ascending ; may your body be preserved like the pine and the cypress whose leaves are always green!" At special entertainments, the guests desired for the master of the house a life of a thousand and ten thousand years (II. vi. IX. 3) ; that he might have an old age such that his back would be wrinkled like that of a porpoise (III. ii. II. 4) ; and that he might preserve his health for thousands and myriads of years (IV. ii. IV. 5).]

[In ordinary conversation with his parents a son "does not use the term 'old' (with reference to them)" (*Li chi*, i. i. ii. 4, 6). "Before his father a son should be called by his name, and before his ruler a minister" (iii. 9, 45). For the designations of the presidents (chief among the five administrative officers of government : Minister of Instruction, etc.), see i. ii. ii. 3, 7–10. "A Great officer, when in another state, styled himself 'the old man' ; in his own state, he called himself by his name" (i. i. i. 7, 30). "The ruler of a state should not call by their names his highest ministers, nor the two noble ladies of her surname, who accompanied his wife to the harem. A Great officer should not call in that way an officer who had been employed by his father, nor the niece and younger sister of his wife (members of his harem). (Another) officer should not call by name the steward of his family, nor his principal concubine." "The son of a Great officer (of the king, himself equal to) a ruler, should not presume to speak of himself as 'I, the little son' [so the young king styled himself during mourning]. The son of a Great officer or (other) officer (of a state) should not presume to speak of himself as 'I, the inheriting son, so and-so' [instead of 'I, the sorrowing son']. They should not so presume to speak of themselves as their heir-sons do. When his ruler wishes an officer to take a place at an archery (meeting) and he is unable to do so, he should decline on the ground of being ill, and say, 'I, so-and-so, am suffering from carrying firewood' [the language of a peasant used by Mencius in mock humility] (i. ii. i. 2, 6, 3, 7–8). There were various terms for referring to the death of the son of Heaven, a feudal prince, a Great officer, an ordinary officer, a common man, a corpse on the couch, a corpse in the coffin, a winged fowl, a quadruped, and death from an enemy in flight (i. ii. iii. 5. 11). "In sacrificing to them, a grandfather is called 'the sovereign grandfather' ; a grandmother, 'the sovereign grandmother' ; a father, 'the sovereign father' ; a mother, 'the sovereign mother' ; a husband, 'the sovereign pattern.' While (they are) alive, the names of father (*fu*), mother (*mu*), and wife (*ch'i*) are used ; when they are dead, those of 'the completed one (*k'ao*),' 'the corresponding one (*pi*),' and 'the honoured one (*pin*).' Death in old age is called 'a finished course (*tsu*)' ; an early death, 'being unsalaried (*pu lu*)'" (i. ii. iii. 6, 13–14). For the terms used in referring to sacrificial animals, birds, fish, water, grain, vegetables, and other articles, see *ibid.* i. ii. iii. 4, 10 ; and for the names to be avoided, both in bestowal and use (*e.g.*, in mourning), i. i. iii. 9, 42 ; v. 5, 15–21 ; ii. ii. iii. 6–7 ; xi. iii. 5 ; xviii. i. i. 26 ; ii. i. ; xv. 34 ; etc.]—*Legge*, i. 66, 68, 78, 79, 93, 100, 101, 107–8, 110–1, 117–8, 190 ; ii. 18, 27–8, 76, 138, 161, 175.

"In the plainness of ancient manners, it is said, when people were talking together they called each other by their names. Shih, however, is honoured [*Shu ching*, Pt. V. Bk. XVI. 1] with the title of 'prince,' which might be given to him, as he had been invested with the principality of Yen."—*Legge*, *Ch. Class.*, III. ii. 475, note.

[The practice of giving honorary posthumous names to ordinary officers began after the victory of Duke Kuang of Lu at Shêng-ch'iu, *circ.* B.C. 684.]—*Li chi*, ii. i. i. 17.

War and peace.—"Confucius refers to an ancient custom which compelled archers who missed the target to take wine ; and we learn that on the conclusion of hostilities between two contending states, a feast was provided by the loser for the diplomatic representatives of the winner, on the occasion of the conclusion of treaties of peace."—*Journ. N.-C.B.R.A.S.*, N.S. xxi. 184.

Absolute Monarchy (221 B.C. *to* A.D. 221).—*Table III.*

Concrete distinctions.—"There were five gates appropriated to the king. The middle one was called the 'south gate' and had two gate-towers. Ho Hsiu said : 'The Emperor has an outer gate with two towers, the princes an inner gate with one tower.'"—*Tzŭ chih t'ung chien kang mu*, *Chi lan.* Walls of officials of different ranks were painted different colours.—*Ko chih ching yüan*, *c.* 20, *Kung shih lei*, p. 14*b*.

[The king occupied different apartments at different seasons, rode in different carriages drawn by variously-coloured horses and bearing variously-coloured flags. He wore differently-coloured robes and gems ; and ate various kinds of food out of vessels suitably carved and shaped for the season.]—*Li chi*, iv. Sects. i–iv. Shih Huang, annoyed by the noise caused by the wheels of his chariot, ordered them to be taken off, and directed that in future his car should be borne on the shoulders of men.

"The sovereign's horses were divided into six classes, and every class had its own grooms, with one among them who had the superintendence of the rest."—*Legge*, *Lî Kî*, i. 294, note 2. See also *Tso chuan*, 18th year of duke Chêng.

Court nobles "wore crowns with a flat parallelogram-shaped board laid upon the head, and embroidered garments." "When the princes or kings called Wang were created, they 'received a reed and some earth,' with which they repaired to their destined territory to erect altars to the land."—*Morrison*, *Dic.*, i. i. 829–30.

"By the rites of the Han dynasty the two-edged sword was worn by a minister until he reached the steps of the throne-hall."—*Ko chih ching yüan*, *c.* 42, *Wu pei lei*, p. 8*a*.

"The carriage of a Prefect had both dust-guards (over the wheels) red ; for officials drawing 1,000 *tan* down to 600 *tan* only the left guard was red."—*Ibid. c.* 29, *Chou chü lei*, p. 5*a*.

"The carriage of the first rank had an azure painted over-curtain with red inside and red silk network ; of the third rank and above, an azure over-curtain, with red inside ; of the fifth rank and above, an azure side-curtain with green inside ; the sixth degree and under had no right to use a curtain."—*Ibid.* p. 5*b*. For the different decorations and the positions in which they were placed on carriages used by the Emperor, princes, nobles, etc., see p. 11*b*.

"Previous to the 'First Emperor, B.C. 255, the Seal of Empire was a small square of gold or silver, but that monarch introduced a jade seal [*Mayers*, No. 393] which Li Sz [*Mayers*, No. 368] inscribed with the words 'By the grace of God' [受命于天]. This seal was handed down through successive dynasties until burnt in the holocaust of the last T'ang Emperor, A.D. 934."—*Ch. Rev.*, xv. 53.

"'Hoisting the red flag of Han' 立漢赤幟 is a further instance of the 'national colours' principle which *Chinese Notes* have now traced back 3,000 years, step by step."—*Ch. Rev.*, xv. 52.

"When the empire was settling down to tranquillity, his Majesty Kao Tsu [in 199 B.C.] gave orders that no trader should wear silk nor ride in a carriage." They were also otherwise restricted.—*Ssŭ-ma Ch'ien*, quot. *Giles*, *Hist. of Ch. Lit.*, pp. 103–4. See *Shih chi*, *Yüan chien lei han*, *c.* 357, *Ch'an yeh pu*, p. 17*b* ; *Chên chu ch'uan*, *Ko chih ching yüan*, *c.* 18, *Kuan fu lei*, p. 21*b* (where the prohibition is said to have applied also to workmen, lictors, policemen, and women) ; and *cf.* REG. OF LABOUR.

[Restrictions upon the use of fire or light at night were removed in the 1st cent. A.D.]—*Giles*, *Bio. Dic.*, p. 482.

[For the distinctions in the number of concubines allowed to princes, etc., see MARITAL.]

[For liability to and exemption from disfiguring punishments, see LAWS.]

[Priests were distinguished by their dress, etc. See ECCLESIASTICAL.]

Towards superiors.—"Mourning for emperors was esteemed of higher importance to them [servants of the state] than that for their own father or mother."—*De Groot*, *Rel. Syst.*, ii. i. 573.

Obeisances.—[Chou Ya-fu, when the Emperor Wên Ti presented himself at his stronghold, refused to make the usual obeisance, declaring that soldiers under arms were exempt from ceremonial observances.]—*Giles*, *Bio. Dic.*, p. 165.

Titles, etc.—The title assumed by an emperor on ascending the throne "is called a *kuo hao*, or national designation, and answers more nearly to the name that a new Pope takes with the tiara than to anything else in western lands. It is the expression of the idea which the monarch wishes to associate with his reign, and is the name by which he is known to his subjects during his life. It has been called a *period* by some writers, but while it is not strictly his name, yet period is not so correct as *reign*. Usage has made it equivalent in foreign books to the personal name, and it is plainer to say the Emperor Taukwang than the period Taukwang or the reign Taukwang." . . . "The use of the *kuo hao* began with Wên-ti, of the Han dynasty, B.C. 179, and has continued ever since. Some of the early monarchs changed their *kuo hao* many times during their reigns ; Kao-tsung (A.D. 650–684), for example, had thirteen in a régime of thirty-four years, which induced historians to employ the *miao hao*, or ancestral name, as more suitable and less liable to confusion. The reason for thus investing the sovereign with a title different from his real name is not fully apparent, but arose probably out of the vanity of the monarch, who wished thus to glorify himself by a high-sounding title, and make his own name somewhat ineffable at the same time."—*Williams*, *Midd. King.*, i. 398–9.

"In the year of our Lord 1, began the practice of conferring honorary designations on Confucius by imperial authority. The Emperor P'ing then styled him—'The duke Ne, all-complete and illustrious' (成宣尼公)."—*Legge*, *Ch. Class.*, i. Prol. p. 91.

"In the Hân dynasty, long subsequent to his existence, Confucius was dignified with the highest title of honour, Koong [Kung] ; and he was subsequently styled the Sovereign Teacher. The Ming, or Chinese dynasty, which succeeded the Mongols, called him 'The most holy teacher of ancient times,' a title which the present Tartar family has continued." "Though only a single descendant (his grandson) survived Confucius, the succession has continued through sixty-seven or sixty-eight generations to the present day, in the very district where their great ancestor was born. Various honours and privileges have always distinguished the family. The heads have enjoyed the rank of nobility ; and in the time of Kâng-hy [K'ang Hsi] the total number of descendants amounted to eleven thousand males."—*Davis*, *Chinese*, ii. 46.

Forms of address.—"The first use of the term 大人 occurs in the reign of 光武 in reference to the 'elders' of the Hun tribes, and it is also applied in conversation in the sense of 'you' to the old Chinese General 馬援."—*Ch. Rev.*, xii. 445.

"In Chinese history subsequent to the first century A.D., princes are often spoken of by the names of their appanages, *e.g.*, 劉州 and 豫州."—*Ibid.* xii. 445.

"The Emperor Shih of the Ch'in dynasty abolished the rule as to posthumous titles."—*Tzŭ chih t'ung chien kang mu*, *c.* 2, *Shang ts'ê*, *Chêng pien*, p. 54*b*.

Presents.—[The Emperor Han Wu Ti compensated the people with presents of oxen, wine, silk, cloth, exemption from corvées and taxes, etc., for expenses thrown on them by the royal progress to Loyang.]—*Journ. P.O.S.*, iii. 80.

[Respecting the presents of handmaids and their precedence see *Po hu t'ung*, *P'ei wên yün fu*, *c.* 84, p. 60*a*.]

Period of Disruption (221 *to* 589).—*Table IV.*

Concrete distinctions.—[There were distinctions in the number of military flags and their sizes belonging to the Emperor, princes, ministers, etc. See MILITARY.]

"In the time of the family of Sun there was no arch in front of the palace door."—*Tsang jung hsü chin shu, Ko chih ching yüan, Ch'üeh lei*, p. 11. Similarly under the Chin dynasty.

"The 'calf-carriage' adorned with mother-of-pearl was called 'mother-of-pearl carriage.' All the ministers had not the right to use it, but at this time it was bestowed upon princes and dukes. The 'completely-screened carriage,' drawn by an ox, was appropriated to all the princes and Presidents of Boards. The 'azure-covered carriage' was appropriated to princes, and the 'green-covered carriage' to sons of princes. Both were drawn by 3 horses."—*Ko chih ching yüan, c.* 29, *Chou chü lei*, pp. 20*b*, 21*a*, 22*b*.

"Under the Chin dynasty the two-edged sword worn by ministers was first changed to [one with a] wooden [hilt]. An officer of high rank was still allowed to wear a gem-headed sword; one of lower rank could ornament [his sword] with mother-of-pearl, gold, silver, or tortoise-shell."—*Ibid. c.* 42, *Wu pei lei*, p. 8*a*.

"The colour of the shoes of the scholar, policeman, and all workmen was limited to green, black, and white, and of the man-servant and maid-servant to black only."—*Chin ling, ibid. c.* 18, *Kuan fu lei*, p. 13*a*.

"Ladies of the 6th degree and under had the right to dress their coiffures with the 'gold broad hairpin,' and those of the 3rd degree and above with a 'bird broad hairpin.'"—*Ibid. c.* 55, *Hsiang lien ch'i wu lei*, p. 3*b*.

[In the time of the Chin dynasty criminals were distinguished by having to wear differently coloured head-dresses, garments, shoes, etc.]—*Chin shu Hsing fa chih hsü, Tzŭ shih ching hua, c.* 55, p. 39*a*; and *cf.* LAWS.

Ceremony.—"Hui Hsiao had been counsellor to 5 governments. When any subordinate officer or [even persons of] lower [rank] came to visit him, he always stood up and accompanied them out."—*P'ei wên yün fu, c.* 60, p. 3*a*.

"On New Year's Day all officials attended at an audience of the emperor, holding jade batons in their hands."—*Shih lei t'ung pien, c.* 5, *Sui shih pu*, p. 9*a*.

"When an Emperor was instructing an ambassador music was played."—*Chin shu li chih, Tzŭ shih ching hua, c.* 41, p. 1*a*.

"A poet who flourished towards the close of the T'sin Dynasty gave up official life, after three months' trial, rather than put on a dress of ceremony to visit the provincial inspectors."—*Simcox*, ii. 128.

"'When a concubine of a Prince visited the consort, the latter need not return the salutation. According to the new rites, however, she must return it.' Chi Yü deliberated upon this, saying: 'A concubine serving the consort is as a daughter-in-law to a mother-in-law; though the respect paid is the same, yet it is of a baser sort. The consort may not return the salutation.'"—*Yüan chien lei han, c.* 247, p. 23*a*.

Titles.—The style of Confucius "was changed, in A.D. 492, to —'The venerable Ne, the accomplished Sage' (文聖尼父)."—*Legge, Ch. Class.*, i. Prol. p. 91.

Presents.—[Singing-girls and prostitutes were given as presents to victorious warriors.]—*Wei chih Hsia-hou Tun chuan, P'ei wên yün fu, c.* 22*b*, p. 38*b*.

"Kao Ti rewarded the king of Nan Yüeh with 4 rolls of grape silk."—*Hsi ching tsa chi, Shih lei t'ung pien, Kuo pu, c.* 84, p. 2*a*.

From the Restoration of Unity to the end of the Five Dynasties (589 *to* 960).—*Table V.*

Concrete distinctions.—"The use of yellow clothes by the Chinese Emperors began with the founder of the Sui dynasty."—*Ch. Rev.*, xiv. 51.

[There were distinctions in dress, head-gear, belts, carriages, etc., according to rank. The T'ang reduced the rings in the Emperor's belt from 12 (as under the Sui) to 9, making it equal to those of the princes, etc. In 627–50 the colours of the robes of officers were increased in number, further distinguishing the various ranks.]—*Ko chih ching yüan, Kuan fu lei, c.* 14, p. 14*b*; *c.* 16, pp. 5*a*, 6*a*; *c.* 17, p. 3*b*; *Chou chü lei, c.* 29, p. 9*a*.

"The princes reserve to themselves the silk of the first quality; as to persons of lower rank, they use silk in proportion to their position."—*Reinaud, Relation*, i. 21–2.

Ming Huang "began with economy, closing the silk factories and forbidding the palace ladies to wear jewels or embroideries, considerable quantities of which were actually burnt."—*Giles, Hist. of Ch. Lit.*, p. 168.

[Curtains in chariots were, as formerly, only allowed to officers of certain ranks.]—*T'ang shu Chü fu chih, P'ei wên yün fu, c.* 68, p. 10*a*.

"During the T'ang and Sung dynasties, one day in five was allotted to give audience to the different Ministers."—*N.-C. Herald*, 1899, p. 339.

Titles.—"When a son or husband became an officer his mother or wife had the title *ming fu* (命婦), 'wife of an official,' bestowed upon her."—*Yu hsüeh hsü chih, c.* 1, p. 15*a*.

Precedence.—"In the year 659 A.D. the T'ang Emperor Kao Tsung changed the 氏族志 into the 姓氏錄. The former publication had been made by T'ai Tsung, the imperial blood, 皇族, taking precedence; the connections by marriage, 外戚, coming next, and the 293 other surnames bringing up the rear. The family of the Empress Wu was now made to rank first, and military ranks were given a place in the official precedence lists under the name of 勳格."—*Ch. Rev.*, xiii. 225.

Presents.—[One of the reforms introduced in 809 by Hsien Tsung was the stoppage of presents.]—*Giles, Bio. Dic.*, p. 463.

Sung Period (960 *to* 1280).—*Table VI.*

[Genghis presented Muhula with a chariot and a banner with nine scalops as an emblem of sovereignty.]—*Boulger, Short Hist.*, p. 53.

"On the dragon-robe of the Emperor were two dragons, one [facing] up and the other down; on that of a duke there was only one with its head coiled round."—*Chu Tzŭ shih chuan, Ko chih ching yüan, c.* 15, *Kuan fu lei*, p. 4*b*.

[Princes and dukes and those below them used the "vermilion round fan," being forbidden to use pheasant's tails on the "screen fan."]—*Sung ch'ao hui yao, Ko chih ching yüan, c.* 58, *Yen shang ch'i wu lei*, p. 14*a*.

"Any person in the palace who presumed to use pearls and beautiful plumage or to remelt gold in order to make ornaments of any kind should be punished, but leniency was to be shown [in administering the punishment]. The families of officers and the common people were to obey the same law. A workmen who violated it was to be punished severely according to the law of Ching Yu (1034–8)."—*Yüeh Ya T'ang ts'ung shu, Hsien shun i shih, c.* 1, p. 16*b*.

"In the 7th moon of the 7th year [1147] the wearing of clothing made of gold thread was forbidden. Anyone who wove or bought it was to be punished."—*Hsü t'ung tien ch'i yao, c.* 20, *Hsing*, p. 7*b*.

[Officers of the 7th and higher ranks were given the right to drink tea, but not to trade in it. See REG. OF LAB.]—*Hsü wên hsien t'ung k'ao, Kuang shih lei fu, c.* 11, p. 8*a*.

[Scholars wore shoes when interviewing officials—in contradistinction to attendants.]—*Sung shih Chih kuan chih, Tzŭ shih ching hua, c.* 38, p. 7*a*.

"Under the system of the Sung dynasty the costumes of women followed those of their husbands, but in the 5th and higher classes of nobility they had special costumes; mothers and wives of the 5th and higher degrees wore purple clothes with embroidered sleeves and girdles; mothers and wives of the 9th and higher degrees wore vermilion; officers without a degree and the common people were not allowed to wear thin silk, gauze, or light gauze, nor the flowery shoes of five-coloured thread. All deep-coloured garments should have not more than 12 seams, and natural coloured ones not more than 6."—*Ch'ün shu k'ao so, Ko chih ching yüan, c.* 15, *Kuan fu lei*, p. 3*b*.

[An amended set of ceremonial rules was among the many benefits conferred by T'ai Tsu upon the empire.]—*Giles, Bio. Dic.*, p. 70. Ceremonies were very minute during this Period.

"Complimentary tea at Court is mentioned in 1086."—*Ch. Rev.*, xv. 53.

"The *Shên Pao* states that, previous to the Yüan dynasty, subjects might sit in the presence of the Emperor, but that, since then, even illustrious statesmen of the blood, or related by marriage, must kneel."—*Ch. Rev.*, xi. 62.

Mongol Period (1280 *to* 1368).—*Table VII.*

The Court.—Kublai "insisted on the proper prayers being offered to himself, and the extreme reverence of the kow-tow. Priests were appointed and specially enjoined to offer up prayers on his behalf before the people, who were required to attend these services and to join in the responses." "It is not surprising to find that he drew up a strict court ceremonial, and that he prescribed gorgeous dresses for those who were to be allowed to approach him. The following picture has been drawn of his court. His courtiers were required to dress after a uniform fashion, and to appear in fixed apparel on all state occasions. His banquets were of the most sumptuous description. Strangers from foreign states were admitted to the presence, and dined at a table set apart for travellers, while the great king himself feasted in the full gaze of his people. His courtiers, guard, and ministers attended by a host of servitors, and protected from enemies by 20,000 guards, the flower of the Mongol army; the countless wealth seized in the capitals of numerous kingdoms; the brilliance of intellect among his chief adherents and supporters; the martial character of the race that lent itself almost as well to the pageantry of a court as to the stern reality of battle; and finally the majesty of the great king himself,—all combined to make Kublai's court and capital the most splendid, at that time, in the world."—*Boulger, Short Hist.*, p. 71.

"I must not omit to tell you of the orderly way in which the Kaan's Barons and others conduct themselves in coming to his presence. In the first place, within a half mile of the place where he is, out of reverence for his exalted majesty, everybody preserves a mien of the greatest meekness and quiet, so that no shrill voices or loud talk shall be heard. And every one of the chiefs and nobles carries always with him a handsome little vessel to spit in whilst he remains in the hall of audience,—for no one dares spit on the floor of the hall,—and when he hath spitten he covers it up and puts it aside. So also they all have certain handsome buskins of white leather, which they carry with them, and, when summoned by the sovereign, on arriving at the entrance to the hall, they put on these . . . and give their others in charge to the servants, . . . that they may not foul the carpets."—*Yule, Marco Polo*, i. 440 (2nd ed.).

[At court festivals, the Kaan's chief wife and the wives of the princes and nobles sat at table with their husbands.]—*Ibid.* i. 368, 369, 370.

Odoric describes "the elaborate etiquette enforced by the master of the ceremonies, whose words of command, at the imperial receptions, have been correctly interpreted to the traveller or understood by him, as his description agrees closely with the ceremonies prescribed at length in the Mongol code, and translated by M. Pauthier (*Marco Polo*, p. 290 ff.)."—*Simcox*, ii. 232.

"Then, as now, the empire considered itself responsible for the safe keeping, as well as the good behaviour, of the foreign visitors."—*Ibid.* ii. 222.

Concrete distinctions.—"Now those Tablets of Authority of which I have spoken are ordered in this way. The officer who is a captain of 100 hath a tablet of silver; the captain of 1,000 hath a tablet of gold or silver-gilt; the commander of 10,000 hath a tablet of gold, with a lion's head on it. . . . [The last-named] weighs 220 *saggi*, [the others, 120 *saggi* each.] And on each of the tablets is inscribed a device, which runs: '*By the strength of the Great God, and of the great grace which He hath accorded to our Emperor, may the name of the Kaan be blessed; and let all such as will not obey him be slain and be destroyed.*' . . . All who hold these tablets likewise receive warrants in writing, declaring their powers and privileges. . . . An officer who holds the chief command of 100,000 men, or who is general-in-chief of a great host, is entitled to a tablet that weighs 300 *saggi*. . . . Below the inscription [as above] there is the figure of a lion, and below the lion the sun and moon. They have warrants also of their high rank, command and power. Everyone, moreover, who holds a tablet of this exalted degree, is entitled, whenever he goes abroad, to have a little golden canopy, such as is called an umbrella, carried on a spear over his head, in token of his high command. And whenever he sits, he sits in a silver chair. To certain very great lords also there is given a tablet with gerfalcons on it; this is only to the very greatest of the Kaan's barons, and it confers on them his own full power and authority; so that if one of those chiefs wishes to send a messenger anywhither, he can seize the horses of any man, be he even a king, and any other chattels at his pleasure." "These tablets are called 'Páïzah,' by the Persian historians of the Mongols. This word is said to be the Chinese *pai-tseu*, a tablet. A trace of the name and the thing still survives in Mongolia. The horse *Bai* is the name applied to a certain ornament on the horse caparison, which gives the rider a title to be furnished with horses and provisions on a journey." [120 saggi = 18½ oz. troy.]—*Yule, Marco Polo*, i. 341, 342, 344 (2nd ed.).

"'Tis the mark of gentility [in Manzi] to have the nails long; and some let their thumb-nails grow to such an extent that they grow right round the hand. And with the women, the great beauty is to have little feet" [*cf.* BODILY MUTILATIONS].—*Odoric*, in *Yule, Cathay*, i. 153. Polo mentions neither of these customs.

[Sumptuary laws were enacted for the Chinese by Jên Tsung (1312–21).]—*Giles, Bio. Dic.*, pp. 5–6.

Salutations, etc.—They "have an ornate style of speech; they salute each other with a cheerful countenance, and with great politeness; they behave like gentlemen, and eat with great propriety. They show great respect to their parents."—*Yule, Marco Polo*, i. 405 (2nd ed.).

Titles.—[For addition made by Emperor to Mencius' title see ECCLESIASTICAL.]

Presents.—[Early in the 14th century, we find the Emperor giving presents of silk to 2,331 old men of ninety and upwards, and to 8,331 of between eighty and ninety.]—*De Mailla*, ix. 506.

Ming Period (*Restoration of Chinese Supremacy*) (1368 *to* 1644).—*Table VIII.*

Semedo "endeavours to interpret the Chinese feeling as to the close connection between good manners and good morals. 'They believe,' he says, 'that no virtue is more important than courtesy, an appearance of composure, and to do things with circumspection, reserve, and mature judgment, all which they express under all circumstances and at all times by the word Li.' The maxim to which chiefly they attribute the duration of the empire is that which recommends that THE COMMUNITY SHOULD BE RICH, AND ITS MEMBERS POOR."—*Simcox*, ii. 271.

Gaspar da Cruz "experienced the 'great courtesy' of the Chinese in his own person, and apparently rather admired the custom of not receiving friends in 'undress.'"—*Ibid.* ii. 264.

"When they write letters unto any principal person, they gild the margent of the paper, and [paint] it, and they put the letter written into a purse made of the same paper, all gilt and painted, the which they shut and seal."—*Mendoza, Hist.*, i. 123.

[The Ming sovereigns admitted their Ministers to audience less frequently than those of the T'ang, Sung, and Ch'ing. Shên Tsung "for twenty-nine years never once saw his high officials."] —*N.-C. Herald*, 1899, p. 339.

Mendoza says that in each provincial capital is a portrait of the Emperor, painted on a golden tablet, to which all the officials —"loytias"—daily do reverence; and it is displayed to the public every month on the day of the new moon, when "all people do repair and do reverence unto the picture with the same respect as they would do if he were present: they do call the king Lord of the World and Son of Heaven."—*Hist.*, i. 76.

[The etiquette observed on the reception of ambassadors from foreign countries is very fully described by Mendoza. They are met on arrival at a town, by the governor, and all officials, civil and military, and escorted in state to the lodging provided. If the envoy arrives by water, a chair and bearers are in waiting at the landing-place. The governor calls on him the following day, to learn his business, and despatches a messenger to the Viceroy at the provincial capital, who, in his turn, sends to the Emperor. The latter sends back, either an order for the ambassador to stay where he is, or a safe-conduct, with directions for his entertainment and escort to Peking. The persons of ambassadors are inviolable, even should they infringe the laws. At Peking he is received by "all the gentlemen of the court, with the royal council and president," who, when the day is appointed, accompany him to his audience in the palace. These ceremonies are not observed in the case of ambassadors from subject states.] —*Ibid.* pp. 156–61.

Christovaõ Vieyra says: "The custom with ambassadors in Piquim is to place them in certain houses with large enclosures, and there they are shut in on the first day of the moon; and on the fifteenth day of the moon, they go to the king's palace, some on foot, and some on jades with halters of straw; and proceed to measure their length five times before a wall of the king's palace all in order with both knees on the ground, and head and face flat on the earth. Thus they remain until they are commanded to rise. Five times do they do this at this wall. Thence they return and re-enter the locked enclosures."—*Ferguson, Lett. from Port. Capt.*, p. 104. For the reasons why foreign ambassadors were regarded as tribute bearers and consequently inferior, see *Simcox*, ii. 273.

Concrete distinctions.—"For the girdle of the court dress of the present dynasty for the first rank they used jade marked with flowers or plain; for the 2nd rank, rhinoceros horn; for the 3rd and 4th, gold; for the 5th, silver with flower marks; for the 6th and 7th, silver; for the 8th and 9th, black horn and black leather belt."—*Shih wu kan chu, Ko chih ching yüan, c.* 17, *Kuan fu lei*, p. 6*a*. Girdle ornaments were similarly of different materials for different ranks.—*Ibid.* p. 13*a*.

"They hold it for greater dignity to go in litters than on horseback, taking one or two persons on the right for state, and a sunshade on foot before them, like those which they use in India."—*Mendoza, Hist.*, Introd. p. xlv.

Visits.—"When one doth go to visit another, he that is visited, after the visitation done, doth bring the other unto the street door. This custom is used most among the common people, being equal in degree, or differing little. [If a visitor from the country accidentally meets his host—before reaching the latter's house, the latter will not appear to recognise him, but returns home to put on best clothes, and then receives him as if he had not previously seen him.]—*Ibid.* pp. 142–3.

Mendoza "mentions the use of large visiting cards, as now." —*Ibid.* ii. 263.

Salutations.—"The salutation that the common people do use is, when they do meet . . . to shut the left hand and to

cover it with the right, [holding both against the chest and bowing the head], signifying that love and amity is as firm between them as their hands are fast, and that their friendship is not alonely in the ceremony, but also in the heart [*sic*]: the which they give to understand by words at the same time. But amongst courtiers and gentlemen they use another manner of courtesy: . . . [when] they meet, they make a little stay, then they cast abroad their arms and clasp their fingers together, remaining in compass, humbling themselves many times, and contending one with another about their parting for to prosecute his way. [Inferiors meeting their superiors stand aside, in silence, and bow their heads till the latter have passed: an infraction of this rule is punished by whipping. A person of inferior station must kneel on entering a magistrate's presence, and] goeth upon his knees till he come into the midst of the hall, and there he stayeth and declareth his petition, by word of mouth, with an humble and meek voice, or else presenteth it by writing; and having received answer, he doth return on his knees backward, without turning his back on the Loytia, till he be quite out of the hall."—*Ibid.* i. 141–2.

Manchu Period (1644 *to* —).—*Table IX.*

Concrete distinctions.—The Emperor "dwells in the interior of his splendid palace, secluded from the gaze of the populace, and surrounded by extensive parks and gardens; with the solemn parade of ministers and the pompous pageantry of processions."—*Medhurst, China*, p. 141.

"Pavilions and halls . . . many of them showing their imperial ownership by the yellow and green tiling."—*Williams, Midd. King.*, i. 105.

"The emperor cannot be represented like another man. If he were placed in a drawing at a distance, his head should carry him in height above all those around."—*De Guignes, Voyages à Péking*, ii. 238.

[For the large quantity and various kinds of food daily supplied to the emperor, see *Williams, Midd. King.*, i. 408–9.]

"In the *Miscellanies of the Western Capital* we read: 'The fans of the Son of Heaven are, for the summer, of feathers; for the winter, of silk.'"—*Fraser's Magazine*, N.S. xix. 553.

"The harness of the horses or mules employed to draw the carts of members of the Imperial Family is covered with yellow cloth; and that of the gentry is sometimes mounted with silver rings and buckles."—*Gray, China*, ii. 178.

"In Pekin the members of the imperial clan and family are allowed to use carts having the wheel behind the body; their ranks are further indicated by a red or yellow covering, and a greater or less number of outriders to escort them."—*Williams, Midd. King.*, i. 747.

"The peacock's feather and the 'button' were introduced, as rewards for merit and distinctive marks of rank, respectively."—*Giles, Historic China*, p. 122.

"*Shang Kung* 賞功.—Distinctions for Merit. Although rewards for distinguished service, or marks of Imperial favour, the conception of which resembles in some degree that of the European system of Royal or national Orders and medals of distinction, are to be found in China, nothing in the shape of an actual Order of Merit, approximating to the European type, has been adopted by the Chinese Government. . . . Isolated distinctions have indeed been conferred in China on foreigners of various nationalities, principally for services rendered in the command of drilled troops during the T'aip'ing rebellion, and subsequently in the collection of the Customs' revenue, which are known, with reference to the European term 'star,' by the designation *pao hsing* 寶星; but as these are bestowed, for the most part, by provincial authorities, and without the sanction of any established rule or recognized statutes, such as are required to constitute what is commonly known as an 'Order' the badges thus conferred can scarcely be regarded as having a real value as authentic marks of distinction. The Imperial decorations for merit established under the reigning dynasty are as follows:—*Hsing Kua* 行褂.—The Riding Cape. This distinction, the most coveted form of reward for military services, is better known as the *Huang Ma Kua* 黃馬褂, or Yellow Riding Jacket, although this is but one form of the privileged style of dress. According to the Imperial regulation, the Cape, which is worn only when in personal attendance upon the sovereign in the field, or upon journeys, is of the colour of the Banner to which the Princes, nobles, or other members of the Banner force upon whom it is conferred, may belong. Officers of the Body-guard and Ministers of the Presence are, however, entitled to wear a yellow cape, irrespectively of their Banner; and in general, at the present day, the Yellow Riding Jacket is the form in which the distinction is commonly bestowed. It has been awarded to two Europeans, to Lieutenant-Colonel Gordon, R.E., for his services in contributing to the defeat of the T'aip'ing rebels in Kiangsu, and to M. Prosper Giquel, for his labours in establishing the Arsenal at Foochow, coupled with previous military services. In this connection may also be noted the privilege of 'riding within the precincts of the Imperial Palace.' *Tzŭ Chin Ch'êng nei ch'i ma* 紫禁城內騎馬—the bestowal of which is termed *shang ch'ao ma* 賞朝馬. This is an honorary distinction, frequently conferred upon eminent public functionaries, who become thus entitled to proceed on horseback, instead of on foot, for some distance within the outer gateways of the Palace when summoned to an audience. *Ling Chih* 翎隻.—The Feather, or Plume. The principal form of distinction for public service under the reigning dynasty. It is classed in different degrees as follows:—A. *K'ung Ch'üeh Ling* 孔雀翎.—The Peacock Feather. This decoration is arranged in the following classes:—i. *San Yen Hua-ling* 三眼花翎.—The Three-Eyed Peacock Feather—a distinction conferred only upon Imperial princes or nobles of the higher degrees or for the most signal military achievements. ii. *Shuang Yen Hua-ling* 雙眼花翎.—The Double-Eyed Peacock Feather—conferred upon dignitaries of intermediate rank or degree of merit. iii. *Tan Yen Hua-ling* 單眼花翎.—The Single-Eyed Peacock Feather (commonly called *Hua-ling* 花翎 alone). This distinction is bestowed as an ordinary form of reward for public service, and during the last few decades has been indiscriminately obtainable by purchase. B. *Lan Ling* 藍翎.—The Blue Plume, colloquially termed, from its glossy blue-black tint, *Lao-kua Ling*, or the Crow Feather. This distinction is attributed by regulation to the rank and file of the Imperial guards, and is conferred as a reward for services upon officials below the sixth degree of rank. It is not to be confounded with the sable-tail *tiao wei* 貂尾 (often erroneously termed fox-tail) badge which soldiers are entitled to wear when employed on active service. This badge is stated to have been introduced, originally, as a part of the uniform worn on the Imperial hunting expeditions. It is now commonly worn by all soldiers as an addition to their uniform. *Pa-t'u-lu* 巴圖魯.—The Bát'uru Distinction. The military distinction called in Chinese *Pa-t'u-lu* (a representation of the Manchu word *bát'uru*, signifying 'brave') is an institution dating from the early years of the present dynasty, and is conferred solely for active service in the field. It constitutes an order of merit partaking of some of the characteristics of the French *Légion d'honneur;* but its special feature of difference from a European order consists in the fact that it has no outward mark of decoration to be worn by its possessor, in the place of which there can only be reckoned the distinguishing word (or title) which is assigned to each recipient on the bestowal of the order. These specific titles may be either Manchu, Mongolian, or Chinese, the Manchu being considered the most honourable. Under this system an officer upon whom the distinction is conferred might receive the designation *Yi Yung Pa-t'u-lu* 毅勇巴圖魯, or 'Bát'uru with the title Magnanimous Brave,' and so forth. The title carries with it the right to wear the peacock-feather, although it seldom happens at the present day that the peacock-feather, lavishly awarded as this decoration has been of late years, is not obtained previously to the bestowal of the *Bát'uru*; and the allowances of the bearer when employed on active service, are considerably enhanced in virtue of his possession of the title. The *Bát'uru* has been conferred upon at least one European, Mr. W. Mesny, a native of Jersey, for services rendered in the province of Kuei-chou. *Kung Pai* 功牌.—The Soldier's Medal. This is an oblong plate of thin silver, having the character *Shang* 賞 (reward) embossed upon it, which is bestowed at reviews and inspections upon meritorious soldiers."—*Mayers, Ch. Gov.*, pp. 65–8.

"There are nine [ranks] each distinguished by a different colored ball placed on the apex of the cap, by a peculiar emblazonry of a bird for civilians and a beast for military officers on the breast, and a different clasp to the girdle." "Civilians of the first rank wear a precious ruby or transparent red stone; a Manchurian crane is embroidered on the back and breast of the robe, while the girdle clasp is jade set in rubies; military men have a unicorn, their buttons and clasps being the same as civilians." "Civilians of the second rank wear a red coral button, a robe embroidered with a golden pheasant, and a girdle clasp of gold set in rubies; the lion of India is emblazoned on the military." "Civilians of the third rank carry a sapphire and one-eyed peacock's feather, a robe with a peacock worked on the breast, and a clasp of worked gold; military officers have a leopard." "Civilians of the fourth rank are distinguished by a blue opaque stone, a wild goose on the breast, and a clasp of worked gold with a silver button; military officers carry a tiger in place of the embroidered wild goose." "Civilians of the fifth rank are denoted by a crystal button, a silver pheasant on the breast, and a clasp of plain gold with a silver button; the bear is the escutcheon of military men." "Civilians of the sixth rank wear an opaque white shell button, a blue plume, an egret worked on the breast, and a mother-of-pearl clasp; military men wear a tiger-cat." "Civilians of the seventh rank have a plain gold button, a mandarin duck on the breast, and a clasp of silver, a mottled bear designates the military, as it also does in the last rank." "The eighth rank wear a worked gold button, a quail on the breast, and a clasp of clear horn; military men have a seal." "The ninth rank are distinguished by a worked silver button, a long-tailed jay on the breast, and a clasp of buffalo's horn; military men are marked by a rhinoceros embroidered on the robe. All under the ninth can embroider the oriole on their breasts, and unofficial Hanlin take the egret."—*Williams, Midd. King.*, i. 413–5. The date of introduction of the "button" is said in *N. & Q. on C. & J.*, iii. 44, to be 1643, but it was "probably not until some years later . . . that the regulations now existing became fully developed."

"Still more comic [than wedding and funeral processions] is the sight of a viceroy's tag-rag and bobtail when he goes to pay official visits. By law he is bound to have a certain number of retainers, title-carriers, police, lictors, changes of clothes, fan-bearers, gong-beaters, trumpeters, horsemen, and so on. Possibly in good old times these men may have been well-paid and well-fed retainers; but now the practice is for the responsible usher to go out into the lanes and the by-ways in order to make a haul of 'the poor, the maimed, the halt, and the blind'; the beggars and street Arabs; at a penny or twopence a head for the morning's outing, the whole forming a gang of 'pitiful rascals' such as Sir John Falstaff used to muster for 'hasty matters in the king's affairs.' Over their rags they thrust a tawdry uniform (usually minus the trousers); on their dirty, unkempt pates they clap a tall, ill-fitting lictor's hat, about thrice the height of that of Mr. Tupman when he went to Mrs. Leo Hunter's garden party, and strongly resembling our 'dunces' caps.' The viceroy sees nothing of these disreputable scallywags, for immediately before and behind his chair are a dozen or so of smartly dressed, well-mounted cavaliers, secretaries, and footmen . . . : he sits complacently in his chair, imagining that the whole official file is equally smart, and little dreaming that he is merely the central figure of a gang of buffoons."—*Parker, John Chinaman*, pp. 282–3.

"Magistrates are not allowed to go abroad in ordinary dress and without their official retinue, which varies for the different grades of rank. The usual attendants of the district magistrates are lictors with whips and chains—significant of the punishments they inflict; they are preceded by two gong-bearers, who every few moments strike a certain number of raps to intimate their master's rank, and by two avant-couriers, who howl out an order for all to make room for the great man. A servant bearing aloft a *lo*, or state umbrella . . . also goes before him, further to increase his display and indicate his rank. A subaltern usually runs by the side of his sedan, and his secretary and messengers, seated in more ordinary chairs, or following on foot, make up the cortège. The highest officers are carried by eight bearers, others by four, and the lowest by two. Lanterns are used at night and red tablets in the day time, to indicate his rank. Officers of higher ranks are attended by a few soldiers in addition, and in the capital are required to have mounted attendants if they ride in carts; those who bear the sedan are usually in a uniform of their master's devising. The parade and noise seen in the provinces are all hushed in Peking, where the presence of majesty subdues the glory of the officers which it has created. When in court the officer sits behind a desk upon which are placed writing materials; his secretaries, clerks, and interpreters being in waiting, and the lictors with their instruments of punishment and torture standing around. Persons who are brought before him kneel in front of the tribunal. His official seal, and cups containing tallies which are thrown down to indicate the number of blows to be given the culprits, stand upon the table, and behind his seat a *chi-lin*, or unicorn, is depicted on the wall. There are inscriptions hanging around the room, one of which exhorts him to be merciful. There is little pomp or show, either in the office or attendants, compared with our notions of what is usual in such matters among Asiatics. The former is a dirty, unswept tawdry room, and the latter are beggarly and impertinent."—*Williams, Midd. King.*, i. 503–4.

"Dwelling-houses must be built according to a law which regulates the height only. If built in any respect to cope with the temples, the owner exposes himself to punishment, and the house is liable to be pulled down."—*R. M. Martin, China*, i. 53.

"The measured pace and air, once believed a sign of worth, has disappeared. So has the extreme minuteness of legislation in matters of food and dress and structure of houses, that we find in the old law books, and much room is left for individual tastes and caprices."—*Johnson, Or. Rel.—Ch.*, p. 52.

"A fan, and possibly an umbrella, are perhaps the only things with which a gentleman burdens himself [when in the street]; other things are committed to the care of a servant."—*Walshe, Ways that are Dark*, p. 30.

"The various forms, fabrics, colors, and ornaments of the dresses worn by grades of officers are regulated by sumptuary laws. Citron-yellow distinguishes the imperial family, but his Majesty's apparel is less showy than many of his courtiers, and in all that belongs to his own personal use there is an appearance of disregard of ornament. The five-clawed dragon is figured upon the dress and whatever pertains to the Emperor, and in certain things to members of his family. . . . The summer bonnet of officers is made of finely woven straw covered with a red fringe; in winter it is trimmed with fur. A string of beads hanging over an embroidered robe, a round knob on the cap, thick-soled satin boots, two or three pouches for fans or chopsticks, and occasionally a watch or two hanging from the girdle, constitute the principal points of difference between the official and plebeian costume. No company of men can appear more splendid than a large party of officers in their winter robes made of fine, lustrous crapes, trimmed with rich furs and brilliant with gay embroidery. In winter a silk or fur spencer is worn over the robe, and forms a handsome and warm garment. Lambskins are much used, and the downy coats of unyeaned lambs, which, with the finer furs and the skins of hares, wild cats, rabbits, foxes, wolves, otter, squirrels, etc., are worn by all ranks. . . . The Chinese like strong contrasts in the colors of their garments, sometimes wearing yellow leggings underneath a light blue robe, itself set off by a purple spencer."—*Williams, Midd. King.*, i. 763.

"The dress of gentlewomen, like that of their husbands, is regulated by sumptuary laws, but none of these prevent their costumes from being as splendid as rich silks, gay colors, and beautiful embroidery can make them. The neck of the robe is protected by a stiff band, and the sleeves are large and long, just the contrary of the common style, which being short allows the free use and display of a well-turned arm. The official embroidery allowed to the husband is changed to another kind on his wife's robe indicative of the same rank. No belt or girdle is seen, nor do stays compress the waist to its lasting injury. One of the prettiest parts of a lady's dress is the petticoat, which appears about a foot below the upper robe covering the feet. Each side of the skirt is plaited about six times, and in front and rear are two pieces of buckram to which they are attached; the plaits and front pieces are stiffened with wire and lining. Embroidery is worked upon these two pieces and the plaits in such a way that as the wearer steps the action of the feet alternately opens and shuts them on each side, disclosing a part or the whole of two different colored figures. . . . The plaits are so contrived that they are the same when seen in front or from behind, and the effect is more elegant when the colors are well contrasted. In order to produce this the plaits close around the feet, unlike the wider skirt of western ladies."—*Ibid.* i. 765.

[For the queue imposed by the conquering Manchus see *Fashions.*]

Ceremony.—"The ceremonial usages of the country are commonly estimated to amount to *three thousand*, as prescribed in the ritual; and one of the Six Boards or tribunals at Peking, called *Ly-Poo* [*Li Pu*], is especially charged with the guardianship and interpretation of these important matters, which really form a portion of the religion of the Chinese."—*Davis, Chinese*, ii. 63. *Cf.* LATER FEUDAL PERIOD.

"Whenever the One Man [Emperor] goes out of the palace gate to cross the city, the streets through which he passes are screened with matting, to keep off the crowds as well as diminish the risks of his person. The result has been that few of the citizens have ever seen their sovereign's face during the last two hundred years. The young Emperor Tungchi obtained great favour among them on one occasion of his return from the Temple of Heaven by ordering the screen of mats to be removed so that he and his people could see each other."—*Williams, Midd. King.*, i. 411.

"Minute regulations for the times and modes of official intercourse are made and promulgated by the Board of Rites, and to learn and practise them is one indispensable part of official duty. In court the master of ceremonies stands in a conspicuous place, and with a loud voice commands the courtiers to rise and kneel, stand or march, just as an orderly sergeant directs the drill of recruits. The same attention to the ritual is observed in their mutual intercourse, for however much an inferior may desire to dispense with the ceremony, his superior will not fail to exact it. In the salutations of entrée and exit among officers these forms are particularly conspicuous, but when well acquainted with each other, and in moments of conviviality, they are in a great measure laid aside; but the juxtaposition of art and nature among them, at one moment laughing and joking, and the next bowing and kneeling to each other as if they had never met, sometimes produces amusing scenes to a foreigner."—*Ibid.* i. 801–2.

"In their common intercourse the Chinese are not more formal than is considered to be well-bred in Europe; it is on extraordinary or official occasions that they observe the precise

etiquette for which they are famous. The proper mode of behaviour toward all classes is perhaps more carefully inculcated upon youth than it is in the west, and habit renders easy what custom demands. The ceremonial obeisance of a court or a levée, or the salutations proper for a festival, are not carried into the everyday intercourse of life; for as one chief end of the formalities prescribed for such times is to teach due subordination among persons of different rank, they are in a measure laid aside with the robes which suggested them. . . . A great degree of urbanity and kindness is everywhere shown, whether owing to the naturally placable disposition of the people or to the effects of their early instruction in the forms of politeness. Whether in the crowded and narrow thoroughfares, the village green, the market, the jostling ferry, or the thronged procession—wherever the people are assembled promiscuously, good humour and courtesy are observable; and when altercations do arise wounds or serious injuries seldom ensue, although from the furious clamor one would imagine that half the crowd were in danger of their lives."—*Ibid.* i. 800.

"Military men pay visits on horseback; civilians and others go in sedans or carts; to walk is not common. Visiting cards are made of vermilioned paper cut into slips about eight inches long and three wide, and are single or folded four, six, eight, or more times, according to the position of the visitor. If he is in recent mourning, the paper is white and the name written in blue ink, but after a stated time this is indicated by an additional character. The simple name is stamped on the upper right corner, or if written on the lower corner, with an addition thus, 'Your humble servant (*lit.*, stupid younger brother) Pí Chí-wăn bows his head in salutation.' On approaching the house his attendant hands a card to the doorkeeper, and if he cannot be received, instead of saying 'not at home,' the host sends out to 'stay the gentleman's approach,' and the card is left. If contrariwise the sedan is carried through the doorway into the court, where he comes forth to receive his guest; as the latter steps out each one advances just so far, bowing just so many times, and going through the ceremonies which they mutually understand and expect, until both have taken their seats at the head of the hall, the guest sitting on the left of the host, and his companions, if he have any, in the chairs on each side. The enquiries made after the mutual welfare of friends and each other are couched in a form of studied laudation and depreciation, which when literally translated seem somewhat affected, but to them convey no more than similar civilities do among ourselves—in truth, perhaps not so much of sincere good-will."—*Ibid.* i. 802–3.

"Tea and pipes are always presented, together with betel-nut or sweetmeats on some occasions, but it is not, as among the Turks, considered disrespectful to refuse them, though it would be looked upon as singular. If the guest inquire after the health of relatives he should commence with the oldest living, and then ask how many sons the host has; it is not considered good breeding for a formal acquaintance to make any remarks respecting the mistress of the house. If the sons of the host are at home they are generally sent for, and make their obeisance to their father's friend by coming up before him and performing the *kotow* as rapidly as possible, each one making haste, as if he did not wish to delay him. The guest raises them with a slight bow, and the lads stand facing him at a respectful distance. He will then remark, perhaps, if one of them happen to be at his studies, that 'the boy will perpetuate the literary reputation of his family' (*lit.*, 'he will fully carry on the fragrance of the books'); to which his father rejoins, 'The reputation of our family is not great (*lit.*, hills' and fields' happiness is thin); high expectations are not to be entertained of him; if he can only gain a livelihood it will be enough.' After a few such compliments the boys say *shao pei*, 'slightly waiting on you,' *i.e.*, 'pray excuse us,' and retire. Girls are seldom brought in, and young ladies never."—*Ibid.* i. 803.

"The Chinese seldom embrace or touch each other, except on unusual occasions of joy or among family friends; in fact, they have hardly a common word for a kiss. When the visitor rises to depart he remarks, 'Another day I will come to receive your instructions;' to which his friend replies, 'You do me too much honor; I rather ought to wait on you to-morrow.' The common form of salutation among equals is for each to grasp his own hands before his breast and make a slight bow, saying, *Tsing! Tsing!* *i.e.*, 'Hail! Hail!' This is repeated by both at the same time, on meeting as well as separating. The formalities of leave-taking correspond to those of receiving, but if the parties are equal, or nearly so, the host sees his friend quite to the door and into his sedan."—*Ibid.* i. 805.

"The first wife is invested with a certain amount of power over the others, and assigns to them their various domestic duties. Indeed it is not usual for second or third wives to sit in her presence, without having first obtained her permission to do so. (In a family, however, where the second or third wife succeeds in usurping the affections of the husband, the authority of the first wife is ignored.) Upon the first wife of a Chinese gentleman of rank is bestowed a title which corresponds to that of her husband. . . . Such ladies, when paying visits [are] escorted by a retinue . . . equal in number to that to which their husbands are entitled. On such occasions it is a rule with ladies of rank not to close the blinds of their sedan chairs, as do other ladies."—*Gray, China*, i. 212.

"If he should happen to meet a friend [when in the street], he should stand for a moment to inquire after his honourable household, and make a few polite remarks, such as 'I haven't seen you for a long time'; 'where are you going?' etc. If, however, the friend should be an official, riding in his chair, he must either turn up a side street or into a shop; or, in default of these resources, should turn his back and look the other way, or screen his face with his fan, if he is carrying one—for it would not be 'good form' for the official to salute him with a nod, and etiquette would require that the rider should descend from his chair, which would be in every way inconvenient." The attendants of high officials, however, interpose large fans between two trains of chairs as they pass, thus obviating the necessity of conforming to the rules of etiquette.—*Walshe, Ways*, pp. 27–8.

[For the ceremonies connected with burial and mourning, and concrete distinctions after death, see FUNERAL RITES.]

Towards superiors, Obeisances, etc.—"Chinese ceremonial requires superiors to be honored according to their station and age, and equals to depreciate themselves while lauding those they address. The Emperor, considering himself as the representative of divine power, exacts the same prostration which is paid the gods; and the ceremonies which are performed in his presence partake, therefore, of a religious character, and are not merely particular forms of etiquette, which may be altered according to circumstances. There are eight gradations of obeisance, commencing with 'the lowest form of respect, called *kung shao*, which is merely joining the hands and raising them above the breast. The next is *tso yih*, bowing low with the hands thus joined. The third is *ta tsien*, bending the knee as if about to kneel: and *kwei*, an actual kneeling, is the fourth. The fifth is *ko tao* (*kotow*), kneeling and striking the head on the ground, which when thrice repeated makes the sixth, called *san kao*, or 'thrice knocking.' The seventh is the *luh kao*, or kneeling and knocking the head thrice upon the ground, then standing upright and again kneeling and knocking the head three times more. The climax is closed by the *san kwei kiu kao*, or thrice kneeling and nine times knocking the head. Some of the gods of China are entitled to the *san kao*, others to the *luh kao*, while the Emperor and Heaven are worshipped by the last. The family now on the throne consider this last form as expressing in the strongest manner the submission and homage of one state to another (*Memoir of Dr. Morrison*, ii. 142). The extreme submission which the Emperor demands is partaken by and transferred to his officers of every grade in a greater or less degree; the observance of these forms is deemed, therefore, of great importance, and a refusal to render them is considered to be nearly equivalent to a rejection of their authority."—*Williams, Midd. King.*, i. 800–1.

"By insisting on the 'kotow,' he [Chia Ch'ing] repelled Lord Amherst's mission in 1816."—*Giles, Bio. Dic.*, p. 126.

[A salute was always made by the firing of three guns, irrespective of rank.]—*Parker, John Chinaman*, p. 261.

"When the new Foochow Tartar-General Kuniyinpu offered sacrifices for the Emperor at Tso Tsung-t'ang's bier, a salute of 9 guns was fired,—evidently an ancient custom."—*Ch. Rev.*, xiv. 169.

"Peking officials of whatever rank, are said to use the *ming p'ien* instead of the *shou pên* style of visiting card, when they for any purpose go home, or to any province, and this no matter whom it is they visit. A recent decree calls attention to the rule that the secretaries of the Boards have no right to kneel to, or to ask after, the health of the Presidents of the Boards. Peking officials are supposed to represent integrity. Sedan chairs are rarely allowed at Peking, as there the Emperor alone is great."—*Ibid.* xii. 443.

"The outer gate of the palace must always be passed on foot, and the paved entrance walk leading up to it can only be used by him [the Emperor]. The vacant throne, or even a screen of yellow silk thrown over a chair, is worshipped equally with his actual presence, and an imperial dispatch is received in the provinces with incense and prostrations; the vessels on the canal bearing articles for his special use always have the right of way."—*Williams, Midd. King.*, i. 402.

"The rules of propriety and government etiquette of the present dynasty are very stringent, and bound by red tape. Sovereigns and officials keep far apart. Only the great Metropolitan Ministers, Viceroys, and Governors of provinces can personally approach the Throne. It is true the Emperors permit a few other officials to send in reports through censors, but this amounts to nothing. In times of prolonged peace, even the great officials hand in few written remonstrances. They on the other hand avail themselves of their position to prevent all unpleasant memorials from reaching the Emperor. . . . K'ang Hsi and Kien Lung allowed Taotais to hand in memorials. Since Tao Kuang this permission has been withheld. Therefore, though disease and suffering are piled up as mountains, and trouble accumulates as the waters of the sea, the Emperor has no means of knowing anything about them."—*N. C. Herald*, Aug. 7, 1899, p. 286.

"At the beginning of the dynasty, students of the Imperial Academy could address the Throne, but not the people."—*Ibid.* p. 287.

Balfour says that court etiquette requires thanks to be returned for every communication received from the emperor, whether favourable or the reverse—*e.g.* a discharged official is always expected to thank the Emperor for his dismissal. "Every relation between the Emperor and the subject is made to appear in the light of favours bestowed and received."—*Leaves*, pp. 55–8.

"The first day was consecrated to the purpose of rendering a solemn, sacred, and devout homage to the supreme majesty of the Emperor. The ceremony was no longer performed in a tent, nor did it partake of the nature of a banquet. The princes, tributaries, ambassadors, and great officers of state were assembled in a vast hall; and upon particular notice were introduced into an inner building, bearing at least the semblance of a temple. It was chiefly furnished with great instruments of music, among which were sets of cylindrical bells suspended in a line from ornamental frames of wood, and gradually diminishing in size from one extremity to the other, and also triangular pieces of metal arranged in the same order as the bells. To the sound of these instruments a slow and solemn hymn was sung by eunuchs, who had such a command over their voices as to resemble the effect of musical glasses at a distance. The performers were directed, in the gliding from one tone to the other, by the striking of a shrill and sonorous cymbal; and the judges of music among the gentlemen of the embassy were much pleased with their execution. The whole had, indeed, a grand effect. During the performance, and at particular signals, nine times repeated, all present prostrated themselves nine times, except the ambassador and his suite, who made a profound obeisance. But he whom it was meant to honour continued, as if in imitation of the Deity, invisible the whole time. The awful impression intended to be made upon the minds of men by this apparent worship of a fellow mortal was not to be effaced by any immediate scenes of sport or gaiety, which were postponed to the following day."—*Staunton, Embassy*, quot. *Williams, Midd. King.*, i. 402–3.

"The mass of the people are not admitted to participate in these ceremonies; they are kept at a distance, and care, in fact, very little about them. In every provincial capital there is a hall, called *Wan-shou kung*, dedicated solely to the honor of the Emperor, and where, three days before and after his birthday, all the civil and military officers and the most distinguished citizens assemble to do him the same homage as if he were present. The walls and furniture are yellow."—*Ibid.* i. 403.

"As it is etiquette that mandarins prostrating themselves before the Emperor should make the floor ring with the knocking of their heads, and as the process would be very objectionable on a solid surface of brick or stone, an arrangement has been made by hollowing a portion of the flooring in front of the throne, by which a slight knock will make a considerable noise, and also save the foreheads of the knockers."—*Giles, Historic China*, p. 207.

"When an officer comes from audience with the Emperor, no matter what his rank, all the high officials have to go in state to meet him; and until this ceremony is over he is, like our 'ambassadors,' part of his 'august master.' . . . The new arrival steps out of his boat [or chair] in full dress, with that haughty swagger which comes so natural to all Chinese officials, and sees the Tartar General, Viceroy, Governor, Hoppo, Treasurer, Judge, etc., etc., all on their knees before him, 'craving to know the health.' The ambassador (for such he is, and is called by courtesy, for the moment) says: '*T'ê-ch'i: chên-an.*' The first pair of syllables is supposed to be imitation Manchu for 'Arise!' The second means in Chinese '*Nos valemus.*' After a cup of tea in the mat-shed, and pipes all round, the officials 'resume their rank.'"—*Parker, John Chinaman*, pp. 171–2.

"In the provincial courts civilians always take precedence of military officers; the governor-general and Banner commander, governor and major-general, the literary chancellor and collector of customs, rank with each other; then follow the treasurer, the judge, and other civilians."—*Williams, Midd. King.*, i. 440.

"Officers avoid meeting each other, especially in public, except when etiquette requires them. An officer of low rank is obliged to stop his chair or horse, and on his feet to salute his superior, who receives and returns the civility without moving. Those of equal grades leave their places and go through a mock struggle of deference to get each first to return to it. The common people never presume to salute an officer in the streets, nor even to look at him very carefully. In his presence they speak to him on their knees, but an old man, or one of consideration, is usually requested to rise when speaking, and even criminals with grey hairs are treated with respect. Officers do not allow their inferiors to sit in their presence, and have always been unwilling to concede this to foreigners; those of the lowest rank consider themselves far above the best of such visitors, but this affectation of rank is already passing away."—*Ibid.* i. 805. The signboards of all shops were taken in when a Viceroy or any of the 3 officials next to him in rank passed. If this was not done, it was a sign of discontent.

"Not only a *hien* is, but even his superiors are very careful not to make a literary man kneel, or to humiliate him in any way; at least until the formality of 'removing his button' shall have been gone through by the viceroy or the governor."—*Parker, John Chinaman*, p. 233.

"A person representing an earlier generation should be treated as a father; of ten years' seniority as an elder brother; of five years' as an equal; and hence, when meeting an elder, a respectful salutation should be made by holding the hands together as high as the breast and making a slight bow, at the same time moving the hands once or twice forth and back." "If spectacles are worn, they should be removed and held in the hand until parting" [this also applies to equals]. "In walking together the younger person should keep in the rear a pace or two, and should offer to assist the elder in places of difficulty."—*Walshe, Ways*, pp. 77–8.

"The position of the teacher, or tutor, . . . is one of the highest in China." For the attitude to be observed towards him *v. ibid.* pp. 79–82.

"Children are early taught the forms of politeness toward all ranks. The duties owed by younger to elder brothers are peculiar, the firstborn having a sort of birthright in the ancestral worship, in the division of property, and in the direction of the family after the father's decease. The degree of formality in the domestic circle inculcated in the ancient *Book of Rites* is never observed to its full extent, and would perhaps chill the affection which should exist among its members did not habit render it easy and proper; and the extent to which it is actually carried depends a good deal upon the education of the family. In forwarding presents it is customary to send a list with the note, and if the person deems it proper to decline some of them, he marks on the list those he takes and returns the rest; a douceur is always expected by the bearer, and needy fellows sometimes pretend to have been sent with some insignificant present from a grandee in hopes of receiving more than its equivalent as a cumshaw from the person thus honored."—*Williams, Midd. King.*, i. 805–6.

"It would be a gross impertinence for an inferior to present a large card to a superior, and quite unnecessary for a superior to act in the same way towards an inferior."—*Walshe, Ways*, p. 41.

"According to strict etiquette, subordinates are not permitted to use a fan during an interview with a superior, no matter what the temperature may be."—*Ibid.* p. 24.

"In handing anything to an equal or superior it is necessary to use both hands; it would be impolite to offer anything with one hand only except to an inferior."—*Ibid.* p. 22.

"So long as one's father is alive it is inadmissible to grow any hair on the face."—*Ibid.* p. 18.

"It was not possible in China for a father to serve under his son, until Prince Chun, the father of the present reigning Emperor, established quite recently a precedent to the contrary."—*Boulger, Short Hist.*, p. 333.

Among equals.—"We cannot wonder at the pulverization to which the art of compliment has been reduced by this mincing process at work through so many ages. Its ingenuity is exercised in avoiding the use of plain personal pronouns, substituting polite or self-depreciatory adjectives. As a branch of the ceremonialism which makes so important a part of Chinese life, these fine-spun courtesies serve to mark what grotesque transformations may befall the higher elements of character, when absorbed by an intense interest in concrete details. We cannot help discerning the traces of benevolence and even humor limping about with clipped wings, where people say 'little dog' for one's own son, and 'contemptible village' for one's native place; while they have invented 'your illustrious house' as an euphuism for another's wife, and even 'your respectable disease' for his ill-health,—phrases doubtless much transformed in spirit by an English garb. What ages of mutual deference are condensed into the flattering address on a visiting card, 'Your stupid younger brother salutes you with bowed head'; or into the host's obeisance to his caller, 'How shall I presume to receive the trouble you give your honourable feet.' From the oldest recorded times the duties of children to parents have been mechanized with a minuteness of prescription that would turn a less prosaic race into sheer hypocrites in the closest relations of life. In the Chinese, it seems but a sincere expression of the patriarchalism that sways every fibre of their being, and works with a kind of spontaneity at the production of these swarming human beings, not more real and solid than they are loyal, age after age, to their unvarying type. And no mechanism can

hide its genuine filial piety; its full flow of reverence and tender devotion neutralizing the rigidity of these infinitesimal rules, though it does not quite melt them in fervent heat. 'They say but little' observes an old traveller of the Chinese: 'their compliments are in form; one knows what he must say, and the other how he must answer; they never beat their brains like us, to find out new compliments and fine phrases. They never overheat themselves; they are like statues in a theatre, they have so little of discourse and so much of gravity."—*Johnson, Or. Rel.—Ch.*, pp. 13–14.

"Leaning the elbow on the table, lounging or spreading the feet widely apart, or crossing the legs should be avoided. The feet should be planted firmly on the ground, whether sitting or standing; in the former position men keep their knees apart, women close together." "When standing, the correct attitude is that of 'attention!' the arms hanging straight at the sides; the legs should be kept more or less rigid, and no limpness . . . be exhibited."—*Walshe, Ways*, p. 19.

In the street "way must be made by the more mobile body for that which is less easily moved" (see instances).—*Ibid.* p. 26.

"Although often what one may call very well bred, there is nothing pretty or taking about Chinese ladies' manners."—*Ibid.* p. 183.

In Fuhchau "there is a general lack of courtesy between acquaintances meeting in the highway, a circumstance quite unusual in China."—*Williams, Midd. King.*, i. 133.

[For the etiquette at dinner parties *v.* HABITS AND CUSTOMS.]

With inferiors.—"The rule of the present dynasty is that winter and summer, every day, responsible Ministers must see the Emperor."—*N.C. Herald*, Aug. 14, 1899, p. 339. *Cf.* previous Periods.

"Chinese mandarins have to be very chary how they hobnob with their own countrymen of the non-official classes; there is no objection to their giving 'jambarees' or 'drunks,' in their own *yamêns*, where no one outside is any the wiser; but it comes very near being an official offence to accept invitations from rich money-lenders or merchants."—*Parker, John Chinaman*, p. 167. See also *Towards superiors.*

"Elders need not remove their glasses [spectacles] when meeting juniors who do not wear them, or who do not remove them."—*Walshe, Ways*, p. 78.

Visits.—[Cards, or rather strips of red paper 7 in. by 3¾ in., were used. On visits, strict ceremony required the visitor to ride in a chair. If the host were "not at home," the servant *tang chia*, "stayed his chariot." If received, he was invited by the servant with the word *Ch'ing*, "[the host] requests [you to enter]." The visitor saluted the host by clasping his hands together, raising them to his chin, and bowing. The host did the same. Various formal questions were asked. Tea was served (to be drunk on departure). The host accompanied the visitor to the door or his chair (according to rank). Leave-taking was marked by similar salutations to those performed on arrival.]—*Walshe, Ways*, pp. 48–55. See also pp. 56–71.

[In ladies' visits a woman-servant or slave-girl supported the visitor to the guest-room, where the lady of the house received. Ladies bowed, placing right hand on left against chest, and moving right hand slowly up and down. Servants brought tea with sugared cakes.]—*Little* (*Mrs. A.*), *Int. Ch.*, pp. 85–7.

Presents.—"Nowhere either in Orient or Occident can there be found a people more lavish and generous in their gifts than the Chinese."—*Headland, Ch. Boy and Girl*, p. 38.

"Presents . . . are a great nuisance in China." "The rule in China is to accept part of a gift, and then 'tip' according to its value; or to reject the whole, and 'tip' with great *sagesse*. You either write on the card: 'X. respectfully detains screen one piecey; remaining gems are excluded with thanks,' or, simply: 'X. excludes with thanks.'"—*Parker, John Chinaman*, pp. 88–9.

"The ornament, which has sometimes, for want of a better name, been called a *sceptre*, is . . . an emblem of amity and goodwill, of a shape less bent than the letter S, about eighteen inches in length, and cut from the *jade* or *yu* stone. It is called *joo-ee*, 'as you wish,' and is simply exchanged as a costly mark of friendship; but that it had a religious origin seems indicated by the sacred flower of the lotus (*Nymphæa nelumbo*) being generally carved on the superior end."—*Davis, Chinese*, i. 353–4.

Titles and Forms of address.—"The most common appellation employed to denote the Emperor in state papers and among the people is *hwangti*, or 'august sovereign'; it is defined as 'the appellation of one possessing complete virtues, and able to act on heavenly principles.' This title is further defined as meaning heaven: 'Heaven speaks not, yet the four seasons follow in regular succession, and all things spring forth. So the three august ones (Fuhhi, Shinnung, and Hwangti) descended in state, and without even uttering a word the people bowed to their sway; their virtue was inscrutable and boundless like august heaven, and therefore were they called *august* ones.'" "Among the numerous titles given the monarch may be mentioned *hwang shang*, the 'august lofty one'; *tien hwang*, 'celestial august one'; *shing hwang*, the 'wise and august,' *i.e.*, infinite in knowledge and complete in virtue; *tien ti*, 'celestial sovereign'; and *hsing ti*, 'sacred sovereign,' because he is able to act on heavenly principles. He is also called *tien tsz'*, 'son of heaven,' because heaven is his father and earth is his mother, and *shing tien tsz'*, 'wise son of heaven,' as being born of heaven and having infinite knowledge; terms which are given him as the ruler of the world by the gift of heaven. He is even addressed, and sometimes refers to himself, under designations which pertain exclusively to heaven. *Wan sui yé*, 'sire of ten thousand years,' is a term used when speaking of him or approaching him, like the words O king, live for ever! addressed to the ancient kings of Persia. *Pi hia*, 'beneath the footstool,' is a sycophantic appellation used by his courtiers, as if they were only worthy of being at the edge of his footstool." "The Emperor usually designates himself by the terms *chin*, 'ourself,' *kwa jin*, the 'solitary man,' or the one man; and *kwa kiun*, the 'solitary prince.' . . . His palace has various appellations, such as hall of audience, golden palace, the ninth entrance, vermilion avenue, vermilion hall, rosy hall, forbidden pavilion, the crimson and forbidden palace, gemmeous steps, golden steps, meridian portal, gemmeous avenue, celestial steps, celestial court, great interior, the maple pavilion, royal house, etc. To see him is to see the dragon's face; the throne is called the 'dragon's throne,' and also the 'divine utensil,' i.e., the thing given him by heaven to sit in when executing his divine mission; his person is styled the dragon's body, and a five-clawed dragon is emblazoned, like a coat of arms, on his robes, which no one can use or imitate."—*Williams, Midd. King.*, i. 393–5.

"The Empress Dowager's honorific titles are at present sixteen in number, the only instance in which such a number has been approximately reached by any Chinese ruler being in the case of the Eastern Empress Dowager who died in 1881 and had ten characters to her name. . . . Each character represents an income of Tls. 360,000 per annum."—*P. and T. Times*, quot. *China Mail*, Sept. 3rd, 1903.

"Shun-che, the first of the Man-chow dynasty, adopted [for Confucius], in his second year, A.D. 1645, the style,—'K'ung, the ancient Teacher, accomplished and illustrious, all-complete, the perfect Sage' (大成至聖, 文宣先師, 孔子); but twelve years later, a shorter title was introduced,—'K'ung, the ancient Teacher, the perfect Sage' (至聖花師孔子). Since that year no further alteration has been made."—*Legge, Ch. Class.*, i. Prol. p. 91. See also *Davis, Chinese*, ii. 56, for similar honour conferred by Chia Ch'ing upon Mencius.

"*Fêng Tsêng* 封贈.—Titles of Honour. The system of conferring titles of honour is one of the most frequent forms of reward for merit or service, or of Imperial bounty on occasions of rejoicing. These titles may either be conferred—*shou* 授—upon an official in person, or bestowed—*fêng* 封—upon his wife, or his parents or grandparents, whilst still living, or, lastly, they may be granted as a posthumous distinction—*tsêng* 贈—to his deceased progenitors. The patents by which these titles are conferred are designated *Kao Ming* 誥命 for all ranks from the 1st to the 5th inclusive, and *Ch'ih Ming* 敕命 for all the inferior ranks. The following are the titles conferred upon civilian functionaries or their connections in the various degrees of rank:—

Title of Functionary.		Wife's Title.
1a. *Kuang Lu Ta Fu*	光祿大夫	一品夫人
1b. *Yung Lu Ta Fu*	榮祿大夫	*Yi P'in Fu Jên.*
2a. *Tzŭ Chêng Ta Fu*	資政大夫	二品夫人
2b. *T'ung Fêng Ta Fu*	通奉大夫	*Êrh P'in Fu Jên.*
3a. *T'ung I Ta Fu*	通議大夫	淑人
3b. *Chung I Ta Fu*	中議大夫	*Shu Jên.*
4a. *Chung Hsien Ta Fu*	中憲大夫	恭人
4b. *Ch'ao I Ta Fu*	朝議大夫	*Kung Jên.*
5a. *Fêng Chêng Ta Fu*	奉政大夫	宜人
5b. *Fêng Chih Ta Fu*	奉直大夫	*I Jên.*
6a. *Ch'êng Tê Lang*	承德郎	安人
6b. *Ju Lin Lang*	儒林郎	*An Jên.*
7a. *Wên Lin Lang*	文林郎	孺人
7b. *Ch'êng Shih Lang*	徵仕郎	*Ju Jên.*
8a. *Hsiu Chih Lang*	修職郎	八品孺人
8b. *Hsiu Chih Tso Lang*	修職佐郎	*Pa P'in Ju Jên.*
9a. *Têng Shih Lang*	登仕郎	九品孺人
9b. *Têng Shih Tso Lang*	登仕佐郎	*Chiu P'in Ju Jên.*

Officials of the class of *Li Yuan* 吏員, *i.e.*, such as have gained admittance into the public service, by examination, from among the ranks of the clerks, *shu pan* 書辦, in the Government Boards at Peking, may receive the following titles of honour:—

6a. *Hsüan Tê Lang* 宣德郎.

7a. *Hsüan I Lang* 宣議郎.

The titles exhibited in the foregoing list are set forth in all historical State papers and family records, on funeral cards, ancestral tablets, and tombstones. They are also frequently displayed on ornamental boards placed over the entrances to dwelling-houses. The patents (referred to above) are inscribed on long scrolls of damasked silk, woven in five colours, with figures of the phœnix in relief, upon which the particulars of the grant are inscribed successively in the Chinese and Manchu languages. Military officers receive similar patents conferring honorary titles of a martial character. The first and second degrees of rank are invested with the title *chiang chün* 將軍, to which appropriate epithets are prefixed, whilst the lower degrees receive the titles *Tu Yü* 都尉, *Ch'i Yü* 騎尉, and *Hsiao Yü* 驍尉, with similar prefixes."—*Mayers, Ch. Gov.* pp. 63–5.

"The style of address varies according to the rank; *ta-jên*, or magnate, for the highest, *ta lao-yeh*, or great Sir, and *lao-yeh* Sir, for the lower grade, are the most common."—*Williams, Midd. King.*, i. 502.

"The periphrases employed to denote persons and thus avoid speaking their names in a measure indicate the estimation in which they are held. For instance, 'Does the honorable great man enjoy happiness?' means 'Is your father well?' 'Distinguished and aged one what honorable age?' is the mode of asking how old he is; for among the Chinese, as it seems to have been among the Egyptians, it is polite to ask the name and ages of all ranks and sexes. 'The old man of the house' 'excellent honorable one,' and 'venerable great prince,' are terms used by a visitor to designate the father of his host. A child terms his father 'family's majesty,' 'old man of the family,' 'prince of the family,' or 'venerable father.' When dead a father is called 'former prince,' and a mother 'venerable great one in repose'; and there are particular characters to distinguish deceased parents from living. The request, 'Make my respects to your mother'—for no Chinese gentleman ever asks to *see* the ladies—is literally, 'Excellent-longevity hall place in my behalf wish repose,' the first two words denoting she who remains there. Care should be taken not to use the same expressions when speaking of the relatives of the guest and one's own; thus, in asking, 'How many worthy young gentlemen [sons] have you?' the host replies, 'I am unfortunate in having had but one boy,' literally, 'My fate is niggardly; I have only one little bug.' This runs through their whole Chesterfieldian code. A man calls his wife *tsien nui*, *i.e.*, 'the mean one of the inner apartments,' or 'the foolish one of the family'; while another speaking of her calls her 'the honorable lady,' 'worthy lady,' 'your favored one,' etc."—*Ibid.* i. 803–4.

"In addition to the 名, 號, 字, and such like names, which every Chinese may or may not adopt, as he likes, there is another sort of name indissolubly attached to each 姓, which is called the 郡名. This name is used in prefaces, and ceremonial writings, [禮書], such as invitations and marriage documents, and appears to be a sort of perpetual sobriquet. For instance 渤海 is the sobriquet or heraldic motto of the double surname 歐陽. The Lord Owyang might be spoken of as the 涕海郡. A wife whose maiden name was 張, and who had married a man named 李, [whose 郡名 would be 隴西], would invite her friends to tea in the following style. 'She who follows the Shen Si count, by name *Chang*, curtseys to,' etc., etc. [歸, or 適, 隴西郡張氏襝衽]. The heraldic name of 龔 is 武陵; and so, *mutatis mutandis*, with all others, on the same principle."—*Ch. Rev.*, viii. 65.

"There is still another name, the 堂名, which is used by the descendants of any one man, for any number of generations, until the head of the family chooses to adopt a name for himself. It is as though the Norwegians or Russians, instead of adding the name of the father, (plus the word *sen* or *vitch*), to the name of the son, (as Pieter Andersen, Vladimir Alexandrovitch), were to retain the extra names Andersen and Alexandrovitch for successive generations until some distant descendant should direct his sons to adopt his own name. The 堂名 is very common in Canton, and is frequently posted on the door together with the surname of the occupant."—*Ibid.* viii. 65.

"The rule regarding private communications to public officers is clearly laid down by the Manchu statesman 文祺. No matter whether the writer be a Prince or a statesman, a Manchu must use the term 呈 in addressing his *tsoling*, *ts'anling* or *tut'ung*: or, if he is a sprig of royalty, in addressing the *Tsun-jên Fu*. A Mongol does the same in addressing the *Li-fan Yüan*; and a Chinese in addressing his native authorities. 文祺 makes use of the peculiar term 奴才們 in his Memorial;—a colloquial expression."—*Ibid.* x. 222.

HABITS AND CUSTOMS.

Early Feudal Period (*c.* 2357 *to* 1122 B.C.).—*Table I.*

Public.—"The Mid-Autumn Festival is also called the Moon Feast, and there is a pretty story in connection with it." "More than 4000 years ago there dwelt in the realms of Yao one Hao I, whose skill with the bow earned him the name of the Archer Lord. This great chief was married to a lady called Ch'ang Ngo, who seems to have been of an inquisitive disposition. Her husband, among other accomplishments, excelled in the art of making cakes which possessed the peculiar property of conferring immortality on all who ate of them. As he presumably did not feel quite capable of sharing more than a *mortal* life with Ch'ang Ngo, he kept these cakes hidden. One day, however, when he was absent, the lady discovered their hiding-place. As she was in the act of eating one, she heard the footsteps of her returning husband; who, in fact, caught her in the act. She fled, pursued by her irate lord. Unable to escape in any other way, she finally decided to fly to the moon, and there she at length found safety, although Hao I let fly his bolts after her."—*Hongkong Daily News*, Oct. 7, 1903. For the observances at this festival in modern times, see MANCHU PERIOD.

[A harvest-thanksgiving festival in the *yang* moon (12th month in ancient, 10th in present times), to "announce the completion of the year," is mentioned in *Lu shih, Yün fu shih i*, *c.* 63, p. 8*a*.]

"In Ching [Chou] and Hsü [Chou], at the spring cultivating, the people fed the ox with *Gastrodia* cakes, and adorned its horns with variegated silk thread."—*Yüan chien lei han*, *c.* 356, *Ch'an yeh pu*, p. 6*b*.

On the occasion of an eclipse, "the blind musicians beat their drums; the inferior officers and common people bustled and ran about" (*Shu ching*, Pt. III. Bk. IV. Ch. II. 4). "In the Chow dynasty these customs were observed only when eclipses happened on the first day of the first month of the year. In this point the custom of Hea, with which the present usage agrees, differed from that of Chow."—*Legge, Ch. Class.*, III. i. 165; 166, note.

["The Announcement of T'ang" (*Shu ching*, Pt. IV. Bk. III.) may be considered a "coronation speech on the inauguration of the new dynasty."]—*Ibid.* III. i. 184, note.

Games and Sports.—"According to the chronology of the Chou-king, the first games of the Chinese were those of the bow and the arrow. It is said in the *Li-ki* (Book X, 59): 'When a man comes into the world, they give him a bow and six arrows to shoot towards the sky, the earth, and the four quarters of the world.' As all his duties and occupations relate to the sky, the earth, and the four quarters of the world, the man begins by raising his thoughts towards the six objects with regard to which he must constantly exercise his energy and his intelligence." "They assembled for purposes of archery (says P. Gaubil in his notes on the *Chou-king*), and these assemblies were festivals. The object at which they aimed was ornamented with the heads of animals. The archers were

divided into several parties, and rewards distributed to the most skilful. To these games succeeded exercises partaking of the character of the military art properly so called."—*Bazin, Théâtre Chinois*, Introd. pp. vii–viii.

"Archery was made much of anciently in China."—*Legge, Ch. Class.*, III. i. 82.

[The catapult is mentioned in *Wu yüan, Ko chih ching yüan, c.* 42, *Wu pei lei*, p. 27*a*.]

Hunting for pleasure is mentioned in the *Shu ching* (Pt. III. Bk. III. Ch. I. 1), where it is said that king T'ai K'ang "went out to hunt beyond the Lŏ, and a hundred days elapsed without any sign of his return."—*Legge, Ch. Class.*, III. i. 156–7.

"King Wăn did not dare to go to any excess in his excursions or his hunting."—*Shu ching*, Pt. V. Bk. XV. 11.

"*Wei-ch'i* [or the Chinese Game of War] is solemnly declared by Chinese writers to have been invented by the great Emperor Yao (see quotation from the *Po wu chih* in K'ang Hsi's dictionary: 'Yao invented Wei-ch'i, and Tan Chu was the best player'), who flourished two thousand three hundred years before the birth of Christ. . . . The earliest mention of Wei-ch'i occurs only three hundred years before the Christian era; but it was then evidently a game of long standing, and the champion player of the day was not deemed unworthy to illustrate the teaching of China's most original thinker—the divine Mencius."—*Giles, Historic China*, pp. 331–2. See also subsequent Periods. For the method of playing the game, see *ibid.* pp. 334–52.

"Yao invented the game of *wei*, chess (of 360 men), to teach his son Tan Chu. Others said that Shun thought that his son Shang Chün being foolish he made *wei* chess to teach him. The game was only for clever people."—*Po wu chih, Ko chih ching yüan, c.* 59, *Wan hsi ch'i wu lei*, p. 1*a*. Yao's invention is discredited by other writers: see *P'i jih hsin yüan i, ibid.* p. 1*a*.

Private.—"In ancient times people when eating had to sacrifice [or offer part of the food] to the inventor of cooking, as *e.g.*, Yu Yü [Shun, who] sacrificed the head; the Hsia, the heart: the Yin, the liver, and the Chou, the lungs."—*Ming t'ang wei, Tsêng chu jên wu lei tien, Yin shih lei, c.* 36, p. 2*a*.

"In the Hsia dynasty the bridegroom welcomed his bride in the courtyard; but in the Yin dynasty in the hall."—*Yüan chien lei han, c.* 176, p. 1*a*.

[The character of the habits and customs of the people, indicating their nature, was regarded as that on which the good or bad government of the country depended. Of the earlier periods the customs of Shang were regarded as the best.]—*Tzŭ chih t'ung chien kang mu, c.* 6, *Ch'ien pien*, p. 36*b*.

Later Feudal Period (1122 *to* 221 B.C.).—*Table II.*

Public.—"In this month [first of spring] the son of Heaven on the first *hsin* (辛) day prays to God for a good year; and afterwards, the day of the first conjunction of the sun and moon having been chosen, with the handle and share of the plough in the carriage, placed between the man-at-arms who is its third occupant and the driver, he conducts his three ducal ministers, his nine high ministers, the feudal princes and his Great officers, all with their own hands to plough the field of God. The son of Heaven turns up three furrows, each of the ducal ministers five, and the other ministers and feudal princes nine. When they return, he takes in his hands a cup in the great chamber, all the others being in attendance on him and the Great officers, and says, 'Drink this cup of comfort after your toil.'"—*Li chi*, iv. i. i. 13; *Legge*, i. 254–5.

"According to the Ping Chou custom, for 100 days after the winter solstice, out of respect for Chieh Tzŭ-t'ui [who was burnt in a wood to which he had retired when his merit remained unrewarded], they did not light a fire, and ate cold things for three days."—*Ko chih ching yüan, c.* 22, *Yin shih lei*, p. 27*a*. The *Sui shih chi, Shih lei t'ung pien, c.* 5, *Sui shih pu*, p. 24*b*, says the day was called "Prohibited Smoke" (*chin yen*), and anyone who violated the custom would have his crops destroyed by hail.

[The dependence of the empire on agriculture was acknowledged annually by the king putting his hand to the plough, and turning up a furrow in a field enclosed for that purpose, as an example to all husbandmen. King Hsüan, who, in 815 B.C., neglected this custom, was remonstrated with by his ministers.]—*Legge, Ch. Class.*, III. ii. 615, note.

"Five days before the Opening of Spring, the earthen ox, ploughman, and agricultural implements were made and placed in the suburbs of the eastern gate. At daybreak on that day the local magistrates prepared an altar to worship the Founder of Agriculture (Shên Nung), and at the same time every petty officer struck the ox three times with an embroidered silk cane in order to encourage cultivation."—*Shih lei t'ung pien, c.* 5, *Sui shih pu*, p. 11*b*.

"The festival of the Dragon Boats originated" at Ch'angsha. . . . "On the fifth day of the fifth month [it takes place] . . . wherever there is a serviceable stream for its celebration. . . . Long, narrow boats, holding sixty or more rowers, race up and down the river in pairs with huge clamour, as if searching for someone who had been drowned. This festival was instituted in memory of the statesman Küh Yuen [Ch'ü Yüan], about 450 B.C., who drowned himself in the river Mik-lo, an affluent of the Tungting Lake, after having been falsely accused by one of the petty princes of the state. The people, who loved the unfortunate courtier for his fidelity and virtues, sent out boats in search of the body, but to no purpose. They then made a peculiar sort of rice-cake called *tsung*, and setting out across the river in boats with flags and gongs, each strove to be first on the spot of the tragedy and sacrifice to the spirit of Küh Yuen. This mode of commemorating the event has since continued as an annual holiday. The bow of the boat is ornamented or carved into the head of a dragon, and men beating gongs and drums, and waving flags, inspirit the rowers to renewed exertions. The exhilarating exercise of racing leads the people to prolong the festival two or three days, and generally with commendable good humour, but their eagerness to beat often breaks the boats, or leads them into so much danger that the magistrates sometimes forbid the races in order to save the people from drowning."—*Williams, Midd. King.*, i. 148, 816–7. See also *Shih lei t'ung pien, c.* 6, *Sui shih pu*, p. 10*b*; *Ko chih ching yüan, c.* 25, *Yin shih lei*, p. 14*a*.

[Customs accessory to this festival were the making of roly-poly puddings out of glutinous rice wrapped in celladium leaves (*Chia li ta ch'êng, c.* 8, *Nien chieh ku shih*, p. 21*b*; *Fêng t'u chi, Shih lei t'ung pien, c.* 6, *Sui shih pu*, p. 9*b*); (for the legend explaining the origin of the use of these leaves see *Ko chih ching yüan, c.* 25, *Yin shih lei*, p. 14*a*); painting the likeness of Chang, the founder of the magic art, or moulding his image out of clay, and putting it on the door (*Sui shih chi, ibid.* p. 10*a*); sticking sweet flags and mugwort on the eaves and wearing red charms, in order to ward off evil influences, children tying embroidered silk rings ("long-life threads") round their arms (*Chia li ta ch'êng, c.* 8, *Nien chieh ku shih*, p. 21*b*). If it rained on this day, people cut open a bamboo and mixed the "spiritual-water" found in it with portions of the otter's liver, forming pills for the cure of indigestion (*Chin mên sui chieh chi, Shih lei t'ung pien, c.* 6, *Sui shih pu*, p. 10*b*).]

"The people living in the district and province of She Chiang regarded the day of the summer solstice as a great festival. On that day they killed geese, which they roasted and presented to each other."—*Ko chih ching yüan, c.* 24, p. 7*b*.

[At the winter solstice dumplings made of millet were sacrificed to heaven and ancestors and red-bean congee for protection from fierce demons.]—*Ibid.* p. 22*b*.

[At certain periods of the year they observed the ceremony of archery, each archer having four arrows which he discharged at the target (*Shih ching*, III. ii. II. 3).]—*Legge, Ch. Class.*, IV, ii. 474. The loser drank wine forfeits.

"We are there [Tso Chuan] told that when an eclipse happened the emperor fasted, and had the drums beat before the altar of the spirits of the land, while the princes of States presented offerings before that altar and had the drums beat in their court," but "these things were observed only when eclipses happened on the first day of the first month of the year." "Again, in the Chow Le, Bk. XXXVII (near the end), we read of the bow and arrows used to deliver the sun, and those used to deliver the moon. On an eclipse of the sun, they shot their arrows into the sky to frighten away the injurious moon, and *vice versâ*."—*Legge, Ch. Class.*, III. i. 166, note.

"When a state had lost a large tract of territory with its cities, the highest and other ministers, and the Great and other officers, all wailed in the grand ancestral temple, in mourning caps, for three days; and the ruler (for the same time) had no full meal with music. Some one says, 'The ruler has his full meals and music, but wails at the altar to the spirit of the land.'"—*Li chi*, ii. i. iii. 45; *Legge*, i. 159–60.

"The use of these instruments [gags] seems to have been pretty common in ancient China, as ch. 37 of the *Chou li* (l. 44) describes the functions of a certain 'Officer of mouth-gags' (銜枚氏), on whom it was incumbent to stop tumultuous cries at the great sacrifices of state, to have clamorous people gagged during military reviews and great hunting parties, and to forbid all vociferation in the capital."—*De Groot, Rel. Syst.*, i. i. 188.

Sports and Games.—"They played games of calculation of an abstruse character, and devised what is to all intents and purposes a variety of chess. They also had games involving manual dexterity, such as pitching arrows into a long-necked bottle."—*Giles, Historic China*, p. 12.

[The game of "pitch-pot" was a kind of archery, with darts instead of arrows, and the hand instead of a bow. Two might play at it, or any number. It was a contest at pitching darts into the mouth of a pot or vase, placed at a short distance from the players. For description and rules see *Li chi*, bk. xxxvii; *Legge*, ii. 397–401.]

"There was a tradition of the 'elephant chess' being used at the end of the first Chow dynasty." "The oldest time to which we can trace the existence of a *hsiang ch'i* in China is mentioned in the following passage of the *Shï wu chi yüan*, as quoted in the *Ko Chï ching yüan:* 'Yung Mön Chow told Möng Ch'ang Chün: "My lord, if you be at leisure, play at elephant chess." Query,—Was there already such a thing at the time of the contending realms?'"—*Journ. N.-C.B.R.A.S.*, N.S. vi. 108. See *Ko chih ching yüan, c.* 59, *Wan hsi ch'i wu lei*, pp. 1*a*, 6*a*. See also PERIOD OF DISRUPTION.

"The Chinese game of chess is very ancient, for Wu Wang (1120 B.C.) is the reputed inventor, and its rules of playing are so unlike the Indian game as to suggest an independent origin, which is confirmed by the peculiar feature of the *kiai* [*chieh*] *ho*, or river, running across the board. There are seventy-two squares, of which eight are run together to form the river, leaving thirty-two on each side; but as the men stand on the intersection of the lines, there are ninety positions for the sixteen pieces used by each player, or twenty-six more than in the European game." "The pieces are like chequer-men in shape, each of the seven kinds on each side having its name cut on the top, and distinguished by its red or black colours. The four squares near each edge form the headquarters of the *tsiang*, or 'general,' out of which he and his two *sz'*, or 'secretaries,' cannot move. On each side of the headquarters are two elephants, two horses, and two chariots, whose powers are less than our bishop, knight, and castle, though similar; the chariot is the most powerful piece. In front of the horses stand two cannoniers, which capture like our knight, but move like our castle. Five *pao* [? ping], soldiers or pawns, guard the river banks, but cannot return when once across it in pursuit of the enemy, and get no higher value when they reach the last row. Each piece is put down in the point where it captured its man, except the cannoniers; as the general cannot be taken, the object of each player is to checkmate him in his headquarters. . . . The want of a queen and the limited moves of the men restrict the combinations in the Chinese game more than in western chess, but it has its own elements of skill. Literary men and women play it much, and usually for small stakes. There is another game played less frequently, but one of the most ancient in the Empire. It is called *wei-ki*, which may be rendered 'blockade chess,' and was common in the days of the sages, perhaps even earlier than chess. The board contains three hundred and twenty-four squares, eighteen each way, and the number of pieces is three hundred, though both the number of points and of pieces may be less than this size of the full game. The pieces are black and white, and stand on the crossings of the lines, three hundred and sixty-one in number. The object of the opponents is to surround each other's men and take up the crossings they occupy, or neutralize their power over those near them. Each player puts down a piece anywhere on the board, and continues to do so alternately, capturing his adversary's positions until all the crossings are occupied and the game is ended (*Temple Bar*, Vol. XLIX. p. 45)."—*Williams, Midd. King.*, i. 827–9. See also *Journ. N.-C.B.R.A.S.*, N.S. iii. 107, and *Ko chih ching yüan, c.* 59, *Wan hsi ch'i wu lei*, pp. 3*b*, 5*a*.

"At the present time children make cash of lead or tin, adorn with fowls' feathers, and call them *chien tzŭ*, 'kickers.' Three or four in the company run and kick at them."—*Shih wu yüan shih, Ko chih ching yüan, c.* 60, *Wan hsi ch'i wu lei*, p. 7*b*.

[Little boys made "dust rice" and "mud soup."]—*Ibid. c.* 22, *Yin shih lei*, p. 29*a*.

"Of old, Mi Tzŭ made a wooden kite which could fly for three days without perching. Now people play with paper kites in the wind, which are flown up into the air guided by a string."—*Ibid. c.* 60, *Wan hsi ch'i wu lei*, p. 8*b*.

"*Ch'iao*, stilts, was a game of walking on wooden poles. It is what Lieh Tzŭ refers to as the game of walking on two pieces of wood tied to the feet."—*Ibid.* p. 13*a*.

"In *Lieh Tzŭ* it says: 'In the time of King Mu of Chou there was a clever man named Yen Shih who made marionettes which could sing and dance. Once the King and his concubine Shên were looking at them, and when the performance closed the actors winked at the King's attendant. This made the King angry, and he threatened to execute Yen Shih, who in terror immediately pulled the marionettes to pieces, when lo! they were only made of leather, wood, and glue. This was the origin of marionettes.'"—*Ibid.* p. 10*b*.

[Imperial hunting and fishing expeditions are described on the Stone Drums of the Chou dynasty. See *Journ. N.-C.B.R.A.S.*, N.S. viii. 146–52.]

[On the 8th day of the 12th moon the people hunted wild beasts to offer in sacrifice to their ancestors.]—*Chia li ta ch'êng, c.* 8, *Nien chieh ku shih*, p. 23*a*.

"When the son of Heaven and the princes had no (special) business in hand, they had three huntings in the year [in spring, summer, and winter; in autumn the labours of the field forbade hunting]. The first object in them was to supply the sacrificial dishes with dried flesh; the second to provide for guests and visitors; and the third to supply the ruler's kitchen."—*Li chi*, iii. ii. 22; *Legge*, i. 220.

"The son of Heaven did not entirely surround (the hunting ground); and a feudal prince did not take a (whole) herd by surprise. When the son of Heaven had done killing, his large flag was lowered; and when the princes had done, their smaller flag. When the Great officers had done, the auxiliary carriages [see IMPLEMENTS] were stopped; and after this, the common people fell a hunting (for themselves)."—*Ibid.* iii. ii. 24; *Legge*, i. 220–1.

"When the otter sacrificed its fish, the foresters entered the meres and dams. When the wolf sacrificed its prey, the hunting commenced. When the dove changed into a hawk, they set their nets, large and small. When the plants and trees began to drop their leaves, they entered the hills and forests (with the axe)."—*Ibid.* iii. ii. 25; *Legge*, i. 221. And *v.* bk. iv.

"After a royal hunt the game was scrambled for by the people, and it was considered bad manners for 'the great kitchen' to put in a claim for all the spoil. . . . There were regulations about the size of the fishing nets to be used (*C.C.*, vol. ii. p. 6, n.), the mesh of which was not to be less than four inches, and it was also forbidden to take fish less than a foot long. As in the case of the woods and forests, the regulations in force were mainly directed against the danger of exterminating valuable species; and even a royal prince, hunting in spring, is forbidden to surround a whole marsh for the purposes of a *battue*. This provision is included among the 'rules of propriety' in the first section of the Li Ki (*S.B.*, xxvii. p. 106; *ib. The Royal Regulations*, p. 220). 'To hunt without observing the rules was deemed cruelty towards the creatures of heaven.' It was also against the rule to take eggs, to throw down nests, and to kill young or pregnant animals; even the firing of fields was supposed to be put off until the insects frequenting them had retired into the holes and burrows where they were thought to spend the winter. Consideration for the brute creation was naturally associated with regard for the interests of human beings, and so the emperor left some game for the princes, the princes left some for the great officers, and when these had had their sport, the common people were allowed to hunt for themselves."—*Simcox*, ii. 39.

[Football is said to have originated during the period of the Warring States (400 to 260 B.C.). It is otherwise ascribed to the mythical emperor Huang Ti. It was originally used as an exercise for the soldiers.]—*Shih lei t'ung pien, c.* 5, *Sui shih chi*, p. 5*b*.

[Cock-fighting, dog-racing, and dice-throwing at Lin Tzŭ, capital of the Ch'i State, are mentioned in Ssŭ-ma Ch'ien's biography of Su Ch'in (third century B.C.).]—*Nineteenth Century*, March, 1906.

[The game of "horn-goring," in which masks of beasts were worn, was invented in the time of the Six Kingdoms. See following Period.]

The Court.—[The chief of the cooking-department tasted the emperor's food before it was served.]—*Li chi.*

Private.—[To feasts they invited the friends of the family and gave them presents of pieces of silk in baskets (*Shih ching*, II. i. I. 1). During the festival they practised shooting with the bow at a target (III. ii. II. 3), and each of those who hit it presented a full cup of wine to those who were unsuccessful (II. vii. VI. 1). At table, they placed the guests on the left and right of the host (*ibid.*), according to their rank and age (*Chung yung*, XIX.). Bells, drums, and other instruments of music sounded in sign of rejoicing (*Shih ching*, II. vi. V. 6).]

"It was the custom . . . to take off the shoes and leave them outside the door on entering an apartment."—*Legge, Lî Kî*, i. 71, note. *Cf.* LAWS OF INTERCOURSE.

"On New Year's Day they burnt a magpie's nest and put the ashes in the water-closet to avert war (*lit.*, weapons)."—*Shih lei t'ung pien, c.* 5, *Sui shih pu*, p. 8*b*.

"When Duke Ting of Lu met the Marquis of Ch'i at Chia Ku, singing-girls and play-actors were sent for to play before them."—*P'ei wên yün fu, c.* 63, p. 156*b*.

"When a wife was about to have a child, and the month of her confinement had arrived, she occupied one of the side apartments, where her husband sent twice a day to ask for her. If he were moved and came himself to ask about her, she did not presume to see him, but made her governess dress herself and reply to him."—*Li chi*, x. ii. 16; *Legge*, i. 471.

"When the child was born, the husband again sent twice a day to inquire for her. He fasted now, and did not enter the door of the side apartment. If the child were a boy, a bow was placed on the left of the door; and if a girl, a handkerchief on the right of it. After three days the child began to be carried, and some archery was practised for a boy, but not for a girl."—*Ibid.* x. ii. 16; *Legge*, i. 471–2.

"When a son and heir to the ruler of a state was born, and information of the fact was carried to him, he made arrangements to receive him at a feast where the three animals should

all be provided ; and the cook took in hand the (necessary) preparations. On the third day the tortoise-shell was consulted for a good man to carry the child ; and he who was the lucky choice kept a vigil over night, and then in his court robes, received him in his arms outside the chamber. The master of the archers then took a bow of mulberry wood, and six arrows of the wild *rubus*, and shot towards heaven, earth, and the four cardinal points. After this the nurse received the child and carried it in her arms. The cook (at the same time) gave (a cup of) sweet wine to the man who had carried the child, and presented him with a bundle of silks, and the tortoise-shell was again employed to determine the wife of an officer, or the concubine of a Great officer, who should be nurse."—*Ibid.* x. ii. 17 ; *Legge*, i. 472.

"In all cases of receiving a son, a day was chosen ; and if it were the eldest son of the king, the three animals were killed (for the occasion). For the son of a common man, a sucking-pig was killed ; for the son of an officer, a single pig ; for the son of a Great officer, the two smaller animals ; and for the son of the ruler of a state, all the three. If it were not the eldest son, the provision was diminished in every case one degree."—*Ibid.* x. ii. 18 ; *Legge*, i. 472.

"A special apartment was prepared in the palace for the child, and from all the concubines and other likely individuals there was sought one distinguished for her generosity of mind, her gentle kindness, her mild integrity, her respectful bearing, her carefulness and freedom from talkativeness, who should be appointed the boy's teacher ; one was next chosen who should be his indulgent mother, and a third who should be his guardian mother. These all lived in his apartment, which others did not enter unless on some (special) business."—*Ibid.* x. ii. 19 ; *Legge*, i. 472–3.

"At the end of the third month a day was chosen for shaving off the hair of the child, excepting certain portions,—the horn-like tufts of a boy, and the circlet on the crown of a girl. If another fashion were adopted, a portion was left on the left of the boy's head, and on the right of the girl's. On that day the wife with the son appeared before the father. If they were of noble families, they were both in full dress. From the commissioned officer downwards, all rinsed their mouths and washed their heads. Husband and wife rose early, bathed and dressed as for the feast of the first day of the month. The husband entered the door, going up by the steps on the east, and stood at the top of them with his face to the west. The wife with the boy in her arms came forth from her room and stood beneath the lintel with her face to the east."—*Ibid.* x. ii. 20 ; *Legge*, i. 473.

"The governess then went forward and said for the lady, 'The mother, So and So, ventures to-day reverently to present to you the child!' The husband replied, 'Reverently (teach him to) follow the right way.' He then took hold of the right hand of his son, and named him with the smile and voice of a child. The wife responded, 'We will remember. May your words be fulfilled!' She then turned to the left, and delivered the child to his teacher, who on her part told the name all round to the wives of the relatives of all ranks who were present. The wife forthwith proceeded to the (festal) chamber."—*Ibid.* x. ii. 21 ; *Legge*, i. 473–4.

"The husband informed his principal officer of the name, and he in turn informed all the (young) males (of the same surname) of it. A record was made to the effect—'In such a year, in such a month, on such a day, So and So was born,' and deposited. The officer also informed the secretaries of the hamlets, who made out two copies of it. One of these was deposited in the office of the village, and the other was presented to the secretary of the larger circuit, who showed it to the chief of the circuit ; he again ordered it to be deposited in the office of the circuit. The husband meanwhile had gone into (the festal chamber), and a feast was celebrated with the ceremonies of that with which a wife first entertains her parents-in-law."—*Ibid.* x. ii. 22 ; *Legge*, i. 474.

"When an heir-son has been born, the ruler washed his head and whole body, and put on his court robes. His wife did the same, and then they both took their station at the top of the stairs on the east with their faces towards the west. One of the ladies of quality, with the child in her arms, ascended by the steps on the west. The ruler then named the child : and (the lady) went down with it."—*Ibid.* x. ii. 23 ; *Legge*, i. 474.

"In naming a son, the name should not be that of a day or a month or of any state, or of any hidden ailment [nor of a hill or river (i. i. iii. 9. 42)]. Sons of Great and other officers must not be called by the same name as the heir-son of the ruler."—*Ibid.* x. ii. 25 ; *Legge*, i. 475.

[For the procedure with regard to the second or other sons by the wife proper, by concubines, etc., and grandsons, see *ibid.* x. ii. 24, 26–7, 29–31 ; *Legge*, i. 474–6.]

"Among the common people who had no side chambers, when the month of confinement was come, the husband left his bed-chamber, and occupied a common apartment. In his enquiries for his wife, however, and on his son's being presented to him, there was no difference (from the observances that have been detailed)."—*Ibid.* x. ii. 28 ; *Legge*, i. 476.

"When the child was able to take its own food, it was taught to use the right hand. When it was able to speak, a boy (was taught to) respond boldly and clearly ; a girl, submissively and low. The former was fitted with a girdle of leather ; the latter, with one of silk."—*Ibid.* x. ii. 32 ; *Legge*, i. 476–7.

"At six years, they were taught the numbers and the names of the cardinal points ; at the age of seven, boys and girls did not occupy the same mat nor eat together ; at eight, when going out or coming in at a gate or door, and going to their mats to eat and drink, they were required to follow their elders :—the teaching of yielding to others was now begun ; at nine, they were taught how to number the days."—*Ibid.* x. ii. 33 ; *Legge*, i. 478.

"At ten (the boy) went to a master outside, and stayed with him (even) over the night. He learned the (different classes of) characters and calculation ; he did not wear his jacket or trousers of silk ; in his manners he followed his early lessons ; morning and evening he learned the behaviour of a youth ; he would ask to be exercised in (reading) the tablets, and in the forms of polite conversation."—*Ibid.* x. ii. 33 ; *Legge*, i. 478.

"At thirteen, he learned music, and to repeat the odes, and to dance the *ko* (of the duke of *Kâu*) [first of the civil dances]. When a full-grown lad, he danced the *hsiang* (of king Wu) [first of the martial dances]. He learned archery and chariot-driving. At twenty, he was capped [the capping ceremony took place when he reached manhood (*Li chi*, ix. iii.)], and first learned the (different classes of) ceremonies, and might wear furs and silk. He danced the *ta hsia* (of Yü) [the *ko* and *hsiang* combined], and attended sedulously to filial and fraternal duties. He might become very learned, but did not teach others ;—(his object being still) to receive and not to give out."—*Ibid.* x. ii. 34 ; *Legge*, i. 478.

"At thirty, he had a wife, and began to attend to the business proper to a man. He extended his learning without confining it to particular subjects. He was deferential to his friends, having regard to the aims (which they displayed). At forty, he was first appointed to office ; and according to the business of it brought out his plans and communicated his thoughts. If the ways (which he proposed) were suitable, he followed them out ; if they were not, he abandoned them. At fifty, he was appointed a Great officer, and laboured in the administration of his department. At seventy, he retired from his duties. In all salutations of males, the upper place was given to the left hand."—*Ibid.* x. ii. 35 ; *Legge*, i. 478–9.

"A girl at the age of ten ceased to go out (from the women's apartments). Her governess taught her (the arts of) pleasing speech and manners, to be docile and obedient, to handle the hempen fibres, to deal with the cocoons, to weave silks and form fillets, to learn (all) woman's work, how to furnish garments, to watch the sacrifices, to supply the liquors and sauces, to fill the various stands and dishes with pickles and brine, and to assist in setting forth the appurtenances for the ceremonies."—*Ibid.* x. ii. 36 ; *Legge*, i. 479.

"At fifteen, she assumed the hair-pin ; at twenty, she was married, or, if there were occasion (for the delay), at twenty-three. If there were the betrothal rites, she became a wife ; and if she went without these, a concubine. In all salutations of females, the upper place was given to the right hand."—*Ibid.* x. ii. 37 ; *Legge*, i. 479.

"There is nothing in what is said of the daughters to indicate that they received any literary training. They were taught simply the household duties that would devolve on them in their state of society ; though among them, be it observed, were the forms and provision for sacrifice and worship. It will be observed, also, at how early an age all close intercourse between them and their brothers came to an end, and that at ten they ceased to go out from the women's apartments."—*Legge, Lî Kî*, i. 477, note.

"To the question : 'Why is a child who is a full year old called "aiming at excellence"?' The reply is : 'When Tsao Pin had completed his first year of life his parents placed many kinds of implements in a *tsui*, platter, and asked him to pick some up. Pin chose the sword and seal ; thus foretelling that he would be a general.'"—*Chia li ta ch'êng, c.* 1, *Yen li t'ou tz'ŭ*, p. 18*b*.

"By the custom of Chiang Nan, when a son was born, on his completing his first year, his parents made clothing for him. Having been washed he was dressed, and there was put before him a bow and arrow, and paper and pen ; or in the case of a girl, scissors, cubit measure, needle and thread, together with food, articles of value, and playthings. The parents watched to see which the child would choose, in order to show whether he or she would be greedy, incorrupt, clever, or stupid. This was called 'trial of a child.' On these occasions all the relatives, near and distant, assembled for a dinner party. Thenceforth, if its parents were alive, every year on that date they must prepare a feast."—*Yüan chien lei han, c.* 244, p. 1*b*.

"The ancients 'proved the twins.' They regarded the one who was born later as occupying the higher situation of elder brother."—*Kung-yang chuan, Kuang shih lei fu, c.* 17, p. 9*a*.

"Confucius said : 'A youth, at 20, should be capped ; after capping he may marry a wife.' This practice is common to both ancients and moderns."—*K'ung Ts'ung Tzŭ, P'ei wên yün fu, c.* 66*b*, p. 171*b*. An emperor who ascended the throne while under 20 was capped when he reached that age : see *Tzŭ chih t'ung chien kang mu, c.* 17, *Ch'ien pien*, p. 4*a*.

[The season for marriages was autumn and winter, but spring if the woman had reached 20 years of age.]—*Shih Yu-nü-huai-ch'un su, P'ei wên yün fu, c.* 13*b*, p. 84*b*. The *Hsia hsiao chêng, ibid. c.* 8, p. 17*a*, says the 2nd moon. (*Cf.* MARITAL.)

[Three months before marriage, a woman was taught speech, deportment, and the duties of a wife.]—*Li hun i, K'ang Hsi Tzŭ tien, Ch'ou chi hsia, Nü pu*, p. 48*a*. (*Cf.* MARITAL.)

[Marriages were arranged by matchmakers ; presents were exchanged ; in marrying a wife, a woman of the same surname was not chosen, but in taking a concubine this rule was not observed, though a diviner was first consulted. Husbands were to be chosen from wealthy families, so as to ensure due respect on the part of the daughter-in-law. On marriage the hair was done up in a knot. The formalities were of six kinds :—enquiring the name, making the contract, espousing, presenting silk, asking the time, and welcoming the bride. The ancestral temple was notified. Minute regulations governed the various salutations and other procedure, which varied in successive dynasties. The bride was now welcomed personally, but in later ages this rite was neglected. Visits were made to the ancestral temple three days after marriage. After an interval of three months, brides returned to their parents' home. These days were called "daughters' festivals." The reason given is that by this time there was no risk of the marriage being adjudged invalid. If the parents were dead the visit was not made.]—*Chia li ta ch'êng, c.* 1, *Kuan chi hsi i*, pp. 11*b*, 12*a*, 12*b*, 13*a*, 13*b* ; *c.* 4, *Hun yin i li*, pp. 1*b*, 42*b* ; *c.* 1, *Hsüeh li yao wu*, p. 7*a*. Some details are given in the following extracts. See also *Li chi*, ix. iii.

The various ceremonies preliminary to marriage were : "the proposal with its accompanying gift [not a goose, as is here and usually stated, but a wild swan, the emblem of fidelity] ; the inquiries about the (lady's) name ; the intimation of the approaching divination ; the receiving the special offerings ; and the request to fix the day [by the lady's family]. These all were received by the principal party (on the lady's side), as he rested on his mat or leaning-stool in the ancestral temple. (When they arrived) he met the messenger, and greeted him outside the gate, giving place to him as he entered, after which they ascended to the hall. Thus were the instructions received in the ancestral temple."—*Li chi*, xli. 1 ; *Legge*, ii. 428–9.

"The father gave himself the special cup to his son, and ordered him to go and meet the bride." . . . On his return her father "met him outside the gate and received him with a bow, and then the son-in-law entered, carrying a wild goose [swan]. After the (customary) bows and yielding of precedence, they went up to the hall, when the bridegroom bowed twice and put down the wild goose [swan]. Then and in this way he received the bride from her parents."—*Ibid.* xli. 2 ; *Legge*, ii. 429.

"After this they went down, and he went out and took the reins of the horses of her carriage, which he drove for three revolutions of the wheels, having handed the strap to assist her in mounting. He then went before, and waited outside his gate. When she arrived, he bowed to her as she entered. They ate together of the same animal, and joined in sipping from the cups made of the same melon ; thus showing that they now formed one body, were of equal rank, and pledged to mutual affection."—*Ibid.* xli. 2 ; *Legge*, ii. 429–30.

"Rising early (the morning after marriage), the young wife washed her head and bathed her person, and waited to be presented (to her husband's parents), which was done by the directrix, as soon as it was bright day. She appeared before them, bearing a basket with dates, chestnuts, and slices of dried spiced meat. The directrix set before her a cup of sweet liquor, and she offered in sacrifice some of the dried meat and also of the liquor, thus performing the ceremony which declared her their son's wife. [There were differences in the ceremonies according to the rank of the parties ; but they all agreed in their general character.] The father and mother-in-law then entered their apartment, where they set before them a single dressed pig, thus showing the obedient duty of (their son's) wife." "Next day, the parents united in entertaining the young wife, showing how she now occupied the position of continuing the family line."—*Ibid.* xli. 5–8 ; *Legge*, ii. 430–1.

"When a daughter was married, her parents adorned her with a leathern girdle and warned her to be cautious and careful to obey their instructions."—*Yüan chien lei han, c.* 251, p. 2*a*.

"A woman, though not married, when she is twenty years of age should put on the hairpin (*chi*)," the sign that a woman is married.—*Tsa chi, Yüan chien lei han, c.* 251, p. 1*b*.

"The king had four meals a day : breakfast, the morning meal, dinner, and supper. At all there was music to stimulate digestion. The princes only had three meals, and the common people only two."—*Li chi, Tséng chu jén wu lei tien, Yin shih lei, c.* 36, p. 3*b*.

"Every day when the king took his meals he used 12 tripod dishes containing the foods. The cook presented the food, and tasted it before the king ate."—*Chou li t'ien kuan, Shih wu lei tien, Yin shih lei, c.* 36, p. 1*b*.

"The tenth book of the Analects is all occupied with his [Confucius'] deportment, his eating, and his dress. In public, whether in the village, the temple, or the court, he was the man of rule and ceremony, but 'at home he was not formal.' Yet if not formal, he was particular. In bed even he did not forget himself ;—'he did not lie like a corpse,' and 'he did not speak.' 'He required his sleeping dress to be half as long again as his body.' 'If he happened to be sick, and the prince came to visit him, he had his face to the east, made his court robes be put over him, and drew his girdle across them.'" "He was nice in his diet,—'not disliking to have his rice dressed fine, nor to have his minced meat cut small.' 'Anything at all gone he would not touch.' 'He must have his meat cut properly, and to every kind its proper sauce ; but he was not a great eater.' 'It was only in wine that he laid down no limit to himself, but he did not allow himself to be confused by it.' 'When the villagers were drinking together, on those who carried staves going out, he went out immediately after.' There must always be ginger at the table, and 'when eating, he did not converse.' 'Although his food might be coarse rice and poor soup, he would offer a little of it in sacrifice, with a grave respectful air.' 'On occasion of a sudden clap of thunder, or a violent wind, he would change countenance. He would do the same, and rise up, moreover, when he found himself a guest at a loaded board.' 'At the sight of a person in mourning, he would also change countenance, and if he happened to be in his carriage, he would bend forward with a respectful salutation.' 'His general way in his carriage was not to turn his head round, nor talk hastily, nor point with his hands.' He was charitable. 'When any of his friends died, if there were no relations who could be depended on for the necessary offices, he would say, "I will bury him."'"—*Legge, Ch. Class.*, i. Prol. pp. 89–90.

[All ate from the same dish of rice without chopsticks or spoons ; but as "one should not have to wash his hands" (*Li chi*, i. i. iii. 12, 53), it was considered necessary to try and keep the hands clean. "Some say the 'washing' was only a rubbing of the hands with sand."—*Legge, Lî Kî*, 1. 80. Chopsticks were used for soup with vegetables, etc., and spoons in eating millet.—*Ibid.* i. 80, 82.]

"In eating millet no chopsticks should be used."—*Li* [*chi*] *Ch'ü li, K'ang Hsi Tzŭ tien, c.* 17, *Chu pu*, p. 32*a* [Edit. of 7th year of Tao Kuang]. They were used in taking soup if it contained vegetables : *Ko chih ching yüan, c.* 24, *Yin shih lei*, p. 10*a*.

"The enumeration of the duties incumbent on filial children in families of official rank (*S.B.*, xxvii. 448 ff.) is our best guide as to the indoor domestic life of the Chinese during the period of Middle Antiquity. The housework, as we should say, is expected to be performed by the children or inferior wives. These, 'at the first crowing of the cock, should wash their hands and mouths, gather up their pillows and fine mats, sprinkle and sweep out the apartments, hall, and courtyard, and spread the mats, each one doing his proper work.' The sons and sons' wives dress and wash with care, and hang at their girdle or sash 'their articles for use.' Both sexes carry the 'duster and handkerchief, the knife, and whetstone, the small spike and the metal speculum to get fire from the sun, and the borer to get fire from wood,' to which are added the implements of writing and archery for men, and for women a needle-case, silk, and thread. When fully dressed the children go to enquire after the health of their parents (or parents-in-law), bring them water to wash, and then the best of food. They 'should not move the clothes, coverlets, fine mats or undermats, pillows, and stools of their parents.' They should reverently regard their staff and shoes, but not presume to approach them, nor should they meddle with their food or utensils, unless it were to eat what was left from their parents' meals. 'Sweet, soft, and unctuous things' left by the grandparents should be given to the little children, who are also allowed to go to bed, to get up, and to take their meals when they please."—*Simcox*, ii. 73.

"On the whole we should judge modest comfort, with an absence of display, to have characterized the life of ancient as of modern China. The extent to which the family waited on itself reminds us of what we are told of the Nabatæans. Life was more decorous than among the Egyptians, more formal than in Babylonia, and more elaborate than in any other community not dependent on slave labour. One note of material civilization, a free use of the bath, is conspicuous. It was the duty of filial children to prepare tepid water, and invite their parents to take a bath every fifth day (*S.B.*, xxviii. 415)."—*Ibid.* ii. 74.

"The men of Sung changed their sons and ate them."—*Tso chuan, Yüan chien lei han, c.* 242, p. 33*b*.

[Collections of curiosities were made.]—*Shih lei t'ung pien, c.* 58, *Jên shih pu*, p. 2*a*.

"A system of inaugurating a new building [舉], is mentioned in many Chinese books, amongst others the *Tso chuan*, and the 幼 學."—*Ch. Rev.*, x. 71..

"When a ruler succeeds to his state, he makes his coffin, and thereafter varnishes it once a year, keeping it deposited away."—*Li chi*, ii. i. iii. 31 ; *Legge*, i. 156–7.

Fashions.—[Women were accustomed to wear false hair : *Legge, Li Ki*, i. 76, note.]

"Though a daughter be not married she should assume the hair pin at the age of 20 (*cf. supra*). On ordinary days she divided her hair and tied it up."—*Li tsa chi, Ko chih ching yüan, c.* 55, *Hsiang chü ch'i wu lei*, p. 2*a*.

Absolute Monarchy (221 B.C. *to* A.D. 221).—*Table III.*

Public.—"On New Year's morning, a good or bad year was predicted from the 'eight directions' of the wind."—*Han t'ien wên chih, Shih lei t'ung pien, c.* 5, *Sui shih pu*, p. 9*b*.

[The "peach charm" was placed on doors to keep off evil spirits. This represented the gods Shên Tu and Yü Lei, who lived under a peach tree, and could swallow evil spirits.]—*Ibid.* p. 9*a*.

"During the Han dynasty the ruling classes believed so firmly in the life-endowing properties of the cypress that, 'on New Year's Day they wished a long life to the Emperor with wine prepared from cypress leaves.'"—*De Groot, Rel. Syst.*, i. i. 297.

[The custom of "sewing the heavens" or "repairing the heavens" was practised on the 20th day of the 1st moon in Ch'ih Yang. It is said to have had its origin in the earliest times. It consisted of tying a thread round a cake and throwing it on to the roof.]—*Ko chih ching yüan, c.* 25, *Yin shih lei*, p. 4*a*.

[On the first day of Spring (1st of the 24 solar terms), before daybreak, officials arrayed themselves in black garments and carrying a black banner, escorted an ox and ploughman made of clay out of the city gate. Pieces of variegated silk cut in the shape of a swallow were worn, and auspicious characters written on slips of paper and pasted on the doors. The custom of "Welcoming the Spring" took place in the "eastern waste places" (50 *li* from a city), and they sang the song "*Pa I* (Eight Dancers) of Ch'ing Yang" and danced the *Yün Ch'iao* ("Cloud Feathers") dance. They ate salad, syrup, and congee. Water drawn on this day was called "water of the gods," and had the property of preventing wine from turning sour.]—*Shih lei t'ung pien, c.* 5, *Sui shih pu*, pp. 2*b*, 3*a*.

[On the 8th day of the 4th moon at all Buddhist temples vegetable offerings were prepared and the gods washed with five-coloured incense-water.]—*Ibid. c.* 6, *Sui shih pu*, p. 8*b*.

[On the same day cakes were offered by childless women to the Goddess of Nine Children, who granted their prayers for offspring.]—*Ibid.* p. 8*b*.

[On the 5th day of the 5th moon (see preceding Period) people tied five-coloured 'longevity-thread' round their arms to ward off evil spirits, and also hung it on the door. Various other charms were worn (*Ko chih ching yüan, c.* 17, *Kuan fu lei*, pp. 13*a*, 13*b*, 14*a*, 14*b*. See also *Yüan chien lei han, c.* 389, *Shih wu pu*, p. 17*b*). They cooked wild duck and fat tortoises, drank wine, and bathed in hot water flavoured with epidendrums. The Emperor bestowed owl-soup upon the Great Ministers.]—*Ibid.* pp. 9*b*, 10*a* ; *c.* 8, p. 21*b*. Some say this custom did not originate before the 7th cent.

"In Mid-Autumn they enquired of every family of the people, and if there was any man 70 years old they bestowed upon him a jade staff adorned with a wild dove, as the dove was a bird that never choked. This was to express a wish that the old man would never choke."—*Ko chih ching yüan, c.* 58, *Yen shang ch'i wu lei*, p. 16*b*.

"At the Chung Yang Festival [9th day of 9th moon] Fei Chang-fang said to Hêng Ching : 'On the 9th day of the 9th moon your village will certainly suffer a great calamity, but if you wear hellebore, go up a high mountain, and drink chrysanthemum wine, the calamity will be averted.' Hence it became the custom for people on that day to ascend mountains and fly paper kites. Mêng Chia of the Chin dynasty called it 'Falling-hat Festival.'"—*Chia li ta ch'êng, c.* 8, *Nien chieh ku shih*, p. 22*b*.

[Seeds of the hemp, vine, wheat, etc., were planted on occasions of victory in the palace gardens as symbols of the greatness of the Empire.]—*Shih lei t'ung pien, Kuo pu, c.* 84, p. 2*b*.

It was, in all probability, under the dynasty of the Hans that the drama first took its place among the amusements of the people, though some defer its appearance until eight or nine centuries later, and attribute its origin to a dream of one of the Emperors of the T'angs, in which he fancied himself on a visit to the moon. Now, when the founder of the Hans was besieged [in the 2nd year of his reign], . . . by an army of Huns, His Majesty, acting under the advice of a crafty minister, sent a messenger to the Hun chieftain and offered him the present of a very beautiful girl on condition of being allowed to pass unharmed through his lines. The Hun chieftain, suspicious of treachery, repaired by agreement to the foot of the city wall, and there beheld a charming young lady moving about among a circle of attendants almost as lovely as herself. His suspicions being thus allayed, he gave orders to open a passage to the Emperor and his suite, who promptly made the best of their way out. At the same time, the Hun chieftain entered the city and proceeded to the spot on the wall where the young lady was awaiting him, still surrounded by her bevy of handmaids ; but on arriving there, he found, to his infinite chagrin, that the beauty and her attendants were simply a set of wooden puppets which had been dressed up for the occasion, and were worked by a concealed arrangement of strings. Overcome with rage and mortification, he instantly started in pursuit of the flying Emperor, who however succeeded in making good his escape. From that day Punch and Judy shows are said to have come into existence, if indeed the term 'Punch and Judy' be not somewhat of a misnomer. For the marionettes of China are unconnected in any way with the loves and hatreds of our own Mr. Punch. The former exhibit to Chinese crowds of men, women, and children, stirring episodes taken from the history of ancient China, relieved by occasional farces of rather questionable decency. Emperors, generals, crafty mandarins, and intriguing women, strut backwards and forwards across the mimic stage, and teach their lessons of worldly wisdom in the local dialect of the audience. No money is collected on the spot, the proprietors of the show being paid out of the theatrical fund of the street or village, sometimes by a well-to-do citizen, to give their entertainment free to all comers."—*Giles, Historic China*, pp. 40–42. See also *Far East*, i. 90–1.

Domestic.—"At the close of the year, every family prepared meats and vegetables to welcome the new year. After this they gathered around to dine and drink."—*P'ei wên yün fu, c.* 16*a*, p. 136*b*.

The Court.—[The sovereign maintained astrologers as a sort of pastime, as he did singers and actors.]—*Journ. P.O.S.*, iii. 5, note.

"In the time of the Emperor Kao of the Han dynasty, on the 7th day of the 7th moon the women in the palace put five-coloured thread in the tufts of each other's hair. This was called 'mutual love.'"—*Hsi ching tsa chi, Ko chih ching yüan, c.* 49, *Jih yung ch'i wu lei*, p. 13*a*.

Sports and Games.—Wu Ti "was a Nimrod among the Chinese, and his principal enjoyment was to chase the wildest animals without any attendants."—*Boulger, Short Hist.*, p. 14.

"Ma Kiün . . . is . . . the subject of a notice in the *Kwang-po-wu-che*, where it is said of him that 'in ingenuity and contrivance he surpassed every contemporary. He trained female musicians and dancing elephants; and even made wooden figures to beat drums and play on fifes. He constructed mounds upon which he made his wooden figures play at football and perform the sword exercise ; and he also made them climb up ropes and stand head downwards." —*Journ. N.-C.B.R.A.S.*, N.S. vi. 81.

"Chess 博 is mentioned in the second century B.C., and is described as a game played on a marked board 局 戲."—*Ch. Rev.*, xii. 206.

[The chessboard used at this time had 17 rows.]—*Ko chih ching yüan, c.* 59, *Wan hsi ch'i wu lei*, p. 1*b*.

"Until we can trace it back to a more reliable source, we must be content with fixing the period of the invention [of chess] before the year A.D. 100, on the more conclusive authority of the Shuo Wön, which was published during this year." "The present character for the game was used in the Shuo Wön during the first Han dynasty with the radical for wood, making it likely that it referred to the 'elephant chess.'"—*Journ. N.-C.B.R.A.S.*, N.S. vi. 108, 120.

"The Han Emperor 成 styled himself the follower of the Earl of Fup'ing (his minion) when he went *incognito* upon his cock-fighting and horse-racing expeditions."—*Ch. Rev.*, xii. 445.

"The Chinese word *chi*, of which 'Planchette' is a fair translation, . . . is there [*Shuo wên*] defined as 'to enquire by divination upon uncertain matters.' This might of course include other forms of divination, but in the *Liao-chai-chih-i*, a well-known work completed exactly two hundred years ago . . . there are two stories which leave no doubt that at any rate at that more recent date the term in question was used precisely in the sense of our own 'Planchette.' It has indeed been for some time known to residents in and writers on China, that Planchette is commonly practised in certain parts of the empire by the people at large as a ready and efficacious means of enquiring into the future on miscellaneous topics of immediate importance to the enquirer, and by the cunning priests who run the tables as a sure and certain method of procuring a handsome addition to the annual income of their temples."—*Giles, Historic China*, pp. 317–8. For a description of a Planchette *séance* see *ibid.* pp. 318–26.

"He was able to play at 'cash-guessing.'"—*Ko chih ching yüan, c.* 60, *Wan hsi ch'i wu lei*, p. 3*a*.

[Football is mentioned several times. The ball was made of leather and stuffed with hair.]—*Nineteenth Cent.*, March, 1906.

"In Chi Chou there was a pastime called the game of *tzŭ yu*. The people in 'sides' of two's and three's wearing ox-horns, butted at each other. The game of 'horn-goring' seen in the time of the Han dynasty was taken from this."—*Pei wên yün fu, c.* 63, p. 156*b*. This game was also played at the court of Wei Yang : *Ko chih ching yüan, c.* 60, *Wan hsi ch'i wu lei*, p. 10*a*.

"The swing originally was a plaything of Shan Yün in the north, used for practising smartness. Afterwards Chinese women learnt to use it, and made a seat of wood hung with coloured cords ; then, wearing their finest garments they stood or sat on the swing, which was pushed by one of the others. It was called *ch'iu ch'ien*."—*Ko chih ching yüan, c.* 60, *Wan hsi ch'i wu lei*, p. 8*a*.

[The paper kite is ascribed to Han Hsin (d. 196 B.C.).]—*Ibid.* p. 8*b*.

[The game of tiddlywinks in 32–6 B.C. is mentioned in the *Hsi ching tsa chi.*]—*Nineteenth Cent.*, March, 1906.

"The aged used to repeat the legend that the magic lantern (*ying hsi*) was invented on the death of the concubine Li of the Emperor Wu of Han, when Shao Wêng, a native of Ch'i, said that he could call up her soul. The Emperor was thinking of her very much, so he asked Shao Wêng to do so. Accordingly Shao Wêng, when night came, set up a square tent and lit a lantern in it, while the Emperor sat in another tent to look on, when lo ! he really saw the form of his concubine, though indistinctly. This is how we have the magic latern at the present day."—*Ko chih ching yüan, c.* 60, *Wan hsi ch'i wu lei*, p. 11*a*.

Marriage ceremony.—[Match-makers were called "ice-men" from the interpretation given by So Shên of a dream of Ling Hu-ts'ê.]—*Chia li ta ch'êng, c.* 1, *Kuan chi hsi i*, p. 12*a*.

"The custom of letting down a [bed] curtain [after the bridal pair had sat on the side of the bed, and then throwing fruit, etc., on the top of the bed-curtain] (*sa chang*) originated with the Emperor Wu of Han and not with I Fêng. When Lady Li arrived the Emperor Wu welcomed her into the curtain, and they sat together drinking pleasantly. He had told the Imperial maids beforehand to scatter flowers of fine colours and 'united-hearts' fruit at some distance, and the Emperor and Lady Li picked up their robes and caught them in them. It was said the more they picked up the more children they would have."—*Yüan shih, Shih wu yüan hui, c.* 13, p. 4*b*.

[For the custom which arose at this time in relation to marriages performed under unusual circumstances, see MARITAL.]

Period of Disruption (221 *to* 589).—*Table IV.*

Public.—[The origin of the *Yüan Tan* (1st moon 1st day), New Year festival, is assigned to Liang, of the *Tung Chih* (12th moon : day variable), Winter Solstice festival, to Wei, and of the *Ch'u Hsi* (12th moon 30th day), New Year's Eve, to Chin, times.]—*Shih wu yüan hui, c.* 2, p. 5*b*, etc. ; *Tzŭ shih ching hua, Fêng su*, p. 9*a*, etc.

[On the morning of New Year's Day magistrates killed a sheep and hung its head over the door, and also cut open a fowl and placed it above it.]—*Shih lei t'ung pien, c.* 5, *Sui shih pu*, p. 4*b*.

[The custom of ascending mountains or going up to high places on the 9th day of the 9th moon (*Chung Yang* festival), to avert calamity, originated at this time. See MANCHU PERIOD.]

[Feasts were given by officials on occasions of festivals.]—*Ibid.* p. 22*b*.

[Honorary door-tablets were conferred by the emperor on filial children.]—*Yüan chien lei han, c.* 241, p. 32*b*.

Games, Sports, etc.—"As to the inventor of the game [chess], it is not unlikely that . . . Chow Wu Ti 周 武 帝, antagonist of the emperor 文 帝 Wön Ti of the 陳 Ch'ön dynasty, who lived about A.D. 560, has been confounded with the celebrated 周 武 王 Chow Wu Wang, as the dynasty of the 北 周 *Pei Chow* or 'Northern Chow,' to which Wu Ti belonged, is not nearly so generally known as the first Chow dynasty. But the 象 經 *hsiang ching* and the 象 棋 *hsiang ch'i*, which the *Tan Ch'ien Tsung Lu* 丹 鉛 總 錄 says this Chow Wu Ti invented referred to the images of the sun, the moon, and the stars"—a game now obsolete.—*Journ. N.-C.B.R.A.S.*, N.S. vi. 107–8.

"At the end of the 1st moon gentlemen and ladies went in boats or took their pleasure on the water side."—*Shih lei t'ung pien, c.* 5, *Sui shih pu*, p. 18*b*.

"[On the day of Opening Spring] the people played at the game of drag-hook [*t'o kou*] [the tug-of-war] which was a rope made of bamboo splints several *li* long. They began to pull at the beating of a drum."—*Ibid.* p. 11*b*.

"Hsüan Jung-tsu was skilful in shooting. He could shoot away all a bird's feathers without killing it. Once when a flock of seagulls were flying about, Jung-tsu went up to the watch-tower to shoot at them, and there was not one whose wings he did not break."—*Nan Ch'i shu, Ko chih ching yüan, c.* 60, *Wan hsi ch'i wu lei*, p. 5*b*.

[The Empress Hu of Wei was an adept markswoman.]—*Pei shih, ibid. c.* 49, *Jih yung ch'i wu lei*, p. 12*a*.

[Skilful shooting into bottles with arrows is mentioned in *ibid. c.* 41, p. 25*b*.]

"The people of Wu Ling in Ch'ang An made peashooters of mulberry wood with genuine pearls as pellets to shoot the magpies."—*Hsi ching tsa chi, ibid. c.* 60, *Wan hsi ch'i wu lei*, p. 5*b*.

"'They met walking on a rope.' The commentary [says]: 'Here *so* means a long rope, the ends of which were tied to poles, but the middle part was unsupported. Then two men each came from either end and met in the middle. That was what was called "rope-walking."'"—*Ibid.* p. 12*b*.

"On *Han Shih*, the day before the tomb festival, many people play at the game of hen's eggs in the streets of cities."—*Shih lei t'ung pien, c.* 5, *Sui shih pu*, p. 5*b*.

[Theatrical comedians are mentioned : see next extract.]

The Court.—Wu Ti "impaired the reputation he had gained among his somewhat severe fellow-countrymen by entertaining a theatrical company of 5,000 female comedians, and by allowing himself to be driven in a car drawn by sheep through the palace grounds."—*Boulger, Short Hist.*, p. 22.

"A bell was hung in the *Ching Yang* Belfry, so that the imperial maids, on hearing the sound of its striking, were enabled to get up early and dress themselves."—*Ch'i shu, Ko chih ching yüan, Lou lei*, p. 7.

Private.—"The custom of Ch'ang An was that on the 1st day of the 1st moon people invited one another to dinner. This was called 'pledge-table.'"—*Shih lei t'ung pien, c.* 5, *Sui shih pu*, p. 10*a*. Some feasts of a lively character at Court are mentioned in *ibid. c.* 84, *Kuo pu*, p. 11*a*.

[Pepper-wine (*hu-chiu chiu*) was drunk on New Year's Day, probably also during earlier Periods.]—*Ko chih ching yüan, c.* 22, *Yin shih lei*, p. 13*a*.

"On the 15th of the 1st moon people boiled congee with fat floating on it as an offering to the gods, praying that silkworms might be abundant."—*Shih lei t'ung pien, c.* 5, *Sui shih pu*, p. 15*a*.

"On the 7th day of the 1st moon people cut embroidered silk in the shape of a man or figures out of gold foil, and pasted them on the wall in front of the gate, sometimes also wearing them on their clothes. It indicated a wish for people to have new countenances in the new year. Tsung Hsün said : 'This custom was introduced by Lady Li, a wife of Chia Ch'ung of the Chin dynasty.'"—*Ibid.* p. 12*a*.

[Women ate plums on the day of the 7th solar term, or held gatherings and partook of plum-juice mixed with wine to preserve their good looks.]—*Ko chih ching yüan, c.* 22, *Yin shih lei*, p. 14*b*.

[Bonds of friendship were formed, often on oath, sacrificing a white dog or red fowl.]—*Kuang shih lei fu, c.* 8, pp. 6*b*, 7*a*, 7*b*. Hu Chao "felled a palm tree to confirm his oath."—*Shih lei t'ung pien, Kuo pu, c.* 84, p. 9*a*.

[Fifteen continued to be the age at which girls assumed the hairpin.]—*Ko chih ching yüan, c.* 55, *Hsiang lien wu lei*, p. 2*a*.

From the Restoration of Unity to the end of the Five Dynasties (589 *to* 960).—*Table V.*

589–907.

Public.—[Most of the festivals (*Shang Yüan Têng, Chung Ho, Ch'ing Ming, Tuan Wu, Ch'i Ch'iao*, and *Chung Ch'iu*) date from this time, but the dates of origin of some are doubtful. For details see below and previous and subsequent Periods.]

"On New Year's Day people first let off crackers in the court-yard, then they pasted pictures of fowls over the door. Sometimes they hung a fowl on the door suspending a reed-rope above it, and planted a peach-tree at the side so as to frighten away the devils."—*Shih lei t'ung pien, c.* 5, *Sui shih pu*, p. 4*b*.

"Young and old donned full dress to exchange congratulations, and drank pepper wine, peach soup, and cedar-leaf wine."—*Ibid.* p. 4*b*. See also p. 4*a*.

"After the period *Hsien T'ung* [860–74] the custom of the scholars was at dawn on New Year's Day to wear a purplish-red

purse containing ginseng and putchuck, which were occasionally taken out and chewed. This was called 'wearing the welcome to the New Year.'"—*Ibid.* p. 10*b*.

"On the 'welcoming-wealth day' [1st moon 2nd day] the ancients sacrificed to the earth in waste places 30 *li* from a city, where they played musical instruments and drank for pleasure; then taking torches and 'precious' things they returned to their respective homes." "Next day they wrote prayers to offer in sacrifice to the spirits of the destitute, that they might not come to poverty. Now people held this observance at the end of the year."—*Chia li ta ch'êng, c.* 8, *Nien chieh ku shih*, p. 21*a*.

[At the *Tzŭ Ni Yin*, held on the 2nd day of the 1st moon, Ming Huang bestowed food from the palace upon all his great ministers and nobles.]—*Ibid.* p. 20*a*.

"On the 'dust-sweeping day' (*sao ch'ên jih*) [1st moon 9th day] people swept away all dust and dirt from their houses, putting it into carts or vessels made of willow and throwing it into the river."—*Ibid.* p. 20*b*.

"The first full moon of the year is the feast of lanterns. . . . Its origin is not certainly known, but it was observed as early as A.D. 700. Its celebration consists in suspending lanterns of different forms and materials before each door, and illuminating those in the hall, but their united brilliancy is dimness itself compared with the light of the moon. At Peking an exhibition of transparencies and pictures in the Board of War on this evening attracts great crowds of both sexes if the weather be good. . . . The feast of lanterns coming so soon after new year, and being somewhat expensive, is not so enthusiastically observed in the southern cities. At the capital this leisure time, when public offices are closed, is availed of by the jewellers, bric-à-brac dealers, and others to hold a fair in the courts of a temple in the Wai Ching, where they exhibit as beautiful a collection of carvings in stone and gems, bronzes, toys, etc., as is to be seen anywhere in Asia."—*Williams, Midd. King.*, i. 817.

"On the night of the 15th day of the 1st moon [Feast of Lanterns] the people in the capital filled the streets and crowded on the roads gambling or rambling in company, whilst the noise of drums thrilled the heavens and lighted candles lit up the earth."—*Yün fu shih i, c.* 63, p. 8*a*.

"On the *yuan hsiao* [same day: full moon in 1st month] day Jui Tsung of the T'ang went to the Fu Gate and planted 'lantern-trees,' 20 *chang* high, on which 50,000 lighted lanterns were suspended."—*Chia li ta ch'êng, c.* 8, *Nien chieh ku shih*, p. 20*b*.

"On the day *hsiao hao* [1st moon 16th day] the people left their occupations, and in the evening all women crossed over bridges or leaned on trees. This was supposed to dispel all sickness."—*Ibid.* p. 20*b*.

"Tomb-worshipping on the Han Shih [day before *Ch'ing Ming*] Festival is not mentioned in the Book of Ceremonies; but as it was commonly practised under recent dynasties so it became a custom. Since scholars and common people who had no right to worship at temples had no way in which to show their filial conduct, they were granted the privilege of tomb-worshipping."—*P'ei wên yün fu, c.* 66*b*, p. 66*a*. At this festival the people of Ssŭ Ch'uan coloured their rice green to increase their virility.—*Ko chih ching yüan, c.* 22, *Yin shih lei*, p. 30*a*.

"On the *Han Shih* 'Cold Festival,' people presented to each other painted ducks' eggs."—*Shih lei t'ung pien, c.* 5, *Sui shih pu*, p. 25*b*.

"On the *Ch'ing Ming* Festival [2nd moon 3rd day] the wastes of the capital were as bustling as the markets; under the fragrant trees or inside the gardens dressed meats were spread. The banqueters mutually helped each other to wine." "The newly-ordained Doctors-of-Law prepared an entertainment in the *Ch'u Chiang* Pavilion. When they had finished eating they went out in a pleasure boat. There was also a ball-playing party in the *Yüeh Têng* tower."—*Ibid.* p. 26*a*.

[At the *Ch'ing Ming*, All Souls' Festival, people worshipped at the tombs, wearing mourning, and placing paper money, flags, and streamers on them. If on this day they drank peach wine and bathed in hot water flavoured with medlars they would have no illness and their complexions would remain clear. Chung Tsung at this time used to bestow upon his attendants variegated-silk covered balls and embroidered artificial plants.]—*Ko chih ching yüan, c.* 22, *Yin shih lei*, p. 21*a*; *Shih lei t'ung pien, c.* 5, *Sui shih pu*, p. 24*b*.

"At the *Chung Ho* [15th day of 2nd moon] festival people used to put the seeds of all kinds of grains, fruits, and melons in black bags and present them to each other. It was called 'offering growing seeds' (*hsien shêng tzŭ*) [and indicated a wish that the recipient might have male offspring]. On the same day, the people in the villages also brewed wine which they called *I ch'un* ('befitting spring') wine."—*Ibid.* p. 18*a*.

[Excursions were indulged in in the middle of Spring.]—*Ibid.* p. 18*a*.

"On the day of the opening of summer (*li hsia jih*) [3rd moon 17th day], if people ate prunes their spirits and strength would be improved, and if they wore *liu kuei* ('six *kuei*,' 10th stem) and *liu jên* ('six *jên*,' 9th stem) charms the heat would not affect their bodies."—*Chia li ta ch'êng, c.* 8, *Nien chieh ku shih*, p. 21*b*.

"On the 'Flower-birthday Festival' all families prayed for happiness before the gods. It was called 'Spring praying happiness.'"—*Ibid.* p. 21*a*.

"According to the customs in vogue during the T'ang dynasty on *shang chi* days they bestowed upon the imperial attendants rings plaited out of willow twigs. Wearing them gave protection against the poison of the scorpion."—*Shih lei t'ung pien, c.* 5, *Sui shih pu*, p. 22*b*.

[At the *Chung Yüan* festival on the 15th day of the 7th moon, criminals were released and sacrifices performed for the release of souls from hell. The people in the palace made a *yü lan* basin adorned with gold and gems.]—*Chia li ta ch'êng, c.* 8, *Nien chieh ku shih*, p. 22*a*; *P'ei wên yün fu, c.* 14, p. 84*a*.

[On the 15th day of the 8th moon, the *Chung Ch'iu*, mid-autumn festival (worship of moon), "rainbow bridges" were erected and round cakes representing the shape of the moon offered up. The people also gathered dew from all sorts of flowers and, having mixed it with vermilion, coloured their foreheads to make them clever, strengthen their eyesight, and avert illness.]—*Chia li ta ch'êng, c.* 8, *Nien chieh ku shih*, p. 22*b*.

[At the *T'ien Kuan* festival books were put out to dry in the sun, as this was supposed to prevent them being eaten by book-worms.]—*Chia li ta ch'êng, c.* 8, *Nien chieh ku shih*, p. 22*a*.

"On the *shê* days (two festivals for worshipping the *lares*) women stopped their needlework and made *no* fillets or silk tassels. It was called 'dreadful day.' On this day when a woman visited her parents' house she was presented with a new gourd. This was supposed to make her husband treat her well. Drinking wine on this day was supposed to cure deafness."—*Shih lei t'ung pien, c.* 5, *Sui shih pu*, pp. 19*b*, 19*a*. In Hunan they sent to each other gourds filled with rice cooked with pork and mutton.—*Ko chih ching yüan, c.* 22, *Yin shih lei*, p. 30*a*.

"On the night of the 13th day of the 12th moon the demon of the mountain raised calamities, so the ancients burnt bamboos to drive it away. But at the present day people let off crackers instead, and also posted up peach charms."—*Chia li ta ch'êng, c.* 8, *Nien chieh ku shih*, p. 23*a*.

Sports, Games, etc.—T'ai Tsung "was a great hunter, and in the pursuit of big game he necessarily had some narrow escapes, special mention being made of his slaying single-handed a savage boar."—*Boulger, Short Hist.*, p. 30.

"On the *shang chi* day all the royal concubines in the palace played at the game of 'patting butterflies' (*p'u t'ieh*)."—*K'ai Yüan i shih, Shih lei t'ung pien, c.* 5, *Sui shih pu*, p. 22*a*.

"On the Dragon Boat Festival the people in the palace prepared meal in globular masses and glutinous rice in bamboo leaves served in a plate, and shot at them with small horn bows. Those who hit them were allowed to eat them."—*Ibid. c.* 6, p. 9*b*.

"In the period *Pao Li* [825–7], the Emperor [Ching Tsung] made a paper arrow which contained powdered musk. When all the imperial maids were gathered together, the Emperor shot into the crowd; anyone who was hit had his or her body perfumed by the powerful odour, but felt no pain. So the people of the palace called it *fêng liu chien* 'pleasure arrow.'"—*Ch'ing i lu, Ko chih ching yüan, c.* 41, *Wu pei lei*, p. 20*b*.

"On the 3rd day of the 3rd moon the people carved rabbits out of wood. They then divided into 'sides' and riding on horseback shot at them to see which would win."—*Yen pei chi chi, Shih lei t'ung pien, c.* 5, *Sui shih pu*, p. 21*b*.

"In the *T'ien Pao* palace, on the *Han Shih* festival the swing was erected, and all the imperial maids were ordered to play at it. This was called by the Emperor, 'game of the half genii' (*pan hsien chih hsi*)."—*T'ien Pao i shih, Ko chih ching yüan, c.* 60, *Wan hsi ch'i wu lei*, p. 8*a*.

"At the present time children played at tug-of-war. Those who were stronger dragged the others over, the weaker ones frequently falling during the contest, which added to the fun. This was the 'tug-of-war' of the T'ang dynasty, performed at the *Ch'ing Ming* Festival. At that time the Emperor and his ministers also played this game together for amusement, which was indeed rather a breach of decorum."—*Lei ching jih cha, ibid.* p. 10*a*.

"The sport of pulling the rope or 'tug-of-war' is apparently an old Chinese game. It was known 1,200 years ago as 拔河 or 'pulling the stream,' and was done in this wise. At each end of a long hemp cable were fastened a dozen smaller ropes, each of which was grasped by several men, and the game was for each side to pull the other over. The Emperor 中宗 had a good many Turks and Tartars in his employ. So possibly they introduced it."—*Ch. Rev.*, xiii. 35*b*. (*Cf. supra.*)

"In the time of the Liang there was a 'high-rope actor' (*kao hsüan chi*), the 'rope-performer' (*hsi shêng*) of the present day."—*Tung tien, Ko chih ching yüan, c.* 60, *Wan hsi ch'i wu lei*, p. 20*b*.
